- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—**A Gold Medal and a Cheque for £10 10s.**, to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—**A Silver Medal and a Cheque for £3 3s.**, to the competitor who submits the best single set of drawings during the session.
- 3.—**Certificates** signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

Per line, Sixpence. Minimum charge, Eighteenpence. Three Insertions for the price of Two.

Prepayment in the above Advertisements is absolutely necessary.

Page or Paragraph Announcements, Trade Advertisements.

Prices on application.

Small Advertisements for current week's issue are received up to first post Monday morning inclusive.

Editorial and Publishing Offices:

Talbot House, Arundel Street,
Strand, W.C.

ON Saturday the last bolt was driven into the gigantic wheel at Earl's Court by Mrs. Basset. The lady ascended to the top of the huge structure in a chair hauled up by a steam winch, and we believe this is the first occasion on which a lady has given the finishing touch to a work of this kind. Mrs. Basset is the daughter of Admiral Dowell, the Chairman of the Great Wheel Company, who gave such bluff and effective evidence in the libel action in which he was recently successful.

Correspondence.

The Editor welcomes Correspondence on matters of general interest. Gentlemen thus addressing the Editor should condense their communications as much as possible.

SUICIDAL STRIKES.

To the Editor of "THE BUILDER'S JOURNAL."

DEAR MR. EDITOR,—I have noticed with interest your remarks *re* the threatened strike in the Building Trade, and it being, from the multiplicity and magnitude of the interests involved, a matter of public importance, it may interest some of your readers to know how the position strikes an outsider, one not in the trade, but in constant touch with all branches.

From a general point of view, the "greatest benefit to the greatest number" is a good object, but, as every practical man knows, there is little enough work just now, and to attempt to attain this object by trying to stop the works or any orders in hand, at the present time is simply suicidal, and one wonders at intelligent tradesmen being apparently led into such a policy, a policy which will inevitably recoil with bitter effect on themselves and their families.

I put this to a leading man in a most important branch, one whom I know is doing excellently well, and in a comfortable position. Put briefly, he admitted he was very well satisfied, also the men working under his lead. "Then why do you strike?" After some pressing, the astonishing answer came, "they could not help themselves, their votes being swamped by the labourers' vote, and he was sorry they had joined the Federation."

Comment is needless.

Another case on different lines.

A frugal steady man, now elderly, had saved enough to start as a builder. He had always been an ardent Unionist, and during the Carpenters' Strike he contributed liberally to their fund (between £40 and £50), but on commencing operations on his own account, he was so continually harassed and put to expense by the rules of the different Unions rigidly applied to his own buildings, that he bitterly repents his well-meant but ill spent contributions, and he is now a firm believer in free labour.

Further, I am assured on good authority, that in cases where free labour and piece-work have replaced the other system, satisfaction has ensued all round, both to employed and employers, the same wages being paid.

Every one knows that the Unions have done good work in the past, and no doubt will do so again in the future, but not by the dog in the manger policy of refusing to work themselves and endeavouring to coerce free men, every whit equal to themselves, and fully entitled to earn their own living on their own terms. Why trained and intelligent artisans, many of whom have spent a lifetime in learning their business, should allow themselves and their Unions to be dominated by the unskilled labour vote (said to be 13,000 strong) passes comprehension. It especially behoves the middle-aged and elderly Unionists to think twice before precipitating a strike.

The above are points which strike—Yours faithfully,

NORI.

ON Saturday last the new Municipal Buildings at Bexhill, were opened by Sir Joseph Renals, the Lord Mayor of London.

THE complete failure of the recent exploration of "Boadicea's Tomb" has not discouraged the promoters of a scheme to explore the Hill of Tara; but as the British Archaeological Society has undertaken the task, it may be taken for granted nothing will be done to spoil the hill as a place of pilgrimage. To most persons it is only known in connection with Moore's charming verses; but apart from that it has much historical importance, and contains many earthworks. Tara is only a score of miles from Dublin, and is one of the green hills seen on entering the charming bay into which the grimy Liffey finds its way.

LORD OVERTOUN has presented a site valued at £16,000 to the Glasgow Young Men's Christian Association for the purpose of founding a club and boarding house.

A NEW Baptist Chapel is to be built in Bowesfield Lane, Stockton, at a cost of £2,500. Towards the building fund the Baptist Union Extension Committee has offered a grant of £500, on condition that £1,200 is raised by the end of June.

OUT of the tenders received for the construction of the open-air baths in Burlington Street, Liverpool, the Baths Committee has decided to accept that of Messrs. Marr and Sons, for £700, subject to their complying with certain formalities in connection with the contract.

THE carpenters' and joiners' strike at Leicester entered on its fifth week on Friday last. The efforts at settlement have failed over the question of piecework, to which the men decline to agree. All the plumbers are under notice to be locked out to-morrow, and there is no sign of any settlement being arrived at. The other branches of the building trade will be seriously interfered with.

A NEW Church has been erected near Sealand Road, Chester. The new edifice, which has a very handsome appearance, will be known as St. Oswald's Mission Church of the Good Shepherd. It has been designed to suit the double purpose of a Mission Church and an Infants' School. The Nave will seat about 200 persons. The Baptistry, which is situated at the west end of the Nave, contains a handsome Font. The Chancel is lined with buff bricks and has a panelled dado, and is separated from the Nave by a Screen. The style adopted is the Perpendicular.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

TO ENGINEERS.

CONTRACT No. 2.

The Guardians of Mile End Old-Town are willing to receive TENDERS for the ERECTION of NEW LAUNDRY MACHINERY, NEW ENGINES, STEAM PLANT and general ENGINEER'S WORK in connection with their new Steam Laundry, and ALTERATIONS and ADDITIONS to the Laundry and Boiler House, at the Workhouse, all situate in Bancroft road, London, E.

The plans can be inspected, and copies of the specifications obtained, of the architect, Mr. CHARLES F. BURDEN, at his Office on the premises, on and after THURSDAY, MAY 9th, 1895, between the hours of TEN a.m. and FOUR p.m., on the production of the receipt of a deposit of a £10 Bank of England Note, made with the undersigned, which deposit will be returned to parties sending in a bona-fide Tender, at the time and in the manner specified, accompanied with such specifications.

Sealed Tenders, endorsed on the outside "Tenders for Laundries," properly filled up and attested, must be delivered at my office not later than FIVE o'clock on the evening of the 23rd day of MAY, 1895.

Persons tendering will be required to observe such hours of labour, and pay such rate of wages, as are generally considered fair with the several trades engaged, and to enter into a bond with approved sureties for the due performance of the contract.

The Guardians do not bind themselves to accept the lowest or any Tender.

WILLIAM THACKER,
Clerk to the Guardians.

Guardians' Offices,
Bancroft road, London, E.
April 24th, 1895.

TO CARPENTERS AND OTHERS.

The Commissioners of Sewers of the City of London, will meet in the Guildhall of the said City, on TUESDAY, the 7th of MAY, 1895, at HALF-PAST ONE o'clock precisely, to receive tenders for the PERFORMANCE of such CARPENTER'S WORK as may be required by the Commissioners, for a period of three years from Midsummer-day next, upon the terms contained in a specification, which may be seen and copied at this Office.

Forms of Tender may also be had.

Security will be required for the due performance of the contract.

Tenders must be endorsed on the outside "Tender for Carpenters' Work," and be delivered at this Office before ONE o'clock on the said day of treaty, and persons tendering must attend personally, or by a duly authorised agent, at HALF-PAST ONE o'clock precisely on that day.

The Commissioners do not pledge themselves to accept the lowest or any Tender.

H. MONTAGUE BATES,
Principal Clerk,
Guildhall, E.C.
April 8th, 1895.
Commissioners of Sewers.

TO BUILDERS.

The Town Council of Gravesend invite TENDERS for the ERECTION of MUNICIPAL OFFICES in the rear of the Town Hall, in accordance with drawings and specifications prepared by Mr. A. G. SMITH, M.S.A. Architect, at whose Offices (No. 1, Darnley street, Gravesend), they can be inspected on and after MONDAY, APRIL 30th, during business hours.

Bills of quantities can be obtained of the Architect by any applicant on payment of a fee of Two Guineas, returnable on receipt of a bona-fide Tender from the applicant, but the employer does not warrant their accuracy.

Tenders in sealed envelopes, endorsed "Tenders for Offices," must be delivered at my Office in the Court House on or before MAY 14th.

The Contractor must be prepared to execute the contract, and be bound by the general conditions which can be inspected as aforesaid, and to give security in the sum of £250.

The Council do not bind themselves to accept the lowest or any Tender.

CHAS. E. HATTEN,
Town Clerk.

The Builders' Journal.

Burlington House.

It is the fashion to temporise with the Academy; to make the best of a barren time; to describe it as neither better nor worse than its predecessors. We are no convert to such compromise. We have dealt with the Architectural Room in a separate article; as for the Academy proper, it is either better or worse than its predecessors, for Art cannot stand still; it must be either vigorous and vital or imitative and commonplace. Each year's Academy sees the identical preliminary paragraphs of anticipation—machine-made; the foreshadowing of this and that by this or that artist; the little fashionable flutter and *frou-frou* of gowns; the columns of heavily-padded morning contemporary criticism, and the dissatisfaction or disgust of the few who know a good picture from a bad one on the walls of Burlington House. Now there is cant in criticism as well as humbug in mere praise, and we are not sure that every New Critic is right and all the Old Critics wrong. There are too many geese cackling of Art and Literature nowadays, fancying themselves swans. No sudden crop of songsters ever disturbs our wood, and the remark is a parable. So that we have come to distrust the New Criticism almost as much as the Old, and we should distrust it, so far as Art goes, altogether were it not for the Picture Shows that lend, each year, such criminal corroboration. There can be no attempt at eulogy on behalf of this year's Academy; the plain facts may be stated: the walls are crowded by conventionalisms; by the duly measured and inordinately dull canvases we have every experience but no

right to expect; and it is only here and there, casis amid desert, or more of mirage than oasis (so high and ill are the few good things hung), that one comes upon a picture worthy the name and palette of the artist, or calculated to give an unknown man both name and fame. Polish and philandering have done their worst, surely, with English Art, and the time has come when the new and bolder men must be promoted to the

startles us to wonder if the years (and all those portraits) have been a dream. Here is he, painting in that pre-Raphaelite manner of his, painting in the manner of "St. Agnes' Eve," though, alack, not near so well; painting at the end of a career in the manner and method of the beginning—it is astonishing! How are we to regard the intermediate stage? as lapse or lucidity? The Rossetti Faith will have it lapse. Mr.

Tadema is disappointing with his overcrowded and small canvas containing all the virtues of marble and the like, and the old sameness of theme; we look in vain for an Orchardson worthy of the name; no hint of his barbed social sarcasms in this tentative little picture of a rose and chrysanthemums! Mr. Watts puzzles us rather than mystifies, and Mr. Luke Fildes would appear to have gone over to The Majority—portrait painters, spelling success. We find a "Forbes" with all the old clever trick of firelight; this time in a smithy with an old grey horse catching up the gleam. There is all Mr. Forbes' strength in this picture. For the rest, Mr. Frank Dicksee has given us an unimpassioned "Paolo and Francesca"—Rossetti's man and woman of rarer race, warmer temperament, grander blood. And it is only when we come to the always brave and often brilliant Sargent, truth and humour and

STAIRCASE IN THE UNIVERSITY, FORMERLY DURHAM CASTLE: SKETCHED BY C. E. MALLOW.

honoured and earlier rooms of Burlington House. Yards of tradition, of the Expected, weary one, till it is too late to come with any sense of freshness upon the more sympathetic work of the younger men. The illness of the President, extending over some months, is undoubtedly responsible for much sense of loss in the pictures he sends this year. One misses the usually gracious lines and the calm Classic sense of repose in his "Flaming June." Sir John Millais

comedy in every line, cruelty when need be in his portraiture; or to Frank Bramley's reposeful, exquisite "Sleep;" or to Shannon's delightful colouring, smoother, less sensational than Sargent's; or to Mr. Tuke's greyer things, or to one of the figure pictures that Mr. Frank Brangwyn loves to paint—that we begin to think Burlington House is, after all, a place in which to see pictures. The last picture we shall name is Mr. Waterhouse's "St. Cecilia,"

Here is the spirit of romance, of mediævalism, of chivalry; here the temperament that scorns the snap-shot sensation, the inanity, the superficial interest of much modern Art. But the British public will have itself pictorialized and illustrated, and while that demand is still supplied we suppose Burlington House will always have an affinity to Burlington Arcade.

Drawing with Hot Air. An architect is responsible, we are glad to say, for one of the few new things under the sun. He has invented an extraordinary process by means of which decorative designs may be drawn without once touching the wood upon which the picture is produced. The thing is certain to prove an artistic sensation and may possibly—if all said about it be true—revolutionize wood panel work. Mr. Smart is an Australian, and while in practice as an architect he went in largely for decorative designing. This led him to invention, and now we have the fruition of his labours—a red hot pencil capable of producing charming effects without once touching the picture. Poker work was a parody, in many ways, of the picturesque, and the old German art of wood burning was only productive of line, bold and *bizarre*, but lacking, of course, in *chiaroscuro*. The new process of drawing with hot air, which Mr. Smart calls Pyro-tint—by the way the inventor was the first Victorian to pass the examination for the Associateship of the Royal Institution of British Architects—gives an effect greatly resembling mezzotint, and is capable of producing “wash” as well as line. Light and shade are simply obtained by increasing or decreasing the distance—the nearer the pyro-tinter to the wood the darker the shade; the further away the more luminous the light. The instrument is a hollow platinum stylus, connected to a hand pump that forces air through benzoline. The air is carried through an India-rubber tube to a reservoir in the point. A match being applied, the metal immediately becomes red hot. This process, applied to furniture, may give machine wood-carving the go-by as a means of cheap yet effective decoration.

Of Interest to Metalworkers. THE Exhibition which the Cambridge Antiquarian Society intends to hold, of antique and rare specimens of plate, for which the Colleges are famous, is likely to prove highly interesting. It is well-known that the collections of the 'Varsity and the Colleges are of great value and antiquity; some of the pieces are in themselves beautiful, while all are historically important. No opportunity has, however, occurred as yet of assembling the different pieces together, and comparing one with another. Thanks to the cordial co-operation of the various owners, such an Exhibition opens to-morrow in the Fitzwilliam Museum. About two hundred articles will be exhibited. They will include the maces belonging to the town and the University; several articles, once the property of the Corporation, but sold in 1837; the most important cups, tankards, salvers, and candlesticks from the different Colleges; and certain pieces of Church plate from the county and the town. Among the latter are the thurible and the incense-boat found in Whittlesea Mere, and believed to have been once the property of Ramsey Abbey.

THE new Church of St. Aidan, Walton-le Dale, near Preston, is fast approaching completion, and is expected to be ready for opening in July next. Only a portion of the Architect's plans have been carried out at present, the erection of the entire Church being deferred until additional funds can be obtained. The foundation stone of the structure was laid by the Bishop of Manchester during last year.

A “FIND” IN FRESCOES.

IT is just possible that nothing but whitewash, or, at most, a coat of plaster, hides a long-lost series of Frescoes known to have been painted by Albert Durer for the Duke of Saxe-Wittenberg at the beginning of the sixteenth century, and German Art circles are greatly excited. Not long ago Professor Gurlitt, a Saxon archaeologist, in the course of his examination of the old account-books of the Castle of Wittenberg, came upon several documents which made it evident that Durer had undertaken the pictorial decoration of the College Chapel and of the walls of two of the halls. He has, moreover, discovered ample documentary proof in the archives of Dresden, Magdeburg, and other cities that the Frescoes were in existence at a comparatively recent period. Then came the question, What has become of them? The answer was, unfortunately, only too simple as regards those which had been placed in the Chapel, as the Vaulting which Albert Durer decorated had long ago crumbled away; but in the opinion of Professor Gurlitt, Wittenberg, like many Palaces and Churches in different parts of Europe, had been the scene of that once common form of Vandalism which concealed or destroyed so many mural decorations by thick coats of plaster. The German Emperor has been so much impressed by the suggestions of Professor Gurlitt that he has given orders for a thorough inquiry, and the World will soon know whether these mural pictures of the greatest painter of his time will be once more exposed to view. The incident has led to a revival of interest in the question of removing the plaster which conceals a series of Frescoes on the walls of one of the rooms in the old Palace of the Popes at Avignon. This fine old mediæval Castle, like that of Wittenberg, is now used as a barracks, but it is well known that it once contained fine mural works by famous artists of the French and Siennese Schools of the fourteenth century; and there are many inhabitants of the city who remember a crucifixion on a wall on which nothing but whitewash is now visible. A writer in the *Journal des Débats* suggests that the French Government should follow the example of the Emperor William and take immediate steps to ascertain whether the old Frescoes at Avignon can be recovered.

SCIENCE AT THE ROYAL SOCIETY'S SOIREE.

THE Fellows and guests who attended the Soirée of the Royal Society on Wednesday evening, at Burlington House, were provided with a notable intellectual treat. The exhibits were even more diversified than usual. Professor Roberts Austen had an electrical furnace, supplied with current from the street main of 70 ampères and 100 volts, which was engaged in melting chromium, an intractable metal that has only in the past few weeks given way to this process. Messrs. Johnson and Matthey showed a series of metals of the platinum group of the value of over £10,000, obtained from gold, and silver, and platinum, of an estimated value of two or more millions. The spectra of the new atmospheric element, argon, was shown by Professor Ramsey. Mr. Shaw's demonstrations of the formation of clouds were very pretty, and Professor Ayrton had a simple, ingenious, and effective student's apparatus for determining the mechanical equivalent of heat. Professor Ewing's magnetic tester for sheet iron for electrical transformers and dynamo-armatures was also a natty little instrument. In Major Holden's optical electric meters the readings of the dials can be magnified to any extent, as in the Thomson galvanometer, with the advantage that all the working parts of the instruments may be of the smallest dimensions, and be worked by the least consumption of energy. The display of the Plymouth Marine Biological Station was more than usually interesting, particularly in regard to the successful use of formic aldehyde in dilute solutions for the preservation of transparent organisms as museum specimens. The combustion of acetylene for illuminating purposes was demonstrated by Professor V. B. Lewes, and Major Cardew sent instructive examples of the incrustations on the insulators of the electric light mains, to which the explosion in St. Pancras has been attributed.

IN THE ARCHITECTURAL ROOM AT THIS YEAR'S ACADEMY.

[By OUR SPECIAL REPRESENTATIVE.]

IT is chiefly as a trysting-place or as a haven of rest to elderly folk wearied with the trials of picture-seeing that the Architectural Room at the Royal Academy is known to the general public. As a rule, even artists who do not happen to be architects find but little of interest within its walls. For this, we think, the architects mainly have themselves to blame; they seem, for the most part, to delight in the matter-of-fact elevation, perfectly unintelligible to the average man, or in an unattractive and inartistic rendering of their work in line perspectives of the ancient and hard order. This year, however, there is light on the horizon, and thanks chiefly to Mr. Henry Wilson and Mr. Prior there is a likelihood of even some of the more cultured of the general public, and certainly of all artists, being attracted to the room. At first sight, indeed, Mr. Henry Wilson's contributions seem to have strayed from the adjoining gallery by mistake, so strong, vigorous and beautiful in colour and design are they. These two notes of colour give one a suggestion of what an ideal Architectural Room could be were architects to commission painters or men specially trained to illustrate their works. Imagine, for example, how attractive the Architecture would be with say a dozen of Mr. Joseph Pennell's pictures in it; Architecture rendered with all his wonderful power of suggesting light and shade, of form and of colour. How some of Bodley's Churches and Norman Shaw's houses would glisten in his hands and sparkle at the touch of his pen. Or, again, some of the excellent domestic work of Mr. E. J. May, Gerald Horsley, and many others, interpreted by water-colour drawings by Alfred Parsons or Abbey. Will ever Architects be found bold enough to try the experiment? Then, and not until then, will the Architectural Room be on the same footing with the rest of the Galleries; at present it is considered a dreary waste to be carefully avoided by the average visitor.

It is most fortunate that in Mr. Wilson our Art possesses a man who, if he had not chosen Architecture as a calling, would have made a brilliant reputation as a painter, and indeed, studying his pictures this year one has almost the regret, were it not for his previous contributions to Architecture, that Painting or Sculpture does not claim him entirely. These are great drawings—Nos. 1,507 and 1519—the first, a “Study for the West Front of Saint Andrew, Boscombe,” and the other, the Interior of the Chancel of the same Church. Broad and luminous, and powerfully handled, they are artistic treats considered as water-colour drawings only. Considered as Architecture, they may be open to the criticism of being unreal phantasies or dreams impossible of realization; we can only say we hope to see many more such dreams from the same hand, and what is more, live to see these dreams come true. Returning to consider the exterior view, there is an immense amount of blank wall space in the upper part of the design, which gives great value to the deeply recessed centre arch with the elaborately traceried window, and the sculptured crucifix and figures over it. Over the centre of this arch is a figure of Christ, with decoration suggested on either side. The upper part of the Front is somewhat elaborately designed with a small square spire, and a flatly treated kind of table upon it. The whole design is one of great originality and power, with a sturdy independence of style, showing a strongly marked preference for Byzantine and Egyptian work.

Mr. Wilson has contrived to get in the interior view, looking towards the Chancel, a wonderful effect of mystery and gloom, the interests of the picture being focussed in the traceried east window. The rest of the Architecture is only dimly suggested, but it is that kind of suggestion which tells all that is necessary of the lofty Byzantine-like columns, of the finely treated organ and the sculptured decoration, and leaves the impression of a beautiful dream of what we can say, without affectation, is a poem in stone.

The exhibit next in interest, and which, doubtless, will be most attractive to the lay mind, is Mr.

Prior's model (made, it is hinted, by his own hands) of a small country house. Designed with great simplicity and restraint, it has a character quite its own, and is admirably adapted to its purpose. The plan is excellently well arranged, and is, moreover, well illustrated and explained by the small plans nailed to each corner of the board on which the model is exhibited. As we hope to illustrate this later on, further description is perhaps unnecessary. In strong contrast to this exhibit, is the model next it, No. 1,608, a hard metallic highly finished representation of Sir Arthur Blomfield's "Chapel at Tyntesfield." The model is in complete harmony with the architecture, which is in the "Correct" Decorated style. If this sort of thing extends, and architects should take to generally illustrating their works by means of models, the Architectural Room is likely to be in the future, the largest gallery

buildings of Christ's Hospital would have looked in the hands of illustrators like Robert Blum or John Fullelove!

Another design for the same subject was that submitted by Messrs. Paley, Austin and Paley, and which must have run the selected design very closely. It is, however, designed in a more "Correct" Gothic style than the others, and is admirably illustrated with pen drawings by Mr. Austin of the Entrance Front (No. 1,483), the Interior of the Dining Hall (1,468), and the Chapel (1,461).

Next, in point of size at all events, Mr. Beattie's project for the monstre Hotel in Princes Street, Edinburgh, is the most important. We must confess to a lack of appreciation of the merits of this design, which is far too fussy and over elaborated with detail, and wanting in cohesion and simplicity of design. It compares most unfavourably with

design. Again, imagine this country house of Shaw's illustrated by a water-colour by Alfred Parsons! That combination of architect and illustrator would be very near perfection. The water-colour drawing by Mr. Alfred Waterhouse, R.A., of his Prudential Assurance Company's Offices at Edinburgh, is an example of a masterly drawing, ruined by a wofully commonplace design.

Another design of prominence is that by Mr. Skipworth for "A Nineteenth Century attempt at a large Cathedral," shown in a perspective view rather neatly drawn in pencil. There are portions of this design that indicate a good deal of power of invention, notably the West Front, which, however, is spoilt by side Towers terminating in an octagonal lantern of brick and stone, and rather odd-looking leaded spires which rise from it.

Of the Churches by Messrs Paley and Austin,

THE CLOISTERS, S. TROPHIME, ARLES, BOUCHES DU RHONE: BY C. E. MALLOWS.

there. The prospect is quite encouraging. Returning to consider the more important of the drawings on the walls, Messrs. Aston Webb and Ingress Bell's large bird's-eye view of Christ's Hospital and Schools at Horsham, naturally claims first attention, and is hung in the place of honour on the South wall. The drawing, most difficult to treat from an artistic point of view, is somewhat hard in general effect, but well illustrates the admirable design which is now too well known to need any detailed description here. It is sufficient to say that it maintains the architects' deservedly high reputation. This cannot, we fear, be said of No. 1,462, Mr. Jackson's interpretation of the same subject. The architecture has scarcely received fair treatment in illustration and gives the impression of a very ordinary type of work, not at all what would be expected from the author of the Examination Schools at Oxford, ever a source of pleasure and delight to the artist. How different these

Messrs. Burnet, Son & Campbell's contribution in the same competition. The plan however, is admirable and by far the best submitted. The large pen drawing by which this design is illustrated, is by Mr. Raffles Davidson and a good example of his well-known manner. Another capital drawing by the same hand illustrates Mr. Basil Champneys' excellent design for his Memorial Building and Museum, Winchester College.

That great master of his Art, Mr. Norman Shaw, R.A., is represented this year by two works, one a country house "The Hallams," Surrey; and the other the Church of All Saints, Swanscombe, Kent. The latter is simple and dignified in treatment, with a low square Tower with raking Battlements, and the former with half-timbered Gables and well managed outline; both works are illustrated in the old fashioned orthodox way, good line drawings in themselves, but not fair to the architect, considered as illustrations of his

Carøe, E. P. Warren; of Mr. Jackson's "Ridley College Chapel," of Mr. Leonard Stokes' dignified design for "All Souls' Church, Peterboro," and Edwalton Church, and the "Sundial in Wharton Park," by Messrs. Brewill and Baily, of Nottingham, of contributions by Messrs. Arnold Mitchell, Gerald Horsley, C. E. Mallows; of these and many others we hope to speak another time. Suffice it to say, in conclusion, just now, that, speaking generally, the Architecture at the Royal Academy this year is well above the average.

TEN additional almshouses for aged poor were opened upon the site in Weelsby Street, Grimsby, last week. Seven of the houses are being paid for out of the trust fund connected with the Sailor's and Fisherman's Harbour of Refuge, and the remaining three are presented by the Manchester, Sheffield and Lincolnshire Railway Company, Mr. Jack Sutcliffe, and Mr. J. Ellis.

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,

7th May, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

WHY does the Government allow the magnificent site in Waterloo Place, on which Her Majesty's theatre once stood, to remain so long vacant? The Government is the ground landlord. The loss in interest on the money value of the estate alone, it is estimated, represents several thousand pounds a year, while the place with its dilapidated boardings and partly demolished buildings is an eye-sore to a district in the very heart of London life.

THERE is at present some danger of a very remarkable collection, which should long ago have been secured for one of our National Museums, leaving this country for America. The wonderful series of specimens of wood-carving which belongs to Mr. George Alfred Rogers, seems likely to become the property of a Boston syndicate, because the South Kensington authorities lack either the inclination or the means to secure it. It certainly seems a pity that so many well selected examples of an Art which has lately shown in this country such evidence of vitality, and which is decoratively so important, should be made permanently inaccessible to the vast majority of the very workers who would find them of the greatest possible value. Such a collection should certainly find a place, if not at South Kensington, in one of our most influential technical schools. The gathering together of these unique specimens has been a work of many years. It was commenced by Mr. William Gibbs Rogers, the decorator of Kensington Palace, the Waterloo Chamber at Windsor Castle, Carlton House, and other buildings, who had, perhaps, unprecedented opportunities of securing both in this country and abroad the best examples of the work of many schools, and who built up the collection with what are now priceless productions of the greatest masters of wood-carving. His zeal in hunting for rare pieces of work was inherited by those who followed him, and no trouble has been at any time spared to make the collection in every way complete. And not the least of its merits is that in its selection it represents the tastes and artistic opinions of men who have always been among the chief exponents of one of the daintiest of the Decorative Arts.

WE very much regret to hear that there is the very smallest possibility of Sir

Frederick Leighton being able to return to Society and to his artistic career. His position as President of the Royal Academy he will, in all probability, resign.

MR. FRAZER, assistant curator of the Walker Art Gallery, Liverpool, in a paper on "The Influence of Art," read before the Liverpool Literary and Philosophical Society, emphasised the necessity of technical excellence. In regard to Art patronage by municipalities, he thought the influence of works of Art on the poorer classes was more direct than commonly supposed; and he defended public patronage as tending to encourage valuable and original effort whilst being superior to cliques. Here Mr. Frazer indulged in a fling at the "common critic," whose foible was to glorify one or two Schools and to condemn every other. For himself, he regarded as acceptable both pre-Raphaelites, Impressionists, French posters, and the nude, and said D. G. Rossetti, Millais, and Holman Hunt did in modern Art what Giotto did in discarding Byzantine traditions. Liverpool was the first place in which the merits of this School were recognised. Referring to French Art posters and the nude, he denied that there was such a thing as unclean Art, but that as Mrs. Grundy equally regarded as "objectionable" works by Sir F. Leighton, Sir Noel Paton,

THE offer of Messrs. Darbishire and Smith, architects, Manchester, to prepare, for thirty-five guineas, plans and specifications of a Pavilion not to cost more than £1,000, and to seat from 8,000 to 10,000 people, at the Welsh National Eisteddfod, in 1896, has been accepted by the Executive Committee. Messrs. Darbishire and Smith were the architects of the Rhyl Pavilion, and that gave such satisfaction that the Llandudno Committee were unanimous in engaging them to design the Pavilion for the 1896 Eisteddfod. The Committee also decided to ask Lord Mostyn for the tenant right of a field in Vaughan Street, near the station, on which to erect the Pavilion.

FASHIONED by Mr. H. L. Brown's workmen, the key for presentation to the Duchess of York on the occasion of the opening of the new wing of the Sheffield Public Hospital is composed of 18-carat and 22-carat gold. It possesses the merit of being made and designed in Sheffield. The device has been cunningly wrought, and the waste involved in the process is shown from the circumstance that the ingot from which it was fashioned weighed six ounces at the outset, and was reduced in the course of manufacture to 10z. 12dw. 6grs. The design is in the style of the French Renaissance. The head of

the key is lyre-shaped, surmounted by a crown. It contains a Maltese cross, two fleurs-de-lis, and strawberry leaves. There are 22 diamonds from Jagersfontein of fine quality. The shank is of 18-carat and the crown of 22-carat gold, the more valuable metal being utilised for the upper portion in order to allow of the enamelling process being carried out the more freely. The enamel represents very faithfully the emerald, the ruby, and ermine. The pattern is carried out on both sides of the key, the complete crown being thus represented.

THAT gigantic wheel, one of the features of the forthcoming great Exhibition at Earl's Court, is likely to be overshadowed by legal difficulties. Lieutenant Graydon, late of the United States Navy, the inventor and patentee of the great wheel, has,

through his solicitor, Mr. E. Kimber, M.P., served notice on the directors of the Gigantic Wheel Company, of whom Admiral Sir W. Dowell is chairman, holding the Company responsible for any deviation from the terms of the license under which he gave them authority to erect the wheel at Earl's Court. The periphery of the great wheel, which has been constructed by Messrs. Maudsley, is now finished. It is an enormous erection, and it can be seen miles away in the outskirts of London. The wheel has been carefully put together under the supervision of engineers of the London Council, who will thoroughly test it. Lieut. Graydon estimates the value of his title in the Graydon Wheel at Earl's Court at £50,000, and he states that he is prepared to uphold his rights by legal action. Similar wheels are to be put up in Paris, Berlin, Vienna, Madrid, Rome, and St. Petersburg. In the meantime the carriages are ready for the Graydon Wheel at Earl's Court, and it is thought that it will soon be ready to go round.

AN important meeting in connection with the building trades was held at Retford, in consequence of a communication received from the local secretary of the Amalgamated Society of Carpenters and Joiners. It was

A MODERN HOUSE: PAUL OGDEN, ARCHITECT.

and Michael Angelo, the sooner that person ceased to be heard of the better.

THERE was a time when sign-painting was not considered unworthy of the attention of great artists, and the Royal Oak at Bettws-y-Coed is not the only hostelry in which famous painters have proved their gratitude for good cheer by leaving proofs of their skill. Among those who have thus condescended are included Jean Goujon, Gericault, Horace Vernet, Hogarth, and Watteau. Of late, however, this branch of Art has not flourished. In England pictorial signs have been almost confined to public-houses; and though in remote places the wandering cyclist or pedestrian may now and then see an old sign which suggests real character and power, such cases are now very rare. A Committee has now been formed in Brussels with the object of reviving the art of sign-painting, and prizes have been offered in connection with an Exhibition which will be held in the Belgian capital next July. The names of as many as fifty intending competitors have already been sent in. The promoters have been encouraged by the success of recent efforts to improve the designs and colouring of pictorial posters, a change from which, thanks to the help of several capable artists, the walls of Brussels have gained largely.

ultimately agreed that 6½d. per hour be paid to skilled workmen; that 56½ hours be a week's work; overtime at the rate of time and a quarter after 56½ hours; Christmas Day, Good Friday, and Sunday to be considered as overtime; all jobs within three miles be walked one way in employer's time, at the rate of three miles per hour; beyond three miles and under 20, all lodgings and travelling expenses to be paid weekly; beyond 20 miles, travelling expenses not less than once a month, and all lodgings. Town workmen sent to jobs over three miles from the shop shall not put an end to this engagement or be discharged except the job be finished or in case of neglecting their employment.

At the sale of the Art treasures of the late Duchess of Montrose, some very fine old silver was for disposal. A square-shaped salver, engraved by Hogarth, and the companion salver, was sold at 60s. per ounce; a large plain James II. tankard, at 36s. per ounce; a plain circular punch bowl, at 101s. per ounce; a Scotch quaigh, engraved with flowers, at 91s.; a pair of fluted column candlesticks, at 40s. per ounce; a set of three shaped tea caddies, chased with flowers, at 36s. 6d. per ounce; a falcon, won by Pic Nic, 1848, at 10s. 3d. per ounce; a plain punch bowl, at 13s. 3d. per ounce; a large ivory tankard, mounted with silver, £110; a parcel gilt Swedish tankard, £19, and a larger tankard on ball feet, the lid repoussé with the adoration of the Magi, £46—very good prices, considering the present state of the Silver Market.

The following British artists have sent pictures to the International Art Exhibition, Venice: Sir Edward Burne-Jones, Henry Coleman, John Collier, Henry Davis, Melton Fisher, Arthur Hughes, Edward Hughes, Hubert Herkomer, William Hutton, Holman Hunt, Sir Frederick Leighton, William Logsdail, Sir John Millais, Clara Montalba, Walter Oules, Alfred Parsons, Briton Rivière, Alma Tadema, and George Watts.

AN unknown and, therefore, all the more generous donor, has offered to the City of Liverpool a plot of land covering 108 acres, laid out as a recreation-ground. The City Solicitor states he is not at liberty to mention the name of the donor. There are some buildings on the land, the rents from which will nearly pay for the maintenance, leaving only a small charge on the City.

LONDON's latest lung—Deptford Park—is about to be laid out by the London County Council at a cost of £3,140. A cricket and general recreation ground will be formed, with a broad encircling raised path, margins planted with trees, &c. The scheme provides for sowing the recreation ground with grass seed, which means that it will probably not be available for games until the summer of 1898. If the area were turfed it could be opened for games next year, but the Council has not felt justified in increasing the cost by £910, which would be the additional expense of turfing the ground.

It is proposed to celebrate in November next the 200th anniversary of the death of Henry Purcell, and to raise a memorial in his honour. The celebration will take the form of a performance of some of the finest of his sacred works on a grand scale in Westminster Abbey, and for a memorial, it is proposed to provide a suitable case for the magnificent organ in the Abbey, which still

contains stops believed to have been part of the organ on which Purcell played. The cost is estimated at £2,000, and towards this amount the Dean and Chapter have promised £500.

BRISTOL must be added to the list of towns in which you may find prudes on the prowl. From that town has recently been addressed an indignant protest to the editor of the "Art Journal," concerning the character of the illustrations which adorn that decorous magazine. The writer of the protest follows the accustomed lines, finding fault with the "Art Journal" as a publication harmful to

TOWER OF THE NEW "OLD SOUTH CHURCH,"
NEW BOSTON, U.S.A.

the young, and abounding with "nudes and horrors." Oddly enough, the number that seems to have caused this fine show of indignation is the Easter one, which is devoted to an interesting account of the life and work of Sir Noel Paton, and is filled with reproductions of the very pictures that have made him the favourite artist of the large class of people who crave for symbolical and devotional art. To accuse him of "demoralising youths and maidens" seems hard. Are they not demoralized already?

THE bust of Shakespeare which has been presented to the Shakespeare Memorial Theatre at Stratford-on-Avon by the family of the late Sir Richard Owen, has had an interesting history. It has been regarded as a plaster copy of the original bust which formerly stood in the old Duke of York's Theatre in Lincoln's Inn Fields, and which, on the demolition of the theatre, passed to Mr. Clift, curator of the Museum of the College of Surgeons, through whom it became the property of his son-in-law, Professor Owen. He sold a Shakespeare bust to the Duke of Devonshire, who presented it many years ago to the Garrick Club, where it is at present.

There is ground, however, for thinking that the Garrick Club bust is in plaster while the one at Stratford is in terracotta; and the question arises whether, after all, the latter is not the identical bust that was formerly in the old Duke of York's Theatre, where it is believed to have been placed in the reign of Charles II. The point may be worth examination, as the theatre bust is among the earliest portraits of Shakespeare we possess.

MR. HAMO THORNYCROFT has broken through his usual custom of dealing with the figure in repose, or only in very gentle movement, and has sent to Burlington House a life-size statue of a dancer vigorously performing an energetic measure. The treatment of the lithe figure and swirling skirts is full of animation; while the modelling of the limbs and the composition of their lines are most skilful and expressive.

A HISTORY of "Punch" is bound to be capital reading. Mr. M. H. Spielmann announces that his work is far advanced, and he hopes to have it ready for publication in a few months' time. It will be in one volume, and will contain some hundred and twenty illustrations, portraits, and facsimiles. The literary side of the history, considering the amount of material at the disposal of the author, should be of great interest, and its artistic side cannot fail to be of the utmost importance when it is remembered that quite two hundred of the best artists of the present century have contributed to "Punch's" pages.

THE Town Council of Harrogate has decided to build a new Pump Room, for supplying the magnesia and some of the chalybeate waters. It will be erected at the top of the Valley Gardens, and will be constructed mainly of glass and iron, from designs by Messrs. Lockerbie & Wilkinson, of Birmingham, at a total cost of £1,035 10s. 8d. Contracts have been let to Lockerbie & Wilkinson, of Birmingham, and Mr. J. Stephenson, of Harrogate. The plan will be octagonal, 24 ft. across, with domed roof surmounted by a turret.

To minimise the danger of fire, it has been decided by the authorities of the South Kensington Museum in agreement with the Commissioners of 1851 to substitute concrete and mosaics for wood as materials for the floors throughout the east and west galleries, where the science collections and the valuable Indian Section, including the silks and other fabrics, are situated. The work has already been commenced, and will be completed in the course of the summer. It is noteworthy that for the mosaic decorative work, Italian workmen will be employed, as was the case with the tessellated floor of the adjoining Natural History Museum. It would appear that the Italians have almost a monopoly of this kind of decorative flooring.

THE Bridgnorth and South Shropshire Infirmary has been founded for upwards of sixty years, and the old building has been to modern eyes singularly ill-adapted for the work it was designed to accomplish. The new building, of which the foundation-stone was laid recently, is designed by Mr. E. C. H. Maidman, Edinburgh. The administrative block will face the roadway, and have an easterly aspect; the out-patient department is at the south end, and the kitchen, &c., at the north, the wards being on the west side. The hospital will accommodate all the patients on the ground floor, and provision is made for eighteen beds—viz., eight in the male ward, eight in the female ward, and two in a spare ward.

A DOCUMENT from the Works Committee sets forth results of a large number of works carried out. In October last, it will be remembered, the Committee reported on 32 jobs which had been carried out at a total cost of £63,061 or £3,000 less than the estimates. The Committee has now furnished particulars of thirty further undertakings, including the erection of buildings at Poplar and Blackwall Lane—in connection with which large unexpected expenditure was incurred—and the painting of Hammersmith Bridge, which, being carried out in mid-winter, and under circumstances of quite exceptional disadvantage, cost far in excess of the estimate. Despite these drawbacks, however, the total expenditure of the 62 works comes out at £178,863 as compared with the estimate of £176,086—or a deficit of only 1½ per cent. These figures constitute a justification of the department, for it must be remembered that the expenditure includes the cost of starting and organising the department. Mr. Holloway, the manager, further reports that works amounting in the aggregate to £230,544 are in hand, and upon them a balance on the right side is certain to be returned. This is essentially satisfactory.

IN connection with the Empire of India Exhibition at Earl's Court, an "Earls Court Art Union" has been established by the authority and under the sanction of the Board of Trade. The London Exhibition (Limited)—the proprietors of the exhibitions—purpose setting aside 15 per cent. of the gross amount received for season tickets, for the purchase of works of Art to be given as prizes in the drawings in which only season ticket holders will be permitted to participate. There will be 102 prizes, amounting in value to £172 15s. for each 2,000 tickets sold. This is one way of promulgating "Art"—the wrong way.

At the annual dinner of the Sheffield Master Builders' Association it was stated that unsuccessful efforts have been made to induce the Sheffield Architects to adopt what is known as the London Agreement, under which, in case of dispute, reference is allowed to a third person, but the hope was expressed that some arrangement would shortly be arrived at which would do away with the cause of complaint that the Sheffield builders contend they have at the present time.

ANOTHER meeting of the Committee of the Carlyle House Purchase Fund has been held at the residence of Dr. Garnet, C.B., British Museum. The secretary's report showed that considerable progress had been made in the matter of repairs and other

things necessary for the preservation of the house. It will be opened to the public as a museum containing many things of great interest in connection with Carlyle, but in the repairs and alterations changes only that are absolutely essential will be made, so that the house may be preserved for the nation in as near as possible the same condition as when Carlyle occupied it.

"GROOTE SCHUUR," i.e., "the large granary," South African home of Mr. Cecil Rhodes, or rather the picturesque old building which forms its nucleus, is a building which more than a century ago was occupied by an ancestor of the now famous Mr. Hofmeyr. A few years ago the homestead was simply a fine old Dutch house with a moderate extent of land attached. Mr. Rhodes, however, has enlarged it in height, has built a new wing, (containing *inter alia* a billiard room), and by adding on property after property to the original twelve acres has increased the estate to one compact block of about 1,000 acres, extending along the slopes of the "Devil's Peak" of Table Mountain for about three miles. In his restorations and enlargements Mr. Rhodes has not only preserved the monuments and memorials of the bygone residents of "Groote Schuur," but has done his best—and with great success—to retain the old quiet dignity of the Cape Dutch house. From a detailed description we learn that

AN OLD DUTCH HOUSE IN SOUTH AFRICA RESTORED FOR MR. CECIL RHODES.

every new thing in the house has been specially designed, and wherever possible hand-made by Colonial workmen. The dining room, library, and an adjoining room are panelled from floor to ceiling in plain teak panels. Antique Dutch is the prevailing character of the moveables in Mr. Rhodes' residence. Many of the articles, including the best, have been bought in the Colony, and but few have come from Europe. All are in excellent preservation, and some are as perfect as when they came from the hands of the old cabinet-makers who understood their craft so well. Dutch clocks, Dutch chairs, and Dutch wardrobes figure prominently in the various rooms. On the walls rich old tapestries, old prints, and old paintings, the latter including the portrait of a lady by Sir Joshua Reynolds (heirlooms of the Rhodes family), and a representation of Capetown and Table Mountain as they appeared early in the century, meet the eye. This painting is attributed to Richard Wilson, R.A.

THE disaster which befel St. Mary's Church, Shrewsbury, by the fall of a large portion of the spire and the demolition of the Nave during the great gale of February, 1894, aroused widespread interest and sympathy, and produced a liberal response to the appeal for funds which was issued by the vicar, the Rev. N. Poyntz. In the course of a few months between £8,000 and £9,000 was con-

tributed. The restoration has necessitated the expenditure of the whole of the money subscribed, and there are still parts of the edifice which need attention. The architect is Mr. Lloyd Oswell, Shrewsbury. The re-opening services have been held.

THE Earl of Ashburnham's collection of Greek coins to be sold this week at Sotheby's, consists of 253 coins, and, for its extent, is a singularly fine and most representative series. There is a romantic legend attached to the subject, that Lord Ashburnham, who was an enthusiastic collector in his younger days, carried his cabinet of coins about with him in his yacht; that some pirates amongst the Greek Islands captured them, and in consequence he gave up his hobby. But afterwards, accidentally seeing one of them exposed for sale at a dealers, he bought it, and subsequently from time to time made fresh additions to this small nucleus. The present collection consists mainly of the series acquired by Mr. Samuel Addington, a well-known collector, most of them coming from Lord Northbrook's sale in 1859. Others were obtained from Mr. Wigan. Amongst the most valuable items the following may be specially noted:—The three gold staters of Tarentum, the silver distater of Thurium, gold drachm of Bruttii, remarkable tetradrachm of Agrigentum impressed with the figures of two eagles tearing a hare (415 B.C.),

and showing on the reverse the monster Scylla; an archaic tetradrachm of Catana, struck before 476 B.C.; a tetradrachm of Segesta, with reverse figure of nude hunter accompanied by two hounds; two very fine medallions of Syracuse, one by Kimson, bears his signature in full, the other by an unknown artist, of whose workmanship only a second instance is known to exist; gold stater of Chalcidice, with head of Apollo, coined about 392 B.C.; a most beautiful tetradrachm of Amphipolis; a tetradrachm with remarkable portrait of Perseus; gold staters of Philip of Macedon, one being a unique variety coined at Rhodes, and bearing the Rhodian Magistrate's name; a gold stater of Pyrrhus, King of Epirus, with the head of Pallas, and on reverse a figure of Victory carrying a trophy; a remarkable silver stater of Delphi, believed to be unique, having a ram's head with dolphin under it on the obverse; a tetradrachm of Lacedæmon, with portrait head, attributed to Areus, King of Sparta; silver stater of Stymphalus, a town of Arcadia, with Hercules striking with his club (a very fine example of die-work); a series of the Kings of Syria; a number of staters in electrum (an alloy of gold and silver, occurring naturally as well as artificially produced); gold tetradrachms and a gold octadrachm of Egyptian monarchs; and a silver tetradrachm, bearing the portraits of Mark Antony and the celebrated Cleopatra.

THE Roman Catholic Church of S. Bridget, Liverpool, which has been in course of erection for two years, has now reached completion, and will be opened on the 26th, when it is expected that Bishop Whiteside will officiate. The Early English style has been followed, and the Church consists of Nave, Chancel and Aisles, and is principally lighted by triplet windows over the arcades, the pillars of which are of granite. The roof, floor and seats are of pitch pine. The Church has been built by Messrs. Roberts & Robinson, from designs by Messrs. Sinnott, Sinnott & Powell, Architects, of Harrington Street, Liverpool.

HE who had the cultured taste to bring together the collection now on view at the Goupil Gallery was, without doubt, a connoisseur. His treasures—and they are veritably such—convert the room which contains them into a miniature Museum of Art. Here are bronzes of Old Japan, of Antique Greece, of Ancient China; curious Persian brasswork as incense-burners in the form of peacocks incrustated with turquoise; a fine plaque of Japanese lacquer, decorated in low relief of ivory, with spirited figures; exceptionally handsome Chinese *cloisonné* vases, Damascus pottery, and ceramics of Italy, China and Spain. The mere enumeration of these things gives an idea of their collector's catholicity of appreciation, but the objects themselves must be inspected to judge of the soundness of his choice in each class. Most valuable of all, or, at any rate, the most actually beautiful section is that of Tanagra figurines, for they are in first-rate preservation, and are gems of sculptural grace, besides being extremely varied in character, of drapery-casting, attitude or movement. The pictures and drawings evince similar judgment in selection, and are most interesting.

THE London County Council has resolved to purchase a strip of land at the eastern corner of Wellington Street, at its junction with the southern side of the Strand, with a view to round the corner of the former thoroughfare, and increase the width of the latter at this point from 68 to 80 feet.

It is well known Birmingham Art Students are singularly successful in competitive work, and that the high record of past years is more than maintained is proved by the last report of the School of Art Committee just issued. The report states that in 1891, 1892, and 1893, the School stood conspicuously at the head of the Provincial Schools of Art in the national competition, and high as was the standard thus created, the School retained its position in 1894 even more markedly than in previous years. This development was unique in the history of Schools of Art. Whereas 28 medals and national book prizes were obtained in 1886, the total last year was 76. The nature of the works rewarded was also satisfactory as showing the influence of the School upon every branch of the artistic work, and especially upon the industrial arts of the city. A gold medal was awarded for modelling from the life; of 12 silver medals, six were obtained for modelling and modelled design, two for measured architectural drawings, two for design, and two for painting; of 18 bronze medals, seven were for modelling and modelled design, seven for design, two for painting, one for architectural drawings, and one for studies of heads from life; and of 45 national book prizes, 24 were for modelling and modelled design, seven for design, seven for painting, five for architectural design and drawing, one for etching from Nature, and one for historic ornament. These awards included two silver and two bronze medals and five national book prizes, all awarded either for modelling or design, to students of the Victoria Street Branch School—an award exceeding that of many Central Schools of Art, and which is regarded as very encouraging to a Branch School mainly intended for students in the jewellery and kindred trades. In 1894 there were 458 candidates for the free admissions and scholarships provided by the endowment funds, against 384 in 1893.

THE Church of St. David, Denbigh, erected by Mr. Lloyd Samuels, of Wrexham, from designs by Mr. Lloyd Williams, architect, Denbigh, has been consecrated. It is in the Early English style of architecture, and cost £2,000, exclusive of the Chancel which was given by the late Dr. Turnour and cost £1,500. The Church will accommodate 700 persons. A fine Reredos of alabaster, representing "The Last Supper," has been placed in the Chancel, at a cost of £350, subscribed for as a memorial to Dr. Turnour by his friends. The Pulpit, of pure alabaster, given by the Misses Townshend, and the Reredos are the work of Messrs. Earp & Hobbs, of London, whilst an alabaster Font and a costly copper-brass Lectern (also gifts) are the work of Messrs. Jones & Willis, of Liverpool. The Nave is divided from the Chancel by a beautifully-worked Screen of copper-brass. The Choir Stalls are worked up from the old oak, and are very effective. In the east end is a stained window, and also

THE CLUB HOUSE, NEWBERRY STREET, NEW BOSTON, U.S.A.

two side Chancel windows by Ballantine, of Edinburgh; these being included in Dr. Turnour's gift. The entire cost of the Church, including the many gifts, has been about £6,000.

THE Church of Saint Trophune or Trophimus, at Arles (our sketch of the Cloisters is from a charming drawing by Mr. C. E. Mallows), was founded on the ruins of the Roman Prætorium and consecrated in 606. The Choir, however, is of later date, and probably of about the 15th century. The interior effect of the Church from a painters' point of view is most impressive from its simplicity of design. The different walks of the Cloisters have different dates. That shown in the illustration—the north side—is pure Romanesque and a wonderful example of the period, and dates about the 9th century. The east side dates about the first quarter of the 13th century. The west side, perhaps the finest and most interesting portion of the whole, has pointed arches, and is pure Gothic of the 14th century. The south side is later still and about the 16th.

THE black staircase in Durham Castle (now the University), is a title which well conveys an idea of its general effect. It was erected by the munificent Bishop Cosin in the year 1665. He is also responsible for the remarkable Classic Porch at the principal entrance in the Semi-Quadrangle, approached by a circular flight of steps built in front of the Gothic door of Bishop Hatfield. Bishop Cosin came into power at Durham with the Restoration, and generally restored and repaired the whole Castle. The carving indicated in Mr. Mallow's drawing is strong and vigorous alike in design and execution.

BLASTING operations on a gigantic scale were witnessed at the Penrhyn Quarry at Bethesda, when the huge cone-shaped rock, known as Talcen Mawr, which rises out of the quarry to a considerable height, and forms a picturesque and prominent feature and one well-known to the thousands of visitors and tourists who have from time to time visited these well-known and old quarries, was removed. Thousands of people flocked to the neighbourhood of the quarry to see the operation take effect, amongst those present being Lord Penrhyn. It was computed that the rock to be dislodged represented about 125,000 tons, though other estimates put it as high as 200,000 tons. The operation was quite a success, and it is expected that by its displacement the better kind of rock will be more obtainable. The boring operations in connection with the work were commenced about five months ago by three men of the name of Davies, who are brothers, and have been employed in the quarry since they were boys. A passage was cut through the centre, 20 feet long by 7 feet wide and 7 feet high, with branches at the end, right and left, forming into two chambers. These were arched in brick and cement, a small sloping tunnel being left to run in the blasting powder, which was specially manufactured, and consisted of 280 casks, each containing 56 lbs., or a total of 7 tons. This being run in through the funnel left, was laid with an instantaneous fuse, 37 feet long, bedded in clay, connected to a 20 minutes time fuse. There have been bigger blasts carried out before, but the fact of the Talcen Mawr being so well-known added additional interest to the undertaking.

THE work in connection with the building of a new Baptistery at Christ Church, Lancaster (which is being erected by subscription as a memorial to the late Vicar, the Rev. Canon Bartlett), was commenced last week, and is expected to be completed during the Autumn. The Baptistery will be carried out at the West end, under the West window—an Arcade of three arches being inserted under the window, the piers having shafts and caps forming the pedestals to two figures of angels bearing shields, with emblems, carved in the solid stone. The centre portion of the Baptistery containing the Font will be a semi-hexagonal Apse in plan, having mullioned windows with traceried heads in each side, flanked by two smaller side windows. The roof will be of panelled wood, covered with lead. The stone used throughout will be Lancaster stone. The contractors are: for masonry, Mr. T. Mawson; for joiners' work, Messrs. R. S. Wright & Sons; and plumbers' work, Messrs. Calvert & Heald—all of Lancaster, the design being by Messrs. Paley, Austin & Paley, Architects, of Lancaster. The estimated cost is about £500.

As a tentative and suggestive project, Mr. T. F. Bentley, to whom has been entrusted the task of preparing plans for the new Roman Catholic Cathedral at Westminster, has sent in two admirable plans, recalling to some extent, features to be found in the great Churches of San Ambrogio, San Vitale and San Marco of Venice. The scale is 350 ft. by 160 ft., the material brick; the arrangement includes a raised monk's Choir in the Apse, and stalls for the Westminster Chapter in the Sanctuary, with a subterranean Chapel, or confessional, as in San Ambrogio. The width of the Nave is 60 ft., and the length of the Transepts 160 ft. Cardinal Vaughan has already collected, in cash and in promises, over £50,000, and donors of £1,000 will obtain the privileges of Founders. At least £100,000 will be required to roof in and complete the shell of the structure.

MR. POYNTER, the recently appointed Director of the National Gallery, has made his first Annual Report to the Lords Commissioners of the Treasury. Confirmation is given to the announcement that the Trustees have accepted the control of the collection of the modern British pictures which Mr. Henry Tate has presented to the nation. Such pictures as are considered suitable have been selected, and a deed of gift has been duly executed. Public attention is again called to the want of space for the proper arrangement of the Art treasures in Trafalgar square. In many of the rooms, the Early Flemish especially, valuable pictures are hung in places where they cannot be sufficiently seen, much less studied. Several branches of Art, notably the French School of the seventeenth and eighteenth centuries, are ill represented, and it will shortly be impossible to find space for the necessary additions.

SOME stir has been caused in architectural circles by the announcement that the important post of architect to the Ecclesiastical Commissioners, held by the late Mr. Ewan Christian, has been given to Mr. Carøe. Mr. Carøe has the misfortune to be too young a man in the view of more than one "Academic ante-chamber," albeit, he has had much experience in Church building. The position being one with large emoluments and great responsibilities, quite a number of men in the profession claim to be of mature years and sufficient age, all of which rather amuses us. It should have gone to an older Architect. The importance of the position is, of course, evident from the fact that all plans for new Churches to which the Commissioners contribute have to be approved by their architect.

WITH regard to the proposed "Restoration" of Orford Church the following, keenly controversial, has been addressed to the Committee by a recipient of the printed appeal for subscriptions:—"I have received your circular appealing for subscriptions to restore that priceless jewel—your lovely parish Church. I am, referring to the glorious portion of the fabric which remains as yet intact, and almost as its gifted creators left it. Visiting the Church, a year ago, I was charmed with the boarded-off portion (Nave, North Aisle, Chancel, Tower, South Porch, &c.), and pray you to leave it as it is, with such repairs solely as are requisite for its maintenance, as a supreme work of Art. Surely, the disastrous depuration of the South Aisle as now "restored" is glaring enough to discourage further excursion in that direction. Vulgar modern ecclesiastical small wares hideously out of place; the beautiful ancient carved seats crucified against the walls or against appalling stacks of hot water pipes slowly destroying them; their places usurped by vapid modern imitations. What has been so handled is gone for ever; sacrificed on the cruel altar of modern folly.—Larner Sugden, Leek."

The Builders' Journal.

MEN WHO BUILD.

No. 12.

MR. CHARLES H. HEATHCOTE.

THREE and twenty years ago Charles Henry Heathcote commenced practice as an Architect in Manchester, and you have to look at him twice before you can believe it. Well favoured of the gods, they have trimmed his beard—as only Parisians know how—to a nicety; but that, and the unmistakable tinge of green in his tweed suit upon his back are

the only æsthetic things about him. Charles Heathcote is not a dreamer of dreams. Manchester has not room for many, and so he tolerates a telephone in his private room

in case at any moment he should be tempted that way where madness lies.

Thirty years ago this smart provincial man was sketching fonts and pew backs in Normandy, drinking Italian wines instead of the Italian "Spirit" in Florence, and anon making measured drawings of half the old Churches in England. His industry was undoubted, for, nestling among the treasures of his youth—the treasures men always linger over in their happy moods—are volume upon volume of measured sketches, all drawn to a uniform style of scale, and bound as only an enthusiast would bind them. Charles Hanson, of Bristol—one of Pugin's men—first took Charles Heathcote in hand, and when he had got a smattering of Gothic well ground into him, he migrated to Lockwood & Mawson, of Bradford, from whom he came to Mr. Salamons, of Manchester, a few months before he made a plunge for himself, at the giddy age of twenty-three. So many of our most successful men have started work before they were well out of their teens, that it seems to be a safe axiom to start early in life. At the age of eighteen Heathcote gained a silver medal of merit at the Institute for measured Church work, and the three sheets of drawings, framed, and recently covered with a respectable layer of dust, are "skied" over the mantelpiece in the private room in Princess Street; and all your persuasive energy—which has been known to move mountains—fails to bring them down from their position. When he was twenty he sent in 100 sheets of drawings for the Soane Medallion, and a roar of hearty Lancashire laughter accompanies the admission. He had more pluck in those days than he has now, and that is why he leaves competitive work as far behind as possible. What he did in the early days of practice is of little moment, but he must have trained himself for a full business career, for to this day he possesses a large practice in arbitration work, light and air questions, and party structures, and is continually commissioned for the judicious purchase of land. This in addition to his artistic work—work which has given to Manchester some of its finest, if not its merely largest, buildings.

You do not hesitate to assert that the Lancashire and Yorkshire Bank, facing down King Street, "knocks spots" off anything of the kind London can show. London, in fact, does not possess a single "house" so carefully

MR. HEATHCOTE'S OWN HOUSE AT BUXTON.

detailed and finished as the banking chamber of the Lancashire and Yorkshire Bank in Manchester. King Street has been and still is a happy hunting ground for Charles Heathcote, for the pen sketch, taken from the steps of Alfred Waterhouse's Prudential Assurance Office, re-produced on this page, shows no less than portions of four large blocks of his work, that of the Manchester Trust Company, which centres the picture and forms the subject of a photographic reproduction also, being in Mr. Heathcote's individual opinion the finest piece of work he ever did. It is interesting to examine these two illustrations and to trace the development of the design from its first conception until its final construction, the

the extension of the Blind Asylum at Old Trafford; the Institute of the Blind in Deansgate; the Convalescent Home at Southport; the Commercial Union Assurance Company, adjoining his own Lancashire and Yorkshire Bank; the Friends' Institute at the corner of Mount Street, Piccadilly (Manchester); and the additions to Longford Hall for Mrs. Rylands, for whom he designed and erected the superb Rylands' Memorial in the Manchester Southern Cemetery. It is worthy of note, and Mr. Heathcote impresses this upon you, that credit should, in this instance, be given to Messrs. J. & H. Patteson, of Manchester, to whose care and fine taste in marble work, much is due.

"There are two secrets in successful

and the architect. And these Northern fellows do just as good work, have magnificently appointed offices, compared with the frowsy dens of many Southern practitioners, and uphold the dignity of their calling in a fashion that would startle some of their London brethren. Charles Heathcote believes in the Northern method of things. From morning until night, three days a week, a continuous stream of visitors ascends to his second floor in Princess Street—contractors and clerks of works, master masons and decorators, sanitary experts, and testing and ventilating engineers—a body of workers in the great and noble art of building. Dust settles nowhere but upon those three framed drawings which won him his silver medal

A VIEW OF KING STREET, MANCHESTER, SHOWING WORKS BY CHARLES HEATHCOTE, ARCHITECT.

circular-headed window on the ground floor and the improvement of the gable end marking the earnestness of the architect. Mr. Heathcote is also erecting in King Street, adjoining the additions to the Prudential, upon which Mr. Waterhouse is now engaged, the new offices of the Alliance Insurance Company, upon a fine corner site. The fronts are in yellow stone and of reputed Renaissance in style, far more placid than the front of the Lancashire and Yorkshire, designed more in accordance with the dictates of managing directors than the dictates of reputed Architecture. Other important works in the Manchester district by Mr. Heathcote, are the Concert Hall and

practice," says Mr. Heathcote in reply to your query; "never guess at an estimate, and avoid extras—the rest, the mere designing and planning, comes easy enough." Mr. Heathcote, himself a Fellow, for some years, of the Institute, spoke only half the truth. He omitted the Lancashire grit, the mastery of difficulties, the plain upstanding determination to succeed, the freedom from the canting hypocrisy of men who teach a rotten creed of professional etiquette which they never practice. It is an uncommon thing in the North to detect a building in course of erection without discovering a notice, boldly placed in a conspicuous position, announcing the names of the building, the contractor,

eight and twenty years ago, and the whole place is a mass of life, instead of a dead philosophy which sends the dreamer home on the top of an omnibus in place of a Pullman car. The refinement of Charles Heathcote is in his methods as in his works. The front of the Manchester Trust Building, in King Street, the internal details of the Lancashire and Yorkshire Bank, the elevations of the Alliance Buildings, and the Concert Hall of the Blind Asylum at Old Trafford, are the work of a refined mind. Out at Buxton, five and twenty miles away, he has built himself a house, in which most of his designs are conceived. He finds the fifty mile daily train ride a delight.

A CHAT WITH Mr. PAUL OGDEN, HON. SEC. OF THE MANCHESTER SOCIETY OF ARCHITECTS.

THERE must be something remarkably generous in the disposition of men who devote most of their leisure moments to the fulfilment of honorary duties thrust upon them by their natural desires to do something—much or little—for the benefit of others. It must be an extremely thankless task to steer a provincial professional Society through the maze of professional etiquette and yet retain the independence due to a man practising his profession amidst the members of his Society. We do not seem to

envy the position, nor the man who by it becomes, metaphorically, the waste basket for all the ills his province is architecturally heir to. Paul Ogden himself is somewhat of a sceptic, but a kind-hearted one, ready to relieve way-farers on the road of experience, travelling towards the gates of Canaan.

The Honorary Secretary of the Manchester Society of Architects does things well. His suite of rooms in King Street—the Broad Street of Manchester—contains a reception room, quite charming in its simplicity and cosiness. He has patronised lincrusta for his dado; and his filling and frieze of blue smacks of our friend Essex, without whom so many architects would possess heavy hearts. A Chippendale overmantel, “picked up” up at a wayside cottage, adorns the mantelpiece, upon which a unique tortoiseshell jewel cabinet of wondrous workmanship almost lures you from the paths of rectitude and uprightness. Colour studies of stained glass work and frieze designs stand upon easels in the corners, and a really magnificent “grandfather,” by George Baddely, ticks away with the solemnity due to his artistic surroundings. Every perspective upon the walls is from Mr. Ogden’s own pen and brush. He himself is one of those few conscientious men who dream for love’s sake—and love to dream—down to the very dregs of idealism. Gotch’s fine work of the English Renaissance is upon the green baize table cover; and at an old escritoire in a corner by the fireplace Paul Ogden sits to chat of the Architectural instincts of Manchester. You are welcome as a being from the outer World, and an hour slips round on the face of that placid clock before you have touched upon many subjects dear to the hearts of both of you. How Paul Ogden came to settle down to practice in Manchester you do not enquire; but you remember him as a pupil—a four hundred guinea pupil—years ago in Bournemouth; and to-day he assures you that, rumours to the contrary notwithstanding, his masters did actually “carry out” a row of shops and

a suburban villa during the period of his apprenticeship. Perhaps it was this experience of architectural things that instilled him with the desire of thoroughness; that impelled him to take his coat off to study, after so many years of his young life had been almost wasted; that taught him to rely upon himself when others failed him. Paul Ogden is thorough beyond all things. He can trace the development of Gothic design as few others can trace it; he can get a precedent for everything he does, and a reason for everything he does not, and no worldly consideration would tempt him to violate the requirements of good work. Although the drawings of the first house he ever built hang in their allotted place upon the wall, he retains them as a beacon light whereby to steer his future course.

The Society over which Paul Ogden holds secretarial sway was instituted more than thirty years ago. It is one of the most prosperous Architectural Societies out of London. Its library is not extensive—it contains some 400 volumes—and the magnitude of the fine collection of books at the Institute in Conduit Street may be fairly judged by the fact that at Manchester, during the past year, only nine volumes were taken out for reference purposes. In the Metropolis of the North the one important question exercising the minds of architects and contractors alike is the vexed one of depositing priced quantities. Mr. Ogden has naturally had this matter very vividly before him, and goes into all its various details for your benefit. For many years the practices of contracting have remained in a very undignified condition in the North. Architects there are who insist upon letting their contracts to separate trades, others who let the whole lot to one contractor, who himself enters into sub-contracts, but is directly responsible to the architect for the whole work. There can be no question which is the most costly proceeding, and which entails the most labour upon the architect. Many instances have recently occurred in which the non-depositing of the priced quantities by the contractor has led to many unseemly disputes, and efforts have been made to bring the matter to a head. On the 21st of November last the

would give a definite reply, they passed the following resolution:—“That in reply to the letter of the Society of architects, the question be asked whether the Architects will agree to the quantities being taken, and the accounts squared up at the completion

A LODGE: BY PAUL OGDEN.

of the building, by an independent surveyor, and that the quantities form part of the contract.”

The reply to this was:—“That this Committee (of the Manchester Society of Architects) is not prepared to recommend any interference with the *individual practice of Architects* in respect to making out quantities. It is, however, prepared to advise making the quantities a part of the contract.”

And here the matter sticks, except that a meeting of architects was held about a month ago with little result. To aid in the settlement of the matter, Mr. Ogden prepared a schedule of answers from various Architectural Societies in the Kingdom—from Glasgow, Dundee, Leicester, Birmingham, Leeds, Nottingham and Sheffield—and it was found that custom and opinion were as wide apart as the Poles.

A HOUSE BY PAUL OGDEN, ARCHITECT.

following question was asked—by the Subcommittee of the Manchester Society of Architects—of the Building Trades Association:—

“Whether, in the event of the Society undertaking to recommend their members to subdivide the contracts into the different trades, the members of your Association would be prepared to deposit their priced quantities with the architects?”

Before the Building Trades’ Association

ST. BRIDGET’S new Church, Bevington Hill, Liverpool, which is to be opened on the 26th inst., is not by any means a pretentious structure externally, although it is in its internal aspect particularly attractive and comfortable. Built to accommodate about 650 worshippers, it consists of a Nave, Chancel, and Aisles, the lines of demarcation between the last-named and the main body of the Church being indicated by massive columns of blue-grey granite from County Down, the bases and capitals of these consisting of stone, which gives an admirable contrast to the highly-polished columns, and which in the capitals will give scope for neat sculptured work when additional funds afford it. The roof, which is lofty, shows massive pitchpine in the woodwork, from which material the solid-looking pews, &c., are also formed. The light, which is admitted principally from triplets in the Clerestory is also good. The Organ-loft overlooks the Chancel, from which it is separated by a beautiful Screen, in which small columns of the beautiful Irish granite already described are apparent.

DO LOW FIREPLACES GIVE MORE HEAT?

THE supposition that fuel burnt in a low fire gives out more heat, has arisen from the experimenter not reflecting that his hand held over the low fire feels not only the heat radiated from the fire itself, but also that reflected from the hearth close beneath it, which second portion, if the grate were high, would have room to spread or radiate downwards and outwards to the more distant floor or carpet, and to warm them. The notion that the fire, because near the floor, must warm the carpet more, springs from what may be called an error in the logic of the reasoner, who is assuming that the hearth, floor and carpet, being parts of the same level, are in the same predicament; the truth being, however, that in such a case the portion of the hearth which is within the fender gets nearly all the downward rays, and the carpet almost none—as a candle held before a looking-glass at a moderate distance diffuses its heat pretty uniformly over

THE CHURCH OF LORD BEACONSFIELD.

HUGHENDEN Church stands within the park of Hughenden Manor, at its furthest extremity. It is of flint and stone, and is almost entirely modern, having been rebuilt in 1875. The account of the Church given in "Cathedrals, Abbeys, and Churches," for May, says it is effectively placed upon the slope of the hill, and is almost surrounded by trees. The very first object which strikes the eye of the visitor in the neatly-kept churchyard, is the Tomb of Lord Beaconsfield. The three red granite panels which contain the inscriptions, are built against the outer wall of the De Montfort Chapel at the eastern end of the Church, closely adjoining the Chancel. The effect is somewhat inelegant, and the low iron railing which surrounds the wreath-strewn space is most unornamental. The right-hand panel commemorates Mr. James Disraeli, third son of the author of "The Curiosities of Literature"; that to the left Mrs. Sarah Brydges-Williams, who left Lord Beaconsfield a fortune, "and was buried at her desire in this vault." Upon the central panel is inscribed: "In memory of Mary Anne Disraeli, Viscountess Beaconsfield in her own right, for thirty-three years the wife of the Right Honourable Benjamin Disraeli, Lord of this Manor; ob. December, 1872." Beneath are the simple words, "The Right Honourable Benjamin Disraeli, Earl of Beaconsfield and Viscount Hughenden, K.G., born December 21, 1805; died April 19, 1881."

Over Lord Beaconsfield's accustomed seat in the Chancel, now marked by a brass plate with an inscription, is the beautiful tablet of Sicilian marble, erected by Queen Victoria. By the side of the memorial are fixed the banner and insignia, removed from St. George's Chapel, Windsor, of this "most noble and puissant Prince," as every Knight of the Garter is described, upon his stall. The stained glass in the east window is the executors' tribute to Lord Beaconsfield's memory. The large west window was filled with stained glass with part of the "National Memorial Fund"; and the south window was the offering of Oxford Undergraduates.

SEWAGE DISPOSAL IN HAVRE.

THE City of Havre has practically no system of sewerage, its sanitary condition, like its architecture, being still mediæval. The result of defective drainage and sewerage are polluted subsoil, damp foundations, sodden and tainted basement walls, and sewage laden gas atmosphere. The soil in the low lying sections of the city is always saturated with water, charged with pathogenic matter, and the foundation walls of the houses are in direct contact with the soil. Added to this most insanitary conditions of the dwellings, the atmosphere is poisoned by exhalations from cesspools and privies situated either in

the building or courtyard. Rain and household water run along the street gutters and pass into the harbour. At times, under the pressure of epidemics, the quantity flowing along the gutters is increased by a system of flushing, which carries an increased quantity of decomposed organic matter and street filth into the docks or harbour; but even this system of transferring filth from one part of the city to the other is practised only during epidemics. The method of getting rid of excretal matters is the most primitive and dangerous imaginable, consisting in placing small moveable receptacles beneath the seat into which the excreta fall. When full the receptacles are removed and carted off in large vans to be emptied and cleaned, being replaced meanwhile by fresh receptacles. The vans, laden with the contents of many privies, traverse the most frequented streets during business hours, filling the air with noisome and most unwholesome, unhealthy emanations. To say nothing of the unsightliness of the vans when moving in procession, they frequently stop in front of the open doors or windows of dwellings as long as it may suit the convenience or pleasure of the drivers, who seem quite unconscious of the nuisance they are causing. Under such an insanitary regime, no surprise need be felt that Havre, with all its natural advantages of climate and locality, was scourged by cholera in 1892; by an unusual prevalence of diarrhoeal and dysenteric diseases during the summer of 1893; by an epidemic of small-pox in the spring; and one of typhoid fever in the autumn of 1894. Notwithstanding the admirable situation and unsurpassed climate of Havre, its rate of mortality is more than that of London.

New Union Offices are shortly to be erected at Townhead, from plans by Messrs. Butterworth & Duncan, of Rochdale.

A NEW Church, &c., is to be built at Ystrad Rhondda, Ystradfogwg, Glamorganshire, from plans by Mr. E. M. Bruce Vaughan, of Cardiff.

THE Urban District Council of Radcliffe, Lancashire, are about to build a new Technical School in Whittaker Street, the architect for which is Mr. E. Grundy.

TENDERS are being advertised for for a new Lecture Hall and School at Consett, Durham, Messrs. Armstrong & Knowles being the architects.

THE Congregation at the Northcote, Street Baptist Chapel, Stockport, have decided to build a new Chapel in Bowerfield Lane, at a cost of £2,500.

The Memorial Stone of the new Liberal Club, which is being erected at an estimated cost of £600, in Leeds Road, Wind Hill, Leeds, was recently laid by Mr. T. Ellis.

THE Newcastle Dental Hospital, which is situated at the corner of Nelson Street and Clayton Street, was formally opened by the Mayor of Newcastle, Alderman W. H. Stephenson, on Monday afternoon, the 22nd ult.

A NEW Church erected in the Micklehurst portion of Mossley, which is dedicated to All Saints, was recently consecrated by the Bishop of Chester. The Church has long been needed, and the full cost of erection and furnishing will reach £4,000.

Vandyck's portrait of the Marchese d'Isipola has been sold by auction for 50,000 dols. to Mr. Sedelmeyer, of Paris. This is the highest price ever realised in America at an auction sale for a single canvas, although two Meissoniers together once brought 66,000 dols.

ON Saturday, six memorial stones of a new Wesleyan Sunday School in Church Lane, Marple, were laid. The new School is being erected on the site of the old erection, and will mark the Centenary of the Sunday School Institution in Marple. The cost is estimated at about £1,500.

AN addition is about to be made to the premises of the Young Men's Christian Association at Glasgow, of a building which is to serve as a Residential Club for young men, and a Bible Training Institute. It is expected that the extension, including the furnishing, will cost about £25,000.

THE MANCHESTER TRUST BUILDING, IN KING STREET: BY CHARLES HEATHCOTE.

the whole, but if moved close to one part of the glass it overheats and probably cracks that part, leaving the rest unaffected. A low fire on a heated hearth is to the general floor or carpet of a room, nearly what the sun, at the moment of rising or setting, is to the surface of a field. The rays are nearly all shooting upwards from the surface, and the few which approach it slant obliquely along, or nearly parallel to, the surface, without touching, and therefore without warming it. Striking proof of the facts here set forth is obtained by laying thermometers on the floors of a room with a low fire, and of a room with a fire, as usual of old, at a height of about 15 or 16 inches above the hearth. An experiment tried in two such rooms, in both of which thermometers on the pianofortes, four feet above the floor, stood at 62 degrees, showed the carpet not far from the hearth to be at 56 degrees with the low, and at 73 degrees with the high fire.

A SILK AND TECHNICAL SCHOOL FOR LEEK.

REVIVING AN ENGLISH INDUSTRY.

CONSIDERABLE efforts have of late been made with a view of giving silk manufacture in England the ascendancy it once possessed, and the Committee of the Leek Urban District Council deems it its duty to provide such means as lie within its power to further this effort. It is now endeavouring to establish a Silk School in the county. Plans and rough estimates for the erection and fitting up of such a School have been prepared by Messrs. W. Sugden and Son, of Leek. The position of the new building, say the Architects, has been determined by the necessity of having it as contiguous as possible to the existing School of Art, and the other popular educational provisions of the existing Institute, with a careful avoidance of damaging the light

8 ft. by 8 ft.; site for extra class room when found indispensable, 25 ft. by 22 ft. On the first floor: Master's room, 11 ft. by 18½ ft., with gangway of communication to the principal's room in the Nicholson Institute Library; commercial and domestic school, 40 ft. by 26 ft., for practical and theoretical instruction in book-keeping, commercial correspondence, French, Latin, shorthand, &c., and in hygiene, sick nursing, ambulance work, domestic economy, dressmaking, millinery, cooking, laundry work, &c.; science lecture theatre (with store room), 35½ ft. by 22 ft., for teaching in theoretical organic and inorganic chemistry, theoretical and applied mechanics, mathematics, electricity and magnetism, physiology, botany, natural history of silk, &c. The building will be of substantial but economical construction: brick built and tiled exteriorly as the adjoining Nicholson Institute, windows of wood painted white and glazed with crown glass, floors of concrete or asphalt (except to

aspect. A rough estimate of the cost of the School has been made as follows: £2,500 for building purposes; fittings, £500; freehold land, £250; total cost, £3,250.

MOORISH STUCCO.

MOORISH stucco appears to be harder, closer in texture, tougher, and much less absorbent than gypsum or plaster of Paris when set in the usual manner. Lime alone, as ordinarily slacked, would not give any such texture, even if it could be manipulated into similar ornamental forms. Moorish stucco is almost, if not quite, identical with Indian "Chunam"—a substance produced much in the same way as the fine stucco of the Romans. In the native treatment of all these substances four things have to be generally observed:—Firstly, to employ the finest lime only; secondly, to mix it with

and air of the present structure. Consequently the new building has been set back so as to leave a sufficient fore-court (which will be utilised) between it and the adjacent cottages, which are only of low height. The accommodation comprises—On the ground floor: External vestibule, entrance and staircase, &c. weaving shed, 40 ft. by 40 ft. for theoretical and practical instruction in silk weaving and manufacture, pattern analysis, card-cutting, drawing and designing, loom construction and manipulation, machine construction and drawing, history of textile fabrics and designs; mechanics' and joiners' shop, 34½ ft. by 26 ft., for manual instruction in wood and iron and for study of building construction; chemical and dyeing laboratory, 35½ ft. by 22 ft., including balance room and chemical stores or preparation room for studying and practice in organic and inorganic chemistry and silk dyeing; open fore-court to last, 30 ft. by 34 ft., for certain dyeing processes; gas-engine room,

the master's room, which, with the lecture theatre gallery will be of wood; and the entrances and corridors which will be red quarries; and the staircases which will be of stone). The heating will be by low pressure hot water, the boiler placed in an extension of the existing stoking to which an external access from the fore-court is provided. For ventilation, fresh air will be admitted behind the hot-water pipes or coils and sufficient extract provided, aided probably by a Blackman fan driven from the shafting. The fanlights of all windows will also open wide for summer or emergency ventilation. For the drainage a rapid fall to the North is secured by the natural declivity of the site and the land between it and the public sewer. The drainage, of course, will be on the most approved principles, thoroughly disconnected, laid in concrete, on straight lines from manhole to manhole, with inspection chambers, lamp-holes, &c., as necessary. The greater part of the lighting is by windows of North

pounded earthenware; thirdly, to beat it thoroughly; fourthly, to use saccharine substances to retard the setting and keep the mass plastic under the tool.

ON Sunday week the new Choir of Bristol Cathedral was opened, on the completion of that section of the work of restoration of which it formed part.

A MEMORIAL Cross of a Celtic type, about 12 ft. high, has been executed in Scotland, and sent to Chicago for erection at the grave of the late John W. Root, the Architect.

THE excavations conducted by the American Institute on the site of the ancient Temple of Hera at Argos, have now been completed. Two fine marble heads of Amazons from the metope of the Temple have been discovered. Professor Waldstein, the director of the excavations, will start for England in the course of the present week.

BUTTRESSES.

IT need hardly be remarked that Buttresses are necessary supports to a lofty wall. A wall of three feet in thickness, with Buttresses projecting three feet more at intervals, is much stronger than a wall of six feet thick without Buttresses. A long unbroken mass of buildings without light and shade is monotonous and unsightly; it is evident, therefore, that both for strength and beauty, breaks or projections are necessary in Architecture. We will examine in which style, Christian or Pagan, these have been most successfully carried out. Pointed Architecture does not conceal her construction, but beautifies it. Classic Architecture seeks to conceal instead of decorating it, and therefore has resorted to the use of engaged columns as breaks for strength and effect—nothing can be worse. A column is an architectural member which should only be employed when a superincumbent weight is required to be sustained without the obstruction of a solid wall; but the moment a wall is built, the necessity and propriety of columns cease, and engaged columns always produce the effect of having once been detached, and the intermediate spaces blocked up afterwards. A Buttress in Pointed Architecture at once shows its purpose and diminishes naturally as it rises and has less to resist. An engaged column, on the contrary, is overhung by a cornice. A Buttress can be made to project such a distance as to produce a fine effect of light and shade. An engaged column can never project far on account of the cornice, and all the other members necessarily according with the diameter of the column, would be increased beyond all proportion. Flying Buttresses, those bold arches by which the lateral thrust of the Nave groining is thrown over the Aisles and transferred to the massive lower Buttresses, again demonstrate the true principles of Christian Architecture, by the conversion of an essential support of the building into a light and elegant decoration. Who can stand among the airy arches of Amiens, Cologne, Chartres, Beauvais, or Westminster, and not be filled with admiration at the mechanical skill and beautiful combination of form united in their construction? Are the revived Pagan buildings constructed with such superior skill as to dispense with these supports? By no means; the vaults of St. Paul's, mere coffered semi-arches, without ribs or intersections, have their Flying Buttresses; but as this style of architecture does not admit of the great principle of decorating utility, these Buttresses, instead of being made ornamental, are concealed by an enormous screen, going entirely round the building.

ART APPRECIATION IN SHEFFIELD.

TWENTY-FIVE PER CENT. MORE THAN LONDON PRICES.

THE sale of the late Mr. Turner's fine collection of pictures, was undoubtedly the most important in point of quality held in the Sheffield District since 1868. Then a choice collection of Art treasures belonging to a local man, was dispersed, including Linnell's famous "Sheepfold." The sale last week attracted crowds of buyers—private individuals as well as dealers—from various parts of the country. The total sum realised was just over £15,000, and it is satisfactory to note that Sheffield purchasers held their own, many of the best works passing into the hands of local Art lovers. The sale lost nothing by being held in Sheffield, instead of being transferred to the Metropolis, and more than one London dealer took occasion to compliment the auctioneer not only upon the ability with which the sale had been conducted, but also upon the excellence of the prices realised. After the first day's results, a leading London dealer wrote to Mr. W. M. Edon, "Allow me to congratulate you upon the very able manner in which you conducted the sale and achieved a success unparalleled, I believe, in Yorkshire. All London dealers will agree with me in saying that at —'s (mentioning a well-known Metropolitan Art Mart) the pictures would not have fetched as much by at least 25 per cent." Of course there was a considerable "drop" in some of the larger works—perhaps there never was a period when people had less "picture-money" to spare—but taking the collection as a whole, it realised two-thirds of the amount it

cost the owner. If one recalls the sacrifices which were made when the Murietta and other collections came into the market after the Baring smash, the shrinkage in the Sheffield sale was comparatively slight. In one respect the Turner Collection was particularly noteworthy—the rarity of examples of the foreign Schools. The Flemish, Dutch, and Italian Masters were almost entirely absent, whilst anything in the nature of an "Old Master" seems to have been altogether avoided by the collector. In place of the monstrosities too often seen in large collections, he had drawn together a number of stirring modern canvases, painted by men the majority of whom still live, are popular, and who paint to please, choosing their subjects for the most part from Nature herself, and eschewing those forbidding mediæval scenes which people, as a rule, only affect to like. Prominent among such is T. Sidney Cooper, the veteran landscape painter, now in his goth year, the dates of his works ranging from 1834 down almost to the present time. David Cox, most charming etcher, as well as painter, John Linnell, T. Creswick, B. W. Leader, whose popularity increases year by year, and Vicat Cole, all appeal to the restful side of Nature, whilst the more stirring Schools were well represented by Ernest Crofts, with his martial scenes of the Netherlands, and R. Hillingford and Beavis.

MECHANICS AND THE STABILITY OF STRUCTURES.

THE different styles of Architecture may, to a certain extent, be distinguished and classed according to the kind and the greater or less complexity of the principles which regulate the stability of the structure. The simplest kind of stability is that of a single mass resting on a base. This is exemplified by pyramids, obelisks, and solitary pillars. Next in point of simplicity is the stability of a load resting on a lintel whose two ends are supported by pillars, each of sufficient dimensions to be stable in itself. This we find exemplified in Egyptian and Greek Architecture, and in those examples of Roman Architecture from which the arch and dome are absent. The next degree of complexity consists in supporting the load on each pier of which the structure consists, by a pair of pressures inclined to each other—that is, by introducing the arch and dome—and this we see in later examples of Roman and Italian Architecture, and in various styles of the earlier middle ages, such as the Byzantine, the Lombard and the Anglo-Norman. The perfecting and extending the application of the arch, so as to sustain the entire load of the higher parts of the structure by means of the thrust exerted through ribs, suitably formed and arranged, characterises Gothic Architecture. The balancing of overhanging leads is seen to a certain extent in the beeting bartizans and turrets which form the most picturesque feature of the Scottish Baronial style. The balancing of bulky arches upon comparatively slender pillars, whose lateral stability depends very much on their connection with the mass above them, is characteristic of Saracenic Architecture. The styles of framework in roofs, and in buildings of wood and iron, might be classed in a similar manner according to the way in which the principles of statics regulate the stability of the structures. Another mechanical characteristic of styles in Architecture is the way in which the strength of the materials is exerted. In the obelisk, pyramid, and simple tower or column, resistance to crushing is also brought into play, and the same is the case with the most elaborate combinations of ribs, groined arches, and tracery in Gothic Architecture. In the styles which employ architraves supported by pillars, the transverse strength of lintels or beams is also employed. The support of overhanging loads requires the transverse strength of corbels and cantilevers, and in some cases the tenacity of cement and cramps. Timber and iron framework bring every form of strength into requisition. A subordinate distinction of styles, founded also on mechanical principles, depends on the hardness and durability of the material of the building. For example, a certain plainness of style, which, if executed in granite, constitutes majestic simplicity, appears poor and bare in sandstone, and paltry in brick.

ARCHITECTURE IN ITALIAN PAINTING.

RAPHAEL was one of the Italian Masters who had most recourse to Architecture for the embellishment of his pictures, and although he did not always avoid the inconsistencies and anachronisms which contemporary artists were apt to commit, he showed an attention to circumstantial facts and particulars which very few equalled. One of the earliest and most beautiful, known as the "Marriage of the Virgin Mary," now in the Gallery of Milan, is adorned by an elegant building of sixteen sides with Ionic columns, probably intended for a synagogue, but not having anything Eastern in its style. Its appearance has, however, nothing offensive, but affords a pleasing accessory to this beautiful subject. In his painting of Paul and Barnabas at Lystra, this great artist has shown the same attention to circumstantial details, and with the happiest results, for amongst the statues which decorate noble edifices, the statue of Mercury appears conspicuous, reminding the observer, at once, that the inhabitants believed St. Paul himself to be that god, and that they were about to offer sacrifice to him as such. St. Paul preaching at Athens likewise affords a successful proof of how much Raphael enhanced the beauty of his historical pictures by means of tasteful architectural buildings of which the Classic orders, clearly defined, are perfectly and appropriately characteristic. In the cartoon representing St. Peter and St. John healing the lame man at the Gate of the Temple which was called "Beautiful," he has introduced a number of spiral columns, richly and elaborately decorated, by which means he has marked impressively the characteristic splendour of the porch. But in this instance his attention to particulars does not appear to have been equally successful, for the effect is meretricious and detracts from the solemnity of the subject. A simpler style of Architecture, though perhaps less truthful, might have been better suited to the dignity of the composition. Neither Michael Angelo nor Leonardo da Vinci, although the first was an Architect and the second an Engineer, seem to have resorted much to Architecture for the embellishment of their pictures. Nor did Correggio, who at Parma contributed so much by his frescoes to embellish the Duomo, avail himself of the beauties of Architecture to enrich his most graceful subjects. The Venetian School of Painting, however, borrowed a great deal from the sister Art, and in this we may probably mark the influence of the architectural magnificence of the City. Gentile Bellini was one of the earliest masters who painted architectural subjects, and during his residence at Constantinople he executed a large, and at the same time elaborate and highly finished, picture of the Church at Santa Sophia, which is now in the Gallery at Milan. Another picture of the Venetian School, very remarkable for its architectural interest, represents what was termed the "Miracle of the Ring," so famous in the Venetian annals. It was painted by Paris Bordone, and the background represents the beautiful and highly decorative Architecture of the Palazzo almost as it now stands. But the artist of this School who gave the greatest importance to architectural ornament in his pictures was Paul Veronese. By his introduction of architectural monuments on a large scale he imparted great beauty and originality to his pictures. He often gave perspective depth and greatness to his compositions by representing these edifices at various distances. Further, by placing them on the most diversified situations he added in a remarkable degree to their picturesque quality. These architectural arrangements afforded him the means of diversifying the positions and attitudes of his figures, which he represented alternately ascending flights of steps, leaning over elevated balconies, or climbing up buildings in order to overlook the principal scene of action.

DR. RICHARD MUTHER, the author of the "History of Modern Painting," which Messrs. Henry & Co. are now publishing, has resigned his post as Keeper of the Prints at the Munich Pinakothek to take up the appointment of Professor of Art History at the Royal University of Breslau.

SAWDUST.

THE Okehampton Board of Guardians intend to alter the workhouse, at a cost of about £3,400.

FOR the extension of Canton Parish Church Cardiff, a committee has been appointed to raise about £2,500.

THE magnificent new buildings of the Imperial Baths at Karlsbad were opened with great ceremony on Sunday last.

THE Barry Urban District Council has received the sanction of the Local Government Board to borrowing £6,000, for the purpose of building an Infectious Diseases Hospital for the district.

A DESTRUCTIVE fire occurred on Tuesday last in the suburb of Psamatia, Constantinople. One hundred and seventy-eight houses and five shops were destroyed. The majority of the occupiers were Armenians or Greeks of the poorer class.

It is suggested in connection with the scheme for a County Museum for Lincolnshire, that the Old Hall, Gainsborough, would be a most suitable site. It is an ancient Baronial Hall of considerable architectural beauty and extent. Its historical associations befit it for the purpose to which it is now proposed that it should be devoted, there being a legend that the marriage of Alfred the Great took place within its walls, and that it was on the banks of the Trent that Canute was persuaded by his obsequious courtiers to defy the rising tide, and that Sweyn, the Danish King, died there. In later days it was associated with the Civil War, and many relics have been dug up in the neighbourhood.

It has been decided that in the year 1896, there shall be held in the Exhibition Park in Berlin, an International Fine Art Exhibition, to celebrate the 200th year of the establishment of the Royal Academy of Arts.

ON Tuesday last, the Bishop of St. Asaph consecrated the newly erected Church of St. David's, Denbigh. The edifice was erected by Mr. Samuels, of Wrexham, from designs by Mr. Lloyd Williams, architect, Denbigh. It is of the Early English style of architecture, and cost £4,000, independent of the Chancel given by the late Dr. Turnour, which cost £1,500. Seating accommodation is provided for 700 worshippers. The Reredos was erected by Earp and Hobbs, of London.

BARON HENRY DE WORMS, M.P., has purchased the estate known as Abbadon Place, which joins the properties recently bought by him in the immediate vicinity of Henley Park. He has also purchased several houses and a considerable amount of land in and about the village of Pirbright, where he intends constructing model cottages, as the want of suitable accommodation for the working classes has long been felt in the neighbourhood of his residence.

THE Hospital Committee of the Aberdeen Town Council propose to erect dwelling-house accommodation in the hospital ground for the firemen and sanitary inspectors, and their families. The Song School Buildings are to be reconstructed.

MUCH of the difficulty that at one time surrounded the proposed reconstruction and improvement of the Lower Walk, a popular promenade at Blackpool, which has been almost destroyed by the incursions of the sea, has now been removed. It has been agreed that the Corporation should take over the whole of the Park, for entrance to which the Land Company is empowered to collect toll, for the sum of £5,000. The Borough Surveyor is at present engaged upon a plan for the reconstruction of the walks, the design showing a series of promenades with shelters.

At a meeting of the King's Norton Board of Guardians, held on Wednesday last, resolutions were passed consenting to the erection and fitting up of the new Infirmary on land already purchased, in accordance with plans approved by the Local Government Board. It was also decided that the expenditure on the building should not exceed £21,000, and that £3,000 should not be exceeded in the fitting and furnishing of the Infirmary. It was agreed to borrow the required sum upon the security of the common fund of the Union.

THE Throne to be erected in Norwich Cathedral in memory of the late Bishop Pelham has been completed, and the work of placing it in position has been commenced.

It is proposed to erect a new Vestry and Organ Chamber, &c., at Holy Trinity Church, Bickerstaffe, at a cost of about £800, which it is expected will be defrayed by voluntary subscription, and at the same time extensive repairs are to be made on the Church.

THE Talcen Mawr, a famous pillar of bastard greenstone in Penrhyn Quarries, Bethesda, weighing 125,000 tons and 360 ft. in height above the lower gallery of the quarry, was recently demolished, in presence of a large number of spectators, by the simultaneous firing of two charges of blasting-powder, amounting altogether to seven tons. The operations for removing the rock have been in progress since September last, under the direction of Mr. E. A. Young, chief manager of the quarries.

THE Bishop Pelham Memorial Throne, which is being erected in Norwich Cathedral, from the designs of Mr. John L. Pearson, R.A., will, it is expected, be ready for dedication by Whit Sunday. The late prelate presided over the See for nearly forty years, and it is mainly to the efforts of Dean Lefroy, who succeeded Dr. Goulburn, that his memory is being so fittingly honoured.

AN Art Union is to be established in connection with the Earl's Court Exhibition. It is proposed to expend 15 per cent. of the amount paid for season tickets in the purchase of works of Art. The lottery will be confined to holders of season tickets.

THE fund necessary for the purchase of the House in which Carlyle lived in Chelsea has not been fully forthcoming. The Committee has, however, resolved to complete the purchase of the residence, hoping in time to clear off the small debt from the fees paid for admission.

THE Government has yielded to pressure on the subject of the naval works at Dover and Hong Kong. The sum of £10,000 is to be spent at each, and to allow for this expenditure, the sum originally assigned to Chatham is to be reduced by £22,000, the odd £2,000 going to swell the item for charges of superintendence.

AMONGST other exhibits of a well-known collector which are being shown at the Goupil Gallery is a delightful case of Tanagra figurines, which were some of the first to be discovered and to come to this country. There are some fifty of them, and they are valued at some £10,000.

THE memorial-stones of a new Primitive Methodist Chapel at Bloxwich were laid last week. The site is in High Street, near the tram-line terminus, and the building is to be in the Classic style, the design being worked out in terra-cotta and red brick, and the internal arrangements including a Gallery, prayer Meeting Room, Vestry, and Organ Loft, with seating for 600 worshippers. The cost is estimated at £1,915. The work is being carried out by Mr. W. Hopkins, Thorp Street, Birmingham, from designs supplied by Mr. S. Loxton.

PLANS for the conversion of the Queen's Hall, Reading, into a Theatre, are being prepared by Mr. C. J. Phipps, F.S.A. Sitting accommodation will be provided for 1,700 persons.

THE Conservative Club recently erected at Belle Vue, Wakefield, was opened on Monday week. The building, which is of corrugated iron, lined with wood, has been erected near the Doncaster Road on a site secured from Colonel Charlesworth, M.P., the president of the Club, and has cost about £400.

THE Rev. Dr. Jayne, Bishop of Chester, recently consecrated the new Church of All Saints, recently erected at Micklehurst, on the Cheshire side of the Borough of Mossley. The new building is a very handsome structure and is built of stone, and has cost about £4,000.

A PROLONGED struggle is feared in the Leeds Building Trade. At a meeting of the Masters on Thursday, the determination was expressed not to yield to the men's demands. The officials of the men's Union maintain that they can continue the strike for six months if necessary, and give each man 15s. a week during the whole of that time.

It is proposed to celebrate the jubilee of Islington Presbyterian Church by the erection of a new Organ and the substitution of a Platform for the present Pulpit.

FOR the new Board School, to be erected on the Marsh, Lancaster, it has been decided that Architects within the borough be invited to send in competitive designs.

THE Tender of Mr. Walter Scott, of Newcastle, for £113,311, has been accepted for additions to Newcastle City Asylum, Coxlodge. Plans are by Mr. J. W. Dyson, architect, of Newcastle.

THE School Board of Stranraer, N.B., are about to make additions to "The Academy," at a cost of over £2,000. Mr. J. C. Macfarlane, of Stranraer, is the architect.

THE late Mr. Charles Docker, of the Deanery, Brewood, has bequeathed £1,000 to the Vicar and Churchwardens of Brewood, to be applied to the purpose of placing a new peal of eight bells in the Tower of the Parish Church.

A LONG cherished scheme for providing the residents of Marton, a working class suburb of Blackpool, with premises in which rational recreation will be afforded, was further advanced on Saturday afternoon, when the foundation stone of a new building, which is to be known as the Marton Working Men's Institute, was laid by Mr. J. Parrott, South Shore. The plans for the building have been prepared by Mr. Frank H. Gorst.

ADDITIONS have just been made to the Altar at St. Michael's and All Angels' Church, Exeter, all being in oak, consisting of Tabernacle, Gradine, and a large Cross 6 ft. high, having upon it the *tilli*, with the initial letters I.N.R.I. The Cross rests upon the Tabernacle, which is carved, and its door diapered and gilded. There are two super Altars, their risers being carved with flowing tracery. The additions have been carried out by Messrs. Harry Hems & Sons, of Exeter, who also made the carved oak Pulpit, from designs of Sir Arthur W. Blomfield, A.R.A.

THE new School to be erected at Hea Moor, will be built at the east, or upper end, of the Chapel, on a plot of ground 30 feet square, belonging to the Trustees, which the architect, Mr. J. W. Trounson, F.R.I.B.A., has admirably adapted for the purpose needed, in spite of great difficulties as to shape and position of ground, &c. The room will be entered by means of a tiled Lobby, 8 feet long by 5 feet wide, and the Lobby will be screened round. The interior of the room will be made as ornamental as is possible consistent with usefulness. It will be dadoed round to a height of 4 feet, and the ceiling will be lined with pitch-pine boards, 6½ inches wide and V-jointed which, when stained and varnished, will present a very pleasant and comfortable appearance. There will be three large windows—8 feet by 4 feet 6 inches—each containing two panes of white shelled-glass. The contract for the building has been secured by Mr. W. H. Trounson, for £217 1s. 9d. (the highest of the eight tenders sent in being £249 10s.).

SOCIETY MEETINGS.

Durham and Northumberland Archaeological Society.—The annual meeting of the Durham and Northumberland Archaeological and Architectural Society was held last week, in Bishop Cosin's Library, Durham. The Rev. Canon Greenwell, D.D., presided, and there was a large attendance of members. The president was unanimously re-elected. Among the new members elected was the Dean of Durham (Dr. Kitchin). The financial statement showed that the balance in the bank had increased from £113 18s. 8d. to £198 5s. 6d. The president referred to the recent discoveries made in Durham Cathedral by means of which the remains of St. Carileph's Church had been discovered. The discoveries were purely accidental. He suggested, as these discoveries were of a very important character, that they should devote a special day to go fully into the matter. He himself would undertake to give the necessary description. The suggestion met with hearty approval, and the 9th of May was fixed for the special day in the Cathedral. Other meetings were arranged for the summer.

THE BUILDING TRADES' EXHIBITS AT THE HEALTH EXHIBITION, MANCHESTER.

NOBODY considers exhibitions produced under private commercial enterprise to be anything else but a mere money-making or a money losing concern, generally without backbone, and lacking in almost every essential detail that goes to make such things sincere and genuine. This International Health Exhibition at Manchester is no exception to the rule. With the exception of about a dozen exhibits, which we intend to comment upon below, the whole thing is as little allied to health teaching or culture, as it was possible to make it. Given a certain number of firms willing to pay a certain number of pounds sterling for a few superficial feet of space, plenty of cheap drink, "tripe and onions, sixpence after six o'clock," a few good and expensive bands, and a poor, miserable fairy fountain, which has been boomed over the whole town, and the thing is complete, except for the hundreds of pounds profit accruing to the enterprising promoter, for three weeks' work. Mr. A. P. Baker, the promoter of the concern, is a genial native showman, who, since he has discovered the financial possibilities of exhibitions, has withdrawn much of his attention from a local Decorative Art Studio, where, to give him just credit, he manufactures the strongest and finest bamboo work we have seen. But in the matter of exhibitions, Mr. Baker is wiser than we are. He knows human nature better than we do. He knows the value of that fairy fountain and Dan Godfrey's band, and, forsooth, they both lead up to that "tripe and onions after six." To see the Harrietts of Manchester pouring into the St. James's Hall, in their thousands, on Saturday nights, would have made Mr. Greville Montgomery green with envy; but sanitary science was not their ambition. We forget for the moment the constitution of the exhibition; forgot also the hour we sat, with profit, listening to Sir Benjamin Richardson discourse most wisely upon domestic sanitation to about a dozen persons huddled together in a dreary, dirty hall, protecting each other from the draughts.

William Ingham & Sons,

Branch of the Leeds Fire Clay Company, Wortley, Leeds, have the first exhibit principally of Hassall's pipes. These pipes at the present hold the market, in face of the fact that engineers have agreed that a cement joint is not a good joint. The makers should never forget to instruct their customers in the proper mixing of their cement. We have seen these pipes laid bare with every socket "blown," owing to neat cement having been used. The proportion should not be less than one of cement to four of washed sand.

Messrs. Odams

show samples of their disinfectants. The World is acquainted with Odams' Chemical Manures, and the Company is worthy of being patronised for its disinfectants. The disinfectant Sawdust which it prepares is a splendid notion.

Messrs. Lightbown, Aspinall & Co.

have in a very modest exhibit a specimen of their Silk Flock wall paper, which they will do well to introduce to the London Market. We are greatly mistaken in our estimate of this, if this very charming specimen of wall hanging does not take the town by storm. The price is high but distinctly cheap.

The Bucket Fire Extinguishers, by

Messer & Thorpe,

of Quality Court, Chancery Lane, London, are still the best in the Market, and highly ingenious. We should like to see the container contracted at the top, so that only an opening large enough to withdraw the buckets was exposed.

The Simplex Window Fittings Co.,

of Caroline Street, Birmingham, exhibit their window in work, and a local architect has pointed out to us the great advantage this system has—the system of one sash-balancing the other—in large institutions where window openings are generally high, and were the sills are some distance from the floor levels. In bedrooms also, where windows are somewhat always inaccessible, the Simplex is a boon.

Lomnitz & Ducksbury,

of 44, Blackfriars Street, Manchester, have a working model of Garners' Patent Hoist, an arrangement whereby the lift doors are opened automatically by the lift itself rising or falling, so that there is no possibility of lift doors being left unlocked and accidents happening.

John Heywood

shows a mixed collection of desks, perambulators, educational literature, lamps, and Art pottery.

The N. A. P. Company

show their top Suspension Safety Cleaning Windows, their Fenestra Ventilator, which is a method of using the pulley boxing of an ordinary window frame as a vent flue, and admitting air into the room through the pulley stiles; an ingenious and scientific arrangement. But, again, we remark upon the value of this firm's wonderful casement possessing the advantage of opening inwards or outwards and being absolutely weather proof.

The Safety Tread Syndicate

exhibit their Unwearable Non-Slipping Stair Tread. Why they call it unwearable we do not know. There is no flooring or paving material in existence that can claim such a virtue. But Mason's system appears to us to be the best in the market, at any rate, of metal ones.

The Sanitary Bath Company

show several of their Baths, manufactured of Siemen-Martins heavy sheet steel, lined with polished copper. The Baths are mounted on ornamental feet, and have no casing of any kind, which is a distinct advantage and qualifies the name conferred upon them. We are informed that the weight of these beautiful looking baths is only 200 pounds.

Thomas Elliott & Sons,

of 26, Pall Mall, Manchester, exhibit a working model of the Temperley Transporter, the special feature of which is a Pulley Carriage or Traveller, of novel design, working on an elevated track, and provided with a simple automatic device by which the traveller is arrested and held stationary whilst a load is being lifted or lowered, and which sustains the load whilst the traveller is moving, all the operations being effected by means of one working rope. The little thing is so clever that we purpose illustrating the methods of its use. Messrs. Elliott, being agents for the "Opalite" manufactures, shows also specimen of this material applied to bricks and the lining of walls. We have already expressed our opinion of Opalite when it was first exhibited at the Building Trades' Exhibition at the Agricultural Hall.

The Self-Lock Roofing Tile Co.

have erected one of their model buildings showing their tiles, and their manufacture in actual operation. We notice in the catalogue that a guarantee is offered, that a roof constructed in accordance with the instructions of the Company shall be both rain and storm proof, and an assertion that the cost of these self-locking tiles is about one-third of any other roofing material now in use. This is a very strong factor in their favour, and should procure for them a large sale for schools, warehouses, factories, farm-houses, and such erections.

The Cork Pavement Co.,

which exhibit their paving bricks on this stall, possess a material with distinct advantages for many certain uses. Nothing could be better than the Cork pavement for railway stations, horse repositories, stabling, tennis courts, and such places where a noiseless paving is necessary. It is necessary to mention that the bricks consist of a bituminous material mixed with particles of cork, procuring a softness of head and preventing slipping.

Mooney & Co.,

of Manchester, have a stand of spray and shower baths, Litz baths and bidets, folding lavatories and patent closets, all of which are beautifully manufactured by Messrs. Morrison & Ingram. Mr. Mooney is a plumber of much repute in Manchester, and we can emphasise repute by saying we have not witnessed better specimens of the art of plumbing than he has.

shown us here. The Portable Spray and Shower Bath is a marvel of completeness and perfection.

The Natural Purification Co.

show a working model of Cosham's Patent Precipitating Tank which interests us deeply. We are asking Mr. Cosham to submit us drawings of his arrangement, when we will gladly give a full description of the invention, backed by an expert opinion of some value.

Messrs. Shanks & Co.,

of Deansgate and Barr Head, Glasgow, have a fine show of sanitary goods, consisting of the "Tubal" School Lavatories, a "Fin de Siecle" Bath, whatever that may mean, most wonderfully enamelled in imitation of marble, the "Lever" Syphonic Closet, the Unity Cistern, and other manufactures.

Henry Lightfoot,

the agent for Messrs. Shanks, has on an adjoining stall some remarkable specimens of lead pipe work, including examples of working single and double lead bends from solid lead pipes.

J. Duckett & Son,

the Burnley manufacturers of sanitary ware, have the advantage of being represented by a thoroughly practical and business man in Mr. Debney, who, we understand, is responsible for those clever detail drawings of their manufactures which have already warranted our highest praise. The question of Slop Water Closets is of the most vital importance in the North, and we have therefore sought Mr. Debney's aid in thoroughly investigating his exhibits. These include Automatic Tipplers, varying from 3 to 100 gallons capacity for flushing closets, drains and sewers. A very good form of overhead tilting tank for flushing latrines and urinals with fresh water, the form of which suggests a powerful flush with a comparatively small quantity of water. Two forms of Slop Water Closets are supplied with water to shew their use. The one called arrangement B appears to us very good and undoubtedly the best; in this arrangement that part of the closet which receives and retains the soil until removed by the slop water is effectually flushed every time the tipper discharges. Such is not the case with arrangement D, and it is an obvious necessity that that part of the closet needs flushing most. The arrangement B is so constructed that the three-gallon tipper which receives the slop water is out of the way of the closet soil and cannot be fouled to prevent working. The tipper is contained at one end of a glazed earthenware box, while at the other end a receptacle for the soil is formed to retain a little water after every flush to prevent sticking. When the tipper discharges in this closet upon the soil receptacle the flush is so powerful that it effectually removes all soil that may be floating in the small quantity of water resting in the bottom. The trap underneath is made to turn in any direction to meet the line of drain. The arrangement D has the tipper under the seat and is the receptacle for soil and slop water alike; the only part of this closet which appears to us to be well flushed is the trap underneath. The pedestal is fitted with an inlet for rain water from closet roof to flush the back. This appears a good thing, because every form of waste water closet is liable in some degree to become fouled above the inlet from drain. A very good arrangement is fitted to this closet in the form of a combined axle and buffer made in gun-metal; hitherto most closets have been fitted with an India-rubber buffer stop, but it is claimed that the new contrivance will last longer. A unique introduction of plate glass in the front part of the tipper will prevent considerable fouling of this vessel.

The Sanitation Improvement Co.

shows Day's Patent Stafford Closet, the only objection to which we refer being the fact that the tipper is under the seat and receives the soil. This is undoubtedly an objectionable system which prevents his slop closet obtaining premier honours.

The Albion Clay Co.,

of the Albion Works, Woodville, Burton-on-Trent, again show their fine Granitic Stoneware manufactures. The Paragon pipe—than which there is no better made in this country; Sykes Patent joint, which we consider to be the finest

on the market; and Sykes' Patent Interceptor, which is the very acme of sanitary scientific investigation, Sykes' Disconnecting Slipper, serving as gully and slipper combined, meets all requirements as no other slipper does, it prevents splashing and is perfect as a gully. Our readers are so well acquainted with our opinion of the Albion Clay Company's goods, that we cannot do better than remark that Mr. Bird, their exhibition representative, who is responsible for all the working drawings and illustrations appearing in their catalogues, is proficient in sanitary science, and that he, or Mr. Sykes, the engineer himself, willingly place their experience at the disposal of architects and surveyors wishing to consult them.

The Builders' Journal COMPETITIONS.

No. 3.—Swimming Baths.

Designs for Swimming Baths in a country town of 5,000 inhabitants. To contain cold water bath fifty feet long, three feet to six feet deep, with necessary dressing boxes; six private washing baths for gentlemen and three for ladies; necessary heating and ventilating appliances to be provided, together with waiting and caretaker's rooms, the entire cost not to exceed £3,000. The site is 100 feet deep and of any necessary frontage, but entrance can only be obtained from the front. All designs to be delivered on or before Monday, the 10th day of June

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

ANNOUNCEMENTS.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Publishing.

The terms for free post Subscription to any part of the United Kingdom are SIX SHILLINGS AND SIXPENCE per annum by half-yearly or annual prepayments.

Advertising.

SITUATIONS WANTED, SITUATIONS VACANT, PARTNERSHIPS, APPRENTICESHIPS.

Per line, Sixpence. Minimum charge, Eightpence. Three Insertions for the price of Two.

Prepayment in the above Advertisements is absolutely necessary.

Page or Paragraph Announcements, Trade Advertisements.

Prices on application.

Small Advertisements for current week's issue are received up to first post Monday morning inclusive.

Editorial and Publishing Offices:

Talbot House, Arundel Street,
Strand, W.C.

Trade and Commerce.

We shall be glad to receive copies of catalogues from firms engaged in the allied building trades. These will be carefully looked through, any novelty noted, and—should its nature seem to demand it—fuller attention drawn thereto. We are particularly wishful to secure the friendly interest of designers and artificers in THE BUILDERS' JOURNAL, and, now and then, we might see our way to reproduce an outline sketch or illustration of any contrivance that struck us as being new or needed. Building covers up—figuratively, and in fact—so much ground, and we mean to cover the whole of it.

We should be further obliged if firms would indicate, by some suitable mark, the pages in their catalogues to which they would in particular, desire to call our attention.

The Economic Smokeless Fire Co., Limited.—We have before us a catalogue of the kitchen-ranges, stoves, &c., of the Economic Smokeless Fire Co., Limited, of Shaftesbury Avenue, and have paid a visit to their show-rooms, and had their system explained to us. It is claimed that these patent fires practically consume their own smoke, and that the process of combustion is accompanied by the production of intense heat. The best results are obtained by feeding the fire with common slack and coal dust, such as is sold in London at 10s. 6d. per ton, and by its use the saving in cost of fuel alone is from 50 to 70 per cent. The flue or chimney, instead of commencing at the top of the fire, is connected at the bottom of the grate, and made to form a hot air chamber at the back of the fire, into which the smoke, or what would be smoke, and flames are drawn, so that the smoke having to pass through the fire instead of being carried direct up the flue in the ordinary way, is super heated; takes the form of gas, which, passing onward

Section of Fire.

into the hot chamber, is consumed by the flames; the result is that instead of soot in the flues, we find nothing but a slight deposit of incombustible impurities, in the form of a grey powder. In the place of the ordinary bars in front of the fire, flat slips of iron, like a venetian blind are used, and these can be opened or closed to regulate the fire; they also take the place of dampers. The bottom of the fire-box consists of two grooved rollers, which turning inwards by a simple arrangement, serve both to stir the fire and remove the ashes. The only time that it is possible for the fire to smoke is when it is first lighted, and before the chamber at the back becomes heated. This was conclusively proved by a series of experiments made by the Manchester Corporation in September, 1892, a report of which we were shown. A range, cooking for 350 people, costs 3s. per day for fuel. We give a section of the fire which admirably shows the working of the system employed.

Flexible Hoses and Pipes.—We have lately had an opportunity of inspecting a variety of samples of flexible hoses and pipes manufactured at the Spincter Works, Emerson Street, London, S.E. To the uninitiated, there would not at first sight appear to be much scope for variety in the form and substance of such appliances. This is, however, a mistake. In addition to the familiar garden hose, of which thousands of lengths are sometimes

turned out in a single season, there are simply dozens of different makes of hoses, each one designed to meet some specific want. Thus we find ordinary delivery hoses, for conveying water, in all grades and sizes, whilst for suction and pumping purposes, an entirely different class is required—viz., an "armoured" or wired hose on the inside to resist the tendency of the "suction" to cause the hose to collapse and thus shut itself up. The conveyance of steam is another branch in which exceptional technical skill is required in the design of suitable hoses. We were shown hoses in this class of almost fabulous cost, the price running into pounds per yard. Such steam-pipes are of necessity only adopted by Government and other important concerns. Hoses are also specially designed for resisting enormous hydraulic pressures, as much as 4½ tons per square inch being reached in this class when necessary, the average being ½ ton working pressure, whilst to enumerate the special hoses—e.g., spirit, acid, brewers, oil, gas, vacuum, heating, air compressing, &c., would require a column of itself. We were specially interested in the various classes of fire hose and the accessory appliances, nozzles, branch pipes, sprayers, and couplings of this well-known pattern. We were shown handwoven canvas hose capable of withstanding very high pressures, whilst a large contract for leather hose was being carried out at the time of our visit. We were informed by Mr. Hamilton Church (who was formerly Works Manager to the National Telephone Co.) that the special feature of the Company's business was the supply of a "high grade" appliance. Their trade mark "Sphinx" is, we believe, an assurance of this.

Architectural Association Sketch Book.

To the Editor of "THE BUILDERS' JOURNAL."

DEAR SIR,—Will you kindly allow me to make it known to your readers that I, as secretary of the Sketch Book, have a few back volumes of the New Series still on hand, which I shall be glad to dispose of for the following reasons, i.e.: Having completed the New Series it is necessary to close the accounts, and in order to meet the last of our liabilities, we desire to realise the only asset we have, viz., some twenty copies in all of the last three or four volumes. I am glad to say that during the whole of the thirteen years over which the New Series has spread itself, we have always paid our way, but we cut matters so fine, that in order to settle our accounts, we must sell the whole of the volumes printed.

I think it is generally admitted that the volumes of the Sketch Book are about the best value for the money that can be obtained anywhere. I therefore trust that when it is known that the sale of the last few copies of the series will enable the Committee to send a final cheque to the printers, there are many who will feel disposed to lend a helping hand.

I should, perhaps, mention that each volume contains seventy-two plates, a title page and index, and is quite complete in itself. The price is one guinea, unbound, and we have copies of volumes 9, 10 and 12. I shall be glad to send copies on approval if desired, but as the whole series can be seen at the British and South Kensington Museums, the A. A. and the R. I. B. A., I trust that I may receive orders. —I am, yours faithfully, LEONARD STOKES.

3, Princes Street, Westminster, S.W.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

BALDOCK.—For malting for Messrs. J. R. Page and Son, Messrs. Arthur Kinder and Son, architects, Suffolk House, Laurence Pountney-hill, Cannon-street, London, E.C. Quantities by Mr. Alexander H. Kinder, 23, Finsbury-circus, London, E.C. :—

Miskin	£5,142 0 0
Kidman	4,948 0 0
Jacklin and Co.	4,881 0 0

Collins and Godfrey, Tewkesbury* 2,630 0 0
* Accepted.

CONTRACTS OPEN.

GREAT BENTLEY SCHOOL BOARD. TO BUILDERS AND CONTRACTORS.

The Great Bentley School Board invite TENDERS for the ERECTION OF NEW SCHOOLS at Great Bentley, Essex, for 250 Children, Board Room, and Master's Residence, Boundary Walls, &c.

Drawings and Specifications may be seen at the Office of Mr. J. W. START, F.S.I., &c., Architect, Colchester, also of Clacton-on-Sea and Harwich, on and after the 30th instant.

Builders wishing to Tender must send in their names at once, together with the sum of One Guinea, to be deposited for the quantities, which will be returned on receipt of a bonâ fide Tender.

Tenders, on forms supplied, sealed and endorsed "Tenders for Schools, Great Bentley," should be addressed to the Board, and delivered at the residence of their Clerk, by TEN o'clock on THURSDAY morning, the 23rd day of MAY, 1895.

Power is reserved to reject the lowest or any Tender.
Colchester, By Order,
April 25th, 1895. C. D. KEIGWIN, Clerk.

TO CONTRACTORS AND PAVIORS.

The Urban District Council of Melton Mowbray, in the County of Leicester, require TENDERS for PAVING the FOOTWAYS of certain streets with Patent Victoria Stone and "In Situ" Concrete Paving, Kerbing, Channelling, &c.

Applications for specification and bill of quantities to be made on or before Tuesday, the 7th day of May, to Mr. EDMUND JEEVES, Nottingham-street, Melton Mowbray, Surveyor to the above Council, accompanied by the sum of One Guinea, which will be returned on receipt of a bonâ fide Tender from the applicant.

Plans may be seen at the Surveyor's Office any day between the hours of Ten a.m. and Five p.m., and sealed and endorsed Tenders must be sent to me at or before FIVE o'clock p.m., on WEDNESDAY, the 22nd day of MAY instant.

The Council do not bind themselves to accept the lowest or any Tender.
RICHD. BARKER, Clerk to the Council.
Sherrard street, Melton Mowbray,
May 1st, 1895.

LADDERS, BARROWS, STEPS, TRESTLES, SCAFFOLDING, For Sale or Hire.

J. BATCHELAR & CO.,
48, HAMMERSMITH ROAD. W

SMOKEY CHIMNEYS & DEFECTIVE VENTILATION.

**THE
"DULCE DOMUM"
CHIMNEY TOPS & VENTILATORS
(Downes' Patent).**

The only Chimney Top which can be Easily Swept with the Ordinary Apparatus without being damaged. A Positive Preventative of Down-Draught, so Constructed that it Creates a Continuous and Powerful Up-Draught. Simple in Construction having No Movable Parts, Nothing to Oil or Repair. Cannot Get Out of Order. Strongly Made in Galvanised Iron. Once Fixed will Last for Years. Applicable also for Ventilating Public Buildings, &c.

Testimonials can be seen and prices obtained at the Patentees' Offices—
11, THE PARADE, Lewisham High Rd., New Cross, LONDON, S.E.

Soil Pipe Ventilator.

Chimney Top.

Quantities, &c., Electrographed
Equal to Lithography and 50 per cent. CHEAPER. Prices and specimens on application. Lithography at moderate rates.

OLDACRES & CO.,
59 & 60, CHANCERY LANE, LONDON, W.C.
N.B.—No connection with any other firm.
Telegrams, "OLDACRES, LONDON."

TO BUILDERS and CONTRACTORS.

CONTRACT No. 1.

The Guardians of the Mile End Old Town are willing to receive TENDERS for the ERECTION of a new STEAM LAUNDRY and COTTAGE at the Infirmary, and for certain ALTERATIONS and ADDITIONS to the LAUNDRY and BOILER-HOUSE, at the Workhouse, all situate in Bancroft-road, London, E.

The plans can be inspected and copies of the specifications and bills of quantities obtained of the Architect, Mr. CHAS. F. BURDEN, at his Office on the premises, on and after THURSDAY, MAY 9th, 1895, between the hours of TEN a.m. and FOUR p.m. on production of a receipt of the deposit of a £10 Bank of England Note, made with the undersigned, which deposit will be returned to parties sending in a bonâ-fide Tender at the time and in the manner specified, accompanied with such specifications and bills of quantities.

Sealed Tenders, endorsed on the outside "Tender for Laundries," properly filled up and attested, must be delivered at my Office not later than FIVE o'clock on the evening of the 23rd day of MAY, 1895.

Persons tendering will be required to observe such hours of labour, and pay such rates of wages as are generally considered fair with the several trades engaged, and to enter into a bond with approved sureties for the due performance of the contract.

The Guardians do not bind themselves to accept the lowest or any Tender.

WILLIAM THACKER,
Clerk to the Guardians of the Hamlet of
Guardians' Offices, Mile End Old Town.
Bancroft-road, London, E.,
April 24th, 1895.

WAR DEPARTMENT CONTRACT.

NOTICE TO BUILDERS, PAINTERS, &c. TENDERS are required for PAINTING, WHITEWASHING, &c., internally and externally, various BARRACKS and BUILDINGS in the Woolwich Royal Engineer District. Persons desirous of tendering for the execution of the above work must leave their names and addresses at the Royal Engineer Office, Mill lane, Woolwich, on or before the 14th MAY, 1895, when a form of Tender, Specification and Schedule of Prices will be issued to each candidate upon the payment of 15s.

Persons or firms not known to the Commanding Royal Engineer must produce references as to their competency to carry out satisfactorily a large painting contract.

The Secretary of State for War does not bind himself to accept the lowest or any Tender.

R. T. ORPEN,
Lieut.-Colonel R.E.,
Commanding Royal Engineer,
Woolwich District.

BOROUGH OF BRIGHTON. TO CONTRACTORS AND OTHERS.

Notice is hereby given that the Council of the said Borough will receive TENDERS from such persons as may be willing to enter into a contract for the CONSTRUCTION of an ENGINE HOUSE and BOILER HOUSE and other WORKS in connection therewith, at the Corporation Waterworks Pumping Station, in the Parish of Patcham, near Brighton.

The drawings may be seen at the Office of the Waterworks Engineer, Bond-street, Brighton, and specifications, bills of quantities, and forms of Tender may be obtained on and after the 8th MAY inst. at my Office at the Town Hall, Brighton, on payment of the sum of Three Guineas, which will be returned on receipt of a bonâ fide Tender.

Sealed Tenders, addressed to me, and endorsed "Tender for Engine and Boiler Houses," must be left at my Office, at the Town Hall, before TEN o'clock in the forenoon, on TUESDAY, the 14th day of MAY, 1895.

Power is reserved to reject the lowest or any Tender.

FRANCIS J. TILLSTONE, Town Clerk.
Town Hall, Brighton, May 2nd, 1895.

COMPETITION.

TO ARCHITECTS AND OTHERS.

The Urban District Council of Lynton is desirous of receiving COMPETITIVE PLANS and SPECIFICATIONS for the ERECTION of a MARKET, TOWN HALL, and COUNCIL ROOM, and OFFICES, at Lynton, at a cost not exceeding £2,000.

A ground plan of the land can be seen, and further information obtained on application being made to Mr. WILLIAM SQUIRE, Surveyor, Lynton.

The competitor whose plans and specifications are deemed by the Council the best will be paid by the said Council a premium of £10 10s.

Arrangements will probably be made with the successful competitor for carrying out the work.

Plans and specifications to be sent on or before 27th MAY 1895, to

W. A. ROBERTS,
Barnstaple, Devon. Clerk to the said Council.

SPHINCTER WORKS,

EMERSON STREET, LONDON, S.E.

**High Grade Flexible Hoses for
Contractors, Engineers, Builders.**

**FIRE HOSES & HYDRANTS,
HOSES FOR CLEANSING WITH WATER POWER.**

Pumping, Suction, & Dredging Hoses.

Always specify "SPHINX" Brand.

The Builders' Journal.

OUR sympathies are for Dr. Joseph Parker. "If London could be rebuilt in any adequate sense, the problem of the unemployed would be laid to rest for at least half a century." Why? asks the man who hears. "Because," says the Doctor, "the rebuilding of London offers the most adequate alleviation of present economic and social difficulties." Joseph Parker is a man of originality. It would not be quite correct to term him a man of depth, either of character or of thought, but he *can* preach, and for that many a wearied man has blessed him. This is the second original idea promulgated by this enterprising preacher. Some years ago he invited the workmen in Holborn to come and smoke their pipes in his Temple, and he also invited them to argue "points" with him in the pulpit. These little festive gatherings he called "Smoke Conferences," but they did not last. Amongst the workers were a dozen or more Classical men—from printers' proof rooms of the neighbourhood—and they soon knocked the bottom out of Dr. Parker's orthodoxy, and he had to find a reasonable excuse to stop the merry meetings. His conferences did not interest us personally, but "The Rebuilding of London" does. The article in the current issue of *The English Illustrated Magazine* is a botch of about the sublimest nonsense a respectably-minded man ever penned. And the sublimest part of it is its sincerity. The Chancellor of the Exchequer is to be asked for £25,000,000, and the "money would be subscribed within a good deal less than a week." The reconstruction "might be divided into eight or ten principal centres." All the Railways in one

centre, "say Ludgate Circus;" all the Churches in another; all the Banks, Exchanges, and Insurance Offices in another; all the Markets in one heap; all the Theatres and Recreational Buildings in another, "the whole constituting a new and glorified Leicester Square." "The Shipping centre, of course, being determined by the River." Why not re-arrange liquid matters generally, and bring the North Sea up to Billingsgate Market? But the funniest

detail of all is that poor little preaching Paternoster Row is to be "abolished," and Fleet Street is to run North and South instead of East and West. "Supposing the idea of Centres to be substantially adopted," continued the Doctor, "there should almost necessarily follow a great scheme of light and water. In every Centre there should be a fountain, as in Trafalgar Square (around which could be grouped figures of eminent Englishmen, not only heroic, but social and civic), which could be banked with flowers and green stuff." Ye ghosts of Covent Garden Market!! "It might be practicable to bring a sea-canal to London, and cut a riverway down to Brighton. It is beyond all doubt that London could be so rebuilt as to bring back thousands who now travel miles daily between the City and the Suburbs." Poor Suburbs! What would Joseph Parker do with these? "The greatness, the utility, and, indeed, the *poetry* of the whole scheme might happily affect the sense of duty all round." We hope it would, particularly the poetry. The duty of the first right-minded Constable is to secure this poet of Destruction. He is not safe to be "at large."

ASHBOURNE CHURCH: W. WHITE, F.S.A.

Northern Architecture. THE opening of a School of Architecture in Liverpool, and the forceful address by Mr. T. G. Jackson, A.R.A., will undoubtedly give an impetus to Architectural matters in the North. Liverpool has turned out some excellent work, and may boast of several buildings of import and magnitude. There are still great opportunities in the City, and, if the Cathedral ever be built, one chance, at least, will be given a man wherewith to make or mar his name. There is always the danger of a "School" sterilizing originality and individual inceptiveness. The students "catch" a fashion or a vogue, and Professors

are apt to inoculate their pupils with their own ideas. We hold with Mr. Jackson that there is nothing better than the apprentice system, though it has its faults. Drilling and drudgery are the golden keys that open the gates to all professions. And notably in Art all restraint increases the ultimate achieving power. It is only when a man is thoroughly familiar with his tools and texts and tenets that he can afford to shake off the shackles of schools and give wings to his own individuality. One good point in the Liverpool School's favour is that "working professors" have been engaged. These will knock into shape much promising material, we do not doubt, and once students are thoroughly grounded in, at least, the very elements of planning, and with some knowledge of building construction, we may hope to find the somewhat jejune and in some ways remarkable efforts of well-meaning beginners a thing of the past. If every young architect would spend, as Mr. Jackson suggested, a year or more in a mason's yard, working as a mason, original ideas would be formed which could not be got in any other way, and this would save him from those mistakes in the construction of material which so characterize modern practice. Mr. Jackson's suggestion that master builders open their yards and workshops for the reception of students is a good one, but we expect the Building Trades' Federation will fall foul of it. However, we heartily welcome the Liverpool School; and, as we know several of its Professors, we are quite confident that it will ultimately give us a clear, a convincing, and a chastening influence in Northern Architecture.

ONE of the handsomest modern Churches in the Midlands is St. Paul's Parish Church, Burton-on-Trent, at which, on Thursday last, the Archbishop of York, dedicated the Reredos and organ, together with numerous other gifts, presented to the Church by the patron, Lord Burton. The edifice was built and endowed by the late Mr. M. T. Bass, who also erected the adjacent Church of St. Margaret as a Chapel-of-ease, with Sunday Schools, the total cost, including the Vicarage and its endowment, amounting to £68,000. Lord Burton added a beautiful Chancel Screen, pannelled oak Porches at the two entrances, oak Vestry fittings, and a new Sacristy. The South Chancel Aisle has been converted into a Memorial Chapel, and is associated with the name of Lord Burton's nephew. It possesses an elaborately-painted roof, four choice stained-glass windows, a marble pavement, and side Altar, and is used for daily service. The roof of the Chancel and that under the Tower have also been richly decorated in gold and colours. The chief points of interest, however, are the new Reredos, the marble pavement, and the organ. The first-named, erected by Mr. R. Bridgeman, of Lichfield, is 23 ft. in height, and displays a central panel in red Shawk stone, portraying the Saviour on the cross, with SS. Mary and John at the foot. The whole is surrounded by carved panels, canopies and figures. The side portions are lower, and are divided into four panels, containing figures of SS. Hugh, Paulinus, Chad, and Aidan. The whole of the Chancel has been relaid (by Messrs. Farmer and Brindley, London) with a pavement in polished red and white marble, a reproduction in the main of that at St. Anastasia, Verona. The whole of these alterations and additions have been carried out from the designs of Mr. G. F. Bodley, A.R.A., at the sole expense of Lord Burton, the total expenditure representing nearly £40,000. Thus the founder and his son, the present patron, may be said to have spent on the two Churches the sum of £96,000.

THE PROPOSED SCHOOL OF ART FOR CREWE.

STARTLING REPORT BY THE ASSESSORS.

THE Report of Messrs. Sugden & Son, of Leek, upon the twelve designs submitted in competition for the New School of Art at Crewe, is a concise and a highly interesting document—quite worthy of a very careful perusal by men who aspire to a remunerative practice by means of successful competition work. The competition was limited to twelve competitors and it is correct to assume that these men were directly invited by the Technical Institution Committee because each was considered competent to design such a building. If such was really the case—and, of course, it must have been—then the opinion of Messrs. Sugden, as expressed in their report, is positively startling. The assessors were zealous in their work. They spent five days in judging the drawings, visited the site, and concocted an elaborate Table of "Points" to assist them in their awards. From the twelve competitors two sets of drawings, those of James Stevens, F.R.I.B.A., and Messrs. Woodhouse and Willoughby, F's.R.I.B.A., all of Manchester, were selected as being superior to any of the rest, and eventually Mr. Steven's scheme was cordially commended to the Committee's acceptance. It is not, however, with these two sets of drawings that we have to deal, but with the remaining ten sets in which the assessors can hardly find a couple of good points. For instance:—

The elevations of Design No. 11 are impossible. The lighting of the Lecture Hall is bad, and that of the Elementary Art School much worse; whilst the lighting of the Painting Room from all sides and its remote position in the Tower is also inadmissible. The Staircase is ineffectively treated. The space devoted to Corridors, &c., in Design No. 2, is excessive, and the competing entrances and maze of intervening steps on ground floor quite uncalled for. Extensions would make the main Corridor very dark indeed. The Lecture Hall is badly lighted from the West and has a "panic door" indeed, seeing that, when broken open, the escaping crowd would suddenly fall 3½ feet to a lower level; this trap to descend from is badly placed, and the room itself, as in most instances in this competition, acoustically bad. The top lighting of Elementary Art School is redundant and would give the deplorable effect of all sky-lighting seen through windows from the outside. The division of light as between the Painting and Antique Rooms is unjust, and the separation of Boys' Lavatory from their cloaks, and on a higher floor, objectionable. Design No. 3 covers the whole of the site and depends largely upon skylights for its lighting, costly to maintain, dismal in effect, creating down draughts and liable to be obscured by snow-fall. Satisfactory extension would be difficult. Amongst many defects may be named: waste of space in Corridors, confusing steps dividing the ground floor levels, inaccessible Internal Court, Art School windows too near Causeway, Art Master too secluded, Lecture Hall Entrance too contiguous to Laundry and Cooking Department. *The Elevations are pardonable.* (The italics are ours, the subtlety of the Extension warrants them).

The dome feature dominates Design No. 9 to its destruction. The Elementary Art School would have the undesirable quality of circular-domed rooms (e.g., the Picton Reading Room at Liverpool), that the slightest sound reverberates both loud and long, in a positively distressing way. The Castle Street Elevation is deplorably bad and the general effect squat, and more suited to crown a hill than depress the foot of a declivity. There are numerous minor defects, such as Laundry badly lit and close to Art School Entrance and Stairs, superfluous separate Women's Stairs to Art School, &c.

Is it that our architects are really deficient in the art of planning and in the science of construction? When a practising architect finds it necessary—in his capacity of assessor—to comment upon his fellow's work in such scathing judgment as appears in this Report, it almost makes us think that after all there is beginning to be some truth in the popular assumption that an architect is sometimes a superfluous luxury. Personally, we detest

artistic competitions, but a few more reports like this upon the designs submitted for the Crewe School of Art will induce us to reconsider matters.

ON THE USE OF MODELS BEFORE BUILDING.

ARE THEY PREFERABLE TO PERSPECTIVES?

IT is essentially necessary that a person about to build should thoroughly make up his mind as to the design he is about to adopt; that every part of it should be minutely considered, and that no alterations whatever take place after the building is commenced. To satisfy himself in this, it is advisable to be at the expense of having one, two or more perspective views taken from different points of sight, in order to ascertain more correctly what would be the general effect of the building altogether when finished, but I would sooner recommend having such money expended upon a model, which would impress the mind more satisfactorily than the most agreeable and specious drawings in perspective could do, however accurately they may be drawn, well shadowed or finely tinted.

A complete though plain model of the design should be first fixed upon, made very accurately to a scale of at least a quarter-of-an-inch to a foot, the several storeys to be contrived so as to lift on and off at pleasure, that every part may be easily and minutely scrutinised and measured. Those not so far conversant with plans as to judge therefrom with certainty, ought not to grudge the trifling charge of three, four, or even five guineas, for a model of this kind—the information and advantages to be derived from it may prevent much of the approbrious work of alteration, save a great deal of trouble, and a considerable sum of money.

Being possessed of such a model, and having obtained thereby a clear and satisfactory idea of the forms, situations, connections, and dependencies of the several apartments, the next step should be to minute down the general dimensions of such of them, at least, as are of the greatest consequence. In order to test the competency of the magnitudes, the dimensions of several rooms of similar descriptions should be tried. This should by no means be considered a useless trouble; the ideas which we form of magnitudes are often exceedingly deceptive, and, therefore, the best and most certain means should be adopted to regulate and correct them. As to the common method of measuring out the lengths and breadths of the intended apartments, in the open air or in some very large room, and setting chairs, tables, or screens, to confine their dimensions and shape their forms—this method will, by no means, answer the purpose so well—a tolerably good room, tried in this way, will appear confined and trifling.

Having proceeded thus far, it will be advisable to procure a few blocks of wood, cut out by the scale of the model to the proper general dimensions, the shapes of bedsteads, tables, chairs, and other common pieces of furniture—the placing of which in the apartments of the model will be of considerable use in judging of the conveniences of the design.

Let the intending owner be resolute in this: *that he do not by any means suffer a stick or a stone of his building to be altered after it is once begun*, let friends or foes say what they will. To examine the proportions of the exterior of a design, and to form a competent judgment of its effects, supposing an exact model has been made, let a board or table (covered with green cloth) be raised to such a height so that the top may be just as many feet and inches—by the scale of the model—below the eye as the eye is above the ground—the model, being placed upon this board or table in the open air, clear of the view of other objects, will then produce the same effect, in every respect, as the building would if it were actually completed.

This must be far preferable to any ideas that perspective drawings can furnish, and, perhaps it would not be doing justice to the exterior of a model to examine it in any other situation, with a view to judge of its merits or effects.

EXAMINATIONS AND LECTURES.

A CHAT WITH PROFESSOR ROGER SMITH.

PROFESSOR ROGER SMITH is half hid by papers and plans and academical data and "authorities" if you call upon him at his office in Temple Chambers, but he will readily "lecture you" in most agreeable fashion until you grow almost to envy the students at University College, where the Professor holds the Architectural Chair.

It was to gain a few hints for those toiling by the hard way of Examination, and also the Professor's view on the value and peculiar usefulness of lectures, that I called the other day at his office and found him primed, having had some warning of my coming.

There is a bookish as well as an architectural air about the Professor's room, and no end of wise writers on Architecture—Weall, I doubt not, though I did not look, and Donaldson, and surely Viollet le Duc, loom largely in old-fashioned book-cases with glass doors.

And Question and Answer, Professor?" I began, "Tell me, is it possible to 'examine' a man Architecturally—that much debatable point?"

"Yes, I think it is, in many ways. It is not quite so easy by paper as by oral examination. I believe in oral examination. You can find out a man's strong point in Architecture—if he has one."

And there was a merry twinkle in the Professor's eye.

"But, pray, a nervous man!"—I interjected. "A modest man—one afraid of his own abilities?"

"Well, you know, we try to put him at his ease; I personally believe very much in discovering if a man has any special knowledge, any grasp of a single subject, and it is not very difficult to discover. Then we humour him a little if we think him nervous."

"And, surely, you can examine a man as to how general building operations should be conducted?"

"There is a good deal that one can't test, it is true, so much skill that cannot be set down on paper. But I take it that a student should have some knowledge of the historical and archæological aspects of Architecture; should, moreover, have this knowledge well tested; should be capable of estimating and aware of the strength and quality of materials and intimate with the way in which to put them together."

"I should say, also, with regard to oral examination, that we base the questions on a specific day's paper work; that is to say, we take answers to the days' questions as guides in any oral examination, so that no sudden subject is sprung upon the student's mind. In drawing, I admit, it is more difficult to test him. Some students are much quicker than others, but I know of no single test better than the simple problem I invariably set at South Kensington, to draw from memory some building or detail of building which the student has personally studied on the spot."

"I should like to ask," said I, "how you account for the fact that the man who can plan well is rarely able to draw a pretty perspective of his own work, and, reversing the order, the picture-que draughtsman so often utterly fails in his planning?"

"It seems to me," he said, "that varying

qualities of mind are responsible for this. Architects may be described as either clever at plans, or clever at sketching (if clever at all), and it is rare that you find the two qualities of mind in the one man. When you do find him, you have a great architect."

"I wish you would give me a 'tip' about plans."

"Well, perhaps I cannot do better than give you the axiom which generally, I fear, startles young students: *that the most important part of a building is the floor*. When all is said for drawing, planning is of most value."

"And now, please give me, say six hints for the Examined: a few principles or tenets,

part of an answer that is correct he receives a proportion of marks. The Examiners are bound to give some marks for any answer that is even partly correct. Many students give up a question altogether if they cannot answer it in its entirety.—

3. A man should answer most thoroughly the one, two, or three questions upon which he feels himself best prepared. There is then a chance of testing the quality as distinct from the quantity of his knowledge. I am always anxious to find students who go in for thoroughness and are well versed in one subject, or even branch of a subject.

—4. I always advise a student, at all quick with his pencil, to illustrate his answer by sketches. A sketch helps often where words fail, or a student may be able to express himself more readily by the pencil than by the pen."

"And the question of line?"

"Oh, a clear good line? It may not catch the eye; it may not be so pretty—*chic*, as the French would say—but it has the merit of being true and is not dependent upon any mere trick of effect."

"And No. 5?"

"5. The student should tackle the difficult questions, or the difficult part of a mixed question if he can. It shows pluck. Even though there may be imperfections, an Examiner thinks more favourably of the student who boldly faces his problems. It is an evidence of his future resource and power in surmounting difficulties. 6. Let the student *begin* with the subject he can answer best. He is then fresh. He can see clearly, think clearly, write clearly. We get the cream of his knowledge. Too often a student leaves his 'strong' question to the last and then finds himself either tired or hurried. It is a singular thing that one class of men naturally rely upon the pencil for the expression of their thoughts, and the other upon the pen. The latter generally ends with the *business* of the profession, and the other excels with designing.

Further advice by Professor Smith was that a man should make himself as competent as he could, grasping every opportunity, which, indeed, is a truism; and then we fell-a-talking of lectures.

"Above all," said he, "a lecturer should have a special aptitude for his work; he should be of wide experience and able to express himself in the concisest English. The wisest way to write out a lecture before it was delivered, and the next best was a full and careful batch of notes. To interest his audience should be his aim rather than the amount of information capable of being compressed into a single lecture, and the choice of a subject was, perhaps, the most difficult thing of all. Many could write—and write well—providing a subject were given them."

Domestic Architecture had wonderfully improved in the Professor's lifetime, and though there was much that was imperfect, many men were now fairly competent, and those of long and careful training were capable of designs of exceeding delicacy and variety. Terra Cotta was very susceptible to ornament, providing it were not overdone. He considered that English modern Architectural work was superior to that of Germany.

THE HELMET OF SALVATION IN THE RYLANDS' MEMORIAL: MESSRS. HEATHCOTE AND RAWLE, ARCHITECTS.

let us call them what we will, to help the student to success."

"Very well. No. 1.—Let the student really *answer the questions* that are put to him. It is so easy to evade questions, to fence with them, to put in something beside the mark; to hedge, as it were. It seems to me that many students come up with loose ideas and lack the facility of expression in plain, straightforward, clear-cut English. An Examiner is always suspicious of an evasion.—2. He should answer as many questions as he can. Even let him give part of an answer—all he knows. For every correct answer a student gets full marks; for every

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,

14th May, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

MR. CARÖE, the newly appointed Architect to the Ecclesiastical Commissioners, is a son of the senior of one of the oldest houses in the corn trade of Liverpool, in which town Mr. Caröe was born. He took his M.A. at Trinity College, Cambridge, was an articulated pupil of Mr. John L. Pearson, R.A., and has been in business on his own account for twelve years, during which time he has been actively engaged in carrying out Church and other works. He is a Fellow of the Antiquarian Society, a Fellow and Member of the Executive Council of the Royal Institute of British Architects, a member and hon. secretary of the Art Committee of the R.I.B.A., is a past vice-president of the Architectural Association, and now president-elect for the ensuing year.

A CORRESPONDENT writes to a Manchester contemporary relative to the proposed West Front to the Cathedral: In the drawing now exhibited at the Royal Academy and in the obviously inspired descriptions of the design that have appeared in print, much is made of the ceremonial West Entrance for special use on State occasions. May I ask if the Architect, or if the Dean and Chapter, have realised the effect of a great congregation being discharged into the street direct from the proposed ceremonial doorway, and into such a street, with the throng of passengers hurrying to and from the railway? It is bad enough in all conscience now, when we have some space between the street and the west door of the Church. But if, as is threatened, there is no space, how will it be then? The design, whatever may be its merits, suggests a want of intimate acquaintance with local circumstances, and also a want of a thorough and lengthened study of the site. There are plenty of ways of spending money wisely and well about the Cathedral. Why, then, merely because there is money to spend, waste it in doing what is not wanted, and in what will, on the whole, injure rather than improve our Old Church and its surroundings?

In addition to the recently-acquired series of drawings by Professor Ruskin, from which various plates, illustrating "The Seven Lamps of Architecture" and "The Stones of Venice," were produced, one of the original drawings for "Modern Painters" has also come into the possession of the Guild of St. George Sheffield. The drawing is a careful study of

mountain peak scenery, representing, as signed by Mr. Ruskin, with the date when it was drawn, "The Matterhorn, from the Moat of the Riffelhorn, August 7, 1849"; and the view is described in connection with the engraving of it, so finely executed by Mr. J. C. Armytage, in the fourth volume of "Modern Painters," pages 238-9. It is to be hoped that as time proceeds many more such drawings by the founder of the Museum may find their way to this most suitable repository for all that relates to the life and work of the great "Art prophet," who has done so much for Sheffield.

At the London County Council meeting, Mr. Burns, M.P., admitted that the building work of the Department had not come out well, but he had learned from the President of the Board of Trade that in four years 3,000 builders had gone bankrupt, with liabilities of £3,000,000. Who paid for that? Having regard to the extras of the successful builders, and the scamped work of those just able to keep their heads above water, it was the creditor ratepayer who had to pay the difference. He would remind the Council that the Works Department was started because 18 "lowest tenders" were withdrawn by contractors, and there was evidence of rings among them. There had

five to be appointed by the leading Scientific and Art institutions of the country, including the British Museum, the National Gallery, the Royal Academy (two members each), and the Society of Antiquaries, the Linnæan Society, the Universities, and the Kyrle Society (one member each). Among the objects for which the Trust is established is, as regards lands, the preservation (so far as practicable), of their natural aspect, features and animal and plant life. The Council is an influential one, including the names of the Dukes of Devonshire and Westminster, the Marquess of Dufferin, the Marquess of Ripon, the Earl of Rosebery and other members of the Government, Professor Huxley, Sir John Lubbock, a number of Royal Academicians, and many prominent writers and workers in the field of Science.

ARUNDEL CASTLE has been added to and improved by successive heads of the great ducal house, and this tradition is being carried on by the present Duke of Norfolk, whose desire is to restore it to a thirteenth century structure, in keeping with the rest of the building, for Arundel Castle belongs to the great period of Architectural work which gave this country such enduring memorials of constructive genius as the Cathedrals of Salisbury and Winchester.

The Castle occupies a most lovely situation on the crown of the hills below which flows the Arun. The most historic part is the "Keep," which crowns a mound some 100 ft. high, where King Alfred is said to have held his camp, its circular form being identical with that of Windsor Castle. This notable landmark will stand as it is. There is already a very marked progress with the work now in hand. From the summit of that part of the building now completed can be obtained a view of some of the loveliest woodland and landscape scenery in the country.

THE old Lighthouse at Spurn, which has befriended the mariner for 20 years more than a century, will soon be superseded by an entirely new structure, in the erection of which upwards of 300,000 Staffordshire bricks have been used. The new house will be supplied with a triple light.

The old lighthouse associated with the great engineer Smeaton, was commenced in 1771, and completed in 1773. In the sixth year of George III. an Act was passed for taking down and rebuilding the Lighthouses then existing at Spurn, one to be 50 feet and the other 90 feet high. The Lighthouse at present in use is called the "high" Lighthouse; the "low" light was destroyed in 1776, and again in 1786, after being rebuilt by Smeaton. It succumbed subsequently to the fury of the sea on three occasions, the last in 1830, and was never again upreared. The "high" light is a Circular Tower, with several stories. Smeaton himself, writing of the two Lighthouses in 1793, says, "I had the great satisfaction to find at Hull that the Spurn lights were in such credit among the seamen that they were both esteemed, on account of their clear and brilliant light, to be the best lights in Europe. Frequently the great light of the Spurn has been seen in clear weather from the high ground near Beverley, a distance of 30 miles."

A LIFE-SIZE terra-cotta group of "Christ and the Children" has been presented to Whitworth Park, Manchester, by Mr. R. D. Darbishire, executed in terra-cotta at the Doulton Works by Mr. George Tinworth, the workman-sculptor, whose deeply felt and vigorously wrought reliefs of "Gethsemane"

AN INTERIOR: COMMERCIAL UNION ASSURANCE COMPANY'S OFFICES,
MANCHESTER: MESSRS. HEATHCOTE & RAWLE.

it was true, been a loss, but it would be more than made up in the operations of the present year. Of course, the Works Department was under the disadvantage of paying Trade Union rates of wages, and it was under the further disadvantage of not employing so many boys and learners and hobbledoys as were usually associated with jerry building. He thought it very satisfactory that there was no change whatever as to the character of the work that had been done. Government works nearly always exceeded the estimate, and it was clear that what might be lost in a slightly increased price could easily be gained, and more than gained, by the quality of the work.

THE movement in favour of the institution of a public body charged with the duty of permanently preserving for the benefit of the nation such lands and buildings as may possess exceptional beauty or historic interest, has resulted in the formation of a "National Trust for places of historic interest or natural beauty." The first annual general meeting of this body was held on Wednesday, when the Provisional Council was superseded by the regular Council to administer the affairs of the Trust, to consist of fifty members. Twenty-five of such members were to be elected by members of the Trust, and twenty-

and "Barabbas" and other Scriptural subjects have in their time excited so much attention. Christ is seated, with His left hand on the head of a child who is offering Him a flower. Another child is looking intently up at Him; at His feet lies a third and younger child, confidently asleep. The children are natural and touching, without mawkishness; the Christ seems to us less successful, a conventional Christ-type à la Cornelius, without the peculiar beauty or expressiveness which are to be found, for example, in "le beau Christ d'Amiens." But of course there are limits to expression in terra-cotta. The general effect of the group is good, and its creamy and ruddy tones tell pleasantly against a green tree-background.

DEEP wells, it has generally been held, cannot be profitably sunk except where, as in the Thames Valley, the geological conditions are such as to favour what are known as artesian wells. Here the water pent up in a basin bursts up, when relieved, to the level of the beds through which it oozed down. But some experiments made in Sweden show that water of the purest kind can be obtained by borings in solid rocks. These data have been accumulated by Baron Nordenskjöld, better known as an Arctic explorer, and his son, who has more recently distinguished himself by an examination of the cliff dwellings of Colorado. They find that if a well is sunk in solid crystallised rocks—granite, gneiss, or whinstone—to the depth of from 100 to 160 feet, the well soon fills and continues full by water trickling through cracks in the rocks, due to variations in temperature experienced by the upper part of the mass. Should their experience be confirmed, the result will be of enormous practical importance so far as the water supply of English towns and private dwellings is concerned.

AMATEUR Art has become self-confident enough to hold Exhibitions of its own, and the studios will be shaken to their somewhat flimsy foundations. But after all, Cosway gives the Amateur Art Exhibition ballast. But we may note the Art carving done by a number of boys who are instructed by ladies at Leigh, Tunbridge Wells. Nearly all the examples are in oak, and many of them would do no discredit even to artists of acknowledged fame. Specially to be noted were a pair of bellows, with long handles, the body being copied from an old 17th century panel. An oak easel is most beautifully carved, and so are a number of cabinets, boxes, and chairs, all designed by the boys themselves, who, generally speaking, are the sons of labourers or small farmers, and who support themselves by this industry. Highly to be commended is the copper work of the boys of the Guild and School of Handicrafts at Mile End, and some capital copies of old jewellery, notably a silver Holbein Brooch. Mrs. Netter contributed several cleverly modelled statuettes, the best of which a Psyche, and amongst the artists who gave or lent pictures are the Marchioness of Granby, Mrs. Adrian Hope, Countess Gleichen, Miss Pember, Miss Rose Barton, Miss Jex Blake, Mr. Heseltine, Mr. Hamilton Aidé, Mr. Herbert Marshall, and Miss F. Graham. The Cosway miniatures and oil paintings number 316, together with over

20 of Cosway's pupils, Andrew and Nathaniel Plimer. There have been several important exhibitions of late years in which works of Cosway were included, but this is the first which has been restricted to specimens from the hand of the master and his wife, and it is intended not alone to interest and to please, but to give to students a broad, clear view of what Cosway produced, so that his position in the gallery of English Art may be clearly defined and settled. It will be generally conceded that in Miniature Painting he has had no equal and but few rivals.

THE Executive Committee of the Payne-Smith Memorial Fund announce their decision that the memorial shall take a double form—first, a memorial in connection with Canterbury Cathedral; and, secondly, the completion of Higher Elementary Church Schools.

ON THE LEADS, EXETER CATHEDRAL: A SKETCH BY SYDNEY NEWCOMBE.

ONE very evident feature of this year's Academy is the more than liberal allowance of portraits which it includes. Out of the 887 canvases which the eleven Galleries devoted to oil paintings contain, 181, or more than a fifth, are portraits. In the Water-colour Room, of 384 drawings and miniatures, 171, or nearly one-half, and in the Black and White Room, 31, out of 137 drawings and engravings, or nearly a quarter, come under the same heading; while in the two Sculpture Rooms there are 44 busts and statues out of a total of 102 works. This means that in an Academy showing, without Architectural designs, 1,510 productions, there are as many as 427 portraits—considerably more than a quarter of the total number of exhibits.

A WELL-KNOWN firm of estate agents in Waterloo Place, has been asked by Lord Gerard to find a purchaser for Eastwell Park, in Kent, the magnificent estate he purchased from the Earl of Winchelsea in

the summer of 1892 for close on a quarter of a million of money. The mansion at Eastwell is one of the finest in Kent, and during the life of the late Lord Winchelsea, who resided chiefly in a flat in Victoria Street, it was rented by H.R.H. the Duke of Edinburgh and the Duke of Abercorn. Another interesting Kentish seat that has just come into the market is Sandling Park, comprising a mansion of 2,400 acres close to Hythe; while among the properties that are about to be announced for sale are Tedworth Park, near Andover, which extends over 6,000 acres, and Nevill Holt, on the Leicestershire borders of Northamptonshire, covering close on 2,000 acres.

THAT the auction season for the disposal of large landed estates this year will be short is evident, but that it will be much heavier than usual has been settled beyond doubt by the number of fine estates that have come into the market within the past few weeks. A well-known London firm of auctioneers recently stated that they had a dozen estates, the average extent of which worked out at over three thousand acres, to put up to public competition during the season. Despite the success of the Wrington sale the other day at Bristol, there is as yet no indication of more than the average number of properties being offered in lots, so as to enable the tenants to purchase the freehold of their holdings; but it is more than likely that the habit of submitting an estate for sale in the locality instead of in London will extend as the season advances.

THE announcement is unofficially made that Mr. George Herbert Murray has been appointed Permanent Secretary of the Office of Works in place of Mr. H. W. Primrose, the new Chairman of the Customs Board.

SOME steps should be taken to protect such buildings as Hampton Court Palace, with its irreplaceable contents, from the ever impending risk of destruction which is implied by the presence within its walls of private dwellings. It is not so many years since a destructive fire was caused there by the carelessness of a servant in one of the sets of rooms; and within the last few days a similar accident has imperilled the Palace, which might well have been destroyed had the officials been less prompt. The fire this time is mentioned as having originated in "a store room immediately under the Picture Gallery," a description of the scene of the outbreak which is sufficiently alarming. There are doubtless many deserving people who have every excuse for claiming house room from a grateful nation, but even their merits hardly justify such risks to national property of a peculiarly valuable type.

MR. J. M. ANDERSON, in his award in the competition for Cottage Homes and Schools for the Chorlton Union, said he had carefully examined each one of the 18 sets of designs which had been submitted in competition for the proposed Cottage Homes and Schools in the Township of Styal, Cheshire, and so far as merits in design and adaptability for the purpose of the buildings were concerned,

he had no hesitation in placing the designs in the following order—viz., No. 1, "Snowflake"; No. 2, "A Home"; and No. 3, "Q.E.D." It was, however, extremely unfortunate that the author of "Snowflake" provided accommodation for 286 children only, the condition of the competition being that provision was required for 300 children, in Cottages designed to accommodate not more than 20 in each, the first Cottage to be at the entrance gates and to also act as the receiving ward. The first Cottage, in the design of "Snowflake," was at the entrance gates, but it provided accommodation for six children only in place of twenty, leaving a deficiency of fourteen. In these circumstances he had, with great reluctance, been compelled to disqualify the design of "Snowflake," and he accordingly assigned the first place in the competition to the author of the design bearing the motto, "A Home," and the second place to the author of the design bearing the motto "Q.E.D." The third prize he awarded to the author of plans signed "Village Homes." The Committee had resolved that the award of the prizes offered be in accordance with Mr. Anderson's recommendation, as follows: First, £75, Messrs. Charles Clegg & Sons; second, £50, "Q.E.D.," Mr. J. W. Beaumont; third, £25, Messrs. W. Telford Gunson & Son. All the architects are of Manchester. The Committee further resolved that having regard to the report of the assessor, "that so far as merit and adaptability were concerned, he had no hesitation in placing the plans of 'Snowflake' first," the Board be recommended to adopt the plans of "Snowflake," and that the author be entrusted with the carrying out of the work. Mr. James B. Broadbent, A.R.I.B.A., of Manchester, was the author of the plans. The estimates of the several architects were as follows: "Snowflake," £26,560; "A Home," £34,756; "Q.E.D.," £35,998; "Village Homes," £30,000.

THE extensive work of restoring Bristol Cathedral has been carried out at a cost of £20,000. This makes a total of £100,000 spent on the building in the last forty years, the most recent undertaking being the restoration of the Lady Chapel, the repair of the Central Tower, and improvements to the Choir. The Archbishop of Canterbury, during his recent visit to the Cathedral, was presented with a numerous signed petition in support of a movement for establishing a distinct bishopric in Bristol, and asking him to consecrate, in the restored Cathedral, the first bishop for the restored See. The Archbishop reserved his reply.

HERE, surely, is the climax of the pessimistic view of Painting: "I would," says Mr. H. Stacy Marks, R.A., "speaking, of course, practically, almost rather see my children take to crossing-sweeping than to Painting. Undoubtedly the greatest difficulty in the way of success is the enormous number of people studying to become artists. Competition is naturally becoming keener every year, and where one swims a large number must sink. . . . In my opinion there are too many Schools at the present time. Everybody appears to be trying to become an artist, and I'm sure I don't know how they will all get a living." Mr. Marks does not consider England an artistic nation. "The best singers and painters get high prices, it is true, but there is no 'rage' for Art as there is among the Italians." He does not think that genius always shows itself in youth. As for himself he says: "Although as a child I was always fond of drawing, there was absolutely

nothing I did in my boyhood which showed any promise of my rising above mediocrity."

RATEPAYERS of Bermondsey have protested against the action of the St. Olave's Board of Guardians, who want to build another new Workhouse at Rotherhithe. If built, this will be the means of sending up the poor rate by 2d., and that rate is already at the present time 4s. 7d. Dr. Cooper, L.C.C., moved a resolution protesting against the proposal. He said they were told it was to be a home of rest; that was impossible from the nature of the plan, which he had seen. Even if the Workhouse were necessary, said Dr. Cooper, it was the wrong time to begin it owing to the heavy rates. He maintained that the present accommodation was amply

[ASHBOURNE] CHURCH: SOUTH-EAST ANGLE OF MIDDLE STAGE OF TOWER: WM. WHITE, F.S.A.

sufficient for the needs of the district. The estimate was £64,000, but the Guardians had never yet built anything that did not exceed the estimate.

THERE is no foundation, it is said, and we trust the good news is true, for the alarmist reports circulated in London regarding the health of the President of the Royal Academy. In conversation with a Press representative, Sir Frederic, who looked very well, said he supposed that the alarming reports prevalent in London as to his health must have arisen from the fact that he was unable to attend the Academy banquet. It was his intention in the meantime to pass only one day at Algiers, but he would return for a stay of several days duration after visiting Setif and Biskra. His general health, the President added, was good, but he suffered occasionally from local attacks of gout. The

British Medical Journal says, we are glad to be able to state that the somewhat pessimist rumours prevalent concerning the cause of Sir Frederic Leighton's absence from his place as President of the Royal Academy at the recent dinner are happily much in excess of the facts. The heart affection from which Sir Frederic Leighton is suffering is one which necessitates abstinence from the excitement of public speaking and from all avoidable business, such excitement having proved to bring on distressing attacks. There is, however, good reason to hope that complete repose from all such functions and rest in a favourable climate will largely improve the President's health and general condition. We are very glad to hear of this, for we had heard, on usually unimpeachable authority, that the President's condition was, or had been, really serious.

ONE of the oldest Churches in Washington has a Steeple formed of a tree. The Church was built under the shade of a tall poplar, and an ingenious member of the congregation suggested that the tree should become the Steeple. Accordingly the poplar was deprived of its head, the bell being hung on the stump. This is, perhaps, the only instance on record of a Church Spire having been made from a tree.

IN Athens the excavations in the neighbourhood of the Pnyx and the Areopagus, begun by Professor Dörpfeld last season, have been continued. These excavations having shown that the ground in this region is full of buildings and antiquities, the Greek Government has expropriated the land. The work has been devoted to two main objects, the further tracing of the aqueduct found last year and the identification of some buildings known to have been situated near the Enneacrounos, in order to place beyond doubt the position of the Enneacrounos itself. Outside Athens, the excavations of the French School are being carried on with remarkable success. Several valuable discoveries have been made, amongst which may be mentioned the Treasury of the Athenians, which is covered with inscriptions (mostly official documents relating to Athens) and a large Archaic Apollo. As it is in Naxian marble, and bears the signature of an Argive artist, it will prove fatal to some theories about early Art. As many as forty inscriptions have been found in a day; the most interesting is the Hymn to Apollo, which has been performed at the French School. Some beautiful small bronzes have been found. At Delos many Roman houses were laid bare containing very fine statues, amongst them a copy of Diodesmus of Polyclitus, said to be the finest extant. The excavations conducted by the Americans at the Heraeum, near Argos, have been continued, and the magnificent foundation of the later Temple now stands bare. At Eretria, Professor Richardson, Director of the American School at Athens, has continued his excavations. The remains of the Temple and of the Altar of Dionysus have been found close to the Theatre. Excavations have been made by the British School on the site of the Temple of Apollo at Abæ. A good many Early Decorative bronzes were discovered. Both the German and French Archaeological Schools receive large annual grants from their respective Governments, and the American School is also generously endowed. The British School receives no regular grant from Government, and its income is a very small one. This is so characteristic.

A REMARKABLY fine Exhibition of the Art of Ancient Egypt has been organised by a

Committee of the Burlington Fine Arts Club. The Committee has received co-operation from many learned Egyptologists, including Dr. Fouquet, of Cairo; and many fine examples have also come, by permission of the Emperor, from the Royal Museum of Berlin. In thinking of Egyptian Art the ordinary person is concerned only with things of size—the pyramids, sphinx, temples, tombs, colossi at Thebes. Indeed, the casual tourist need not even go so far as this implies—Bloomsbury or Sydenham are enough to confirm his belief that the awe inspired by Egyptian Art is due to hugeness of scale. Such a belief would, however, be upset by a visit to the Art Club's rooms in Savile Row, where nothing larger than a mummy case—and only one of those—finds place, for the sensation evoked by this multitude of small things is one of respectful veneration, aroused by the sense of the antiquity of Art, and the longevity of the objects which are here to prove it. Nevertheless, the assigned dates can only be approximate, if not altogether supposititious, for there is a difference of 2,457 years between that given by Wilkinson to the first Pharaoh and that which Professor Flinders Petrie considers is correct—4,777 B.C. Paintings, pottery, glass, wood-carving, jewellery, scarabs, bronzes, stone, sculpture, textiles, bead-work, and ivory are here under the permissibly comprehensive title of Egyptian Art. Also there are many things—not the least beautiful or interesting—which reveal that, although Egypt was the parent of Greek Art, she took back more than she gave. But the pure Egyptian is classical and enjoyable, whether seen in the beautifully sculptured "Head of a King," lent by Sir Francis Grenfell; Dr. Fouquet's "Throne for a Divinity;" Mr. Hilton Price's Sixth Dynasty figures, carved in wood, of a priest and of a functionary; his very fine "Cynocephalons" silver spoon, pectoral; examples of the New Empire and Saitic periods in the Berlin case; the "Gold Necklace," lent by Lady Lampson, and Count Tyszkiewicz's *cloisonné* work, "Gold Soul," or necklace connected with earrings of gold and precious stones. Nor is the pottery section less fascinating, whether that from the Ancient Empire to the Roman times, or the brilliant blues and clear glazes of the Middle Empire.

It is probably known to few that on the north side of the Chancel of Holy Trinity Church, Stratford-on-Avon, there are the remains of the most ancient part of the original fabric, believed to be intact, but covered up with soil. The Vicar states that he is anxious to get some Archæological or Antiquarian Society to superintend the excavation, as it would be of interest to all if the remains, which comprise the ancient Charnel House, could be carefully and reverently uncovered. Existing records show that the Vault is built in the Saxon Gothic style, and there is every reason to believe that it is part of that portion of the Church erected at the time of Edward the Confessor. The Gothic doorway, within a few steps of Shakespeare's grave, opened into this building, which, says Ireland, "contains the greatest assemblage of human bones I ever saw."

THE repair of the steeple of Ashbourne Church (the "Minster of the Peake") completed with the exception of re-hanging the old bells in the Tower, was undertaken none too soon. The stair-turret and middle stage of the Tower (of earlier date than that above it) had opened considerably. The East and South walls of the upper stage, carrying the spire, had to be shoved up from the floor of the Church whilst the critical work of rebuilding this angle was carried on. Before commencing this work the opposite walls were bonded together (permanently) with two tiers of rods of "Delta" metal. This material is not only free from rust, but also from the dangerous expansion and contraction of iron. Of the spire the two lower stages were spreading, and there were large fissures

shall be available for their restoration to the Tower in which they could now be rung with safety. The work took three years in execution at a cost of very nearly £5,000. The greater part was carried on, without contracting, by Mr. Ralph Clifton as building foreman and clerk of the works. The architect was Mr. William White, F.S.A.

TWENTY-SIX thousand seven hundred and sixty-nine persons were at the first public view of the Champs-Élysées Salon. In the Salon the paintings most looked at, on the five franc day, were M. Detaille's Prince of Wales and Duke of Connaught, M. Bonnat's President of the Republic, and Munkacsy's "Crucifixion," which seems borrowed from the one which made the tour of England and the United States. There was more than usual interest shown in the sculpture. Patriotism is the fashion, and the best sculptors are this year patriotic. M. Batholdi's group, representing Strasburg succoured by Switzerland in 1870, was pronounced a masterpiece. Were it set up in the Tuilleries Gardens it would be hidden soon with wreaths and bouquets. All the Joans of Arc were admired. M. Falguière contributes a spirited and picturesque statue of Laroche-Jacquelin, the hero of the Vendean civil war, but M. Cordonnier's "Electricity" was the most admired work of all.

MR. J. W. WATERHOUSE, A.R.A., is mentioned as the probable successor to Mr. W. C. T. Dobson, retired Academician, on the Royal Academy. Mr. Dobson is entitled on his retirement to a pension of £200 a year. He will make the sixth retired Academician.

THE new Church at Crathie greatly interests the Queen. It will be formally opened during her Majesty's next residence at Balmoral. Princess Louise has given the church a splendid collection of polished marbles and pebbles from the Island of Iona, with which the granite Pulpit is ornamented. Several of the windows are filled with stained glass, the designs being selected by the Queen, assisted by Princess Louise and Princess Beatrice. The highly ornate Pulpit is a gift from "the Court."

SCREEN, DUNSTER CHURCH: SYDNEY NEWCOMBE, ARCHITECT.

extending to a considerable height on three of the angles. The top-stone and cap were also split by the expansion of the iron rod carrying the vane. This has now been constructed in the Delta metal. A great deal of stonework was injured or destroyed by the rusting of cramps and tie-bars, which had ceased to afford the requisite support. None of the old carved or moulded work was even cleaned, nor were the general surfaces touched. Large bonding stones were built in, and large quantities of concrete and cement were poured into the walls. Very nearly 5,000 cubic feet of new stone were nevertheless required. The height to the top of the vane is about 218 feet. The beautiful bells, eight in number—the veritable peal which inspired "those evening bells"—are hung temporarily in their old cage, brought down into the Churchyard till funds

We indicated its probability in a recent number, and now we are glad to announce that the amalgamation of the Surveyors' Institute of this country with the Irish Land Agents' Association, has at length been definitely decided upon. The matter was mooted years ago, but it was not till last week that the last of the numerous difficulties, owing to the different practice that prevails in each country, was overcome.

THE final series of Mural Decorations illustrating the Art of Music, have now been completed and placed in the Donaldson Museum. These paintings, which are presented by Mr. Donaldson, have been executed by M. Gaston de Vaere, who has enjoyed the privilege of having them submitted to the Prince of Wales, President of the College, at Marlborough House.

AN INTERNATIONAL SERIES OF ILLUSTRATED ARTICLES.

TO OUR READERS.

In our early numbers we hinted at our intention to introduce Illustrated Articles on current Architecture as a further feature in "THE BUILDERS' JOURNAL."

We have, therefore, pleasure in announcing that we have arranged for a series of

IMPRESSIONS

upon the Architecture of the chief cities of Great Britain and Ireland, of Germany, France, Italy, Spain and America.

These Articles will be finely Illustrated, and will appear in conjunction with "Our Men who Build" series, which we shall also make

INTERNATIONAL.

We shall be obliged if our readers will aid us in making these facts known.

IMPRESSIONS.

NO. I.—MANCHESTER.

THE NEW MEMORIAL CROSS AT PLYMOUTH.

STUDDER as England is with Mediæval Crosses of beautiful and graceful proportions, the new St. Andrew's Cross at Plymouth, designed by Messrs. Hine & Odgers, architects, of Lockyer Street, Plymouth, can well hold its own. In height it is taller than the majority; the Bristol Civic Cross at Stourton, Wilts, is only fifty feet high, and the celebrated Eleanor Cross, at Waltham, Essex, is but little higher. But the new Cross on the old burial ground, which on plan measures twenty-four feet square, is seventy feet high. It contrasts, in its light and beautiful outline, very happily with the old Western Tower of the parish Church hard by, whose bells once rang out when Drake and his ships dispersed the galleons of the Armada. It is in distinct contrast, too, to the Towers of the Municipal Buildings and Guildhall, yet there is an Architectural affinity and harmony in the whole group, which is striking and impressive. The base is of polished granite, surrounded by steps, octagonal on plan, of Plymouth limestone. The fabric generally is of carefully selected Portland stone. A red sandstone, raised in quarries at Mitcheldean, is introduced neatly in alternate layers, with most excellent effect. The Cross may be divided into three distinct tiers or stages. On each of the four faces of the first or lower tier, there is a moulded arch with double shafts and carved capitals. These recesses contain slabs of polished granite, on two of which are inscriptions. The legend on that on the south face reads: "Erected Anno. Domino, 1894. Ven. Archdeacon Wilkinson, vicar; John P. Paige, T. G. Greek Wills, churchwardens"; and on the northern: "To the glory of God, and in memory of parishioners during many centuries buried near this Cross." The central stage is treated somewhat similarly to the lower one, but is higher and it contains niches for statuary. At either angle are graceful pinnacles carved with crisp and effective crockets. Above are more pinnacles, and a crocketed spire of well considered proportions, terminating with a cross of wrought copper. All the mouldings upon this handsome structure are bold and thoughtful. The carved foliage throughout the fabric, which is exceedingly well done, is by Messrs. Harry Hems & Sons, of Exeter. In each of the four niches, resting upon a base carried by a polished granite column, is an allegorical Statue, measuring seven feet or more high. That on the south side is a particularly well considered one of Hope, with an anchor by its side. On the north stands Peace, wearing the crown; on the east, Faith, with the cross; and on the west, Charity, with an orphaned little one in her arms. The new boundary wall has also been designed by Messrs. Hine & Odgers, and its piers are effectively carved by Messrs. Hems & Sons. The handsome wrought iron work is by Messrs. Hardman & Powell, of Birmingham. The general contractor for all the works, now so nearly completed, is Mr. John Finch, Plymouth.

The Builders' Journal.

MEN WHO BUILD.

No. 13.

MR. WILLIAM WHITE, F.S.A.

WILLIAM WHITE, whose work is perhaps less known than that of any other architect of repute, might justly be considered a man of periods. Blakesley in Northamptonshire, knew him first seventy years ago. His father was a clergyman and intimate with the Scott family—of whom Sir George Gilbert Scott was the most renowned. Young White and Scott both made up their minds to devote themselves to Church work about the same time, and although factionists might not mention William White as the equal of Sir Gilbert, yet they have both achieved their object, and in these days that is something to be proud of. A Mr. Squirhill, of Leamington, was White's first master, from whom he acquired a general technical knowledge of his profession, and who left him to study drawing and "Art" as he pleased. Although from Leamington he came south and sat beside G. E. Street and Mr. Bodley, in Spring Gardens, he never imbibed the "knack" of making pretty drawings. After almost half a century of practice—forty years of which has radiated from his house in Wimpole Street, there is hardly a drawing in the place commendable to any known "process" of reproduction, and Mr. White has designed and built in his time no less than seventy Churches, and has added to or restored twice as many more.

The actual date of his commencement of practice was 1847, the first few years of which were spent at Truro, where he designed the block of buildings, consisting of the Bank and Solicitors' Offices, which occupy the site of the old Stannery Court,

and later the Bank of St. Columb. He built and restored many Churches in the county—those of Baldu, St. Gerrans, St. Hillary, St. Phillack, St. Petroc-Minor, Lamorran, and subsequently New Quay, Merifield by Torpoint, Anthony, and St. John's. Amongst

domestic work in the same county, he undertook the renovations of the ancient and interesting moated Rectory of St. Columb, for the Rev. Dr. Samuel Walker. Upon taking up practice in London, almost the first Church designed by Mr. White was that of All Saints, Notting Hill—the Church which was to have had the highest Tower and Spire in London. When the Tower itself had just been completed, a settlement made

its appearance owing to the authorities putting in a large drain within thirty feet of the foundations in the London clay, and work had to be stopped; and from that day not another stone has been added to the unfinished Tower, and over the bookcase in Mr. White's room are three out of the four silvered glass balls which were to have formed the finials of the pinnacles, the contractor of the work having got the fourth. It is a great pity that work was stopped on what would otherwise have been one of the very finest Towers and Spires in the country.

Between the years 1850 and 1860, the list of English architects who devoted themselves more especially to the building and restoration of Churches largely increased. Messrs.

PROPOSED WALL PAINTING OVER CHANCEL ARCH OF LYNDHURST CHURCH: WILLIAM WHITE, F.S.A.

E. Christian, J. Clark, S. S. Fenlon, and J. H. Hakewill, were amongst those who followed, with more or less tendency to individual peculiarities, in the footsteps of the late Sir Gilbert Scott, while a certain number of younger men, including G. E. Street, H. Woodyer, G. F. Bodley, and William White himself showed an early inclination to strike out in a new line for themselves. Mr. White has always been a great believer

to be prosecuted, as well as an art to be practised. As in all other Arts, there are confessedly abstract laws and principles in subjection to which they must be carried out, so we may naturally expect to find the same in Architecture. And as the scientific laws of each of these were discovered by a careful examination of the most masterly works of their respective Arts, so it is in the study of ancient buildings

great teaching of Burke, that the eye is not capable of determining whether any part of any determinable quantity be a fourth, or a fifth, or a sixth, or a moiety of the whole; or whether it be of equal length with any other part, or double its length, or but one half, it being a matter quite indifferent to the mind, and stands nearer to the question. "Surely beauty," said Burke, "is no idea belonging to mensuration, nor

ORIGINAL DESIGN FOR A CHURCH IN COURSE OF CONSTRUCTION AT BATTERSEA: WM. WHITE, F.S.A., ARCHITECT.

in proportion—in absolute scientific proportion—a perfection of design which finds little study and less favour in the present day. As far back as June, 1853, in a paper read before the Cambridge Camden Society, William White preached his doctrine. It is the neglect of the Science of Architecture which causes failure in modern design. It seems to have been almost passed over or forgotten that there is in Architecture a science as well as an art—a science

that we must look for a discovery of the scientific principles which ought to regulate the Art of Architecture; for it is in the investigation of these laws that the SCIENCE consists, the ART being simply the application of them, when discovered, to the practical purposes of correct design and beautiful form. Mr. White, therefore, believes in geometrical proportion worked out with as much rule as one would take out the bearing strains of materials. He does not believe in the

has it anything to do with calculation and geometry." All this William White does not accept. There is every reason to believe—he thinks—that whenever true Art was in any state of perfection, the artists *did* bind themselves down to the observance of certain fixed rules—rules that we call the conventionalities of Art. A Church worked out most minutely on Mr. White's principle of geometrical proportion, is that of St. Saviour's at Highbury, illustrated on another page.

On the drawings, and more so by glancing at the building itself, one would judge that the capacity of the Church was at least 800 to 1,000 persons, yet it is actually under 400, and Mr. White proudly considers the deception is due to the perfect proportions of the building. William White has built a great number of Churches in London. St. Mark's, Battersea Rise, St. Peter's, Plough Lane, St. Matthew's, Lavender Hill, all of which were for the Rev. Canon T. Erskine Clarke, and St. Marks, Hanwell; where also he built several houses in the Old English Cottage Style, one of which he occupied himself for a considerable period. Of country Churches there is no end, and he designed the Cathedrals of Madagascar

Warnborough, Hants, contains many mediæval brasses and tombs of the family, the most conspicuous of these being one to Sir Thomas White of Canterbury, with effigies of himself and his wife, and statuettes of their fifteen sons and six daughters—a goodly family indeed. Mr. White also claims kinsmanship with William of Wykeham, and being twice married, has a family of daughters and an only son.

It is William White's boast that every sheet of detail which has gone out of his office during the past half century has been done by his own right hand. Until the past couple of years every season has found him in Switzerland taking a hurried tramp through

SAWDUST.

THE appointment of surveyor to the White-chapel Board of Works is now vacant. The commencing salary is £400 per annum.

A NEW Grammar School is to be built at Shepton Mallet, also a Master's Residence at a total cost of £8,000.

A NEW Church, to be called St. Margaret's, is about to be built in Abel Street, a rapidly growing district of Burnley. It will seat 560 people, and the estimated cost is £5,000.

A NEW Baptist Chapel has been opened in Leamington Street, Blackburn. It has been erected under the recently inaugurated extension scheme of the Baptist Union. The cost of the new building has been £6,000.

DISTRICT CHURCH OF S. SAVIOUR, ABERDEEN PARK, HIGHBURY GROVE, LONDON

and Pretoria. His principal restorations have been Newland Church, in the Forest of Dean; Adisham, near Dover; West Wittering, in Sussex; Great Maplestead, Bletchley, Selborne, and Witham Friary, built by Hugh of Lincoln; together with the Rectory of Darlington, the ancient Palace of Bishop's Court, near Exeter, with its original Chapel; Tarporley Rectory, in Cheshire; and the old Manor House of Marshall's, near Edgware.

Of the social side of William White's long life there is not much to chronicle. His antecedents are perhaps best known by his relation to the family of the Rev. Gilbert White, of Selbourne. The Church of South

some part of the country and bringing back fresh vigour for his work, and now, at the ripe age of threescore years and ten, he does not hesitate to run up a suspicious pair of steps, and standing on the topmost rung remove from the walls of his interesting rooms in Wimpole Street the drawings you select to illustrate your sketch. In his long life this brilliant Church architect has done some splendid work, and when the century's Architecture comes to be detailed, William White's name will assuredly not be forgotten.

JAPAN is to celebrate its victories by an Eiffel Tower, erected, however, as a private enterprise.

A COMMODIOUS School Hall and Chapel have been erected at the Convent of the Holy Child Jesus, at Layten Hill, Blackpool, by Mr. J. Whiteside, from designs by Mr. R. B. Mather, architect.

APPLICATION is to be made to the Local Government Board for sanction to borrow £1,650 for the purchase of Cromwell House, for conversion into Offices for the Guildford Council.

THE Town Council of Burton-on-Trent propose to widen Little Burton Railway Bridge, and the approaches to it, at a cost of £5,000. It is also the intention of the Council to proceed with the widening of the Trent Bridge at an early date.

"TREILLAGE": TRELLIS-WORK.

MR. JOHN BELCHER'S PAPER.

THE fortnightly meeting of the Architectural Association was held on Friday night, at 9, Conduit Street. Mr. F. G. F. Hooper, vice-president of the Association occupied the chair, in the absence of Mr. E. W. Mountford, the president.

Mr. John Belcher read a paper on "Treillage." At the commencement he explained that he had selected this subject because it was a simple and suggestive medium by which he could obtain important and good effects in connection with gardens and domestic buildings. He then said: I do not propose to attempt, even if I were able to do so, any historical description of the gradual development of trellis-work. My object is to suggest its more extended use and recognition. I would point out that it has a poetical and romantic side as well as a useful one. Such a medium may be to the architect what clay is to the sculptor. It is the ease and facility with which daring experiments can be made which render it valuable. It can be altered and shifted at pleasure until the desired effect is obtained in a way which more solid and valuable materials prohibit. And it thus affords opportunities for judging effects which may subsequently be translated into stone or brick. To the student it presents the advantage of a material in which he can try experiments. He can buy a bundle or two of plasterer's laths and interlace them, and form panels and arches and many devices within a few feet of the back wall of his garden, which will increase its interest. And beyond all this, I think trellis-work itself is capable of being adapted to uses for which its nature and lightness render it suitable, while its decorative character must be recognised by every artist. In gardens trellis work is very effective. With the flexible laths, deep archways can be formed in the trellis division just long enough to form a dark frame beyond. Or if just a peep is required here or there, a few laths can be cut and a bent piece or hoop of wood, circular or oval, inserted, forming an unglazed window in the trellis or hedge. There is an example in the Penshurst garden. Again, should it be desirable that the upper part of a high screen, or parts of it, be more open or only partially hide what is behind it, then the trellis can be cut into pattern more or less open as desired—sometimes in panels, sometimes in a running pattern. Mr. Belcher gave instances of successful examples of trellis work, and mentioned particularly that in the garden of Mr. Alma Tadema, which was carried out some years ago by Mr. Brydon. Continuing he said: In trellis designs it is the solids and voids which must be taken into consideration. The interpretation of column and entablature into trellis-work is worthy of your attention. The "flutings" of the column are represented by the voids, and the "fillets" by the laths. In the lower part of the columns, to one-third of their height, there are "reeds" represented by circular rods. The laths and reeds are fastened to rings at intervals. The "Ionic caps," with their "volutes," are ingeniously managed. The introduction of the "triglyph" in this "order" is also amusing. Then a fret-work pattern is happily introduced in the fascia, and round balls at regular intervals in the bottom member. There are many other examples and variations. The construction of fences, arches, verandahs, and porches in trellis-work is exceedingly simple. In division fences the posts vary in thickness, according to their height and distance apart, and are frequently finished with some sort of terminal; a small fillet is all that is used to keep the ends of the laths in position against the posts. The top and bottom rails are often plain, the top having a projecting cover piece, or are sometimes moulded, and the bottom rail is kept well off the ground. The laths are arranged in several ways, and in larger or smaller meshes, as lightness or increased density is required. In garden fences the laths are sometimes interlaced, but more usually they are laid across each other, and pinned together in squares or diamonds. Other variations are obtained by doubling the lines of the pattern. When, however, in verandahs and porches, for instance, other geometrical forms are needed, they are made up of circles, curves, and radiating bars, mostly put together in sections,

though some of them are cut out, and form a species of fret-work. Instead of the ordinary thin lath, strips or fillets of greater thickness, ranging from $\frac{3}{8}$ in. by $\frac{1}{2}$ in. and upwards, are used when the pattern is very open. In many of the best examples of verandahs, we may note that the constructional timbers are reeded or treated with a hollow moulding to secure a light appearance. Small reeded columns are not unusual, and, indeed, form a very characteristic wood treatment of the period. The caps to such columns also are interesting, and some in form resemble a mushroom button. Garden seats with trellis work backs were very general in the last century. The backs, and sometimes other parts, were arranged in panels very similar to those on balconies. Such seats have been reproduced in many forms by Mr. Marcus Stone in his pictures. They are so excellent in design, and so ornamental to the garden, that a revival of the treatment may well be advocated. When oak is used in garden work the delightful silvery tint it gains with age is valuable. If the work is in deal then the dark green is most effective. For verandahs, &c., the dark green also tells well against a plaster or cement background, but when the brick wall is dark in tone then white or straw colour looks well. With regard to the use of trellis-work, which I have hinted at, I might say that amongst other ways in which its use might be developed is in internal domestic work. The staircase affords an opportunity, as instead of the ordinary baluster, some trellis pattern can be effectually adapted. Opportunity is also afforded to the County Council for the use of trellis-work in the erection of "band stands" in the people's recreation grounds. The pavilion designed by Sir W. Chambers is very suggestive and quite adapted to such a purpose. Light iron-work is too brittle, and is easily broken, whereas the wood gives, and even if a lath is snapped it is more easily repaired than ironwork. The garden seats and shelters also afford excellent opportunities for its use. In conclusion, he said, a well-designed piece of trellis-work gives to the substantial building to which it is attached something of that grace which is lent to garden Architecture by the natural growth of creepers.

A discussion followed.

The Chairman said he had been very much delighted with the paper and the exhaustive manner in which Mr. Belcher had handled the subject. He should make no remarks, but as Mr. Brydon's name had been mentioned in the address, he hoped that gentleman would open the discussion.

Mr. Brydon said he had long been impressed by the conviction that the only really good examples of treillage were rapidly disappearing from the scope and interest of the profession as architects. Mr. Belcher had referred to many fine examples of the laudable retention of it, as, for instance, the beautiful specimen in the house of Mr. Tadema. Yet its one great and, in fact, only merit, consisted in the fact that everybody could see exactly how it was done, and that the whole effect was got by judicious adaptation to catch the beautiful effects of natural light and shade. Its colour and effect were only to be obtained by years of fading and searing which resulted in the end in what the variable-ness and eccentricities of the English climate would do for it. Mr. Belcher had made reference to the inartistic treatment of garden seats. It was an absolute impossibility to get hold of a genuine old garden seat. They might think sometimes that they had got hold of one, an ideal one, but they had not. (Laughter). He had frequently made inquiries for such an article, but the answer was always No; the only way to get one was to design and build one. He knew of nothing more atrocious than the present-day libel on such a thing, with curved and uncomfortable angles and projecting knobs and joints. (Laughter). Garden gates, too, he thought offered a large field in which something could and should be done in the way of modifying them or going back to the antique and picturesquely beautiful in them. (Applause).

Mr. R. S. TAYLOR seconded the vote of thanks, and remarked that the glory of Treillage, whether of Egyptian origin or not, was fast going into a state of deplorable decay. It was no doubt from the Egyptian source that much or most of the present day finest

examples of the Art had emanated. He strongly recommended the study of the subject in its entirety to the members of the Association.

The CHAIRMAN in putting the vote of thanks said, it only remained for the members to follow up Mr. Belcher's suggestions. It could easily be done. To see beauty in common things, and to make others see it and take interest in it, was part and parcel of their common function in following their profession.

Mr. BELCHER, in reply, said that when he undertook the subject he had expected to find any amount of data to work upon, and any number of works to refer to, but he had been disappointed, for he had found absolutely next to nothing upon which to found his remarks. His ideas and suggestions had consequently to be derived from and built up upon really personal observation. He had found it a most interesting study, and believed they all would, too, if they took it to heart as he had done, in the interest of their profession.

Mr. BELCHER then explained the illustrative and technical features of his essay to the members, and the meeting terminated with the usual vote of thanks.

THE WORK OF THE INSTITUTE.

A CLASS OF "CRAFTSMEN."

THE members of the Institute considered the report at their annual general meeting, Mr. F. C. Penrose presiding. The report was in great measure a *resumé* of the year's work, and as such had been reported concurrently. From it we learn that the Fellows now number 604, and Associates 921. During the twelve months five Fellows (who were previously Associates) and 91 Associates (19 of whom were previously Students) have been elected. Three Hon. Associates—Alfred Gilbert, R.A., F. G. Hilton Price, director of the Society of Antiquaries, and W. B. Richmond, M.A., A.R.A., have been elected; and six Hon. Corresponding Members—Charles Buis (Brussels), Bar Fereé (New York), Alois Hauszmann (Budapest), Henri Edouard Naville (Geneva), Emerich Steindl (Budapest), and Louis Viollier (Geneva). There are now 61 Hon. Associates and 55 Hon. Corresponding Members. The number of Students has increased to 143, as against 101 at the corresponding period last year, and the number of Probationers to 736, as against 577 in 1894. The Art Standing Committee reported that, in view of the fact that one, or possibly two, important new bridges across the Thames at Vauxhall and Lambeth were in contemplation by the London County Council, they had given special attention to the matter, in order to secure structures worthy to rank with Waterloo and London Bridges. Although the Committee regretted that their endeavours to secure stone structures had been unsuccessful, they desired to record their sense of the courtesy and attention with which their views had been received by the Bridges Committee of the London County Council. The Council, having appointed a Committee to consider the question of the Hon. Associate class, has approved in principle the establishment of an additional class of members who shall be craftsmen in the Arts allied to Architecture; and have referred the matter back to the Committee to work out. The Council hope, before the close of the Session, to bring forward a scheme for the consideration of the Institute. The Preliminary Examinations of November, 1894, and March 1895, were held in London, Bristol, and Manchester, and the 217 successful candidates have been registered as Probationers. The Intermediate Examinations were held in London on the same dates, when fifty-seven Probationers passed, and were registered as Students. Examinations qualifying for candidature as Associates were held during the week commencing November 26, 1894, in Manchester, Bristol, and Glasgow, when sixty-four passed. The first of the Final Examinations qualifying for candidature as Associates was held in London and Manchester, from March 29 to April 6, 1895, when out of the eighty-six applicants who attended twenty-six passed. The Council again tender the thanks of the Institute to the Board of Examiners for the arduous services rendered by them, and to the allied Societies at Manchester, Bristol, and Glasgow.

SHOULD GOVERNMENT ENCOURAGE ART?

AT the Academy Dinner, Lord Rosebery spoke of a national duty to painters and sculptors, in the spirit of a man conscious of a vast debt which he has never yet had a chance of paying. As "an irresponsible dreamer of dreams," he weighed in the balance, not the present Government only, but all Governments in our country, and found them wanting. What had they done to encourage Art as she deserved? They had bought a few pictures when their authors were dead; they had commissioned a living sculptor to execute a Statue of a deceased statesman; they are in the habit of giving commissions to a few architects for the erection of public buildings—with results not always as happy as could be desired. Lord Rosebery was careful to disclaim any official authority for his critical attitude; but, in effect, he was repeating Carlyle's vigorous diatribe against those marble presentments of notable men in our squares and public thoroughfares, which seemed to him to be like "grisly undertakers waiting to bury the lost spiritualisms of mankind." It is extremely pleasant to find that Lord Rosebery, speaking not as the head of Her Majesty's Administration, but as a dreamer who sees at the foot of his bed that beautiful apparition of an ideal Art to which he extends his yearning arms, can frankly tell us that we ought to commemorate our national annals by the aid of contemporary pencils and chisels, and deck the walls of Parliament "by giving orders to living painters to paint living men."

VERY interesting is the discovery reported from the Department of the Drôme. During the construction of a railway from Nyons to Pierrelatte some remains of a Gallo-Roman town have been revealed to view in the neighbourhood of Saint-Paul Trois Châteaux. According to the account which reaches us the town is thought to be that of Tricastina, which was very ancient, and of some note at one period. All the mosaics, pillars, black and white marble tiling, bas reliefs, and porcelain hitherto found were covered with a layer of ashes, which leads to the presumption that the town was destroyed by fire.

THE Warwickshire County Council has decided to accept Mr. Jeacock's tender of £1,283, being the lowest of six tenders, for the erection of a Police Station at Erdington. The County Surveyor has also been instructed to prepare specifications for the new Lock-ups at Castle Bromwich and Earlswood, and to invite at least six tenders for each building.

MR. GOURLAY'S Architectural and Building Classes, to the number of over 100, took advantage of the opportunity of his appointment to a Professorship of Architecture and Building Construction in the Glasgow and West of Scotland Technical College, to present him with a very handsome oak writing cabinet.

MUNICIPAL ENGINEERS AT BRIGHTON.

THE Incorporated Association of Municipal and County Engineers visited Brighton on the 4th instant. The members assembled in the Royal Pavilion, where, after being greeted by the Mayor, they settled down to the consideration of several papers. Mr. Francis, the borough engineer, gave a description of Brighton and its municipal works, including the sea-front improvements, the drainage system (which, by the way, is being extended by Messrs. B. Cooke & Co., of Battersea), and the condemned areas. The large site of Cumberland Place is being cleared for the erection of houses for the artisan classes. Other works, for which tenders will shortly be invited,

Britain. Mr. Johnston, C.E., the Corporation Waterworks engineer, gave a description of the sources of water supply and distribution in Brighton. The members subsequently inspected various works in the town. One point the Association might bear in mind at the forthcoming meeting in Cardiff: However great the merit of a paper may be, greater personal advantages accrue to members by expressions of individual opinion and experience upon the subject touched upon in the paper, than by simply hearing the paper read and having, either no discussion whatever, or a discussion of a superficial character.

It is stated that the Count and Countess de Castellane (née Gould) are preparing the plans for a sumptuous residence in the Avenue du Bois de Boulogne. A large site has been secured at the corner of the Avenue Malakoff, at the cost of 700 francs per metre. The American Countess will now carry out the dream of her life, and a considerable portion of Mr. Jay Gould's money will be spent in an exact reproduction of the Grand Trianon of Versailles, surrounded by spacious gardens. M. Samson is the architect chosen to carry out this elaborate work.

MR. CHARLES MASON, who was telling the Society of Engineers one evening last week, how to make street subways, is the responsible Vestry surveyor to the Parish of St. Martin-in-the-Fields. Thirty-five years of age, and one of the handsomest municipal engineers on the planet, he might be taken at the first blush for a popular tenor star. Instead of this he is one of the soundest authorities in London on the disposal of house refuse.

THE great Beacon Light now being set up on Fire Island, just off New York, will be the most powerful light in the World, the lens increasing the power to 250,000,000 candles. To ships out 100 miles at sea it will be visible—not the light itself, on account of the curvature of the earth, but the flash on the clouds.

BROMLEY, one of the most poverty-stricken parts of London, is about to be furnished with a new centre for social work. The other

day the foundation stone of a new Hall in connection with Blackthorne Chapel was laid with much *éclat*. The Hall will accommodate 800 persons, and will be used as a centre for all kinds of social work. It will cost only £3,000, about £800 of which still remains to be provided.

At a meeting held at Wesley Chapel, Accrington, a scheme of enlargement of the premises, which will involve an outlay of £1,600, was accepted. Subscriptions have been promised amounting to £300.

THE Aberystwith Town Council propose to borrow £13,000 for the following purposes:—Sea Wall £10,000, Town Hall £2,500, Electric Lamp Pillars £900, and Lavatories and Urinals £350.

THE RYLANDS' MEMORIAL, MANCHESTER: MESSRS. HEATHCOTE AND RAWLE, ARCHITECTS.

comprise the extension of the existing Colonnade and Terrace, the building of a Sea-wall, one new concrete Groyne, and other works. The Municipal Buildings Improvement Scheme, Technical Schools, and alterations and extensions of the buildings on the Pavilion Estate, so as to form a new Free Library and Reading Rooms, Museums and Picture and Art Galleries, are matters under contemplation. Mr. Arthur Wright, the electrical engineer and manager of the Corporation Electricity Works, discussed some points of interest in the development of electric supply at Brighton. The remarkable feature of this electric light station is that, exclusive of redemption and interest, the actual cost of supplying electrical energy in 1894 was only 2.3d. per unit, being lower than that obtaining in any other central station in Great

THE FIRST SCHOOL OF ARCHITECTURE IN ENGLAND.

OPENING AT LIVERPOOL.

THE Liverpool School of Architecture and Applied Arts was formally opened on Friday last, although it has been in vigorous informal existence for six months and has already close upon 100 students. But though the School has thus rapidly advanced in its development, its growth has gone on so quietly that people interested in the matter in a general way remain under the impression that as yet it exists only as a scheme on paper, and as the cherished craze of certain Art enthusiasts. The facts, however, are all the other way; the first School of Architecture and Applied Arts in England is hard at work. Without doubt, the credit of having conceived the idea of the School belongs primarily to Alderman Rathbone, who is a unique figure in municipal life. Of what value is the new School as a step in the desired direction? The question is best answered by considering briefly the aims which Professor Simpson, the director, and those associated with him, have set themselves to achieve. These aims are three in number. First comes this one: "To effect a complete union between the different Arts and Crafts." This sounds at first rather vague. In truth it is not so, and none are more aware of its importance than those who have any association with the Arts. Painting, Sculpture, Architecture, Decoration, Artistic Craftsmanship, isolated from one another, as they are, unfortunately, at this moment in England, are mere sport and pastime, outcome of the public uncertainty, which is the surest evidence that a reasonable and cultivated taste is absent. United as they are, on the other hand, in France, they exercise upon one another a healthy and invigorating influence, creating a common atmosphere favourable to free and natural development, and conducing to the growth and conservation of public judgment on right lines. To effect a complete union between the Arts and Crafts, so that painter, sculptor, architect, decorator, craftsman, may be animated by a common spirit in pursuit of a common end, is therefore a great and a necessary aim. The second of the three objects is to establish a thorough course of training for students in the different Arts, and especially in Architecture, Sculpture, and Decorative Painting, and the third to provide special instruction of an advanced kind for skilled craftsmen and artisans, chiefly in those crafts allied to Architecture.

The School began last October with the resources of the Roscoe Chair of Art, plus a grant of £1,000 per annum from the City Council out of the Technical Instruction Fund. But it was homeless, and had it not been taken in by University College would have been in almost as bad a way as the School of Science and Technology. At University College Professor Simpson, the director, has an eyrie at the top of the Victoria building, which is also the Architectural studio—an excellent room lighted from the roof, and with no disadvantages except its altitude from the street. Those students who go in for Architectural Modelling put up with a part of the old building near the Medical School, which was used for a time as a temporary infirmary. The wood-carving, again, is carried on in the annexe of the engineering laboratories, and the Painting, Sculpture, and Metal-Work students find a home in a one-storey wooden building of fair dimensions, built specially for their accommodation. In a capacious studio, furnished with casts from the antique, mingled with busts and figures modelled by students from the life, and in every stage of advancement, Mr. Charles J. Allen directs some thirty students of Sculpture and Modelling. Here, also, in the adjoining studio, Mr. R. A. Bell teaches Decorative Painting and design by studies from life and the antique. The Metal-Working department is under the direction of Mr. J. Platt, whilst the Wood-Carving is taught by Mr. F. G. Floyd.

The staff of the School consists of the directors and these four assistants, but other instructors, it is hoped, will shortly be appointed. The details of work already mapped out appear to be on right lines. To take the Architectural department, the course of studies is arranged

to meet the wants, first of students already engaged in architects' offices as pupils and assistants; and secondly, of those who desire a course of Architectural training before entering the profession. The latter feature may be emphasised, because the architect's assistant's usual experience is two or three years' copying or tracing, as a result of which he gains by degrees a certain practical facility in drawing up plans and designing elevations which meets ordinary professional needs. The case, however, would be different if he began the work with some appreciation of Architecture as a Fine Art, and with some love for the pursuit of it as a study. It is here undoubtedly that the influence of the School will be felt. In entering upon his course at the School, the student studies the history of Architecture with systematic reference to the features and ornament of each particular style. He has also his attention directed to building materials, their strength and application to design, since it was along this path that Architecture advanced. Finally, he engages in studio work, copying either approved designs, or drawing from and modelling casts. In the following year he studies elementary design and construction in a practical way by drawing and modelling, and if he pursues his studies during a third year, is carried to the most advanced principles of construction and design. In the Sculpture and Modelling studio modelling is done either from the life or from the antique or casts. The design and modelling of ornament is also carried on. Decorative Painting is necessarily chiefly taken up by advanced students. A word may be said with reference to Decorative Painting. As sometimes used the term is made to apply to easel pictures with certain peculiarities of style. But Decorative Painting proper—painting which, like the Italian fresco paintings, is designed as an ornament and completion of Architecture, lending appropriate grace and dignity to interiors—is based upon definite principles of its own. Except at this Liverpool School it is, however, nowhere taught in England, though there can be little doubt that it is destined to be one of the most important developments of the Fine Arts.

The School has besides these departments a popular crafts side, which is of importance. Evening classes are held in modelling from the life; modelling from the antique, and modelling architectural ornament; decorative design, drawing from life, carving in stone, marble and alabaster; wood carving and wrought iron work. The fees for admission to the evening classes are (except life classes) 10s. per term; but artisans are admitted at half fees. The latter regulation indicates the spirit in which the School is directed. It is satisfactory to note that in connection with the School there are twelve free evening studentships open to competition, and it is to be hoped that at an early date scholarships will be established enabling students from the evening classes to pass the day classes. The students now enrolled include architects, painters, sculpture apprentices, pottery painters, lithographers, glass painters, engravers, furniture designers, decorators, wood carvers, plasterers, stone masons, and smiths.

INAUGURAL ADDRESS BY MR. T. G. JACKSON, A.R.A.

"BUILDING WELL AND BUILDING BEAUTIFULLY."

Mr. T. G. Jackson, A.R.A., said there were associated with Architecture two vital misconceptions. The first was that Architecture was mere ornamentation—something that was only skin-deep, and simply a matter of expense. The second was that it applied only to Town Halls, Churches, and the like, and not to ordinary buildings, in the same way that a carriage and pair or a footman and butler were out of the reach of ordinary people. If those ideas were true, Architecture would not be in the true sense an Art at all; it would not be Art applied, but misapplied. But these ideas were wholly false. Architecture was not the art of tricking out a building with ornamentation; it was the art of building well, and, at the same time, building beautifully. It was nothing but good construction, inspired from first to last with artistic motive. Ornament was not a necessary part of it; often ornament was

far better left out, for ornamentation was one last resource of the incompetent architect. As one of their own professors had put it, when a man could not design, he fell back upon ornament. Nor was expense a necessary part of it. Many of our buildings would have been better if less had been spent on them. On the contrary, no building was too humble for Architectural treatment, and Architecture was no more a luxury than was virtue. The true architect built plainly where it was necessary, splendidly where there was need for dignified expression, but always basing design upon construction, always adapting effect to the occasion, and by cheerfully obeying constructive necessities from first to last, shaping and adapting forms suggested by construction into beautiful and harmonious combinations. Thus Architecture inspired building with the artistic motive from the laying of the first brick to the driving of the last nail. How was the good architect to be made? A true artist worked unconsciously in a good way, and produced a good thing. They might set another man to do the same thing, but the result would not be beautiful. The artistic instinct was born with a man. There were those who had none of it; others, most of us, who had enough to enjoy the works of artists; others who had the instinct of beauty so strong within them that they could not help giving it expression either in literary composition, or Music, or by what were called the Fine Arts. But though a man might be born with this instinct it was worth little without study and instruction. A man might be of the right material to begin with, but training was necessary to enable him to use his gifts, and to shape him into an artist. These considerations appear to him opposite on such an occasion as that then present. Their School was an experiment, an interesting experiment, the result of which would be waited for with anxiety; but, experiment though it might be, experience was not to be overlooked by those who had the direction of it. In this connection he desired to refer to the comparative values of training architects by the apprenticeship system, which in their case still survived; and by scholastic teaching. He laid stress on the former. There was nothing like real work, the practical work of an office, for enabling a youth to acquire knowledge with rapidity. But although he held that no school training could be substituted for apprentice training, he was far from saying that the latter could give the student all he would require for his career. It needed to be supplemented in a thousand ways, which the student must discover for himself, and such a School as that would be of infinite service to him. One of the results of the modern method was that it shut up the student in the architect's office. This isolation of the architect was a matter of comparative recent date. In former days it was not so. If they wished to know how the great masters of old accomplished their art, they must picture to themselves a very different system to that which was in vogue to-day. They would not find, as now, the architect sitting in his easy chair in his private office receiving his clients, and surrounded by his clerks and draughtsmen; but a much humbler picture would have to take its place. They would find the architect with his tools in his hand, amongst his own workmen, and in his shirt-sleeves, providing he possessed a shirt. These Old Masters were nothing more than workmen, for they not only designed the work for their assistants, but also worked manually in bringing that work to a successful completion. Thus, whereas the modern architect resembled the professional man, and designed his buildings on paper, and only visited the scene of operations from time to time, the old architect lived on the building, and designed it with his own hands. The advantages of the old method over the modern were obvious, since Architecture and Sculpture depended upon the right use of material no less than a right principle of design. Under the present system the architects were too often more in the position of learners than of teachers. They had workmen under them who knew how to do work better than they themselves did. They had to design without ever having held an instrument in their hands. The consequence was that they often set men

to do things in difficult and roundabout ways which might have been done much better. All this resulted from the fact that architects were trained on paper, and as long as that was so they could not hope for anything better. It was important that they should face the fact, and see what could be done to remedy it. If every young architect were made to spend a year or more in a mason's yard working as a mason, original ideas would be formed which could not be got in any other way, and this would save him from those mistakes in the construction of material which so disgraced the modern practice. He hoped this would form part of their work at University College, or that arrangement could be made with master builders to open their yards and workshops for the reception of students, and he trusted those master builders and members of the Building Trades' Federation who occupied seats on that Council would give effect to the suggestion he had made. There was another evil in shutting up students in an architect's office, and that was that it kept them away from the study of the sister Arts. The consequence was that when occasion arose it was impossible for artists unacquainted with each other to produce harmonious results. Architecture was the art of building on a grand scale, as sculpture was the art of building on a small scale, and of all the Arts these two were the least separable. It was most essential, therefore, that these two should be trained alike, and a happy consummation attained as in the older times, when the same man could work in each. There in that School they had a ready remedy, for they proposed to carry on instruction in the three great Arts, and they might thus easily gather the students together. It was necessary that every architect should pass through the Modelling School, where he would learn to accomplish in concrete form what was to be done in buildings, and in the same way he would have every young sculptor trained in the School of Architecture, so that he might learn to deal with work on a large scale, and that which lay more in the field of Architecture than Sculpture. It was not, however, only to the sculptor or to the painter that they would throw open their School of Architecture, but he trusted that it would be open to all concerned in building, of whatever degree. It was essential that builders should take some Architectural training in order that their work might be turned out in good taste, and he trusted that the students at that School would be largely made up of builders as well as of architects. In conclusion, Mr. Jackson said the scheme which the Liverpool School of Architecture and Applied Arts had in view was one which every true son of Art would, from his heart, wish a successful issue, and which, if it succeeded, could not fail to have an abiding influence on the history of Art in England. In the evening a banquet was held.

THE Crewe Town Council has accepted the design of Mr. James Stevens, F.R.I.B.A., of Moseley Street, Manchester, for a new Art School and Women's Institute, and has placed the work of carrying out the scheme in his hands. The building is to cost about £5,000.

THE Princess of Wales has kindly lent her collection of photo-ceramics to the Exhibition of Photography, which opened at the Imperial Institute on Saturday last; and the Princess Victoria of Wales has contributed to the Artistic Section photographs which she has taken.

THE Local Government Board disapproves of the proposal of the Health Committee of the Halifax Corporation not to carry out the scheme of a new small-pox Hospital, the erection of which is estimated to cost nearly £20,000. Borrowing powers had already been obtained.

CLASS Rooms have recently been erected in Guinea Street, Redland, Bristol, which completes the block of buildings commenced six years ago. Mr. H. C. M. Hirst, A.R.I.B.A., is the architect, and Messrs. Lowe and Waite are the contractors. The block now consists of the Hall erected in 1889 at a cost of nearly £2,000; the Soup Kitchen and Offices built at a later date at an outlay of nearly £300; and three Class Rooms just finished at an expenditure of £1,000.

SOCIETY MEETINGS.

Liverpool Architectural Society.—On Monday evening, May 6th, the annual meeting of the Liverpool Architectural Society was held in the Law Association Rooms, Mr. Henry Hartley, F.R.I.B.A., presiding. The annual report stated that the Society numbered 129 members, as compared with 130 at the close of the previous year. The Committee expressed regret that the new School of Architecture had not been so well attended as had been hoped at first. The receipts amounted to £110 15s, and there was a balance in hand, after meeting expenses, of £7 7s. Mr. A. B. Culshaw was elected president for the next session. Messrs. H. W. Keefe and J. Woolfall vice-presidents, Mr. J. W. Blakey librarian, Mr. James Dodd treasurer, and Mr. Henry L. Beckwith secretary. Mr. Hartley in bringing the proceedings to a close, thanked the members for the assistance which they had rendered him during the period he had occupied the position of president. The most important event which had taken place during his period of office had been the establishing of a School of Architecture and Applied Arts, and the appointment of Professor Simpson to the chair of Architecture of the University College (applause). He congratulated the Society upon the fact that Liverpool was the first centre which had taken upon itself to establish such an educational work. He also congratulated the profession generally upon the accomplishment of a scheme which had been so long desired and so long looked forward to—namely, the formation of such a School as a great centre from which would spring new life and greater vigour in the development of Art by the systematic training which their younger members could now obtain. The School was dependent entirely upon the way it was supported and made use of by those for whom it had been specially created.

Edinburgh Architectural Association.—At the recent meeting of this Association held in the Royal Institution, Mr. John Burn read a paper on Plumbing, and in the discussion which followed, the vexed question of safety-valves for kitchen boilers came largely to the fore.

Glasgow Architectural Association.—The general monthly meeting of this Association was held on Tuesday evening in the Rooms, 114, West Campbell Street. Mr. Wm. Tait Conner, A.R.I.B.A., vice-president occupied the chair. Mr. David B. Dobson read an essay on "Decorated Gothic," illustrated by lime-light views and by a number of diagrams, plates, &c.

Society of Engineers.—At a meeting of the Society of Engineers, held at the Westminster Palace Hotel, Westminster, on Monday evening, the 6th of May, 1895, Mr. Wm. George Peirce, president, in the chair, a paper was read by Mr. Charles Mason, Assoc.M.Inst.C.E., Surveyor to the Vestry of St. Martin-in-the-Fields, Westminster, on "Street Subways for Large Towns." The author, impressing the importance of an improved method of underground construction for the reception of the numerous mains laid beneath the streets, stated that the subject was one requiring the immediate and serious consideration of all engineers to public authorities, gas, water, electric light, and other companies. Further, the difficulties experienced in making periodical examinations of the mains as to leakages and repairs (as the recent explosions in the Metropolis prove) has imposed a duty upon those having the control of the streets to devise some better means whereby the safety of the public is absolutely secured, and the life and cleanliness of the pavements materially benefited. The present system of leaving disused pipes beneath the streets was strongly condemned, as materially adding to the risks to those using the streets by reason of probable accumulations of gas therein. Interesting statistics were given, showing the enormous annual cost of opening up the pavements for examination, and repairs to the various mains. The various powers conferred by Acts of Parliament upon local authorities and bye-laws made thereunder, together with the objections on the part of the owners of the mains to using the subways, were fully explained, the author stating that where subways did not exist, municipalities lost to a certain extent the control of the streets. The author, in

explaining the construction and uses of existing subways both in the provinces and the Metropolis, pointed out the chief difficulties in the way of their general adoption as being the question of light and ventilation, and cost of construction; also in his opinion, the "single" system was open to objection, as the mains having to be placed on one side of the subway, compel the supply pipes to be taken across the same for supplying premises on the opposite side of the street, thus blocking the passage way and causing obstructions in the flow of the pipes themselves; the difficulties of sewer ventilation were also referred to. The author proposed "triple" subways having a central avenue for trunk mains, and side avenues for subsidiary or service pipes, vaults being provided beneath the footways remaining the property of the public authority and leased to the adjoining owner, thus providing some return for the outlay. A detailed description of the method of construction was given, with an estimate of the cost shewing a profit based mainly upon returns of the rentals derived from the vault construction and charges for those using the subway; the saving which would accrue in keeping the streets free from obstruction unfortunately could not be reduced to figures on the credit side although the saving to life and rolling stock would be very great; immunity from frozen pipes due to a uniform temperature in the subways was instanced as an argument in favour of subways. The author in conclusion strongly urged the desirability of obtaining powers whereby the whole of the subsoil of the streets should remain the property of the authority, and although not directly advocating the municipalization of all gas, water, and other companies, expressed the opinion that such a course from a municipal point of view would cause far less inconvenience than now arises to the public using the streets. Finally, the subject was one of a very controversial nature, but in spite of all obstacles some form of the triple subway should be adopted universally in all large towns. The paper was illustrated by diagrams which were fully explained by the author.

Institution of Junior Engineers.—At a meeting of this Institution held at the Westminster Palace Hotel, London, on May 3rd, the chairman, Mr. H. J. Young, presiding, a paper on "The Warming of Buildings by Hot Water" was read by Mr. Ernest King, Wh.Ex., and Mr. Kenneth Gray. The subject was treated in two divisions, the first dealing with the low-pressure system, and the other with that of the high-pressure. The authors having stated the theory of circulation and mode of determining the motive force in a hot-water apparatus, proceeded to deduce therefrom the best arrangement of the mains and pipes. Passing on to the high-pressure system its leading characteristics were brought forward, special mention being made of the pipe joints, boiler coil and pipes, and the various ways of circulation. The relative merits of the low and high-pressure systems were investigated, from which it appeared that the former was more advantageous. The paper was illustrated by a very large number of diagrams, specimens, etc., and an interesting discussion followed, in which Messrs. E. Berry, H. Parsons, Z. King, F.R.I.B.A., P. Griffiths, Loftus Perkins, W. B. Clarke, W. G. Walker, A. S. Arundel, H. E. Duncan, B. T. King, and Shephard took part.

Liverpool Engineering Society.—The annual meeting of the Liverpool Engineering Society was held on Wednesday last in the Royal Institution, Colquitt Street, Professor H. S. Hele Shaw presiding. Mr. Arthur J. Maginnis was elected president for the next session, Mr. W. S. Boulton librarian, Mr. C. S. Pain hon. treasurer, and Mr. R. C. F. Annett hon. secretary. The annual report, submitted by Mr. Annett, stated that when they started in 1876 they had only 51 members, but at the close of last year they had 274, being an increase on the previous year of 27 members. A paper was read by Mr. J. Reney Smith, entitled, "Engineering Work and Operations at Perim Island."

A HANDSOME marble Memorial Tablet to the late Lord Bowen has just been placed in the Vestibule of Lincoln's Inn Chapel by the benchers of Lincoln's Inn. The Tablet has a laudatory inscription in Latin engraved on it.

THE COUNTY COUNCIL AND ITS ARCHITECT.

MR. BLASHILL'S CRITICISM OF THE WORKS COMMITTEE.

THE conflict between the Architect's Department and the Works Committee of the County Council reached a further stage when Mr. Blashill, the architect, replied to the criticisms of Mr. Holloway, the manager of the Works Department. Mr. Holloway placed the responsibility for part of the excessive cost of the Yabsley Street Dwellings and the West View Cottages on the architect, who was too rigid in his examination of the material, seeking a higher quality than it was easy to obtain. Mr. Blashill replied that he did not want to be made responsible for the materials and workmanship of the Works Department. His advice was not taken, however, and the "Progressional officers of the Council found themselves charged with the very difficult and delicate responsibility of supervising the operations of one of the most important of the Council's Committees. To add to these difficulties the Council determined to keep up a strict comparison of its own operations with those of contractors." Mr. Blashill remarked that all his specifications were prepared with a view to the work being carried out, if necessary, by contractors. He reminded the Council that

of the excessive cost of labour. A very large proportion of this excessive cost was really due to the delay in the purchase and delivery of particular materials and to the purchase from different makers of the several parts of the same fitting, which parts when brought together could only be adapted by altering them on the job. A good deal of material was actually sent down to the jobs which was not wanted there at all. I have no means of knowing whether this has been charged to these jobs. A good deal of work was executed in spite of my warning that it was being wrongly done, and no doubt the cost of making this good is charged to the job."

THE NEW GENERAL POST OFFICE.

THE pile which has just been erected in St. Martin's-le-Grand is another testimony to the continual growth of postal business. The new building will be known as the General Post Office North. It occupies a site on which formerly stood the Queen's Hotel, the French Protestant Church, the old Money Order Office, &c., and covers an acre and a quarter of ground. The site alone cost over £326,000, and the building will cost at least £200,000 more. The shape of the General Post Office North is described as irregular, one front being considerably larger than the other. The

which will be used for storage. The structure will, it is calculated, accommodate altogether about 2,000 persons. The Post Office has always been careful of the comfort of those it employs, and this fact has not been overlooked in the new building. On the top floor provision has been made for kitchens and refreshment rooms, where members of the staff can, if they choose, have their mid-day meal at a cheap rate. In a pile of such dimensions, getting to the top of a staircase is no joke, so the various floors will be connected with lifts, worked on the most approved principles. On the roof is a Tennis Court, which in the lunch-hour will, no doubt, be fully utilised. Altogether the General Post Office North is one of the largest, handsomest, and best appointed public buildings in London, and is one of which its architect, Mr. Henry Tanner, Surveyor of Her Majesty's Board of Works, may feel proud.

ART IN VENICE.

AN Art Exhibition in Venice strikes one, at first, as a superfluity of æstheticism, since Venice itself has long been, and must always remain, while it contrives to keep its head above the waters, an Exhibition of Art, such as Rome or Florence alone can rival. The present age has not been lacking in self-complacency, but even in its most conceited

FIRST FLOOR PLAN OF VICTORIA INSTITUTE, WORCESTER: MESSRS. WOODHOUSE AND WILLUGHBY, ARCHITECTS.

better "workmanship and material was as strongly insisted upon as the expected saving of the contractors' profits" when the Works Department was established, and that "the manager cannot be officially aware of the excessive pressure which was in the earlier days of the Council put upon my department to exact the best quality of materials and workmanship from everyone over whom I had influence." As regards the supervision which he exercised, the architect admits that bricks, wood and other materials were condemned, but simply because they were bad. "There was no foundation for the statement that the letter of the specification was strained in any degree, the direct contrary being the case." The two departments will have to fight out this difference of opinion on a matter of fact. The architect concluded by giving his opinion of the Works Department. "I had," he says, "strongly advised that, in the first instance, small jobs only should be undertaken, so that experience might be gained. But when the Works Department was organised, it was found necessary to supply it with the whole of the work that could possibly be handed over to it. Much of its earliest work was necessarily experimental, and some of its methods were, in my judgment, not calculated to be successful. It would be quite untair to charge against the workmen the whole

edifice, which is composed of a facing of Portland stone and Leicestershire bricks, is ranged round a Central Courtyard, approached by carriage entrances from St. Martin's-le-Grand and King Edward Street, and is five stories in height. All the floors are of concrete, with steel joists, and the roofs are asphalted. The external doorways are of polished granite. The internal arrangements are striking, the main staircase being exceedingly handsome. The flooring of the corridors is of stone mosaic, and that of all the larger rooms of wood parquet. Throughout the building due regard has been paid to light and air. Two of the rooms on the third and fourth floors respectively are especially spacious, each measuring 100 feet long by 45 feet wide, and each calculated to accommodate at least 100 clerks. The apartments which will be occupied by the Postmaster-General and the Secretary are at the south-west corner of the pile, on the ground and first floors. The Solicitor to the Post Office and the Receiver and Accountant-General and their staffs will also be housed in the new building. The whole of the fourth floor it is intended to devote to the female staff employed in the Postal Order Branch. There is a large sub-ground floor available for clerical work, and at a greater depth still a spacious basement, not only under the building but beneath the Courtyard as well,

moments it has not arrogated to itself equality with the fifteenth and sixteenth centuries in respect of Architecture, Painting, Sculpture, or any of the fine plastic Arts. We have had a sort of artistic Renaissance of our own, and very interesting, very salutary, and very refining it has been to a generation whose more immediate predecessors had devoted themselves to the cultivation of the Useful rather than to the pursuit of the Beautiful. But, as compared with the memorable rejuvenescence of Art which was taking place when the Medici first established their hold on Florence, and the Turk captured Constantinople, it must be pronounced an artificial, and, as far as satisfactory originality is concerned, a comparatively barren movement, notwithstanding the many charming, and some powerful, productions it will bequeath. But perhaps the second or later Renaissance has not uttered its last word; and, meanwhile, its leading and most successful spirits are stimulated by a sound instinct when they turn their faces to the real cradle and nurse of their praiseworthy endeavours. For an artist to be invited to exhibit his works in Venice is to receive the highest and most agreeable compliment that could possibly be paid him; since he is thereby admitted to the company of the immortal masters of his craft.

The Builders' Journal COMPETITIONS.

No. 2.—A Village Club House.

Mr. Leonard Stokes, F.R.I.B.A., has kindly undertaken the task of adjudicating upon the designs in this Competition, and his award will be announced in due course.

No. 3.—Swimming Baths.

Designs for Swimming Baths in a country town of 5,000 inhabitants. To contain cold water bath fifty feet long, three feet to six feet deep, with necessary dressing boxes; six private washing baths for gentlemen and three for ladies; necessary heating and ventilating appliances to be provided, together with waiting and caretaker's rooms, the entire cost not to exceed £3,000. The site is 100 feet deep and of any necessary frontage, but entrance can only be obtained from the front. All designs to be delivered on or before Monday, the 10th day of June.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

Per line, Sixpence. Minimum charge, Eighteenpence. Three Insertions for the price of Two.

Prepayment in the above Advertisements is absolutely necessary.

Page or Paragraph Announcements, Trade Advertisements.

Prices on application.

Small Advertisements for current week's issue are received up to first post Monday morning inclusive.

Editorial and Publishing Offices:
Talbot House, Arundel Street,
Strand, W.C.

Men who Build.—In our last sketch, that of Mr. Charles Heathcote, of Manchester, it should have been stated that most of the buildings mentioned therein, and many that were illustrated, were the joint work of Mr. Heathcote and Mr. W. H. Rawle, who were formerly, and for some years, in partnership. It is but just to Mr. Heathcote to remark that he mentioned this fact to our Contributor, who omitted any reference to it in his M.S. Our sincere apologies are due to Mr. Rawle, and we offer them.—ED. BUILDERS' JOURNAL.

Trade and Commerce.

New National Schools, Newcastle-under-Lyne.—These Schools will replace old buildings in Bagnall Street, and have cost over £4,000, exclusive of site. They are of a plain character, being of brick, with Ruabon terracotta dressings from the works of Mr. T. Edwards, the gables of Main Front towards the Ironmarket being treated in the style prevailing in the old Flemish brick buildings. The general contract has been carried out by Messrs. H. & R. Inskip, of Longton, from the designs and under the personal superintendence of Messrs. Chapman & Snape, architects, Newcastle; Messrs. R. Boyle & Sons, London, being intrusted with the ventilation.

"Practical Telephony."—Under this title, a new and well-written series of articles is now appearing weekly in the columns of our penny contemporary *Electricity*. It is being written by Messrs. James Bell, A.I.E.E., and S. Wilson, and should interest a very large number of readers, especially in view of the inquiry now being held by the Government.

LONDON "RIGHTS OF WAY."

THOSE who know the City of London are often able by means of threading courts and alleys to escape the crowded thoroughfares, and at the same time considerably shorten their journey. For some time past complaints have been made that owing to large firms and public companies buying up large blocks of buildings, gates have been erected at the entrance to some of the courts, and the thoroughfares have thereby been completely in the hands of private persons. A recent case of alleged encroachment came before the City Commission of Sewers, one of whose officers, the solicitor, reported that there never had been a public right of way, while the engineer affirmed that since 1867, the Commission had sewered the court in question, and had lighted and paved it. The matter, which relates to Plough Court, Barbican, has been adjourned from time to time, and was recently disposed of at the meeting of the Commission. It appears that three owners are concerned in the closing up of the court, they having a right of way. The initiative was taken by the Trustees of St. Giles's Cripplegate, who were the largest owners, and who claimed their right to put up the obstruction—a gate. The discussion was animated, the Committee having reported, recommending that no further action be taken. An amendment to refer the matter back was lost, and then Mr. Morton moved the adjournment of the Commission in order to prevent the solicitor giving a further opinion. He stated that the solicitor was also interested in the question in another way, his firm being the solicitors acting for the persons desirous of closing the court. Mr. Wallace seconded, and pointed out that all public bodies appointed another legal adviser when their own was acting already for the persons with whom negotiations were being carried on. The solicitor said it was true that his firm were acting for the Trustees of St. Giles, but he had ample proof that no right of way had ever existed; and it was upon that proof that he advised the Commission. The motion for adjournment was lost, and the recommendation of the Committee was agreed to.

It is proposed to erect a Memorial to the late Sir George Chesney, who took a leading part in the founding of the Royal Indian Engineering College, Cooper's Hill, Staines.

THE new two-storey Day School in connection with St. John's Church, New Clee, by the side of the old premises in Hamilton Street, has been completed. The total cost of the new block, together with small extension, is £1,500. Accommodation has been provided for 310 children.

THE Enfield School Board, upon the award of the assessor, Mr. J. Vicar Anderson, has resolved to accept the designs submitted in open competition, by Mr. G. E. T. Laurence, of Queen Victoria Street, London, for the Chesterfield Road School. The designs of Mr. Jones, of Harley Lodge, Bush Hill Park, were placed second.

Correspondence.

The Editor welcomes Correspondence on matters of general interest. Gentlemen thus addressing the Editor should condense their communications as much as possible.

"H. A.," Croydon, writes: "Would any of your readers kindly tell me the best thing to do for the Foundation of a small house, when running sand is found in the trenches? The site is on a hill-side in Kent."

SAWDUST.

It is announced from Colon that a thousand labourers have been engaged for work on the Panama Canal.

WE understand the Chilean Government has invited English and American tenders for the construction of a number of railway engines.

ON the Queen's Birthday the Prince of Wales will unveil the handsome Pulpit erected in Norwich Cathedral in memory of Bishop Pelham.

THE Government has commissioned Mr. Thorneycroft to execute a large statue of Cromwell. It will probably be placed at Westminster.

THE Russian Government has under contemplation a scheme for establishing direct railway communication between St. Petersburg and the Ural Region.

A MOVEMENT is being initiated by the Mayor of Eastbourne for the erection of a Statue of the late Duke of Devonshire, who has done so much to advance the prosperity of the town.

THE Palais de l'Industrie in Paris, built at a cost of nearly £1,000,000 for the Exposition of 1855, is about to be pulled down to make room for the buildings of the Exposition of 1900.

SIR LLEWELLYN TURNER has presented the borough of Carnarvon with the museum of local antiquities he has for some years been forming in the Castle, of which he is the deputy constable.

THE death is announced, at Paris, at the age of 60, of M. Eugene Bellangé, son of the military painter, Hippolyte Bellangé, and himself an historical painter, though of less repute.

COLONEL JOHN O. HASTED, C.E., held an inquiry at the Town Hall, Hoyland, on Wednesday last, respecting an application from the Hoyland District Council for power to borrow the sum of £22,800 for Sewage Works and Store Sheds, Stables, &c.

ON Tuesday the Paddington Vestry decided to sanction the erection of a suitable Memorial Statue to Mrs. Siddons on that portion of Paddington Green, facing Harrow Road, in the event of a sufficient sum being subscribed for the purpose.

THE monster Exhibition to be held next year at Nijni-Novgorod will be the greatest show of its kind ever held in Russia. The Exhibition and town will be illuminated by the electric arc and incandescent lights, and an electric railway and a service of balloons will convey visitors from one side of the Volga to the other. The cost of the lighting, railway, and balloons is put at £20,000.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

BANGOR.—For building semi-detached villas at Upper Bangor, for Mr. Lloyd and Captain Davies. Mr. Richard Davies, architect:—

CITY OF CHESTER.

TO ARCHITECTS.

PUBLIC BATHS.

The Town Council invite COMPETITIVE PLANS (to be accompanied by detailed specifications, and estimate of cost) for PUBLIC BATHS, to be erected in the Hop Pole Paddock.

A premium of £50 will be paid to the author of the plans which may be selected, which amount will be deducted from the author's commission in the event of the work being proceeded with, and his being employed to superintend the same; the selected plans, specification, and estimate to be the property of the council, who will be assisted by a competent professional assessor, but reserve to themselves the right of ultimate decision.

The Council do not bind themselves to accept any of the plans. Copies of conditions and instructions may be obtained from the City Surveyor, Town Hall.

The plans, &c., without signature, but with a motto or device, and a letter (sealed) containing a corresponding motto or device, and the architect's name and address, to be sent addressed to "The Chairman, Baths Committee, Chester," not later than the 2nd day of JUNE 1895.

By Order.

SAML. SMITH, Town Clerk.

TO CONTRACTORS AND PAVIORS.

The Urban District Council of Melton Mowbray, in the County of Leicester, require TENDERS for PAYING the FOOTWAYS of certain streets with Patent Victoria Stone and "In Situ" Concrete Paving, Kerbing, Channelling, &c.

Applications for specification and bill of quantities to be made on or before Tuesday, the 7th day of May, to Mr. EDMUND JEEVES, Nottingham-street, Melton Mowbray, Surveyor to the above Council, accompanied by the sum of One Guinea, which will be returned on receipt of a bona fide Tender from the applicant.

Plans may be seen at the Surveyor's Office any day between the hours of Ten a.m. and Five p.m., and sealed and endorsed Tenders must be sent to me at or before FIVE o'clock p.m., on WEDNESDAY, the 22nd day of MAY instant.

The Council do not bind themselves to accept the lowest or any Tender.

RICHD. BARKER, Clerk to the Council.

Sherrard street, Melton Mowbray, May 1st, 1895.

GREAT BENTLEY SCHOOL BOARD.

TO BUILDERS AND CONTRACTORS.

The Great Bentley School Board invite TENDERS for the ERECTION of NEW SCHOOLS at Great Bentley, Essex, for 250 Children, Board Room, and Master's Residence, Boundary Walls, &c.

Drawings and Specifications may be seen at the Office of Mr. J. W. START, F.S.I., &c., Architect, Colchester, also of Clacton-on-Sea and Harwich, on and after the 30th instant.

Builders wishing to Tender must send in their names at once, together with the sum of One Guinea, to be deposited for the quantities, which will be returned on receipt of a bona fide Tender.

Tenders, on forms supplied, sealed and endorsed "Tenders for Schools, Great Bentley," should be addressed to the Board, and delivered at the residence of their Clerk, by TEN o'clock on THURSDAY morning, the 23rd day of MAY, 1895.

Power is reserved to reject the lowest or any Tender.

Colchester, April 25th, 1895. By Order, C. D. KEIGWIN, Clerk.

TO BUILDERS and CONTRACTORS.

CONTRACT No. 1.

The Guardians of the Mile End Old Town are willing to receive TENDERS for the ERECTION of a new STEAM LAUNDRY and COTTAGE at the Infirmary, and for certain ALTERATIONS and ADDITIONS to the LAUNDRY and BOILER-HOUSE, at the Workhouse, all situate in Bancroft-road, London, E.

The plans can be inspected and copies of the specifications and bills of quantities obtained of the Architect, Mr. CHAS. F. BURDEN, at his Office on the premises, on and after THURSDAY, MAY 9th, 1895, between the hours of TEN a.m. and FOUR p.m. on production of a receipt of the deposit of a £10 Bank of England Note, made with the undersigned, which deposit will be returned to parties sending in a bona-fide Tender at the time and in the manner specified, accompanied with such specifications and bills of quantities.

Sealed Tenders, endorsed on the outside "Tender for Laundries," properly filled up and attested, must be delivered at my Office not later than FIVE o'clock on the evening of the 23rd day of MAY, 1895.

Persons tendering will be required to observe such hours of labour, and pay such rates of wages as are generally considered fair with the several trades engaged, and to enter into a bond with approved sureties for the due performance of the contract.

The Guardians do not bind themselves to accept the lowest or any Tender.

WILLIAM THACKER,

Clerk to the Guardians of the Hamlet of Mile End Old Town. Guardians' Offices, Bancroft-road, London, E., April 24th, 1895.

Architects' Fees.

In quaint old towns some curious things still happen. Even an architect can become a Mayor, and, as Mayor, act professionally (in the town's service) as an architect. It is a little complicated we admit, and contrary to usage, but we are rather amused by the Truro "breeze." Architects know Truro chiefly for its modern attempt at a Cathedral; an attempt praiseworthy in the extreme were it anything but shockingly unfinished. When we were last there a sight of sheer hoarding and boarding blocked the "Nave"

—a Nave left to the imagination. We confess to no liking for these "lopped" buildings. However, Truro is to have another building, and Mr. Passmore Edwards is the money-magician. It is to be called the Passmore Edwards Free Library, and is to cost £2,000. We gather that the Mayor, Mr. Trevail, being an architect, rather naturally (in quaint old towns) prepared the plans which have been "approved." If Mr. Trevail had done this for nothing, we daresay the Truro City Fathers would have remained somnolent and content. But even Mayors have an eye to their purses and we cannot say that we altogether blame Mr. Trevail, though it is an understood corporate canon that a man should not work for the town while administering the town's money. But this happens to be Mr. Passmore Edwards' money (though given to the town), and perhaps that makes all the difference. To obviate the difficulty, a wise and kindly Town Clerk suggested that Mr. Edwards pay the architect direct, and remit to the Council £1,900 only of the £2,000, this to "avoid misunderstandings," as the Committee discreetly put it. Moreover, Mr. Trevail has not a high opinion of his Council, and professional dignity must be maintained as we all know, only it is a costly luxury. "The Mayor said the architect would not be paid by the Council at all. As Mayor of the City, he would decline to take a single farthing from the Corporation." This was Mr. Trevail upon himself in his dual capacity. A Mr. Roberts said something about "blinding our eyes," but, we take it, it was not profane; at any rate, nothing happened. The City

Fathers continued to see clearly—according to their lights. After considerable heat, and some legitimate discussion, the Town Clerk read the context of a letter he had written to Mr. Edwards, pointing out that Mr. Trevail could not be legally remunerated if Mr. Edwards handed over the whole £2,000, and suggesting that "the difficulty may be got over by presenting the plans and architect's supervision, and such a sum as with the cost of such plans and supervision will make up £2,000." Mr. Edwards could not see it at

BOWDON CHURCH, NEAR MANCHESTER: THE EAST END.

first; he had handed over £2,000 to "be expended on a Free Library," and left "to the Corporation the selection of site, architect, builder, &c." But someone must have whispered in the donor's ear, for, writing almost by next post, Mr. Edwards was willing to do "just what the Truro Corporation desire;" in other words he was prepared to pay them £1,900, and the architect £100. So this settles it, we hope, and the Mayor-Architect will get his cheque for £100, and really we see no reason why not, providing Mr. Trevail's work be good and his plans something near perfection, only we were so surprised to learn of an Architect-Mayor that we could not pass the incident by; and one is very disposed to forgive Mr. Trevail, in any case,

if only because we are so glad to know that an Architect can be addressed as His Worship the Mayor! The Profession is looking up.

An Announcement.

From time to time we shall have announcements to make that will, we think, bring our paper still closer in touch with our readers, with their idea of what an Architectural paper should be, and with ours. We have passed our quarterly number, and we are satisfied. We are so satisfied that we shall add further features; we shall give more reading matter; we shall maintain the illustrative excellence at which we have aimed; increasing it by degrees. Already our pages are being made more compact; the type is closer without loss of clearness, and we are arranging for a stiff green cover that will give "grip" to our paper—indicative of our policy. The inside sheets of the Journal will be printed wholly in white so that the reading matter and the advertisements may be extended at will. The increase in our professional news and in advertisement contracts for long periods, demand this. In this, our current number, also, we illustrate our criticism of Architecture at the Academy; a novel effort in professional journalism, we venture to think. Our Impressions of the Architecture of English and Foreign Cities will be vivid and virile and critical; we are arranging also

for "Men who Build" from America. Thus we have done something, so far, as guarantee of our good faith; the Architectural World is pleased with us, and says so; there is no need now for the fanfare of trumpets, the preliminary flourish; we ask our readers for their cordial co-operation in elevating and stimulating Architecture and the "Art of Building;" is it not a good cause? Moreover, we have had extended to us by our advertisers and by our readers the co-operation that spells success. Had our individual battle been harder, we should have won, for the "sinews of war" will not fail. It has been comparatively easy, but much remains to do. Of far more weight even than the chorus of kindness we

have received, is the fact that we have not met with a single rebuff. Finally, the price gives us our strength and we can afford it. At the end of our second quarter we shall add a double lithographic sheet of illustrations particularly devoted to scale drawings, structural plans, and current architectural work. The sheets shall compare with any Architectural Supplements in the World. That is all we desire to announce at the moment.

Wooden Structures.

THE Birmingham Corporation are impounding the waters of two Welsh rivers, near Radnor, for supplying its town with water, and having a thousand workmen and their families under their control, they have erected a model village—of wood. The houses are of different type, and the village has its dispensary, its hospital, its post office, savings' bank, and its fire brigade station, public baths, recreation hall and reading rooms—even a public-house, where liquor of all kinds, purchased by the Corporation, is retailed to the residents. What interests us at the moment is this point of timber construction. A summer or two ago we designed a little wooden bungalow, which we were desirous of erecting on a lovely site overlooking Coney Island at the mouth of the Thames. It was a mile from Benfleet village and the nearest habitation, but the local authorities prohibited the luxury of a wooden house and spoilt our little game entirely. And we protest. In the depth of the country, on the outskirts of our woods, on the banks of our beautiful streams, there are thousands of quiet, secluded spots where weary brain workers would gladly pitch their little wooden homes if they were permitted by local laws to do so. In towns or even villages where habitations adjoin, or are close together, wooden construction may be picturesque, though it is not safe. Surely, away on our hillsides, man should be permitted to run the risk of frizzling himself to death if he chooses, when he occasions no risk to his fellow beings. The Birmingham Corporation have evidently taken the risk at Radnor, perhaps because the site of their "town" does not come under the jurisdiction of any new-fangled local authority, but that cannot, or at any rate should not, empower them to break laws which are presumed to exist universally in this country for the safety of its inhabitants. If the Corporation of the Midland capital are justified in doing this, then, by what earthly sense, are we debarred from building our bungalow in the wilds of Essex, miles away from the habitation of man? Laws of this nature should be universal. A man should be permitted to build a wooden house a hundred yards away from any other house, or he should not; there should be no middle course governed by the caprice of local nobodies who generally understand more about bacon curing than anything else. For our part we should welcome the sight of the chalet and the bungalow along our country pastures and our river banks. Life is more ethereal than it was; we live lighter and quicker; and the little country home, neatly and picturesquely constructed of honest timber, soothes and pleases the toilers of our towns, and hides them away from the awful dwellings which creep into being under the artistic guidance of our jerry country builders.

It has been decided to commence the works in connection with the open air Baths in Burlington Street, Liverpool, at once, and sanction has been given to a proposal for introducing electric bells as an experiment in some of the Corporation Baths.

ARCHITECTURE AT THE ACADEMY.

BY OUR SPECIAL REPRESENTATIVE.

WITH SKETCHES BY C. E. MALLOWS.

OUR first notice, in the issue of the week before last, was written whilst we were still under the influence of Mr. Wilson's masterly works. If it were possible to dismiss these from one's thoughts whilst in the room (which it is not) we should be obliged to say that the whole show of Architecture hardly rises above mediocrity. There are some notable exceptions, of course, both above and below that level, but generally speaking, the average of recent years has not been reached, and there are some half dozen works,

which we mention later on, so bad, both in drawing and design, that it is a mystery how they passed the Hanging Committee without the red and white crosses they so well deserve.

It is well-known to be a dangerous thing to prophesy unless you know, but we were right in saying in our first notice that the Architecture would be more attractive this year to the general public than it has been in years past. It is perfectly true that a touch of old times occurred, when a certain well-known and antiquated Divine put his reverend head within the door and immediately withdrew it, as if he had been in some way silently hurt, remarking to a friend, "Oh, these are the works of architects, you know, and they are best left to themselves," but then, perhaps, he was in a hurry to discuss one of Messrs. Spiers & Pond's famous rejected chickens in the refreshment room below. We spent some time in the Galleries last week, and had an excellent opportunity of judging. Generally speaking, Mr. Wilson's drawings were a great attraction, and it was the opinion of one dis-

tinguished artist that his drawings were equal to anything in the whole Exhibition, and folks stopping at the door to look at these remained to wonder at others, so that at times the place was positively crowded.

Conspicuous in recent years among the authors of Church Architecture has been the name of Leonard Stokes. His fine design for the large Roman Catholic Church at Miles Platting, Manchester, in the Academy of 1892, will not easily be forgotten, or the drawings by which it was illustrated. He has nothing so important this year as that, but his fresh and vigorous little "Church of All Souls", Peterboro', No. 1494, which we shall illustrate in our next number, will be much admired. It has a well disposed arrangement of window and wall space, and his treatment of the West End, with the large window filled with finely-arranged lines of tracery (influenced, perhaps, by certain windows in Tewkesbury Abbey), and the plain wall beneath are excellent. The Gable has those little curves, finishing the lines at the springing, which Mr. Stokes is so fond of, and which give a good deal of character to his work. The Presbytery, which joins the Eastern End of the Church, and is at right angles to it on the North Side, is simply designed, with a cleverly-treated bay window, which we remember to have seen before in one of Mr. Stokes' country houses. This work is illustrated by a pen drawing by Mr. C. E. Mallows. In No. 1529, "A Summer Cottage, Isle of Wight," Mr. Aston Webb shows a reserved treatment of Late Gothic, which well expresses its purpose, and has a studied outline of much character, in harmony with the lines of the hills and downs amidst which the house is situated. The drawing, in pencil and stump, is a little too much detailed, but is otherwise effectively done. Nos. 1478 and 1512 are by Messrs. Ernest George and Peto, the former, "Additions and Alterations to Colworth House near Bedford," is not particularly interesting, and is presumably a continuation of the old work; but there is a very pleasant little corner in the interior view showing the fireplace, hall table, an attractive little panel at the end, and an elevational sketch of a side-board, all of which are characteristically (Ernest) Georgian. No. 1512 illustrates the Interior of the Hall at North Myms, Herts, effectively drawn, of course, but we do not like the somewhat awkward lines of the hooded fireplace.

A prominent exhibit is No. 1490, "The Sun Dial at Whatton House, Loughboro'" for Lady Crawshaw. An excellent design, well conceived, on an old model we dimly remember having once seen in a garden somewhere in the North of England. The figures which support the circular table of the dial stand on a carved

No. 1519

No. 1507

THE CHURCH OF ST. ANDREW
BOYCEBURY, BUCKINGHAMSHIRE
BY H. WILSON.

pedestal raised on two steps, and are well proportioned, admirable in feeling for line, and modelled with much grace and delicacy. It is illustrated by a crisp and telling pencil and stump drawing by Mr. Mallows.

Mr. C. A. Voysey shows a delightful house in stucco and green slates, at Colwall (No. 1,452), which, artistically drawn in elevation as it is, would have been far better illustrated in a perspective view. It has a recessed Garden Entrance simply treated, and there is apparently a Courtyard to the Principal Entrance, which latter is placed to the right under a square Porch with columns at the angles, or perhaps the Entrance is under the small square Tower (finished at the top with a long row of low lights and hipped pyramidal roof), to the left

of the drawing; it is somewhat difficult to say, without a plan, which would have added interest to this design. Another drawing (shamefully skied), is by Mr. Phillip Figgis, of "Proposed Cottages at Harrow" (No. 1,553), an excellent group of half timber and brick daintily drawn in water-colour, reminding one of Mr. Wilson's work of a few years' back. There is a breezy open-air feeling about the whole drawing which is very taking. It should have been hung well on the line. How on earth such a drawing as this, or the pen drawing No. 1,587, should occupy these positions, and such drawings as Nos. 1,580 (which is only mentioned as an example of what to avoid), 1,415, 1,525, 1,536, 1,541 (a caricature in parts of Hadden Hall), and 1,538 (especially 1,538), should have been hung on or near the line in nearly every case, is one of those mysteries which the Hanging Committee presents every year for consideration. No. 1,560 has no right to its position, neither on its merits as a piece of Architecture or illustration. A good drawing will make a commonplace design interesting, but in these cases it is difficult to say which of the two offends the most—the drawings or the buildings.

A good piece of Domestic Architecture in red brick and half timber, thoroughly homelike and English in character, is No. 1,437, Mr. Collcutt's house at "Cold Harbour, Liphook, for Sir Thos. Sutherland," which also we shall illustrate later on. The portion to the right of the drawing, showing the large half-timbered gables and the projecting Entrance Porch in wood, is the proposed addition; the remaining portion of the House, including the Stables, was built some five or six years ago.

Another exhibit by Messrs. Brewill and Bailly is of a house by the water-side at Nottingham, No. 1,587. It shows a good deal of appreciative knowledge of Georgian work, and is simply treated. We like the severe, elliptical-headed entrance doorway and the square pent-house door, and the formal garden in front, with the sun-dial and paths radiating from it. It is illustrated by Mr. C. E. Mallows in a delicately handled pen drawing, carefully and thoroughly worked out, even to the reflection of the house in the water, which is well managed. It is hung far too high for so small a subject.

There are portions of the "Church of S. Matthew, Cockington, Devon" (No. 1,551), by Mr. Nicholson, which appeal as a good study in Decorated Gothic, and there are other portions which would have been better reconsidered. The upper part of the Tower promises well, but we do not admire the two gables by its side, the centre one is out of drawing, and both narrowly escape the commonplace. There is a good deal of distinction in the design, but Mr. Nicholson has done much better work than this.

No. 1,555 is Mr. Aston Webb's design for the Reconstruction of the Staffordshire County Infirmary. It consists of the Centre Administrative Block of three storeys, and Wards of two floors on either side, connected with open

Corridors. The large low lines of the whole front are very pleasing, and in its simple and unpretentious treatment has much charm. It is illustrated by a pen drawing by Mr. Raffles Davison. The drawings in the lower part of the frames show the Hospital as existing before and after re-construction. From this it appears to have been entirely rebuilt. There is a Children's Ward placed at right angles to the Ward on the left side of the building.

Mr. Skipworth is much more successful in design No. 1,559, for "New Church of St. Etheldreda, Fulham" (illustrated by exterior and interior views), than in his larger effort for the Cathedral mentioned last notice. The Chancel is apparently an addition in red brick and stone dressings to an older Church in yellow stocks; this may not be so, but it looks something like it in the drawing. This latter is wanting in force and life, and the design deserves better illustration, but we admire the East End, with the well designed five-light traceried window and recessed arch over; it shows a fine feeling for the value of the blank wall space which occurs below.

The Interior View of the same Church (No. 1,599) shows a plainly treated Interior, with stone ribs to the vaulted roof, with the Chancel raised some eight or nine feet above the level of the Nave floor, an arrangement which gives much dignity of effect. As the Vestries do not appear on the plan, they would probably be contrived in the space below the Chancel.

No. 1,558, the Church of "The Most Holy Redeemer," Chelsea, by Mr. E. Goldie, is an Interior view in a somewhat heavy style of Classic, and is illustrated by a pen drawing by Mr. Brewer. We like Mr. Brewer's colour drawings better than his works in pen and ink.

It is a pleasure to look at No. 1,562, Mr. E. P. Warren's delicately drawn "Interior of a Church for a West London Suburb." It is partly in pencil and partly in water-colour, and executed with much feeling in both. The first three bays of the Nave are shewn; there are Side Aisles after the French plan, and the Nave Arches run the entire height of the Church. The Chancel is of three bays with a plain wooden Vault continued from the Nave, the ribs of which are decorated in a low tone of Indian red. There is much good character in the

colour decoration throughout. This is another instance of the Chancel being raised above the level of the Nave by a flight of seven steps. We much like the design of the East End with the recessed centre window and the narrow two-light windows on either side, and the colour scheme of the Reredos below.

The three bright drawings by Mr. Raffles Davison, in frame No. 1,570, admirably illustrate Messrs. Clark & Moscrop's selected design for the

Darlington Municipal Buildings, which indicates a liking for some of Mr. T. G. Jackson's executed work, and a careful study of Kirby Hall, Northamptonshire, but then it is well interpreted and not caricatured.

(To be continued.)

On Saturday last, at the Spring Exhibition of the Walker Art Gallery, Liverpool, an illustrated lecture was delivered by Mr. E. Rimbault Dibdin, entitled, "In Search of Sunlight," and in the evening Mr. James Lowrie lectured on "The Highlands and Lowlands of Bonnie Scotland."

In the original plan of St. Andrew's Church, Redruth, a handsome Tower is conspicuous, but from want of funds this is left for a future generation to provide. A temporary structure, with a single bell, has, however, been put up within the past few days to remind the parishioners of service hours.

The Vestry of St. Luke's, Skerton, has decided to apply to the Consistory Court for a faculty to erect a new Chancel at the east end of the existing Church. This extension of the edifice has been rendered imperative by a report concerning the organ, which has to be removed from the present chamber much nearer the centre of the Church, in order to save it from utter ruin. The plans, prepared by Austen & Paley, Architects, of Lancaster, show a Chancel, not exactly in accordance with the Architecture of the present Church, which is a bad example of "Modern Early English" Architecture, but one that will be suitable for a new building, if one is ever erected.

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,
21st May, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

A NEW through communication from the north-east to the north-west of the Metropolitan, formed by the widening of England Lane, Haverstock Hill, at a cost of £6,000, to be borne jointly by the London County Council and the Hampstead Vestry has been opened. The lane was formerly a very narrow thoroughfare, but of late years a great deal of traffic has passed through it, and at times it became exceedingly dangerous. The Vestry took the matter in hand some years ago, and, after great difficulty, succeeded in purchasing the property necessary for widening the lane. Now the lane adequately connects Eton Avenue with Park Road and Haverstock Hill, and an important link of communication has been formed between the north-east and the north-west, opening out a direct line of traffic to the Midland, London and North-Western, and Great Northern Railways.

THE announcement of the impending publication of an important volume dealing with the life and work of the President of the Royal Academy is now made. This book will be uniform in size and style with the monographs of Sir Edward Burne-Jones and Albert Moore, which the same firm has already published, and will contain more than a hundred photogravures and other reproductions of Sir Frederic's works. The biography is written by Mr. Ernest Rhys, and a critical introduction is contributed by Mr. F. G. Stephens. The owners of the better-known pictures and copyrights have, in nearly all cases allowed them to be reproduced, so that the volume will be of the first importance as a record of the President's work.

AMONG the arrangements for the summer season at the Imperial Institute, are an International Railway Congress and Exhibition, to be held from June 26 to July 9, and an International Geographical Congress and Exhibition, to be opened by the Duke of York on the evening of July 26. At the Railway Congress Mr. Frederick Harrison, General Manager of the London and North-Western Railway Company, will report upon the organisation of the central administration and outdoor staff and the various systems of different countries; Mr. A. M. Thompson, the Signal Engineer of the same concern, will deal with the whole question of signals, introducing recent improvements in block and interlocking apparatus; while Mr. C. A. Park, the Company's Carriage Superintendent, will submit a paper upon "Rolling Stock for Express Trains," in which special reference will be made to the type of carriages for such, vestibule trains, improvements in internal arrangements, and various

modes of heating and lighting. Mr. Henry Lambert, General Manager of the Great Western Railway, and Mr. George H. Turner, General Manager of the Midland, will discuss various points in relation to the transport of merchandise; and Mr. William Hunt, Chief Engineer of the Lancashire and Yorkshire, will handle the question of the strengthening of permanent-way in view of the increased speed of trains. The Birmingham Railway Carriage and Wagon Company, the Patent Nut and Bolt Company, the Gloucester Railway Carriage and Wagon Company, the Tubular Frame Wagon Company and many other well-known firms, will contribute, by the way, to the accompanying Exhibition of railway appliances.

PROFESSOR SIMPSON, Director of the School of Architecture, briefly discussed the question of unity between Architecture and the kindred Arts, at a discussion held in the Grosvenor Room of the Spring Exhibition, Liverpool. He said a great truth was expressed in the motto of the Art Workers' Guild of London, that "Art is Unity." In point of fact there ought to be little difference between the preliminary training of architects, sculptors, painters, and Art craftsmen generally. Every advantage was to be gained by their being trained together; without such common training unity among the Arts was next to impossible. If painter, sculptor, architect, decorator, smith, or the designer of pottery, fabrics, furniture, glassware, &c., were trained together, the result would be as in the days of the Renaissance. These artists would modify and strengthen each other. And this was necessary if living Art was the aim.

HAVING urged that Wall Decoration Painting had found its highest expression, Professor Simpson proceeded to say that the supply of real Decorative Art was not equal to the demand, but that the demand would grow larger as the supply increased. If they were good craftsmen, they need not fear but that they would be artists. Mr. Anning Bell also spoke. He endorsed the observations of the preceding speaker as to the need of unity in training. The great point was that men should not learn to design this or that, but to design, to study direct from Nature. Modern design showed nothing of this. Generally speaking, it lacked consistency because it lacked individuality. What we needed to restore was a serious and reasonable view of Art—that Art was not to be acquired by workshop receipts and tricks of method. The aim of the new School was, in short, to teach a man to use his brains as well as his tools.

IN the Crypt of St. Paul's Cathedral, a marble medallion portrait of Sir Robert Montgomery, G.C.S.I., K.C.B., LL.D., has been unveiled by Sir Henry Davies. The medallion, which is the work of Mr. Bruce-Joy, was subscribed for by the friends of Sir Robert in recognition of his services in India during the Mutiny. He restored peace in Oude, and after the taking of Lucknow, acted as Governor of the Punjab for six years, during which period he was knighted. The inscription goes sufficiently into the details of Sir Robert's career and achievements to refresh the memory. It concludes as follows: "Born at Londonderry December 12, 1809, died in London December 28, 1887. In death as in life resting in faith in his Redeemer." The medallion is placed near the grave and memorial of Lord Napier of Magdala, one of Sir Robert's oldest friends.

At a special meeting of the Conway Council, held for the purpose of conferring with a deputation respecting the alleged opposition of the Council to the construction

of the new Bridge over the river Conway at Tal-y-cafn, the vicar of Caerhun, the Rev. W. Roberts, stated that the Corporation's insistence upon the Bridge having a minimum height of 26 feet above spring tide high water, instead of the Bridge Company's proposed height of 16 feet, would probably cause the abandonment of the scheme, owing to the increase in the cost, while river navigation would not be prevented, though delayed a tide, by the lesser height of the bridge. The borough surveyor, Mr. T. B. Farrington, explained the position in some detail, showing that the Council was not itself adverse to the erection of the bridge, but had, as the Conway Harbour authority, made itself the mouthpiece of the river navigators in submitting the question to the Board of Trade for their decision.

THE remains that are being unearthed in France in the construction of the railway from Nyons to Pierrelatte puzzled antiquarians at first, but now little doubt is entertained on the subject. The site is that of the Gallo-Roman city of Augusta Tricastinorum. Everything that has been found, water pipes enclosed in blocks of stone, fragments of capitals and statuary, tiles, large blocks of masonry, urns, amphoræ, indicates the former existence of an opulent city. All vestiges discovered at a depth of ten feet below the surface bear traces of fire. The stones are calcined, the marble and jasper are vitrified, and there are pieces of carbonised wood. The destruction of the city is attributed to the Saracens. After they were vanquished by Charles Martel at Poitiers, an event to which we almost certainly owe it that Britain has never been overrun by Mohammedan hordes, they retreated to the valley of the Rhone, which they held for four years, and completely devastated, under Abderraham, who was supported by the Moorish Governor of Narbonne. If the site is scientifically excavated, discoveries on a much larger scale will almost certainly be made.

ACQUISITION by the Antwerp Museum of the Triptych, "Christ and his Angels," attributed to Memling, has been officially communicated to the Town Council by the Burgomaster. It is to be paid for in six yearly instalments of 40,000 f., of which the first, to the amount of 15,000 f., will be contributed by an anonymous donor, and the remainder by Mdlle. Beernaert, sister of the former Prime Minister.

ON Saturday the foundation-stone of a new Free Library, provided by the Corporation of Birmingham for the inhabitants of Balsall Heath, was laid. The Library, with its fittings, will cost about £5,500, and is being built by Mr. R. Fenwick from the designs of Messrs. Jethro A. Cossins and Peacock. The building, although unpretentious, is decidedly original and decorative in character, and will be a pleasing addition to the Architectural features of the locality. It will cover some 600 square yards, with a frontage to Moseley Road of about ninety feet. The style is English Renaissance, and the façade will consist of three bays, pierced by an equal number of bold elliptically-headed windows, each divided by mullions into five lights. The bays will be surmounted by pedimented gables with decorative niches. On the right will be the Entrance Porch, over which will rise a square Clock-Tower with a height of seventy-eight feet. The materials will be Leicester "sanded" brick, with dressings of biscuit-buff terra cotta. This material will be employed for the decorative gables, and will contrast pleasingly with the green Westmoreland slates used for the roof. According to the designs, it is also introduced very happily for the broken pediment over the Porch, and for the upper

portion of the Clock-Tower. The latter has quadrant corners, and four little domed turrets form finials to them at the base of a miniature octagonal spire. Turning to the left through a Vestibule beyond the Porch, entrance will be gained to the Reading Room, which will have a floor area measuring 57 ft. by 62 ft. The Hall is arranged somewhat in the manner of a nave and aisles, the latter divided from the former by three bold arches, answering to the front windows, carried upon red granite shafts. The central portion of the Hall will be ceiled at the level of the wall-plate, 25 ft. from the ground. The ceiling will be divided by heavy beams with moulded cornices, and a large part of it will be glazed to admit roof light. In the aisle portions the ceiling will be vaulted to correspond with the arches, and the vaulting will be pierced by small lantern-lights. In addition to the floor space already described, there will be, to the rear of the Porch, a recess for administrative purposes, and also a Librarian's room, with a large inspection window. Counter space to the length of 35 feet is arranged for; and shelving, principally on the west wall of the Reading Room, will be provided for about 10,000 volumes. The light-buff terra-cotta will be used for the interior arches, and an ornate low relief frieze of fibrous plaster, 2 ft. 9 in. deep, will run below the ceiling, and form a somewhat striking feature.

AN experiment on a great scale in acoustics was tried at Philadelphia yesterday week in the Baptist Temple, the largest Church building in Philadelphia. The Temple has two auditoriums, one on the lower floor, the second on the one above, where there are besides several smaller meeting-rooms. These were all connected one with another, and with a gigantic telephone by means of wires. The service, the sermon, and the music were all produced in one room, where the large telephone stood near the pulpit and the organ. A large transmitter was placed in each of the other rooms, so that the sermon, service, and hymns were distinctly audible and intelligible to the crowded audiences that filled the other auditorium and the meeting rooms. The success of the experiment was complete.

THE OLD HALL, WORSLEY, MANCHESTER.

EVEN Artists sometimes fail of that intelligent observation in which they think the general public so much lacking. A picture at the current Exhibition of the Society of American Artists was hung upside down at first. It represents a pool of water reflecting an invisible sky and the objects on one bank.

It has been said that save under very exceptional circumstances a woman cannot

become a great artist, and answering the argument of Rosa Bonheur they aver that she has nothing feminine in her character. Be that as it may, the ladies have not only made successful raids of late years on the prizes in the Academy Schools; but they have this year secured a large share in the wall-space of the Exhibition, as the following statistics show: The exhibitors number 1,162, of which the odd 62 may be taken as Academicians and Associates, and the 100 as Architects, amongst whose ranks the ladies have not yet appeared as exhibitors. Of the remaining 1,000, 150 are single and 37 are married ladies; amongst the latter being the following wives of members: Mrs. Alma-Tadema, Mrs. Stanhope Forbes, and Mrs. Seymour Lucas.

A PHOTOGRAPHIC survey of Yorkshire, for the purpose of establishing a record of objects of antiquarian or historic interest in the county, has been put on a practical footing. The Yorkshire Archaeological Society, having had the matter under consideration, are issuing a prospectus to photographers, amateur and professional, inviting their co-operation in the execution of the design. The following passages, extracted from a circular just issued, show the scope and plan of the work: "The chief value of the scheme is, perhaps, the means it affords of preserving accurate representations of both the interiors and exteriors of ancient buildings, so many of which are from one cause or another constantly disappearing from the map; while such objects as monumental effigies or tablets, sacramental plate, sun-dials, crosses, and even remarkable trees, might with advantage be included. It is proposed to arrange the views under parishes, and to secure them in albums of a uniform size, the latter to be kept in the Society's library as books of reference. When, in the opinion of the Council, a sufficiently complete set of views in any one parish has been obtained, such set will at once be mounted, and any additional views in that parish which it may afterwards be thought advisable to preserve, will find place in a second series."

ORIGINALLY there were fifty-four applicants for the post of Borough Surveyor of Wolverhampton, and the Council had the names of the following three candidates before it from which to make a selection: Messrs. James William Bradley, borough engineer, Nelson, Lancashire; John Thomas Eayrs, borough engineer and surveyor, West Bromwich; and Albert Edward Nicholls, assistant engineer in the city engineer's office, Leeds. The applicants by agreement did not appear before the Council, nor did they canvas for votes. In the discussion on the

subject it was stated that the Sub-Committee was unanimous with regard to the qualifications of Mr. Bradley. A number of members, however, spoke in favour of Mr. Eayrs, but the voting resulted as follows:—Bradley, 25, Eayrs, 17. On the motion of the Mayor, seconded by Alderman Gibbons, Mr. Bradley was appointed borough engineer. The salary attached to the office is £450 per annum.

MR. FRANCIS T. W. MILLER has not the face of a humourist, and yet he was the author of two of those sparkling Association burlesques which have hit off, so trenchantly, the little foibles of professional grey-beards. Mr. Miller's paper, "The Queer Side of the Profession," read before the Discussion Section of the A.A. last week, is not in his best form, or, was it that he feared the lance

on its rebound? No one takes these little pleasantries seriously, although good would come if they did. There are dozens of queer things in architectural practice which Mr. Miller could have whipped up for his purpose. How a man can undertake the awful responsibilities of editing such a work as Lockwood's Builders' Price Book and maintain this lighter side of existence sufficient to produce burlesques and other dainty, brainy things, puzzles us; but Francis Miller is a man of resource. We remember—it is many years ago now—travelling to a wayside hamlet in Surrey to measure up the extras of an East End Nobleman's residence. Oh, that measuring! But Miller was ever a demon with a five-foot rod and a tape; and the awful calculations he manipulated were wonderful to a man who has a soul above the cubic capacity of an O.S. gutter. We held the tape. Yes! we admit, with the resignation of a saint, *we held the tape*, and became ravenously hungry in the operation. We were in the land of nowhere—bread and cheese, our highest ambitions, were at least four miles off; but they attracted us, and so, along the dusty road, we started for the "Rising Hope." Presently a hawker's barrow, pulled by a fiery untamed steed, came careering along behind us. Miller's brow set firm. There was mischief mixed up with the cubic capacity of that O.S. gutter. Stop! demanded Miller, standing in the middle of the road and addressing the frightened driver, "How dare you, Sir, journey along the highway of life in luxurious repose, whilst we, the tee-squares and isosceles of our noble profession are padding the hoof? Come on 'to us,' and you, you elongated parallelogram of a sorcerer, drive on to the village pub, and, verily, your reward shall be a mug of foaming sack and a silver shilling." The driver, who had not understood a single word, merely said: "Chuck it, Guv'nor," and winked at us. In the village, we found food, and a delightful old homestead, which we immediately commenced to sketch, and when we had finished it was too late to return to the guttering and the five-foot rod, and so we slept at the "Rising Hope," and plodded back to work the following morning.

ADDITIONS to Queen Mary's Schools, Walsall are now nearly finished. The new buildings consist of two distinct blocks, one containing six Class Rooms, a Dining Room, and a Kitchen for cookery classes for the Girls' School, and the other a Gymnasium, a Workshop, a Laboratory, and a Boardroom. The additions to the Girls' School are built alongside the old Lower School room, which is henceforth to be used as an Assembly Hall, and in this block are to be found rooms for the head mistress and assistant mistress, and the other rooms already named, three of the Class Rooms—arranged to accommodate twenty-four, thirty, and forty students respectively—being on the ground floor, and the three others, of similar capacity, being on the floor above. The additional accommodation provides for 188 pupils, whilst the two old Class Rooms on the other side of the Assembly Room accommodate 36 more—a total of 224 scholars. In the basement are a large Dining Room for girls who may not be able to return home in the middle of the day, a Kitchen for cookery classes, Cloakrooms, and a large Lavatory. All are fitted up with careful forethought for the purposes for which they are intended, and the buildings throughout are planned on the most approved principles. The rooms are lofty, well lighted, warmed and ventilated, the corridors, rooms, and all the accessories are bright and cheerful, whilst substantial in construction. Red bricks are used externally in the construction of the buildings, with a sparing use of Hollington stone for dressings, and, although the decrees of the Charity Commissioners in the matter of expenditure compelled economy, an effective and dignified appearance is produced.

THE Workshop and Laboratory block is placed between the boys' and girls' playgrounds, with a separate entrance from each, and the arrangements are such that whilst the rooms are in use by either School access from the other can be entirely cut off. On the ground floor are a Gymnasium, 47 ft. 6 in. by 22 ft. (which has been furnished with apparatus under the direction of Professor Hubbard, Birmingham), and a Workshop 50 ft. by 22 ft., fitted with work benches, timber racks, and tool cupboards, under the direction of Mr. W. N. Teague, the carpentry instructor at the School and at the Technical School. The first floor contains one bedroom, 22 ft. by 18 ft., having a coned ceiling and an oriel window overlooking the boys' playground; and the Laboratory, which is 37 ft. 3 in. by 22 ft., fitted with chemical tables for twenty-four students, fume closets, combustion hearth, and sulphuretted hydrogen closet. It is claimed for the Laboratory that for its size it is probably the most complete in the district; and the Governors and the townspeople at large have cause to be proud of the additions as a whole. The general building works have been carried out by Mr. R. M. Hughes, Birmingham, from the designs and under the superintendence of Messrs. Bailey and McConnal, architects, Walsall. The total cost will be about £4,750.

HOMES for aged miners is a question that will come before the annual meeting of the Durham and Northumberland Miners' Permanent Relief Fund. Counsel's opinion taken sometime since was that if the rules were altered as suggested, the Society could legally use its funds for the purpose of the proposed building scheme, but the cost could only be met by an increase in the members' contribution. At a moderate computation it would require £80 to build a comfortable Cottage, and as there are now about 2,900 old men on the Society, a Cottage for each would cost about £230,000. These facts will be placed before the members at the forthcoming meeting.

THE Durham Corporation which is being urged by the Durham County Council to dispose of the city sewage otherwise than by putting it into the River Wear, recently offered two premiums of £100 and £50 for the best scheme. There were a number of competitive plans, and those of "Valves" and "Efficiency and Economy" were finally selected. On the seals being broken the names of the successful competitors were found to be—"Valves," Messrs. Lomax and Lomax, Deansgate, Manchester, first, £100; "Efficiency and Economy," Mr. D. Balfour, Houghton-le-Spring and Newcastle, second, £50. The process adopted by Messrs. Lomax is that known as "The International," being by chemical precipitation in tanks and filtration through polarite beds.

SINCE Easter work has been commenced on the London section of the Manchester, Sheffield and Lincolnshire Railway, and is now actively proceeding. Hosts of quaint little houses, situated in quiet, secluded gardens, are now being ruthlessly swept away to make room for this great extension. The scene of ruin and desolation is already great in South Bank, now called Grove Gardens, in North Bank, Alpha Place, Lodge Road, St. John's Wood Road, Wellington Road, Wellington Place, Grove Road, and Cunningham Place. It will probably be a long day hence before London again sees such a gigantic clearing away of house property to make way for a Railway, and it must have come as a great surprise to the inhabitants of this secluded corner of London, when they first had notice of the threatened invasion. The Railway cuts right through the easternmost portion of Lord's Cricket Ground, and sweeps away the old buildings of the Clergy Orphan Asylum, this Institution having just been built by Messrs. A. Waterhouse & Son, near Stanmore. The Passenger Terminus is to front the Marylebone Road, and will be between the upper part of Baker Street and Lisson Grove, quite an ideal site for a great West End Station. We hope the Architecture will be worthy of the site.

THE Schorlemmer Laboratory for Organic Chemistry, which has been provided by subscriptions to commemorate the life and scientific work of the late Professor Schorlemmer, has been opened at Owens' College, Manchester, by Dr. Ludwig Mond. The Laboratory, which has been designed by Mr. A. Waterhouse, is at the end of the main Corridor, in the old Chemical Building. It measures 60 feet by 30 feet, and has an arched roof 30 feet high and is designed to accommodate a Professor, two Demonstrators, and 36 Students. The lower Laboratory is designed to accommodate 45 Students. The fittings are similar to those in the old Laboratory, designed by Sir Henry Roscoe. The Re-agent Room, 20 feet by 20 feet, communicates by a flight of steps with Burlington Street. The total cost of the new building is £4,800.

THE Grand Staircase and State Rooms in Kensington Palace, the birthplace of her Majesty the Queen, are said to be in a dilapidated condition. Sir Samuel Montagu has suggested to the First Commissioner of Works that they should be restored to their original condition, with the furniture, pictures, and other works of Art pertaining to the Royal house replaced.

EVERY effort is being made to proceed with the building of the new Church for Southport, and about £7,000 has been raised. Matters have been further facilitated by the gift of a central site, and of 17 designs sent in for the new edifice, that of Messrs. Preston & Vaughan, Manchester, has been finally selected, and that firm is now busily engaged in preparing specifications and other details.

The new building, which is to be consecrated as Emanuel Church, will be cruciform in shape, with a large Central Tower, and will be built of stone inside and out, the total cost when completed being estimated at about £20,000. Close to the new Church there will be erected a small Chapel.

A NEW issue of bronze coins, now in the Mint, is to be of a design not hitherto used for either pence, half-pence or farthings. The obverse will bear a smaller effigy of Her Majesty than is now struck, and this reduction will make room for a longer inscription. Instead of "Victoria D. G. Britt. Reg. F.D.," the annular legend will read: "Victoria Dei Gra. Britt. Regina Fid. Def. Ind. Imp." The principal words at least are thus presented without abbreviation.

THE lectures of the Sheffield Society of Architects and Surveyors have been so much appreciated during the winter that the Society has extended its rules in order to admit an additional class called "Lay Members" not engaged in the Profession of Architecture or Surveying. These will have the privilege of attending the lectures in the winter, and the opening conversation. They are not to have any responsibility for the management of the Society. The lecture list for next winter includes the names of Messrs. Percy Fitzgerald, Mr. A. Paul Waterhouse, M.A., H.C. Sorby, LL.D., F.R.S., T. Winder, and Hugh Stannus.

THE Lighting Committee of the Brighton Town Council has received fifteen tenders for the supply and erection of boilers in connection with the Corporation electricity undertaking. For six boilers the estimates range from £4,750 to £2,627, the former figure being that of Messrs. H. & T. Danks, Limited, Dudley, and the latter that of Mr. E. Danks, Oldbury. These are for "dry back" boilers. Messrs. Babcock & Wilson, of London, submit, however, a tender for boilers of the water tube type, their price being £3,100, and as the Committee is advised that a considerable saving in space will be secured by the use of this pattern they recommend that a contract shall be entered into with the firm. Tenders have also been received for the supply of vulcanized rubber and lead-covered and armoured cables, and the Committee advises that that of the British Insulated Wire Company at £230 per mile for 3 core cable and £215 per mile for 2 core cable be accepted. In the case of the highest tenders the figures were £396 and £297 respectively.

THE Architect of the Law Courts has much to answer for. He reared a magnificent maze, in which Beatrice Lindsay, of Windsor, lost herself in the pursuit of Justice. She entered the building in search of Mr. Justice Chitty, but could not see him, and at last she found herself called to the bar by a friend, who celebrated the occasion in the usual way. Then she renewed her search for Mr. Justice Chitty with equally unsuccessful results, and at last thought she had better consult someone acquainted with the intricacies of the Law to guide her to his court. She found one in the shape of a policeman, who, instead of taking her to the Chancery Division, led her to Bow Street, where the magistrate adjudicated upon her folly. She pleaded to his Worship: "When I got to the Law Courts I found the passages and corridors so confusing that I thought I had better go to Bow Street and get a good solicitor. I assure you, sir, that the passages at the Law Courts are so perplexing that I got quite mixed up. It's all owing to them." Mr. Vaughan: "You must pay a fine of 5s." And after paying that sum the good old lady may find that Mr. Justice Chitty has disposed of her case in her absence.

FATE has hitherto been somewhat against the Earl's Court Exhibition, and now the opening which was to have been at the commencement of the present month, is perforce postponed to a period which will be much nearer the end. But the Empire of India Exhibition will be well worth waiting for, since it will be one of the most complete and comprehensive shows yet offered to the modern generation of sightseers. The whole thing has been designed and carried out on a scale which characterises Mr. Imre Kiralfy's work, and those who had become accustomed to the site in the days of the old Exhibitions will wonder where all the land has come from on which the vast array of buildings and the splendid collection of gardens have been placed. To begin with there is a Theatre arranged for great spectacles with a Stage a quarter of a mile long, and an Auditorium capable of seating 5,000 persons at a time.

MR. H. G. LUFF, architect, has reported that he has made a careful inspection of St. Mary's Spire, Devonport, and is of opinion that it will be necessary to take down about 10 feet, to remove the dangerous portion. The Spire was built of Bath stone, and he suggested that the portion taken down should be replaced by limestone, which was not so soft as Bath stone. He did not think there was any immediate danger, as the spindle kept the top portion together. There had, however, been a movement of the stone eastward. He estimated it would cost about £100 to do this work. A discussion ensued, in the course of which Mr. Luff offered to hand over his professional fees to the Churchwardens. Ultimately a Committee was formed to consider the best means of raising the money to take down and rebuild the upper part of the Spire.

THE Vallance Estate at Hove, Brighton, is developing very rapidly. Allotment holders on that portion of the estate between Portland Road and Church Road have received notice to quit, and the plans have been prepared for the roads which are to be made at once. No terrace houses will be allowed to be built, erections being confined to residences of the value of £800 or semi-detached houses of the value of £750, exclusive of the value of the land. There is a 30 feet frontage to each plot and an average depth of 125 feet.

FREQUENT representations have been made to the County Council, and plans have even been prepared, for the construction of a broad avenue connecting Holborn with the Strand. Hitherto, however, no active measures have been taken by that body, and, with the object of again stimulating the authorities at Spring Gardens to action, a Deputation representing ratepayers in the two divisions, waited upon the Improvements Committee at the County Hall. In the unavoidable absence of the Recorder Sir Charles Hall, the Hon. W. F. D. Smith, M.P., acted as spokesman, and urged the desirability of some scheme being formulated which would remove present grievances. The Deputation

had not, he explained, been instructed to favour any particular proposal, but desired only to point out the inconvenience experienced by passengers between the Railway Termini in the north and the south by way of Waterloo Bridge. Certain owners and occupiers of property in the neighbourhood also suffered considerable anxiety, owing to the fact that a notice, served upon them two or three years ago, of the possible formation of a new street, was still hanging over their heads.

A NEW Warehouse of gigantic dimensions is a proof that the Cheshire Lines Committee see not only a great future for Liverpool trade, but also a rehabilitation of the shipping industry on a considerable scale in that portion of the city where their special enterprise has found for itself a habitation and a name. The Warehouse is bounded on the north by Northumberland Street, on the south by Park Street, on the west by Sefton Street, and on the east by Caryl Street. It has a frontage of 600 feet, directly facing Brunswick, Toxteth, Harrington, and a portion of Herculaneum Docks. The width of

ANOTHER Lunatic Asylum, that built by the Sunderland Town Council at Ryhope, is now completed. Hitherto the Sunderland patients have been accommodated at the County Asylum at Sedgfield. The Asylum is the most valuable piece of property which the Sunderland ratepayers possess, as the Municipal Buildings, including site, only cost about £50,000, and Wearmouth Bridge a little less, while the cost of the Asylum will, it is expected, exceed £100,000. A commencement was made with the building in November, 1893, on a site comprising 75 acres, which the Sunderland Corporation were fortunate to get at the remarkably low figure of £9,000. Mr. J. Howe, of West Hartlepool, had charge of the contract, and has finished his work well within time, June 30th being the limit allowed by the County Council for the Sunderland patients to be removed from Sedgfield. The plans provide accommodation for 350 patients, capable of extension up to 500. It is estimated that 280 patients will enter upon immediate occupation. Dr. F. A. Elkins, late of the Morningside Asylum, has been appointed Medical Superintendent, and he has about 50 subordinates. The following are the principal items of cost in connection with the Institution:—Land, £9,000; Foundations, £9,000; Superstructure, £61,250; Electric Light, Heating, and Ventilation, £8,000; Laying-out Grounds, £500; Furnishings, £8,000; Clothes for Patients, £1,400; Total, £97,150.

THE City Authorities of Newcastle-on-Tyne, having abolished the old signal gun, which was fired by electricity from Greenwich each day at one o'clock, placed a large bell in the Tower of St. Nicholas' Cathedral, the intention being that this should be sounded at the old gun-hour. It was found, however, that the present clock in the Tower was not powerful enough to raise a hammer of the proper size and weight. The Corporation have placed an order with Messrs. Potts and Sons, of Leeds, for a new clock

and this is now ready for forwarding. It will, it is said, be the largest and finest clock of its kind in the provinces. The time signal portion has an arrangement fitted so that it can be discharged by the Greenwich time current at one o'clock, the other striking part being rendered silent at that hour.

THOSE who had the good fortune to see the Manchester Art Treasures, in 1857, will probably remember Mr. Wallis's picture, "The Death of Chatterton," a work that created a sensation when first exhibited at the Academy a year before it went to Manchester. This painting, we hear, is destined to belong to the nation, its present owner, Mr. C. C. Clement, having promised to present it to the National Gallery.

At the general assembly of the Royal Academy, Mr. J. W. Waterhouse, A.R.A., was elected R.A. Mr. Waterhouse is well known as one of the most gifted of our romantic painters, and his "St. Cecilia," in the present Exhibition, has already been praised as one of the finest works now to be seen at Burlington House.

ARCHITECTURE AT THE ACADEMY.

the structure is 105 feet and the height 70 feet. The building is of massive proportions, and has an imposing appearance, the lettering of the names of the various lines constituting the Cheshire Lines Committee being of gigantic size. The Warehouse is an addition to the goods accommodation which has existed so long there, but it is built on a scale, and with such evident improvements in many ways, that it quite eclipses not only the old Station in size and style, but may well claim to be one of the best, if not the very best, Warehouses in Liverpool or any other city, either in Great Britain or elsewhere. A visit to the premises showed that all that architectural, engineering and Mechanical skill can do to give efficiency and easy manipulation has been expended upon it. The walls, the supports, the floors, are all of the most solid description, and all the appliances fitted up for the handling and the transshipment and storage of goods are such as the most recent up-to-date ideas can suggest. The structure is practically incombustible and imperishable, held together with such a wealth of iron that nothing short of dynamite or heavy shot could imperil its stability.

AN INTERNATIONAL SERIES OF ILLUSTRATED ARTICLES.

TO OUR READERS.

In our early numbers we hinted at our intention to introduce Illustrated Articles on current Architecture as a further feature in "THE BUILDERS' JOURNAL."

We have, therefore, pleasure in announcing that we have arranged for a series of

IMPRESSIONS.

upon the Architecture of the chief cities of Great Britain and Ireland, of Germany, France, Italy, Spain and America.

These Articles will be finely Illustrated, and will appear in conjunction with "Our Men who Build" series, which we shall also make

INTERNATIONAL.

We shall be obliged if our readers will aid us in making these facts known.

THE BUILDING TRADES' CRISIS.

ARBITRATION REFUSED.

THE outlook in the London building trades has suddenly darkened, and the danger of a great struggle during the present summer has increased. It will be remembered

A VIEW OF DEANSGATE.

that the 1892 agreement came to an end on May 1st last, owing to the expiration of the six months' notice given by the master builders last November. Whilst that notice was running several conferences were held, at which the master builders endeavoured to introduce two new rules, one of which provided for sub-letting, and the other for the harmonious working of Union and Non-Union men. These rules were not accepted by the men, and the master builders have since offered to submit the two suggested rules to arbitration, and to continue the 1892 agreement until June 1st next, providing an arbitrator is agreed upon before that date. This proposal has been submitted to a ballot of the various trade unions in the London building trades, and has been rejected with almost complete unanimity. Since then a conference of delegates from these unions has been held. What has been the result of that conference has not been made public, but it is believed that an intimation has been conveyed to the Central Association of Master Builders that the men decline to arbitrate on the question of sub-letting, that they will insist upon the terms of the 1892 agreement being observed in future, and that any departure from that agreement will be strenuously resisted. It is stated that there is a strong feeling amongst some of the building trade unions at once to strike all the shops and jobs of those members of the Master Builders' Association who decline forthwith to again sign the 1892 agreement.

The Builders' Journal.

IMPRESSIONS.

NO. I.—MANCHESTER.

HEAVINESS and dullness, almost fierceness, about its Architectural surroundings—characterise the Metropolis of the North, as a first impression. It takes years to know your Manchester. It has depths you never fathom; a forlornness you make no effort to penetrate, but until you do—until you get well beneath the mere aspect of things—Manchester is just as commonplace, as prosaic, as grimy, as any other great town. The Domestic Architecture of the Great Cotton City may be summed up in a sentence—it has none. Where the mighty millionaire and his satellites foregather no one knows. They seem to disintegrate when the money-making hour is dead, and roll away like little dust drops to their wigwams in the suburbs, unknown, unhonoured, and unwashed. On my last visit to Manchester, an incident was told me by mine host of mine Inn; a worthy man indeed, with a reputation. He was a German, but twenty years of English life had improved him into a decent fellow. A citizen called upon him one day and queried

the price of a good dinner for a party of guests. "How much a head?" said the visitor. "From ten shillings to five pounds," replied the landlord. "Well then! dinner for twelve, at the higher fee." Now dinners at five pounds a man are not too frequent on this Universe. On the eventful night mine host—gorgeously spiced and span—awaited the coming of his visitors. The drive-up had been freshly gravelled, and the hall porters were up to their work. Presently a voice

accosted him across the corridor, "Any of my friends here yet," and turning, the astonished hotel keeper discovered the host of the evening trimming his nails with the wrong end of a lucifer, and asking one of the servants, "where he could get his boots blacked?" The giver of the feast had turned up in his every-day garb; and so did his guests.

There is no stupid pride about Manchester men, and little more can be said about its Architecture. Alfred Waterhouse, R.A., commenced life in Manchester and for that we must be thankful. His Town Hall, built at a cost of nearly a million-and-a-quarter of money, is naturally a magnificent pile and would be a beautiful one had a material been used

which would not have sucked up the grime and filth of the city atmosphere. At present it is jet black with only the joints of the masonry shewing white. The style is Waterhouse Gothic, and students of other men's work know what that is. The building does not possess the refinement of much of its Architect's later work, but all his old

THE ENTRANCE TO THE TOWN HALL.

trickery of design, the quips and cranks of a wonderful master-draughtsman are apparent at every turn, and the internal arrangements of the general floors are almost wonderful to contemplate. Had Waterhouse planned no other building but the Town Hall at Manchester, he would have stamped himself as a remarkable man; but his Assize Court in Strangeways, built some thirteen years before the Town Hall, is much more Gothic in feeling and, therefore, the more unsuited to secular building. The celebrated Owen's College is perhaps really Waterhouse's best building in Manchester, but his Refuge Assurance Offices in Oxford Street, is a remarkable application of terra-cotta. The fronts are a mass of the most extraordinary and intricate detail this much abused material has ever had to encounter, but the colour, a rich deep leather brown is quite suited to the locality. If the Refuge ever tumbles to pieces, it is to be hoped that it annihilates the Palace Theatre of Varieties, on an opposite corner—the most fearful abortion of coloured cement work any civilised city could tolerate. Sir

OWEN'S COLLEGE: A. WATERHOUSE, R.A., ARCHITECT.

Charles Barry is represented in Cottonopolis by the City Art Gallery and the Athenæum, the former of which was erected five-and-seventy years ago. It is a good and spacious building in Barry's sober methods, and, on my last visit, harbouring a delightful collection of Art-mongery I would personally give half Manchester to possess. In Gallery E, for instance, amidst the most beautiful pottery—unhallowed by the touch of centuries—almost warm from the kiln, so modern is it, so new, one feels that one could wander for days and never tire. The man who sees beauty in merely old things and refuses to recognise it in the merely new, would not trouble to visit the present Exhibition in the Art Gallery at Manchester, but for me and my creed, I am content to dwell among the men who have made much of the Doulton ware and the Maw ware, the tiles of Pilkington, the dado designs of Lewis F. Day, the pottery of the Della Robbia Company, and the potters who have glorified Walter Crane's delightful vases. Of the remarkable permanent collection of modern masters in the rooms of the first floor of the Art Gallery, I could write much, but not here. Many an hour have I spent studying these gems which—if I know aught of Painting—will prove the wisdom of Manchester's choice. To an Architect the series of Prout's water colours will give much enchantment; and was it not Ruskin who said: "There is no stone drawing and no vitality of Architecture like Prout's?" But one is of necessity not always Architectural. Did Yeames ever paint a finer canvas than his Prince Arthur and Hubert? Was there ever a nobler piece of design—for it is design—than Ford Madox Brown's "Work"?

"Which bends the brow, and tans the flesh of lusty manhood, casting out its devils; By whose weird art, transmuting poor man's evils. Their bed seems down, their one dish ever fresh."

Did Watts ever surpass his "Prayer"? Was Goodall ever so truthful as in "The Water of the Nile"? and did Rossetti ever reach so closely the sublime as he did in "Astarte Syriaca"? If he did I have not seen the work, and I have seen most of all he ever did. Of David Cox and Copley Fielding, De Wint and Etty, of young Arthur Hacker's "Syrinx," of Edwin Ellis's—erratic Edwin Ellis's—masterpiece "The Haven under the Hill"—and such a hill, and such colouring, unsurpassed by any living artist and unequalled in his blues by any who is dead—of Leighton's superb "Captive Andromache" I may not dare to speak, when Manchester has slums to be slummed, and sewage work to be surveyed.

Of the Royal Exchange one must say

something. However impressive it may be within, nothing but the Portico impresses me without. The Post Office, designed by Mr. Williams, of H.M. Board of Works, about fifteen years ago, is a much finer building, and altogether excels London's wretched St. Martin's-le-Grand and its impure offspring on the other side of Aldersgate Street.

Of one aspect of Architectural Manchester there is no two opinions. The warehouses are unquestionably the finest in England. One has only to walk down Portland Street, which runs from the Infirmary—the central site of the City—to Oxford Street, to gather a conception of what Warehouse Architecture

are disgraces to civilisation, though they may be a credit to Engineering skill. The Churches—with but two exceptions—will never flatter the pages of an Architectural sketch book.

The Cathedral itself has the worst situation of any Cathedral in the Kingdom, but until half a century ago it was merely the Collegiate Church. It was Thomas de la Warre, who, besides being the twelfth Baron and Lord of the Manor of Manchester, was also a priest and rector of the parish, "bethought himself, as well for the greater honour of the place as the edification of the people," to erect such a Church, which was dedicated to St. Mary. Mr. J. S. Crowther, the Cathedral

Architect, who has carried out the restorations and enlargements, which have been in progress during the past twelve years, has more than once called attention to the "stalled Choir of exquisite beauty," which is unquestionably the finest part of the Church. The Tower, at the East End, is but a poor affair, although rebuilt as late as 1864, and perhaps the South Front is the best. During the last sixty years considerably more than £80,000 has been expended on the fabric, and a sum equally large is required to be spent in making it, with its approaches, worthy, from the Architectural sense, the "second City" of the Empire. No sum, however large, can release it from the bondage of a hideous railway station which, with its fearful bridges and accessories, will for ever choke the artistic life out of what might otherwise have become a really beautiful Church. Almost the only historic building left in Manchester is Chetham College, quite close to the Cathedral, and worthy of a passing visit.

And so much for detail. English cities, indeed, depress the mind of a searcher of the Beautiful. If one could alter these things which *do* depress, the effort were worth the time; but as it cannot

be, the time is too precious to waste. Commend me to the "view" which faces a traveller entering Manchester from any of its great railway termini. Words cannot convey the Architectural depravity of such, and so let it rest. There seems to be in the City a fine field for good Architectural work; but we know how it will be devastated. If only architects would be a little less original and a little more compatible. If they would, for instance, occasionally sustain the horizontal lines of their next door neighbour instead of starting new horizontals of their own, a very big step would be advanced towards a certain uniformity of principles which might

THE TOWN HALL, MANCHESTER: ALFRED WATERHOUSE, R.A., ARCHITECT.

should be. London can shew nothing to compare with these serious sober blocks of masonry or brickwork, quite refined in their "features," and giving to the whole place a strong sense of commercial stability. King Street is the Bond Street of Manchester—and, socially, but a poor representative. Market Street, Piccadilly and Deansgate are the great commercial thoroughfares. In the latter Mrs. Rylands is erecting her Library building, in which to place the noble collection of books purchased from Lord Spencer some few years back. None of the Theatres call for any Architectural comment; they are airy and spacious structures and nothing more. The four hideous Railway Stations

lead to better things. But Manchester suffers, as other cities, from the snippy, snappy originality of very unoriginal minds; and it almost seems that until the socialistic tendencies of modern manners lay their fingers on the Art side of other people's affairs, and compel building owners to build under some code of artistic consistency, in which harmony is of a little higher value than mere originality, our street Architecture will remain what the Victorian Age has made it.

Manchester is a city of wealth and vile sanitation. At the end of the Nineteenth

ASYLUM FOR THE BLIND, MANCHESTER.

Century it tolerates urinals of the most primitive kind and of the most public nature, which offend the sense of even strong men of the World. Its public conveniences in its main thoroughfares would not be permitted in a Rotterdam slum. There are hundreds of cottages with no better sanitary arrangements than unholy "biddens"; one "bidden" to a couple of dozen families, in common use of men, women, young girls, and children. Manchester reeks of soil carts, which, after midnight, commence their ghoulish work. The sanitation of its domestic dwellings is a horror. Manchester is a city of cotton which is white and sweet. It can spend a million and a half of money on a Town Hall, and find £15,000,000 for a canal, and it knows not the very rudimentary rules of Sanitary Science.

I lunched at the Reform Club not very long since, the guest of an eminent citizen, and was congratulating him on the acquisition of Mr. De Courcy Meade as the City Surveyor.

"Ah! my friend," he replied, "Mr. Meade has come ten years too soon. Manchester has no knowledge of sanitation."

"All the more reason why he should be here."

"Perhaps; but Manchester won't learn."

SOCIALISM v. ARCHITECTURE.

NOW and then it is interesting to read what other and non-professional Journals say of Architecture. "The unerring test of a people's true happiness," the *Clarion* calls it. Our contemporary is spirited and picturesque, but not always practical. Yet its Socialism is not the "mess of pottage" policy of some. It has its ideals and aspirations. "Socialism will be impossible without good Architecture," our contemporary goes on to say. "Good Architecture is impossible without Socialism. And so it is of all the Arts, of all good and beautiful things; they are bound up with Socialism, and it is bound up with them. Don't let us forget that. Socialism means the application of the eternal principles of Truth, and Love, and justice to the Whole of Life, and not to the machinery of production only. Socialism is not higher wages, and shorter

hours, and municipal gasometers; it is not economics only, or ethics only, but it is Love and Truth in *everything*. That is the difference between the old trade unionist and us. We are working for Socialism, and for nothing short of that. When we have got thirty bob a week and an eight-hour day as a minimum (if we do get even that without Socialism, which I doubt), we shall still be insatiably asking for more. We shall, I hope, be even more discontented than we are at present. And, as long as we have beastly towns to live in, and smoky ugly things around us, we shall be as divinely discontented as ever. There are two men whose work has been—and will be still more—of peculiar importance to the Cause.

They are John Ruskin and William Morris. Both began with Art, and both came to see that Art would be impossible without Brotherhood. They both applied a marvellous feeling for Beauty, and an intimate knowledge of past history, to modern problems; with the result that they overthrew the whole dismal structure of English political economy, not without leaving in its stead the foundation of a better science, a science that shall be co-extensive with Life. And they both attach the greatest importance

to the Art of Architecture, and have shown by the records of the past how inextricably it is bound up with the welfare of the people. Therefore let all Clarionettes who are in any way connected with the building trade (*trade* is an ugly word, but we *daren't* talk about the 'Art of building' nowadays), and let all who have any voice in the creation of buildings, public or otherwise, read, mark, learn, and inwardly digest Ruskin's 'Seven Lamps of Architecture,' and Morris's 'Signs of Change.' For the Art in which they are concerned is the most indispensable of all. We might do without pictures, and music, and poetry for a while; but Architecture, of some sort, we must have, places to live in and to meet in. Now here we have a good instance of the thralldom of Art, and of Labour, to Commercialism. Every true artist feels an instinctive terror at the idea of iron supplanting stone and brick and wood. He knows that the beauty of buildings and of cities comes from their subtle proportions, their structural integrity, from the sense of solidarity and of immovable strength, from the record of Life upon them and the mellowing touch of Time. Yet the artist is powerless. He may protest, but the age of iron, he is told, is upon us."

[We, at least, *dare* talk and *write* about "the Art of building" with sincerity and conviction. We believe in it as an "Art." —ED. BUILDER'S JOURNAL.]

LABORATORIES have now been provided and furnished in Ashton Street, Liverpool, in connection with the University College, and are now ready for use. The building, which will be known as Ashton Hall, was formally opened on Saturday last.

THE NEW UNIVERSITY HALL.

ANOTHER LONDON "SETTLEMENT."

THE new buildings of University Hall, Gordon Square, for which a competition of twelve architects is now at work, will consist of a public building, containing Concert Hall, Library, Gymnasium, Class Rooms, Workshops, Billiard Room, &c., and a Residence for the accommodation of eighteen residents and a warden. Mr Norman Shaw, R.A., will act as honorary assessor to the Committee in the matter of the plans for the new buildings, and it is hoped that building may be begun some time in the autumn. An admirable freehold site has been secured on the Bedford Estate, at the corner of Tavistock Place and Little Coram Street, and the Committee speak in their appeal of the kindness of the Duke of Bedford, who has taken much personal trouble and given them every facility. The total cost of the Site, Hall, and Residence is expected to be about £20,000, of which, including Mr. Passmore Edwards's gift of £10,000, £12,000 has been now collected. The new Settlement will stand as it were, on the boundary line between Eastern and Western London. It will look eastwards over Pentonville and Clerkenwell, and will be in close relation to the crowded neighbourhood of King's Cross, Burton Crescent, and Somers Town; while, at the same time, it will be easy of access from the west. It is expected that the new buildings will open with a body of some hundreds of working men and women closely attached to the Settlement by means of the work now being carried on at Marchmont Hall, and the Committee hope to make this body the centre and starting-point of future activities. The religious aim with which University Hall was founded will be carefully maintained. Under the new articles of association the Committee will be bound to devote some of their resources to an improved teaching of the Bible "in the light of modern knowledge and research," and a fresh Lectures Committee, on as broad and representative a basis as possible, is now in process of organisation. The House of Rest Scheme also, in which Sir Edward Burne-Jones has promised cordial co-operation, will provide, when carried out, a shelter for the religious activities of the Settlement, where, however, the general social work will be wholly dissociated—as it has been till now—from any special form of religious propaganda. The new Concert and Lecture Hall will be called the Jowett Hall, in memory of the late Master of Balliol; the Residence will be called Emerson House; and the Library, by Mrs. Green's consent, will be known as the Green Library, in memory of the late Professor T. H. Green.

A NEW National School for Boys, at Great Harwood, has been formally opened by Mrs. Adam Dugdale, of Griffin Lodge, Blackburn. The School has cost close upon £1,800, and will accommodate 250 scholars.

THE EYE HOSPITAL, MANCHESTER.

"THE QUEER SIDE OF THE PROFESSION."

By FRANCIS MILLER, A.R.I.B.A.

A Paper read at the Architectural Association.

WHEN the mandate from your Committee, to read a paper before the Discussion Section, reached me last August, I was in Devonshire—in one of the leafy recesses of that delightful county unknown, at present, to speculators—one of those umbrageous solitudes where it is still possible to stretch oneself on the green turf, and bask in the sunlight at the feet of immemorial elms, with no companion save an ounce of birds-eye and Gwilt's Encyclopædia in thirteen volumes. Secure in the consciousness that if one's eyes should perchance stray from the magic pages that they will not encounter some dire portent of coming evil in the shape of a notice board announcing that this eligible building land is to be sold as a whole or in plots.

I was—if you will—snatching a brief interval of repose from the toils of an arduous profession, or, may be, filling up the time because I hadn't a blessed stroke to do—which ever you like.

Let us, without minutely sub-dividing the subject, cutting it up into stories, as it were—from the basement of fact to the attic of fiction. Let us begin with the solid and substantial statement that there is no "queer side to the Profession," lest these words may act as a species of damp-proof course on your hopes of a discussion. I hasten to say that whilst there is no queer side to the Profession itself, there are undoubtedly many queer sides to some of its Professors.

Why, for instance, should a certain practitioner, who might claim a passable standing as being conversant with matters of dilapidations and compensations, seek rather to shine before an astonished World as a full-blown Professor of Architecture?

Or why should a mild-mannered young gentleman occupying (worthily enough, no doubt), an office stool in Spring Gardens, and having presumably no intimate acquaintance with the myriads of craftsmen here and abroad, past and present, select for his paper such a title as "the inefficiency of the modern workman," and then forthwith proceed to take the Universe under his protection?

A late professor of the mysteries of Ecclesiastical Architecture (who is no longer with us), one who was in his day as a pillar of fire to the select band of mediæval pilgrims journeying through the desert of Modern Construction, once publicly gave thanks for that he had never used a girder!

At a meeting at Conduit Street, when someone hazarded the remark that a knowledge of drainage might, peradventure, prove of use to an architect on his way through life, did not a prominent disciple of the latest new School amongst us lift up his voice in lamentations, and—like Rachel weeping for her children—refuse to be comforted?

And to come nearer to each of us here assembled, once upon a time, did not one of our little band, in the pages of our own "A.A. Notes," turn up his æsthetic nose at such vulgar things as gas and electricity as illuminants, and, after coyly admitting a penchant for oil lamps, confess finally to a yearning for candles—whether plain or coloured did not clearly appear, but it was essential they should be stuck in sconces?

The effect of combining the functions of architect and editor in the same person is also at times productive of strange results. We have lately been treated to the spectacle of the editor of a well known professional journal coming forth from the mysterious obscurity that surrounds all editors and publicly reading a paper on Bridges, or some topic of that kind. Strange to say, the various rival journals preserved a strong silence on the subject, making no mention or report of the event until the editor of one of them, having incautiously offered to print an account of it was at once told by Editor No. 1 that if he did so he would lock him up or put him in Chancery or something of the kind. After this one is not surprised to hear that our President missed his umbrella twice lately.

Further specimens selected from our records

might be exhibited if it were necessary to prove the existence, here and there, of these bumps of queerativeness, as a phrenologist might call them.

These abnormal incrustations, however—these accretions or moral protuberances—whilst sufficiently remarkable in the individual become yet more so when the individual is merged in the corporate body! The effect then produced is somewhat in the nature of a kaleidoscope, and like as each tiny bit of dull glass, which would else have passed unnoticed then becomes, when duly confined within circumscribed limits, and under the hands of a skilful operator, a potent unit in producing the most extraordinary combinations, so does the average man, when mixed with his fellows and duly shaken up, become a marvel to himself and a puzzle to beholders.

There still exists, I believe, in connection with Architecture, a custom of bestowing annually a crown of gold or golden medal, I forget which. This bestowal, unlike the Paris Rosière, which is for the reward of virtue (a somewhat scarce commodity perhaps in Paris), is an institution for the recognition of Architectural merit. That, at least, was the intention of the pious founder, and the onerous duty of adjudicating upon the many and varied claims to the possession of this important qualification is left to the Council of the senior Architectural body. The method of selection adopted for the most part by these portly and rotund descendants of Inigo-Jones possesses at least the merit of simplicity, inasmuch as they gravely present this valued trophy to each other in turns; calmly ignoring the existence of men who have done something at least to advance the cause of genuine Art. Such indifference to all outside the conventional ring is ludicrous, if you will, but approaches the sublime in its lofty effrontery.

It is this failure to see any merit or ability outside a limited circle, this exclusiveness of feeling that perhaps accounts for the existence throughout the kingdom of so many independent bodies as there are; almost every large town having its own local Architectural Society or Association, each cut off from the other in proud isolation. Thus, whilst the doctors, the lawyers, the engineers, and the surveyors, are each severally governed by practically one central body exercising a control over the whole profession, architects seem incapable of union, and resemble rather so many Hal's o' th' Argud, each fighting for his own hand.

It is now, I understand, becoming the custom for the large upholstering and drapery firms to keep "an Architect" on the premises.

It is also a mere commonplace that most of the large estate agents and auctioneers have what they are pleased to term an Architectural department. The Army and Navy and Civil Service Stores also undertake to supply their clients.

A friend of mine—a clever able man and an Associate of the Institute—had amongst his clients a banker, who thought of erecting for himself a small country house. An appointment was made at which the proposed building was discussed, finally the matter was adjourned for a few days to allow of my friend putting his ideas somewhat into shape. The banker's wife at the conclusion of the interview, saying very innocently and cordially, "Well, good-bye Mr. So-and-So, we shall see you on Monday then, and you will bring your book of patterns with you."

When this is the estimation in which Architecture and Architects are held by the average ratepayers, it is a matter of small wonder that the Press, both daily and weekly, plain and pictorial, with few exceptions, practically ignore the very existence of the Art and its professors both, in proof of which one has only to turn to the average account of the opening of any public building to find that whilst full particulars of everything appealing to the commercial instinct is given, such as the cost of the site and the building, whether the latter is heated by hot water or lighted by electricity on somebody's patent principle, or that the chaste and elegant furniture was supplied by an eminent Tottenham Court Road politician, no allusion is ever made to the artistic aspect of the structure good, bad, or indifferent. That whilst the speeches and names of the Committee or the ornamental persons specially deputed to declare

the building open are given in full, that of the designer of the edifice to do honour to which they are all met, is seldom or never mentioned.

At the opening of the Imperial Institute there was, as everyone knows, a grand ceremony, and, with a careful eye to spectacular effect, an imposing procession was arranged comprising all sorts and conditions of persons connected with the affair. The position of each in the show being governed by his relative importance. And where did the Architect appear? Nearly last, walking between the Clerk of Works and an Under-Secretary, coming in at the tail end of the usual string of trumpery German Princes, Serene Transparencies, Military Officers and titled Committeemen.

It has always been a cause of personal wonder and regret to many of us that Mr. Colcutt did not better consult his own dignity and that of his profession by remaining at home, rather than consent to occupy such a subordinate position.

Sir John Millais, at the late Royal Academy Banquet, remarked that no one could contemplate without a shudder the prospect of a new public building being erected by the Government. This is scarcely to be wondered at when one remembers that, for a long period, it was the custom to place as much as possible of this kind of work in the hands of military officers or departmental officials.

However, we must take the World as we find it and do the best we can with it. For most of us the chief of the seven lamps of Architecture is the lamp of getting a living, and very curious are the devices sometimes resorted to in order to keep this particular lamp trimmed and burning. I knew one man who by day was a "ghost" to a well-known architect, but who wisely devoted his evenings to the cares and emoluments of a suburban boot shop, which he carried on by the aid of his wife. Another worthy old gentleman, now dead, was a district surveyor, with which calling he combined the functions of a bill discounter and money lender on notes of hand. Some men design for the furniture shops, others, with a greater love for the open air, speculate in land; the real wonder being how all contrive to exist. Indeed, when one considers the shoals of aspirants constantly pouring into the Profession, and casts a glance, when walking abroad, on the great and constantly increasing number of brass plates adorned with the magic word "Architect" that grace the door-posts in all directions, one is tempted to wonder what the end will be; whether the members of the Profession will adopt some process of decimation—the selected victims being given the run of the jobs and allowed to fatten on wealthy clients for say a month, and then led forth to slaughter, amid rejoicings to the sound of shawm and trumpet—or whether some arrangement will be mutually arrived at, akin to that which is understood to be in force among the keepers of the endless restaurants of Paris, in virtue of which each dines at the other's café in turn; and thus trade circulates and all flourish.

The real truth is that the Profession has for some years past been getting too respectable. Schemes of education, examinations, certificates, diplomas, public assertions of the high and lofty nature of an architect craft have at length done their full work, and fathers of families have at length awoke to the fact that our's is a genteel occupation, one which it is occasionally possible to make money and get knighted, and as more cannot be hoped for even by a City Alderman, the result is that numbers of youths who would in the ordinary course of things have gone into a City counting-house, have been duly articulated to some premium-hunter, to be turned loose later on to shift for themselves and swell the ranks of the Unemployed.

Probably you will expect me not to conclude these disjointed remarks without a moral of some sort. I freely confess that I am not good at morals. But don't worry yourselves as to whether our's is an Art or a Profession. The great men who reared the fabrics of which to-day the whole World is proud would have stared if you had asked them such a question. Do the best that lies in your power, every good piece of work will bring its own joy and reward with it, and remember that if you cannot always design with beauty you can always build in Truth.

NEW PUBLIC HOSPITAL AT SHEFFIELD.

THE OUT-PATIENTS' WING.

THE new Wing of the Sheffield Public Hospital, opened by the Duke and Duchess of York, has a terraced elevation of 173 feet by 52 feet, and is English Renaissance in style, with an external appearance as graceful as the internal arrangements are scientifically complete and sanitarily effective. The plan of the proposed new building, of which the Out-patients' Wing has just been completed, is in the form of the letter E. The block which is the Out-patients' Wing, constitutes about one-third of the whole building scheme; the Administrative Department will be entered by a spacious Hall, and here also will be the Main Staircase, the room in which the meetings of the Board will be held, the Secretary's Office, Porter's Residence, Matron's Office, and other accommodation. The other Wards will be divided by spacious Courts, and opposite them, but separated by an extensive Courtyard nearly 200 feet in length, is the site for the Home, which is to accommodate between 40 and 50 nurses. The Out-patients' Wing has a fine entrance up a flight of gently sloping steps, laid at such an angle that the bearers of the ambulance may enter with the least possible exertion. Columns of Derbyshire marble, capped with alabaster, flank the entrance to the Corridor which immediately faces the Main Entrance from the street, and goes direct to the room, a few yards distant, where casualties are to be treated and small operations performed. The science of Hospital building has been described as a place that can be easily washed and cleansed, and the architect has elaborated on this idea in designing this Casualty Room. It is octagonal in shape, well lighted from the ceiling, and lined with a particularly hard marble which will reflect light. This marble is of a kind extensively used in the construction of Italian Buildings. In addition to being used to line the internal walls, the tables and basins for operating purposes will be made of it, and as there is nothing to spoil, the Casualty Room and a small Retiring Room for private examinations, which lead out of it, may be thoroughly cleansed. Should a very serious accident case be brought in, there is an apartment near the Casualty Room which has been expressly designed for the reception of this class of injuries. It is entered through wide doors, and will contain everything necessary for the purpose for which it is set apart. The Waiting Rooms are near the entrance, women to the left, men to the right, and with their comfortable seats and warm, well-ventilated atmosphere, they will be an immense improvement upon the inconvenient and crowded Hall used for a similar purpose in the old block. From these rooms patients will pass in rotation into the Consulting Room of the physician or the surgeon. Leading out of the Consulting Rooms are small rooms in which patients may be examined privately, and there is also a Dark Room for the benefit of those suffering from ophthalmia. This spacious Hall, which is near the principal entrance, has seating accommodation for 150 patients. Electricity will be called into use in the new building to a greater extent than hitherto, and a room which has been specially provided for the treatment of patients, is to contain electric batteries and other appliances. It is near the rooms which constitute the Dental Department. These rooms, like all the rooms in this extension, open out of the Main Corridor, nine feet wide, which runs a length of 173 feet, and constitutes a great fresh-air lung. In building the Wing there has not been much opportunity for artistic treatment, but the architect has carefully studied points of more importance. The building has a groined dome ceiling, whose graceful lines and bright appearance give pleasure to the eye. The floor is of *terazo*, a kind of marble mosaic, with very durable qualities, and which has the additional advantage of being kept clean with a minimum of trouble. The same principle is developed in the Architecture of the large Wards on the floors above. Between each of the eighteen beds the Wards will respectively contain, is a large window opening into the Court. These

windows are of the *louvered* pattern, which allows each sash to be reversed, so that they can be cleaned from the inside, without the servant resorting to the dangerous practice of sitting on the outside ledge. The private rooms of the resident medical staff are in the Corridor near the Centre Ward. These rooms looking out into the street are separated from the Sick Wards by a Grand Corridor of communication, and at each end of this broad, handsome way there are emergency staircases, which, like the ceilings, are composed of a peculiar kind of fire-proof concrete, laid on steel girders, and covered with polished teak blocks, whose hardness is proverbial. The same kind of material has been used in the construction of the floors of the upstairs rooms. The Wards are heated by low pressure hot-water pipes and warm-air stoves, and slow combustion stoves. The Principal Fronts of the building are faced with thin Skiers' spring bricks, which are hard and impervious to moisture, and oolitic stone from Weldon, Northamptonshire. This stone is easily worked, but acquires hardness by exposure to the atmosphere, and consequent durability. The elevations to the Courts are of local bricks from Robinson's yard in the Park, and stone is sparingly used. The Basement story is executed in Stand Hills' daystone, which from long exposure, has acquired the hardness of granite. The late Mr. Bernard Wake made a gift of this stone to the Hospital Board, having some twelve months before his death had a sample prepared. The floors are constructed with Siemens-Martin steel girders, embedded in cement concrete, and the flat roofs are covered with mineral asphalt. The new Hospital when complete will have cost £50,000. Mr. Charles Hadfield is the architect.

THE CARDIFF DISPUTE.

MR. SEWARD AND THE ARCHITECTS' SOCIETY.

A LITTLE while ago, a most regrettable dispute arose in professional circles in Cardiff. It will be remembered that the Cardiff, South Wales and Monmouthshire Architects' Society objected to the application of Mr. Edwin Seward, F.R.I.B.A., as Architect for the proposed new Museum and Art Gallery to be built by the Corporation. The Society's point was that there ought to be a competition. Mr. Seward defended himself vigorously, and the "affair" created an unpleasant sense of friction all round. On Tuesday last, at a meeting of the Museum Building Committee, Councillor Beavan, the chairman, announced that a site for the proposed new Museum and Art Gallery had been selected, and the Committee now had to pass to a consideration of the building itself. A ground plan had been drawn up, showing the requirements in the matter of rooms for the Museum. It must be borne in mind that the Committee had only the sum of £12,000 to spend on the edifice, as, out of the £16,000 allowed for the Museum, £4,000 had already been spent in gaining possession of the site in Park Place. The meeting then discussed the question of architect for the building, but, before doing so, Mr. Edwin Seward stated that he thought it advisable, as he, as the Committee knew, was professionally interested in the matter, that he should withdraw from the meeting. The Chairman thought that it would be better if Mr. Seward would remain, at any rate while the clerk read certain correspondence on the subject. A memorial was then read from the South Wales and Monmouthshire Architects' Society asking the Committee that, unless they had pledged themselves to any architect the Committee should invite a public competition for the post of architect, which should be under the rules of the Royal Institute of British Architects. A letter was also read from Mr. David Jenkins stating that, although his name had been subscribed to the above memorial, he had never given his consent to the use of his name in the matter, and he opposed in the strongest terms the submittal of the memorial to the Committee. A letter on the subject from Mr. Seward himself was further read, in which he explained his position in the matter. He stated that he had for some time past acted as architect for the Museum, which was at the present time part of the Free Library. Acting in this capacity, he

had prepared plans for which he had received no remuneration, and he thus felt that he must claim either remuneration for his professional assistance in this respect or to be engaged as architect for the new building. Mr. Seward then retired, and the Mayor (Alderman P. W. Carey) said that, although Mr. Seward might not have a legal, he had a moral claim upon them, and moved that he be engaged as architect to the new building. The resolution was carried unanimously. It was also agreed to return an answer to the memorial of the South Wales Architects' Society saying that the Committee could not accede to the request contained therein, as it felt itself pledged to Mr. Seward. Mr. Seward was then recalled, and informed of the decision of the meeting. He, on the request of the Committee, consented to withdraw all allegations of claim for past services. It was also resolved that the architect be at once requested to take the plans prepared by Mr. Ward as a basis upon which to act, and that he set at once about the means for carrying out the plans.

SAWDUST.

THE Town Council of Leicester propose to borrow sums, amounting in all to £29,550, for public works and improvements in the Borough.

The foundation stones of a new Wesleyan Mission Hall have been laid at Greengates, Bradford. The Hall is to cost about £500.

FOR the erection of a new School at Meledor, St. Stephen's-in-Bramwell School Board, the tenders of Mr. Gilbert for masonry, and Messrs. Curra, Walters & Richards for carpentry, have been accepted.

THE biggest contract for stonework ever awarded was probably that reported to have been made for the stone for the Hudson River Bridge. The sum named is above £1,600,000.

CLEVELAND is to have the first Elevated Bridge worked by electricity and compressed air. The Bridge will be poised on huge stone piers, and give a clear channel over the river of 115 ft.

THE Keighley Town Council has declined to approve the plans of the Sanitary Committee for buildings to be erected at Low Bridge at a cost of £700. The Council, however, agreed to apply for power to borrow £6,250 for Artisans' Dwellings.

THE repairs and pointing to the Sheffield Parish Church and Spire, which has been done by Messrs. B. Powell and Son, contractors, Cavendish Street, Sheffield, are now completed. The work has been carried on under the superintendence of Messrs. Flockton and Gibbs, architects, St. James' Row, Sheffield.

THE Guardians have decided to ask Mr. Sampson Hill, their Architect, to prepare plans for the first portion of a new Infirmary to be built at the back of the Redruth Workhouse in accordance with the suggestion of the Local Government Board. The cost of the portion to be erected is estimated at £1,000.

ABOUT six miles of wire cable wound around a drum 8 ft. in diameter was carted through the streets of New York one day last week. The wire weighed 63 tons, and the truck that carried it 14 tons more. It required 42 horses to draw the load, said to be the heaviest ever carried through the City's streets.

THE Hanging Committee is busily engaged this week making the necessary arrangements for opening the Exhibition at Plas Mawr, Conway, on the 1st of June. Monday and Tuesday were the receiving days. A Gallery is to be constructed in the Courtyard of the old Mansion for the accommodation of additional pictures, and this, it is expected, will be completed by the middle of summer.

WE are informed that Mr. Arthur Baker, F.R.I.B.A., of the firm of Messrs. Baker and Turrill, of Effingham House, Arundel Street, Strand, and Mr. Richard P. Day, A.R.I.B.A., of 20, John Street, Adelphi, have been appointed surveyors of dilapidations in and for the Diocese of London in accordance with the Ecclesiastical Dilapidations Act of 1871, to fill the vacancy caused by the recent death of Mr. Gordon M. Hills, who held the appointment as sole surveyor for the Diocese since 1871.

THE "KEY METHOD" OF VENTILATING HOSPITALS.

AN INSTALLATION AT BIRMINGHAM.

THE arrangements for the ventilation of the New General Hospital, Birmingham, having been attacked, the *Lancet* has made an inspection, and the current number contains a special report upon what is known as the Key method of ventilation—the system introduced. "We cannot do better," says the *Lancet*, "than take as an example the New General Hospital, now in course of erection in Birmingham, which, by the courtesy of the architect, Mr. William Henman, we have recently had an opportunity of inspecting. Let it be understood that in doing so we are not dealing with a system that has merely been projected, but with one that has already been carried into practice in several infirmaries and other buildings, Schools, Police Courts, and the like, and which has actually been provided for in the plans of one of our great Hospitals. The building operations, indeed, at the New General Hospital, Birmingham, are so far advanced as to afford a clear idea and plan of the installation which is to effect the ventilation adopted by the Hospital." The article then briefly reviews the systems of ventilation which are available, and points out broadly the advantages of the propulsion system. The method of its application and the installation at the New General Hospital, Birmingham, are then described. The method of ventilation is primarily due to Mr. William Key, an engineer of Glasgow. "In applying the Key system to a Hospital, a selection is first made of a position, uncontaminated by surroundings (or of more than one such position if the buildings are extensive), where air can be drawn in towards an extended screen, kept moistened with water, and periodically flushed to free it from the large amount of dirt which it intercepts. The screen is formed of a series of cocoanut-fibre cords stretched vertically, and interlaced with copper wire to keep them in position. On the outer side a coil of steam or hot-water pipes is placed to prevent freezing in the winter, and on the inside are other heating coils, arranged so that by means of doors or louvres the air passing through or under them may be regulated. It is then forced onward by means of a rotary fan or air propeller, set in motion by steam, water, gas, or other power—preferably an electric motor—and finds its way to the several rooms, wards, or corridors by means of a wide and lofty horizontal duct and up flues, all calculated to the required areas, at the base of which are more heating coils, together with a simple contrivance by which both the volume and temperature of the air supply to any separate part of the buildings can be adjusted to a nicety. The air enters where required by means of trumpet-mouthed openings, at about two-thirds the height of the storey, so as to disperse evenly throughout the apartment; and at the same time it expels an equal amount of air, principally through openings provided on the same side of the room as the inlets, up flues of the proper sectional area, into ducts in the roof, and thence to the open, through valved and louvred turrets or flaps, four-sided, so that outer movement of the atmosphere shall exert no adverse influence upon the outflow. These outlet air-valves are so constructed as to place the air within the building under a slight pressure of about four ounces per square foot in excess of the outside atmospheric pressure at the time. In the new General Hospital at Birmingham an installation has been provided for heating and ventilating the buildings, the cubical capacity of which equals about two million feet; so that, as the air may be changed ten times per hour without opening any windows, twenty million feet of air every hour has to be propelled, cleansed, and warmed; for which purpose there will be eight 'fans,' from six to eight feet diameter, to be turned by electric motors, 2,000 superficial feet of cleansing screen, and about 35,000 feet of steam tubing. The results may be summed up as follows:—

- (1) Micro-organisms are entrapped by passing air through moistened screens.
- (2) The apparatus employed in the experiments in which dust loaded with organisms was forced through an experimental screen into a wooden

chamber, from which samples of the air were taken from time to time for bacteriological analysis, gave in all probability less perfect results than would occur in practice, because in these experiments the air, highly charged with micro-organisms, was both forced directly through the screens and also by force drawn through them, whereas in buildings the air would be propelled gently through the screens simply by the slight pressure of the incoming air, no suctional force whatever being employed.

- (3) The very marked diminution in the number of micro-organisms which passed through the screens when supported by means of perforated zinc, and the smaller number still which pass through a thin layer of cotton-wool, indicate varying powers of filtration, and point to the possibility of devising a screen which will practically free the air from germs and yet not unduly retard the expulsion of the air from the building.
- (4) In proportion to the closeness of texture of the screen material, the size of the screens must be increased so that the air may pass through them with the least possible force being required to expel it.
- (5) The moistened screens are all that is required to arrest the germs, but carbolic acid should be added for destroying them.
- (6) Disease germs or fungi likely to be conveyed by the atmosphere are usually found attached to comparatively large floating particles, as the scales of the epidermis, or fluffy shreds of material which would be entrapped by the screens in greater proportion than the germs experimented with."

TWENTY MILLIONS FOR AN AQUEDUCT.

WE shall certainly have to imitate the Corporations of Glasgow, Birmingham, Liverpool and Manchester, in finding a catchment area and in constructing an aqueduct, says the *Daily Chronicle*, speaking for London. Neither would have presented any difficulty had there been a proper municipal spirit and organisation in the Metropolis when Mr. Bateman proposed his great scheme of bringing water from Wales in 1865. But we have wasted a generation, and our present sources of supply are going from bad to worse. A catchment basin will now cost at least double what it would have cost thirty years ago. We must assume from the fact that Manchester and Birmingham have gone so far afield that the fine water of the Peak district is not available, and practically we seem to be limited to that part of South Wales which lies about Fforest Mawr, or the Black Mountains, where we might poach a little on both the Usk and the Wye. But at any rate, London cannot put up much longer with its "filtered filth," the abandonment of which would greatly improve the navigation of the Lower Thames and purify its waters. Perhaps a supplementary supply might be got from the Surrey, Kent and Sussex border, but it could never be the main dependence of London. We must face the fact that an aqueduct of adequate dimensions, with the catchment area and necessary reservoirs on the Chiltern Hills, would cost £20,000,000, but that sum could now be raised at an annual charge of three per cent., or with a half per cent. sinking fund, at a yearly cost of £700,000. Even if it cost much more we cannot afford to go on as we are. It might, perhaps, be possible to economise by having two supplies, and using Welsh water for potable purposes and Thames or Lea water for flushing and manufacturing. But no paltering with the subject will serve our purpose. The evil is great and the need for a change is urgent. The health and the welfare of our great community require it, and that should be enough both for Londoners and for the Legislature which is so thoroughly identified with London.

THE Exhibition of Watches and Clocks, which opened at the Royal Aquarium on Wednesday, has an artistic as well as horological interest. Among the specimens included are those which belonged to Charles I., Cromwell, James I., Queen Elizabeth, Lady Jane Grey, and others. Most of the best watches and clocks are distinctly indicative of the state of Decorative Design and Art Craftsmanship of their period.

A NEW SCOTCH ASYLUM.

THE new Hartwood Asylum, which has been constructed for the accommodation of lunatics in the Lanark district, was opened last week by Sir Windham Carmichael-Anstruther, convener of the county. The buildings, which occupy an area of about 10 acres, are plainly and substantially built in the old Scottish style, Architectural decoration having been made subsidiary to the grouping of the erections for efficiency and convenience of administration. The Asylum may be generally described as consisting of a number of distinct blocks, each connected with the other merely by an 8-ft. Corridor. This arrangement, while, as already indicated, forbidding structural beauty, practically isolates each block, and thus minimises the risk of an extensive fire, and also secures better lighting of the various departments. The Central Block consists of the Administrative Department. On the ground floor are the Dining Hall, which will accommodate 600 patients besides attendants, and the Kitchen, measuring 60 feet by 40 feet, with Sculleries, &c.; while immediately to the rear is the General Store, into which the railway trucks can be shunted on a siding from Hartwood Station—a few hundred yards off. Above the Dining Hall is the Recreation Room, capable of seating 1,200 persons. To the east and west of the Main Block are respectively the male and female sections of the institution. Each department is subdivided into distinct blocks for the treatment of chronic, acute, and senile patients. Some distance to the east of the Asylum is the Superintendent's House, and to the south of the Edinburgh and Glasgow Railway, which skirts the grounds, are several blocks of Attendants' Cottages. The building material, which had to be conveyed by rail, amounted to about 75,000 tons; and the laying-out of the grounds, including the construction of two Reservoirs of a storage capacity of 8,280,000 gallons for water supply, involved the removal of about 290,000 cubic yards of earth. The buildings are heated throughout by hot water, the pipes for which measure nearly 9½ miles. Electric light is employed for illumination, the lamps numbering 1,260, and having a combined power of 21,984 candles. In drainage and ventilation the most recent and approved ideas have been utilised, and the interior finishings, many of them specially designed, have been selected with a view to comfort and safety. For the protection of the patients, the railway line along the front of the Asylum, and up the western boundary to the lower Reservoir, and round both Reservoirs, has been fenced by a 7 feet high unclimbable iron fence, and besides this there has been erected about 9,000 yards of galvanised iron and wire fencing. Two points which have been kept steadily in view are the avoidance of anything which would suggest to the patients the idea of imprisonment, and the provision of every means of comfort and enjoyment practicable under the circumstances. When patients are admitted they will be introduced gradually to the Asylum life so as to avoid the shock which is so detrimental, and which, it is said, often lingers painfully in the patient's mind long after all the other associations are forgotten.

THE new Telegraph Offices and Porter's Room at the old Hove Station—shortly to be known as Holland Road Station—are now almost complete, and the Telegraph Office will be opened as soon as the wires are connected, which will be in the course of a few days.

THE Hove Urban District Council is desirous of receiving tenders for works of street masonry and jobbing work, and for the supply of ironmongery, gas and water pipes and fittings, etc., for a period of three years. Communications should be addressed to the Town Clerk by June 5th.

ST. GEORGE'S CHURCH, Maryhill, Glasgow, was consecrated on Wednesday last. The Church, which was designed by Mr. Petrie, Glasgow, is Early English in style, and occupies a commanding site on the Garscube estate. It is seated at present for 280. Seven of the windows are filled with stained glass by Kempe, of London, and the fittings are all extremely handsome.

ARCHITECTURAL IRONWORK.

CONCLUDING CHAPTER.—ROOFS ENTIRELY OF IRON.

ROOFS constructed solely of iron combine lightness, strength, durability, and economy. They are framed in a very great variety of forms, the choice of which is dependent partly on the width of the space to be spanned, partly on the fancy of the construction, and partly upon other considerations only to be comprehended by experience and practice. Amongst the roofs which do for principals, **I** beams make very good rafters, and in light trusses **T** bars, with or without a plate, rivetted to the upper flange, answer every purpose. Struts may be made of **T** bars or angle iron, as these forms afford great facilities for attachment to the rafters. Ties may be of flat or round bars, attached by eyes and pins or screw ends. Care should be especially taken to properly proportion the dimensions of eyes and pins to the strains upon them. A very good and safe rule in practice is to make the diameter of the pin from $\frac{3}{16}$ ths to $\frac{1}{4}$ ths of the width of the bar in flat, and $\frac{1}{4}$ times the diameter of the bar in round, giving the eye a sectional area of fifty per cent. in excess of that of the bar. The thickness of flat bars should be at least one-fourth that of the width, in order to secure good bearing surface, and the metal at the eyes should be as thick as the bars on which they are upset. The details of roof trusses vary to suit the character of the work, and the sections of iron employed. The heel or butt of the rafter usually rests on the wall in a cast iron skewback fitted to the beam and sloping to the angle required by the pitch of the roof. The struts are attached to the rafters by cast caps or wrought iron strap plates, and the joints at their feet made either for pin or screw connections. The peak is joined by wrought iron bolts and plates, the beams or rafters having been cut to the required angle. In roofs of wide span, provision for the expansion of the iron, due to changes of temperature, must be made, by resting the skewback of one end of the truss on a cast wall plate, with rollers interposed to permit of the sliding of the heel without straining the wall, but this precaution is not necessary in roofs of 60 feet span or less. Careful experiments have proved that an iron rod 100 feet in length will vary about one-tenth of a foot for a change of temperature of 150 degrees Fahrenheit, and as this is the greatest range to which iron beams and rods in a building would be probably subjected to in this climate, compensation to that amount would be sufficient for all purposes. For a 60 feet span the variation of each wall would then be only $\frac{1}{1000}$ of a foot either way from the perpendicular, a variation so small and so gradually attained that there is no danger in imposing it upon the side walls by firmly fastening to them each heel of the rafters. Expansion is also provided against by fastening down one heel with wall bolts, and allowing the other to slide to and fro on the wall plates, without rollers.

Coming now to the strains, in estimating these in iron roofs the weight of the structure itself, as well as the loads to be supported, must be taken into account. Tredgold's assumption of the total maximum vertical load of 40 lbs. per square foot of horizontal surface is usually considered sufficiently high; but if a floor or ceiling be suspended from the tie beam, or should the under side of the rafters be banded or lathed and plastered, it is evident that these additional weights require more strength in the roof for their support.

For ordinary roofs of short span, 30 lbs. per square foot is quite enough, however, and for long spans of 60 feet and over, 35 lbs. will be sufficient to provide for, with the factors of safety in the material that are usually adopted. The stress upon each member of the truss having been found by any of the methods of calculation preferred, the sectional areas may be found by taking the tensile strength of good wrought-iron at 10,000 lbs. per square inch, and the compressive resistance of beams or shaped iron at from 6,000 lbs. to 8,000 lbs. for the same unit of section. The smaller, or counter-balance rods, ought to be made strong enough to resist strains induced by wind pressure on one side of the roof only—the

other half being unloaded. Lateral braces should be provided in each end panel of straight roofs, as well to secure the roof during erection as to provide an abutment that will uphold the whole in case of fire or accident. From the panels so braced, the rods run to each of the other rafters, and, with the purlins, unite the roof into a firm and compact whole. The gable walls are sometimes employed to anchor the tie rods into, but this plan should be avoided.

Main rafters may be spaced at from four feet to twenty feet apart, the spacing being partially regulated by the size of the purlin, and this again by the material used for covering. For slate on iron purlins a convenient spacing is about eight feet between centres of rafters, the angle iron purlins being put in at from seven inches to 14 inches apart, according to the size of the slate employed, and notched at the ends into the flanges of the rafters. They are held in place by the rods that extend from rafter to rafter the entire length of the building, three or four rows of these rods being placed between the peak or ridge of the roof and the heel of the rafter, at intervals of from six feet to eight feet. On these iron purlins the slates may be laid directly and held down by copper or lead nails, clinched around the angle bar. When greater intervals are adopted in spacing rafters, the purlins may be light beams, fastened on top or against the sides of the principals with brackets—allowance, of course, always being made for longitudinal expansion of the iron from changes of temperature. On these purlins may be fastened wooden jack rafters, carrying the sheathing bonds or laths on which the metallic or slate covering is laid in the usual manner, or sheets of galvanised corrugated iron may be fastened from purlin to purlin, and thus the whole roof be entirely composed of metal. When wooden purlins are employed, they may be put between the rafters, and held in place by tie rods, or on top, and fastened to the rafter by brackets.

With this my remarks on Architectural Ironwork may terminate, as I do not think that the construction of sheet iron buildings, which are usually only of a temporary character, or the employment of the many sanitary and decorative details, which would extend in this last case from a railing at the basement to a finial at the summit of a tower weathervane, come within the scope of these articles.

DOORWAYS OF ANCIENT IRISH CHURCHES.

THE most usual form of doorway, and, as it would appear, the most ancient, is the quadrangular one as found in the stone roofed Oratories in Kerry, built without cement, and of which the doorway of the Oratory of Gallerus affords the finest example. This form was perpetuated in the Churches said to have been founded by St. Patrick and his immediate successors. In this class of doorway no ornament whatever is used, and this was the usual mode of construction in the sixth and seventh centuries, and perhaps even later; but the doorways were not always plain in those ages, for in many instances they present a flat projecting architrave, as in the doorways of the oldest Greek and Etruscan buildings, as well as in those earliest Roman Churches. The doorway of the Church at Glendalough, popularly called Our Lady's Church, is, however, carved with a double moulding in the architrave, and it is also ornamented with a cross cut saltierwise. This Church, according to the tradition of the place, was the first Church erected in the lower part of the valley by St. Kevin, and is that in which he was afterwards interred, so that its erection may be fairly referred to the middle of the sixth century. Though the quadrangular form is that most characteristic of the doorways of the primitive Irish Churches, there are examples of doorways which would seem to be of the contemporaneous age, constructed in what may be called the Roman manner—namely, with a semi-circular arch springing from square impost, and exactly resembling the ancient Saxon doorways, excepting that the sides are usually more or less inclined. There is another form of doorway found in the earliest of our Churches, also of quadrangular form, but in which the

weight of the lintel is taken off by a semi-circular arch placed immediately above it, and having the place within the curve filled up with masonry. A doorway of this description is found in the Cathedral Church of Glendalough, and also in the same curious structure, in the same interesting locality, called St. Kevin's House. It is also found as a side entrance in the beautiful Abbey Church of Innishmaan, in Lough Mask, County of Mayo, originally built in the fifth century by St. Cormac, and remodelled and enlarged in the twelfth. The finest specimen, however, of this class of doorway is probably that of the ancient Parish Church of Britway, in the barony of Barrymore, County of Cork, one of the most interesting remains in the County.

SANITARY PROPORTIONS OF ROOMS.

FOR purposes of ventilation the height must bear some relation to the size. Adequate movements in the currents of air cannot be secured in a room unless the height be proportioned to the width and length. The minimum height must be fixed with reference to that which will allow the currents of air to circulate without being inconvenient to the occupants. Therefore, in proportion as the width and length of a room are increased so must the height be increased. On this account it is not advisable to make rooms much less than 10 feet high. With large rooms, as the height should be increased in proportion to the size, if the cubic space be the measure of the number of occupants, the area or floor space per occupant would diminish with the size of the room. As, therefore, the height of rooms is necessarily variable, it follows that it is rather the floor space which must be considered in allotting accommodation to the occupants of a room than the cubic space. In Barracks a floor space of some 50 to 60, and occasionally 80 square feet is allowed per occupant. These are for rooms occupied by day as well as for sleeping rooms. In Workhouses for dormitories a minimum floor space of 25 square feet has been admitted, provided the ventilation was carefully attended to. In Nurseries and Servants' Rooms from 50 to 60 square feet is desirable per occupant—that is to say, a room 10 feet square, or 10 feet by 12 feet in area, should not contain more than two persons. In Schoolrooms which are only occupied during parts of the day, and where the air can be changed between the periods of occupation, a less amount would suffice, and from 15 to 20 square feet is sufficient.

SAWDUST.

THE well-known handsome drinking fountain standing in Adelaide Place, close to London Bridge, which cost over £1,500, has been given by the Metropolitan Drinking Fountain and Cattle Trough Association to the St. Olave's Board of Works, and will probably be placed on or near the Tower Bridge Approach. The cost of removal will be about £250.

THE Bolton builders have advanced their employes wages from 8½d. to 9d. per hour, and reduced the working hours from 52 per week to 49½ in winter, and 47 in summer.

THE Amsterdam Exhibition was opened on Saturday, May 11th, the buildings and grounds covering over 160,000 square metres. It comprises exhibits connected with the building and furnishing of hotels and cafés, the construction and equipment of railways and ships, the latest electric inventions, and general industries. One of the features is an Electric Restaurant, where the services of waiters are dispensed with, and the guests are served by electric contrivances, while another attraction is a reproduction of Old Holland.

It is proposed to rebuild the dangerous portion of the Spire of St. Mary's Church, Devonport.

MRS. WELLER POLEY, of West Broyle House, has signified her intention of presenting a magnificent organ to East Lavant Church; and an Organ Chamber in keeping with the Architecture of the sacred building is to be constructed on the north side of the Chancel. The Organ will be built under the supervision of Mr. F. J. Read, Mus.Doc., organist of Chichester Cathedral.

Trade and Commerce.

An Important Decision under the London Building Act.—An important decision was given by Mr. Horace Smith, at the Clerkenwell Police Court, with especial reference to Sec. 212 of the new London Building Act, in the case of *Matthews v. Salt*. The defendant, a builder, who was erecting a beerhouse in Collier Street, Pentonville (for Messrs. Whitbread, the brewers), was summoned by the Complainant, the Acting District Surveyor of Clerkenwell (during Mr. Carritt's absence from ill health), for not separating by a fire-resisting floor the part of the premises used for trade from the part used as a dwelling-house, the total area of the building exceeding ten squares. The builder's notice was dated the 23rd January, 1895, and the buildings were commenced about the end of February. It appeared that some letters passed between the freeholder's Agent and Messrs. Whitbread in April and May, 1894, by which the latter agreed to take the premises from the freeholder and to build a new house thereon, and that the terms of these letters were embodied in a more ample, formal contract of the 10th September, 1894. The drawings for the new house were as required by Clause 4 of the formal contract, approved by the freeholder's surveyor about the end of October, and the formal consent given to them on the 1st November, 1894. When the drawings were submitted to the District Surveyor, he called the attention of Messrs. Whitbread's architect to the requirements of Section 74 of the Act as to the construction of the building in certain particulars of fire-resisting materials, and served the builder with notice of objection under Sec. 150, on which the builder took no steps, as he contended that the contract for this building was entered into before the passing of this Act, and that, therefore, he came within Sec. 212, and the new building would be erected in compliance with the old law. The builder having proceeded to erect his building and having laid fir joists for the floor, forming the separation of the first storey (which consisted of the living and sleeping rooms for the occupier) from the ground floor, notice of irregularity was on the 4th April served on him by the District Surveyor under Sec. 151, and a summons issued on the notice not being complied with. On behalf of the builder it was argued by Mr. J. P. Grain, who appeared with Mr. Sydney Knox for the Defendant, that the contract under which the house was being built dated from the 16th April last year, when Messrs. Whitbread purchased the lease from the tenant of the premises. He said they then applied to the surveyor to the freeholder for a building lease, and on the 31st May they received a letter containing the terms on which a new lease would be granted. These were accepted by them except as to the amount to be expended in re-building which was afterwards agreed. The formal contract was signed on the 10th September, 1894, and the drawings were submitted on the 5th October to the freeholder, and afterwards signed. Mr. Grain contended that the letters between the parties dated 31st May and 5th June, constituted a good contract, and could have been legally enforced. He also argued that if the Magistrate was against him on this point that he submitted that a public-house did not come under Sec. 74, and that to build a wall around the bar-parlour, which was part of the domestic building and shut it off from the bar, would make it absolutely useless, and further, that notwithstanding the Defendant had not appealed to the Magistrate under Sec. 150 to set aside the requirements of the District Surveyor, that it was still open to the Magistrate to decide what should be done. Mr. T. Seager Berry, from the office of the Solicitor to the London County Council, pointed out that as the passages and staircase had not yet been constructed, and that consequently no irregularity had been committed, the summons was simply for making the floor fire-resisting. The Magistrate, without calling on Mr. Berry, stated that although he agreed that the arrangement came to in the letters of the 31st May and 5th June, was a binding contract between the owner and tenant, he did not consider such a contract was a contract as meant by Sec. 212. Contract in that section in his view meant a contract to make a particular building, and not a contract to purchase or take land on which a building is to be erected. He did not think that in this case a proper contract to satisfy that section had been made till the document of the 10th September, 1894, was signed, and the plans mentioned therein drawn. He was against Mr. Grain on Sec. 74; he thought the Section applied to a public-house which did not come within the Section referring to hotels and public buildings, and it seemed to him that a public-house must be held to be a building used in part for the purposes of trade. He, therefore, ordered that the whole of the floor under the dwelling rooms should be made of fire-resisting materials.

Robert Adams' Manufactures.—At a recent visit we paid to Mr. Robert Adams' works, 67, Newington Causeway, our representative was much interested in the new Impervious Casements and Frames, the invention of Mr. Arthur W. Adams. The casement is made with four contact or weather stopping surfaces, which are perfectly true to the frame, making it, as it is termed, impervious to the weather and perfectly rigid. There is also a condensation channel which effectually drains off any water that may accumulate. The casements are made single or double, and in all shapes, to suit the requirements of customers. Amongst the many specialities introduced by Mr. Adams, that for opening fanlights, the "Falling Link Adjuster," which consists of a rack chain working on a wheel with an endless cord, is worthy of the attention of architects. This adjustment is worked by pulling a cord which causes the wheel to revolve and traverse the rack. The same principle is also adopted in a circular fanlight, called the "Glade," which is very neat and effective. Mr. Adams is Sole Agent in the United Kingdom for the "Pullman" Steel Frame Sash Balance, which does away with cords and weights, and can be used where there is not room for the ordinary weights. These are guaranteed to last fifteen years. Another speciality is the X. I.T. and Exodux Panic Preventing Bolt for Theatres, &c. The doors are automatically bolted by closing, and can only be opened from the outside by a key, but are immediately opened from the inside by pushing against the rod. At some future occasion we hope to have the space and opportunity of describing some of Mr. Adams' other excellent patents.

Mr. Thomas Elsley, of Great Portland Street, London, W., is issuing a series of Photographs of his Mantelpieces, of which we shall give an illustration shortly. In execution and design these Mantelpieces are as good as anything we have seen.

The Patent "Push and Pull" Locks, manufactured by Messrs. Joseph Kaye & Sons, of 93, High Holborn, London, W.C., must, by this time, be well known to every architect, but they are so continually improving them, and adapting them for fresh uses, that we give a brief description of the advantages they offer. The name describes their action. The door is opened from the inside or outside by pushing or pulling the handle. It immediately releases the bolt and the door opens or shuts. Although the action is so simple, it is perfectly fast when closed. The locks are suitable for every case in which the ordinary lock is used. In connection with their new Patent Lever Lock, they have introduced a great improvement in the striking plate, which compensates for all shrinkage of doors with only $\frac{1}{4}$ -in. projection of latch. This is effected by an adjustable roller, which can be projected to the desired extent by turning a screw. The firm's Patent Automatic Door Porters are for holding doors in the open position when desired. In the old door catch, it was necessary to press it down with the foot before the door could be released, causing the door, through kicking against it, to be spoilt, at any rate as regards its appearance. Messrs. Kaye's Patent obviates this, as the door is fastened back or released by the action of opening and gently pulling it for closing. We have not space this week to describe their Panic Door Bolts, or Stable Door Locks, and Carriage Handles, and several other of this Firm's specialities, but may do so on a future occasion.

Messrs. Doulton & Co.—Catalogue of Sanitary Appliances.—Messrs. Doulton send us the 1895 Edition of this the 38th Section of their Catalogue, and in it we gather that they have erected additional Works and Foundries at Paisley, so that in conjunction with their various Potteries and Art Studios, in Lambeth and Staffordshire, they have under their own control the whole of the manufacture and finish of the different fittings connected with every Sanitary Appliance turned out by the firm. Since the issue of the 1890 Catalogue, many important additions have been made, the most important of which, perhaps, is the "Simplicitas" Closet, and the METALLO-KERAMIC joint which solves, so Messrs. Doulton inform us, the hitherto insurmountable difficulty of ensuring a perfect junction between the pottery trap of closet and the lead soil pipe. By a patented process—which, from the neat little model sent to us, we are unable at present to solve—there is a thorough incorporation of the two materials, rendering ingress of sewer-gas to the house quite impossible. This joint, which is quite startling in its effectiveness, puzzles us at the moment, but perhaps Messrs. Doulton will think fit to let us into the secret. The Catalogue itself consists of 300 pages illustrative of all the Sanitary Appliances manufactured by this notorious firm, and as every item is priced in "plain figures," the volume forms an indispensable reference in every Architect's office. Several of the pages devoted to Glazed and Enamelled Tiles for Wall Linings, are quite wonderful specimens of colour printing.

"Quantities," by Banister Fletcher.—The most perfect work on the ethics of Quantity Surveying, if so dry but so useful a science has any ethics, is assuredly the 1895 Edition of Professor Banister Fletcher's work, a copy of which is forwarded to us by Mr. Batsford, the publisher. The book now runs to 430 pages, is profusely illustrated in all the trades and contains a complete set of drawings of an Entrance Lodge to illustrate (a) the complete taking off in all trades; (b) the abstracting of the various items in the various trades; and (c) the complete bill. A most complete Index and Table of Contents is included in the volume, which should be found on the bookshelves of every Architect and Surveyor in the Kingdom.

THE re-opening of the Chapter House of Durham Cathedral (Bishop Lightfoot Memorial) has been postponed for twelvemonths.

OUT of seventeen designs submitted for the erection of a new Church in Cambridge Road, Southport, those of Messrs. Preston and Vaughan, of Manchester, have been selected.

A HANDSOME Hall and Institute, costing £16,000, for mission and social work, at East Greenwich, have been built and presented by Mr. Josiah Vavasour, of Blackheath, to the Blackheath Congregational Church.

NEW buildings are about to be erected in Upper Bangor, in connection with the Bangor County School for Girls. The buildings, which are to cost about £2,000, will include a Gymnasium and facilities for technical instruction.

THE Bacup Town Council has decided to accept the plans and tenders of proposed new Municipal Buildings at Hempsteads, to cost £13,241, and that application be made to the Local Government Board for sanction to borrow £14,000 for such purpose. Mr. Beaumont, of Manchester, is the architect.

ST. PAUL'S CHURCH, Widnes, near Warrington, is about to undergo several important alterations and improvements, amongst which will be the provision of a new organ. To provide a chamber for the instrument it is probable that the lower portion of a new Tower, which has been in contemplation, will have to be built. The cost of the work will be about £700.

OF the competitive designs received for the proposed new County buildings, Durham, the first premium of £200 has been awarded to "Onward," and the second, £100, to "Demos." The successful competitors were Messrs. Cooksey and Cox, Craven Street, Charing Cross, London, first; and Messrs. Vaughan and Coates, Sunderland, second.

Awards in our Second Competition.

"A VILLAGE CLUB HOUSE."

- No. 1.—"Rough Cast." T. TYRWHITT,
33, Vincent Square, Westminster
No. 2.—"Demos." C. WONTNER SMITH,
34, Woodberry Grove, Finsbury Park, N.
No. 3.—"Robin Hood." J. R. IRESON,
63, Alexandra Road, Addiscombe, Surrey.

I HAVE looked carefully through the various sets of drawings sent in, says Mr. Leonard Stokes, F.R.I.B.A., and, after considerable deliberation have reduced the number to three, all of which have distinctive merits. The final selection of merit I, however, found very difficult, as I think the conditions are a little too elastic, and I found myself in effect choosing between the respective "points" of an elephant and a doormouse.

The three designs which I selected as the best are "Rough Cast," "Merlin" and "Demos," and applying the rules as to cost to them, I found that "Merlin" has distinctly broken the limit, as his design would cost very nearly double the stipulated sum (£2,000). I therefore regret that I am obliged to report against this design, although it is in other respects, perhaps, the best; and apart from one or two obvious little defects in plan, would make an excellent Club, and I hope that you may see your way to give some sort of prize to the author of this design, and make it clearer in future that the cost limit is to be more strictly adhered to.

Of the remaining two, "Rough Cast" is undoubtedly the best, and should receive the First Prize, although before the design could be carried out, the Kitchen and Offices would require extending, as they are much too cramped; the Committee Room is also too small, and some sort of Retiring Room from the Dais or General Room, should be provided, and as "Rough Cast" has kept well within the limit of cost, these matters could all be attended to without infringing that rule. Apart from the defects I have mentioned, the design, as a whole, is an admirable one, and would be a credit to any Village, and also to its architect.

"Demos" should take second place, and his plan has many good points about it, although I do not quite like the General Meeting Room being on the first floor, and the rather cramped planning of the Offices; otherwise the arrangements are all good. As a whole, however, the design is not quite so suitable and appropriate as "Rough Cast," and suggests Town rather than Village Architecture. This remark applies also to "Merlin," whose design would certainly look well as a building, but I think it would probably look rather out of place in a Village, at any rate, in the kind of Village I have in my mind, but here again I suggest that the instructions and conditions should be more clear and emphatic, as, in order to compare designs with any degree of fairness, it is necessary that the competitors should all start even.

Of the remaining designs "Robin Hood" (who has certainly grasped the Village idea), "Crypto" and "Horseforde," all exhibit considerable skill and ability, but the general standard is not quite up to those I have already mentioned.

LEONARD STOKES.

A NEW Church, to be called St. Margaret's, is about to be built in Abel Street, Burnley. The estimated cost is £5,000.

A NEW School is to be built at Heywood Street, Liverpool, application having been made to the Educational Department for sanction to borrow £15,903 6s. for that purpose.

THE designs submitted by Mr. George Baines F.R.I.B.A., 4, Great Winchester Street, London, E.C., in the open competition for a ladies' College at High Barnet, have been selected, and he has been instructed to obtain tenders forthwith.

THE authorities of the Midland Railway have been forced to abandon the electric lighting system, with which several of its trains have been equipped, on account of its unreliability and expensiveness. The trains will hereafter be illuminated by Pintsch gas.

The Builders' Journal COMPETITIONS.

No. 3.—Swimming Baths.

Designs for Swimming Baths in a country town of 5,000 inhabitants. To contain cold water bath fifty feet long, three feet to six feet deep, with necessary dressing boxes; six private washing baths for gentlemen and three for ladies; necessary heating and ventilating appliances to be provided, together with waiting and caretaker's rooms, the entire cost not to exceed £3,000. The site is 100 feet deep and of any necessary frontage, but entrance can only be obtained from the front. All designs to be delivered on or before Monday, the 10th day of June.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—**A Gold Medal and a Cheque for £10 10s.**, to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—**A Silver Medal and a Cheque for £3 3s.**, to the competitor who submits the best single set of drawings during the session.
- 3.—**Certificates** signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

ANNOUNCEMENTS.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Publishing.

Talbot House, Arundel Street,
Strand, W.C.

THE subscriptions to the Tennyson Beacon in the Isle of Wight are coming in so slowly that the modest sum required is still not nearly reached. The Beacon is to be a Monolith in the form of an Iona Cross, and is to take the place of the present pile of tarred wood known as the Nodes Beacon, the authorities of Trinity House having consented to the change. Twelve hundred pounds is the sum needed, and of this £800 has been subscribed in England. The American appeal, however, based not alone upon American regard for Tennyson, but also upon the fact that Englishmen have placed in Westminster Abbey memorials to Longfellow and Lowell, and in St. Margaret's one to Phillips Brooks, has only produced £144.

SOCIETY MEETINGS.

Edinburgh Architectural Association.

—The members of this Association made a visit to Paisley on Saturday the 11th instant, the attractions being the ancient Abbey, allowed to be the best preserved example of pre-Reformation Ecclesiastical Architecture, and the modern and costly Coats Memorial Church, of which Mr. Hippolyte J. Blanc, A.R.S.A., of Edinburgh, was the Architect. At Paisley Abbey Mr. Blanc read a paper, in which he described the foundation of the original establishment, its development till it became one of the richest in Scotland, having derived revenues from 28 Churches; and the various historical associations in which royal personages figured. It was largely destroyed by fire in 1307, and the existing remains were chiefly of the 14th and 15th centuries. Mr. Blanc pointed to its Architectural features, and indicated the character of the complete building before the Choir and Transepts came to ruin. The party afterwards proceeded to the Thomas Coats Memorial Church, where Mr. Blanc explained the Architectural features of the structure, directed attention to the problems which he set himself to solve in designing the Church, and showed how he had overcome the difficulties which he encountered.

Dundee Institute of Architecture, Science and Art.

—A meeting of this Society was held at the Albert Institute on Monday night. Ex-Bailie Keith, the President, occupied the chair. The result of the Drawing Competitions of the Institute were announced, as follows: For perspective sketch of an Architectural subject Mr. James Williamson, County Buildings, Cupar Fife, who showed a fairly good drawing of a Gate Lodge. For measured drawings Mr. Charles Soutar, 104, Commercial Street, was first with a firmly set and carefully manipulated drawing of Dairsie Church; Mr. Andrew Hutton, 16, Annfield Street, being second. Mr. Hutton did not show the same firmness in his work as Mr. Soutar, but he exhibited a considerable amount of refinement in details. For perspective sketch in pencil of a Memorial Tomb in a Church the prize was awarded to Mr. W. B. Black, 12, Hawkhill, for a capital piece of work. Mr. D. P. Grubb, 5, Osborne Place, was easily first in the Water-Colour Sketch Class with a painting of Leuchars Church. The picture shows much artistic merit and considerable latent power, its only weakness, perhaps, being that it was rather delicate in colouring. Honorariums were awarded to Mr. John Gray, 4, Baxter Park Terrace, for his Landscape, and to Mr. Alexander Malcolm, 6, Forfar Road, for "On the Eden," both meritorious pictures. There were two competitors for the best sketch from an antique subject in the Dundee Art Museum of Casts. The prize was awarded to Miss Bella Fraser, 9, Ward Road, her subject being "The Slave." The other competitor, Mr. Allan Inglis, 26, Isles's Lane, exhibited a drawing of the figure of Bacchante, which, though more firmly drawn than "The Slave," lacked the winning picture's softness and roundness. The judges of the Competition were Provost Orchar, Broughty Ferry, Mr. A. C. Lamb and Mr. T. S. Robertson. The Institute afterwards nominated the Council for the ensuing session as follows: President, Ex-Bailie Keith; Vice-President, Mr. Leslie Ower; Members of Council, Messrs. James Foggie, T. M. Cappon, W. Nixon, John Macfarlane; Hon. Secretary and Treasurer and Librarian, Mr. J. J. Henderson; Auditors, Messrs. James Hutton and Frank Salmond. Mr. Robert Little, architect, Kirkcaldy, was elected a member of the Institute.

At a special meeting of the Durham City Council, the scheme submitted by Messrs. Lomax and Lomax, of Manchester, for sewerage Purification Outfall Work, was awarded the first premium; the second being awarded to Mr. D. Balfour. The scheme submitted by Messrs. Lomax and Lomax embodies all the modern improvements in sewage treatment. The process adopted was that known as "The International," being the chemical precipitation in tanks and filtration through polarite beds.

SAWDUST.

At Chesham, Bury, new Schools, which are to be known as "The Harvey Memorial Schools," are being erected to perpetuate the name of the late Rev. Joseph Harvey. The scheme includes also the erection of a new Chapel.

THE Shropshire County Council has decided to provide a new site for a Police Station in Church Street, Shrewsbury, at a cost of £900, and plans have been prepared for the new buildings, which are estimated to cost £2,000.

An appeal is to be issued on behalf of the movement which is on foot to erect a Memorial to Prince Llewelyn, the last Welsh Prince. The appeal is addressed to Welshmen throughout the World, and those who respond to it will decide what form the Memorial ought to take.

In connection with the Brontë Society—which was formed a few months ago, a Brontë Museum has been formed, and was formally opened on Saturday last at Haworth, the Yorkshire village which gave the Sisters Brontë to the World.

At a meeting of the Lancaster Board of Guardians, on Saturday, tenders were accepted for the erection of a new Workhouse Hospital, estimated to cost about £4,596. The plans have been prepared by Mr. J. Parkinson, Architect, of Lancaster.

THE newly erected Smithfield at Denbigh, was formally opened on Tuesday. It has been erected at a cost of £5,000, out of the rates, from designs by the Borough Surveyor, Mr. J. Davies, J.P. It occupies about 14 acres, and is one of the most commodious and replete Cattle Sale Markets in North Wales.

For the erection of a new Church School at Halebank, the tender of Messrs. Holmes & Son, Liverpool, which was the lowest sent in, has been accepted. The building will cost about £2,000, and it is to be completed by October next. Accommodation will be provided for 342 scholars.

THE Croydon County Council is about to apply to the Local Government Board for permission to borrow the sum of £74,000 for the purchase of land and the erection and equipment of a new Lunatic Asylum for the Borough. The site chosen by the Lunacy Visitors is Kennel Farm, Warlingham, which is six and a quarter miles south of Croydon.

ON Wednesday afternoon the ceremony of laying the foundation stone of extensions to Didsbury Parish Church was performed by Sir Oswald Mosley, of Rolleston Hall, Burton-on-Trent. The extensions, which are from plans prepared by Messrs. Preston and Vaughan, of this city, include the erection of clergy and choir Vestries, the building of an Organ Chamber, and the addition of about 40 seats. The estimated cost is about £2,000.

THE House in which Canrobert was born, in the town of Saint Cere, in the Lot, is to be bought by the Town Council and turned into a Museum. It was built 130 years ago, and takes the form of three sides of a long square, is in thorough repair, and stands in a large garden. St. Cere is a beautiful antique town in one of the most picturesque valleys of the Lot. General Fredericks is to be President of the Committee for the creation of the Canrobert Museum. The General served as a lieutenant in the Crimea, where Canrobert won his Marshal's baton.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

BRIDLINGTON (Yorks).—For the erection of corn-mill for Mr. W. T. Lowson. Mr. J. Earnshaw, architect, Bridlington Quay:—

[Rest of Guildford.]

The Builders' Journal is published at
3 a.m. on Tuesday mornings, and should
be obtained from any Newsagent in the
Kingdom the same day.

BARROWS & CO., LTD., BANBURY.

A Large Stock of Portable Engines, New and Second-hand, 5 to 25 h.p.; Mortar Mills, Plain and on Wheels; Saw Tables, Mortar Tip Carts, &c. ready for immediate delivery, at low prices for cash, or on easy Terms of credit. Write for particulars to:—

BARROWS & CO., LTD., BANBURY.

CONTRACTS OPEN.

TO PAINTERS AND OTHERS.

The Streets Committee of the Commissioners of Sewers the City of London will meet in the Guildhall of the said City, on TUESDAY, the 28th of MAY, 1895, at TWO o'clock precisely, to receive TENDERS for PAINTING the IRONWORK of the BRIDGES on the Holborn Viaduct, agreeably to specification, which may be seen and copied at the Office of the Engineer to the Commissioners in the Guildhall, where forms of tender may also be had.

Security will be required for the due performance of the contract.

Tenders must be endorsed on the outside "Tender for Painting Ironwork of Bridges on Holborn Viaduct," and be delivered at this Office before TWO o'clock on the said day of treaty, and persons tendering must attend themselves, or by a duly authorised agent, at TWO o'clock precisely on that day.

The Commissioners do not pledge themselves to accept the lowest or any tender.

H. MONTAGUE BATES,

Principal Clerk to the

Commissioners of Sewers.

Guildhall,
May 13th, 1895.

BISHOP'S STORTFORD URBAN DISTRICT COUNCIL.

WATERWORKS EXTENSION.

TO CONTRACTORS, ENGINEERS AND OTHERS.

The Council is prepared to receive TENDERS for the following WORKS:—

CONTRACT No. 1.

The construction of a covered service Reservoir (to contain 300,000 gallons) and Cooling Pond, with Valves and Fittings, and Boundary Wall and Gates.

CONTRACT No. 2.

The construction of an additional Well, together with the requisite Rising Main and fittings for pumps.

CONTRACT No. 3.

Alterations and Repairs to one of the Engines and its Gearing, and Alterations and Additions to the Engine House.

Plans may be seen, and copies of the specifications with forms of Tender obtained at the Office of the Surveyor to the Council, North Street, Bishop's Stortford, on and after MONDAY, the 13th day of May instant, on payment of the sum of Two Guineas for each Contract, which sum will be returned on receipt of bona-fide Tenders and the documents supplied for that purpose.

Sealed Tenders, properly endorsed "Tenders for ——" to be sent to me, the undersigned, by TEN o'clock a.m. on SATURDAY, the 25th day of May instant.

The Council does not bind itself to accept the lowest or any tender.

By order,

WILLIAM GEE, Clerk.

Council Offices, North-street, Bishop's Stortford,

May 1st, 1895.

HOLBORN UNION.

The Guardians of the Poor of the Holborn Union invite TENDERS for the POINTING, PAINTING and GENERAL REPAIR, externally, of the OLD BLOCK of the Workhouse, Shepherdess-walk, City-road, N.

Persons desiring to Tender must send in their names to the Architect, Mr. C. E. VAUGHAN, F.R.I.B.A., 25, Lowther Arcade, Strand, W.C., not later than TEN a.m. on TUESDAY, 21st inst.

The specification and form of contract may be seen at his Offices, and bill of quantities and form of Tender obtained from him, WEDNESDAY, the 22nd inst. between the hours of TEN a.m. and FOUR p.m. A £5 Bank of England note must be deposited, but will be returned on receipt of bona-fide Tender.

Sealed Tenders, upon the form supplied, must be delivered to me at my office undermentioned by ELEVEN a.m. on WEDNESDAY, the 29th inst. after which no Tender will be received.

The priced bill of quantities must also accompany the Tender, enclosed in a separate envelope, and endorsed with the name of the person tendering. The contractor whose Tender may be accepted will be required to sign an undertaking to pay his employees the Trades Union rate of wages.

The Guardians do not bind themselves to accept the lowest or any Tender.

By order,

HARRY O. HILL,

Clerk to the Guardians.

Clerk's Offices,
Clerkenwell-road, E.C.
May 16th, 1895.

LADDERS, BARROWS, STEPS,

TRESTLES, SCAFFOLDING,

For Sale or Hire.

J. BATCHELAR & CO.,

48, HAMMERSMITH ROAD, W

Quantities, &c., Electrographed

Equal to Lithography and 50 per cent. CHEAPER. Prices and specimens on application. Lithography at moderate rates.

OLDACRES & CO.,

59 & 60, CHANCERY LANE, LONDON, W.C.

N.B.—No connection with any other firm.
Telegrams, "OLDACRES, LONDON."

ENFIELD SCHOOL BOARD.

TO CONTRACTORS.

The Enfield School Board invite TENDERS for the ERECTION of a BLOCK of SCHOOLS at Seventh-avenue, Bush Hill Park.

The plans and specification can be seen, and copies of the bills of quantities obtained, on application to the Architect, Mr. G. E. T. LAURENCE, 181, Queen Victoria-street, London, E.C., to whom a deposit of one guinea should be sent for quantities, which will be returned on receipt of a bona-fide Tender.

Sealed Tenders on the form supplied must be delivered at my office, free of charge, and not later than TWELVE noon on THURSDAY, the 30th May.

Persons tendering will be required to sign an undertaking to pay the rate of wages and observe the rules adopted by the London Building Trades' Federation, and to find two sureties in five hundred pounds each for the due performance of the contract.

The Board do not bind themselves to accept the lowest or any Tender.

By order,

N. HEPWORTH, Clerk,

School Board Office, Court House, Enfield,

May 6th, 1895.

TO PAINTERS.

The Guardians of the St. George's Union invite TENDERS for REPAIRING, PAINTING, WHITE-WASHING, and CLEANING WORKS, &c., at their Infirmary in the Fulham-road, West Brompton.

Persons desirous of tendering may obtain, any week-day up to and including the 21st inst. and between the hours of TEN a.m. and FOUR p.m. (Saturday until ONE p.m.), a specification and form of Tender upon application to the Guardians' Architect, Mr. H. SAXON SNELL, of 22, South-ampton-buildings, Chancery-lane, W.C., and depositing with him a £10 Bank of England Note, which will be returned to persons sending bona-fide Tenders in the manner and at the time stipulated.

Tenders must be signed sealed, and endorsed "Tenders for Painting, &c.," and addressed and delivered to me not later than FOUR o'clock on WEDNESDAY, the 29th inst.

The Guardians do not bind themselves to accept the lowest or any Tender.

By order,

THOMAS WORLOCK,

Clerk to the Guardians.

Clerk's Offices,
St. George's Vestry Hall,
Mount-street, Grosvenor-square, W.
May 15th, 1895.

TO CONTRACTORS.

NEW ENGINEERING WORKS, RUGBY.

CONTRACT No. 1.

TENDERS are required for the CONSTRUCTION of FOUNDATIONS (including Earthwork and Construction of Trautways) for New Engineering Works, at Rugby, for Messrs. Willans & Robinson, Ltd.

Plans and Specifications may be seen at my Offices after THURSDAY next, MAY 16th, and a copy of the bill of quantities obtained on payment of Five Guineas, which will be returned on receipt of a bona-fide Tender.

Tenders are to be addressed to the Secretary, Messrs. Willans & Robinson, Ltd., Piston House, Thames Ditton, Surrey, not later than THURSDAY, MAY 30th, 1895, endorsed "Tender for Foundations, Rugby Works."

The Directors do not bind themselves to accept the lowest or any Tender.

T. W. WILLARD, Architect.

St. Andrew's Chambers, Rugby,
May 10th, 1895.

MANCHESTER CORPORATION.

The Paving, Sewering, and Highways Committee are prepared to receive TENDERS for the EXECUTION of the under-mentioned WORKS (Contract No. 1), viz:—

Laying a system of Underground Telephone Pipes, with Brick Inspection Pits, Service Boxes, and other appurtenant Works in the following streets:—

Route 4. Portland-street, Princess-street, Hart-street, Sackville-street.

Route 4a. Altrincham-street, Lower Albion-street.

Route 4b. Charles-street, Carpenter-street.

Route 4c. Hart-street, Chatham-street, London-road.

Booth-street, Dale-street, Stanley-street.

Route 4d. Dale-street, Spear-street, Bennet-street.

Route 5. Portland-street, Chepstow-street, Great

Bridgewater-street, Albion-street, Little Peter-street

Greaves-street.

Route 5a. Oxford-street, Hulme-street.

Drawings may be seen and copies of Specification, Bills, of quantities, and Form of Tender may be obtained on application at the City Surveyor's Office, Town Hall, Manchester, on payment of £5 ds., which sum will be refunded on the return of the documents and the receipt of a bona-fide Tender.

Sealed Tenders, enclosed in the official envelope, to be sent in on or before the 31st inst.

The Committee do not bind themselves to accept the lowest or any Tender.

By order,

WM. HENRY TALBOT,

Town Clerk.

Town Hall, Manchester.

May 15th, 1895.

COMPETITION.

LEATHERHEAD URBAN DISTRICT COUNCIL.

The Leatherhead Urban District Council invites SCHEMES for the SEWERING of the Parish of Leatherhead, Surrey, and for the DISPOSAL of the SEWAGE thereof. Schemes, accompanied by the necessary plans and tabulated estimate of cost for draining the Parish, are to be sent to me on or before FRIDAY, the 28th day of JUNE next, at FOUR o'clock in the afternoon, under a motto.

A premium of £25 will be paid to the author of the Scheme which shall be considered by the Council to be the first in merit, upon which the Council's decision shall be final, and on payment of the aforesaid sum, the scheme, plans, and estimates shall become the absolute property of the Council, all others being returned at the expense of the Council.

The Council will not be bound to carry out the Scheme for which the premium may be awarded or any other Scheme.

Each competitor must state the percentage he will require to act as Engineer on the work in accordance with his own Scheme and plans in case the same be adopted.

A plan of the Leatherhead Parish can be seen, and further information can be obtained, at the office of the undersigned, between the hours of TEN and FOUR, on any day except Saturday.

No plans will be considered unless the author sends in with his Scheme by separate letter, his name and address together with the name of one or more towns which have been satisfactorily drained by him, together with the estimated and actual cost of carrying out such work.

WM. J. HODGES,

Leatherhead, Clerk to the Urban District Council,
May, 1895. Leatherhead.

Architectural Modelling. No interested man or woman going into the Architectural Room of the Royal Academy but what will become excited over the charm of Mr. Prior's Architecture and modelling. There appeared in our columns but a week or so ago an interesting article upon the value of models—over mere paper perspectives—for Architectural purposes, and it would be wise if Architects would study in the concrete form what for all intents and purposes may be considered an outcome of it. We do not remember having seen such things at the Academy before, and yet in addition to Mr. Prior's work, unique and quite beautiful as it is, Sir Arthur Blomfield is responsible for a Chapel design rendered by a professional modeller in cardboard in a very weak and simple fashion. Mr. Prior, on the other hand, has done his work delightfully. His ground-work is real earth, his walls are faced with cement to imitate stone, his yew hedge is of sponge and his grass plots of felt, and surely the well-with Truth bubbling at the bottom is as realistic as anything could be! But the mere charm of this piece of design and modelwork is not the end of our ambitions now. It would have been impossible by any geometrical drawings to have shewn the grouping of this house, its fine simplicity, or its perfect proportion of parts, and Mr. Prior has made a lasting benefit to his profession by demonstrating how easy it is to produce an exact miniature of one's Architectural intentions, even down to the minutest detail of colour. We did not know it was even possible to make so charming a thing as this model really is, and for the first time we recognise what a vast assistance to good work modelling can become. It would naturally be impossible to model many architectural

designs. There is no need, where much is not attempted with a grouping of parts or an assessment of fine proportions. Where mass is but *mess*, or where nothing but a flat front is exposed to view, models may be discarded, but where, as in Mr. Prior's design, grouping and proportion and mass are everything, then one wonders how on earth modelling has not asserted its wonderful artistic capabilities and value before. How charming Mr. Skipworth's design for his Fulham Church would have appeared in a scale model, instead of a perspective wash drawing, poorly illus-

expect to see a great development of Mr. Prior's example. Mr. Reginald Blomfield will have to model some of his buildings if he wishes to do justice to his art, and so likewise will Mr. Caroe and Mr. Wilson and Mr. Leonard Stokes. Even if Mr. T. G. Jackson, and Mr. Champneys, and Mr. Norman Shaw should, in the fullness of their renown, elect to turn up their noses at so striking an innovation, the Architectural Association should at once commence an Architectural Modelling Class, and Mr. Prior should be its first master. The question of the expense or

modelling need not trouble us yet, neither need we be frightened by the rumours—rumours which, in the absence of any authoritative statement, we must discount—that the model of Sir Arthur's Chapel in the Academy cost £300. The late Mr. Devey made models of all his buildings, and did not expend a fraction of this sum on any one of them, nor need we do so, unless we wish to develop the primary benefits of modelling into the very depths of the art, which produces real brass knobs or real framed doors and kitchen ranges suitable to dolls' houses! The materials for producing a card and wood model of any house made to half

DESIGN FOR SCULPTURE AT THE SOCIETY OF PAINTERS IN WATER COLOURS.

trative of what thus appears to be a poor building! Take Mr. Norman Shaw's house (1460), had that been by model it would not have shown the mark of other hands, as is very clearly discovered from the perspective sketch. In a model Mr. Shaw would instantly have discarded that chimney stack as unworthy of England's leading domestic Architect. And Aston Webb's amazing "Cottage" (1529), how much more truly picturesque and beautiful it would have appeared under Mr. Prior's delicate handling, instead of by the clever drawing which alone distinguishes it! From henceforth we shall

inch scale, would cost but a few shillings, and the requisite tools but a few shillings more. The elaboration of the model depends entirely upon the cleverness of the modeller, and whether his fingers are not all thumbs at wood turning and carving. Mr. Prior must have devoted hour upon hour to the model of his beautiful house, but then they were hours of love, and his labour will bring to the Architectural Room of this year's Academy more persons totally and sublimely ignorant of Architectural Art, than could be induced to enter were there ten times as many fine drawings upon its walls.

Art: Ancient and Modern.

It is the vogue to speak of Bankrupt Art, but the recent Art Sales give the lie, in pounds, shillings and pence, to the assertion that we have all become beggars. Beggars may not be choosers, but the connoisseurs who flock to Christie's go on choosing and paying. It has been quite a sale epidemic, and some noted collections have been dispersed—a sad thing when you come to regard the labour and years spent in collection. There was the Craven sale and the Kennedy sale and the Woolner sale—all of pictures—and the Lyne Stephens sale came, with all the effect of red fire and slow curtain, to wind up the lot. Something like a quarter of a million has been spent within a fortnight with Christie and Manson, and modern Art murmurs all the more at this very sterling tribute to the dead. But it seems to us that modern Art distinctly does *not* supply a "long-felt want." People are not always desirous of their own portraits (for which escape we are devoutly thankful) and the fact of the matter is that the Crafts allied to Art have not yet managed to compete in charm, dexterity, or grace, with their mediæval competitors. So far as pictures go, there is a literal "boom" (if we may be permitted the word) in Italians and Spaniards and the great Dutchmen whom Mr. Seymour Lucas has been extolling. Buyers now-a-days, are in want of a sure thing; one which, if you cast your bread upon the fluctuating waters of the Sale Room will return after many days. So few of the modern men last out their own lifetime—a more figurative way of saying that they outlive their reputation. With the Academy each year in view, canvases have to be turned out at express speed. Only here and there is a man strong enough to "disappoint" his Academy and his "public." Curiously, while the Moderns go down in "quotations" the Ancients still go up—a Velasquez has doubled itself in thousands in a few years; a small Murillo in half a century has become more valuable by one hundred and twenty five per cent., and a Cuyp has grown in goodness from five hundred and thirty to two thousand guineas. Watteaus, that have been despised in very recent days by a certain "School" are now in three thousands! Does not all this mean that the section of the "public" able to buy, demands something more than a rocket reputation with its attendant stick? The public wants a safe investment in Art as in everything else; it cannot afford to fling money into new Art currents for fear lest those currents should not prove tidal. Decent objects of vertu, craftsmanship and exceptional guaranteed art names are what can be "sold" now-a-days.

It has been decided that the memorial of the public services of the late Dr. Dale shall consist of a Statue to be placed in the Art Gallery, Birmingham, and the provision of a gold medal to be annually awarded in connection with King Edward's School.

THE TOWN Council of Weston-super-Mare has received sanction from the Local Government Board to borrow £4,600 for the erection of a new Market.

THE TOWN Council has agreed to repair the roof of the Chancel of St. Mary's Church, Bury St. Edmunds. The Borough Surveyor has estimated the probable cost at from £230 to £250.

TENDERS have been accepted for the erection of a new Roman Catholic Church, to be called the Wake Memorial Church, at Sunnyside, near Halifax, at a cost of £4,000.

LONDONERS are soon to have an opportunity of seeing the Statue of Ada Rehan in solid silver, as "Justice," which was shown at the World's Fair, Chicago, and was the great feature of the Montana Section. It is nine feet in height, and contains 97,000 ounces of silver.

ARCHITECTURE AT THE ACADEMY.

BY OUR SPECIAL REPRESENTATIVE.

WITH SKETCHES BY C. E. MALLOWS.

MR. COLLCUTT'S refined and characteristic work at the Holborn Restaurant (No. 1,566), with which every one is well acquainted, is illustrated by a capital wash drawing, bearing the signature of Mr. Frank Murray. The decoration of the roof to the same Hall is shown in drawing No. 1,543, by Messrs. Shrigley & Hunt. There is a pleasing little Interior of Waxwell Farm, Pinner, (No. 1,578), by Mr. Seth Smith, but this drawing and No. 1,577, by Mr. William Wallace for "Philliphaugh" Selkirk, are both hung too high for criticism. The latter seems to be a

mansion designed in a typical and somewhat uninteresting type of Scotch Baronial, and is illustrated by a wash drawing in Indian ink.

There is character in No. 1,557, which inadequately illustrates Mr. Cave's "South Front of Eventyde." Much more could have been made of the designs in the drawing, in which there is much nice feeling, however. Mr. Phené Spier's water-colours are always admired, and No. 1,556, "Wolgangs," Kirche, Rothenburg, will be no exception, as it is an excellent example of his work. No. 1,564 is another delightful water-colour of "Dalethorpe Dedham," by Mr. Beresford Pite. It is drawn with much vigour and freshness of handling, but, with regard to the design, we object to Mr. Pite's

merits of the work itself. The reverse of this remark applies to No. 1,585, "The Hall of a Small Country House," by Messrs. Baillie Scott and S. Morris; it is admirable and unconventional in design as will be seen by the accompanying sketch, and marked with much homely character, but the drawing, good as it undoubtedly is, hardly does the design justice. The Public Library, by Mr. Percy E. Newton (No. 1,588), is a design well expressive of its purpose, has much breadth of treatment generally, and of good proportions. The idea of the sculptured decorative band over the Entrance is good, but the figures should have been more carefully studied and drawn. But taken as a whole it is a very promising effort. The frame of No. 1,591 contains "Three alternative Treatments for the Study," illustrated by line drawings with slight washes of colour. The simple treatment of the lower design is preferable to the others.

They are good pen sketches illustrating an able design for a house at Woodside Park, London, N. (No. 1,590), by Mr. William T. Walker. The drawings are by Mr. Richards. No. 1,595 is the Interior view of the Staircase of Gosford Hall, the drawing is better than the design, and is conspicuously signed in the bottom left-hand corner by Mr. William Young, Architect. Another contribution by the same Architect is No. 1,484, a large Mansion called "Duncombe Park," which leads us to another part of the room altogether, and close by Mr. C. R. Ashtee's delightful restoration of the "Magpie and Stump" (No. 1,487), in Cheyne Walk, Chelsea. It is illustrated by a tinted elevation, drawn (with much artistic feeling) in bronze ink on parchment, with plans of each floor arranged in the lower part of the frame. There is a nice subdued red colour in the tone of brickwork, and a well designed oriel, corbelled on the basement window, runs nearly the height of the building and finishes with a flat stone cornice under the windows of the top-floor. The whole design of the high and narrow front terminates under the eaves by a flat stone cornice, with a rather heavy enrichment of egg and tongue, not too heavy perhaps for its position, but it seems somewhat so in this elevation. A perspective view would, of course, have given its correct relative effect, which is another reason why elevations should not be used to interpret designs. It is impossible to realise what the finished effect of a building will be like from elevations only, whereas a careful illustration in perspective will give it very nearly.

Near to this Mr. Tulloch exhibits his Com-

treatment of the angle chimney which is not so successful as the gable end; this latter is very pleasing with the high curved parapet as a forehead over the billiard room window, with canopied niches at the angles. This is another example of a small drawing carefully hung out of sight.

An attractive little frame is No. 1,584, "Small Country Houses," by T. W. Cutler; but the attraction is more in the way Mr. Raffles Davison has illustrated the houses than in the

petitive Design for New Municipal Buildings at King's Lynn, (No. 1,493), a design in harmony with the existing quaint old work. We believe Mr. Ivor Price was awarded the first premium in this competition. In another part of the room (No. 1,579) Mr. Tulloch shows a half-inch detail of his New Bank at Halifax. The drawing is of a portion of the Principal Front, a good piece of Classic work, showing the influence of the *Ecole des Beaux Arts*, where, perhaps, Mr. Tulloch has studied. Messrs. Horsfall &

Williams show in No. 1,458 their design for the same subject, which was awarded the first premium. Saint John's Seminary at Wonerst (No. 1,576), by Mr. F. A. Walters, is another type of building altogether, and is not so successful as some of Mr. Walters' previous works. We like his Gothic buildings better than this attempt at Renaissance of an ordinary and uninteresting description. The drawing is very strong in colour (especially the tone of the very red brickwork), but there are points, especially where some of the foliage and distant country are indicated, which show a sympathetic hand.

Mr. J. M. Brydon has, in his revised design for the Pump Room Buildings at Bath (No. 1,554) a sound piece of Classic work, treated with much individuality, although it is difficult to admire the outline of the dome which crowns an otherwise able design. It is illustrated by a weak and colourless drawing in sepia. The

genius. There is nice quality in some of the lines, and Mr. Percy Robinson has, at all events, illustrated his subject "The Norman Porch of Adel Church, Yorkshire" in a very thorough and complete way. Amongst other illustrators of old work, Mr. Arnold Mitchell sends some crisp and clear pencil studies, illustrating a recent article on a tour in Normandy (No. 1,523). Mr. Gerald Horsley shows in No. 1,425, the "West Front of Wells Cathedral," a pen drawing not quite worthy of Mr. Horsley's reputation. Mr. T. G. Jackson, who has in the "Interior of St. David's Cathedral, showing the Choir Screen" (No. 1,486), a water-colour drawing of much delicacy and charm. Mr. Needham Wilson exhibits a tenderly drawn illustration in pencil of "Malmesbury Abbey from the South" (No. 1,439), which well illustrates the subject. The "Nave Arcade of St. Anastasia, Verona" (Nos. 1,503 and 1,522), has been well and carefully drawn by Mr. Huber,

more expressive of a better class warehouse than a Tabernacle, so little there is to mark its religious purpose.

Mr. Frank A. Bright has a "Sketch for Village Church" (No. 1,505) of apparently much merit, but as it is hung nearly as high as it well could be it is difficult to judge of it in detail. Two capital water-colours illustrates Mr. Brigg's "Country House at Oxted" (Nos. 1,506 and 1,518). The former shows the Entrance and the latter the Garden Front; the Entrance Front is the more pleasing of the two, and is simpler and quieter in treatment generally, both in drawing and design. It is much more clearly handled than No. 1,518, which is a trifle woolly in execution, and the design is rather restless and over-featured. From what can be seen of Mr. William A. Pite's design for "A Small Artist's House" (No. 1,513) we should say it is most artistic, and ably illustrated by the coloured elevations.

No. 1,510, "The Gables, Harrow," is a bright and clever sketch in sepia by Mr. Arnold Mitchell, but this, as with his other excellent contribution—"House, S. Margaret's, Harrow-on-the-Hill (No. 1,575)—is rather obviously founded on Ernest George, not only in the general effect of the drawings but in design as well, and also in small points of technique.

The "House by Racecourse, Lingfield," by Mr. E. Turner Powell (No. 1,520) is illustrated by a good water-colour drawing, and shows a fairly proportioned house in rough cast, red brick and half-timbered gables.

The design by Mr. Gerald Horsley for the New Chancel, Ipstones, Staffordshire (No. 1,527) has much merit of a quiet and subdued kind, and is illustrated by a pen drawing bearing his well-known signature.

The competitive design for the Church at Abbeydale, by Mr. Skipworth (No. 1,586) is rather florid Gothic in style and a little restless in parts, but this is counterbalanced by a well

same Architect exhibits a rather hard line drawing, (No. 1,574) of the "Château de Buillon."

The drawings in the frame No. 1,548 illustrate an interesting Church, "SS. Michael and All Angels, Colehill, Wimborne," by Mr. W. D. Caroe, the newly appointed Architect to the Ecclesiastical Commissioners. We like the Pulpit, which is better both in drawing and design than the other illustrations, which scarcely do justice to the Architecture. No. 1,596 is the "Palazzo Hanburg Ventimiglia, Italy," by the same Architect. Mr. George Kenyon in 1,550 and Mr. H. O. Cresswell in 1,545 show good examples of Domestic work, the latter, "A New House at Effingham, Surrey," and the former, "Eastwood Cottage, Walterswick," illustrated by a small water-colour; and No. 1,593 is a bright little water-colour drawing, by Mr. James Ransome, of a house near Leicester. The accompanying sketch indicates the main features of the design; the stables are to the left of house, but do not compose very well with it. Mr. Reginald Hallward exhibits in No. 1,594 seven beautiful working designs for Embroidery, and another exhibitor, who is also not very Architectural, is Mr. Albert A. Turbayne, who shows in frame No. 1,539 a magnificent cover design for the édition de luxe of "Masterpieces of Art, 1894."

There is again much charm but very little Architecture in No. 1,598, Mr. Inigo Thomas' view of Church, House and Garden (principally the latter). The general effect of the picture is dark and mysterious, and conveys an impression of an old-World garden and surroundings at eventide. Mr. Ambrose Poynter's "Design for a Suburban House," (No. 1,597), is aggressively ugly and painfully bald in appearance, and is not in any way redeemed by the sepia drawing which illustrates it.

No. 1,604, "House at Bowden, Cheshire," by Mr. Edgar Wood, has some of the qualities of the previous exhibit, and rather affectedly drawn in the manner of a certain famous drawing for a "West End Club" of some years ago. Apart from the drawing, however, the design has many good points, and is worth noting. No. 1,589 is an example of the immense capacity for taking pains which is not precisely

C. Conlette, showing the colour decoration and design of mosaic pavement. Mr. C. E. Mallows' contributions are from Gloucester, one of the "Scriptorium Side of the Cloisters of the Cathedral" (No. 1,563), a pencil drawing which shows a care for the chiaroscuro of an intricate and wonderful subject, and the other a bright and telling pencil sketch of the "Deanery from the Cloister Garth" (No. 1,485); Mr. Francis W. Bedford's "Loggia Vatican, Rome" (No. 1,602), and Mr. Alfred Hart's (No. 1,565) "Marble Screen and Throne in St. Lorenzo, Rome."

Mr. Seth Smith has a view drawn in pen and ink of Little Missenden Abbey, Bucks (No. 1,488).

No. 1,549, "The Anglican College, Jerusalem," by Mr. Jeffrey, F.R.I.B.A., is a hard and unfeeling line drawing of an ordinary Gothic design; we see no reason why this exhibit should be placed in such a prominent position. It certainly has merit, and is a design in parts, showing an appreciation of old work, but is not of sufficient importance to justify its being in one of the best positions in the room.

In Mr. Ernest Newton's (No. 1,414) design for the Interior of the Church of Saint Swithin, Lewisham, there is much to admire. The severely simple lines of the type of Late Gothic he has chosen, the design of the tracery for the West Window, and the breadth of effect generally, are all worthy of praise, and remind one a little of the influence of Mr. Norman Shaw.

Near to this hangs "Sir Frederic Leighton's Picture Gallery" (No. 1,418), an addition to his house in Holland Park, by Professor Aitchison, a refined arrangement in colour, or it would not be the work of the Professor; but the Architecture does not appeal as being very brilliant.

The same can with much more certainty be said of No. 1,413, "The Chapel of Cheltenham College," by Messrs. Prothero and Morris, a heavy and ordinary type of Late Gothic, drawn by Mr. Brewer.

Apart from the pen drawing, which is by Mr. Roland Paul, there is little of interest in design No. 1,502, "New Tabernacle, Woolwich," by Mr. Walter H. Woodroffe. As a design it is

managed blank wall space. The drawing is in pencil, and wanting in force and life.

(To be concluded.)

THE Stamford (Lincs.) Board of Guardians purposes building a new Workhouse at an estimated cost of £5,000.

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,
28th May, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

THE leisurely way in which the Statue to Lord Strathnairn is being erected at Knightsbridge can only be described as irritating in the extreme. In fact, the method of procedure has been a source of amusement to those who pass by daily, and many have been the comments as to the cost of the pedestal and the considerable funds which must be in hand to meet it. The site can hardly be called a happy one so long as the hoardings continue to occupy that No Man's Island behind it.

OUT of nineteen designs for the new Workhouse for the Ipswich Union, six have been selected which will be submitted to an Architect as assessor for him to award the premium. The Workhouse Election Committee was of opinion that the new Workhouse need not exceed in price the sum of £20,000; and though the Architect's estimate in one or two cases somewhat exceeded that amount, the Committee considered that, with certain modifications, it might be reduced to that figure. The Committee, deeming it advisable that the assessor appointed should be one in whose decision all the competitors might have confidence, asked the President of the Royal Institute of Architects to recommend some Architect to them. He recommended Mr. Charles Barry, whose fee would be 50 guineas, and travelling and hotel expenses. The Committee accordingly recommended Mr. Barry's appointment. The Rev. Wickham Tozer advocated securing the services of a local Architect, which he considered would entail less expense. He moved as an amendment that Mr. Brightwen Binyon be asked if he would accept the position, and the fee he would receive. A Mr. Gower seconded. Mr. J. B. Fraser supported the recommendation of the Committee, observing that there should not be the slightest suspicion that local prejudice would be brought to bear in making the awards. On the vote being taken, nine voted for the motion and eleven for the amendment, which was therefore carried. Mr. Borrett, upon the substantive motion being put, moved a further amendment that Mr. Eade be approached in the same way as Mr. Binyon, and this was also carried.

A NUMBER of Manchester capitalists have formed a company with a capital of £20,000 for purchasing the Gorsey Hill and Stoney Hey Estates, comprising the loftiest eminence in the Wallasey district at New Brighton, which commands a magnificent view of the Rock Channel, the approaches to the Mersey and Dee, and the Snowdon and Carnarvonshire Ranges. It is intended to erect a Tower on the summit of the hill. The

grounds will be laid out on the lines of Belle Vue at Manchester and the Douglas Pavilions and pleasure grounds, and provision is to be made for a football ground, surrounded by a racing and cycling track. The Company has secured Mr. Huon A. Matear, F.R.I.B.A., of Birkdale, to develop the undertaking.

AFTER long pondering over the subject, the Chancellor of the Exchequer has at length determined to find the money necessary for the widening of Parliament Street at the end facing Westminster Abbey and leading up to the Houses of Parliament. This piece of work has long been a temptation to the speculative builder. There is now before the House a Bill promoted by private persons providing for the compulsory purchase of the land in the neighbourhood of Charles Street and Delahay Street. The intention was to pull down the block of houses that disfigure this end of Parliament Street, and make a new street with houses reaching as far up to the sky as the regulations of the County Council will permit. The plan of the Government is more gracious, it being intended to clear away the block of houses and approach Westminster Abbey with a broad sweep. The work, when completed, will make Parliament Street one of the finest Avenues in the World, opening up for the greater part of its distance, a view of the Abbey and the Houses of Parliament.

WHEN the London County Council was accused of wasting the ratepayers' money by painting Hammersmith Bridge in the winter, its apologists replied that the Council was only carrying out Mr. Balfour's advice, given at Manchester, that as much municipal work as possible should be reserved to the winter. The absurdity of the defence was sufficiently obvious at the time. Its dishonesty is now being illustrated. For more than a month hundreds of workmen employed by the Works Department of the County Council have been engaged in remaking the Thames Embankment. This is work which not only could be reserved for the winter, but for which wet weather is actually better than dry. All over the country road making is carried on through the winter and late autumn. It is only in London that gigantic road making operations are reserved till the spring and summer, when the water cart has to be employed to do the work of the winter rains; when masters have to hunt for men instead of men for masters; and when the maximum of inconvenience is caused by the stoppage of the traffic.

A WATER-COLOUR drawing by that long neglected artist, David Cox, sold at Christie's for the large sum of 2,400 guineas. It was 29 in. by 40 in., and represented "A Welsh Funeral" at Bettws-y-Coed. Some years ago it was won as a £20 prize in the Art Union of London, but the owner re-sold it to a dealer for the same price. After a few years when the "boom" in Cox drawings came up it passed to the late owner for £500, and was on loan at Leeds in 1868, and at Manchester in 1887. A view near Highgate, by J. Constable, made 180 guineas, and "Off the Northumbrian Coast," by J. S. Cotman, 260 guineas.

It is customary, during the summer months, for the Council of the Institution of Junior Engineers, to organise fortnightly tours of inspection to various buildings of which the machinery is a prominent feature. The other afternoon was devoted to the Imperial Institute, and, thanks to the courtesy of Sir Frederick Abel, Sir Somers Vine, and the chief engineer, no fewer than a hundred "junior engineers" were enabled to inspect the heating, ventilating, lighting, hydraulic, and other engineering features of the build-

ing. The systems of heating and ventilating such a large structure attracted much attention, especially the ventilating operation, which is carried out by means of air-compression and water-sprays. The engineering plant is naturally a very extensive one, and much time was spent in inspecting the various points of interest, which included two Galloway superposed steam-engines capable of indicating at 100lb. pressure 180 horse-power, the diameters of the cylinders being 13 in. and 22 in., the stroke 33 in., and with ninety revolutions per minute. Much interest was displayed in the fire appliances, which were fully explained by the engineers in charge of the two parties of visitors. Subsequently the Exhibition of Photography was inspected.

ANOTHER of the familiar buildings in Blackett Street, Newcastle, is being razed to the ground—the well-known shop of Messrs. Allan, booksellers and newsagents, having been doomed by its owners to make way for a better building. It seems strange, looking at the old brick fronts of some of the houses in Blackett Street, to realise the fact that there are persons treading the thoroughfare to-day who can remember when there were no houses there at all. Little more than seventy years ago—what is certainly one of the busiest streets in Newcastle, if not the busiest—was nothing better than a dust heap. There were no houses or shops near. The town wall occupied the south side, and a few miserable gardens we are told held the ground further north. The town wall having been removed, however, Newcastle began to expand, and Blackett Street was built in 1824. There was no intention then on the part of Architect or builder to make shops. It was simply a residential centre. But the shops came. Messrs. Allan now intend to build on the site of their old shop a stone building similar in height and appearance to the premises they are temporarily occupying, and the Architectural features of that part of Newcastle will in consequence receive an addition.

RELATIVE to the strike of Carpenters and Joiners at Leeds, a "Builder" writes: the state of trade in Leeds does not warrant and cannot afford a rise of wages at all, and local trade cannot and does not find adequate employment for local workmen. If it were not for the enterprise of many of the Leeds builders (who have rents, rates, taxes, &c., to pay, which cannot be got out of work executed in and about the city of Leeds) in obtaining contracts and orders from outlying places, including Harrogate, Walsall, Sheffield, Newcastle, and many others, the larger portion of the labour for which is done here, the carpenters and joiners would not be half employed. As to the rate of wages and cost of living now and some years ago a contrast is instructive. About 34 years ago the wages were 4½d. per hour for 58 hours a week, and four years later they were 5½d. per hour for 56 hours a week. Then the workmen had to provide a kit of tools costing fully £20, and had the hard, heavy, laborious work to do. Now a kit for a first class man need not cost more than £5, and the hard work is done by machinery.

THE Villa recently purchased by M. Faure at Ste. Adresse, near Havre, is to be put into a state of thorough repair and enlarged. He has agreed on a plan with his Havre Architect for the additions. A Wing will be added at one end of the house, containing a Dining Room large enough to accommodate fifty persons, and a roomy Study and a Morning Room for the President. The Wing at the opposite end will be appropriated to a postal and telegraph service, and to the military guard. The Architect promises to have all ready by the end of July.

ACCORDING to the *Petite République* a party of about 200 members of the British Society of Naval Architects, including a number of eminent authorities on the British Navy and on British maritime industry, will arrive in Paris on June 12th, and will hold three meetings in the Amphitheatre of the Sorbonne. The journal adds that the Minister of Marine has instructed a Committee, presided over by Admiral Duperre, to make arrangements for receiving the English visitors with some ceremony. Co-operation has also been asked for the same object from other quarters. Soirées and banquets in honour of the visit will be given, not only by Admiral Besnard, Minister of Marine, but also by the Paris Municipal Council and the Paris Chamber of Commerce.

At the meeting of the Association of Municipal and County Engineers at Plymouth reference was made to the important results which flow from the attention paid to Sanitary Science in our day. By the provision of good supplies of pure water, the extension of drainage systems on scientific principles, and some attempt to ensure the erection of healthy dwellings, towns were gradually being made more habitable. The papers read by Mr. J. Paton, borough engineer, and Mr. E. Sandeman, water engineer, gave an admirable account of the municipal works now in progress in Plymouth. They showed, moreover—and this especially applied to Mr. Paton's paper—how much needs to be done before anything approaching perfection will be reached in local sanitation. The great problem to be solved is that of the housing of the working classes. Plymouth is greatly and increasingly overcrowded. At the last census, when it was stated that 26 per cent. of the population of the town was "over-crowded," there were 9,635 houses and a population of 84,253. In the four years which have since elapsed the houses have increased to nearly 11,000 and the population is estimated to have grown to 89,000. To-day there is an average of nearly nine persons per house. It is satisfactory, therefore, to have the assurance of the borough engineer that building operations will be soon commenced at Prince Rock. Devonport and Stonehouse will have to follow suit.

ANOTHER new idea emanates from Chicago. The City has originated a Circulating Picture Gallery, starting it with 50 framed pictures. The arrangement is that each picture may be taken out for two weeks at a time, and the privilege may be once renewed. By this means the member is able to add a little change to the mural adornment of his walls, and the idea is said to have "caught on." The Circulating Picture Gallery seems a method of bringing Art to the people; but it can only apply to lower-priced paintings.

MR. G. F. WATTS, R.A., again gives proof of great interest he takes in the work of the Society known as "The Home Arts and Industries Association," by presenting it with a cheque for 1,000 guineas towards the endowment fund, which he and Mrs. Watts are raising, a fund badly needed to place the Association in a sound position. The public will have an opportunity of becoming acquainted with the work which the Association is doing by visiting the Annual Exhibition, which will be held this year on June 13th and following days at the Albert Hall.

OUR attention has been called in a letter from Paris to a novel device for providing with a living a workman who had been dismissed by his employer, and who was unable to obtain a place elsewhere. Citizens are evidently of a philanthropic turn of mind at Romilly-sur-Suine, in the Department of the Aube. The workmen's syndicate in that part of the country assembled to consider ways and means, and it hit upon the idea of enjoining the local Mayor, who is also an *ouvrier*, to resign his post, and thus make room for his comrade, who is an active Socialist, and could ill be spared by the politicians of his party. According to the law no salary was to be paid to the Mayor, but the retiring functionary had received as compensation for loss of time 365*f.* per annum, and a resolution was passed that this sum should be increased, so as to enable the man who was out of work to earn a comfortable subsistence as head of the municipality. Unfortunately for this bright scheme, the authorities will in all likelihood have something to say in the matter which will not be altogether to the taste of such a philanthropic spirit.

By the narrow majority of two, the Manchester City Council has declined to appoint a Committee to inquire into the advisability of re-arranging and extending the work of the Art Gallery Committee and of obtaining the services of an Art Director to assist them. Their decision is to be regretted. There is

the land it occupies, close upon £100,000. It is certainly to be regretted that Mr. Ewan Christian, the Architect who designed it, should not have lived to witness the final completion of his work.

THE Committee appointed by the Board of Trade to recommend a standard for testing the illuminating power of gas in substitution of the candle standard has presented its Report. It finds that the flame of the Parliamentary sperm candle does not furnish a satisfactory standard, and that it is desirable that the standard should be produced by the process of combustion and of the nature of a flame. No time is to be lost in giving effect to the Committee's recommendations, and a short Bill for the purpose may possibly be promoted during the present Session of Parliament.

ANYTHING about teak is of importance and Vice-Consul Black's report on the teak forests of Siam, compiled during his recent journey to Paknam and Nakonsawan, will doubtless be read with interest. The forests lie, for the most part, to the east and north east of Moulmein, between that port and Luang Prabang. Although some of the forests are said to have been worked for half a century, it is only within the last 10 or 12 years that the industry has reached large dimensions. The trees are first "girdled," that is, incised all round the trunk at a height of four feet from the ground—when they are in flower.

They are then left to die and dry, and are subsequently cut down, marked, and floated down the forest streams, to which they are dragged by elephants, until sooner or later they reach their destination. Elephant labour plays a conspicuous part in all the operations. There is a good deal of timber stealing; but a more serious business is the cutting of saplings, a practice which

threatens to ruin the trade by preventing the renewal of the forests. The local authorities are strongly urged to insist that no tree with a semi-girth of less than 21½ inches shall be felled.

HAYES, one of the farms on Lord Poltimore's Estate, may well be described as a model farm, for it has to a great extent been entirely rebuilt; a new Wing has been added to the house and a new range of sheds have also been erected. This has been done in accordance with plans prepared by Mr. Wreford, Clerk of the Works for the Estate, and carried out under his supervision. Every care has been taken to make a substantial structure, and to render the sanitary arrangements as perfect as possible. The front building is about 100 feet long and 15 feet wide. At the east end, on the ground floor, is an Engine-room, with a Crossley four-horse power engine, of a design which contains many improvements on the exhibit which was awarded the prize at the Royal Show at Cambridge; adjoining this is a pulping and mixing room, a root house, a granary, and a manure house, whilst the floor above forms a spacious loft. At right angles with this building is a large shippen for bullocks, with loft over, and another root house and cellars at the south end. On the west side is a long cattle shed, splendidly arranged; and the square will be completed with stabling, that is now in course of erection, the whole of the building enclosing an extensive manure yard. Tram rails are laid throughout the

Design for a "Village Club House":

PERSPECTIVE SKETCH, BY "ROBIN HOOD."

not a single Gallery of the first importance in Europe in which this one-man power is not the very keystone of the structure. In this connection the name of Birmingham must always be mentioned first, for Mr. Whitworth Wallace, the Art Director to the Birmingham Corporation, has made the Art Gallery of that city, with its annexe at Aston, one of the most successful institutions of the kind in the World. As another example, there is the Dublin National Gallery, where Mr. Walter Armstrong is building up a small, but remarkably fine collection of works, typical of the best Schools of Art. In each instance good results have been attained, nor is there any apparent danger lest either the Birmingham or the Dublin Gallery should become a "one-man collection," as one of the speakers feared would be the case if the Manchester Art Gallery were put in charge of a Director instead of a Committee.

We are glad to be able to announce that at the end of this month the new National Portrait Gallery at Charing Cross will be ready for the reception of the Art treasures that have so long been knocking about without any settled home. Its walls have had ample time to dry, and the only thing remaining to be done, the work of distemping and papering, has been commenced. Before the 1st of June this will have been completed, and nothing will remain to be done but the hanging of the pictures and the ceremonial opening of the building, which has cost altogether, exclusive of the value of

place for conveying the roots and fodder to the spots where they may be required in specially constructed trolleys. Water has been brought in from a well in a field above the house, and it is interesting to note that the supply was discovered by means of the divining rod. The whole of the machinery on the premises, which with the tramways and engine have been fitted by Messrs. Wm. Brenton & Son, of the East Cornwall Iron Works, St. Germans, is of the most modern description. On the ground floor is a root cleaner—which also acts as a feeder—and pulper. In the room above are an oil-cake mill, a grinding mill, a corn cutter, and chaff cutter.

THE Chancel Window at St. Luke's, Queen's Park, Brighton, has just been completed by the filling in of the four remaining lights with richly-stained glass. These four lights represent the Annunciation, the Nativity, the Resurrection, and the Ascension, and together with the centre light, which was put up two years ago, and represents the Crucifixion, form a very striking Window. The unveiling and dedication ceremony took place on Ascension Day.

At a meeting of the Leeds Building Trades' Federation the following resolution has been adopted:—"That this Federation urge the Leeds School Board to adopt the suggestions offered by the employers and employes engaged in the painting trade of Leeds, believing that such a course will be beneficial to the health of children attending the Schools, and in the best interests of the ratepayers of this city." The suggestions are as follows:—(1) That the colour of the distemper on the walls be changed each time, so as to ensure the walls being properly washed. (2) That all work to be re-varnished shall be washed by painters. (3) That one member of the Master Painters' Association and one of the operatives be allowed to visit the Schools during the cleaning, and to examine the work being done. (4) That where a doubt exists as to an employer paying the standard rate, his wages book shall be examined. (5) That a number of the Schools be done during the winter holidays.

MR. J. P. NORRINGTON, Surveyor to the Lambeth Vestry, in his report published at the end of his first experiments in street paving, states that he saved the Vestry no less than £1,146 on the paving of three roads. At the end of 1894, Mr. Norrington became Surveyor to the Lambeth Vestry. Jarrah is the wood used for paving in the Lambeth district, whereas in Fulham but very little of this wood is laid, the greater part being plain deal or creosoted deal. Wherever possible the old deal paving is being substituted by Jarrah paving. In the wear of the two materials the comparison is tremendous. A block of Jarrah wood laid in Westminster Bridge Road in May, 1888, and taken up in February, 1895, had been worn only one inch and a sixteenth. This block was taken from the centre of the road. A paper on the use of Karri and Jarrah for wood paving, which Mr. Norrington read at a largely attended meeting of the Association of Incorporated Municipal and County Engineers, is full of information. In comparing the wear of Jarrah and plain deal blocks, he says that a strip of Jarrah laid in

Lillie Road, Fulham, after three years and a half wear, was $\frac{1}{2}$ in., $\frac{3}{4}$ in. and 1 in. above the plain deal blocks adjoining. He also refers to another experiment made in King's Road, Chelsea, with Karri and Jarrah laid side by side, adjoining yellow deal. After four and a half years' wear the Karri was quarter of an inch above the Jarrah, and the Jarrah three-quarters of an inch above the deal. Mr. Norrington says that Karri is cheaper and generally superior to Jarrah, but the fact that Lloyd's class both woods as nearly equal to teak is strongly in favour of both materials. Both woods possess a natural oil, which is probably equivalent in its action to the creosote forced into deal blocks. In reference to the complaint that hardwood roadways are more slippery than deal, Mr. Norrington says that as it is admitted that hardwood is cleaner, and as slipperiness is generally the result of dirt, proper scavenging should obviate the complaint. But Mr.

built of local stone with brick dressings, and the internal fittings will be of pitch pine. The work is being carried out by Messrs. J. Symons and Son, of Blackwater, from the designs of Mr. J. Hicks, Architect, Redruth.

For the past year or two the Corporation of Halifax has been endeavouring to improve the sewage system of the town, which at present is admittedly unsatisfactory. The scheme that has received favour with most of the people of the town itself is one that provides for the purchase of 19 acres of land on which the sewage may be dealt with by a plan of chemical precipitation—the estimated cost being between £20,000 and £22,000. The proposal includes the introduction of a chemical precipitating process at Salterhebble at a cost of £13,000—for which powers are said to have been actually obtained—and the provision of upwards of ten acres of additional land, together with works for the treatment of the sewage effluent, this second item being expected to absorb £9,000, making £22,000 in all. The Corporation's idea has been to provide settling tanks, to have the sewage treated by one or other of the chemical processes usually resorted to, and to afterwards allow it to flow into precipitating tanks, and thence into the stream, believing that by this process an innocuous effluent would be procured.

THIS quantity of land the authorities thought was ample, and in their opinion they could procure upon it a fluid fit to enter the river after a chemical treatment by ferozone polarite, aluminiferous, charine, or the ordinary filtration system, which is the simple filtration through a filter-bed coated with carbon. In the belief that the Local Government Board would take no exception to the scheme—which includes an area of ten acres more than was originally thought of—application was made to that authority in the usual way for powers to borrow the money required to carry out the work. To this the Local Government Board have replied that the loans acquired for such purposes must be deferred pending the reconsideration by the Council of the arrangements for the disposal of the Borough sewage. What the Local Government Board wish the Corporation to do is to procure more land, so that the sewage, after

passing through settling and precipitating tanks, may be further purified through its passing overland again before being allowed to enter the stream. They are understood to be of opinion that the scheme at present proposed by the Corporation is not sufficient to warrant due purification, and practically suggest a sewage or irrigation farm. To carry out such a scheme the Corporation would, it is said, require about fifty acres of land.

THE Society for Promoting the Enlargement, Building, and Repairing of Churches and Chapels held its monthly meeting at 7, Dean's Yard, Westminster Abbey. Grants of money were made in aid of the following objects:—Building new Churches at North St. Pancras All Hallows, Middlesex, £400; Nottingham St. Catharine, £120; and Penygraig St. Barnabas, in the parish of Llwynypia, Glamorgan, £120, and towards enlarging or otherwise improving the accommodation in the Church at Molash St. Peter, near Canterbury, £15, and South Croxton St. John

THE CENTRAL HALL OF THE NEW GALLERY:
E. R. ROBSON, ARCHITECT.

Norrington says that to overcome this tendency the blocks could be laid close-jointed and diagonally across a road.

At Liskeard, Cornwall, on Tuesday, the Foundation-stone of the New Cottage Hospital, which is being erected at Tremedden, on the outskirts of the town, was laid. The site is situated on high ground adjoining the main road from Liskeard to St. Neot. When completed the building will comprise an administrative block in the centre, and wings on the right and left. The East Wing will contain a Ward for three men, and the West Wing for three women, besides an Accident Ward. There will be in addition two smaller Wards, intended, when not otherwise used, for private patients. A feature of the building will be the provision in the centre block of three bedrooms and sitting-rooms, which will be occupied as a house for parish nurses in the Liskeard district. All the sanitary, warming, and lighting arrangements will be of the latest type. The walls are being

the Baptist, near Leicester, £20. Grants were also made from the Mission Buildings Fund towards building Mission Churches at Marsh Green St. Andrew, in the Parish of Rockbeare, near Exeter, £20, and Pontymoile, in the parish of Pantég, Monmouth, £30. The following grants were also paid for works completed:—Roath St. Saviour, Cardiff, £50, balance of a grant of £200; Morley St. Paul, near Leeds, £40; Stetchworth St. Peter, near Newmarket, £20, on account of a grant of £40; Strumpshaw St. Peter, near Norwich, £15, on account of a grant of £20; and Chester St. Oswald, £30. In addition to this the sum of £449 was paid towards the repairs of 17 Churches.

PLANS for the sixth County Asylum in London are being prepared by Mr. Hine, the Architect of the Asylums' Committee, but before they can be adopted and the work begun they must be accepted by the Commissioners of Lunacy and the Home Secretary. The process of passing through plans occupies, as a rule, from six months to a year. The site for the new Asylum is at Bexley, and has been acquired. The land is at present occupied by Mr. Maxim, who lives at the old Mansion House called The Balwyns, and has a track for his flying machine laid down in the grounds. Mr. Maxim will have to remove his "plant."

THE Memorial Throne erected in Norwich Cathedral to the memory of Bishop Pelham, and unveiled by the Prince of Wales, consists of a desk or front richly carved, with three 14th century crocketed arches with elaborately treated finials. The sides of the desk are filled with sunk and moulded tracery, and with foliated panels and spandrels. The edges of the upper portions of the desk are enriched with elaborately carved pateræ, no two of which are alike. The Throne itself is a very substantial and spacious oak seat surmounted by an elaborate canopy which rises to a height of 23ft. In a niche on the western side of the Throne will be placed a figure of the late Bishop Pelham, and in a corresponding recess on the eastern side an effigy representing the first Bishop of the See, Herbert de Losinga. On the north face of the back panel is a shield, bearing the arms of Bishop Pelham, impaling those of the See of Norwich, surmounted by a mitre, and encircled by a band, on which are carved the words "In memory of John Thomas Pelham, 1857-93." The whole is enclosed in a quatrefoil embellishment, in which the rose, shamrock, and thistle are unostentatiously introduced. On the eastern and western faces are shields with the arms of the See and the Dean and Chapter of Norwich.

THE new National Schools at Hunslet, said to be one of the finest elementary Schools in Leeds, were opened by Viscount Cross, on Wednesday afternoon last. The site is adjacent to Hunslet Parish Church. The cost has been about £8,000 and the accom-

modation is for 1,180 scholars. At each end an easy stone staircase leads to the two upper floors and the numerous Cloak and Class Rooms. The Infant Department, which accommodates 400 children, is on the ground floor, consists of a large Hall, 83 feet by 30 feet and 16 feet high, with Class Rooms adjoining. The two upper floors are for boys and girls respectively, accommodating 780 children altogether, and the dimensions are much the same, though the top floor is loftier. The warming and other arrangements are of the latest character, and spacious gravelled playgrounds surround the building for each department. Mr. J. E. Leake, of Leeds, is the Architect, and the contractors were Messrs. Oakes and Son.

THE energetic Central Committee of the Paris Universal Exhibition of 1900 is determined that the great show shall "beat the record." The series of colossal buildings in lath and canvas, or in more solid materials, which busy inventors have suggested to the jury, contains some imaginative reproductions of the past. Such, for instance, are

of the sage, so intimately associated with his life and work, shall henceforth be preserved in the name of the public. Considerable repairs on the property are necessary, and the proposal is to put these in hand without delay. The sum subscribed towards the fund amounts to over £2,000, and unless this is supplemented the house will have to be absolutely self-supporting.

THE site of the new Glasgow Samaritan Hospital consists of an isolated piece of ground extending to about three-fourths of an acre, exactly to the south of the Victoria Baths, and has a southern frontage towards Coplawhill Road. The building when completed will consist of two distinct blocks—the Hospital and Administrative—connected by Corridors. The Hospital block will consist of two floors, each containing four wards, accommodation being thus provided for 28 patients. The Administrative block will consist of three floors. The Out-houses consist of the Mortuary, Post-mortem Rooms, Wash-house, Laundry, &c. The estimated cost of the building is £8,000. The Architects are Messrs. M'Whannel & Rogerson, West Regent Street.

THE Sussex Archaeological Society proposes to visit Eastbourne on July 25th and 26th. At a meeting of the Eastbourne Town Council Alderman Farncombe suggested that on the first day the members should visit Westham Church, Pevensey Castle, and Pevensey Church, and Hurstmonceux Castle and Church. On the second day they might visit the Manor House grounds and see the Cornish Cross, which many people in Eastbourne had never seen, the Parish Church and the interesting fish-markings recently discovered on the pillars, and two or three other buildings in the Old Town. They might then go on to East-

dean, and Mr. Par-

ington would show them the ancient British urn found on the Downs. They might have some excavations made there, visit Eastdean Church, and go on to Friston, and Alfriston. He thought some such scheme would probably meet with favour from the Society.

MR. LOW, the leader of municipal reform in the United States, has just presented Columbia College, New York City, with £200,000, to be used in erecting a Library building in honour of Mr. Low's father. Two of Mr. Low's friends and brother reformers have also given large sums to Columbia. Mr. W. C. Schemmerhorn has given £60,000 to erect a Natural Science building, and Mr. F. A. Schemmerhorn has presented the collection of books, pamphlets, and newspapers known as the Townsend Collection, together with a cheque for £5,000 to cover costs of indexing. Columbia College has 258 instructors, 1,800 students, a library of 175,000 volumes, productive funds amounting to about £2,000,000, and a yearly income, exclusive of benefactions, of £140,000.

THE CENTRAL HALL OF THE NEW GALLERY: E. R. ROBSON, ARCHITECT.

the Acropolis of Athens in the great age of ancient Greece; the great Pyramids of Egypt, and a Sphinx; the Hanging Gardens of Semeramis; the facsimile of the Colosseum of Rome, with actual fights of wild beasts; a banquet of Sardanapalus, with a splendid Oriental Theatre and Public Baths, exactly as at the period of that gorgeous spendthrift; the Palace of Tamerlane at Samarcand. Other suggestions depart from all ground of history, and propose to charm the visitors to Paris with sheer fantastic creations. Such is a Castle in the Air; and a zealous palæontologist proposes a reproduction of the "World before the Flood." A genius recommended a "construction of the New Jerusalem, after the model described in the Apocalypse, with its walls, towers, and gates." Another recommended "the discovery of the North Pole." This does not nearly exhaust the catalogue.

WE are pleased to learn that the Committee at the head of the movement for acquiring Carlyle's House in Chelsea as a memorial of him has now completed the purchase. It is definitely settled, therefore, that the old home

NOTICE.

Our Issue of

JUNE 11th, 1895.

Will mark the Second Great Development of

The Builders' Journal,

Which now possesses a

Larger Circulation

Than any other Architectural Journal published in this country. This

SPECIAL ISSUE

Will have the whole of its pages Printed on White Paper, and possess a

COVER

Of Stiff Green Paper, which is now being manufactured by an English Maker. We have invited three of the best known Pen and Ink Artists to submit us designs for a New Head Piece, which will embellish the issue. This Number will be sent by Post to Every Architect, Surveyor, Borough, Diocesan and Ecclesiastical Surveyor, Clerk to Local Board, in England, Ireland, Scotland and Wales. This, with the Publisher's ordinary Edition, will make the output close upon

25,000 Copies.

A FRENCH VIEW OF LONDON.

M. ALPHONSE DAUDET has been speaking his mind pretty freely about London and Londoners. What strikes him most forcibly in our Metropolis is the silence. This seems odd at first, but M. Daudet draws a distinction between sound and noise. The sea, he says, is silent in spite of its monotonous roar. In London the silence is disquieting, "for millions of taciturn automata seem passing on a stage in a dream, on an india-rubber floor." That is an extremely picturesque description of the movement of London from a Parisian's point of view. M. Daudet is deeply impressed by the size of everything, especially by the Tower Bridge, "that mass of timber and iron slowly and fearfully parting, and then falling back and resuming its original place." But mere size is not enough for the artist. The lavish ugliness of London distresses our visitor. He sees "an extreme senseless abundance." The monuments strike him as terrible, and that is not to be wondered at, for the Englishmen with any idea of Art and proportion is perpetually afflicted by the London statues. "You have a sensation," says M. Daudet in his vivid way, "of an immense box of stupendous toys scattered pell-mell over a place. Look, there are one tower, two towers, ten towers, and still more and more, and pedestals and statues, and palaces and colonnades, and cupolas and belfries, and never big enough, never lofty enough, never imposing enough." And then comes the inevitable contrast. "Paris seems to me like a pearl, very delicate and artistic. I think of the harmonious entirety of its quays, the fine proportions of the Louvre, of the beginning of the Champs Elysées. Oh, you do not find that sensation here." You do not—we admit it with pain. But M. Daudet is learning to like us, in spite of our unconscionable belfries. He says frankly that he came to London with a detestation of the English race. "But now, in spite of the horrible cookery of coarse meat, in spite of the tea, to which I cannot get accustomed, I am beginning to be won over. One thing particularly strikes me, the cordiality of the people for France, as evinced in the letters I receive, and the attentions without any parade which are paid me wherever I go."

The Builders' Journal.

MEN WHO BUILD.

No. 14.

MR. E. R. ROBSON, F.S.A.

It is a grand achievement for a man, particularly an Architect, to pin his faith to one particular style or period, and to work in it continuously against all odds. Before the London

School Board started on its glorious work, and before Mr. Robson publicly took hold of the reins of School planning, nothing in Architecture was so wretchedly imperfect as that of Scholastic Design. A School looked anything, between a four storied warehouse and a Gothic Temple. Its plan mirrored the whims of its particular Architect, it had few set rules, and fewer regulations. Mr. Robson, himself, developed School Architecture. Hundreds of Schools, worked from the same details, grew up all over the Metropolis. Country Architects, with the instincts peculiar to their race, soon absorbed the planning and the Architectural treatment of the Board Schools, so that in less than five-and-twenty years, a distinct method of School planning and design has spread itself over the whole country, and the source of all this inspiration is the subject of this sketch. When E. R. Robson resigned his position at the School Board, to be followed by Thomas Bailey, his chief assistant who has already figured in this series of "Men who Build," he merely resigned to accept the more responsible and less harassing appointment of Architect to the Board of Education, so that in the multitudinous drawings which are referred to his department, he can witness the outcome of his own initiative. There is now a uniformity and similarity of plan and elevation of Schools throughout England, that would be troublesome to the student of Architecture were it not so strikingly apparent: and it will not be forgotten that in very many districts of London and other great towns, and even in our smaller cities, the Schools are the only buildings which possess the slightest Architectural merits.

There was nothing material in the early training of E. R. Robson that prompted him to select this particular department of his Profession, except that, unlike most young men, he preferred to study, to measure, and to sketch the planning of buildings, even before a pretty "bit," or a grotesque, captured his eye. And Professionalism could do with a little more of the same faculty now. This propensity of his followed him over his sketching tours on the Continent, and when he finally fixed upon practice, he had an amount of practical experience and

data at his finger ends, which became of inestimable value to him later. Mr. Robson has, of course, "passed through" many good offices in his early days, but not until a couple of years after he had assumed the Architectural destinies of the London School Board, was it apparent that a master of School planning had arrived. The development of his ideas is known throughout the World, for England possesses Scholastic Architecture worked upon scientific and practical lines, unequalled by any

other European country; and its Technical School buildings are fast following suit. The fact that Mr. Robson's successor at the School Board has continued the "Architecture" of his predecessor, merely placing upon it his own individuality, makes the elevations of London Schools as a whole still more striking: for the uniformity of style has been, under the wisdom of the Board, so judiciously adhered to.

Mr. Robson, in both his official positions, has possessed the privilege of private practice. His Institute of Painters in Water-Colours, in Piccadilly, is by many good judges considered to be one of the best elevations in London; but how sadly marred by the wretched placards of Commercialism and the

THE TERRACE FRONT OF TROTTER'S CLIFF, SIR SYDNEY WATERLOW'S HOUSE, BY E. R. ROBSON.

individualities of shopkeepers! The sculpture over the entrance, is a delicate piece of work and worthy the position assigned to it in the pages of this issue. But as far as London is concerned, Mr. Robson may rest his reputation upon the People's Palace, which, although yet incomplete, is undoubtedly the finest work of its kind in the country. We have seen happier phases of Mr. Robson's talent than the Front of the People's Palace, but in critically dealing with a work of this kind—which we have no notion of doing here—it should always be remembered that Architects are invariably debarred the privilege—which is granted to every other Art and Profession under the sun—of initiating work from their own souls, unhampered by the desires and ideas of cranky clients. We have no knowledge that such was the case with the People's Palace, but it may have been so.

Mr. Robson is a man of action and resource. The story of the New Gallery proves it. When the proprietors were "removed" from the Grosvenor Galleries, they found themselves without a habitation, until Mr. Philip Webb—than whom there is no more delightful man and architect living—sent them to Mr. Robson for succour. They wanted a good site for their Gallery, and Mr. Robson advised the Old Market in Regent Street. It was not considered suitable, and the Architect's advice not being accepted he naturally withdrew. But some days after the proprietors returned to Mr. Robson determined to withdraw their objection to the Regent Street project if he could transform the building into Art Galleries in three months. Considering that a rod had not even been passed over the site, this demand was startling, but after all a bagatelle to a man of grit. Within an hour of the receipt of his instructions, Mr. Robson visited the works of Messrs. Farmer and Brindley, hunting for marble. The firm, fortunately, had just received a big consignment from the Italian Quarries, and before Mr. Robson left the yard, the saws were actually at work cutting some fine blocks into slabs, and the Architect returned to survey his site and to mature his scheme. At daylight the following morning he was ready for the workmen, and in a few hours a gang had taken possession of the building and commenced operations. Within nine weeks from the day on which he first visited Farmer and Brindley's yard, the new Gallery was handed over to its proprietors.

We believe we are correct in saying that Mr. Robson has never used terra cotta as a building material. He is one of those men who do not consider it so particularly adapted to the atmospheric conditions of large towns. Mr. Halsey Ricardo's salt glazed brickwork is distinctly preferable, and he means to follow

the example when occasion serves. One cannot glance at the series of beautiful photographs of Sir Sidney Waterlow's fine house in Surrey, without discovering Mr. Robson's leaning to Italian influences. The Portè Cochère of Trotters Cliff is as fine a piece of modern design as we have seen, and there is a stately charm about the Terrace Front, which transcends above the picturesqueness of much of the so called Queen Anne stuff which irresponsible Architects are guilty of. The two turrets were not in Mr. Robson's original drawings, but were constructed on the express demands of the owner. With those who consider the Classical is the right feeling to introduce into English homes the Hall of Sir Sydney Waterlow's house will find much favour.

HALL OF TROTTER'S CLIFF HOUSE, SURREY, FOR SIR SYDNEY WATERLOW:
E. R. ROBSON, ARCHITECT.

Mr. Robson is one of the few men in the Profession who have a grip of matters beyond the elements of design. It were necessary, or he would not occupy his official position at the Board of Education. It is easy to imagine the number of scholastic schemes which comes under his personal notice, and the reports he makes personally upon them all. It has naturally, in the experience of years, become somewhat of routine this reporting upon the planning of schools, and it may be explanative of how he can get through a week's work in a day. In his fine suite of rooms opposite Barry's crowning work at Westminster, Mr. Robson exerts his private influence on Architectural design; but the great point of his life lies between the Thames Embankment and Whitehall. If he did no other stroke of

actual work, but rested, in the prime of life, on the laurels which we gladly offer him, he would have accomplished a noble record given indeed, to but few modern Architects to accomplish.

EXTENSIVE additions are now being made to St. Paul's Schools, Walkden, the Earl of Ellesmere having agreed to defray the cost, £1,200. Additional accommodation will be gained for nearly 200 children.

MR. G. F. WATTS, R.A., has given the Home Arts and Industries Association a cheque for 1,000 guineas towards the endowment fund which he and Mrs. Watts are raising, and which is needed to place the Association in a sound position. The Annual Exhibition of the Association will be held on June 13th, at the Royal Albert Hall.

THE idea of holding an International Exhibition at Montreal next year, is likely to fall through on account of the refusal of the Dominion Government to grant the desired sum of 250,000 dols. in aid of the project.

At a sale which took place recently at Glangwina, the residence of Mr. W. H. Graves (Lord-Lieutenant of Carnarvonshire), an old and very dirty picture was bought for £5 by a gentleman, who sent it to Christie's in order to ascertain if it was of any value. The painting is believed to be a missing Rubens, and is roughly valued at £7,000.

THE Society of St. Nicholas' College, is about to open another great School at Worksop, in connection with its Midland branch, of which the headquarters are at Denstone, to be called St. Cuthbert's College. The buildings, which will be sufficient for an instalment of 200 boarders, include a Great Hall, 116 ft. in length, Libraries, Class-Rooms, Masters' Rooms, Provost's Lodgings, Dormitories, and extensive Offices for servants, &c., and have cost £18,400. Another Wing, which will contain a temporary Chapel, has been commenced, and the whole blockforms an imposing feature amidst the beautiful forest scenery of the Dukeries in which it stands.

THE foundation stone of the new buildings at Deptford Foreign Cattle Market will be laid on the 14th of next month.

THE amount of the accepted tender of Garton & King, Exeter, for works for Exmouth Water Company, is £1,582 3s. 4d.

MESSRS. WALSH & WRIGLEY, Architects, Hebden Bridge, have been instructed to prepare plans for a Catholic Church at that place for 400 persons, with Presbytery adjoining.

GREAT progress is being made with the St. John's Church Tower, Bognor. In fact the lofty structure will soon be completed, and, towering far above the Water Tower and other prominent buildings, will form a landmark for that part of the Sussex coast.

A NOVEL Art Exhibition will be opened shortly at Messrs. Dickinson & Foster's Galleries in New Bond Street. It will consist of pictures, prints, &c., relating to Dorset, and illustrating "Wessex," and more especially the towns, villages, and scenes described in Mr. Thomas Hardy's novels.

ANGLO-SAXON ARCHITECTURE.

PROFESSOR G. BALDWIN BROWN AT THE R.I.B.A.

A PAPER was read by Prof. G. Baldwin Brown at the Meeting of the R.I.B.A., on the 20th inst., on "Some Characteristics of Pre-Conquest Architecture." The lecturer said that a century ago the word "Saxon" was commonly applied in a loose sense to denote all round-arched Mediæval structures, including those of Norman origin. In Rickman's "Studies of the Styles of English Architecture," the Norman was made the first of the styles there described and discriminated. Appearing as it did in the Architectural history of the country, between the Roman and the Norman periods, Saxon work might seem at first sight very easy of identification. Roman work, it might be said, and Norman work were alike unmistakable; but in small and unpretending structures the Norman style showed itself still uncertain and tentative. At Bernay, in Normandy, in the first half of the eleventh century, and in Edward the Confessor's buildings at Westminster, the masonry and details had the pronounced Norman character; while country Churches in Normandy contemporary with Bernay, and those erected in Britain in the first generation after the Conquest, were often built irregularly of small materials, and were destitute of those special constructive and ornamental features by which the style was generally recognised. A certain air of simple and severe massiveness, while the use of blocks of abnormal size lent to the structure a certain megalithic aspect, was a trait to some extent Roman, but was opposed to Norman practice. Though at times elaborate, the enrichment seemed to bring before us craftsmen working, not according to a living tradition of style, but from imperfect remembrance or hearsay. We might describe pre-Conquest Architecture as presenting a decidedly primitive aspect. In regard to its facing, Saxon masonry had no special consistent character. Masonry of stones, squared and laid in level courses, was very characteristic of Saxon work of the better kind, and was well represented at Bosham, near Chichester, and Billingham, county Durham. The external use of plaster was proved in many cases by the setting back of the wall-face half-an-inch behind the quoins. The absence of buttresses was a noteworthy feature of Saxon as distinct from Norman walling; but the chief peculiarity was to be found in the quoining. There was an important difference in the structure of the wall between the work of the Romans and the Normans. The Saxon wall was a single thing, the Roman and the Norman wall, at any rate in the twelfth century, a threefold affair, consisting of two carefully-constructed outer faces and an interior filling of rougher material. The Norman wall was generally thicker than the Saxon, and it was to the credit of Saxon builders that their comparatively thin walls, often less than 3 ft. in thickness, had stood as well as has been the case. The Saxon column was but a prop, with nothing organic about it. It was a defect in Rickman's and other works that they dwelt too much on the classification of details. Referring to the Saxon Towers, he suggested that they were partly built as strongholds against the Danes, a purpose which they would fairly answer in a constructive sense. Referring to some of the most complete examples of Saxon Churches, at Escomb and Bradford-on-Avon, and St. Mary's, Dover Castle, he observed that each of these testified to the existence of a stone Church on the site before the Conquest, and these survivals were proof that permanent Churches existed on the present sites before the Norman epoch. It was true that many of the earlier Churches were of wood, one solitary example of which material yet existed at Greenstead, near Ongar, Essex; but from the Venerable Bede we learned that Churches were at all periods constructed of stone as well as of wood. A single Saxon quoin possessed rich historical associations to the student of Architecture. The Lecturer proceeded to urge the importance of the consideration of the direction of roads and sites of early buildings in the study of history, pointing out that the rural green was the oldest symbol of English life. There seemed to be two periods of pre-Norman

Church-building, the Romano-British period of the conversion of the Saxons to Christianity, and the rebuildings by Canute in the early part of the eleventh century. Apart from the remains recently found at Silchester, the only existing Church of the Romano-British period was the little one of St. Pancras at Canterbury, which was very different in style to the work at, say, Brixworth, or St. Mary's, Dover. The Saxon builders frequently utilised Roman materials, as in these cases. There was a marked contrast between the pre-Conquest buildings in Kent and Sussex and those in the north of England. The Churches of Monkwearmouth and Jarrow, the latter now demolished, at Escomb, near Bishop Auckland, and at Stow, Lincolnshire, and the Chapel of St. Lawrence, at Bradford-on-Avon, were all, he believed, buildings of the seventh and eighth centuries. The Church of St. Mary, at Dover Castle, was of a totally different class; it was a well-developed Church with a Central Tower; it was certainly not a reproduction of a Roman basilica, but was based upon a Roman Mortuary Chapel. The buildings of Monkwearmouth, Jarrow, and Bradford-on-Avon were entirely different from this Castle Chapel; they followed the Celtic traditions directly derived from the Stone Architecture of Ireland. The chief characteristics of this Celtic type of Church were height and narrowness, the plan having a narrow aisleless Nave and a square-ended Chancel agreeing with the normal Celtic arrangement. The sloping jambs of doors and windows, and the use of large stones might be equally paralleled in Ireland. In Saxon work these features were always carried out in squared and coursed masonry, whereas in Ireland they were always of rough native stone. In Kent, where the Roman influence and tradition were much greater, the Churches were Apisidal; but throughout England Celtic traditions prevailed.

In the discussion which followed Mr. W. White, F.S.A., said that he thought that the paper read treated more upon a historical than a practical subject, and that he should like the Professor's learning brought to bear upon the history of the discoveries recently made at Durham Cathedral. Mr. R. Phené Spiers and Mr. Rickman also took part in the discussion.

PROFESSIONAL PARAGRAPHS.

ON Tuesday a meeting of the Stewartry Road Board was held at Castle-Douglas to consider a report on Kirkcudbright Bridge by Messrs. Strain, Robertson & Thomson, Glasgow. The Bridge was erected in 1868 at an expenditure of £10,000, and its present insecure condition is due to the recent severe weather.

FROM designs by Mr. Walter G. Doolan, M.A., of Dublin, a Roman Catholic Church of St. Mary is about to be built at New Ross. The contract has been taken at £16,000, by Mr. A. Cullen, of New Ross.

THE plans prepared by Mr. J. W. Tennant (Tennant & Bagley), the recently appointed Architect to the Pontefract Joint Hospital Board, which he has prepared of a new Infectious Diseases Hospital, at an estimated cost of £4,800, have been sent to the Local Government Board for approval.

THE Exminster Church Restoration Committee has resolved that Messrs. Rowell, the Architects, issue specifications and solicit tenders from a selected number of contractors with a view to the restoration of the roof on similar lines as at present existing. Tenders will also be invited for reslating the roof.

A NEW North Aisle has been added to St. Agnes' Church, Birch, which is situated in Slade Lane, Longsight, Manchester. Additional accommodation is obtained for 200 persons. The Aisle is divided from the Nave by an arcade of four arches, and is terminated at the West end by a semi-circular Apse. On the North side are four large equal gables, the windows in which give light and air and add to the picturesqueness of the building. The work has been built by Mr. Thos. Scott, from designs by and under the superintendence of Mr. Medland Taylor, F.R.I.B.A., of Manchester. The cost has been £1,400.

NEW Roman Catholic Schools for St. Andrew's parish are about to be built in Great Brunswick Street, Dublin on the site of Sibthorpe's marble works. The buildings will cost £5,200. Mr. William Hague, Dawson Street, Dublin, is the Architect, and Messrs. Michael Meade and Son, Great Brunswick Street, in the same city, are the contractors.

A VICARAGE is about to be built for the Incumbent of the Parish of S. Mathew, Blackburn, a house of residence not being included in the scheme of Church building in the erection of the edifice in 1886. The Vicarage, which occupies a site next the Church, is being built from designs by Mr. James Birtwistle, Architect, of Blackburn.

THE new Altar and fittings in the Side Chapel of St. Dunstan's, Earle Road, Liverpool, were recently dedicated. The Chapel presents a very pleasing appearance, the rich hangings and ornaments harmonising with the rest of this beautiful Church, the whole work being from the designs of Mr. C. E. Deacon, the Architect of the Church.

THE new bank building at Horncastle, for the Lincoln and Lindsey Banking Company, Ltd., which is almost complete, is in the Late Gothic style, and has been designed by Mr. William Scorer, Architect, Lincoln. Mr. Frank Bell and Mr. George Pike (both of Horncastle) being the builders. The carving, both wood and stone, has been intrusted to Messrs. M. Tuttell and Son, Architectural sculptors, Lincoln.

MR. PAUL SPEAKE, Chairman of the New Offices Committee of the Queensbury Urban District Council, has laid the memorial stone of new Council Offices, which are to be erected in Albert Road, from plans by Mr. J. Drake, Architect, of Queensbury, Bradford, and which will cost £2,500. The building will comprise Clerks, Surveyors, and Rate Collectors' Offices, and a large Council Room, also a Fire Brigade Station and Mortuary.

A NEW Infants' School has been added to the School Buildings of St. Luke's Parish, Beeston Hill, Leeds. By this extension extra accommodation has been gained for 250 children. There are four Class Rooms, a small Hall, and Cloak Rooms. Advantage has been taken of a fall in the site to build a large Room, which will be fitted up as a Gymnasium. The cost has been £1,500. The Architect is Mr. W. S. Braithwaite, of Leeds.

THE Speyside Distillery Company has just accepted contracts for the erection of a new Distillery at Kingussie, on ground acquired from Mr. Baillie of Dochfour immediately behind Pullar's Hotel. The works promise to be about the largest and most complete in the North. It is proposed to have the building lighted by electricity. The estimated total cost is given at from £15,000 to £20,000. Mr. Alex. Mackenzie, C.E., Architect, Kingussie, is designer of the works.

ST. JAMES'S Church, Morpeth, an edifice built fifty years ago, has been greatly improved by the removal of the original plain Chancel pews and the introduction of Choir-stalls. They have been made by Messrs. Sopwith & Co., Newcastle, from designs by Messrs. Boulds & Hardy, Architects, Morpeth. The material used is wainscot oak, and the style adopted is an adaptation of Norman zigzag; billet, nail-head, pellet, and lozenge-shaped mouldings, and conventional carvings are employed in all the stalls; those for the priests are distinguished by having their ends further enriched with wood-carving.

MEMORIAL stones of a new Wesleyan Church at Middleton, near Leeds, have been laid. The new Church will be built entirely of brick and terra cotta, and in the English Renaissance style of Architecture; having accommodation for 364 persons including 50 in the Gallery. The plan also comprises a Minister's Vestry, and also a large Vestry to accommodate 40 people. The total length of the Church will be 67 feet, and the breadth 40 feet. The Architects are Messrs. T. and C. B. Howdill, A.R.I.B.A., of Leeds, and the contractors are—for brick-work and joinery, Mr. Jos. Pullan, Leeds; plumber, H. Lumley; slater, J. Season; plasterer, Mr. Branton; ironwork, Messrs. Beckwith; painters, Messrs. Roylance and Horsman; heating engineer, Mr. George Tankard. The total cost will be £1,800.

SECRETS OF PICTURE MAKING.

MR. SEYMOUR LUCAS, A.R.A., ON THE AVERAGE CULTURED PERSON.

MANY people, so Mr. Seymour Lucas appears to think, might become fairly good Art critics, if they would only add to a certain amount of culture and natural taste, a little knowledge of the technicalities of Painting. In his lecture on "Picture Making," at the Royal Institution, the painter paid a distinct compliment to the average cultured person. This is the sort of material, so we gather, out of which critics ought to be compounded. What is chiefly lacking is technical knowledge. The average person generally appreciates a good picture when he sees it, but press him as to how much of the combined effect is due to correct grouping, harmony in composition, chiaroscuro, and the rest of it, and he can only flounder in the vaguest of generalities. Mr. Seymour Lucas would mend these defects, and hence the discourses which he is giving to the Royal Institution habitués, most

Rembrandt, Turner, and other great men. Roughly speaking, the rule is that one-third of the picture must be dark, and the other two-thirds light, or *vice versa* (it does not matter), and if this proportion is preserved it is equally unimportant what position the dark space occupies, whether as a band at the bottom, as in a Dutch landscape or sea picture, or running diagonally across one corner or at an end. The half-tones are confined to the light two-thirds. Mr. Lucas said nothing was more difficult to paint than a broad mass of sky; hence in modern pictures the sky-line was kept high. Not so the old Dutchman, who revelled in a low horizon and a vast sky. In this particular also was Turner's supremacy. Painters of Interiors reserve their one-third light for their figures. Touching on the question of "breadth," the lecturer illustrated the sort of difficulty to be contended against by throwing on the screen a photograph of his own picture in which the Earl of Leicester is seen emerging from a doorway, and a number of courtiers are awaiting him outside. The two

PROFESSIONAL PARAGRAPHS.

THE School Board for Newcastle-on-Tyne, has appointed Mr. W. Lister Newcombe Architect for a new School to be built at South Byker.

THE memorial stone of St. Margaret's Established Church at Barnhill has been laid. Mr. Carmichael, London, is the Architect of the building.

TENDERS have been accepted for the building of the Wake Memorial Church at Sunnyside, where a site was secured some months ago. The cost of structure will be about £4,000. The edifice is being erected by subscriptions in memory of the late Vicar.

MR. J. JACKSON, Barry Street, Leeds, is the Architect for the new Baptist Chapel, at Heaton, Yorks. A Lecture Hall and Class Room will be obtained under the Chapel. The cost will be £3,377. The builders are Mr. Patefield, mason; Messrs. Foster and Fortune, joiners.

A LONDON SCHOOL: BY E. R. ROBSON, F.S.A.

of whom are probably also consistent "private viewers." The present lecture was devoted to the general principles of Picture-making, and was illustrated very aptly with lantern slide reproductions of many well-known canvases in the National Gallery. Mr. Lucas mainly dealt upon the qualities of colour, breadth, and chiaroscuro. It is possible, he thinks, to teach a good deal of all three by rule of Science as Sir Joshua Reynolds contended. But after all a good colourist is born, not made. Colour is the most personal element in a painting; every artist has his own scheme of colour, much as he may try to follow other masters to unlock their secret. Mr. Lucas himself, went to Spain to get hold of the colour methods of Velasquez, but when he came back and commenced to use his knowledge, he still found that the colour was Seymour Lucas and not Velasquez. Speaking of the management of light and shadow, and the secret of getting "breadth" into a picture, the lecturer exhibited a number of diagrams to illustrate the scheme adopted by

main figures take most of the bright light, but as originally painted they were somewhat isolated, and the effect proved weak. Mr. Lucas took the advice of a brother artist, who recommended that the pavement (originally dark) connecting the two figures should be painted as white marble. By this means the points of high light in the picture were made continuous, and the effect was at once to give the necessary "breadth." The point was also emphasised by reference to a number of Turner's finest landscapes. In conclusion, the lecturer dealt with the important point of subordination of detail, remarking that the Dutch Masters, who carried detail further than any other School, reserved their finest brushwork for the most distant parts of the scene.

THE colossal bronze Statue of the late Marshal MacMahon, which is destined to adorn the Market Square of Magenta, was successfully cast a few days ago at Pricotta, near Milan.

As a memorial of the late Father Healy, a small Hospital is about to be built in Dargle Road, Dublin. Mr. Albert E. Murray, of Dawson Street, Dublin, is the Architect, and the contractor is Mr. Kiernan, of Talbot Street, Dublin.

TEN designs were submitted in the Leek Markets Competition about the middle of March, and on Tuesday last the Urban District Council accepted their committee's recommendation to premiate the following:—1, Mr. O. T. Brealey ("4d. Stamp"); 2, Messrs. W. Sugden & Son, F.R.I.B.A., and Messrs. Mosley & Anderson ("Bon Marché"); 3, Messrs. Baynes & Campbell ("Auld Lang Syne"). Mr. John Brealey, the Chairman of the Urban District Council, presided at this meeting. Messrs. Sugden had memorialised the Council to appoint a professional assessor to adjudicate upon the various designs sent in. This was negatived, though supported by a strong body upon the Council and by the local press.

ARCHITECTURE AND DESIGN.

MR. WALTER CRANE AT THE A.A.

[In view of the importance of Mr. Crane's Paper, we print a page this week, and shall give a further instalment in our next Issue.]

THE large attendance of members at the A.A. meeting of the Session, at 9, Conduit Street, on Friday evening, was undoubtedly due to Mr. Walter Crane, who came provided with a Paper admirably prepared and careful in detail, headed "The Influence of Architectural Style upon Design," a subject with which, perhaps, no one else is quite so competent to deal. The Author was surrounded by a large number of sketches, which were so perfectly executed, that the Chairman (Mr. E. W. Mountford), at the close of the meeting, requested the loan of them at some future period on behalf of the Association, a request to which Mr. Crane at once acceded, and one of which the audience expressed their heartiest approbation. Mr. Walter Crane said: It seems tolerably obvious that without shelter of some kind, without walls or roof, without suitable materials, determined limits, proportions and prepared surfaces, the art of the decorative designer, whether in Sculpture or Painting, or any other method of expression, could not have much chance of serious development, historic continuity, or permanent existence. The natural walls of cliffs and caves might be utilised, certainly, as they have been in pre-historic times; bold tribal ensigns such as the "White Horse," cut through the green turf on the chalk in a kind of natural squaffito, as it appears upon the Wiltshire Down, might exist (with periodic scouring) for ages, but it is only with the development of the Constructive Art that the organic ornament springs to life; only with the squaring and joining of timbers, the moulding of bricks and tiles, and the cutting and dressing of stone, and their use under the constructive necessities of a building that the sense of relation or proportion is born, without which we could have no Fine Art at all.

It may be an open question whether the impressionist individual graphic sketcher or the constructive associated craftsman designer represented the primitive artistic condition—we are apt to colour history as well as Art by the tint of our own sympathies—but, judging from the fragmentary squaffiti of the cave-men it would at most seem as if the former was the first in the field, and that man only slowly found his way to the harmonious, related, and ornamental forms of Art after he had made some progress in the constitution of the primitivedwelling.

It seems highly probable that the material and method of construction of the wicker and wattled walls of the primitive hut gave motives for some of the first types of pattern design.

The primitive hunter-artist might scratch the forms of the reindeer and mammoth upon the bone handles of his weapons, or the herdsman-astronomer cut the signs of the sun and moon, of fire and water upon clay or stone; but the sense of rhythm and harmonious recurring line would have to be learned in following the useful craft of the rush-plaiter and basket maker, to whose simple constructive methods we owe at least two important plans of ornament—the chequer and the spiral meandering line. Their value, too, has never been forgotten in ornamental work, and when man learned to work stone and bronze he still perpetuated these primitive motives.

In considering the bearing of the Architectural influence upon Decorative Design of all kinds, which is so marked in all historic Art, we may conveniently adopt Mr. Ruskin's three broad and main divisions which indicate the fundamental differences of constructive principle in Architecture, namely:—

I. The Architecture of the Lintel.

II. The Architecture of the Round Arch.

III. The Architecture of the Pointed Arch.

Or, characterising them from the decorators' point of view, by their leading ornamental spaces or features, we might distinguish them severally as:—

I. The Architecture of the Frieze and Pediment.

II. The Architecture of the Spandril and Dome.

III. The Architecture of the Vault and Window.

Of Lintel Architecture, ancient Egypt gives us the most massive examples, but it seems most probable even here stone construction only followed wood, or rather reeds and clay, and that the types and systems of ornamental were originally suggested by these primitive materials.

If we look at the primitive Egyptian house, planned for a hot climate, built by the great river-side, of materials furnished by the river itself, we may see the type of the massive Egyptian Temple column (in the clustered reeds fixed at the angles). This but represents in stone, and more formally, a bundle of lotus reeds, bound together by fillets of rushes with one bud or flower clustered at the top to form the capital. The coved casting of the flat mud-roof, made of rushes, is perpetuated in the pointed cornice of the pylons of the great Temples, as at Edfu and Philæ.

The mud wall, built in layers filled in between the frame-work with its horizontal and vertical divisions marked by them, may also have suggested the sub-division of the stone wall to receive the hieroglyphics and figure paintings, but with the adoption of stone structure came Stone Sculpture, and the Temple walls are regarded as great surfaces for the permanent record of the mysteries of religion, of the power and attributes of gods and kings, of their wars and conquests, and of the labour of the people upon which the wealth and power of empire always rest. The Egyptian wall reliefs were sunk, the outlines being hollowed and the edges of the figures rounded so that they never projected in relief beyond the surface of the wall. We may consider this an elementary stage in the evolution of Relief Sculpture, but, undoubtedly, the broad and massive monumental look of the walls which is so marked a feature of the Egyptian style owes its character to this treatment. The statues have the same simple, broad, massive Architectural character, as if they were the half-emerged spirits of the changeless stone itself. Placid of countenance and tranquil, indifferent to the passage of time, they impress us with their sublime dignity which belongs alike to their sphinxes and lions which guard the portals as to the small portrait statue. Even where these latter show an extraordinary realism as in the famous scribe of the Louvre, with the eyes of rock crystal, quartz and bronze—a work of the Early Empire—they are still under the influence of this Architectural control, simplicity and reverse which seem to me to give dignity to all Egyptian Art.

The Egyptians, though acquainted with the use of the round arch, did not use it as an Architectural feature, like the Assyrians in their palace gateways, and who also, according to Viollet le Duc, used the round brick vaults to support the roof of the interior large halls of these palaces; but the sculptor was the chief decorator in the Assyrian Palace. He kept the door with his mighty winged bulls, man-headed, meeting at the angles and facing outwards in a formidable way, their general design controlled by the rectangle of their position and Architectural purpose; and he covered the alabaster wall slabs with delicately chiselled reliefs in which the story of his times and the customs of his country are graphically, if somewhat rigidly, told.

The ancient Persian depended largely for his Architectural effects upon lintel and column. The peculiar form of the typical capital suggesting its origin in the timber-built houses of the Medes, with forked tree stems supporting the beams of the roof.

The wall decoration of glazed bricks for the ancient Fortress and Palaces of Susa, shows the Persians to have been accomplished workers in that material, and to have been early distinguished for their ornamental and colour sense. The frieze of arches moving in severe profile along the battlements of the Fortress, forms a striking decoration and at the same time a remarkable illustration of the Architectural influence, since the decoration not only shows this in its design, but could not have existed apart from the actual wall and its construction. The very joints of the bricks help the general effect and vary the surface. Design, colour and modelling are here one in structure. The figures appear to have been proved upon the clay while soft from wooden moulds, and then divided into bricks, the bricks

being long in proportion to thickness. The colour surface of the turquoise blue of the ground is very varied, being put on in small well-flattened disc-like patches. The figures are alternate as to their dress, patterns and colour, though alike in attitude. The small repeated form upon the dress of one set of archers is supposed to represent the fortunes of Susa itself in a heraldic sort of way.

In the palm leaf-like running border, as in a similar design of frequent occurrence in Assyrian ornament, we see the type afterwards developed by the Greeks in the Athenian, which must have been largely under Asiatic influence. To the Greeks, too, we owe the simplest and most refined type of Lintel Architecture in the Doric Temple, which was apparently evolved from a timber-built Shrine or Tabernacle. The triglyphs which divide the external frieze into panels representing the ends of the crossbeams. These, with the vertical grooves, serve as a framing for the Sculpture, which, as in the Parthenon, filled the metopes or spaces between them. The low pitched roof terminates in a pediment, and these pediments again afforded a space for Sculpture. In the arrangement of the groups which fitted the Eastern and Western pediments of the Parthenon, shattered as they are, with the assistance of Cowey's drawings we may detect the controlling influence of Architectural line. In fact, Figure Sculpture intended to be placed in a pediment, can only fill its position when it acknowledges this control, since the groups, however varied, must be enclosed by the rigid boundary of the space running into extremely acute angles at each end.

The subjects were the Counties (?) of Athena and Poseidon for the patronage or protection of Athens, and they were significant and symbolical of all that the Athenian citizens held dear. In the Eastern pediment we had the fragments of a great sculptured and decorative epic, the central point of the birth of Athena being lost; but in the figures and groups that remain, I think it is clear how constantly in the controlling lines both of the groups like the Fates, and in single figures like the Thesus and Misus, the long sloping angles of the pediment recur through infinite variations, and give harmony and relation to the whole work, from the extended arms of the Sun God rising in the extreme angle, driving his horses, whose heads emerge from the sea, to the descent of Selene, with the horses of night in the corresponding angle.

We find here that great principle which holds good throughout all design, the principle of recurring or re-echoing line which governs both the disposition of masses and the arrangement of detail.

We may trace the indications of the same feeling in the design of the Metopes and of the famous frieze of the Cella, which is still more decidedly ornamental in its lines, and might almost have been planned upon those of a running rythmical scroll border. There is, of course, in practice, all the difference in the World between working consciously and dryly according to fixed principles and working inventively and freely under the influence of Architectural geometric lines and spaces. To acknowledge the existence of natural laws in Art is a very different thing to being a slave to an Academic tradition, as in Art there are generally a variety of ways of solving a particular problem.

It may be said, indeed, that however beautiful these sculptures are as individual Figure-Sculpture and regarded solely as such, they are strictly Architectural ornament and parts of a whole, and their distinction of style is, I venture to think, largely owing to that fact. The truth is, that the human figure was really the ornament of the Greeks. Their types of strictly ornamental pattern, in the ordinary sense, were extremely limited, and mostly derived from Asiatic prototypes, however, refined upon and perfected by delicacy and precision of workmanship. But from the Phidian period till the decline in Figure Design, they were free and inventive, and whether the aim of their artists was to produce a terra-cotta statuette, to paint a vase, to carve a marble statue, or a frieze slab, we find the same extraordinary feeling for grace and appropriateness and sense of controlling line.

(To be continued.)

BUSINESS AT THE A.A. MEETING.

Mr. A. C. Long, The Limes, Mostyn Road, Brixton, and Mr. J. E. Colon, 1, South Bank Terrace, Surbiton, were elected members of the Association. A vote of thanks was passed to Mr. J. T. Perry, the author, for his donation of "Blethingly," to the Library. The Chairman announced that the Royal Institute of British Architects had consented to make the Association a grant of £100 for the ensuing year. The result of the election was as follows:—

President, W. D. Caröe, M.A., F.S.A.

Vice-Presidents, G. H. Fellowes-Brynae and F. T. W. Goldsmith.

Ordinary members of Committee—

E. W. Mountford..	242
A. B. Pite ..	222
F. G. F. Hooker ..	217
J. Begg ..	191
O. Fleming ..	174
W. H. Seth Smith ..	160
E. Woodthorpe ..	157
Theo. Moore ..	156
Hon. A. McGarel Hogg ..	109
A. W. Earle ..	105

Hon. Treasurer, Hampden W. Pratt.

Hon. Librarian, J. W. Stonhold.

Hon. Secs., B. F. Fletcher, A. H. Hart.

The above form the Committee.

Other officers—

Hon. Solicitor, W. H. Jamieson.

Hon. Asst. Librarians, C. H. Freeman, E. W. M. Wonnacott.

Hon. Auditors, E. H. Sim, F. G. W. Buss.

Asst. Sec. and Registrar, D. G. Driver.

VOTES OF THANKS.

Votes of thanks were passed to the Scrutineers, the retiring Hon. Secretary (Mr. Goldsmith) the Hon. Treasurer (Mr. Hampton W. Pratt) the Hon. Librarian and the Hon. Assistant Librarians. A vote of thanks was also given to Messrs. Earle and Sim, Colonel Balfour, and Captain Whyte and the caste who assisted at the soirée on the 16th May. It was announced that the annual dinner would be held at the Holborn Restaurant, and the first summer visit on June 15.

NEW MEMORIALS IN ST. GILES', EDINBURGH.

UNVEILING OF THE ARGYLL MONUMENT YESTERDAY.

At the unveiling, yesterday, of the Argyll Memorial and Window in St. Giles' Cathedral, Edinburgh, by the Marquis of Breadalbane, Sir Thomas Clark handed the Memorial and Window over to the Cathedral Board. The 27th May is the anniversary of the execution of the Marquis of Argyll, and for this reason was selected for the unveiling of the Memorial. Both the Memorial and the Window are already practically completed; some gilding on the latter is all that remains to be done. The Memorial is erected in St. Eloi's or the Hammermen's Chapel, which is immediately to the west of the north doorway of the Cathedral. The Monument, placed beneath the Window, is 11 ft. 6 in. wide by 12 ft. high. It consists of a surbase of alabaster, enriched with Genoa green and vert campan marbles, supporting at each side two black marble columns and pilasters, with bronze ornaments and gilt caps and bases. These columns and pilasters carry an entablature, finished with pinnacles and pediment, enclosing the Argyll coat of arms. Between the pilasters is an elaborate elliptical arch, beneath which rests the recumbent figure of the Marquis upon a carved and moulded sarcophagus. The figure, which has been designed and executed by Mr. Charles M'Bride, is a chaste piece of Sculpture. The recumbent figure is admirably treated. The Marquis lies with his head on a pillow, the body turned to the right, and the left foot crossed over the other. The attire is a nobleman's costume of the period, kept simpler than that of a cavalier's to indicate the Marquis' leaning to the Reformed doctrines. The features are modelled from an authentic copy of a painting of the Marquis which was at Inverary, but which, unfortunately, was destroyed by fire when the castle was burned some years ago. The right hand of the Marquis, extended at arm's length, is laid upon a clasped

Bible, and the left hand holds breast high a sword of the period with gilt hilt to indicate that he was a military man as well as a statesman. The figure, as indicated, is very pictorially treated, and is altogether an excellent piece of work. The following inscriptions have been placed on the Memorial. The principal inscription is contained in an oval panel of white alabaster, and runs thus:—"Archibald Campbell, Marquess of Argyll, beheaded near this Cathedral, A.D. 1661. Leader in council and in field for the Reformed religion." Below this are the Marquis' own words:—"I set the crown on the King's head: he hastens me to a better crown than his own." On a ribbon under the panel is one of the mottoes of the Covenanters, "For Christ's crown and covenant." On a small rectangular panel immediately below the recumbent figure of the Marquis appears the verse from 2nd Samuel, "He hath made with me an everlasting covenant." "Ne obliviscaris," the motto of the Argyll family, is placed on a scroll below the coat of arms. The window, which is by the Glass Stainers' Company, Glasgow, contains the arms of the Marquis' chief adherents and friends. As space could be found for only a limited number of shields, great difficulty was experienced in making a selection, and many names are omitted in consequence which have great claims for admission. Those finally chosen are:—Earl of Sutherland (now represented by the Duke of Sutherland), Earl of Lothian (now represented by the Marquis of Lothian), Earl of Cassillis (now represented by the Marquis of Ailsa), Earl of Eglington, Earl of Loudoun, Earl of Leven, Lord Balmerino (now extinct), Lord Newark (now extinct), Earl of Dalhousie, Sir Thomas Hope (now represented by the Earl of Hopetoun), and Johnstone of Warristoun. These arms are grouped round the Argyll arms, which occupy the centre of the window. The Memorial has been designed by Messrs. Sydney Mitchell and Wilson, and has cost £1,000.

Another Memorial, that of the Lord High Commissioners of the Victorian era, in the form of a stained glass window, was opened in St. Giles', last week. The window, which is over the Royal pew, is of five lights, with transom and traceried heading. Only the five lights in the upper tier above the transom are being filled meantime, and these are to commemorate Lord Bute, Lord Airlie, Lord Aberdeen, Lord Hopetoun, and Lord Breadalbane. The uppermost portion of the tracery openings is treated with the Royal arms, whilst the arms of the five present donors appear in the remainder. The tier of the window proper, which is now being filled in, represents St. Peter and St. John before the Council of the High Priests, as recorded in Acts iv. St. Peter and John are represented in the second opening, St. Peter with outstretched hands announcing his mission to the High Priest, who is represented seated in the fourth light surrounded by his Council. Two Roman soldiers, together with the lame man whom Peter had recently healed, occupy the first light. All the subjects are shown beneath Architectural canopied ornament of a light character; whilst the whole scheme of colour is of a rich transparent nature. The lower tier of the window is intended to be filled in, with a representation of St. Peter making his defence before the brethren at Judea. When the lower subject is completed in a somewhat richer tone of colour, the effect of the whole window will be very much improved. The window has been executed at the studios of Messrs. A. Ballantine & Gardiner, George Street, Edinburgh.

THE Education Department has approved plans for the alteration of the Old Schools in High Street, Stonehouse, which are to be so converted as to give accommodation for 307 infants and 250 girls. It was decided to invite tenders for the execution of the work.

THE Kensington Board of Guardians propose to expend the sum of £20,000 in making additions to the Infirmary of the parish, and in providing fittings, fixtures, and furniture, in connection therewith, in pursuance of the Order of the Local Government Board, dated June 18, 1892, in addition to the sums of £39,000 and £6,000 authorised by the said Order to be expended for those purposes.

WHAT IS A WALL?

THE LORD CHIEF JUSTICE ON BUILDING CONSTRUCTION.

AN important decision was given in the Queen's Bench Division on Wednesday, when the Lord Chief Justice gave judgment in the case of *Badley v. the Cuckfield Union Rural District Council*, which had been argued before his Lordship and Mr. Justice Charles. His Lordship said the case raised a somewhat intricate and at the same time important question upon the construction of the bye-laws of the local authority relating to the construction of new streets and new buildings. The question arose in this way. The plaintiff, having certain property within the jurisdiction of the authority, was minded to erect a Sanatorium in connection with that property known as Bedale, and on the 21st January, 1895, he wrote to the local authority stating that he proposed to build in connection with his establishment a Sanatorium, consisting of brick and cement foundations, and walled with corrugated iron, supported by posts and rails, and lined with match-boardings. The plans which were at the time submitted, were, it appeared, not found correct, and the authority declined to sanction them. It had been agreed to submit a special case to the Court on the point in dispute, and the question for the Court was whether or not the local authority was justified in refusing its consent to the erection of the building, and that depended upon the construction of the bye-laws. Knowing, his Lordship said, how common it was to meet buildings in various parts of the country, including buildings in which persons were intended to reside, composed of an outer wall and roof of iron much in the same way as the building in question, it seemed to him remarkable that there did not appear to be any bye-laws or regulations referring specifically to such buildings, but, there being no rules dealing specifically with these buildings, the Court had to decide whether, in fact, the existing rules did cover the case of such buildings. The rule or bye-law specially relied upon by the local authority was Rule 2, which provided that "every person who shall erect a new building shall cause such building to be enclosed with walls, constructed of good bricks, stone, or other hard and incombustible materials properly founded, and solidly put together with good mortar compounded of good lime and clean sharp sand or of cement." The explanation following obviously only applied to brick or stone walls, and had no proper application to the case of iron buildings. The wall was not constructed of bricks or stone; but the rule contemplated that if not of bricks or stone, the wall must be of "other hard and incombustible material." Concrete would be such a material, and so, no doubt, would iron under certain circumstances, but what they had to ask themselves was whether the wall, as built by the plaintiff, was constructed of incombustible materials, and this raised the question: What is a wall? He did not propose to give an elaborate or exact definition of a wall, but he supposed he should be right in concluding that it must be something which would stand by itself, and if so it could not be made of corrugated iron only one-thirty-second part of an inch in thickness. Therefore the plaintiff's wall did not satisfy that test of what was a wall. The plaintiff's wall, it appeared from his own description, was constructed of an outer sheet of corrugated iron, supported by wooden posts and rails. The outer sheet of iron was only one-thirty-second of an inch in thickness, and certainly could not of itself stand alone, and the wooden framework by which it was supported, being of wood, could not certainly be said to be a hard and incombustible material. If, too, he took into consideration the matchwood lining, the case for the local authority was strengthened. Therefore he must hold that the work was most distinctly not a wall composed of brick or stone or other hard and incombustible material. Therefore he was of opinion that the wall, as constructed, was an offence against the bye-law. Judgment was accordingly entered for the defendants, the local authority, with costs.

THE Congressional Palace, the largest and most important building in Santiago, the capital of Chili, was recently entirely destroyed by fire.

SOCIETY MEETINGS.

The Society of Antiquaries of Scotland.

—Under the auspices of this Society, Dr. Joseph Anderson, on Wednesday afternoon, delivered the first of a series of ten lectures on Archaeology in the National Museum of Antiquities, Queen Street, Edinburgh. The lectures are intended to communicate the general principles of Archaeology, with demonstrations from the objects in the Museum; and the first of the course was devoted to an exposition of Archaeology—its science, its methods, &c. In subsequent lectures Dr. Anderson will deal with the various periods, and illustrate them by reference to the articles found in Scotland belonging to those different periods.

Lincolnshire Architectural Association.

—The Architectural and Archaeological Association for the counties of Lincoln and Nottingham will hold its meetings this year at Stamford, on Wednesday and Thursday, the 19th and 20th of June. On the first day an excursion will be made to Duddington, Tixover, Barrowden, Harringworth, Lyddington (where there are the remains of the Bishop's Palace), Seaton, Morcott, North Luffenham, Edith-weston and Empingham. On the second day a visit will be made to Barnack, Bainton, Ufford and Wittering. At half-past two o'clock, the company will visit the six Churches and other places of antiquarian interest in the town of Stamford, beginning with St. Mary's Church, and afterwards, those who wish to do so, will visit Burghley House, near Stamford.

Liverpool Engineering Society.—The following visits will be made to works during the forthcoming summer: Saturday, June 8, to the Liverpool Corporation Reservoirs and Filter-Beds at Rivington—Mr. Jos. Parry, M.I.C.E., Water Engineer; Friday, June 21 and Saturday, June 22, to the Main Sewerage Works, Pumping Station and Refuse Destructor of the Borough of Cambridge—Mr. J. T. Wood, M.I.C.E., Chief Engineer; Saturday July 6, to the Snowdon Mountain Rack Railway in North Wales—Sir Douglas Fox, M.I.C.E., Chief Engineer, and Messrs. Holme and King, Contractors; Saturday, August 3, to the site of the Elan Water Supply of the Birmingham Corporation at Rhayader, Radnorshire—Mr. Jas. Mansergh, M.I.C.E., Chief Engineer; Friday, September 6, to the Sunlight Soap Works, Bebbington—Messrs. Lever Bros., Limited, proprietors; and on Saturday, September 21, to the Wirral Railway Works—Sir Douglas Fox, M.I.C.E., Chief Engineer.

Royal Geographical Society.—The anniversary meeting of the Royal Geographical Society for the election of President and Council, was held in the hall of the University of London on the 27th inst., at half-past two. During the meeting the Royal Medals for the encouragement of geographical science and discovery were presented—the Founders' Medal, to Dr. John Murray, for his services to oceanography; the Patron's Medal, to the Hon. George N. Curzon, M.P., for his book on Persia, and his visits to the Pamirs and Kabul; the Murchison Grant, to Mr. Eivind Astrup, for his Arctic journeys; the Back Grant to Captain C. A. Larsen for his Antarctic voyage; the Gill Memorial to Captain J. W. Pringle, R.E., for his African surveys; and the Cuthbert Peek Grant to Mr. G. F. Scott-Elliott, for his explorations in the neighbourhood of the Victoria Nyanza.

SAWDUST.

AFTER being open for four months, intimation is now made that the Royal Scottish Academy's Exhibition will close on the 1st June. It is gratifying to know that the attendances up to the present time have been very satisfactory, and that the receipts and sales of pictures have been much above those of last year.

For the better accommodation of nurses and servants, the New Wing at Broomhill Home, Kirkintilloch, was recently opened by the Duchess of Montrose. The New Wing is a three-storey building, which contains dining-room, parlour, matron's sitting-room and bedroom, and six double and three single bed-rooms. The total cost has been £2,500.

THE Barnstaple Board of Guardians has accepted the tender of Messrs. Barwick and Karslake (£135) for the conversion of the school into a Board-Room.

MR. F. S. BUTTON, Borough Surveyor of Bromley, Lancashire, has intimated his intention of resigning his position. His salary is £550 a year.

ON Tuesday afternoon Sir George Williams opened the new Jubilee building of the Young Men's Christian Association at Croydon, which has been erected at a cost of £7,500.

AN enquiry on behalf of the Local Government Board was held at Loughborough on Tuesday last by Colonel J. O. Hasted, R.E., into an application by the Town Council for sanction to borrow £9,000 required for the purchase of a site in Island House Park for a Cattle Market, Fire Engine Station, Workmen's Dwellings, mortuary, &c.

A PORCELAIN Factory, on the model of that of Sevres, has been recently established within the precincts of the Sultan's private residence at Yildiz Kiosk. The foreman and workmen have so far been French, but they are acting as instructors to Turkish hands, under the superintendence of Selim Melhame Effendi, the future chief of the little factory.

THE Exhibition of Railway Appliances, &c., in connection with the United Kingdom section of the Imperial Institute, will be opened on Saturday, June 1st, at noon, by the Lord Chancellor. The contents of the Exhibition will, in view of the forthcoming International Railway Congress, be of a most interesting and instructive character.

THE new Birmingham Corporation Stables and Granary, which will give an additional accommodation for 25 horses, and will also supply the whole of the staff, including other 375 horses, have just been completed at a cost of £6,000, from plans by the City Surveyor. The builder was Mr. Fenwick.

THE School recently erected by Liberton School Board, was opened by Capt. Gordon-Gilmour on Tuesday last. The first estimate for the School was £4,900; but it is expected the total cost will be a little over £5,000.

A GOLD medal and a prize of the value of £200 is offered by the Bologna Academy of Sciences for the memoir describing the best system or apparatus for putting out fires by chemical, physical or mechanical means. The papers must all be in by the end of May, 1896, and may be written in Latin, French, or Italian, or in any other language, accompanied by an Italian translation.

THE Improvement Committee of the Cheltenham Town Council recommends the purchase of the Winter Gardens. If the Council approve this report, the Committee propose to advertise for plans and give premiums for the same for the erection of general buildings and of municipal offices. The Committee propose to limit the Architects to an expenditure of £10,000 on municipal buildings and £8,000 on other buildings.

ALDERMAN FALLOWS, the Mayor of Birmingham, has laid the foundation-stone of a new Free Library in Moseley Road. The building will be of brick and terra-cotta, and will cost close upon £5,000. It is intended to erect Baths on land adjoining the Library.

MEN employed to lay the pipes of the Redruth Waterworks Co. from Penstruthal to Redruth found in the main County-road, close to the site of the old toll-gate at South Turnpike, an old mine workings, or shaft, ten fathoms deep. There was no covering of any kind over it, except the hard macadamised road nine inches in thickness. Traction engines, as well as ordinary traffic, have been passing over the road for many years. The shaft is being filled up.

A NEW Wing has just been added to the main building of the Red House Home, Musselburgh. The addition, which is on the west side of the main building, includes a dormitory for fifteen boys, a large room, a dining room, and a kitchen. At present there is provision for forty-five boys, and the additional accommodation will enable that number to be increased to sixty.

THE Schools at Killick's Lane, Mitcham, Surrey, are to be enlarged, and Mr. R. M. Chart, from whose plans the present Schools were built, has been appointed the Architect.

THE Gloucester City Council has decided to sell to the Gloucester Railway Carriage and Wagon Company the freehold property belonging to the Corporation at present leased to them at £528 a year, for £20,000, subject to the approval of the Local Government Board. It is stated that the Company will erect additional buildings and introduce a new industry into Gloucester.

MR. THOMAS C. McFARLANE, of 4, Bristol Terrace, Newcastle, has been appointed Clerk of the Works of the new Asylum about to be built. The salary is £200 per annum. The expenditure on the new building will be over £100,000. There were more than 100 applicants for the post.

A NEW Temperance Hall is the latest addition to Morley. The building will be in the Classic Style, and will comprise, on the ground floor, two Secretaries Rooms, two Reading Rooms, large Class Room, and Kitchen, whilst the upper room, or Hall, will be 62 feet long by 33 feet wide, with open roof and panelled ceiling, 16 feet high, and having a platform at one end to accommodate 150. The estimated cost, including the site, is £2,000.

THE County Council is doing much good work in improving the condition of the roads and bridges in East Northumberland. The construction of Bridges at Holywell and Seaton Sluice supplied a much needed reform, and this policy of progress is to be continued at Sleepwash, where the old Bridge collapsed last January. The proposed new structure is not to be built on the site of the old Bridge, but at a point near the Anglers' Arms Inn, on the south side, and across the Wansbeck to the corner of Thieves' Bank on the other. The County Surveyor, Mr. Kynnersley, estimates that the erection of the Bridge near the Anglers' Arms will cost something like £600 more than a Bridge on the old site. The cost of the structure it is proposed to erect is estimated at £4,104.

MR. H. W. THOMAS, Coventry, at the last meeting of the Urban Council, presented plans of a new Theatre he purposes erecting in New Bridge Street. The structure is to be 84ft. long and 40ft. wide. The Council passed the plans, on the understanding that an additional exit should be made.

GAS AND OIL ENGINES.

A PROPOS of the recent boom in petroleum, a Manchester correspondent states that the leading makers of gas engines are closely watching the development of oil for heating and other purposes connected with motive power; and that as soon as petroleum shows signs of coming into more general favour as a propeller, they will be prepared to place on the market some really first class oil engines, both stationary and otherwise. It is generally felt that, although the trade in oil has grown to gigantic dimensions during the last few years, it is only as yet in its infancy. It may be mentioned that amongst the present uses of petroleum it is employed extensively for driving fixed and locomotive engines—in this country, e.g., on some of the engines of the Great Eastern and Chatham and Dover railways. By its use for this purpose economy in storage is effected and labour saved. On steamships too, it is in some cases taking the place of water ballast, and it also reduces the intense strain upon the stokers caused by continued heat. It is also stated that the number of stokers required is, by employing automatic machinery, 50 per cent. less. At Manchester it is intended to erect vast storage tanks on the Ship Canal, similar to those provided at Birkenhead, which are earning a considerable revenue for the Mersey Dock and Harbour Board. From these tanks large quantities of oil could be distributed over the railways to the industrial centres of Lancashire and Yorkshire. It may also be added that there is a great future for Russian oil, for heating and illuminating purposes as soon as it can be the better refined than at present.

The Builders' Journal COMPETITIONS.

No. 3.—Swimming Baths.

Designs for Swimming Baths in a country town of 5,000 inhabitants. To contain cold water bath fifty feet long, three feet to six feet deep, with necessary dressing boxes; six private washing baths for gentlemen and three for ladies; necessary heating and ventilating appliances to be provided, together with waiting and caretaker's rooms, the entire cost not to exceed £3,000. The site is 100 feet deep and of any necessary frontage, but entrance can only be obtained from the front. All designs to be delivered on or before Monday, the 10th day of June.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

ANNOUNCEMENTS.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Publishing.

The terms for free post Subscription to any part of the United Kingdom are SIX SHILLINGS AND SIXPENCE per annum by half-yearly or annual prepayments.

Advertising.

SITUATIONS WANTED, SITUATIONS VACANT, PARTNERSHIPS, APPRENTICESHIPS.

Per line, Sixpence. Minimum charge, Eighteenpence. Three Insertions for the price of Two.

Prepayment in the above Advertisements is absolutely necessary.

Page or Paragraph Announcements, Trade Advertisements.

Prices on application.

Small Advertisements for current week's issue are received up to first post Monday morning inclusive.

Editorial and Publishing Offices:
Talbot House, Arundel Street,
Strand, W.C.

THERE is not in Europe a more magnificent burial place than the Mausoleum in the park of Hamilton Palace, where the late Duke of Hamilton is to be interred at the end of this week. This Mausoleum was built about sixty years ago at a cost of £150,000, and Italian artists and workmen were principally employed. It is a square building, surmounted by a round tower and a stone cupola, with bronze gates, which are coupled from those of the Baptistery at Florence.

An Exhibition in the interest of photography is announced to be held at the Royal Aquarium in June. There will be competitions for amateurs and professionals.

Trade and Commerce.

Messrs. C. Isler & Co., of London, have received orders from Mr. William Whiteley, of Westbourne Grove, to fix an artesian bored tube well and deep well pump machinery in connection with it, at Avonmore Road, West Kensington. The preference was given to this firm owing to their latest arrangements and improvements in their deep well pumping machinery, which was approved by Mr. G. D. Dennis, M.I.M.E., the engineer under whose superintendence the work is carried out. The same firm have orders to supply all the turnstiles at the Earl's Court Exhibition.

The Soho Foundry.—The purchasers of the Soho Foundry, we are informed, are Messrs. W. and T. Avery (Limited), the well-known manufacturers of weighing apparatus. The purchase includes the fixed plant and machinery, but Messrs. James Watt and Co. will be allowed to retain possession until their present contracts are completed; so that it will be three months, probably, before Messrs. Avery enter into full possession. Messrs. Avery intend to concentrate at Soho the operations carried on at Mill Lane and Moat Lane, Birmingham, the repairing department in the Bull Ring, and the foundry at West Bromwich. The original premises, those in Digbeth, where are registered offices of the Company, may possibly be retained for the sake of their associations and as a Birmingham depot, but the decision of the directors on this point has not been made known. The firm dates from 1730, when its business began in a small way in Digbeth. It now employs in the Birmingham and West Bromwich establishments seven or eight hundred workpeople, about a hundred and fifty of them being at West Bromwich. There are also branches in London, Plymouth, Manchester, Glasgow, Leeds, and Sheffield, at all of which either repairing or manufacturing work is carried on, the Glasgow branch comprising a foundry. The necessity for consolidating the various establishments in the Birmingham district has long been felt, and the increase in business during the last few years has made the matter one of some urgency. Messrs. Avery's business was carried on as a private concern until 1891, when a limited company was privately formed under the style of W. and T. Avery (Limited). In December last the present company, bearing the same name, was registered, some readjustment of the proprietary having become necessary after the death of Alderman Thomas Avery; but, as in the former case, no prospectus was issued. The capital authorised is £200,000, divided into 20,000 ordinary shares of £5, and 20,000 cumulative 5 per cent. preference shares of £5 each. Seventeen thousand of each kind of shares, fully paid up, have been issued. Most of the capital has been subscribed by members of the Avery family and their personal friends, and by employees.

Green's Truinvert Pipe.—This new pipe, the patent of one of the Partners of Messrs. Oates & Green, of Halifax, the well-known manufacturers of clay goods and builders' requisites. This invention, we take, is presumed to be an improvement upon a very similar pipe in the market, and the improvement claimed is that, whilst it is impossible for a series of these pipes to be laid with an untrue invert, there is sufficient space round the spigot, after its insertion in a socket, for making a perfect joint of clay or cement in the ordinary way. The invention appears to us a simple and a very good

one, except that there appears to be no "seating" of cement or clay, between the spigot end of the pipe and the "lip" or "rest" of the socket. There is no question, however, that with these pipes it would be impossible to get either a defective invert or joint, and therefore we have no hesitation in pronouncing them worthy of great consideration by engineers and surveyors. The sketch which is given shows the construction of the pipe, and in the catalogue which Messrs. Oates & Green send us, we notice that the price is only 33s per cent. more than that of ordinary pipes.

Acoustics in relation to Architecture and Building.—Messrs. Crosby Lockwood & Co., send us the new edition of this little work, which has been for some years a very

useful book in the *Weale's Rudimentary Series*. Professor T. Roger Smith, the author, does not claim much for his manual; he states that "it has simply been framed with a wish to afford, in a somewhat connected form, as much information relative to the laws of sound and their application to the arrangement of buildings as could be collected from trustworthy sources." And the Professor has admirably achieved his task. In a footnote relating to the derivation of the word *Acoustics*, the author shows us how and why the second syllable should be pronounced *cow*, and not *coo*. The explanation is quite acceptable, but we consider it time that a little English common sense is brought to bear upon words derived from the Greek and Latin tongue. As *coo* is far more phonetic and far more pleasing to the ear than the harsher syllable, we always speak it, and we trust the majority of our friends—including Professor Roger Smith—will follow our example.

The Rockingham Railway and Jarrahdale Timber Co., Ltd., and Others v. J. Temperley & Co. and Others.—This action, which was to restrain the Defendants from advertising with reference to Karri and Jarrah that they were "the only importers of both timbers in the United Kingdom," has been settled by the Defendants agreeing to a perpetual injunction with costs.

New Opening "In and Out" Casement.—Messrs. E. Farrar & Co., of Berners Street, have submitted us a model of their new casement, which in reality consists of a hinged inside rim which acts as the inward stop to the sash, which is pivoted top and bottom. Two thumb screws—which should be attached to the frame in some way to prevent them being lost—when released allow this rim to fall outwards, when naturally the casement comes inward, also for cleaning purposes. The illustrations which accompany an advertisement of this casement in the present issue will show the working of the invention, which has the distinctive quality of being extremely simple in parts, none of which can possibly get out of order. The casement is perfectly watertight, and the makers gladden us with the information that its cost is but very little more than the single way casement.

The Building Trades' Dispute.—Under the auspices of the London Building Trades' Federation a meeting of members of all sections of the federation was held on Sunday morning, at the St. Pancras Arches, Kings Cross, "for the purpose of considering the attitude of the master builders in the present crisis." Mr. W. Geard (United Builders' Labourers' Union) said that the building trade throughout the Metropolis was passing through a crisis which threatened at any moment to assume a serious aspect. The attitude of the masters with reference to the many questions at present in dispute would undoubtedly precipitate matters, and he could assure the members of the Federation that nothing would be left undone to secure the ends they had in view. It could not be denied that the approaching conflict in the building industry demanded the serious attention of all building trade workers. The attempt of the employers to force new conditions upon them, which, if successful, would deprive them of their liberty and freedom as workmen, was only what they had been warned would happen, if by apathy and indifference, they placed the means in the masters' hands. When weakened by slackness of trade, reduced by hunger to a point of despair, and a spirit of indifference overtook them, there was the opportunity the employers would take to regain any advantages previously obtained. The Masters' Association had given notice that after a certain date piece work, which had always been a vexed question in that particular industry, should be again introduced. Although the time had expired, the masters had deferred the matter until June 1, in order to give the London workers engaged in the building trade an opportunity of deciding either one way or the other. The men had decided, by an overwhelming majority, against any alteration of the agreement arrived at in May, 1892, but still the employers were determined that the proposed change should come into operation on June 1. The Federation, however, was determined to resist this alteration, which meant a renewal of the slavery and injustice which characterised the building trade prior to the year 1892. A resolution upholding the action of the Federation during the present crisis was carried unanimously.

ISLINGTON has followed the example of Kensington, and appointed a lady sanitary inspector. Her name is Miss Jessie Gray, and her salary is to be £150 a year.

A SECOND High-Level Bridge between New York and Brooklyn is projected. The growing traffic, and the projected union of the two sides of the river under the Greater New York Bill, may justify the undertaking. The present Bridge, which was opened in 1883, took thirteen years to construct. It is 135 feet above the East River, its length is 5,989 feet, and it cost £3,000,000.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

BASFORD (Notts).—For the erection of a laundry at the Workhouse, for the Union Guardians, Mr. H. Walker, architect, Newcastle Chambers, Nottingham. Quantities by architect:—

Fellowship of the Institute.

ON Monday of last week we were invited to attend a meeting of a number of Associates of the Institute at Dr. Williams' Library, Gordon Square, the meeting being convened for the purpose of considering the replies to a certain circular which had been sent to the candidates for Councillorship of the Institute. The circular—a copy of which we received—was not a very impressive document, the whole thing bearing more plainly the imprint of the revolt that is brooding in the hearts of the younger generation, rather than any more significant fact of immediate importance. Our views upon the condition of the Institute are now well known, and we have well-founded information, that, if the voting of Saturday last has gone in one particular direction, there will be revolutions at Conduit Street after all. And we shall be sorry, for, though we have pointed out many necessary and drastic reforms, it will be much more dignified if the movement come from the elders of the Profession. But really this question of who should be eligible for Fellowship of the Institute is not of the highest importance now. It is the questions which affect the reputation of the Profession itself, and the standing of its members, that bear so strongly on the work of a very imperfect system. All this twaddle about "Art" versus the "Profession" of Architecture stinks in the nostrils of every sensible man who happens to be an Architect, and it is this twaddle, promulgated principally by a journal which has a hundred times sacrificed every vestige of Professional principle and dignity, that brings about the possibility of such a sight as a handful of earnest and well-meaning young men being compelled to catechise their elders as to what they will do

if they be elected to the ruling of the Profession. The situation is becoming ridiculous, but even a ridiculous situation from which something must come is better than the stagnation into which the work of the Institute has drifted. Even our contem-

but, behold, it is astonished that "a recent paper on Early Architecture in this country, a subject of the greatest interest and entirely above mere professional considerations, was read to nearly empty benches." Oh! these professional considerations, these revolting fallacies that canker the industry and the intuition of aspiring men, whilst the "considerators" are swallowing up the commissions and delivering lectures on the high Art racket. It is monstrous that the sixty well-intentioned men who signed this circular, appertaining to Fellowship of the Institute, could not get on with their studies or their practice, and leave matters of great pith and moment to those whose business it is to keep a watchful eye upon the interests of the Architectural Profession. It is not by such methods of attack that the Citadel will be successfully stormed, that at least is what we should have hoped, but we may be wrong. These Associates may know more surely than we do, even, how utterly useless it is to hope for anything from "above," and so they elect to score off their own efforts. If it becomes necessary that they should—and we still hold back our final opinion—then may they throw every atom of enthusiasm into the battle and win. The Institute as at present constituted struggles away its existence in legislating for the men who are without their gates. Perhaps the younger men consider it, as we do, about time that something should be done for those that are within.

It is opposed to the best traditions of the Law that a Judge should become irate, but a certain Builder, whose name shall mercifully be veiled, had a humiliating ten minutes in the Croydon County Court last week. Justice

TOWER OF SAN FERMO, VERONA: BY H. L. FLORENCE.

porary of Catherine Street has at last woken to the revelation that dissatisfaction with the Institute causes it no surprise,

has been a little prone to air its superior virtue at the expense of other trades and professions of late, and we have had the dignified spectacle of a Lord Chief Justice pronouncing upon iron and concrete walls. We are not in love with iron as a building material, neither are we fully convinced of the unalloyed merit of concrete, but we are quite reassured of the infallibility of the Law, and this after some doubts and dismays. It may be true that the general and daily aspect of the Law Courts—Street's masterpiece—for which Architecture will have something to answer when Truth is finally come to Judgment, is, on the face of it, a serious and severe impeachment of the honesty of the Law. We, like the rest of thinking folk, have been puzzled to wonder if all this machinery be moral in the broad sense; whether, after all, there is not the speculative smooth-tongued barrister as well as the speculative easy conscientious builder; but "lay" fears may be set at rest, seeing that Judges go on "slogging" and castigating poor Jerry as if he had not even a shred of a soul for his own. Perhaps he has not, but a County Court is hardly the place in which to discover many. His Honour Judge Lushington had hardly breath enough in his body wherewith to be sufficiently emphatic, for "John Jerry" had now failed to the tune of six thousand pounds, while his assets scarce passed the thousand. A commiserating Counsel, daring to speak a word in so Caesarean a Court (spurred, no doubt, by fees), spoke of his client not having "a penny in the World." It is so common a condition that it has become almost a figure of speech. But penury awakes no pathos in the legal mind, and Jerry had been guilty of a "very disgraceful failure." All failures are not disgraceful, but we invariably note that in the eyes of the Law *all* building failures are. This is unjust. A man may honestly speculate in building as in anything else; all trades and professions are, in the main, ground for speculation; if a man succeeds he is a "good business man," certified and duly accredited; if he fails, he is at once knocked into a corner for every one to pound at. We are not defending this particular Jerry, but we do emphatically resent Judge Lushington's remark that it was "difficult to believe a building man." It is no more difficult to believe a building man than any other man, and we have heard of more than one "eminent" Q.C. whose *strong* point was an ability to confuse the jury! We really do want a little less cant in this country and a greater simplification of Law. If Law is equivalent to Truth, let Law set the example to jerry builders. In Croydon Court the building man was told to "stand 'umble," as if it were a matter for debate whether he should stand at all. We rather fancy the sight of John Jerry on his knees would have been a more singular and soul-shaking business. That such small failures as this should "throw great disgrace on the whole building trade of this country," leaves to the imagination the magnitude of dishonour when big men fail to the extent of hundreds of thousands of pounds. This John Jerry was trying to get work and was living with his mother-in-law—surely not the happiest of conditions, but the Judge thought him evidently not sufficiently cowed and cast down, for he abjured him to "stand 'umble," and "umble" John Jerry stood and "umble" no doubt he will be with his relative by marriage just now, and yet—for all the Law's righteous and somewhat frothy indignation—John Jerry found a Counsel to defend him! "The case was one of those calamities which throw great disgrace on the whole building trade of this country," but the Law has clean hands even when they are not "briefless." A little less of this posing on pedestal is really wanted in our Courts. There are so many "attacks" of virtue.

ARCHITECTURE AT THE ACADEMY.

CONCLUDING NOTICE BY OUR SPECIAL REPRESENTATIVE.

WITH SKETCHES BY C. E. MALLOWS.

THE coloured design (No. 1,419) for the New Reredos in Manchester Cathedral, by Mr. Basil Champneys, will not enhance his reputation. The figures are the best part of the design, and are, we believe, by Mr. Frampton, A.R.A. These are, of course, admirable, and probably the effect of the whole Reredos would be better in execution than this drawing suggests.

We do not know, for certain, of what material Mr. Champneys intends to build his "Proposed West Front" for the same Cathedral (No. 1,455), but the drawing suggests cast iron.

Mr. Ernest Newton's "House at Sutton, Coldfield," drawings Nos. 1,411 and 1,421, the first the Entrance and the other the Garden Front, is a most delightful design of a homely and inviting-looking country house, but is very inadequately illustrated by the unsigned pen drawings. This Garden Front is admirably composed, and has a nice feature in the plainly treated covered Loggia. It is a pity this design is not better illustrated.

No. 1,410 is another case in point. If Mr. Breden's "Country House" had been better illustrated; there are many good points in the design which would have shown to much advantage. It has, nevertheless, much character and nice feeling in it as it is.

No. 1,430 is the "Lecture Hall of the Imperial Institute," illustrated in this issue. The pen drawing at the Academy is by Mr. Prentice.

No. 1,433 is a water-colour drawing, in a quiet tone, of "St. Saviour's Priory Chapel, at Haggerstone," by Mr. Chas. H. M. Mileham. It is in a somewhat severe type of Early Norman or Romanesque, with good colour decoration, successfully managed with the one exception of the barrel-vaulted roof. The zigzag effect of the blue colour is not very pleasant.

Mr. Wilson's third exhibit this year is the

"Design for Rood, All Hallows Church, Southwark" (No. 1,420), a most beautiful study in colour, but the three rectangular ends and the Crucifix seem a little heavy and out of scale with the rest of the work.

Nos. 1,422 and 1,431, very much skied, possibly because they are slight drawings, illustrate portions of the "s.s. Tantallan Castle," by Messrs. Niven and Wigglesworth.

Mr. Horace Field in No. 1,438 has produced a very successful type of Georgian work for the Hampstead Central Public Library, with a semi-circular headed Entrance Door in stone, and balcony over. It is mainly of red bricks with stone quoins at the angles, and stone, cornice with modillions to eaves. The two semi-circular bay windows to the Side Elevations are well and effectively designed.

No. 1,432, a design for "The Sutton Public Offices," by Mr. Searles Wood, is not very interesting either as a drawing or design. No. 1,427 hangs below and is "The Passmore Edwards Free Library, Uxbridge Road, Hammersmith," designed and drawn by Mr. Maurice B. Adams, F.R.I.B.A.

We like the Interior of the "New Chapel of St. Peter's College, Radley," by Mr. T. G. Jackson, A.R.A. (1,434), designed in a florid type of Gothic with German feeling. The drawing is not a very successful interpretation of the design.

The Interior of "Ashorne Hill House" (No. 1,435), by Mr. E. Goldie, has something attractive about it, especially the way in which the open Arcade and Gallery are managed at the sides and far end, but we cannot admire the ill-proportioned and characterless Chimney-Piece, out of scale and harmony with the other parts. The pen drawing is by Mr. H. W. Brewer.

There is much style in the way Mr. John Begg has drawn "Earlshall," Fife (No. 1,446), for Mr. Robert S. Lorimer. The "Pleasant" and the quaint old Scotch house is very well treated. One would look forward with delight to a summer's holiday at such a place as this.

Mr. Mileham's laboured water-colour drawing does not adequately illustrate his design for the "Chapel and suggested Screen for S. Albans, Holborn" (No. 1,445); nor is there much originality in No. 1,448, which is a design for an Organ Case, by Mr. A. E. Perkins.

No. 1,443, Mr. C. H. Mileham illustrates his design for proposed new Chapel and other buildings at S. Saviour's Priory, Haggerstone

It is fully explained by two water-colour views and plans. The drawings, a little blurred in effect, and wanting in precision and freshness of colour, show an able design in red brick and stone (principally the former), and a large amount of plain wall space in the view from

Little Cambridge Street, and a long low porch with a pan-tiled roof supported by short Doric columns, without bases, in the view from the Priory. The whole general effect is rather un-English, and more what would be seen in some quiet Italian town than in prosaic Haggerstone.

We like Mr. F. A. Walters' "Church at Petworth, Sussex" (No. 1,449), much better than his other exhibit on the opposite wall.

"Rotherhithe Town Hall," the accepted design (No. 1,450), which has been already published, and is consequently well-known, is by Messrs. Murray & Foster, and has good points but not much originality, and savours a little too much of the *Ecole des Beaux Arts* to suit English tastes. The Entrance Porch with the attenuated figures supporting the stone balcony over, is the most unsatisfactory part of the design, and we should hope will be reconsidered. Mr. Arnold Taylor's "Public Library at Hampstead" (No. 1,459), does not present much for comment, and would be more satisfactory in execution if the Architecture expressed better the public character of the building. The "Rebuilding of All Saints Church, Hertford," by Messrs. Paley, Austin & Paley (No. 1,464), is doubtless carried out in a thoroughly conservative spirit, but the pen drawing (by Mr. Austin), is hung too high to properly judge. (No. 1,465), "Shireoak Headingley," by Mr. Francis W. Bedford, suffers from the same cause, but it appears to be designed and drawn by the Architect in excellent taste and feeling. Messrs. Niven & Wigglesworth's House "Tieth View near Donne, N.B." (No. 1,466), is a little too quaintly clever to be pleasing, but the garden front redeems the rest of the design, which could, with a little alteration, be made interesting. We take strong exception to the way in which the entrance doorway butts into the bay window, and should hope the Architects will never seriously think of building it that way.

A very successful design is No. 1,471, "New Front Offices, Uttoxeter, Staffordshire." The Ground Floor is designed with an Ionic order, the entrance door being placed in the centre and windows on either side; a long low window on the First Floor is finished by a plain blank plastered gable. The whole design is one which would be sure to attract attention on an A.A. tour. "A Garden Pavilion on the edge of a Lake," by David Kennedy (No. 1,472) is an elevational drawing in water colour, hopelessly skied, but by what can be made out, it seems to be designed under the French influence of Mr. James Fasnacht.

The Bedford Court Mansions (No. 1,475) is by Mr. Vigers, and a severe treatment in brick and stone of a block of buildings at the corner of a street, with a projecting bay window at the angle. The design is successful mainly from its simplicity of treatment. The drawing is by Mr. Gerald Horsley.

No. 1,456 is a series of seven designs for stained glass windows, by Mr. Henry Haliday, for the Apse of Gracechurch, Utica. Harmonious arrangements of colours with well drawn figures. No. 1,470 is by the same artist and is a design for the East Window of the Church of St. Luke's Hospital, New York, and the subject "Christ the Consoler."

There is no reason why No. 1,473 should

have been hung, it can claim no merit either as a drawing or design—it is inoffensive and that is the best that can be said for it. Mr. Hall Caine's House at Peel, Isle of Man (No. 1,457), by Messrs. Scott and Morris, does not very well express its purpose as an entrance to a private home. The large semi-circular doorway is somewhat inspired by Richardson, but we doubt if Richardson would have treated a private entrance quite in this way. It would be admirable for Public Halls, or perhaps better still, as an Entrance to a Crypt or a Church but the Architects have lost the domestic character altogether. Otherwise it is bold and suggestive both in design and drawing, and at once arrests attention.

Messrs. P. H. Tree and Ivor S. Price have in No. 1,476 an excellent design, illustrated by Mr. Price, of small Cottages at Ninfield, Sussex. There is much nice feeling in this drawing.

Mr. Voysey's design for Walnut Tree Farm, (1,496), is another example of artistic domestic work. It is daintily illustrated by Mr. Davison. The effect of the long low lines of the Front with the four gables at one end is very good, and the lonely appearance of the whole design is excellent.

Mr. Andrew N. Prentice shows in 1,499, the Interior of a Dutch Library at Glasgow, which

is more remarkable for the clever handling of the neater colour drawing than for the design.

Another design in colour is by Mr. Belcher, of a Country House "Bearoc," Berkshire. (No. 1,504). The merits of this work, artistically and cleverly drawn as it is in elevation, would have been better explained by perspective views.

There are fine lines and good colouring in No. 1,479, Mr. Patten Wilson's design for "Panel in Frieze." The arrangement of the kneeling figure in blue against the green flowing lines of the background is most artistic, and shows much power of invention.

Other exhibits remaining worthy of remark, No. 1,409, (the first on the Catalogue), is a "Sketch Design for a Town House," by Mr. Frank B. Cooper, a tinted elevation in good colour of a design, in a quiet type of Renaissance, with a nicely treated recessed arched window to the Drawing Room on the first floor. The Grange Road Schools, Middlesborough, (No. 1,424), by Mr. J. Mitchell Bottomley, have some good points, but the design is in a somewhat crude type of English seventeenth century Renaissance, and moreover has received rather rough treatment in illustration by a weak and slovenly water colour drawing. We are glad to see Mr. Reginald Barrat exhibiting again with his lovely water-colour of a delightful piece of

Oriental Architecture, "The Mosque Door at Cairo" (No. 1,540).

Messrs. Cheston and Perkins have a very nice design (No. 1,528) for a Convalescent Home for the East London Hospital for Children, of which we now give a sketch of the Entrance Front, and Mr. Herbert L. Fedden has a charming little design for "The White Cottage, Caterham" (No. 1,535). There are many colour drawings showing schemes for stained glass windows of more or less merit, and amongst them are Mr. E. Frampton's, Nos. 1,531 and 1,547, the latter a design for Chancel Window Nottingham Parish Church. We note No. 1,440, "The Four Elements," a panel by Mr. Herrell; the North Transept Window of the Lichfield Cathedral, by Ward and Hughes; East Window, Radley College Chapel, by T. J. Grylls; "Industry" (No. 1,442), by W. J. Griffiths, and Nos. 1,447 and 1,542, the latter, "Decoration round Confessionals," by Thomas Grew; No. 1,477, "The Baptism," by William Arkman, and a Memorial Window (No. 1,481), by Stephen Adam. Messrs. Ion Pace, Shrigley and Hunt, George W. Ostrehan and Hubert C. Corlette (the latter from New College, Oxford), also contribute decorative designs in colour.

Mr. W. S. Weatherley sends a good pencil drawing by his own hands, illustrating his Church at Stanford-on-Soar, in which there is excellent work of a somewhat correct type. Mr. William L. Griffiths has a design for a Wesleyan Chapel (No. 1,436), which is far above the average of such buildings, and Mr. Cesare Formilli and Mr. James Boekbinder contribute some subjects of quite another character which should not be overlooked.

Mr. E. F. Bodley, A.R.A., has only one contribution this year, "The New Electric Organ, Burton-on-Trent." We should like to have seen some of his beautiful Church work well illustrated. It is, comparatively speaking, unknown in that respect. Sir Arthur Blomfield, A.R.A., has a similar subject in No. 1,429 for St.

Saviour's Church, Southwark, and Mr. Henry Skipworth, for S. Albans' Church, Teddington.

Messrs. Frank Baggallay & Bristowe send a view of the "Centre Hall and Pump Room, New Baths, Harrogate," which we remember they won in open competition some time ago. The "New Chancel of Edwalton Church" (No. 1,546), by Messrs. Brewill & Bailly, is designed on simple and good lines and illustrated by a pencil drawing in which tone and values have been studied. Messrs. Rogers, Bone & Cole show in No. 1,546, the Tower and Spire of Emmanuel Church, Plymouth, and Mr. Baker King the "New Chancel and Alterations to Nave, Christ Church, Southwark" (No. 1,516). Domestic work of some interest is contributed by Messrs. Huntly Gordon, who also sends a new drawing of an "Entrance Hall in Moorgate Street," T. B. Silcock, C. E. Sayer, C. J. Fergusson, John Cash, and Brightwen Binyon. The "Bishopsgate Institute," by Mr. C. Harrison Townsend, is a building admirably adapted to, and expressive of its purpose, and deserves more life-like illustration.

Messrs. J. L. Pearson, R.A., Reginald Blomfield, John Attwood Slater, W. R. Lethaby, Millard, T. MacLaren, E. W. Mountford, and many others are unfortunately not represented this year.

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,
June 4th, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

At last the Victoria Embankment is open from end to end. It has been blocked in sections ever since the break up of the great frost, and its repair has been an exceptionally heavy undertaking. This road presents a surface of 48,000 square yards, and to keep it in repair costs on an average £3,000 a year, the responsibility for it devolving on the London County Council. Only so recently as the close of the year before last it was picked up from end to end and relaid with Macadam, but for a long time past complaint has been made of the spongy, unsatisfactory condition of the roadway. It was thought expedient, therefore, to have a thorough renovation. It has been "scarified" to a depth of eight inches over its entire surface, and in some places even to a greater depth. Many tons of rotten material—pulverised macadam—have been removed, and replaced by new metal. The whole of the road has in fact been completely remade, and a fine piece of work it appears to be. It has occasioned a serious interruption of traffic, but this has been inevitable. The blocking of the entire width of the road in sections, instead of keeping it partly open for traffic, has been necessitated by the use of the large number of steam rollers and "scarifiers" in use.

EMINENT clerics and ecclesiastics are not always apt in their remarks upon the true spirit of Art, but the Dean of Ely is an exception to the rule. In distributing the prizes and certificates gained by the students of the Tamworth and Glascote Science and Art Classes, the Dean said that the question of the restoration of the Sculpture work in the beautiful Lady Chapel of Ely Cathedral was at the present time creating much interest, and he had been asked why the authorities did not restore the beautiful figures, many of which had been defaced in Puritan times. Even if a millionaire offered to pay for the cost he should be sorry to see them interfered with, because he was conscious of the fact that there was no artist or sculptor in Europe at the present day who could restore the work, because the whole spirit of our work at the present day was totally different to the work of the 14th century. Art was an expression of a workman's joy in his work, and the reason they did not get good Art was because very few of the ordinary workmen got joy out of their work. Their work was solely for the weekly wage, and they wanted to do everything on the cheap, always thinking of what they could do in return.

THAT latest established of Art organisations, the Society of Women Painters, holds its first annual Exhibition at the Hanover

Gallery in Bond Street. The collection which has been got together for the occasion is a fairly creditable one. Some of the works display much originality and cleverness, and there is a pleasing absence of the merely meretricious or eccentric. A notable feature is the series of pencil sketches of public men which the Marchioness of Granby contributes. These vary somewhat in quality, but they are all marked by directness and sincerity.

For the support of English Archæologists in Greece, the Prince of Wales has consented to preside at a meeting in St. James's Palace some time during the season. The Archæological Schools of other countries, France, Germany, and America, receive support from their Governments, but this is not the case with the English School. The money which is required does not amount to a very large sum, and should be easily subscribed.

MR. PEARSON, R.A., who is advising the Dean and Chapter of Peterborough, gives a lamentable account of the condition of the noble West Front of the Cathedral. Until a scaffolding can be got up, the extent of the repairs which are urgently needed cannot be estimated, but it is clear that a large amount of work must be done if a great calamity is to be averted. "Not only is the stone," writes Mr. Pearson, "in numberless prominent places very much decayed, but the mortar in the beds and joints has come out to a considerable depth, and, but for some iron cramps—also much decayed—the tops of all the pinnacles would in all probability have been thrown down." It was not only the great gale that was responsible for the mischief; centuries of English winters, with their sudden and violent moods, have also played havoc with masonry and joints. The Restoration Committee has taken immediate steps to issue an appeal for funds, so that the Pinnacles and Spires on the Towers of the West Front may be made secure, together with the remaining portions. Peterborough Cathedral should be preserved at whatever cost.

NUMEROUS improvements in the sanitary arrangements of the Guards' Barracks in London have recently been carried out or are now in progress. These improvements have been undertaken in consequence of representations made by the medical officers in charge of the various Barracks in their weekly reports. Many of the sanitary appliances and arrangements are, or until recently have been, such as have been rendered obsolete by the advance of Sanitary Science; but there is every intention on the part of the authorities to render the Barracks in London as complete and perfect as possible in sanitary matters.

THE New British Art Gallery, to be presented to the nation by Mr. Tate, is rapidly rising on the ground formerly occupied by Millbank Penitentiary. It was commenced last October twelvemonths, and already the structure has attained to something above the main floor level. Only the central portion of the new Gallery will have more than a ground floor, so that a great part of the building is rapidly approaching its full height. The Main Front to the Embankment is 280 feet in length, and already it gives promise of being an imposing piece of work. It is to cost £80,000, and though it will be quite a complete institution in itself, the Architect, Mr. Sydney Smith, has, in accordance with the stipulations of the donor, so arranged that it will admit of extension hereafter. At the commencement it was estimated that about four years would be required for its completion. It is now thought that another eighteen months or two years will be sufficient for the work.

THE New Post Office, Stirling, built on the site of the old structure, has occupied fully eighteen months in construction, and has cost nearly £6,000. It is commodious, well lighted, and fitted up with every convenience for the comfort of the officials and employees, and for the rapid dispatch of public business. The building consists of two storeys and sunk flat, and on the ground floor is the Public Office, with counter extending to 34 feet, and the Postmaster's Room, behind these being the Sorting Room, 43 feet by 36 feet. The Instrument Room is on the second floor, and is 21 feet by 33 feet. Retiring Rooms are also provided. Mr. M'Pherson, Stirling, was the contractor for the erection of the building.

THE Surveyor's Institution held its annual general meeting at 12, Great George Street, Westminster, Mr. Daniel Watney, the new president, in the chair. The report showed that there were now 2,367 members, and four fellows had been elected during the year. Three representatives of the Society appeared before the Hybrid Committee of the House of Commons to oppose the London Streets and Buildings Bill, and succeeded in greatly modifying some main features of the measure. It is too much to look for finality in an Act of so complicated a character, but as it stands it may be regarded as a very successful attempt at the codination and amendment of previous Acts, and is likely to be of great benefit to the Metropolis. Mr. A. Harston moved, and Mr. G. Kemsley seconded, the adoption of the report and balance-sheet, a motion which was carried unanimously. Mr. J. H. Sabin thanked the Auditors for their past services, and a similar compliment was paid to the President, Vice-President and the Council. The Institution Prize was then presented to Mr. Herbert John Watson, the Penfold Silver Medal was given to Mr. Hugh Major Messenger, and the Penfold Gold Medal was awarded to Mr. Theodore Gervase Chambers. The Crawford Prize went to Mr. Cyril Frood Vale Davies.

To those who saw the ground at Earl's Court six months ago, the transformation is simply marvellous. It was at that time filled with the ruins of played-out undertakings, and had its surface churned up into a perfect sea of puddle. But since then the builder and landscape gardener have worked wonders—picturesque edifices, domes, colonnades, and waterways being features of the new show. Buffalo Bill's once famous arena has disappeared, and the lake of Captain Boyton has shared its fate. In place of these, however, is a dainty Court surrounded by fine samples of Indian Architecture. Within these buildings are to be found exquisite specimens of Oriental workmanship—some in metals, some in statuary, many in cutlery, and others again in the shape of Pictorial Art. Taking the whole series of Exhibitions—right away from the fisheries at South Kensington—we have had nothing half so pretty as the white-fronted facades of these Eastern dwellings at Earl's Court. Though "the Queen's Palace," with its attractive collections, is sure to bid high for popular favour, there are other spots that ought to be equally appreciated. The vast interior of the "Empress Theatre" is still incomplete, and cannot be properly judged.

BURY ST. EDMUND'S New Post Office, recently erected on the Cornhill, where it occupies a commanding position, has been opened for the transaction of business. The large block of buildings has a handsome frontage of red brick, with imposing stone dressings, and the carving includes the Royal Arms on the top gable. There are two stories and a basement. The premises extend back into St. Andrew's Street, adjacent to which thoroughfare there is a yard where

the mail carts arrive and depart. On the ground floor of the Cornhill structure is the public Post Office, a lofty, well-lighted apartment, 27 feet by 25 feet. On the outside of the counter the floor is of red Ruabon tile, and around is a coloured glazed dado. Behind the counter, and elsewhere in the building, the flooring is of wood brick, supplied by Messrs. Roger Lowe & Co., of Bolton. Immediately in the rear of the public office is the office of the postmaster, and in close proximity is the office of the chief clerk. Both apartments are close to the lofty, well-ventilated Sorting Room, 63 feet by 26 feet, having six skylights. This office leads through double doors into a granolithic-paved yard, and thence through a wide gateway into St. Andrew's Street (South). There is a Retiring Room for postmen. On the first floor, directly

DESIGN FOR A BOOK COVER, BY
A. A. TURBAYNE.

over the public office, is the Telegraph Instrument Room, of the same size, and there is a Retiring Room for male clerks, and also for telegraph messengers. The second floor consists of the female clerks' Retiring Room, with the caretaker's apartments, Storeroom, and Battery Room. Mr. H. Tanner, of H.M. Office of Works, was the Architect, and Messrs. Everett & Sons, of Colchester, were the contractors.

FROM the annual report of the Committee of the American School of Classical Studies, at Athens, it appears that among the most interesting results of the excavations during the period dealt with, was the discovery of beehive Tombs of the Mycenaean period, one of which contained more than forty vases in perfect preservation, besides terra-cotta figurines, and other objects. A communication from Athens states that at the beginning of this month, the excavations now being conducted at Eleusis by the Archaeological Society brought to light a pinax of terra-cotta of much importance. It is a work of Art of the fourth century before Christ, from the hand of a master. On it are painted four female figures, and the colours are wonderfully preserved.

ST. MARGARET'S CHURCH, Olton, which, after its enlargement, will consist of Transepts, Nave, and Side Aisles, will give sitting accommodation for 464 adults. A new Choir Vestry will also be built at side of South Transept. The plan is so arranged that a Tower may be erected upon the south side, and also Porches upon the north and west sides. The total length of the Nave is 75 feet, the width (including Side Aisles) is 49 feet, and the height from the ground to apex of roof is 42 feet. The walls are being faced on the outside with Codsall stone and finished with Bath stone dressings; the inside walls will be built with brick and finished with stucco; a dado of red brick is built round the lower part of the walls inside. The roofs are constructed with open-framed timber work and covered with tiles. The cost of works in hand, including seating, lighting, and warming will be about £3,000, the half of which sum has yet to be collected. The work is being carried out under the supervision of Mr. B. Corser,

Architect, of Birmingham, by Messrs. H. Willcock & Co., Contractors, Wolverhampton.

FROM the mahogany forests of Africa it is said that 12,000,000 feet of lumber have already been cut and exported, and they promise to yield an immense revenue to the British and French colonists who have seized upon the territory. The wood has a tinge of pink in contrast to the somewhat reddish colour of the American variety, and some of the squared logs which have been imported are 2 by 3½ feet in size. Some of this African mahogany is the wood of Khaya senegalensis, a tree which belongs to the same family as the true mahogany, and is closely related to it. It is not so desirable a cabinet wood as the Mexican or Cuban mahogany, but is more like the Central American wood.

THE India Office has ordered from a firm of granite merchants in Aberdeen a large Monumental Obelisk to be erected at Manipur in memory of the officers who were murdered there four years ago. The Monument, which will comprise 170 pieces of Aberdeenshire granite, will weigh 70 tons, and when set up will bear the following inscription: "The Government of India have caused this Monument to be erected to mark the spot where rest the remains of the British officers who were murdered at Manipur in 1891."

PRACTICAL effect has just been given to the movement for providing a superior class of workmen's dwellings in France by the official opening of a new Model Village at Athis, ten or twelve miles from Paris, on the Orleans Railway. The group of houses in question, to which the name of "Cottage d'Athis" has been given, is the first undertaking carried out under a recent Act for enabling workmen to obtain houses in the country, either as tenants or owners, under very favourable conditions. In this case the Orleans Railway Company offered special advantages, not only by allotting a plot of land on very easy terms, but by advancing a sum of £6,000 to a Co-operative Society of their workpeople to enable them to build their own dwellings. The name "cottage," which to English ears has an odd sound as a collective word, was given to the Village, because it suggests "the happy and the picturesque, and a home in the country where a man may live in peace and comfort with his wife and children." The new Village seems to realise the intentions of the promoters. At present it only includes 19 houses, with a population of 63 persons; but more houses are in course of construction, and there seems to be a great demand for them. The cost of building has varied from £160 to £300 and the annual rent from £3 to £12, but the tenancy is, of course, confined to the members of the directing Co-operative Society. The Cottages are of picturesque design.

LLEWELLYN AP GRIFFYD, the last of the native Princes of Wales, is to have a monument. With regard to the place and form of the memorial, some difference of opinion prevails. It is believed that Llewellyn was buried in 1282 in the Abbey of Cwm Hir, Radnorshire, and one proposal is to erect a stately tomb to his memory in the Abbey. Some subscribers think that first of all excavations should be made in the Abbey with a view of finding, if possible, the exact spot in which the remains rest. The excavation work, has, indeed, been decided on, and will be carried out under the supervision of a body composed of representatives of the Memorial Committee, the Cambrian Archaeological Association, and the Cymmrodorion Society.

SOME successful experiments have been completed by the London Council in regard to the filtration of sewage effluent, which

will be of value to authorities having to deal with the purification of sewage. Experiments have been made through various media by means of filters at Barking outfall, with the result that coke-breeze has been found to be most effective. An average quantity of a million gallons of effluent per day per acre, is being purified to such a degree as to remove odour, colour, and liability to putrefaction.

CARDINAL VAUGHAN will lay the foundation stone of the Westminster Roman Catholic Cathedral, on the site close to Archbishop's House, Westminster, at eleven o'clock in the forenoon of Saturday, June 29th, the Feast of the Apostles SS. Peter and Paul. Associated in the ceremony with his Eminence will be Cardinal Logue, Roman Catholic Primate of All Ireland, who has accepted Cardinal Vaughan's invitation to be present. Invitations have also been sent to all the members of the Hierarchy in this country, and to the clergy of the old London district, now forming the Westminster, Southwark, and Portsmouth dioceses.

THE New Volunteer Memorial at Exeter, which stands just outside the walls on the site of the Saxon Castle—the last stronghold in the country to give in to the conquering William in 1066—was designed by Mr. Sidney K. Greenslade, of University Chambers, Gordon Square, London, a native of Exeter.

NEW VOLUNTEER MEMORIAL, EXETER,
DESIGNED BY S. K. GREENSLADE, A.R.I.B.A.,
EXECUTED BY HARRY HEMS AND SONS.

The work itself was carried out by Messrs. Harry Hems and Sons, of Exeter. The approaches and base of the Memorial are of grey granite, quarried from the Tors, close by the convict prison at Princetown. All above (save the inscription tablets and the medallion bust, which are in hard Sicilian marble) is in Portland stone. Rising to a height of nearly 25 ft., the outline of the Memorial is graceful and strong. Above the

marble tablet the structure tapers considerably, the fluted column being surmounted by a Royal crown in the solid stone.

GUISELEY is to have a new Wesleyan Chapel, and the foundation stones have been laid. The new building, which is to take the place of a Chapel built in 1814, and enlarged in 1834, occupies a commanding position, with a south aspect, the ground sloping towards the road. The style of Architecture is Decorated Gothic. The Chapel will comprise Nave, Chancel and Transepts, giving an accommodation of 509 on the ground floor, whilst 200 more will be accommodated in three small Galleries. At the south-west corner, a Tower and Spire will rise to a height of 100 feet. The Chancel, which will be lighted by a tracery window at each side, and a "Rose" window in the Gable will contain the organ and the choir. All the windows will have stone tracery heads, filled with stained glass. The outside walls will be faced with pitch-faced delph stones, relieved with Ashlar dressings of Guiseley sandstone, and the roof covered with green Westmoreland slates with red tile ridge. All woodwork will be of pitch pine. The ceiling of Nave will be trefoil, the lower arch being plastered in between the wood ribs, and the upper arch and whole of the Chancel ceiling of wood, divided into panels by ribs and the arch roof trusses. Messrs. Walker & Collinson, of Bradford, are the Architects. The contracts, which amount to £3,792, have been let to the following firms: S. Mounsey & Sons, masons, Guiseley; Jas. Deacon, joiner, Shipley; Edwin Lee, plumber, Guiseley; Andrew Firth, plasterer, Graddon; John Smithies, slater, Gt. Horton; Bilton & Bowdon, painters, Guiseley. The whole cost, including site and Architects' fees will be over £5,000, and towards this, prior to the ceremony on Saturday, £3,200 had been raised.

WHILST the workmen were levelling the land on the north side of the Market Place and the Free Library at Preston, the remains of three draw wells were discovered. There is a record of the Corporation having ordered, in 1654, a "draw well" to be made "in the bottome of the Market Stedd," and in 1666 another well was sunk in Fishergate. About 40 years ago, workmen employed in excavating in Church Street, found an ancient well a little to the south of Water Street. One of the upper stones bore the date 1664, and was inscribed with the name of the Mayor of that year. Towards the end of the 17th century, Molyneux Square—formerly a part of Lancaster Road—was described by Dr. Kuerdon as having "a draw well in the midst thereof." Pumps were afterwards erected in various parts of the town, and it is only in comparatively recent years that they have been abolished. The district seems noted for its legends and discoveries of subterranean vaults and passages. There is supposed to be one connecting the ancient Abbeys of Whalley and Sawley.

MR. W. B. RICHMOND, A.R.A., spoke of his work on the "Decoration of St. Paul's" before a meeting of the Applied Art Section of the Society of Arts the other evening. The Dean of St. Paul's was in the chair. Professor Richmond said a century ago the Bishop of London, approached as to decoration, made answer that nothing would induce him to sanction the conversion of Protestant St. Paul's to the Romish Church. Hence the Cathedral remained an example of the dulness of Protestantism and an evidence that England was not ready for the remarriage of Religion and Art. But time brought a change in the manner in which such things were regarded, and it was considered that St. Paul's should be decorated in accordance with the

ideas of Sir Christopher Wren. When he was asked to prepare a scheme of decoration for the Choir, he felt that the only material for such decoration was mosaic, because principally, it could be washed without injury—an absolutely necessary condition in the smoky London atmosphere. Further, he considered that the designs should be such as were used during the time of the Byzantine Empire; that the work should be carried out by English—not Italian—labour; and that the work should be, if possible, carried out on the spot where it was to remain—under the light and conditions of its environment. The paper described at length how the English workmen were educated up to an appreciation of the Art. Speaking of the first two spandriis, Professor Richmond said he had not used sufficient strength in his outlines; he had used his white too liberally, the consequence being that the half tones were too narrow on account of the liberal expansion of white. He hoped, however, that this had been put right in his later efforts. One thing he trusted, and that was by his work and methods he had killed for ever paper mosaic in England.

THE 40 ft. scaling ladders and the pent-house for covering 100 men, which have been discovered in Chitral, and were intended by Sher Afzul as engines for the final assault and sack of Chitral Fort, ought to be taken to pieces, carefully numbered, and despatched at once to the Empire of India Exhibition in London. They would be the attraction.

AN unpretentious red brick and tile building, with half-timbered gables, situated close to Wallasey Station, near Liverpool, and standing in its own ground of rather more than an acre, has been provided by Mr. James Samuelson as a permanent "Camp" for girls. The main room is the Dormitory, an airy and well-lighted apartment 52 feet 6 inches long by 16 feet 6 inches wide. In this there is accommodation at present for twenty-four girls, but a dozen more can be provided for. There is a Dining-Hall 23 feet 6 inches by 16 feet 6 inches, the Matron's Room, and a Kitchen with a fine range and ovens. There is also full accommodation in the way of Lavatories and Baths. The building has been erected by Mr. James Merritt, Birkenhead, to the plans of Mr. R. G. Sykes, Liverpool.

THERE is to be no buying up of existing electric light companies on the part of the Newcastle Corporation. The Electric Light Committee has carefully considered Professor Kennedy's recent report, and has come to the conclusion that it cannot recommend the Council to purchase existing rights. While they have taken this action, however, the members of the Committee have not abandoned the idea of a corporate electric light supply. There are other towns where electric lighting companies exist, and where the Corporations still produce electricity on behalf of the public lighting of the streets. There are portions of towns that companies have refused to take up, and the Corporations have stepped in and given the supply themselves. How these ventures have succeeded is not stated, but the Town Clerk of Newcastle has been instructed to make inquiries on the matter, and the Committee will afterwards consider the advisability of getting the Council to apply for powers to provide an independent supply. The Committee pays something like £14,000 per annum to the Gas Company alone for lighting, and this in itself, it is contended, would furnish a large return for money expended to begin with.

MEMBERS of the Association of Sanitary Inspectors visit Worthing this Whitsuntide, on the occasion of their provisional meeting

and conference. On Saturday there was a conference at which papers were read by Alderman Cortis, Chairman of the local Sanitary Committee, on "The Dwellings of the Poor;" Dr. Charles Kelly, the Medical Officer for West Sussex, on "Death Rates;" Mr. C. T. Gardner, Sanitary Inspector of Worthing, on "The Sanitary History of Worthing;" and by Mr. W. W. West, the Vice-Chairman of the Council of the Association, on "The Sanitary Inspectors' Association: a review and a forecast."

In the Hall of the Barbers' Company is a painting, alleged to be by Holbein, representing Henry VIII. presenting a charter to the Court of Barber-Surgeons, and among the portraits are several of the leading members of the fraternity in the City at that time. A rumour is abroad that the Guild is about to turn it into cash, the price they set upon it being given at £15,000. The picture is essentially part and parcel of the ancient history of the City of London, and it would be a thousand pities if so interesting and valuable a work of Art were allowed to find a future home, say, in America, or in some collector's residence.

A BLOCK of buildings now being erected on the site of the old Bruce Academy in the Haymarket, Newcastle, is being pushed forward rapidly by the contractor (Mr. Walter Scott) and will no doubt be completed shortly. On the front of the building, facing the Haymarket, a stone niche, with canopy above, and an ornamental tablet below, has been inserted. In the niche is to be placed a statue of the late venerable Dr. Bruce, and the tablet is to record the fact that the new building stands upon the site of the famous Academy at which many distinguished Novocastrians received a goodly portion of their education. Bruce's Academy was at one time regarded as the scholastic institution of the town.

ART students in the National Gallery have been puzzled of late to find the large Raphael Room upside down. A most unsightly erection—a kind of palisade—has been put up in the centre of the room, hiding the Ansidei Madonna and cutting off all the centre of the floor. We hear that this room within a room has been put up in order to facilitate the proceedings of a firm of foreign photographers. In the interests of other visitors to the Gallery, these proceedings should not be lengthy; but as the palisade has been painted, it looks as if it had come to stay some time. Perhaps it would be well to say again that the National Gallery is a public institution not a private speculation ground. By the way, the National Gallery made several purchases at the Cliefden sale, and probably, through employing two agents instead of bidding directly, obtained what they required at a moderate price. We are glad to note that the new director is not confining his attentions to Foreign Art, but is filling up the gaps of our National Artists—even those of the second rank, such as Stubbs and Herbert Pugh. The picture of St. Paul's, Covent Garden, by the last-named, which has been acquired, is interesting not only topographically but because it is the view from the Artist's house, he having lived and died (from drink) in the Piazzas. Probably his remains are somewhere in the graveyard of this very Church, where Girtin and other Artists also sleep.

THE month of culture at Edinburgh, called "The Edinburgh Summer Meeting," which now almost rivals the Extension retreats at Oxford or Cambridge, begins this year on August 5th and closes with the end of the month. The programme includes lectures on Social Science and Philosophy, History, Literature, Philology, Hygiene, Biology,

Geography, Geology, Chemistry, Civics, Sloyd, and Fine Art. Among the lecturers are Professor Geddes, Mr. William Sharp, Mr. Arthur Thomson (all concerned with the "Scotch Renaissance") Professor Haddon, Professor Lloyd Morgan, Dr. Nicol, and others.

THE Walton New National Schools, Liverpool, are arranged to accommodate 324 boys on the ground floor and 324 girls on the upper floor—648 in all. Each department is arranged in five large Rooms, divided by glazed Screens, by the sliding of which three of the largest rooms can be thrown into one at any time for public gatherings or examinations. Every part is particularly well lighted, according to the best system for School work, and the teachers not only have perfect supervision of the Rooms but of the Entrances and Cloak Rooms also. The ventilation and warming have been carefully carried out, open fires and hot water pipes having been used in combination. The plans were selected in a limited competition, in which Mr. Hance, of the Liverpool School Board, was referee; and Messrs. C. O. Ellison and Son, the architects.

ROSSLYN CHAPEL has been further beautified by the addition of two new Stained Glass Windows. In 1887 the late Earl of Rosslyn filled in the centre of the Clerestory windows on the north side with a figure of St. George and the Dragon, in the memory of the late Mr. Andrew Kerr, Architect, who superintended the building of the Baptistery, and other work connected with the Castle. At the same time, by his Lordship's kind permission, the centre window on the south side was filled in by Mr. W. Mitchell, S.S.C., the then tenant of Rosebank, with a representation of St. Michael, as a thank-offering from himself and Mrs. Mitchell. It was understood at the time that these two subjects formed part of a series with which

Lord Rosslyn intended to fill all the Clerestory windows, after the suggestion and design of Messrs. Clayton and Bell, of London; those on the north side consisting of Christian warriors, and those on the south Old Testament warriors. As stated above, St. George, soldier and martyr in Nicodemia, fourth century, patron of England, forms the centre subject on the north side. There have now been added on the left of this St. Longinus, soldier and martyr in Cappadocia, fourth century; and on the right St. Maurice, soldier of the Theban Legion, who was martyred with others in 286. The former is given by Blanche, Countess of Rosslyn, in memory of her beloved husband, Francis Robert, fourth Earl of Rosslyn; the latter by her Grace the Duchess of Sutherland in memory of her father, the late Earl. It is needless to say these windows add very much to the beauty of this unique Architectural gem.

THE new organ for St. George's, Hanover Square, London, is constructed on the modern electric principle. The arrangement of the electric organ is already pretty well known, but it may be briefly described. It

consists of an electric key-board, communicating with the organ by means of wires forming a single cable, and of an ingenious system for the production of sound in the organ itself. The organ pipes stand on wind boxes, which are automatically filled by the action of a nicely-adjusted valve. This valve responds to the slightest touch of the key, so that immediately a note is struck there is a rush of air, which, striking suddenly on the lip of the pipe, emits a full round tone. One of the advantages of the system is that the keyboard may be situated at almost any distance from the organ. In the case of St. George's it is in the Chancel, at the opposite end of the Church to that in which the instrument is placed. It occupies no more space than an ordinary chamber organ, and it may be moved about from place to place as the exigencies of the Church may require. In point of tone these electric organs leave little to be desired. It is claimed for them, indeed, that they are superior in this respect to instruments constructed on the old system.

It was recently ascertained that the Tower of Darrington Church, about four miles from Pontefract, had suffered some damage during

a great store of documents relating to the titled families of France. The Marquis de Magny, the compiler of the "Livres d'Or de la Noblesse de France," founded it in 1841, professedly in order to continue the work of the genealogists of the 18th century. But the new generation of Frenchmen care little for tables of precedence, and what Carlyle called "Tom Fool titles," so that the whole concern is going for what it will fetch. Upwards of 40,000 genealogical trees and 400,000 original documents upon parchment or paper were submitted at the sale.

PROGRESS is being made with the erection of the extensive block of offices for the West Riding County Council at Wakefield. As the pile of buildings gradually rises, the design of the structure, by Messrs. Gibson & Russell, of Little Queen Street, Westminster, is much admired. The cost of the buildings will be about £80,000.

A PULPIT of Caen stone has been erected in St. George's Church, Birmingham, to the memory of the Rev. J. W. Mills. The Architect, Mr. A. Edwards, designed a very handsome pulpit, which has been made by Messrs. Thomson & Co., at a cost of about £100. The pulpit is of octagonal shape,

relieved with open tracery and carved foliage, and stands on a panelled column springing from a moulded base.

MEDALS of Honour have been awarded by the Society of French Artists exhibiting in the Salon of the Champs-Élysées to M. Ernest Hébert, Painter; M. Bartholdi, Sculptor; and M. Baude, the Wood Engraver. The Jury of the Champs-Élysées Salon has decreed some of the honours of the year. No first-class medals were given for Painting. M. Sorolla y Bastida, M. Ravanne, M. Paul Lecomte, and M. Simonnet were among the recipients of medals of the second class. M. Gauquie, Sculptor, obtained

the only first-class medal given in his department. The Architects fared as badly as the Painters, none of the candidates for first-class medals having obtained a sufficient number of votes to entitle them to the honour of such an award.

AMERICAN engineers seem to be agreed that steam railways are doomed, and that the recent development of electric railways is beginning to revolutionise travel. The steam railways are finding it difficult to compete with the electric trolley lines over large parts of New England. An electric line is also projected to connect Haverhill, in Massachusetts, with Quebec, in Canada, a distance of 280 miles. The Cincinnati, Hamilton, and Dayton Railway, is about to substitute electricity for steam power. The competition of the electric trolley lines has brought down the fares on the Philadelphia and Reading, and is expected to do so on the Pennsylvania Railway. And, finally, the Inter-Oceanic Electric Railway, has been incorporated in Illinois with a capital of 200,000,000 dols. It will construct an elevated electric railway between Chicago and New York.

the winter gales. The foundations were carefully examined, when it was found that under the west side of the Tower, only about a foot deep from the surface, the body of a man had been placed in a sort of bed in the solid rock, and the west wall was actually resting upon his skull. The gentle vibration of the Tower had opened the sutures in the skull, and caused a crack of about two and a-half inches long. The grave must have been prepared and the wall placed with deliberate intention upon the head of the person buried; and this was done with such care and art that all remained as placed for at least six hundred years, till in fact the storm of December last found out the weak place. The place can still be seen, being protected by a framework of bricks.

ONE of the most curious sales of modern times took place on Thursday at the Paris Mart, the Hôtel des Ventes in the Rue Drouot. The Heraldic College of France was put up by auction, together with all its archives. It is true that the institution was never anything but a private enterprise, but it has had an uninterrupted existence of more than half a century, and it has amassed

NOTICE.

OUR SPECIAL ISSUE.

The Firm of English Makers

Commissioned to supply us with the **Stiff Cover** for our **Special** and all future numbers have notified us that, owing to the stoppage of their mill, consequent upon the **Whitsuntide Holidays**, they are **unable to Deliver to Date**; we have, therefore, no option but to postpone the **Special Number** for one week.

Our Issue of JUNE 18th

Will mark a **Second Great Development of**

The Builders' Journal,

Which now possesses a

Larger Circulation

Than any other Architectural Journal published in this country.

This **Special Issue** will have all its inside pages **Printed on White Paper**. We have invited three of the best known **Pen and Ink Artists** to submit us designs for a **New Head Piece**, the best of which will embellish the issue. This number will be sent by Post to Every Architect, Surveyor, Borough, Diocesan and Ecclesiastical Surveyor, Clerk to the Local Board, in England, Ireland, Scotland and Wales. This, with the Publisher's ordinary Edition, will make the output close upon—

25,000 Copies.

COMPETITION AS TO FEES.

At the last meeting of the Ipswich Board of Guardians, the clerk read replies from Mr. Brightwen Binyon and Mr. W. Eade, local Architects, to whom he had written, in accordance with the resolution passed last week, asking each whether either would undertake to act as assessor of the six selected plans for the new Workhouse, and at what fee. Both declined to enter into a competition as to fees with Mr. Charles Barry, the Architect recommended by the Royal Institute of British Architects (of which both are members), but intimated that they would be willing to act jointly at a fee of 50 guineas. The Rev. T. W. Tozer said that was the only answer they could have expected from gentlemen, and moved that they be appointed as assessors at a fee of fifty guineas to cover everything. This was seconded by Mr. Lord. Mrs. Owen said the ground on which the resolution was carried was that about half the expense would be saved, and as the fee would be the same it would be better to have Mr. Barry, who was recommended by the President of the Institute of Architects, and was an Architect of great reputation. His travelling expenses could not be much. She moved that Mr. Barry be appointed. Mr. C. Borrett (a local builder) seconded this, and, on a show of hands, it was carried by 23 to 3.

The Builders' Journal.

MEN WHO BUILD.

No. 15.

HENRY LOUIS FLORENCE.

IF there is nothing inspiring, there is at least something refreshing in the fact that two centuries and a-half ago one could obtain from Gray's Inn Gardens a delightful and uninterrupted view of the rising ground of Highgate and Hampstead. Two centuries and a-half ago! But you do not dive back, even in soulful reverie, into the days of the *Tatler* and the *Spectator*, when Gray's Inn was in the zenith of its fame, and when Howell wrote from his beloved Venice to a friend in his equally beloved Inn, "I would I had you here with a wish, and you would not desire in haste to be at Gray's Inn, though I hold your walks to be the pleasantest place about London, and that you have there the choicest society." Sir Roger de Coverley, of immortal memory, is mentioned by Addison as walking on the terrace of Gray's Inn Gardens, "hemming twice or thrice to himself with great vigour, for he loves to clear his pipes in good air, and is not a little pleased with any one who takes notice of the strength which he still exerts in his morning hems." Jacob Tonson, the celebrated bookseller, had his shop under Gray's Inn Gateway: being succeeded by an equally notorious bookseller, Thomas Osborne to wit, who is oftener than once introduced in the "Dunciad." Pope made him contend for the prize among the booksellers, and prove the successful competitor:—

"Osborne, through perfect modesty o'ercome
Crowned with the guerden, walks contented home."

And yet Johnson in his life of Pope speaks of Osborne as a man entirely destitute of shame—without sense of any disgrace but that of poverty. So much for history. Men's reputations do not mellow like wine and Architecture. The toning propensity of years does wonders with the cup, it also works miracles with stone. Antiquity blinds us; the pen is not so heartless as it seems. Oftentimes we deem a thing is good because we have no heart to call it bad; self-satisfying, if a little false.

But memories of the old Inn—and there are a crowd of them—do not occupy your present thoughts. Though the sun is sweltering down upon the elms—the poor old soot-dyed elms which Bacon planted with his own hands, and under whose shadows he divined the purest of human pleasures the love of trees and grass and flowers and plants "that do best perfume the air,"—you escape into the shadows of Verulam Buildings, to chat with an Architectural dilettante—a modern man of pencil and polish, souled with old time influences, but garbed in the

orthodox monstrosities of the century. If one should talk under the glamour of Gray's Inn, of memories of early days, there were no limit to your retrospection, and so Mr. Florence starts with the happy moment wherein he snatched the Soane Medallion, with as fine and perfect a study as has ever secured the award. That was six-and-twenty years ago—half a life-time; and in the same year he won the Royal Academy Gold Medal, and in the year following, its

COOMBE FARM: H. L. FLORENCE, ARCHITECT.

Travelling Studentship. For twelve months he roamed through Italy sketching and studying all its most treasured works, and the number of very clever and earnest water-colour drawings he brought back with him, testified to the industry and perseverance of their author.

Henry Louis Florence is one of the few men who have been steadfast in the loves of their youth. He has studied and worked in the Italian spirit ever since he first made acquaintance with a drawing board, and although English practice offers but the rarest opportunity to work purely in sympathy with the Italian feeling, he has kept as close to its teachings as the fashion of the moment permitted. The two designs hanging upon the walls of his drawing office, and which gained him his first distinction, show this most clearly, and none of his later and

Lloyd's house in Delahay Street, Westminster; the Holborn Town Hall; New Library, Reception and Class Rooms for the Benchers of Gray's Inn; additions to Wood's Hotel, Furnival's Inn, the Paddington Baths, the London Joint Stock Bank at Paddington, and the Coburg Hotel, now being erected in Mount Street, on the Duke of Westminster's Grosvenor Estate. The greater number of these works have emanated from the firm of Isaacs & Florence, but although Mr. Florence does not say so, it is well known that while this connection lasted, the Designing and Drawing offices were under the sole supervision of himself. Indeed, Henry Florence invariably plans all his work and details his elevations with his own hands. Before he came to take any great interest in the work of the Institute, and as a member of its Council and Art

Mr. Florence was born to be an Architect; he has combined in his own individuality all the little accomplishments of manner which build, upon the attributes of draughtsman-ship, the mellowed man of practice, and those are what so many clever practitioners lack.

THE Zion Congregational Chapel, Attercliffe, Sheffield, was re-opened last week after complete renovation and decoration at the hands of the Sheffield Co-operative Painters' Society, the effect of the efforts of the decorators being highly satisfactory. In addition, the Organ, which has done good service since 1867, has been extended and rebuilt.

MAUCHLINE is to have a row of Cottage Homes built as a memorial to Burns, for aged poor people, who will be housed in them rent free. The Cottages will overlook the Moss-giel Farm.

R.A. GOLD MEDAL DESIGN FOR A THEATRE, BY H. L. FLORENCE.

executed work approach them in purity of detail. Mr. Florence knows how impossible it is to produce any adequate virtue of proportion, of scale, or of detail in the mammoth buildings demanded of present day Architects. He turns to a splendidly executed elevation of the Hotel Victoria—the largest of his works—which holds the pride of place in his own room—and laments the necessity of floors piled one on top of the other, as they are here; but then he can turn to the delightful sketches of Coombe Farm, Croydon, for Mr. Herbert Lloyd, for whose family Mr. Florence has erected many fine houses, and be satisfied that never a more charming resting house for a busy man has been erected in the shires these many years. To give a schedule of the works of Henry Louis Florence would be a big thing, but his best known are the Holborn Viaduct Hotel, the late Mr. Edward

Committee got into close quarters with the examinations, Mr. Florence did great good at the Association, and passed its chair with distinction. One remembers with much pleasure his suavity of manner, the little lisp intoned so pleasantly in his speech, the courteous demeanour, the utter lack of "side."

Upon a delightfully carved oak settle rest the complete set of drawings of the Mammoth Hotel, that was to have risen on the site of Her Majesty's Theatre, in the Haymarket. These drawings have re-crossed the Atlantic, and may now lie in the charming oblivion of Gray's Inn for the remainder of their days. One can but think how typical of life sets of Architectural drawings are. Those upon which most hours of toil are spent, and of which the greatest expectations are formed, oftentimes never get beyond the artist's signature in the corner. Ambitions many times get no riper than that.

STEPS have been taken to secure a suitable Primitive Methodist Chapel at St. Leonard's, in the Hastings circuit. Property valued at £900 has been purchased for a site, and the building will be erected at once.

THE six plans received from competing Architects for alterations in and additions to the Workhouse Infirmary at Scarborough, are to be sent to the Local Government Board for adjudication.

MR. HUMPHREY MINCHIN seems to be earning well-merited appreciation in the practice of his profession as an Engineer out in India. Although only 26 years of age, he has charge of the important Waterworks which are being constructed in the Madras Presidency at a cost of £150,000. Colonel J. Pennycuik, R.E., Chief Engineer of the Public Works Department, recently made an inspection of the works. His report states that the progress made and the manner in which the work is being done, reflects the highest credit on Mr. Minchin.

A MODERN GRAMMAR SCHOOL.

ONE of the two Grammar Schools to be built at Oldham, under the Hulme Trust, was opened by Earl Spencer on Thursday. The Schools have been built to accommodate 250 boys and 150 girls on a plot of land (about eight acres in extent). The buildings are placed on the crown of the hill, with the Front to the south-west, overlooking Manchester. The basement floor contains a Gymnasium, which will be used by both boys and girls, with Dressing Rooms for each, a Workshop for the boys, and a Recreation Room for the girls; separate Dining Rooms are provided, and drying stoves for wet clothing, fitted up with radial horses. There are staircases to the ground floor, one at each end, which, together with the Corridors and Gymnasium, are lined with glazed brick dadoes. On the ground floor are separate Entrances, with Offices or Waiting-Rooms, Private Rooms for the use of the master and mistress, with Lavatories, &c., to same. The Cloak Rooms and Lavatories for the boys and girls are placed near the Entrances. There is a large Central Hall, capable of seating about 600 persons, with Corridors round same on three sides, from which is access to the various Class Rooms, thirteen in number. All the Class Rooms have raised Galleries, and are lighted from the left. A space of 15 ft. superficial and a separate desk is provided for each scholar. A Chemical Laboratory is provided, and is fitted up with benches to accommodate 36 students working at a time, with separate bench on a raised platform for the use of the master. There is also a Preparation Room adjoining the Laboratory, and a Chemical Lecture Hall, which has a raised Gallery, with fixed benches for the students, and a large demonstrating table, fitted up with the most modern appliances. The Lavatories are in close proximity to the back Entrances, and are of easy access from the School and playgrounds. The style of the building is Gothic (Perpendicular), and is built with Ruabon bricks, with red terra-cotta dressings in tracery labels, string courses, copings, &c., with heads and sills of stone. The roofs are covered with Welsh slates and ornamental red ridges. The whole of the floors are concreted, and laid with wood blocks (except the Entrances, which are tiled). All hollow floors have steel joists and girders, all the Corridors from the Entrances on the ground floor have tiled dadoes, and the large Hall and Class Rooms, &c., have dadoes in timber. The whole of the inside joiner's work is of the best selected red deal, stained and varnished. The whole of the rooms are heated by hot water, low pressure, having ornamental radiators fixed in different parts of the rooms and corridors. The lighting is on the Stott Thorp principle, with ornamental pendants and gaseliers. Ventilation is effected by fresh air inlets with Tobin's tubes, and with outlets in ceiling connected with a large exhaust ventilator on the main roof of Hall, the outside of which is covered with copper, and forms a very attractive feature in the building. The work has been carried out from the designs and under the superintendence of Mr. John W. Firth, Architect, of Oldham. The sum of £18,000 has been expended on land and buildings, and in addition £1,250 is available annually for maintenance.

THE Pleasley School Board have accepted the tender of Mr. Oscroft, of Nottingham, at £3,357, for the erection of new Schools at Shirebrook.

LAVOISIER the great French chemist, is to have a Statue in Paris which will be of an international character. The Institute of France is soliciting subscriptions, which may be sent for the Lavoisier memorial to 55, Quai des Grands-Augustins, Paris. Lavoisier, like our own Dalton and Davy, was, of course, one of the fathers of Modern Chemistry.

At an Exhibition in Philadelphia a novel exhibit will be a huge model gaol. It will show all the latest improvements in prison construction, and will present for inspection a gaol complete in sanitary equipment and absolutely safe. A prisoner incarcerated within its iron cages will be absolutely protected from without, and will find it impossible to escape, even if allowed to work for liberty with the most improved gaol-breaking tools.

ARCHITECTURE AND ANTIQUITY IN THE EAST RIDING.

FROM A CORRESPONDENT.

THE East Riding Antiquarian Society has a fine field for Archaeological and Antiquarian research, and in the summer season some charming excursions are organised. Last week, Londesborough Park was visited, within which there is an early Anglo-Saxon burial place, discovered during the present generation, and its identity has been fairly established by various relics picked up from time to time in the immediate vicinity. The other week a skeleton was found in what is called the Saxon Wood, lying alongside the skull being an old earthenware urn. Most important of the ancient monuments in the Church, as the Rector pointed out, is the brass plate on the Chancel floor, commemorative of Margaret, daughter and heiress of Henry Bromflete, whose marriage with John, Lord Clifford—the "bloody Clifford"—spoken of by Shakespeare—brought the estate into the hand of the Clifford family, then held successively by the Earls of Cumberland and the Earls of Burlington, and passing, through the marriage of Baroness Clifford, daughter of the third Earl of Burlington, with the Marquess of Hartington, to the heir of Chatsworth. From the general character of the masonry the bulk of the Church dates back to the end of the twelfth or the beginning of the thirteenth century; but the Rector indicated a Saxon cross and sun-dial over the main entrance as proofs of the early introduction of Christianity to this part of the World. The sacred edifice was restored in 1679 by the first Earl of Burlington and his wife, who also built and endowed the Village Hospital or Almshouses—an endowment accompanied by a set of rules, characteristic of the period, for ensuring a complete renunciation of the Evil One and all his works. But the most notable of the Earls of Burlington was the third who bore the title. His rule extended over the fifty years from 1703 to 1753—described by Canon Wilton as "Londesborough's Classic Era"—and was marked by a generous patronage of Art and Literature, and the creation of landscape gardening so far as Londesborough is concerned. It was Richard Boyle, the third Earl, who also built Burlington House, London, and the Assembly Rooms at York; and to him Alexander Pope dedicates his epistle on "The use of riches," making distinct allusions to the re-invigorated scenery of the park and pleasure grounds. The Church itself contains no memorials of the Earls of Burlington beyond the funeral banners and armorial bearings to be found in the Vestry. Mr. Temple Moore explained in fuller detail the Architectural features of the Church, depicting the old family pews, long since demolished, as a curious structure in wainscotted oak, with a canopy and sash windows. It was difficult for the visitors to take their leave of Londesborough, with its splendid specimens of oaks and elms, its yew trees and copper beeches in cultivated profusion, its lawns and lakes and the fine avenue of trees, extending over a mile in length. There is something with a still greater attraction for the antiquary in the fact that the Park contains the remains of a Roman road, partly submerged by a lake, and is moreover supposed to be the site of the Summer Palace of King Edwin, where the council was held in which Paulus persuaded the King and his chief men to embrace Christianity. After an examination of the stoutly-built cellars of the old Hall, the party moved on to Nunburnholme, where the Rev. M. C. F. Morris took up the duties of cicerone. The site of an ancient Benedictine Nunnery was inspected, and many theories advanced as to the ground plan of the building, after which Mr. Morris ascended the pulpit of his Church and explained its leading features. Altogether it is a most interesting edifice, dating back to the days of the Conquest, and containing one of the most perfect specimens of a Norman arch, with its soffit rolls, zigzag, and grotesque heads in label. A Norman window admitting but a narrow ray of light, has been transferred from the west wall of the Tower to the further end of the Aisle where the pulpit stands, and shares with the Arch the distinction of being the oldest portions of the structure.

Much controversy arose over a strange obelisk erected in the churchyard from carved stones, which were formerly incorporated with the building. As usual the authorities are not agreed as to the origin of the relic, or even as to the emblematic or non-emblematic significance of the rude carvings upon it. The proceedings were finally wound up by a visit to Burnby Church, where the Rev. C. Wilton unfolded the history of the ivy-clad structure, as far as it could be obtained, from the days of its Norman dedication.

PROFESSIONAL PARAGRAPHS.

A NEW Sunday School is about to be built at Zion Baptist Chapel, Bramley. The plans are by Mr. W. A. Hobson, Architect, of Leeds.

A NEW Baptist Chapel is being built at Stanwell Road, Penarth, from plans by Messrs. J. P. Jones, Richards & Budgen, Architects. The Builder is Mr. T. Bevan, of Penarth. The cost will be £3,080.

FROM designs by Mr. C. H. Fowler, F.S.A., Architect, of Durham, a new Tower for St. Chad's, Tushington, near Whitchurch, is about to be built.

A NEW Hospital is to be built at Morton Banks, for the Keighley, &c., Joint Hospital Board. Tenders are to be delivered by June 12th. Messrs. Judson & Moore are the Architects.

THE Board of the Central London Sick Asylum District, Cleveland Street, W., has selected for the new Asylum the plans by Messrs. Giles, Gough & Trollope. Five competitive designs were sent in.

At Heckmondwike, the Corner Stone of a new Church, dedicated to St. Saviour, has been laid. The Church replaces a temporary one erected at Claremont some six years ago, and will occupy the same site. An anonymous gift of £5,000 made for Church extension being applied to this purpose. Mr. Swindon Barber, of Halifax, is the Architect.

ST. ANDREW'S Parish Church, Haughton-le-Skerne, near Darlington, an edifice dating from the end of the 11th century, was reopened on May 23rd, after restoration and an enlargement of the edifice. The Architects were Messrs. Hicks and Charlewood, of Newcastle-on-Tyne. The cost of the alterations will be about £3,800.

DESIGNS are invited by the Argentine Republic from Architects throughout the World for a new building for the use of the Argentine Congress. Three prizes, one of 20,000 dols., one of 10,000 dols. and one of 5,000 dols., are offered for the most satisfactory designs.

MEMORIAL Stones of the new Class Rooms, &c., adjoining the present building of the Primitive Methodist Connexion, at Rhodes, have been laid. The plans, which are by Mr. Edgar Wood, Architect, of Middleton and Manchester, show six Class and other Rooms, a Lecture Hall, and other conveniences, the whole forming an admirable addition to the building. The contract is in the hands of Mr. Walker, at a sum of £428.

ARCHITECTS are invited to send in competitive designs for the Public Baths and Wash-houses, to cost £30,000, and the Public Library and Museum, to cost £9,000, which the Commissioners of Shoreditch are about to erect on a site in Hoxton. The assessor is Mr. R. Plumble, F.R.I.B.A., of 13, Fitzroy Square, W. Premiums of £125, £75, and £50, will be paid for the best three designs for the Baths, and premiums of £50, £40, and £30, for the best three designs for the Library.

THE ancient little Church of Gursage St. Andrew, near Handley, Dorset, has been reopened. All the pews and West Gallery were removed, and new seats with carved ends and stained dark green, have been placed instead. The Church itself has been generally repaired, though much remains to be done, such as putting new tracery to the windows. Mr. C. B. Hutchinson, A.R.I.B.A., of London, is the Architect, and Mr. H. Adams, junr., of Handley, the Builder.

THE PREJUDICE AGAINST ENGLISH ART.

A PROTEST BY HOLMAN HUNT.

MR. HOLMAN HUNT, whose position in English Art and picturesque personality command public interest, delivered the Romanes Lecture in the Sheldonian Theatre, Oxford, on Thursday last, on "The Obligations of the Universities towards Art." The lecture was a review of the whole Art position to-day, and a strong emphatic declaration came very early. The noisiest spokesmen of to-day, Mr. Holman Hunt remarked, claimed for Art that it should be supreme and independent, and

can never be indifferent and hold itself aloof from the vital movement." If it would not take part in the march forward to a great end, but severed itself from sympathy with general goodness, it transferred its energy to evil. If it would not serve honesty and modesty it would pander to grossness—it would be a varnish of corruption, a whitened sepulchre. The effects of hedonistic philosophy already showed themselves, and it was time, he thought, to take alarm. Let us set our faces against this use of the weapons of knightly Art, for otherwise it would be handing over our nation and every precious attainment to the civilised World, with all that was purest—perfected

follow. They might then erect their own temple on a sure platform of truth.

But let them consider—what was true Art? It was one and indivisible, whether it affected the mind by the channel of the eye or the ear, inasmuch as both obeyed precisely the same impulse, and an identical Art inspiration prompted them. With the true artist it was a question after what means he should interpret God's harmony of the spheres, and this would depend upon his natural endowments and upon his opportunities. Mr. Holman Hunt's observation satisfied him that in accordance with the elevation of the artist's aims would be the richness and the infinite mystery of his power of expression. All past great Art had been born of religious thought, and thus acquired its strength, although in its prime it was often employed in an extended field. He drew a line of complete identity between the Literature of a nation and its graphic and plastic Art, and passed Egypt, Greece, and Rome shortly in review, with the object of showing this. Giotto and Dante sounded the leading notes of Italian Art—a melodious heralding of the new life. Returning to modern times, Thackeray had pointed out that bloodshed was so very often introduced in French Art. Indeed, no visitor to Paris could fail to see that bloodshed was regarded as a standard enrichment of a painting.

Mr. Holman Hunt turned to a consideration of the position which English Art occupies. It began nobly at the beginning of the reign of Henry III., but while we were working out our history through wars and troubles, Art was neglected. When peace came, and there was once more an opportunity for the artist, it was the foreign artist who stepped forward. They did most precious work, some of them; but a superstitious prejudice against Native Art was established which had never since died out. The creation and growth and present persistence of this prejudice had done a great injustice to Englishmen. He ran over a list of brilliant English painters—Hogarth, Reynolds, Gainsborough, Romney, Raeburn, Turner, Wilkie, Stothard. The English in most purposes had shown a leading spirit which other nations all admitted and respected. This was so in all but Art. Whenever English youths committed themselves to Art, their prospects of making their lives productive were destroyed, every foreigner being greeted with applause, while the young Englishman had to struggle against prejudice and abuse.

"I protest against this," said Mr. Holman Hunt; "for it ruins the purest and best of Art where under the happiest circumstances the career of an artist must be a hard one." Even for his countrymen's sake, however, he would not attack this established prejudice; but he spoke to save our nation from the disgrace of an Art which was in no sense its own. The obligations of the Universities towards Art—and he came to his recommendations—were to consider the position and take steps in defence of honest English Design. The Schools of Design had for many years entirely departed from their original purpose, and the authorities at Kensington were wisely endeavouring to prevent the inordinate training of mere canvas painters. Then we had far too many training schools over the country already, for many still failed in Decorative Craftsmanship. No educated man need despair of understanding our Art, and a step towards this end should be the giving to graduates of Universities a knowledge of the sciences employed in it. Theoretical teaching alone was apt to mislead the amateur, and his study should be practical. How far should the training extend? That might be a question. But certainly a full acquaintance with the proportions of the human figure was needed, also with the laws of balance and equipoise. Further, a knowledge of the laws of perspective was necessary, and, as following this, the laws of light and shade might be mastered. Then add some understanding of the varieties of Decorative Design, and a young man might be entitled to a degree which would qualify him for any post of responsibility in reference to Art generally. Such a simple provision by the Universities as this test would be a thing of great value to English Art.

have no relation whatever to the national soul. It was to have nothing to do with virtue, vice, honour or dishonour—it was to serve mainly as an excitement to sensation. One of the faction had lately declared that the pleasure which Music, Painting, Architecture, Poetry, or Sculpture should communicate, would be exactly that which a glass of good wine would give to the senses. "Let me say at once," was Mr. Holman Hunt's comment, "that this view of Art is abhorrent to my mind. We are in a World in which all things act and react on one another, and Art

only by long past effort—to ruin and chaos, and the prejudice once blindly entertained against Art would be more than justified. He proceeded to show that in all times there had been evils which had been inherited in the society where Art had arisen. A proportion of these had grown and accumulated about her while she had been overcoming other ills. What was eternally precious was the sublimated element—the element refined and purified by time, and to discover this and apply it to chasten their own developing faculties, was the aim all true artists had to

ARCHITECTURE AND DESIGN.

MR. WALTER CRANE AT THE A.A.

(Concluded.)

ANOTHER point we may note about these Parthenon sculptures, true of the use of Sculpture in the Classical Temple generally, is that they are *not used to emphasize* what I should call the *constructive features*, but to *fill the interstices of the construction*. The building stands without them; on the support few would be prepared to justify their presence in the British Museum if they were there at the cost of the fall of the Parthenon; though there are many who do so now, although they are there at the cost, practically, of its artistic destruction. That is to say, the building without its Sculpture is somewhat like a man with his eye put out.

Close by, however, we find an illustration of the opposite principle, the sculptural emphasis thrown upon the constructive necessities, in caryatid columns of the Erechtheion. In these we have a notable instance of the union of Sculpture and Construction, and it is evident that in the treatment of these figures the Sculpture has strongly felt the necessity of Architectural massiveness, simplicity, dignity and reserve. They each support the cornice upon an abacus and cap, and the columnar vertical feeling is expressed by their erect attitude, slightly varied individually by the seven vertical lines of their draperies.

The caryatid idea is, no doubt, a most difficult one to treat satisfactorily, and there is a sort of painful slavish suggestion about it, as of human beings condemned to support an intolerable burden.

The prototype of the sculptural pediment may, perhaps, be found in the sculptured slab placed to fill the hollow left by the relieving arch over the massive lintel gateways of the ancient Cyclopean buildings in Greece, as at the gate of Mycenæ. In the sculptured lions and column we have, too, a simple exemplification of the symmetric principle in design; as well as of that recurrence or re-schoing in the design of Sculpture of the lines of the enclosing space.

The fusion of Classical and Oriental feeling with Christian mysticism in Byzantine Architecture, with which came in the use of the round vault and dome, opened a new field for that most splendid material, mosaic, which became, *par excellence*, the principal means, as well as the glory of the interior decoration of Byzantine buildings. In the Churches of Ravenna and St. Mark's it dominates all other decoration, its impressiveness being largely due to this, and one feels it to be sufficient in itself. The concave surfaces of the vaulting affords a peculiar appropriate field for the most effective use of the cubes of coloured and gilded glass, by means of which the designs are built up. The very method of mosaic work harmonises it at once with the craft of building, of which it becomes a part. It is a constructive method of surface decoration entirely in harmony with Architectural construction; capable of the utmost splendour, and yet full of solemnity. The nature and conditions of the material seems to place natural limits upon its graphic or pictorial range, which, curiously enough, it appears to be in the nature of the degree of evolution of any Art (or perhaps of artist) continually to attempt to overstep.

One has only to compare the decorative effect and Architectural feeling of the Byzantine mosaics with the late Roman attempts to reproduce Renaissance pictures at St. Peter's to be convinced of its true artistic province and treatment, and to be left in no doubt as to which influence, that of Architecture or of Painting, has proved the most beneficial and inspiring to the mosaic designer and worker. We have in our own time in recent years returned to the old method of working glass mosaic as an Architectural decoration, to working in on the surface, and *in situ*, as the only means of obtaining that richness and variety of surface and play of light, impossible to be attained by the mechanical method of making flat slabs of tesserae on the back of the cartoon in the workshop.

The most important piece of modern mosaic work of our time and country is that upon which Mr. W. B. Richmond is now engaged at St. Paul's Cathedral.

Personally, I am not in favour of modern artists decorating a building of a former age—at least in the present condition of Art and Craftsmanship. I should put new wine into new bottles, and artistic interest into those places most bare of it. But I think, nevertheless, Mr. Richmond and his able assistants, the mosaic workers of Messrs. Powell, are carrying out a very fine, thoughtful, and splendid piece of work, full of ability in design and conception, and technical skill, governed by the Architectural feeling of a decorator, even though that feeling may compel him to mask some of the characteristics of the building he is decorating—but then comes in the modern difficulty. From the mosaic point of view one might wish St. Paul's had been a Byzantine building. Notable characteristics in the design of Byzantine mosaic is the simplicity in the design and arrangement of masses. They are in some instances almost heraldic in their ornamental effect, and there is no doubt that the silhouette of figures or groups as thrown upon a gold ground is the most important consideration in the case of design intended to be seen from a long distance and in subdued or half light, and upon the concave surfaces of a dome.

As subsidiary to its chief decorative splendour in mosaic, Byzantine Sculpture shows a certain restraint, reserve, and a linear feeling in its design, though with considerable richness of detail, as in the carving of the characteristic cushion and basket-like capitals, and screen panels of open-work, which also suggest wicker and rope work motives. This linear feeling, and lattice, wicker, and rope work motive, can also be traced in the typical carved ornament of Romanesque work generally, as for instance, in the mouldings of Norman arches and the caps of the shafts. These characteristics may perpetuate the tradition of the construction of the primitive buildings, in this country, of wood and wicker.

In Norman ornament, the use of recurring line and repetition of unity is very marked, and its peculiar character and richness is due to this. The zig-zag moulding itself is an illustration of the principle, and simply repeats itself in varying proportions and projections. Some of the outer rings of Norman arches and arcading simply repeat the leading constructive form—the semi-circle of the arch itself.

This is still more observable when we come to the Architecture of the pointed arch and the gable, where the mouldings surrounding the window and door-heads repeat in projection the lines of the window and door in serving their original office of keeping the rain from the window and wall, richness of effect being gained by the variety of the alternating concavities and convexities of the section. Gothic work generally illustrates the opposite principle in the use of enrichment to that which we noticed in the Greek, inasmuch as the ornamental emphasis is generally thrown upon the constructive points themselves, rather than on the interstices.

We get the clustered and filleted shaft, the ornate foliated capital in endless variety; the richly-moulded arch, the cusped arch, the window tracery; the moulded ribs of the vaulting, their junctions marked by richly-carved bosses, and, if a corbel or bracket is used, the opportunity is seized by the sculptor for a head or a winged angel, but worked strictly in accordance with the size of joints of the stonework, and therefore always showing the controlling Architectural influence. The exterior of a Gothic building is almost equally expressive of its construction; the buttress is made an important decorative feature and a source of variety, and light and shade, often crowned with a pinnacle, and, in its flying form, supporting an apex, as at Wells, extremely elegant in design, moulded and pierced. The door and window heads are moulded; the spring of the roof is often marked by machicolations, and the parapet battlemented or pierced. The gables are crested, towers are pinnacled and spired, and tipped with vanes. This emphasis on the constructive features gives an expression of organic life, directness, and strength which is characteristic of all Gothic design.

The shadow gained by the recess certainly gives solemnity and impressiveness to the sculptured effigy. The effigy is frequently sculptured upon an arcaded tomb, shields with the bearings of the family filling the panels between

the arches, which are made to subserve by their more formal masses and vertical lines, the freer and more horizontal ones of the sculptured figure. Architectural Design and Sculpture are in these works inseparable. The Later Gothic tombs take the form of shrines built clear from the wall and overhung with rich tabernacle work, buttressed, and sometimes enclosed with wrought-iron railings, in the design of which may again be seen the prevailing Architectural influence of time.

Not less instructive for the evidence they give of Architectural influence are Mediæval brasses, in the treatment of the figure, the enclosing borders, and the use of inscriptions. More especially remarkable in design and draughtsmanship are the Flemish brasses of the Gothic period, where the full-length portraits of the personage or personages commemorated occupy the principal space in the panel, not cut out in silhouette and inlaid on the stone slab, as generally is English brasses, but relieved upon a rich diapered background.

It is the same in other branches of Design, such as stained glass, which in its best shows such close relationship to the Architecture of the building it enriches. With the evolution of the window from the small round-headed loop-holes of the Byzantine, through the simple lancet-pointed lights separated by solid masonry, to the foliated tracery and subdivided mullions of the Later Gothic, the splendour of mosaic gave way to the splendour of the stained-glass window—at first a jewelled web of geometric lead thrown across the light, the form of the simple or cusped points of the tracery influencing the lead lines they enclosed, and the long vertical lines in the figures of saint and angel re-echoing the long lines of the narrow pointed light, into which ascended later the pinnacles of the canopies. Up to the end of the fifteenth century each light was still generally regarded as a separate panel, but with the large windows subdivided with light tracery and thin mullions, it became feasible to consider the design as filling the whole window.

A kindred feeling determines the treatment of the wall, and perhaps nowhere is the necessary Architectural influence more felt than in mural decoration. Anything which disturbs the general flatness and repose is out of keeping. We may gain a certain accidental or naturalistic interest, but at the cost of decorative repose and richness.

The Italian fresco painters of the Early Renaissance, Giotto and his School, thoroughly understood this, and though in details Naturalism was carried quite far, as in the beautiful frescoes in the Riccardi Chapel at Florence by Benozzo Gozzot, in spite of all their richness and variety, they remain essentially wall paintings, as completely mural as the finest arras tapestry, such as those splendid Burgundian specimens at South Kensington, which, while absorbing much of the new splendour and detail of the Early Renaissance, remain Gothic in spirit.

The great principle in the design of these tapestries, or of early wall painting, was the exclusion of sky-spaces and atmospheric planes which necessarily, in proportion to the illusive design with which they are represented, must throw the wall out of the perpendicular. There is an instance of a sky-distance having been introduced later at South Kensington.

We do not want to think we are out of doors while in a room, so that all successful mural decoration never forgets the wall—it acknowledges, in short, the Architectural influence.

The same principle is to be traced in other textile design, in the geometrically planned and heraldically treated silk hangings of Sicily, and the Venetian and Genoese velvets and brocades, with mottoes derived from Eastern sources, which frequently repeat the geometric foliated forms of Arabic and Gothic Architecture, as in the brocade from an Annunciation in Malines.

We see the value they are to the painters and designers in affording rich back grounds of definite recurring masses of pattern, to oppose the varied outline and relief of their figures.

In jewellery, metal work, pottery, inlays, in the spacing of the book cover, the distribution of its tooling; in the arrangement of the book page and its decoration; in the form of choice type—everywhere in beautiful Art, we may find the Architectural influence, that poetry of

the constructive sense which is the common sense of Art, and adapts itself to all manner of useful things, giving to each its particular and ornamental value, and insuring it harmonious place and relationship in the great household of Design.

I believe that in any period or country where exists anything like a distinct and living Architectural style we shall find its influences coming out in all sorts of ways, harmonising and controlling invention, and bringing all the Arts of Design—which really owe their existence to Architecture—into relation with itself. In countries like Japan, which (perhaps owing to its liability to constant earthquakes) have no stable or noble monumental type of Architecture, it is noticeable, in spite of extraordinary artistic skill, there is a tendency towards triviality in the design of accessories: but even here it is noticeable how the form of their main constructive material—the bamboo—constantly reappears as an element in Design.

It is curious to trace the lingering traces of Architectural relation still clinging about such unrelated Art, as much modern sculpture (or statuary) and easel painting—I mean in the pedestal as essential to the one, as the frame moulding is to the other. Both Sculpture and Painting have set up a supposed independent existence—have gained, perhaps, a decree of judicial separation from Architecture, if not a *decree nisi*. But it has only been for the sake of convenience and to meet certain commercial conditions; and thereby it becomes a grave question with artists—with all who care for beauty and harmony in Art and Life how far a unified Art is possible under the rule of the huckster and the speculator.

It is certain in any case we shall never be able to build up a noble style in Architecture and bring about a harmonious unity in all the Arts of Design without sympathy and co-operation, without some mutual understanding of each other's work and aims on the part of artists, whether their work is constructive or graphic, but I think of late years there are not wanting signs of a strong and growing feeling in this direction, which is beginning to tell upon contemporary work.

THE ART OF PHIL MAY.

IT is not that Phil May is greater as a humoristic draughtsman than those who have preceded him, but he is distinctly more original. Gilray and Rowlandson—with whom his Art has no affinity—Cruikshank, Leech, H. K. Browne, Doyle, Keene, to say nothing of the present contributors to *Punch*—Tenniel, Linley Sambourne, Du Maurier, and others—have each and all distinguished themselves, but not in just the same manner as the young man whose pictorial jokes fill a Gallery at the Fine Art Society in New Bond Street. Never attempting to reach humour through grotesque exaggeration of form or feature, as was the case with some of our earlier caricaturists, Mr. May's study is Nature in its simplest form. With an appreciation of the comic side of life that is almost inspiration, he rarely indulges in parody, and never in satire that is not born of his subject, whilst it is wholly lacking in the tinge of bitterness that sometimes disfigures the work of professors of his particular Art. But when he encounters any droll phase of life, the artist, with keen power of observation and a talent amounting to genius, can transfer his impression to paper with a power that has never been surpassed. In his peculiar style of drawing, Mr. May has invented a manner of his own totally distinct from any recognised method. With any amount of labour and pains, he draws in a figure until he feels he has perfected it, and then he rubs out the minor or unimportant lines, leaving only the major line indicating the form. This plan, which perhaps originates with Mr. May, has this advantage. The beauty of the draughtsman's Art is its simplicity—we all know how one wearies of elaborated detail—whilst the process explained gives the fullest possible result with the least display of the means by which that result is attained.

A NEW Wesleyan Mission Hall is to be built in Barnsley Street, Hull. The building, which is to cost £1,110, will accommodate 250 persons.

PERILOUS STATE OF PETERBORO' CATHEDRAL.

REPORT BY JOHN PEARSON, R.A.

AFTER a careful survey of the upper part of the West Front, I must say that I am thankful more mischief was not done by the late storm, considering the sad state the masonry has got into. It seems indeed surprising how some of it resisted so terrible a visitation, for not only is the stone in numberless prominent places very much decayed, but the mortar in the beds and joints has come out to a considerable depth, and, but for some iron cramps—also much decayed—the tops of all the pinnacles would, in all probability, have been thrown down. There can be little doubt that much injury has been done in very severe winters through the alternate changes of rain, snow, and frost playing into the open joints. Some of the masonry too has suffered in consequence of this, and much more would it have suffered but for the enduring quality of the stone of which the Cathedral is built. The time has now arrived when some general repairs must be undertaken, extending over the whole of the western portion of the Cathedral. It is absolutely necessary that its various features should be preserved, and, unless these repairs be done at once, I am sure that ere long a much greater work will have to be faced. The features which have been thrown down must, of course, be rebuilt, using up all the old stones as far as possible. As regards the West Front itself, what I have said with reference to the pinnacles and the work in connection with them, applies equally to this. The masonry over the whole of it, especially in parts above the three arches, has suffered, and is suffering from neglect and the want of timely repairs, but to what extent I cannot say until a scaffolding has been erected. This scaffolding I would venture to urge the Dean and Chapter to allow me to put up as soon as possible. It is obvious to every observer that the centre part between the flanking towers bends considerably outwards; careful plumbing has determined that the detached clustered columns with the part up to the string course above them lean outwards to the extent of fully two feet, and that the three gable-ends have an inclination in the same direction of about six inches. Upon looking for the effect of such a divergence from the perpendicular of these pillars and arches upon the work inside the Arcade, one is surprised to see how little there is to indicate that such a great movement has taken place, for instead of huge gaps in the groining which one would have expected to see, there are only—so far as can be discerned from the ground—some slight openings in the cells. Coupling this fact with the fact that the three gables lean over at a less angle than the pillars below them, and that some of the work in connection with these gables inside the roof is nearly perpendicular, I am very much disposed to think that the pillars began to settle and to lean outwards at a very early period, even perhaps before the gables were erected, and certainly before the groining of the Arcade was put in. It must have been at some early period that the four great ties were introduced which pass through the wall for the purpose of hanging on the West Front to the square Towers behind; these ties are still in a perfect state, and show clearly that since their introduction little or no further movement has taken place. These Towers have gone over a little to the west, but whether it is partly in consequence of having the weight of the West Front upon them I am not prepared to say. In addition to these ties there are three others which come over the centre of the arches and are connected to continuous horizontal beams which lie inside the gable walls, and are, opposite to each gable, cleverly framed together like a trussed beam; they also add material support to the walls. The centre gable is, however, not so well supported as the two side ones, because it has not a direct hold on to the Towers. I would, therefore, advise that a strong girder be introduced, stretching across the space between the two Towers and built into and strutted from them to which two or three ties similar to the existing ones could be attached, thus the centre part of the west end would be effectually secured. I would also advise the introduction of a strong iron tie bar

some little distance above the caps of the pillars to connect them with the wall behind for the purpose of checking any further movement westward, additional help in this direction would be gained by the removal of some 2 feet of the filling in over the groining, for the weight of this needless mass of masonry induces a lateral thrust decidedly injurious to the pillars. As regards cost, I can give you no particulars at present, and not until the work to be done has been carefully examined and considered in detail. That part of the work which is above the roofs and can be got at can be estimated without much difficulty.

Writing subsequently, Mr. Pearson says:—“I should like to emphasize what I said as to the unsatisfactory condition of the Front, and the necessity for immediate steps being taken for its preservation. I do not refer merely to the fact that the two main Piers of this Front lean over 2 ft. and 2 in. respectively in a height of 78 ft., but to the insecurity which is manifest in so many places, for instance—the stones forming one of the rings of the northernmost arch are much out of place, the other rings over it are twisted and fractured, and the quatrefoil opening above is greatly distorted, and any further movement here, however slight, might lead to deplorable results. The corresponding portion of the southernmost arch also manifests a similar defection, but to a somewhat less extent. It would be a wise precaution against accidents to fence off the northernmost archway until it has been properly examined, and the arch and the work in connection with it have been made secure.”

The Restoration Committee unanimously resolved that the Sub-Committee be requested to prepare an appeal—(1) For the amount required for the repair of the Pinnacles and Spires on the Towers of the West Front. (2) For such an amount as, after conference with the Architect and Builder, may be thought probably sufficient to secure the safety of the remaining portions of the West Front. (3) For the amount still required to complete the repairs to the Transepts and Eastern Chapel.

For the erection of the Blackfriars Street and Marlborough Road Schools, the School Board for Salford is applying to the Public Works Loan Commissioners for a loan of the sum of £18,454.

MR. M. HAINSWORTH, who for thirteen years has been Surveyor to the Ilkley District Council, has resigned his post in order to take a similar one under the Teddington District Council, Middlesex. It has been decided to advertise for a successor at a salary of £150 a year.

For the first time in its history Victoria University, Manchester, has recognised the services rendered by eminent men in the various spheres of public life, Literature and in Science, and has conferred honorary degrees on several distinguished noblemen and gentlemen. The honorary degree of Doctor of Laws has been conferred on Mr. Alfred Waterhouse, R.A.

It is with regret that we announce the death of Mr. Henry Sumner, the well-known Liverpool Architect, who died at his residence 40, Falkner Square, last week. The deceased gentleman was noted for the part he took in suggesting public improvements. His principal one, that of high level Bridges from Dale Street to Lime Street, form an important feature at the Spring Exhibition, at the Walker Art Gallery, now open. The deceased Architect had an extensive practice, and designed many buildings in Liverpool and elsewhere. He was a member of the Liverpool Architectural Society, of which he was an ex-president.

THE Hanley Town Council has accepted the following tenders: Mr. C. Cornes, Hanley, £1,050, for the erection of Terrace Walls, Steps, &c., in the new Park; Mr. Cornes, £785, for the provision of Piers and abutments to four Canal Bridges in the Park; and Messrs. H. & T. Danks, Oldbury, £1,060, for Boilers, Electric Light Mains, and other appurtenances. Application is to be made to the Local Government Board for permission to reborrow the sum of £8,000 (part of a loan of £11,500 sanctioned on December 17th, 1883, for the purchase of the Queen's Hotel for the purposes of a Town Hall), on security of the Town Hall property, for a further period of eight years.

REVISING THE R.I.B.A.

THE QUESTION OF FELLOWSHIP.

NO EXHIBITION OF WORKS TO BE TOLERATED.

A NUMBER of Associates of the R.I.B.A., called together to consider what steps should be taken at the forthcoming and future election of Council of the Institute, with respect to the qualification for Fellowship, met at Dr. Williams' Library last night week. The meeting had been convened by circular. Mr. Owen Fletcher presided, and stated that a circular, signed by over sixty Associates resident in London and thirteen provincial members, had been issued to each of the candidates nominated for election to the Council of the R.I.B.A.—47 in all, the total number to be elected being 36. The circular read as follows: "We, the undersigned Associates, are anxious to obtain your views upon the question of the qualification for the Fellowship of the Institute, and we should, therefore, take it as a great favour if you would be so kind as to forward a brief reply to the following question to Mr. H. V. Lanchester, 12, Great James Street, W.C., before Friday next: 'Are you in favour of restricting the Fellowship of the R.I.B.A. to (1) Associates, (2) other Architects who were in practice before 1880, and (3) those whose work is of exceptional merit? In the case of the latter, would you advocate that photographs of their executed work should be exhibited in the Institute Rooms one month before the election?'" Mr. Lanchester read a number of letters received in reply. Mr. Ernest George was against restricting Fellowship to Associates, and his reply to questions 3 and 4 was "Yes." Mr. Aston Webb was in favour of restricting Fellowship to Associates and those who had done really good work. Mr. J. M. Brydon would not restrict any Architect from becoming a candidate who could fulfil the requirements of the Charter, except for the quality of his executed work, and of that he thought the Council should be the judge, as at present. Mr. C. Hadfield, the President of the Sheffield Society of Architects, writing as a private member, sympathised with the objects aimed at in the circular, but did not think that those objects went far enough. He had been a member of the Institute for many years, and was now losing all confidence in what it is likely to accomplish. He fully sympathised with the views of the memorialists. Architecture was not a profession, nor a business, but a constructive Art. An Architect who loved his craft, and desired to steer clear of the commercial element, which the R.I.B.A. seemed to be determined to force into the ranks of the Fellowship, could not do otherwise. He was willing to sign Clauses 1 and 3, but with the proviso that in addition to the candidate submitting photographs of his work, he should append plans, and some kind of endorsement from his local society that he was a *bona fide* Architect, and not a land surveyor or estate agent. Mr. John Slater saw no objection to Clauses 1 and 3, but could not support Clause 2, as it would inflict hardship on many provincial Architects who had never been Associates of the Institute. As to the exhibition of photographs of the executed works of candidates in the Institute Rooms, he thought this would be most improper, and should strongly oppose it. Mr. Phéné Spiers was not in favour of any other restrictions as regards the Fellowship than those now prescribed in the bye-laws. As for questions 2 and 3 he considered that integrity in professional practice was of even more importance in a candidate for the Fellowship than exceptional merit of design. The R.I.B.A. was not a Royal Academy with limited membership, but a professional society, to which all practitioners ought to belong. The only limitations to the Fellowship should be integrity of practice; sufficient evidence that the candidate is really the author of the works to which his name is attached as Architect; the execution of work of sufficient importance, either in artistic design, in construction or in extent, to warrant the application for the Fellowship, still retaining the seven years' limit. Mr. Leonard Stokes was distinctly of opinion that a man's executed work was the one and only test that should be applied to a Fellow. Examinations on paper might be all very well, and a proper test for Associates, but in his opinion they were no

good whatever for Fellows. The fact of an Associate having passed an examination brought him no nearer to the Fellowship as far as his Architecture was concerned. Mr. Paul Waterhouse's views were quite in accord with the general spirit of the questions asked. Mr. William Young thought the qualification for Fellowship should be the exceptional merit of a man's work. That was the only way to make the Fellowship of any value. The suggestion to exhibit photographs of candidates' work was a good one. Mr. Atkin Berry, an Associate, was in favour of restricting the Fellowship to (1) Associates, and (2) other Architects in practice before 1880, and from those whose work is of exceptional merit. Mr. Flower was in favour of restricting the Fellowship to (1) Associates, (2) Architects in practice before 1880, and (3) those whose work is of exceptional merit. He believed in the exhibition of photographs, but thought the number should be limited. Mr. F. T. W. Goldsmith's replies were all in the affirmative, but he added to the second:—"Provided the Architect is in active practice." Mr. E. J. Dodgshun's, of the Leeds and Yorkshire Architectural Society, replies were, "yes," to the first and third, and "no" to the second. Mr. Caroe supported the view that a candidate for the Fellowship should be judged by the quality of his executed works. Letters from fifty-nine Provincial and other Associates had been received, supporting the proposals to limit the qualifications for Fellowship. Of these twenty-five agreed to the limitations contained in the circular, twenty-six proposed to only admit Associates and other Architects who had done exceptionally good work, 6 desired Associateship to be compulsory, and 2 accepted proposition 3 only. As to the exhibition of photographs, there was a general opinion that such a course would be desirable.

Mr. Knight suggested that the words of the third question should be added to the first, so that the motion would be as follows: "That this meeting declares itself in favour of restricting the Fellowship of the Royal Institute of British Architects to Associates, and to other Architects whose work is of exceptional merit."

Mr. Langston accepted the suggestion, and questions one and three, as incorporated, were agreed to. The proposal to admit other Architects who were in practice before 1880, was not pressed.

It was moved "that this meeting would suggest to the Council of the Royal Institute of British Architects the desirability of exhibiting, for one month before the election, photographs and working drawings of the executed works of all candidates for the Fellowship." The motion having been seconded, an amendment was moved to the effect that a list of the executed works of the candidate be attached to his name in the nomination published in the *Institute Journal*.

Both the amendment and the original motion were lost.

An Associates' Committee was appointed as follows: R. Shekleton Balfour, Sydney B. Beale, John Begg, Arthur J. Bolton, Owen Fleming, B. F. Fletcher, James S. Gibson, Sydney K. Greenslade, Francis Hooper, H. V. Lanchester, John Murray, J. E. Newberry, G. A. Price-Cuxson, J. Humphreys Jones, Andrew W. Prentice, Edgar H. Selby, F. W. Troup, Charles E. Bateman, Harold Brakspear.

THE Windsor Board of Guardians propose to borrow £1,000 with the view of making additions to the Infirmary.

A NEW Wesleyan Chapel is to be built at Barnton, in the Northwich circuit. The cost, including site, is estimated at £1,500.

SIR FREDERIC LEIGHTON'S health is, according to news received from Algeria, a good deal better. It is probable that he will return to London in the course of next month.

THE Arts and Crafts Society of Ireland is decorating its Hall in the Royal University Buildings, in preparation for the forthcoming Exhibition. An arrangement of dais tapestry hangings and fresco cartoons suggested by Mr. Walter Armstrong has been unanimously adopted. The Hall is large, and the wall space at the end necessitates a decorative treatment, which will form a background to the Society's exhibits.

THE FRESCOES AT THE ROYAL EXCHANGE.

TWO panel pictures out of the twenty-four which in time will decorate the interior of the Royal Exchange, were unveiled on Thursday. They are the work of the President of the Royal Academy and of Mr. Robert Macbeth. Both are gifts, the work of Mr. Macbeth having been presented by Mr. Deputy Snowden, and that of Sir Frederic Leighton being an offering to the City from the artist himself. Neither is in reality the "fresco" which it will be apt to be mistaken for; the works, executed by some slight modification of the Gambier Parry process, being, like the large allegorical pieces at Amiens, by the great master of Decorative Painting of our time—M. Puvis de Chavannes—in reality paintings upon canvas, delicately transferred to the wall.

Sir Frederic Leighton's canvas, which has for subject the commerce between the Ancient Britons and the Phœnicians, is a picture which displays hardly one of his possible deficiencies, and, in an abundant measure, his strength and his refinement, his fullness of invention, his noble suavity of line, his stately and sumptuous colour. When the very greatest of an artist's gifts is his gift of pure Design, it is natural, of course, that he shall be seen at his best in Decorative Painting. Sir Frederic is so seen at South Kensington, and, again, and even more effectively at the Royal Exchange. The "Commerce" which he depicts, consists, it must be supposed, of certain barterings between the dark and melancholy Orientals, who display upon the shore their jars, and necklaces, and bracelets, and fabrics of Tyrian dye, and a group of blonde yet warmly coloured natives, one or two of whom appear, it may be, scarcely satisfied with the bargain that is proposed, while others examine the precious objects with an intense and careful curiosity. Sir Frederic has taken a charitable view of the outward appearance of the Britons. One man at least is a model of comely strength, and more than one of the women—she especially who is crouching on the beach, absorbed in the charm of the Phœnician raiment—is of refined and exquisite yet never too effeminate beauty. The scene passes in serene weather; a sky of white cloud, with no threat of storm, hanging over the deep blue seas of our south-western coast.

Mr. Macbeth's picture has for theme an historical incident of only half a century ago—the opening of this very Royal Exchange by the young Queen, accompanied by Prince Albert, and attended by the Duke of Wellington and Sir Robert Peel. Into the corner of the piece, but very unobtrusively, Mr. Macbeth, following the good Italian and good Flemish custom of the Renaissance times, has introduced a portrait of the donor of this present work. The moment chosen for portrayal is that in which the Lord Mayor of the period bows before the Queen, who has a gesture of appropriate and characteristic graciousness. The open door, with all the metal work surmounting it, is seen immediately behind them. A Beefeater adds to the scene a picturesqueness which, whatever may be the opinion of the modern fashionable dressmaker, does not really belong to the "early Victorian" costume. Behind the Beefeater, and the scarlet and white and black cloaked figures, comes a silvery vision of the street. In his portraiture, in his disposition of the subject, in his treatment of a difficult, yet worthy, theme with dignity, Mr. Macbeth has shown himself thoroughly entitled to the trust that was reposed in him.

Bournemouth is to have a new Playhouse. The Grand Theatre, Boscombe, which has been constructed by Mr. Archibald Beckett, was opened last week.

A SCHEME is on foot for erecting a new Church to accommodate 600 persons, at a cost of £6,000, for the Emanuel district of St. Thomas, Exeter.

It has been decided to enlarge the Vestry of Keighley Parish Church to about four times its present size, it being much too small. The estimated cost is about £500, a quarter of which the Duke of Devonshire has generously promised to defray.

SOCIETY MEETINGS.

Northern Architectural Association.—

An outdoor meeting of this Association was recently held, when 38 members attended, including Mr. J. Oswald, F.R.I.B.A., the president. Assembling at Jarro, the first place visited was Christ Church, where the new Chancel Screen and fittings recently erected in memory of the late Lord Northbourne, from designs by Mr. Crawford Hick, Architect, of Newcastle, were examined. The party next proceeded to the old Church (St. Paul's), which is one of the most ancient edifices in the kingdom. Embarking on a steam launch, the members proceeded down the Tyne and viewed the Lighthouse in progress of erection on the South Pier. At the Pilots' Landing, conveyances were in waiting, and the party drove to St. Michael's Church, Westoe, where the Rev. C. E. Adamson conducted them over the building, which has just been enlarged by the addition of Aisles from the designs of Messrs. Hicks & Charlewood, of Newcastle. Thence proceeding to the village of Westoe, the members were permitted to view the Mayor of South Shields' residence, which was erected several years ago from the designs of Mr. J. J. Stevenson, of London. Finally the party proceeded to Harton Cemetery, and inspected the Chapels and Entrance Lodge erected in 1889, and designed by Mr. Henry Grieves, of South Shields.

York Architectural Society.—

This Society held its first summer excursion on the 25th ultimo, when the members visited Tadcaster to view the residence of Mr. T. H. Ingleby, recently erected from the designs of Messrs. Hornsey and Monkman, York. The party was met on arrival by Mr. Ingleby and Mr. Monkman, and conducted over the building, which is of stone, in a modified Elizabethan style of Architecture, and is situated on high ground overlooking the river Wharfe. The Entrance Hall, staircase, and principal apartments are finished in oak. A chamber organ, in course of construction by Mr. Binns, of Bramley, will, when completed, include a novel combination of pneumatic and electric action. The building and Stables are lighted throughout by electricity, and every modern convenience in the way of fittings, electric bells, &c., combined with a system of heating and ventilation, dual water supply and sanitary arrangements, form a model country residence. After visiting the Greenhouses and Stables, the party were shown over the extensive Flour Mills belonging to Mr. Ingleby, and then returned by train to York.

The Institution of Civil Engineers.—

At the annual general meeting of this Institution, which was held in the Hall of the Royal United Service Institution on the 28th ult., Sir Robert Rawlinson, K.C.B., President, occupied the chair. The report, commencing by referring to the change that had taken place in the roll of the Society during the past twelve months, stated that 29 Members, 286 Associate Members and 5 Associates had been elected, and 2 Members and 3 Associate Members were restored to the roll; while the deaths, resignations and erasures amounted to 170. The numbers of all classes on the books at the end of the Institution year were: Honorary Members, 17; Members, 1,862; Associate Members, 3,687; Associates, 355; making a total of 5,921. The report having been adopted, votes of thanks were passed to the President, the Vice-Presidents, and the other Members of the Council for active services in the management of the Institution. The ballot for Council resulted as follows: Sir B. Baker, K.C.M.G., President; J. Wolfe Barry, C.B., W. H. Preece, C.B., Sir Douglas Fox, and James Mansergh, Vice-Presidents; and of W. Anderson, D.C.L., Alex. R. Binnie, W. R. Galbraith, J. H. Greathead, J. C. Hawkshaw, C. Hawksley, Dr. John Hopkinson, Alex. B. W. Kennedy, LL.D., Sir G. L. Molesworth, K.C.I.E., Sir Andrew Noble, K.C.B., Sir E. J. Reed, K.C.B., M.P., W. Shelford, F. W. Webb, Sir W. H. White, K.C.B., and Sir E. Leader Williams. The Session was adjourned to the second Tuesday in November.

Edinburgh Architectural Association.—

The annual meeting was held in the Royal Institution on Wednesday evening last, Mr.

W. W. Robertson, of H.M. Board of Works, presiding. It was reported that the membership had increased to 295, and that the funds were in a satisfactory condition, being £30 greater than last year. Other reports were submitted and approved. Office-bearers were then elected as follows:—President, Dr. Rawand Anderson; vice-presidents, Mr. Thomas Ross, F.S.A., Scot., Mr. J. Balfour Paul, Lyon King of Arms; honorary secretary, Mr. T. Fountain; honorary treasurer, John Johnstone, C.A.; librarian, Thos. Ross, F.S.A., Scot. In his valedictory address, Mr. Robertson dealt with the work of the Association during the past session, making special reference to the various interesting lectures and excursions. He said that in his presidential address three years ago, he referred to the projects for the rebuilding of the City Chambers. He then expressed the hope that the centre of municipal life and activity would never be removed from the old town. He also then expressed the opinion, which, he thought, met with the general concurrence of the members of the Association, that the most appropriate method of housing the Council would be by the completion and extension of the buildings they at present occupied. He referred to the question that night to say how glad he was that it was now definitely settled, and settled in a most satisfactory way, by the Town Council, on the initiative of the Lord Dean of Guild. The Town Council had now acquired old property in the neighbourhood which would give the accommodation required to complete the building satisfactorily.

The Glasgow School of Art—Architectural Department.—

An excursion of about 40 Architect Students of the School of Art, under the direction of Mr. W. J. Anderson, A.R.I.B.A., and Mr. Emmet Brady, recently visited the Abbeys of Melrose and Dryburgh. A specially prepared paper, dealing with the history and Architecture of the buildings, was read by Mr. Anderson, and studies of the buildings by the students completed the day's programme. Mr. Anderson has accepted the appointment of Master of the Architectural Classes of the School of Art, and, with an assistant, will take charge next Session of this important department.

PROFESSIONAL PARAGRAPHS.

ON Thursday last at St. Matthew's Church, Newcastle, a magnificent Reredos, recently put into the Church in memory of the late Mr. R. J. Johnson, F.S.A., F.R.I.B.A., was dedicated. The Reredos, which is from the design of Messrs. Hicks and Charlewood, Grainger Street, Newcastle, is, with its super-altar and gradine, executed in Caen stone, and stands about 11 feet above the Altar, its width being identical with the length of the same. Although much smaller in size and scale its design is suggested by the great Screen at Winchester Cathedral, erected in the latter portion of the fifteenth century. In this central portion we have a range of niches on a traceried base, and these niches are intended for figures of adoring angels. Immediately over the centre of this rises the Cross with the figure of our Lord crucified; the side niches at the foot having figures of the blessed Virgin and St. John. Over the canopies is a richly carved cornice and open cresting, the severe line being only broken in the centre for the crowning feature, our Lord, in majesty, surmounted by a richly-carved canopy and crocheted spire. The figures have been carved by Mr. G. W. Milburn, of York, all the rest of the work being executed by Mr. Robert Beall, of Newcastle.

FROM the plans of Messrs. Hardy and Wright, Architects, Edinburgh, a Church for the new parish of St. James has been erected. The building is situate near Leithwalk Station. The ground floor is about 12 feet below the street level, and allows the basement floor to be utilised as a Hall, which accommodates about 800. The acoustics are unexceptionally good. The Interior has an open timber ceiling, and for better light, the windows at side galleries have been provided for by triplet lancets and gables of size determined by the position of the main trussed framing of the roof. The Church is heated on the low-pressure system by 2 in. pipes, and a separate but

circular arrangement heats the Hall below. The total cost has been about £4,000.

A NEW Parish Room is being built adjoining St. Michael's Church, Ipswich. Mr. E. S. Bisschop, of Ipswich, has prepared the plans, which Mr. William Grayston, of the same town, is carrying out. The building will be connected with the Chancel of St. Michael's by a Clergy Vestry. The principal entrance from Upper Orwell Street will be by a red brick Porch, harmonising with the rest of the building, and from Bond Street by a Vestibule 12 ft. by 7 ft. The dimensions of the Interior will be 39 ft. square, and the Clergy Vestry 20 ft. by 15 ft., whilst there will also be a Kitchen 15 ft. by 12 ft. The floor will consist of solid wood blocks. The estimated cost is £1,000.

THE large Hotel which is being built in New York from plans by Messrs. Reeves and Sons, of Broadway, in that city, is to be known as Herald Square Hotel. It will have frontages to Broadway Sixth Avenue and Thirty-sixth Street, will be fifteen stories in height, and will cost for site and erection at least £450,000 sterling. The first two stories of the facades are to be of limestone, the upper portion being in light brick and limestone. The building will be of steel construction, and the porous fireproofing used will be strengthened by wire cable run through it. The only material not fireproof in character in the entire building will be the wainscoting on the lower floors and the wood used for doors and windows. All the floors will be of cement. There will be no interior shafts, except those used for the five lifts.

MESSRS ARTHUR BAKER and Harold Hughes, of London, are the Architects for the new Mission Room and Schools, Uxbridge Street, in connection with St. Catherine's Church, Tunnel Road, Edgehill, Liverpool, which has been formally opened. The Mission Hall and Schools are contained in the same building, the former being above the latter. The Schools comprise girls' and infants' departments, accommodating 228 girls and 196 infants respectively. There is a large class room for cookery purposes. The Mission Hall, which is lofty and well lighted, is 51 feet long by 40 feet wide. The Contractors are Messrs. Brown and Backhouse, of Liverpool; Heating Engineers, Messrs. Harlow & Sons; Ventilating, E. Hatton; Gas Fitting, Jas. Cooper & Sons; Asphalting of playground, Mr. Gilbertson. The entire cost has been £4,028 2s. 6d.

THE Voluntary Schools Committee at Lewes having practically formulated the scheme for the provision of additional School accommodation in the town as required by the Education Department, it has been arranged to extend Malling School, and plans for this purpose have been submitted to the Department for approval. A new School to accommodate 410 children, viz., 100 boys, 100 girls, and 210 infants, is to be built on a site below St. John's Church near the Pells; and Mr. Creed, Architect, of Finsbury Circus, is now preparing the plans.

ANOTHER addition to the many Metropolitan Synagogues has been made. It is situated in Great Alie Street, Whitechapel, in close proximity to the Jewish Working Men's Club and Institute. The cost of the building, which comprises the Synagogue, Hall, Vestry Room, and Dwelling House, was £1,600, Mr. Lewis Solomons, of New Broad Street, being the Architect, and Mr. Richardson, of Finsbury Square, the Builder.

Good progress is being made with the first new School in connection with the Horfield School Board. The site is near the gaol, and having decided to purchase an acre of land, there is ample room for buildings and playgrounds, and to allow of extensions when necessary. The building, which is in the English Renaissance style, is of pennant stone with freestone dressings, and the high pitched roof is covered with Broomhall tiles. There are two central Assembly Halls, 42 feet by 24 feet, and arranged around these are eight Class Rooms for boys and girls. A Cookery Room and caretaker's apartments are included. Mr. W. V. Gough is the Architect, and Mr. H. G. Rossiter the Builder. The building, which, with land and equipment, will cost about £7,500, is expected to be ready for occupation in September.

The Builders' Journal COMPETITIONS.

No. 3.—Swimming Baths.

Designs for Swimming Baths in a country town of 5,000 inhabitants. To contain cold water bath fifty feet long, three feet to six feet deep, with necessary dressing boxes; six private washing baths for gentlemen and three for ladies; necessary heating and ventilating appliances to be provided, together with waiting and caretaker's rooms, the entire cost not to exceed £3,000. The site is 100 feet deep and of any necessary frontage, but entrance can only be obtained from the front. All designs to be delivered on or before Monday, the 10th day of June.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

ANNOUNCEMENTS.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Editorial and Publishing Offices:

Talbot House, Arundel Street,
Strand, W.C.

ON Thursday last the new sewerage works which have been constructed at Kyo, near Annfield Plain, were formally opened. Mr. J. E. Parker, A.M.I.C.E., who has personally supervised the construction of the works, explained the *modus operandi* to those present, and the scheme was found to act in a satisfactory manner. The cost of the work is £1,600, the contractor being Mr. Geo. Robson, of Newcastle, while the ironwork was supplied by the Grange Iron Company, Durham.

THE contract for the enlargement of the Whitehall Schools, Bristol, has been placed in the hands of Messrs. Love and Wait. The estimated cost is £1,700.

Trade and Commerce.

WE shall be glad to receive copies of catalogues from firms engaged in the allied building trades. These will be carefully looked through, any novelty noted, and—should its nature seem to demand it—fuller attention drawn thereto. We are particularly wishful to secure the friendly interest of designers and artificers in THE BUILDERS' JOURNAL, and, now and then, we might see our way to reproduce an outline sketch or illustration of any contrivance that struck us as being new or needed. Building covers up—figuratively, and in fact—so much ground, and we mean to cover the whole of it.

We should be further obliged if firms would indicate, by some suitable mark, the pages in their catalogues to which they would, in particular, desire to call our attention.

Lawson's Patent Combination Set-square.—Mr. F. R. Lawson, Surveyor, of Market Street, Fenton, Staffordshire, sends us a celluloid Set-square which "works" at 45°, 52½° and 60° by the medium of slips cut through the material of an ordinary 60° Set-square. There is no question that the idea is extremely useful, but it appears to us that a little more care is necessary in the manufacture. We applied a match to the Set-square, and that Set-square is no longer in existence—perhaps Mr. Lawson will send us another for our Artist's use.

Leicester Building Strike.—The strike in the Leicester Building Trades, though now in its ninth week, so far as carpenters and joiners are concerned, shows no prospect of settlement. The plumbers are still locked out, and they decline to return to work on the terms offered, although promised all that they demanded within a week of resuming work. The builders, bricklayers, plasterers and slaters have up to the present declined to accede to the demand for a general strike, but all building operations are being seriously interfered with, and the employers threaten to introduce non-Union labour.

The Strike in the Building Trade at Stourbridge.—This strike still continues, and though the men have had a communication from the masters with an offer, it does not, it is stated, meet what the former want—viz., the fixing of a standard rate of wages for the Stourbridge district of 8d. per hour.

The "Landis" Band-Saw.—A trial of this new band-saw was made last Tuesday, with very satisfactory results. The saw-blade, which is 38 ft. long, 5 in. wide, and runs horizontally at 7,000 ft. a minute, is carried by two wrought-steel pulleys of special construction, 5 ft. in diameter. No india-rubber or other substance is used on the surface of these pulleys, the saw-blade running on the metal rim, with the teeth projecting sufficiently beyond the edge of the pulley to clear the set. The saw pulleys are carried on a strong horizontal casting furnished with the necessary adjustment for altering the distance between the pulleys to suit saws of different lengths, and to vary the tension on the saws. The casting on which the pulleys are carried rises and falls on two large screwed vertical columns, which are made to rotate by self-acting gear for the purpose of varying the height of the saw. The position of the saw is indicated by a disc immediately facing the operator, the whole control of the machine being immediately within his grasp, without his having to alter his position. It is claimed for this machine that it is a better and more rapid board-sawing machine than any other in the world, and that it will satisfactorily carry out certain operations hitherto looked upon as impossible on the band-saw.

General Line of Buildings Case.—At the North London Police-court, Mr. Thomas Pryor, a builder, of Stoke Newington, appeared before Mr. Lane, Q.C., on the 20th and 27th ult., in answer to a summons at the instance of the London County Council, for having erected a building on the northern side of Prince George Road, Stoke Newington, beyond the general line of buildings. Mr. Chilvers, from the solicitor's department, represented the Council, and Mr. Macmorran, barrister, appeared for the defendant. Mr. Chilvers stated the summons was taken out under section 75 of the Metropolitan Management Act, 1862, and was for an order for the demolition of so much of the building complained of as had been erected beyond the general line of buildings as defined by the superintending Architect, and subsequently confirmed by the Tribunal of Appeal. The owner of the building having appealed against such certificate, which, however, was duly confirmed, and he called Mr. Dovaston, a Surveyor in the office of the Council, who proved that in August, 1893, the Council approved plans for the formation of Prince George Road, that on such plans certain old houses were shown by a yellow colour, which it was stated by a note on the plan would be taken down within three months. This, however, had not been done, but the defendant in October last year commenced the erection of a building on the site of certain of the old buildings, and was covering not only the site of the building but the garden at the rear and the forecourt also. The old building was now standing in advance of the general line, and the new building when completed would also be about 7 ft. in advance of the general line of buildings, for which no consent of the Council had been obtained. For the defence, Mr. Macmorran contended that as the Tribunal of Appeal had not only confirmed the certificate, but also determined that the building was being erected on land which came within the exceptions contained in Sec. 33 of the London Council General Powers Act, 1893, the Superintending Architect could not define the general line of buildings under Sec. 75 of 25 and 26 Vic., Cap. 102, and he further contended that as the building complained of was being erected on the site of an old building with grounds attached, it came within the decision of the well-known case of "Lord Auckland v. the Westminster

Board of Works," and he asked for the summons to be dismissed. In reply, Mr. Chilvers submitted that, notwithstanding the finding of the Appeal Tribunal, the proceedings were properly taken, because the appeal from the Architect's certificate under sec. 28 of the London Council General Powers Act, 1890, and not sec. 33, as contended for by counsel for the defence, and he further submitted that this case was distinguishable from Lord Auckland's case, inasmuch as there was only a small Court-yard in the rear of the building in that case, and in the present there was a Forecourt of considerable length. The magistrate, in giving his decision, said he agreed with the argument put forward by Mr. Chilvers, that the appeal from the certificate of the Architect defining the general line of buildings was under section 28 of the Act of 1890, and not under section 33, and that the finding of the Tribunal of Appeal as to the land coming within the exceptions contained in section 33 did not apply to the present case; but, on the other hand, he was of opinion that the case was one which came within the decision of the High Court in "Lord Auckland v. the Westminster District Board of Works," and he should, therefore, dismiss the summons with £7 7s. costs. Upon the application of Mr. Chilvers, the magistrate stated he was quite willing to state a case for the High Court.

THE new Pier at Rottingdean, erected by the Brighton and Rottingdean Seashore Electric Tramroad Company was formally opened by the Chairman of the Company (Mr. E. O. Bleackley) on Thursday afternoon.

THE Bromyard Board of Guardians has chosen a site for the proposed Vagrant Wards, and has decided to advertise for plans for accommodation for forty vagrants.

At a cost of £15,000, for which the Messrs. W. H. and J. D. Lever have made themselves responsible, a new Congregational Church to accommodate 600 persons is being erected in Blackburn Road, Bolton.

THE new floating Cholera Hospital on the Tees was recently opened by the Tees Port Sanitary Authority. The Hospital is situated near the mouth of the river, and has been constructed at a cost of about £10,000. The building is erected on ten floating cylinders, 86ft. 6in. by 6ft. The administrative building is in the centre, and on either side two commodious blocks are admirably arranged for the accommodation of patients.

A NEW Church Mission Hall and Sunday Schools for St. Peter's, Middlesboro', were opened by Lady Dixon, on Wednesday last. The Mission Room will accommodate 400 persons, and the Schools 500 children. £1,000 has been raised towards the £1,400 required for building and furnishing.

THE Board of Guardians at Horncastle, Lincolnshire, has determined to expend some £800 or £900 in improving the Board Room, and other alterations.

A NEW departure, and an excellent one, is recorded in New York, and it has been taken, moreover, by a member of a very objectionable class—the American millionaires. The gentleman in question had a magnificent house built for him, and when it was finished, he wished to recognise the services of the workmen who had built it. He therefore gave an invitation to dinner to every man who had worked on the building, and he invited his own friends to meet them.

IN order to test the Belleville type of water-tube boilers, which have been recently criticised in Parliament, and which it is proposed to use in the new battleships *Powerful* and *Terrible*. The Admiralty have ordered the *Sharpshooter* torpedo gunboat to leave Devonport on June 17. She will proceed to Gibraltar, and will be worked for long periods at various powers ranging from 1,500 to 3,000 indicated horse power. These trials will be exhaustively reported upon.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

BECCLES.—For converting old chapel, Peddler's-lane, Beccles, into dwelling-house, erecting new outbuildings, and relaying drains, &c. Mr. Arthur Pells, architect:—

"A Great Reputation."

A woman, Mrs. Owen by name, and a cultured woman by instinct we have no doubt, has taught a lesson at Ipswich to her fellow Guardians (all of whom are of the sterner sex), which we hope they and all Boards of Guardians in other districts of the kingdom will not readily forget. The details of this lesson were published in our last issue, but they bear recapitulation as the sequel is not quite matured. The Board some time ago decided upon building a new Workhouse, and naturally, as Boards do, decided upon a public Architectural competition. The worthy Guardians then selected six out of the total number of designs sent in. Then their capacity of Architectural judgment becoming exhausted, they wrote in despair to the President of the Institute, begging him to advise a competent assessor to them. The President recommended Mr. Charles Barry, himself a past President of the Institute, and Mr. Barry offered to assess the respective merits of the drawings for a fee of 50 guineas and travelling expenses. Now the travelling expenses to Ipswich, as Mrs. Owen tersely pointed out to the Board later in their proceedings, cannot possibly be a very alarming matter. Mr. Barry is not what we should call an exacting man; no doubt he would travel first-class, but as he professes no personal friendship with Royalty, or any luxury of that sort, the ordinary fare of an ordinary decent individual could not well be exceeded. However, it was the travelling expenses that did it. Whether the Board, knowing the charges of the Ipswich Hotels let imagination get the better of them, is not stated, but rather than risk the expanding capacity of those travelling expenses, it passed a resolution that some of the local Architects, not engaged in the competition, should be asked to give "a lump sum for the job." Messrs. Brightwen Binyon and W. Eade, both Fellows of the Institute, declined to enter into a competition of fees with

Mr. Barry, but they did not object to do the work for the sum he had stipulated without any extraneous charges. The ordinary illogical school boy might imagine that this was a very keen competition in the way of

they could have expected from "gentlemen," moved that they be appointed assessors, we presume, because their fee was the same as Mr. Barry's, and a lord seconded the proposition. But there happened to be a

lady in the case, the Mrs. Owen before-mentioned, and she possessing a little more logic than her worthy vicar, pointed out to the enlightened Guardians that as they had consulted the President of the Institute and he had recommended an Architect of "great reputation" to them, and further, as his fee was not excessive, nor larger than the two local men wanted between them, there was no earthly reason why Mr. Barry should not be appointed, especially as his travelling expenses "could not be much." Mr. Borrett, a local builder, and evidently a man of pluck, supported his colleague, and between them they routed the vicar and the lord, and the one other guardian who voted in the minority. Mrs. Owen's motion was carried by a majority of twenty. The point of this matter is a very great one, although in a nutshell, and resting with Messrs. Binyon and Eade. We take no notice of the vacillating action of the Board of Guardians—Boards of Guardians and all kindred bodies will vacillate until the crack of doom—and beyond it; but professional dignity should have shown Messrs. Binyon & Eade the open path. Having made up their minds not to under-bid Mr. Barry in fee, they should have upheld the recommendation of the President of the Institute by strongly advising the Board to appoint Mr. Barry as assessor. But they did not do it, and therefore they assist this miserable Board of Guardians to impeach the dignity of the Institute, and to discard the recommendation of its President in a matter in which

they had previously sought his advice. A woman saved the situation—as women often do—and a "local builder," to both of whom the thanks of the Institute are due.

THE AMSTERDAMSCHÉ POORT, HAARLEM: DRAWN BY
F. T. W. GOLDSMITH.

fees, and the school boy might be right, but it does not matter. The Rev. Tozer, a working Guardian, touched by the magnanimity of Messrs. Binyon and Eade, which he characterised as the only answer

Wanted—A Strike Preventor! A superb opportunity for what is oftener described as "Party Politics" is going a-begging—and there would seem to be no bids. We suppose the Prevention of Strikes is too difficult a nut for the average Politician to crack, although he has got so far as mediating mildly in settlement. But we hold that *strikes should never be permitted to occur at all*; that they are the bane of industrial development, and that a little common sense and a decent share of self-control are alone needed to relegate such disastrous "wars" to the limbo of forgotten controversies. The Building Trade has had, for months now, a sword hanging over its head very much in the manner of the weapon of Damocles. There have been, within the last few days, distinct and dangerous notes of strife; the "men" we are told are now going to assume the "offensive," and we are prone to ask if there be a double meaning to the word; the masters are "firm," and all the stereotyped ineffectual peddling phrases of the daily Press speak of a "dead-lock." Why, we ask, should there be a dead-lock? Why cannot Governmental machinery be invented—machinery that would grind these differences, these disagreements to dust? Do the men absolutely and finally say that they, as Unionists, will not tolerate as fellow workman an artisan who is not a member of their Society? The artisan, surely, has a right to be what he please; if he be a Non-Unionist he takes his own risk of treatment, and his blood be on his own head. Again, if the advantages of the Union be so obvious, Unionism may depend upon it that all working men who do not happen to be drunkards or street loafers will join their Society. If they do not, there is something rotten in the state of Denmark. And that is just what quite a number of working men have come to believe. If they honestly believe this, if, as they say, these continued strikes and lock-outs have impoverished their pockets and punished their families, without a single penny of victory being won, then, surely, if this be the free country we brag of, they have a right to disassociate themselves with a Society which has damaged instead of protected them. We believe in Unions—Unions up to a certain limit; we should prefer to deal with Union men so long as they be willing workmen, but the defiant and dictatorial attitude assumed in these latter days, indeed, since the mischief of the New Labour and Much Language Movement began, is simply annihilating the business and setting up the backs of the employers. Building, at least, cannot afford a general strike; trade has not been too good, nor are the prospects too hopeful. A general strike will hit the building trade desperately hard. If Union men make themselves indispensable as workmen, there will be neither need nor demand for Non-Union labour. Non-Unionism is the thin end of a very big wedge, and that wedge will split Unionism itself if the organised Societies do not act more wisely. This is the view that should be pressed upon the more responsible men in the Union Movement. Meanwhile, if the working rules be bad, a day's impartial, judicial consideration would discover their iniquity. Why cannot we have, therefore, this temperate enquiry *before* we are plunged into the turmoil of a strike? We have locked the stable door after the horse is stolen so many times. If Government cannot do it, will not do it, or is too oblivious to think out a scheme of Arbitration Boards, if neither Party "tumbles" to the idea that here is a Party Chance and a Party Cry, then let a clever outside man save the situation before the work and the workmen have disappeared.

A CHAT WITH F. T. W. GOLDSMITH.

THE WORK OF THE A.A.

THERE are rooms in Verulam Buildings, Gray's Inn—of the Historic and Antiquarian association of which I noted one of your contributors had something to say last week—looking down upon the turmoil of tramcars and traffic, with a ceaseless sense of modern life, but there are other rooms with wide windows, and the modester glass of forty years ago. Shoot high one of these windows, and you might be away in the heart of somnolent England; living in some Cathedral Close, some Dean's Yard, within shadow of a Minster, within sound of vibrant bells, unclashed by the roar of a city. It is so swift—from that red-painted, yellow-painted, green-painted stream of tramcars to the green swarded, tree shadowed, turf—it might be a dream.

Cool greys and browns linger upon the walls of the Inn; wonderfully cool and quiet with the sunlight over the ridge-roof making a hard hot line where it strikes the grass—an edge of hot light, trying to the eyes this June weather. It is delightful at high noon to look at this grey corner where as many men as can get chambers find time to smoke a cigar and forget London for half-an-hour, but it is still more delectable when the trees grow soft in the pearl greys of early night and one chimney-pot glows in the westering sun. You expect then to hear the bells, not as Matthias did—with horror—but with a sense of harmony and Evensong and rest.

Mr. Goldsmith has such a room, so have Mr. Bodley and Mr. Garner, "so many water-spouts distant" on the other wing that helps to make the corner cool, and quite a host of fellows struggle with their window-boxes in decent rivalry, or play tennis with disregard of of all Law and Equity, and a full determination to win. And it is no lie to say that this turf is some of the finest in London, and if your windows lend you no sight of Brick and Mortar you are yet cloistered with a country seclusion in the very thralldom of London town. It is the place for Architects really, though lions and lambs of the Law swarm, and, in fact, even an outsider would be content to share, I do not doubt, the hallowed fragrance of this Inn.

It was to see Mr. Goldsmith and to draw a little of his enthusiasm that I visited the somewhat ungodly rooms of the Architectural Association in Great Marlborough Street, where Architecture may be said to be hiding a diminished head, but I was glad to begin again in Verulam Buildings, where air and atmosphere were right and there was a comfortable chair for one's back—without disparagement to Great Marlborough Street, W.

There is some Spanish blood, now far removed, in F. T. W. Goldsmith's veins, and this still knows how to get fiery and enthusiastic, "sudden and swift in quarrel" perhaps—hopeful and eager in enterprise. He looks a little Spanish also, and he is very eager to range a whole series of subjects at once. Thirty-six years ago he was born—at Calne, in Wiltshire—and I have noticed that certain Wiltshire men, making almost a type, have this oval swarthy face, so un-English, suggesting the "olive" of either Piedmont or Pyrenees.

It was at "general Architectural work"

that he was grounded with that excellent man, E. A. Lansdowne, of Newport, who guided him well and grounded him even better. By-and-bye, there came the customary sketching tour, without which no young Architect is complete—Paris, of course, and here and there in nooks and corners. He did his classes and lectures

in London also, and in the outer office of Verulam Buildings hangs a Certificate gained in the Old Voluntary Examination (Class of Proficiency), one of the last granted, and of which he is proud. Mr. Goldsmith has been recently appointed a Vice-President of the A.A. He was made an Associate of the R.I.B.A. in 1883.

Mr. Goldsmith has a passion for Arts and Crafts, and it was this, no doubt, led him to that queer School at Bushey, where Herkomer lords it not to the satisfaction of everybody,

and not without some keen controversy as to the method of his Art. Richardson, of Boston, designed the front of the house at Bushey, and Goldsmith worked at the interior arrangements, but, possibly, the "glory" was not even "reflected"—it is so difficult to apportion credit in Art.

"The chief work of the A.A.," said Mr. Goldsmith, "lies in the Studio and in the proper encouragement of volunteer work. The Voluntary Classes—survival of the old Water Colour Class—and the Discussion Classes very properly go hand in hand with the paid teaching work. Volunteer help, and the lectures

ROCKLEIGH, EXETER: F. T. W. GOLDSMITH, ARCHITECT.

and classes by paid instructors, all tend to the achievement of our aim, which, pure and simple, is to be able to turn out good Architects."

"Can good Architects be turned out?"

"Well, perhaps not—unless the material be there, but there can be no doubt but that a young student is either made or marred in

training. The A. A. aims at making him conscientious and enthusiastic. The Advanced Class of Construction, which languished years ago so much that only two or three students attended, has been re-invigorated, and now we have some thirty to forty present. I think it a pity that the old Class of Design was abandoned. No. 1 and 2 Divisions of our Curriculum are very successful but the R.I.B.A. might consider our Classes a little more than it does. We clash in holding our respective Classes, and with the inevitable result. I think everybody in the Profession ought to work for and with the A.A., and we have one cardinal rule, a good one I think, that *everyone* should share the credit. It is the *con amore*, the spirit of comradeship that we want to create among Architects and Students, the love of their Profession, and a sense of Brotherhood. Some of the best of all friendships are made at the A.A."

Mr. Goldsmith said that with conviction and conviction is everything in friendship.

"It is true, I am afraid, I find little sign of improvement in the bulk of Architectural Students; absolutely no enthusiasm, except in a few who are going to make their way and perhaps a name, and no desire to work in small competitions. I can remember the time when a little competition set the whole of us youngsters agog; it was hailed with eagerness, and one had ideals and outlines for big buildings such as the World had never seen! But the attitude of men is changing—it may be the effect of competition—from the aspiration to excel to the determination to make a living. Architecture will suffer in the process. There is more of the commercial spirit in the young students of to-day. It is just possible that the Revival of Design may inculcate enthusiasm for Art and Craft work which, to my mind, has been sadly neglected or overlooked. It is our intention in future to extend our curriculum as far as our funds will permit us, in the development and strengthening of studio work, and in arranging for classes in handicrafts. The A.A. should certainly do something in this way. I have spent many hours in a blacksmith's shop indulging a little 'bent' in iron and metal work, and the pleasure to be derived from such work is incalculable. Modelling also the A.A. may take up in view of the recent expressions of opinion upon the merits of models, and we want to strengthen our Curriculum all round. We want a new building also, a building worthy of Architecture, and I should like to see us starting this work, improving our Library, extending our influence, and promulgating all the enthusiasm we can. I have been Hon. Secretary of the A.A. for four years; two years under Mr. Gale as Junior and two years as Senior with the help of Mr. B. F. Fletcher, and I should like to say how much I am indebted to them, and to the Assistant Secretary, Mr. Driver, for help, in what is really a rather difficult task."

"You ask me with regard to the 'rumoured revolution in Conduit Street?' I think we all must be a little careful at present; not committing ourselves too much, and what I say at all is in my capacity of private member, not as representative of the views of the A.A. The R.I.B.A., I take it, is entitled to respect, perhaps, rather one should say veneration, but it is not quite the hall mark it should be. I hold that a man to be a Fellow of the Institute should be a man to whom one, figuratively speaking, should take off one's cap; a sort of 'R.A.' With regard to the Examinations, I think these should be conducted on similar lines to the work of an Architect in practice; that is to say, the Examinations at present seem to me to be developed too much in the direction of Design without due regard to the working

details of practice. The element of practice, of what a man would do under working conditions should constitute the test of examination. Questions and problems should not be 'sprung' upon him. I should like it made clear that the A.A. maintains an attitude of utter independence from the R.I.B.A., that it is separate and distinct, with a common aim, perhaps, but that an inter-dependence—a mutual movement in progress and development might be possible, and is what we young men hope for. If such an inter-dependence could exist, we should soon foster a feeling of comradeship, well expressed in the phrase 'Brother Chips.' As for the bricks thrown at us 'young men of enthusiasm,' it is a truism that no Art or profession can do without its vitalizing influence. Mistakes are made by enthusiasts, no doubt, but a man who can hit can bear hitting back, and I am a great advocate for discussion. After you have had a discussion, hot and fiery if necessary, something results. The Institute accomplishes a

A. A. rooms, which are indeed "unworthy" their calling, ended in our both being agreed it was time Architecture had an abode dignified and distinct, in every way worthy of its achievement and its aim.

DESTRUCTION OF THE SPINA CHAPEL.

IT was some comfort to me, that second of May last (1872), at Pisa, to watch the workman's ashamed face as he struck the old marble cross to pieces. Stolidly and languidly he dealt the blows, down-looking—so far as in anywise sensitive, ashamed—and well he might be. It was a wonderful thing to see done. This Pisan chapel, first built in 1230, then called the oracle, or oratory—"Oraculum, vel Oratorium"—of the Blessed Lady of the New Bridge, afterwards called the Sea Bridge (Ponte a Mare), was a shrine like that of ours on the bridge of Wakefield—

a boatman's praying-place; you may still see, or might ten years since have seen, the use of such a thing at the mouth of Boulogne Harbour, when the mackerel boats went out in a fleet at early dawn. There used to be a little shrine at the end of the longest pier, and as the Bonne Espérance, or Grâce de Dieu, or Vierge Marie, or Notre Dame des Dunes, or Reine des Anges, rose on the first surge of the open sea, their crews bared their heads and prayed for a few seconds. So also the Pisan oarsmen looked back to their shrine, many-pinnacled, standing out from the quay above the river, as they dropped down Arno under their sea-bridge, bound for the Isles of Greece. Later in the fifteenth century "there was laid up in it a little branch of the crown of thorns of the Redeemer, which a merchant had brought home, enclosed in a little urn of beyond-sea (ultramarine), and its name was changed to St. Mary's of the Thorn." In the year 1840 I first drew it, then as perfect as when it was built. Six hundred and ten years had only given to the marble of it a tempered glow, or touched its sculpture here and there with softer shade. I daguerre-typed the eastern end of it some years later (photography being then unknown), and copied the daguerre-type, that people might not be plagued with its lustre. But the last quarter of a century has brought changes, and made the Italians wiser. British Protestant missionaries explained to them that chapels were inconsistent with liberty on the quay; and their own engineering missionaries explained to them that steam-power was independent of the Madonna. And now, in 1873, rowing by steam, digging by steam, driving by steam—here, behold, are a troublesome pair of arms out of employ, so the engineering missionaries fit them with hammer and chisel, and set them to break up the Spina Chapel. A costly kind of stone-breaking this for Italian parishes to set their paupers on. Are there not rocks enough of Apennine, think you, they could break down instead? For truly, the God of their fathers and of their land would rather see them mar His own work than his children's—J. RUSKIN.

A PORCH: BY F. T. W. GOLDSMITH.

good work, but it leaves much work untouched. It will be the duty of those engaged upon its administration to make the Institute serve the best, the vital interests of Architecture."

We talked of other matters, treading the while on the thin crusted surfaces of not a few volcanoes; of handicraftsmanship, of "temperament," of which Mr. Goldsmith has got his share; of "slogging" in crusades of conviction, and, perhaps, of generally setting half the Professional World by the ears or the heels—which ever metaphor be best.

And there were the excellent sketches, now added to our portfolios, to be reproduced time and time in this *Journal*, and the tracings and plans, and a grateful reference to Mr. Goldsmith's partner, Mr. E. J. Gosling, and much about London—its influence, the magnetism of it that is going to draw F. T. W. Goldsmith back from Lee.

And one more look at the green turf and the cool grey corner, and a later run round the

It was reported at the Council Meeting at West Hartlepool, on Thursday last, that the completion of the new Public Library there is expected in about two months. There is already gathered a large collection of books, including some valuable local volumes.

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,
June 11th, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

THE new Lecture Hall and Library of the Imperial Institute has been designed to be occasionally used as a Lecture and Concert Room, and to afford additional accommodation for books and readers to that now comprised in the Fellows' Library and Reading Rooms. It has a floor space of 55 feet wide by 76 feet long, the south end being raised as a Gallery, and that, together with the Arcade on the western side, forms a considerable area, in which it is proposed to place bookcases, leaving the floor of the body of the Hall free for seating when the room is used as a Lecture Room. The Indian Conference Room, adjoining the Hall, and forming a portion of the main building, is decorated in colour from floor to ceiling sufficiently Indian in character to distinguish it from the Conference Rooms of the various Colonies. It is proposed to procure the furniture direct from India, made from special designs, which will be thoroughly Indian in style. The work has been carried out, from the designs of the Architect, Mr. T. E. Collcutt, by Messrs. John Mowlem and Co. The colour decoration in the Indian Room is by Mr. Almqvist, of the firm of Messrs. Shrigley and Hunt.

ARCHÆOLOGY, Natural History, Science and Art have each a Museum in London where their treasures are stored and made accessible to students. No accommodation for what is known jointly as "Arts and Crafts" has yet been provided, but a proposal will be submitted to the County Council for the permanent establishment of such an Institution on some central area. It is suggested, in the first place, that a special committee shall be appointed to formulate a scheme, which will then come before the Council for discussion. Already the authorities at Spring Gardens have shown their interest in museums by forming, at the County Hall, a small but interesting collection of relics obtained by workmen during excavating operations. The great revival of enthusiasm in "Arts and Crafts" should hasten this suggested treasure house and speedily result in a valuable addition to the permanent collections of the country.

A CASE of some importance was heard by the Leeds Stipendiary Magistrate, when the Leeds Steel Works Company (Limited) was summoned at the instance of the Corporation, for several offences against the Building By-laws—firstly, for erecting a chimney of other material than brick or stone; secondly, for erecting a chimney without notice; and, thirdly, for building contrary to plans. In a fourth summons, the Corporation asked for an order for the demolition of the chimney forthwith. The Town Clerk (Mr. J. Harrison), who appeared to prosecute, stated that in February of last year the defendants submitted plans, which were approved by

the Corporation, for a brick chimney, 90 feet in height, to be erected in connection with a boiler at their works at Hunslet. After putting in the footings, however, and raising the brickwork about two inches above the ground, they abandoned the work, and the present proceedings were taken in respect to the erection of another chimney of tubular iron, which was connected with the boiler, but for which no plans had been submitted. This latter chimney was only 40 feet high, and the smoke issuing from it constituted a nuisance to the neighbourhood. Mr. E. O. Simpson, who appeared for the defence, took an objection that the proceedings were out of time, urging that it was necessary for the Corporation to take proceedings within three months after the discovery by their officials that an offence had been committed, and not later than twelve months after such committal. After hearing the legal arguments on both sides, the Stipendiary said he would reserve judgment on the point.

THE stained glass windows just placed in position on either side of the west window in St. Mark's Church, Sheffield, in memory of Mrs. Favell, the late wife of Archdeacon Favell, are a distinct addition to Ecclesiastical Art in the city. In the south-west window, the incidents depicted are from the life of Mary Magdalene. The first light of the north-west window contains a representation of St. Thomas, and the centre light is typical of the first Easter night. The windows are from the studio of Messrs. J. Powell & Sons, London, and are believed to be the first this firm has executed for Sheffield.

A CORRESPONDENT writes: I went recently to Stonehenge, and came home shocked at such a scene of neglect and desolation. Many of the fine columns, some of them 24 feet long, are lying heaped one on the other on the ground, while most of those that are still standing are quite out of the perpendicular, and will soon follow the others, and the whole thing will then be nothing but a heap of stones. Can it be possible that we are going to allow the finest Druidical Monument in Europe to perish by neglect? We have more than one Archaeological Society in London, but is there no sentiment in the country or veneration for antiquity that would preserve Stonehenge from the destroying hand of time? It would not cost very much to raise some of these splendid monoliths from the ground and to restore what remain standing to the perpendicular.

ONE result of the Exhibition of Railway Appliances opened at the Imperial Institute, will be the introduction of some reform in ventilation, lighting, and warming. At present there is little choice between partial asphyxiation with closed windows, and draughts, combined with showers of soot and dust, with open ones. In lighting considerable progress has been made on some of the northern lines. Compressed gas seems to be the favourite. Electricity has been found to be uncertain in its present stage of development, though the time will come when this best of all illuminants will be called in to the service of the railway traveller. But there is a fine field for the inventor in the warming of carriages. Unless we are prepared to use the foot-warmer as the countryman did, and sit upon it, we are, as the Lord Chancellor said, scorched at one extremity and frozen at the other. One pleasing feature of the Exhibition is to be found in two or three inventions which reduce the danger to the shunter to a minimum, by means of an automatic coupling which can be worked from the permanent way or from the engine.

WEMBLEY PARK Tower—a mad affair to our thinking—is again in active progress,

and is rapidly approaching the completion of the first stage, which consists of the construction of a vast platform 190 or 200 feet from the ground. The gigantic framework upon which this platform is to be laid has long been a conspicuous object on the top of the hill in Wembley Park. The cross girders are now to be got into position, and the concrete floor formed. This floor will be of enormous area, as may be gathered from the fact that in the centre of it is to be a large Hall with a floor space of 20,000 square feet, a broad promenade running all round it. The original design contemplated also the building of an Hotel on this platform, with 90 Bedrooms. Whether that is likely to be carried out at present we are not informed. There are to be four lifts to this first stage and two staircases. One of the staircases is sufficiently advanced to permit of the ascent being made by it, and the lift guides have just been got into position. The complete Tower—if it ever is completed—is to run up six times as high as this floor, or thereabouts. About £90,000, we understand, has been required to finish this first portion.

MR. MORRISON'S dissent against the appointment of Messrs. Morris and Hunter as Architects for the extension to the Academy, Ayr, has been read before the School Board. Mr. Morrison contended that the matter should not have been settled at a private meeting of the Board; that as public men entrusted with public funds they were bound to secure the best plans; that it was an established principle in all public bodies that there should be some form of competition; that as most of the Architects in Ayr had received their education at the Academy, it was natural that they should have an opportunity of competing; and that by public competition there were secured the best brains and the best Architects.

AN experiment—with a view to ascertain the relative resistance, under pressure, of the hardest steel and the hardest stone—was recently made at Vienna. Small cubes, measuring 0.39 in., of corundum and of the finest steel were subjected to the test. The corundum broke under the weight of 118 cwt., but the steel resisted up to 844 cwt. The steel split up with a noise like the report of a gun, breaking into a powder, and sending sparks in every direction, which bored their way into the machine like shot.

PLANS for the new Cottage Homes for the pauper children belonging to Mile End have been adopted. The scheme provides for the erection on the ground acquired by the Guardians at North Weald, Essex, of 24 Cottages, Swimming Bath, a Gymnasium, Hall for entertainments and services, administrative buildings, &c. The estimated cost is £50,000.

THE only point in dispute is as to whether the Hall should be used for Church purposes only. In this event, Miss Lilley, one of the Guardians, offered to provide the whole of the interior fittings. The Board decided otherwise, holding that being parochial property they should not favour any sect, and that the utmost use should be obtained from the buildings.

WE regret to hear that the Queen's Head in Southwark, once the Crossed Keys, but rechristened at the Reformation, is to go the way of so many old hostelries. Seeing that in 1637 the Queen's Head was owned by John Harvard, afterwards the founder of the famous University that bears his name, it is strange that Americans have not stepped in to save it from demolition, by purchasing it with a view to the reconstruction of the venerable building on some appropriate spot, as a memorial of one of the few pious founders of whom they can boast. Failing their intervention, however, the ancient hostelry is doomed, and with it will pass

away another landmark of that mediæval London of which such sparse and scanty vestiges alone survive. The worm-eaten rafters and balustrades of its quaint old gallery will come down, and the dark and low ceiled sleeping-rooms that have housed so many generations of shadowy guests will be levelled to the time-worn stones of the courtyard.

A GIGANTIC project in the way of Bridge construction is about to be undertaken. The Hudson River Bridge Commissioners having accepted the plans for the great work, which is to cost 25,000,000 dols. The Bridge is to be built without supports between the piers, and will have a clear span of 3,100 feet. The elevation is to be such that the Bridge shall afford under any conditions a clear headway above the high water of spring tides of not less than 150 feet at the centre of the span. The endurance of the structure may to some extent be calculated from the fact that there will be six standard railroad tracks upon one level. The general type of the proposed Bridge will be a steel wire Suspension Bridge. The Towers at each end will be steel skeleton structures commencing at an elevation about fifty feet above high water, where the masonry piers end. The Bridge will be proportioned to carry, besides the dead load of the structure, trains weighing 3,000 pounds per lineal foot of track, covering all the tracks from Tower to Tower, at rest or moving slowly. This is certainly a country of astounding enterprises, but in the matter of bridge-making the Hudson River structure promises to completely eclipse all records.

At St. Mawgan on Thursday, the Bishop of Truro will reopen one of the most ancient and interesting ecclesiastical buildings in Cornwall. Associated with it are memorials of the old county families of Carminow, Trevelyan, Vincent, and more particularly the Vyvians. The exact age of the Church appears unknown, although the monks of Carminow rank among its earliest occupiers. On removing the wooden floors, old oak joists, several of them in splendid preservation, were found to consist of what the builders are satisfied were the top rails of the seats introduced by the monks. The ornamented tops, grooved for the insertion of blackboards and fitted with connecting pins, afford evidence that even in remote times practical ideas were entertained by those engaged in structural work. Beneath the wall of the South Transept, or Carminow Aisle, are supposed to be hidden Architectural treasures. Curious to know the meaning of a hollow sound when tapping the south-eastern wall, the builders removed the upper crust to discover a pretty little window with a circular head and tracery characteristic of the work of the ancients. The antiquity of the Church is further exemplified in the circular oak ribs supporting the roof, which have in some cases crumbled to dust. Another remnant of bygone days is the quaint St. Mawgan Cross, bearing traces of an inscription believed to be at least 900 years old.

By the employment of a new board made from wood pulp, which is of great elasticity

and toughness, a new "case" for bookbinding, made in one piece, is shortly to be put upon the market. It is expected that it will effect great saving in the cost of this department of book production. It is the invention of Mr. E. Frith, of Reigate. By means of machinery a series of minute corrugations is made in the arched portion forming the back to give it the necessary flexibility, and the hinges are formed along each side by two larger corrugations producing, it is claimed, an altogether stronger and more durable back than the ordinary cloth-bound book possesses. The folded, sewn, and backed-up sheets of the book to be bound are fitted into this case in the ordinary way. The material can, it is said, be printed upon in colours or gold with more effect than either paper or cloth.

The extensive new Wing of the Rotunda Hospital, Dublin, will shortly be handed over to the authorities of the Institution. Its Front, rich in terra-cotta, cannot be seen as yet to advantage, owing to the old Hospital buildings intersecting the view. The Wing will be known as the Plunket Cairnes Wing, in memory of the late Vice-President of the Hospital, who, with his family, was a contributor to the funds. Mr. Albert E. Murray, A.R.H.A., of Dawson

the two opens. When it is necessary to pass from the air-lock back to the shaft the iron door communicating with the face is closed and the pressure is thus maintained there. The men work inside an iron shield, which is driven forward by hydraulic pressure. Inside this shield a casing of iron is constructed in sections of 2 feet 9 inches at a time, and inside this there is one foot of brick and cement built. By some means or other the water from the river got into the air-lock, and the engineer and five labourers were drowned like rats in a trap.

THE new Admiralty Buildings overlooking St. James's Park are close upon completion, and plans are in preparation for "Block No. 2," which is to occupy the ground now covered by dwelling-houses and other buildings in Spring Gardens, in the occupation of various Departments of the Admiralty. These, of course, will have to be swept away before the second block can be commenced, and while the Civil Servants now in occupation are awaiting the erection of their new quarters, they will be transferred to the old premises of the Royal United Service Institute, and some houses owned by the Crown adjacent to those premises. When the whole is done the Admiralty Buildings will form three sides of a square, and on the

fourth side will be a handsome covered Corridor running along the north side of the Parade Ground. That has not yet been taken in hand, and probably will not be till block number two is well advanced.

DURING some structural alterations to buildings in Old Bailey, near the scene of last year's big fire, an interesting discovery has been made by the men employed. A portion of the old London Wall, which ran between Ludgate and Newgate, has been brought to light, and is said to be in excellent condition. There is an archway 11 ft. wide, and 14 ft. high, lined with red bricks, but rising only 4 ft. above the present ground

level, showing that the original level of the City at that part was 10 ft. below what it is now. Although the archway has been discovered there is no indication of any roadway, and it is, therefore, supposed that the arch was cut in the original wall during the past 200 or 300 years. During recent years it has been used as a stable, and the alterations will necessitate its removal, but it is understood that before this is done an opportunity will be given by the owners to any who wish it to view the archway during the next few weeks.

It is now decided not, in 1900, to cover the Seine with an iron Bridge extending from the Avenue Montaigne to the Place de la Concorde. The plan adopted is to turn the river into the semblance of a grand canal at Venice. The principal entrance to the 1900 Exhibition will be in the Cours-la-Reine, near the Place de la Concorde. The portal is to be flanked with two buildings devoted to Education and Technical Instruction. The Fine Arts Palace will face the Esplanade of the Invalides and cover the Jardin de Paris. These buildings and a Bridge over the Seine will be the only permanent constructions. The Venetian Palaces on the river will be places of amusement. The

Street, is the Architect of the new buildings, which are in the Georgian style, with elaborate ornamentations in terra-cotta mouldings and window dressings, and with a couple of imposing pediments in terra-cotta facing the western side of Rutland Square, this portion of the building being well exposed to view.

In connection with the construction of a large Sewerage Tunnel under the river Yarra, at Melbourne, a disaster has occurred, reminding one of the difficulties connected with the formation of the Thames Tunnel. The river bed, instead, of being of firm material, proved to be sandy and treacherous, and it was soon found that all the resources of engineering would be required to carry the work to completion. When about 400 feet of the Tunnel had been driven an air lock was constructed. This consists of a strong brick chamber built across the Tunnel, into which compressed air is pumped from an engine on the surface, and compressed air is also supplied to the face beyond this in which the men work. The compressed air is used to hold up the face of earth and to keep the water back, and the air-lock is used to allow transit from the shaft into the face where the men work. When the pressure of air in the lock equals that in the face, the door between

Bridge will take a slightly oblique course, and have but one arch, the span of which will be of steel. Between it and the Pont de l'Alma will stand the Palace of Flowers, and the Palace of Social Science and of Congresses. Foreign exhibitors will be given stands in Pavilions and Palaces in the Champ-de-Mars, where the Agricultural Show is also to be held. A Chateau d'Eau with cascades is to serve as a vestibule to a Palace of Electricity bordering the Avenue de Suffren.

THE new Memorial Window, unveiled in St. Sidwell's Church, Exeter, and the original cartoon for which is in this year's Royal Academy, is a fine specimen of modern Art on glass, and is the handiwork of Messrs. Percy Bacon & Brothers, of London. In the tracery lights, which occupy the upper part, are angels bearing scrolls, upon which are inscribed the cardinal virtues,—prudence, temperance, fortitude, justice. The central and most prominent figure is that of St. Boniface, who was born at Crediton, A.D. 680, was educated at Exeter, and suffered martyrdom at Utrecht in his 75th year. The artists have shown him with a long blonde beard, and in full canonicals, holding the crozier in the left hand, whilst in the right he grasps a sword, which pierces an open book, upon which occur the words: "In erat principis verbum." On the dexter side light is a finely-drawn figure of St. Hieretha, a native of Swymbridge. She was contemporary with St. Thomas à Becket, and is represented bearing in her hands an exact model of the Western Tower of Chittlehampton Church, of which she was the foundress. On the sinister side is St. Sidwell, a woman with a face of pleading beauty. She bears in one hand her missal, and in the other holds a scythe, the emblem of her martyrdom. Above each figure is much delicate canopy work, and over this on either flank, are full length figures of angels—the one on the south bearing a starry crown, and that on the north a martyr's palm. The three subject panels, lower down, are cleverly treated. The drawing and colour of the window are excellent. The new stone work for the window was carried out by Messrs. Harry Hems & Sons.

THE Irish Antiquarian and Historical Society visited Durrow Abbey, near Tullamore, on Sunday. Considerable local public interest was manifested in the history and antiquities of the Magna Domus or great Monastery founded by St. Columba in the sixth century, and the celebrated "Book of Durrow," now happily preserved in the archives of Trinity College, Dublin. The richly sculptured Celtic Cross, popularly known as St. Columba's Cross, and the ancient "Holy Well," together with the quaintly-inscribed tombs in the old Irish language, many of which mark the graves of Irish chieftains and the monks sent over from Iona by the Apostle of the Picts and Scots formed a group of Columbian relics which could not fail to attract.

THERE is a body in France called the Society of the Friends of Trees. Its object is to promote planting, and especially the re-forestation of the hill-sides, in order to prevent the floods, which cause an annual average damage amounting to 80 million francs. This has slightly diminished within the last few years owing to re-afforestation. The Government would have to spend 160 millions of francs to carry out the work effectively. They only dispose of about three millions a year for the purpose. The Society supplements these efforts. Its members have planted about 600,000 trees.

CARPEAUX, the Sculptor, gave lessons in Art at the late Prince Imperial, who seemed at one time destined to become Napoleon the Fourth. The results of this

teaching were embodied in several works, most of which are now scattered, bearing the signature of Prince Louis Napoleon. M. Croisy, a French Sculptor, has, however, two of the Imperial memorials. One is a bust of M. Lemonnier, who was tutor to the heir of the third Napoleon, and the other, a statuette, represents a Grenadier, in the act of clasp ing a flag to his breast, as he defends it from an imaginary foe. Mr. Croisy's strong Republican sympathies have not prevented him from forming the resolution of presenting the Empress Eugénie, during her stay in Paris, with the bust chiselled by her son. The other statuettes and samples of the Prince's efforts in Art have, most probably, shared the same fate as the Palace of the Tuileries, where they were stored when the Franco-German war broke out. It was at the Tuileries, and during the intervals between his studies and drills, that the Prince received the valuable instructions of Carpeaux, who has left his master-touch on the plastic productions signed by his pupil.

THE fifth session of the International Railway Congress will be held this year at the Imperial Institute Buildings. Altogether 800 delegates are expected to attend; of these 600 will come from the United States, South America, Canada, Australia, New Zealand, France, Germany, Belgium, Russia and Italy. The Congress will be opened by the Prince of Wales, at 3 p.m., on June 26th, and at 10.30 p.m., there will be a reception by Mr. Bryce, the President of the Board of Trade. The meeting will be carried out on the lines of the British Association meetings, each section having a separate chairman.

A LIST has recently been published of the greatest canals in the World. The Imperial Canal of China is over 1,000 miles long. The Canal du Midi, connecting the Atlantic with the Mediterranean, is 148 miles long. It has more than 100 locks, and about 50 aqueducts. Its highest part is 600 feet above the sea, and it is navigable for vessels of upwards of 600 tons. The Great North Holland Canal is 125 feet wide at the water surface, 31 feet at the bottom, and has a depth of 20 feet. The Caledonian Canal of Scotland has a total length of 60 miles. The Suez Canal is 88 miles long, and the Erie Canal is 350 miles long; the Ohio Canal, Cleveland to Portsmouth, 332; the Miami and Erie, Cincinnati to Toledo, 291; the Wabash and Erie, 374; the Manchester Ship Canal, 35½ miles long.

PLANS have been passed for the largest block of business buildings ever built in Ayr. The ground forms a valuable site, with a frontage to Wellington Square of about 130 feet, and to Fullarton Street of about 110 feet, on which is to be erected buildings to be called the Wellington Chambers, with a height of four storeys, and a square Tower at the corner five storeys in height. It is intended to divide the floors into suitable offices for business people. Provision is made for passenger lifts, which will make the upper flats as valuable as those nearer the street level. The cost of the building is about £15,000. The Architect is Mr. Henry V. Eaglesham, Ayr.

THE equestrian Statue of Lord Straithnairn, which Mr. Onslow Ford, A.R.A., has constructed for the Straithnairn Memorial Committee, is cast in bronze from guns captured in battles in which Lord Straithnairn took part. The Statue is in course of erection in the open space at the top of Sloane Street, Knightsbridge. A more central site was sought for it, but the authorities concerned were not inclined to assist, so that the offer of the Westminster Vestry of the present position had to be accepted. On the whole, perhaps, the choice is not a bad one. The Statue will be a commanding object to all proceeding from Piccadilly westwards, while,

with the Wellington Memorial at Hyde Park Corner in comparatively close proximity, it is in congenial company. Mr. Ford is considered by Lord Straithnairn's old comrades to have produced an excellent work. The ceremony of unveiling the Statue has been fixed for June 15th, the anniversary of the capture of Gwalior.

WE hear that Battersea Parish Church, from the Turret window of which Turner sketched many of his wonderful sunset scenes, a Church which consecrated the marriage of William Blake to the daughter of a market gardener, and in which are many memorials by Roubilliac and others to the St. John and other families, to say nothing of the painted window which is said to date from the days of Queen Elizabeth, is sadly in need of repair, and the churchwardens are making an appeal for assistance in carrying out the necessary work. The present edifice was opened in 1771, and its copper Spire is a familiar feature on the banks of the Thames.

AT the provincial meeting and conference of the Sanitary Inspectors' Association, held this year at Worthing, an address that had been prepared by Sir Benjamin Richardson was read. In it he stated that the continued activity of the Sanitary Inspectors' Association and the increasing success of it was a source of great gratification to all who were seriously impressed with the cause of true sanitation. The great points which it seemed to him were essential to their continued progress were—first, unity of purpose and endeavour, so that they might as a body of men scattered widely through the country have a common object, insisting on their own proper recognition, remuneration, and consolidation. Their second great point was of an educational character. It would be advisable for them to have a School in which systematic instruction should be regularly carried out in the directions of their practical work. Short papers were afterwards read on "The Dwellings of the Poor," by the Deputy Mayor (Alderman R. Pipe) for Alderman Captain Cortis (Chairman of the Sanitary Committee of the Borough); "Death Rates," by Dr. Charles Kelly (Medical Officer of Health for West Sussex and Professor of Hygiene at King's College); "The Sanitary History of Worthing," by Mr. C. T. Gardner (Sanitary Inspector of the Borough); and "The Sanitary Inspectors' Association: a Review and a Forecast," by Mr. W. H. West (Vice-Chairman of the Council of the Association and Sanitary Inspector of Walthamstow).

THE seventh annual Exhibition of amateur Art work, promoted by the Artists' Guild, will be opened at the Royal Albert Hall on Nov. 4th next. Prizes are offered for embroidery, painting, photography, wood decoration, leather work, work in metals, and other artistic work. The Secretary of the Artists' Guild will be glad to give any information.

THE second outdoor meeting of the Dublin Sketching Club, recently held, was largely attended. The members assembled at the Club Rooms, Leinster Street, and proceeded thence by road to the picturesque valley of Glen Donagh, in the heart of the Dublin Mountains, where the varied and charming scenery affords many excellent subjects. One of the foremost objects of the Club is to promote and foster the study of Landscape Painting direct from Nature, and the popularity of these sketching expeditions is amply evidenced by the large and increasing attendance of the members. The party was in charge of Mr. C. J. McCarthy.

A LONG anticipated sewage scheme, which Messrs. Bramwell and Harris, of London, have been preparing for Derby, was laid before the Town Council on Wednesday. Considerable friction has arisen for some

time past between the town and county authorities on account of the borough sewage polluting the Derwent, and proceedings have been threatened, but now that some definite scheme has been drawn up the matter will, no doubt, be amicably settled. The report of the eminent firm of engineers mentioned is a very extensive and exhaustive one. It is proposed to erect a pumping station at Litchurch on the site of the present Litchurch sewage works, and to utilise as much as possible the existing sewers. This part of the scheme is estimated to cost £28,000. It is further proposed to treat the sewage in a series of underground tanks, the effluent being somewhere near the Borrowash Mills. The total cost of the scheme is put down at £82,000, and the cost of maintenance £7,500 per annum, £4,750 more than at present expended for a similar purpose.

A COMPETITION among Italian artists has been set on foot for the execution of a reproduction in marble of the alto-relievo of the Lion of St. Mark with the Doge Gritti. This alto-relievo formerly ornamented the terrace above the piazzetta of the Ducal Palace in Venice. The winner of the competition will be given two years in which to complete the work, the price for it having to be decided by a Commission appointed by the Italian Minister of Public Instruction.

IN the front of a house situated in the Faubourg de Shaerbuch, in Brussels, there is to be seen, half buried in the plaster, a cannon ball which was fired from a Dutch cannon at the period of the Revolution of 1830, and has ever since been permitted to remain. Recently it was determined to restore and refront the house, and the question arose: What was to be done with the Dutch cannon ball? It was at once determined to achieve the new fronting without disturbing it. Since then the ball has been repainted black, in strong contrast with the pale pink plaster around it, and provided with the simple commemorative date, "September 24th, 1830."

THE new Church and School buildings for one of the oldest Presbyterian congregations in Newcastle, and one of the largest in the denomination, will have one novel feature at least. The history of the Trinity congregation goes back to the days of the Puritans and the passing of the Uniformity Act. The Church has 500 members. The old Church in New Bridge Street was found inadequate, and a fine site in the new and central thoroughfare, Northumberland Road, was obtained, for new Church and Schools and Class Rooms adjoining. The total cost is estimated at £16,000, of which £12,000 is in hand. Messrs. Marshal & Dick, of Newcastle, are the Architects. A new feature in the plan is a screened Corridor running round the auditorium, from which the congregation obtain direct access to their seats, without passing through the Church. There are no pillars to obstruct the view of the pulpit.

THERE is no longer any reason to suggest that the unreliability of true fresco in this climate affords a sufficient excuse for the entire neglect of mural decoration of the better sort. The Gambier Parry process of "spirit fresco" has proved quite reasonably suitable and permanent; and a more recent device, which makes it possible to paint a design on canvas that is afterwards solidly attached to the wall, avoids the incon-

veniences inseparable from actual work on the spot. In the two Royal Exchange paintings, which we described in our last issue, the Gambier Parry process has been employed upon canvas, and this canvas has been put into its place after the Artist has in each case completed his labours. With this double safeguard against deterioration there seems no reason why these decorations should not remain in good condition for generations.

THE Bust of the late Lord Tennyson, executed in 1857 by T. Woolner, R.A., which was given for the purpose by the late Mr. C. Jenner, of Edinburgh, has now been placed on a pillar very near the grave of the poet in Poets' Corner, Westminster Abbey. The Memorial is exactly where it ought to be—looking directly, and from a very short distance, on the poet's gravestone, which was laid down by the Dean. The only rearrangement necessary was the shifting of the Tablet erected to the memory of Mr. Anstey, author of "The New Bath Guide,"

sisting of eminent statesmen and men of celebrity in Literature and the Arts and Sciences. The late Sir Robert could not afford to live at Drayton for a long time, and the present one is desirous to either let or sell it.

A LARGE stained-glass window was unveiled on Wednesday last, in Trinity Church, Stratford-on-Avon. The window has cost £600, and is situated at the east end of the Chancel, immediately above the Altar. It is the work of Messrs. Heaton, Butler & Bayne, London. The colouring is exceedingly rich and beautiful, and in marked contrast to the glass in the window which it supplants. The general subject of the new window is the "Adoration of the Crucified."

A MEETING of the Arts and Crafts Society of Ireland took place in Belfast, on Friday. It is hoped that this meeting will have effect in awakening a practical interest among the trades of the North of Ireland, and result in a large access of exhibition. This effort of

the Arts and Crafts Society of Ireland to raise the artistic excellence of craftsmanship comes none too soon. To anyone who cares for such things—on which so much refined pleasure in life depend—the poverty of design in Irish work is painfully apparent. That this was not so once, for instance in the last century, makes the fact the more deplorable. The blame attaches two-fold, to a careless, Art-less workman and an apathetic, Art-less public.

SIR J. E. MILLAIS recently had a surprise. Visiting at the house of a fellow artist who has just returned from Rome, he was asked to look at some sketches which the latter had brought back with him, and of which he was not a little proud, having picked them up for "an old song" in a curio shop at Rome. Sir John looking at them closely found that they were some sketches of his own, done in his student days. One of them was of his own father on horseback. Needless to say the owner of the sketches is still more proud of them now than he was before.

THE latest Brodingtonian addition to New York Hotels is the "Majestic." It is opposite the Central Park. It is 204 feet by 150 feet, by 165 feet high, contains 600 rooms, is fireproof, and cost four million dollars or thereabouts, and, certainly, for we have seen an illustration, it looks ugly enough to have cost that enormous sum. A

covered carriage-way runs right through it. There is a Winter Garden under glass, and a Summer Garden on the roof of 30,000 square feet.

DUNOON is to have its Highland Mary Statue after all. The financial results of the recent agitation have proved satisfactory enough to warrant the Committee to definitely instruct Mr. D. W. Stevenson, R.S.A., to carry out his design in bronze. The unveiling of the memorial, will take place on July 21st.

SHIPBUILDING in Cork Harbour is now becoming a very significant industry, and an important order has just been placed with the Passage Docks by the Grand Canal Company of Dublin for the construction of five iron barges for use in the Grand Canal Company's river trade. Under the able management of Mr. Allan Johnson, the Passage Docks are capable of turning out work in the line of shipbuilding and repairing equal to any that can be done elsewhere in the United Kingdom.

A SKETCH IN ALKMAAR : BY F. T. W. GOLDSMITH.

and the Bust is placed on an adjoining pillar. The Sculptor devoted loving labour to the work, which bears the date 1857, and represents the poet in his prime, with a strong, beardless face and sensitive mouth, and the abundant hair which he carried till his death. The Bust was thoroughly approved by those who knew Tennyson 40 years ago.

DRAYTON MANOR, near Tamworth, which it is said, the late Speaker, now Viscount Peel, will make his home, once belonged to Hugh Lupus, Earl of Chester, and in 1390 passed into the hands of the Staffords. It afterwards became the residence of the Countess of Essex, mother of Queen Elizabeth's favourite. It then passed into the hands of the Marquis of Bath, who sold it in 1790 to Mr. Peel. The Queen visited the great Sir Robert here in 1841. The old Manor House was a timbered structure, but the existing one is a handsome modern Mansion, built in the Elizabethan style. The Portrait Gallery is very interesting, con-

NOTICE.

Our Next Number,

June 18th,

*Will mark the Second Great Development of***The Builders' Journal***Which now possesses a***Larger Circulation***Than any other Architectural Journal published in this country.*

This Special Issue will have all its inside pages Printed on White Paper. We have invited three of the best known Pen and Ink Artists to submit us designs for a New Head Piece, the best of which will embellish the issue. This number will be sent by Post to Every Architect, Surveyor, Borough, Diocesan and Ecclesiastical Surveyor, Clerk to the Local Board, in England, Ireland, Scotland and Wales. This, with the Publisher's ordinary Edition, will make the output close upon

25,000 Copies.

MR. THURSTAN C. PETER'S explorations at Carn Brea are successful. Twenty-seven arrow heads in one circle, a large spinning-wheel, a javelin head, silver and bronze coins and rings, besides pottery, iron pyrites, and flints, are among the finds, which have been forwarded to the British Museum for examination. The report will be awaited with much interest by adjoining residents. Old historians of Cornwall have recorded notices of coins previously found at Carn Brea; but the things discovered by Mr. Peter will throw probably much light on disputed points.

THE Wrexham Wesleyan Quarterly Meeting has sanctioned a scheme for building Chapels at Ruabon and Caergwle, for completing the Chancel in the Wrexham Church—built four years ago—and for refurnishing the Sunday School. The total outlay will be £2,000. Sir Watkin Wynne has given a valuable site at Ruabon, allowing part of his park to be appropriated for the purpose. Subscriptions to the amount of £1,500 have already been secured, including £200 from the Rev. J. S. Haworth, a former superintendent.

THE eleventh annual Exhibition of the Home Arts and Industries' Association will be held in the Albert Hall from the 13th to the 17th June inclusive. Pupils from the various classes will work at intervals at wood carving, leather embossing, lace making, spinning and weaving, &c. Mr. G. F. Watts, R.A., has just presented 1,000 guineas to the endowment fund of this Association.

The Builders' Journal.**MEN WHO BUILD.**

No. 16.

MR. GEORGE H. WILLOUGHBY.

LANCASHIRE is not a very happy county when Scotch mists hang over the moors, or when a Lancashire rain is soaking down for days at a time. Manchester itself is a gloomy City at best, and on a wet day its gloom is deadly, even when you take coffee at the Reform Club, and pass an early hour with one or two congenial spirits at the Brasenose. But there is one point about a Lancashire man that pricks him very deeply—punctuality is his topmost virtue, and when your hour for calling on him or visiting him is twelve of the clock, he expects to hear your soothing footsteps on his stairs, and to hear the click of his office lock, as the City clocks are booming the hour of your appointment. If you are late he will apologise for you.

George Harry Willoughby, partner in the firm of Woodhouse & Willoughby, served his articles with Messrs. Pierpoint, Hughes & Pierpoint, of Warrington and Preston, and eventually became assistant to a well-known Manchester firm. Twelve years ago, when in his twenty-fifth year, he commenced practice in Stockport—his native place—and was fortunate to be commissioned immediately to build several big houses for hat manufacturers living in the outskirts of the town. He also began what has since proved to be a remarkably successful career in competitions, and obtained the Conservative Club House at Heaton Norris; the Union Club, Stockport; the Edgeley Wesleyan and several other Schools; together with private commissions for the erection of new offices for Joseph Legh, M.P., additions to Chetwode Hotel, Crewe, to Bromborough Hall and the Court House, Cheshire. In 1884 he sent in, with Mr. J. H. Woodhouse, of Manchester, a competitive design for the Widnes Town Hall, and it was placed "third" by the Assessor. In the following year a joint partnership was arranged between Mr. Willoughby and Mr. Woodhouse, and since that time they have developed a remarkably successful competitive practice in the designing and equipment of Technical Insti-

tutions and School structures of all kinds. It is quite extraordinary the success that has come to Mr. Willoughby's firm from competitive work, five Technical and three large Board Schools having only just been completed, apart from smaller work of the same kind at Stockport, Ardwick, Great Harwood, and other places. The Blackburn Technical and Trades' School, the Foundation-Stone of which was laid by the Prince of Wales, is also just completed at a cost of £30,000, gained in open competition from 76

competitors. In 1890 Mr. Waterhouse placed Messrs. Woodhouse and Willoughby's designs for the Victoria Institute at Worcester, second among the six selected schemes, and in the same year they won the Rochdale Technical School, which has since been built in Ruabon terra cotta, at a cost of £10,000. In 1892 Mr. Tuke, of Manchester, placed their drawings first in the Heywood Technical School, and his decision was unanimously endorsed by the Building Committee. In the same year their scheme was selected for the Free Library and Technical School at Widnes, and the Winsford Gymnasium and Technical Schools. The Holland Street Ancoats School for 1180 children is the work of Messrs. Woodhouse & Willoughby, and is costing £11,600. The Higher Grade School at Salford (£10,500), and the Salford Boards' new offices in Chapel Street (£10,000), are also by these Architects, the latter work having been secured in a limited competition confined to a number of Manchester and Salford Architectural firms chosen by the Board to compete. A sketch of this building, drawn by Mr. Langham, was published in a recent number of THE BUILDERS' JOURNAL. Many other works of a scholastic nature have been done, and not until a couple of years ago, when they submitted a scheme for the St. Helen's Free Library and Technical Schools, which was placed first by the professional Assessor called in to adjudicate upon the drawings, have Messrs. Woodhouse & Willoughby ever met with unfair treatment. In this instance, although the advertised premiums were awarded according to the experts ruling—the Committee decided to carry out the second design, no reason or explanation being offered for a most inequitable proceeding, not even to the Council of the Institute who addressed one of its thundering communications to the

HOUSE AT STOCKPORT FOR MR. THOMAS LEES, J.P.: G. H. WILLOUGHBY, ARCHITECT.

St. Helen's people without disturbing their equanimity in the slightest.

It rains; a steady downpour clatters on the pavements and makes music in the gutters, and the air is a little fresher than it was. But it takes something more than the determination of the weather to upset the arrangements of Manchester, and so Mr. Willoughby, sensibly garbed in thick-soled boots and calmly ignoring your own thin consumptive foot gear, goes out into the storm to visit his jobs at Salford and Ancoats. The horses in the north are much better brutes than one sees down south, and your cab rattles along the street in a fashion that would make a London policeman green with fury. Mr. Willoughby, knowing the interest you take in Terra Cotta, lures you up all sorts of death traps, so that you may see the work in actual construction; vertical

planning of Schools now-a-days is "much of a muchness," but the Manchester men have a little to learn, from Messrs. Robson and Bailey's work, of good proportion in their elevations and in their massing of parts. In the block of Schools last mentioned—the Architect of which you need not inquire—there is a terrible blunder in the arrangement of the staircase and in its lighting, and much of its exterior detail is crude and unworthy of the planning. The cost of this particular work comes out at 4½d. per foot. A little more care and another halfpenny would have made an excellent building of it.

The day is far spent when you return in a very limey and dilapidated condition to the charming offices of Messrs. Woodhouse and Willoughby and join once again in the spirit of competitions, on one of which all hands are engaged. Mr. Willoughby has

of a good cigar. Good cigars are somewhat like good Architecture, they are sometimes difficult to obtain. The inferior article is often palmed off upon us, and we accept it, but George H. Willoughby can give you a good weed, and shew you good Architecture, free from the eccentricity of the too Modern School, free from the almighty effort to do something noble and doing it badly, free from the imperfect planning of many of his contemporaries, and full of honest, good work, which bears inspection and much admiration. Both he and his partner deserve the success which has come to them.

The Tower of the new Lighthouse which is being erected at Penmarch Point, on the coast of Brittany, will be 185 feet above high water line, and is being built entirely of

THE BLACKBURN TECHNICAL AND TRADE SCHOOLS: WOODHOUSE AND WILLOUGHBY, ARCHITECTS.

ladders are assailed with the cleverness of an able-bodied seaman. Cinquevalli has done nothing bolder than your desperate plank feat over a yawning abyss of 20 yards to test the very charming colour of Messrs. Doulton's material. The Salford School Board will have a very cleverly planned block of offices, and as fine a specimen of Terra Cotta work as you have yet seen. Back goes Jehu through the slippery streets to Ancoats, and its slums, and on the plain of desolation stands the Holland Street School which, on closer examination, proves a wonderful building for £11,600. The Manchester School Board has a system of placing their buildings under the supreme supervision of one Clerk of Works—a careful and clever man—and he is invited by Mr. Willoughby to show you another School, by another Architect, some short distance away. The

studied a little of human nature, and studied it wisely. He has discovered—how much against his wish you need not ask—that there is a deal of commercialism in the noble profession of which he is so competent a member, and like the smart man that he is, has not kicked against the pricks, but calmly done his best to inspire the commercial spirit with higher motives. His own room, therefore, is delightfully appointed. The grandfather's clock—all Manchester men have grandfather's clocks—and the portraits of his children over the mantel give a soft touch of homeliness to the severer aspects of the surroundings, but no cobwebs of hallowed memory decorate the walls. The inevitable chat which follows a pleasant day is welcomed, and it fills out the remaining office hours, and overflows into King Street and across to the Reform Club, where it is finally lost amid the smoke

granite from Kersanton Quarries, near Daoulas Finistere. The electric light with which it is to be furnished will be of such intensity as to be visible at a distance of nearly one hundred in clear, and from twenty-five to twenty-eight miles in hazy weather. The actual illuminating power of the light will be 10,000 candles, which is much greater than that of La Hève (Seine Inferieure), admittedly the most powerful light at present on the French coasts.

MR. H. J. WEAVER has been appointed Assistant Surveyor and Building Inspector to the Gloucester City Council. The remuneration is £150 a year.

THE Halifax Town Council has applied to the Local Government Board for permission to borrow £15,000, for the erection of a new Court House and Police Station.

CHARACTERISTICS OF CELTIC ART.

THE RECENT REPRODUCTION OF THE NIGG CROSS SLAB.

THE reproduction of the Nigg Cross Slab recently added to the Edinburgh Museum of Science and Art, is highly interesting to Archaeologists, seeing that the Nigg Cross Slab is the most perfect, both in design and preservation, of the Ross-shire Monuments, and is a thoroughly typical Celtic stone. The Slab now measures 7 feet 4 inches high by 3 feet 5 inches broad, and is rather more than 5 inches thick. The sides are nearly parallel for a height of 6 feet; they then slope inwards to form a gable-shaped top, in which the principal figure subject is sculptured. When entire the Monument must have measured about 14 inches higher than at present; but it was thrown down during a gale in 1787, and broken in two pieces. When seen by Mr. C. C. Petley, who visited Nigg in 1811, the one portion was lying in the churchyard, and the other had been thrown over the churchyard wall. Fortunately, Mr. Petley made drawings of the two fragments, and from these drawings it is possible to restore the parts which have been broken off and destroyed since his visit. This priceless Monument, which thus so narrowly escaped destruction, has now fallen upon happier times. The general plan of the decoration of the Slab is similar to that seen on many of the decorated pages of Celtic manuscripts. The surface of the obverse is divided by panels which are so arranged as to form in the centre a cross, the shaft of which extends to the bottom of the Slab, the other panels serving as its background. The ornament is entirely different from the Romanesque forms of the Ruthwell Cross. Celtic Art is, so to speak, a child of the soil. Its elemental forms are so simple that they have been the playthings of every nation in its young days. The early Greek potter had little else than these frets and spirals and twisted bands with which to decorate his vessels. By-and-bye he mastered the human form, and these primitive elements had to take a subsidiary place. But to the Celtic Artist they are his all in all. It is true he carves many figure subjects, but these crude productions can never be looked upon as Celtic Art. It is by its ornamental forms that it must be judged, and though these are limited for the most part to the fret, the spiral, and interlacements of varying complexity, an examination of the panels of the Nigg Stone will show to what unequalled skill and what beautiful results the Celtic Artist attained. His interlacings twine and intertwine with a certainty and unerring accuracy that almost defies imitation; his spirals are bewildering in their complexity, yet as an ornamental pattern are clear and perfect, and even on the fret or key pattern, common to every people from Ross-shire to Peru, he stamps his individuality, and by an original treatment marks it as a Celtic form. As a rule, the human figure and animals appear on these monuments only to serve the purpose of filling up spaces, without regard to proportion or artistic composition. On the reverse of the Nigg Stone there is a gathering of various sculptured forms which seem to have little connection with each other. The central group, David rending the jaws of the lion, is much damaged, and would be unrecognisable save for the symbols—the harp and the sheep, which remain to tell us that the sweet singer of Israel is here represented. Below and above this group is a stag hunt in much better preservation, and showing a good deal of natural drawing and action. This subject is said to have a symbolical significance, and refers to the chase of the soul until it finds rest in the bosom of the Church. Other forms there are on these monuments which are purely symbolic, but which have defied all attempts to ascertain their meaning, and among such are the so-called elephant symbol on the Nigg Slab and on the Shandwick Stone, and the spectacle form and the crescent and V-shaped rods on the Hilton Monument. The principle figure sculpture on the Nigg Slab is scarcely less free from mystery. In the pediment shaped top of the obverse, two figures in flowing robes, and with hair falling on their shoulders, are represented in high relief, facing each

other, and bending forward toward a chalice-like form placed in the centre. Each holds a book in his hand, and seems intent on its open page. Two dogs cower below the figures, crouching low as if awed by some supernatural power; while in the centre a dove descends, bringing in her bill the sacred wafer to complete the elements of the Eucharist. Over the group are two very conventional trees which form an enclosing border. The Nigg Slab is not only an unrivalled example of Celtic ornamentation, but to the student it is quite an epitome of the characteristic forms of Celtic Art.

SCULPTURE DECORATION OF ST. GEORGE'S HALL, LIVERPOOL.

MR. STIRLING LEE'S PANELS.

AN interesting report on the completion of St. George's Hall, Liverpool, was considered by the City Council last Wednesday. The report gave a *resumé* of the inception of St. George's Hall, and the gradual completion of the building to the present day. After referring to the designs of Mr. Elmes, the report stated that Mr. Elmes' early death unhappily prevented his superintending the completion of the building, but Mr. Cockerell proved himself capable of carrying out Mr. Elmes' scheme, so far as the shell of the building was concerned, and successfully commenced the sculpture required for its completion by the group on the pediment, in which it would appear he was assisted by Mr. Alfred Stevens, but to what extent is not known. The partially completed building was opened in 1854, which was not a very brilliant period of English Sculpture. The Council seemed to have feared putting so important a work into incompetent hands, and nothing more was done for some years. In 1882 (the prospects of English Sculpture having very much improved) Sir James Picton proposed that the Council should endeavour to worthily complete what would be the chief glory of Liverpool, if not spoiled by incompetent hands, and a commencement was made by commissioning Mr. Stirling Lee, after a severe competition, to carve certain panels on the east side of the Hall. Doubts were roused in the minds of some members of the Council as to the success of the first two panels, which delayed the work for some years, but at length, in 1894, Mr. Stirling Lee was enabled to complete the first six panels, and their singular success in carrying out Mr. Elmes' conception was universally admitted. For several cogent reasons the work should now be vigorously, but cautiously, pressed forward to completion. The building would then be a monument perfectly unique in its successful adaptation of Classic Architecture to modern uses, and give an idea of the glories of Greek work in its most perfect development. Owing to the difficulty of adapting the Classical forms to modern requirements, it would probably remain unique in its character, and be quoted as the only really successful attempt in the World to revive the full glories of one of the finest periods of Architecture. Fortunately the opportunity now offered itself. During the last few years a young School of Sculpture had arisen in England, which promised to be the finest England had seen. Whether it was to be permanent or not depends upon the encouragement it received, especially the encouragement of Monumental Sculpture, combined with Architecture. Though, unfortunately, many of Mr. Elmes' plans and drawings had disappeared, he had on the building itself indicated the position and nature of the sculptures necessary for its completion, the panels, for relief Sculpture, the bases and pediments for the statues, &c. These Mr. Lee had worked out with great care and sympathy. During the progress of the work, Alderman Rathbone, who had prepared the reports, felt they would gather to Liverpool skilled workmen of the highest class, and set an example which would no doubt have no unimportant effect in inducing great companies to erect noble buildings, causing Liverpool to take a leading position in the great rebuilding of the cities of England which will be a prominent feature of the first half of the twentieth century. The first step would seem to be the completion of the south end of the east wall, by

placing the requisite figures over the panels already completed, representing the growth of Justice. St. George's Hall had, according to the statement in the annual accounts of the City Treasurer, already cost £317,000, and it could not therefore be thought that the carrying out of the new work, which it is estimated will cost £40,000, was by any means extravagant, seeing that ten years will be occupied in its completion, and the sum of £4,000 per annum only be required for that period.

PROGRESS OF ELECTRIC TRACTION.

A REPORT on Electric Traction has been drawn up by Mr. R. Hammond for the Dublin United Tramways Company, which proposes to obtain powers to work its cars by electricity. He thinks that horse traction will soon be regarded as "barbarous, clumsy, inefficient, and wasteful, and for tramway work quite inadmissible." Major Marindin in a recent communication to the Board of Trade has reported adversely to steam as a motive power even on the few tramways where it is still employed, and cable trams can only be used with advantage on steep gradients. Mr. Hammond, therefore, concludes that the electric tram must supersede all others for general purposes in the near future. It has already been tried on a large scale in the United States and Canada, where within ten years from the opening of the first electric tramway 9,000 miles of line have been laid down on this system, as well as in many Continental cities and in a few places in the United Kingdom, as, for instance, in South Staffordshire, at Blackpool, and in the Isle of Man, and the results attained have been, on the whole, satisfactory. Mr. Hammond points out that an electric tramway may be worked either from accumulators carried on the cars or from a central generating station, the current being conveyed to the cars by wires. Accumulators have as yet been little used—first, because they are wasteful, and secondly, because they increase the weight of the cars, and therefore necessitate frequent repair of the track. All but about half a dozen lines are worked from a central station. The current may be conveyed either along cables fixed in open conduits or through wires suspended from standards. The first plan has only been tried at two places in Europe—Blackpool and Buda-Pesth. It is found to be often unsatisfactory, because, as at Blackpool, the conduits become choked with dirt and stones so as to interrupt the service, though on the other hand the Buda tramway, which is laid on sloping ground so that the channels are naturally drained, is probably one of the best in the World. Mr. Hammond, therefore, pins his faith to the second plan, by which the current is supplied through overhead wires, along which travels a wire connected with the motor on the car. These overhead wires have, he thinks, been unjustly attacked as being dangerous, troublesome and unsightly. He brings forward the evidence of Mr. Edison and Professor Elihu Thompson, to show that a current of 500 volts, the maximum pressure allowed on the Liverpool Overhead Railway by the Board of Trade, is perfectly safe. He quotes a letter from the captain of the Wednesday Fire Brigade to prove that the wires, if hung along the sides of the roads at a height of 21 feet, would not seriously impede the passage of a fire-escape to or from by-streets, and shows by photographs that heavily-laden waggons could easily pass between a car and the wires with which it is in connection. When, however, Mr. Hammond tries to show that "the overhead system can be carried out in such a manner as not to offend the æsthetic tastes of the citizens of Dublin," he is less convincing. His photographs show that the tramway at Milan, where each of the standards placed in the centre of the double track supports two wires, is less unsightly than the South Staffordshire lines, with plain iron poles erected along the sides of the roads. But even admitting that the design of the standards might be improved, it is impossible to contemplate with satisfaction the prospect of having still more poles and wires to join with lamp-posts and telegraph poles in making our streets hideous.

THE ADVANTAGES OF SEMI-CIRCULAR PORTICOES.

ONE thing that ought to recommend Semi-circular Porticoes is the greater variety of optical and perspective effect attending them, inasmuch as the apparent position of the columns is constantly shifting, accordingly as the spectator changes his situation. Nevertheless, such plan is but very rarely adopted, for the two Porticoes to the Transepts of St. Paul's are almost the only ones of the kind of particular note. Though but subordinate features in themselves as compared with the entire pile, these Porticoes are greatly superior in taste, in both Classical and grandiose quality, to almost everything else produced or designed by Wren, some of whose works it may be fairly suspected, would obtain very little admiration at present, or even the semblance of it, were it not for the authority of his name. The nobleness which stamps that example of a Semi-circular Portico would perhaps be most striking were a similar Portico, and upon the same scale, made

compatible with originality, or that it is only by deviating from the former that the latter can be attained. Few knew better than Soane how not only to overcome difficulties of site and plan, but to turn them to positive account—therein lay his peculiar forte; and no doubt the idea of that feature of the Bank of which we are speaking was forced upon him in the first instance as an expedient for getting rid of a harsh angle and connecting the north and west sides of the building by an intermediate feature of sufficient importance to claim to be considered a distinct composition. The curvature of this Loggia is much less than a semi-circle, which would perhaps be a defect did it project from a plain surface, because in such case a segmental curve would have a look of feebleness and indecision, but as the Loggia is placed at an angle of the building it defines itself sufficiently; besides which the pair of columns placed on each side of it serve both to frame in and to extend the composition. There is, moreover, another circumstance which greatly enhances its effect, namely—the introduction of two columns placed on a chord-line of the exterior

A MARINE LAKE FOR RHYL.

THE inauguration of the new Marine Lake and the completion of the new Sewerage Works at Rhyl took place last week, and, it is stated, that during the past five years the public authorities have spent £200,000 in improving and enhancing the value of the town. The first improvement of note was the asphalt-ing of the Promenade, followed by the erection of an Infectious Hospital. With the object of procuring an effective water supply, the Corporation purchased Waterworks at a cost of £75,000, and afterwards decided to acquire the Gasworks, for which £35,000 was given, and £20,000 was spent in placing the Waterworks in an effective condition and enlarging their capacity. Last, but not least, came the re-arrangement of the sanitary conditions of the town, and the formation of the Marine Lake. The former scheme, which has cost over £30,000, was placed in the hands of Mr. Baldwin Latham, C.E., who has succeeded so well that it was declared by medical authorities that Rhyl is the only watering place,

the main feature of a different composition; still no one has cared to adopt avowedly what Wren has there done—which certainly is not owing to aversion to copying or to dread of the charge of plagiarism. The same remark applies to another and quite different example—so different, indeed, from everything else of the kind as to be almost *sui generis*, and to all appearance likely to remain such, none having as yet even borrowed an idea from the truly charming Loggia at the north-west corner of the Bank of England, which is confessedly and incontestably Sir John Soane's masterpiece, stamped as it is by genial artistic feeling, and fraught with an extraordinary degree of picturesque effect, so that it almost becomes captious hypercriticism to object to it that it is after all only a piece of Architectural decoration. Avowedly derived from the Temple of Tivoli, that composition of Soane's may, nevertheless, lay claim to more decided originality of application than designs in general, for, if not indebted to ideas for any particular example, they are apt to be fashioned according to routine, and it need not be said that routine is in-

compatible with originality, or that it is only by deviating from the former that the latter can be attained. Few knew better than Soane how not only to overcome difficulties of site and plan, but to turn them to positive account—therein lay his peculiar forte; and no doubt the idea of that feature of the Bank of which we are speaking was forced upon him in the first instance as an expedient for getting rid of a harsh angle and connecting the north and west sides of the building by an intermediate feature of sufficient importance to claim to be considered a distinct composition. The curvature of this Loggia is much less than a semi-circle, which would perhaps be a defect did it project from a plain surface, because in such case a segmental curve would have a look of feebleness and indecision, but as the Loggia is placed at an angle of the building it defines itself sufficiently; besides which the pair of columns placed on each side of it serve both to frame in and to extend the composition. There is, moreover, another circumstance which greatly enhances its effect, namely—the introduction of two columns placed on a chord-line of the exterior

THERE are no fewer than 103 Cathedrals in the United Kingdom. Of these 48 are Roman Catholic Cathedrals, 36 Church of England, 12 belong to the Church of Ireland, and 7 to the Episcopal Church of Scotland.

with one exception, which possesses such a perfect scheme of sanitation. These works have been in progress eighteen months. The new Marine Lake has been constructed at a cost of £10,000. It covers forty acres, and has a uniform depth of four feet, on which boating can be indulged. Captain Keating, Chairman of the Council, performed the opening ceremony, and at a banquet given in the evening, Sir Arthur Cameron, M.D., said he was delighted to find that Rhyl, with its population of 8,000, had actually gone to the expense of £4 per head of the whole population in perfecting its sanitary system. The fact that the sewage was discharged into the sea one hour after high water on the ebb tide, and when there was at least twelve to twenty feet of water above the outlet, proved that there was no possibility of contamination. Their Sewage Works were now as perfect as it was possible to make them. Speaking of the Lake, Sir Charles said he was surprised to find such a magnificent sheet of water. The great advantage was that navigation would be unattended with danger.

THE APPROACH TO WESTMINSTER. COMPLETING "THE FINEST SITE IN EUROPE."

THE Government's decision to remove the King Street block, to improve the approach to Parliament and Westminster Abbey, makes it useful to know something about the plans concerning it. The narrow street was a hindrance to traffic in the time of Charles II. The difficult street was tolerated, amidst many grumbings, until it became necessary to build a new Bridge at Westminster more than fifty years later. For the years 1754 and 1755 the sums of £2,000 were voted by Parliament (ten millions was then the cost of governing England) for the new Westminster Bridge, and in the following year an Act was passed for making the present Parliament Street. The improvement of King Street then dropped out of view. For a hundred years the subject slept, to be revived when other improvements were projected, viz., another new Bridge at Westminster, and better Government offices. A Parliamentary Committee was appointed in 1856 to consider the subject. When prizes had been awarded for the new Government offices designs, a controversy arose as to the style. A Gothic had been selected, but Lord Palmerston objected, obtained his way, and Classic was adopted. The new offices from Downing Street to Charles Street were built, and they brought about the beginning of the demolition of King Street. A long block of King Street stretched from the point where Charles Street cut it in two to the end of Downing Street. It was removed, and opened out the facade of the new offices, making a thoroughfare over a hundred feet in width. But the more ambitious plans for buying the block between King Street and the Park, Charles Street, and Great George Street, in order to put upon the site the new War Office and Admiralty were to undergo a very peculiar fate. They were nebulous at first; a Committee in 1874 gave them shape; it was then fixed that the Great George Street site should be adopted; and then the whole site was abandoned. Captain Galton, who was then at the Office of Works, prepared plans. In giving evidence to the Select Committee on Public Offices and Buildings, June 26th, 1877, he said:—"I always thought that it would be necessary to complete the approaches to the Houses of Parliament by the purchase of the block between King Street and Parliament Street, and that if the Government made that purchase, it was desirable to extend its purchase to some distance on the other side to the west of King Street, and to erect a handsome building of a palatial character in continuation of the present Home and Colonial Offices." The Committee of 1868 made another pregnant suggestion—the removal of St. Margaret's Church. They said:—"When a magnificent street 150ft. wide has been opened from Whitehall to Westminster Abbey and the new Palace, it will be more than ever necessary to remove what will then be the only obstacle to the Abbey forming the termination of a site which will probably be unsurpassed in any European capital." As long as the idea remained of building new offices along the line of the home Office, preparation was made for the work. Houses and properties in Parliament Street and King Street were bought by the Government. At the present moment the Government owns threefourths of the land and buildings required for the entire removal of the King Street block that remains. If there had been no change from the Great George Street site for War Office and Admiralty buildings to the Spring Gardens site, as much of the King Street block as lies east of a line drawn from the corner of the Home Offices to Parliament Square would have been scheduled for removal at the present time. In 1882, on the adoption of the Spring Gardens site, Mr. Shaw Lefevre, then Commissioner of Works, suggested to the Metropolitan Board of Works that the widening of Parliament Street should be done by them, the Government co-operating by taking out the value of its property by arbitration in new frontages. The Board was prepared to widen Parliament Street to the Home Office line, at an estimated cost of £200,000, "provided

the Government would consent to continue the coal dues." This the Government was unable to do, and so the scheme dropped. It was again revived in connection with the Parks Railway Bill of 1883-4. This railway was to afford direct access to Westminster by underground from Edgware Road and Praed Street Stations of the Metropolitan Railway, under Hyde Park, the Green Park, and St. James's Park to a station behind Parliament Street. After discussion the Metropolitan Railway Company agreed to "widen Parliament Street to a line with the Foreign Office, and to construct a new street, 50 ft. wide and 340 ft. long, in place of King Street," opening out from 35,000 to 40,000 square feet of land as public roads. A Committee sat upon the scheme and condemned it, amongst other reasons because it would be "necessarily burdened with conditions which the promoters had not contemplated," viz., the widening of Parliament Street. The last effort to get rid of the King Street block is interesting for many reasons. Section 4 of the Westminster (Parliament Street, &c.) Improvement Act, 1887, provided for the formation of a company to execute certain street alterations within two years, but no company could be formed, and so in 1892 another Act was passed modifying that Act and reviving the powers of a company. This company approached the London County Council, offering a site for a new County Hall, "on the west side of Parliament Street, between Great George Street and Charles Street." The Report of the County Council upon Sites, dated July 4th, 1893, sets forth that this site is recommended by them, and that the Westminster Company, by the Acts just mentioned, is compelled "to widen Parliament Street to the width of Whitehall, and the works must be accomplished by August, 1896." The County Council deferred the question of a County Hall, and the Westminster Company, after drafting a Bill to continue its powers last year, allowed it to be withdrawn. The exact nature of the position before the decision of the Government was stated by Mr. Shaw-Lefevre in his evidence before the Parks Railway Bill Committee, April 30th, 1884. There were other "more pressing improvements," it was "out of the question in these days for the Government to undertake that which is a Metropolitan improvement," and the block of traffic was not so great as to make widening "an absolute necessity." He added, "At the same time, from other points of view, as an approach to Westminster and Parliament and the Abbey, it is an extremely important one as a general improvement." It has at last been decided that the Government shall make the improvement, and we hope that London Architecture may thereby have its "grand chance." The opportunity must not be lost.

SCULPTURE: A COMPARISON.

THE ACADEMY.

THE average of merit in the Sculpture shown this year at the Academy is high, though the number of works exhibited is fewer than that of last year, and the Sculpture Gallery is so little crowded that wall space has been found for a couple of large pictures. A welcome symptom in this year's Exhibition is the representation in the Lecture Room of some of the Arts allied with Sculpture in the shape of some metal caskets, variously adorned, and other objects, or designs for them, in enamel and damascened steel, as well as a bust carved in wood and a head in ivory. The Academy is waking up to the fact that it is an Academy of the Arts—not of two or three privileged ones. "The Joy of Life," by Mr. Hamo Thornycroft—the life-sized figure of a girl dancing—is a daring feat; the thought is symbolic, the embodiment modern, the treatment almost classical. It is easy to see that in the execution of this figure the sculptor has avoided no difficulty, and in bringing his work to a successful issue he has won no cheap victory; the admirably poised figure is full of exuberant youth—of vigorous movement and of the self-display that comes of enthusiastic youthful self-delight. In "The Late Right Rev. Harvey Goodwin, Bishop of Carlisle—recumbent statue, bronze; to be placed in Carlisle Cathedral" Mr. Thornycroft is successful with a widely

different subject. It is treated in a fine, stately, and effective style, this recumbent figure of a Bishop with his mitre at his feet and his pillow supported by two charming little angels. The modelling is strong and grave, and the contrasted richness and simplicity of line in its general arrangement is Sculpturesque. "Echo," by Mr. E. Onslow Ford, is a very favourable example of this sculptor's handling; it has none of the unhappily imagined accessories that have sometimes, in former years, tended to obscure the merits of plastic work that is always earnest and artistic. The attitude of the slender-limbed naked figure of Echo is graceful and harmonious; there is little idealization in it. It is, from one point of view, simply and merely an admirable bronze study of a nude girl; but it is wrought with such a tender and delicate feeling for what is beautiful in un-idealized form that it thereby attains to a certain quality of ideality and remains a wholly admirable figure. In "For she sitteth on a seat in the high places of the city," Mr. Bertram Mackennal has made a stride in advance of his "Circe" of last year. In the expression of beauty as well as in richness of design he has equally developed. He represents the Foolish Woman of the Proverbs as an amply formed nude seated on a throne that is elaborately allegorical in its decoration and terminates at the back in the figure of a fiend. The whole composition is strong, thoughtful, and impressive.

THE CHAMPS DE MARS SALON.

EVERYONE is attracted by the wonderful Tomb by Bartholomé, which faces the entrance. A fine piece of harmonious originality such as this makes one wonder why the World tolerates the tedious sentimentality of the ordinary cemetery. The Tomb is a plain opening in a flat wall. The young man and his young wife, beautifully modelled, are entering, one at each side, as spirits strong and pure. Under the threshold are their earthly effigies, laid together in death; while above them rises, with a splendid hope, the Light that shineth in the darkness. Upon either side the composition is carried along by groups which indicate their relatives and friends—the old and young. Nothing could be simpler and nothing better. There is another notable Monument, designed by St. Marceaux, for the Tomb of M. Tirard. It is a figure of "Duty," similarly set simply against a flat wall and perfectly unpretentious; but its splendid strength of line and the tense energy of the pose are its distinction. In the Galleries can be seen one of those heads by Rodin, half embedded in its native stone, the subtle surfaces of which recall the best times of Florence; and there are also two excellent things by Dampé—one a wonderful baby head (recalling his "Baiser de l'Aieule," which has found its way to the Luxembourg), and another a daring but excellent statuette in wood and ivory. Nor should one pass over lightly the wonderful collection of objects of Decorative Art—things of household use, such as inkstands and teapots and brackets and pottery and binding—which are displayed in the Gallery of the Central Court. Nothing in modern French work is more laudable than the way in which their very best men lend their full energies to designing such things as these, which indeed can be bought for hardly more than our rich people pay for the gaudy and tasteless shop-goods which represent to the enriched iron-monger the acme of domestic splendour.

It is expected that Lord Brassey, the President, will take the chair at the summer meeting of the Institution of Naval Architects, which will be held this week in the Amphitheatre of the Sorbonne, Rue des Ecoles, Paris.

Out of thirty-eight applicants for the Assistant-mastership in the Linlithgow Academy, the Governors have appointed Mr. William B. Watson, M.A., of the Edinburgh University.

A CORRESPONDENT says that the latest find in the course of the excavations at Delphi is a large slab of marble, with bas-reliefs dating from the time of the Roman domination. The subject is the labours of Hercules, and the work is in an excellent state of preservation. Excavations are now being carried on upon the site of a Theatre which appears to have been destroyed by the hand of man.

THIRTY THOUSAND TONS OF SULPHURIC ACID PER YEAR.

THE PREVENTION OF BLACK SMOKE.

LIKE some other experts, Mr. Fletcher, the Chief Inspector of Alkali Works, considers that the ordinary coal smoke discharged by factory and house chimneys is far more deleterious to animal and vegetable life than the noxious gases which escape from chemical works. As an instance, he specifies the case of Widnes, where mill furnaces, and not the chemical manufactories, produce and distribute over the surrounding country no less than 30,000 tons of sulphuric acid every year. He is very positive as to the feasibility of entirely obviating this nuisance by the general use of good automatic stokers, a plan for which he claims the merit of greater economy in addition. This is the line which, he understands, will be taken by the long-delayed, but shortly forthcoming, report of the Committee appointed by an association of Manchester manufacturers to practically investigate the subject. It will "show abundantly that means now exist for preventing the discharge of black smoke without any sacrifice of economy." Meanwhile the Chief Inspector propounds a method by which that other offender—the domestic open fire, so dearly beloved by English people—may be deprived of its present powers of mischief. This is not the adoption of the stuffy Continental stove, nor any ingenious contrivance of draughts, but a plan whereby the fresh air is heated in a basement stove before being allowed to circulate through a dwelling. "If a copious stream of filtered fresh warm air be supplied from below into the centre of the house, it follows the passages, passes into all the rooms, and ultimately escapes by the chimneys and window crevices, thus quite preventing the draughts of cold air previously sucked into the house, and the most objectionable down-draughts of disused chimneys." Mr. Fletcher writes after long experience of the system. It might easily have been an improvement on open fire-places during last winter. "I lately heard of one house, inhabited by a large family, where recently, during a week of frosty weather, 21 open fires and five oil or gas stoves were kept burning. In this case, of course, each fire, though emitting a certain quantity of radiant heat, went far to neutralising this by the indraught of cold air necessarily drawn into the house to supply the currents sent up the open chimneys. There is no doubt that one of these 21 fires burnt in a properly arranged stove would have heated the whole house more effectually than did the whole 21. In a house, the general atmosphere of which is maintained at a temperature of 55 degrees or 60 degrees Fahrenheit by such a stove, the fires may be lighted, but they will receive little attention, and, except in the coldest weather, will not be used at all. In this manner I think the consumption of coal would be greatly diminished, and the smoke and smuts of our town air in large measure removed. Certainly the comfort of a house so warmed is much greater than one warmed only by open fires, and the coal bill is much less. In a London house, of which I speak from experience, the cost of coke or anthracite coal burnt in the stove which warmed the whole was only £3 during the winter, while in neighbouring houses of the same size the coal bill was not less than £25." This very important piece of practical information may perhaps suggest a means whereby sufferers from Corporation gas bills may indemnify themselves, to their own and the general advantage.

SAWDUST.

In our last issue we stated that Messrs. W. H. and J. D. Lever were building a Church, Schools, and Manse at Bolton, at a cost of £15,000. We are asked to state that Messrs. Lever Brothers are not erecting Schools, only a Church and Manse, the cost of which will be upwards of £22,000.

The Earl of Strafford will unveil the Williams Memorial Clock Tower in the Broadway, Crouch End, on Saturday, June 22nd. The Tower has been erected by subscription at a cost of £1,200, to commemorate Mr. Williams' 21 years' service to Hornsey.

THE Government has notified its acceptance of the site offered by the Sunderland Corporation for the erection of a General Post Office, and has agreed, it is said, to spend not less than £20,000 upon the new building.

IN connection with the new Infirmary at Burnley, the Local Government Board has sanctioned the borrowing by the Board of Guardians of £10,000.

RUSSIAN engineers are studying a route for a waterway to connect the White Sea with the Baltic. The total distance to be covered is about 180 miles. Part of the route is already navigable. It is estimated that a uniform depth of 30 feet can be obtained along the entire route at a cost of £1,200,000.

PLANS are required by the Newport (Mon.) Board of Guardians for the extension of the Workhouse. The cost will be between £7,000 and £8,000.

THE Swinton and Pendlebury Urban District Council proposes, with the consent of the ratepayers, taking over the Institute at Pendlebury as a public building. The Institution would provide accommodation for the Overseers, School Attendance Committee, Technical Classes, and a Public Meeting Room. The building is substantial, and has cost £4,500.

THE School Board has resolved to raise from the City Council £17,307 for the cost of the site and School buildings in Dennis Road, Birmingham.

THE Council of the Society of Engineers announce that it has succeeded in making arrangements with the Council of the Royal United Institution for holding the future Ordinary Meetings of the Society in the Lecture Theatre of the Institution, Whitehall.

THE old Infirmary at Dewsbury is to be altered by the Board of Guardians at a cost of £2,800.

At an estimated cost of £18,000, the Police Commissioners of Glasgow have decided to erect new Police Buildings in Allison Street, Strathbungo.

THE deep hole which M. Paschal Grousset proposes to dig as an unprecedented achievement for the Paris Exhibition of 1900, will not be a novelty after all as far as depth is concerned. M. Grousset talks of 1,500 metres. There is a mine in Belgium 1,100 metres, and two in Germany much deeper. One is at Sperenberg, 1,390 metres, and the other is at Schledobach, 1,910 metres. The Wheeling Mine in Virginia is 1,500 metres. Then, as regards distance from the surface of the earth, every time a passenger goes through the Mont Cenis Tunnel he is at one point 1,654 metres beneath the summit, and in the St. Gothard Tunnel he is still deeper, 1,706 metres.

ST. LEVAN Wesleyan Chapel is to be enlarged and redecorated at a cost of £208. Mr. Hodge, of Bosistow, has given land at the back of the existing building which with the land now in the hands of the Trustees, will enable the Chapel to be lengthened 12 feet.

IN the Memorial Porch which Lady Sherbrooke has erected at St. Margaret's, Westminster, there has now been placed a bust of the late Viscount, sculptured in Italian marble. On the pedestal is a Latin inscription from the pen of the late Earl of Selborne.

THE handsome Parish Church of Bunbury, Cheshire, which is said to date from the thirteenth century, was re-opened on Wednesday last, after undergoing complete renovation at a cost of between £2,000 and £3,000.

AN attempt to reach the North Pole in a balloon, for some time projected but hitherto a project very much in the clouds, will actually be made either this year or next. Mr. Andree, the Swedish aeronaut who conceived it, has obtained by public subscription the sum requisite for his equipment, estimated at 30,000 crowns.

THE new road and Esplanade at Hannaford West, Looe, is rapidly approaching completion, and is expected, together with the new western approach to the Bridge, to be ready for opening on July 3rd. The event is anticipated with much interest, marking, as it does, an era for the old towns of East and West Looe. The Marine Drive will be one of the finest on the coast, and the eligible building sites thrown open by it will commend themselves to those who appreciate the charms of the south coast of Cornwall.

ON Tuesday, the Bishop of Colchester, dedicated the Tower of the new Church of Mary Magdalene, Harlow. The Nave and Chancel were built previously, on the site of a temporarily-built Chapel-of-Ease to the Parish Church, and the building has just been completed by the addition of the Tower. The building is in the Perpendicular style, and the Tower is built of flint and brick, with bath-stone dressing, and has a shingled Spire. The cost of the whole edifice was about £2,500. The Church, as now completed, is capable of seating about 170 persons.

ANOTHER marked improvement at Westminster is the clearance of the buildings in Old Palace Yard, whose dangerous proximity to Westminster Abbey has long been a matter of public concern. With the exception of two of the buildings, the Crown leases fall in this year and are at the disposal of the Board of Works. The First Commissioner has succeeded in settling with the owner in the exceptional cases. The work of demolition will commence in the autumn.

THE Free Library Committee of the Leeds City Council is about to complete the purchase of Mr. J. W. Waterhouse's, R.A., picture, "The Lady of Shallot," for addition to the permanent collection of the City Art Gallery. The picture, which is now on view in the Gallery, was exhibited in last year's Royal Academy, and was catalogued at 700 guineas, but as Mr. Waterhouse's father was a Leeds man, and he himself was educated there, and also that he has expressed a wish that Leeds should possess a representative work by him, he is prepared to accept a considerable reduction.

PROFESSIONAL PARAGRAPHS.

At a meeting of the Liverpool City Council it was proposed and decided that a series of Panels be completed on the east side of St. George's Hall, at a cost not exceeding £3,000. The work will be spread over five or six years, the design and scheme being first submitted to the Council for approval.

THE Mosque at Woking, which was visited last week by the Shahzada, is Architecturally a beautiful place. The Screen behind the Pulpit shows Tunisian glass painting of sacred passages to perfection. On the carved Lectern to the right of the Pulpit rests a noble Koran in three large volumes—a royal but anonymous gift. Prayer-carpet and mats, suited to Sunni and Shiat worshippers respectively, cover the mosaic floor. In the adjoining room of the Imam of the Mosque there is a whole armoury of priestly weapons in the shape of pious mottoes, drawings of the Mecca shrines, Korans and Commentaries, and, as an Oratory, contains *facsimile* reproductions of a gateway and Mihrab from the Kaid Bay Mosque. The reservoir at which the worshippers wash their feet and hands is in a mosaic basin inside a crescent-shaped approach, screened from observation by a Karhonir gate closing two sides of a mound on and round which trees are planted instead of a railing.

THE beautiful Fresco painted over the Chancel Arch of the Artists' Parish Church, Mount's Bay, has been unveiled. The great picture follows the lines of the arch and angular roof, and is 42 feet high and 22 feet wide, covering in all about 300 feet superficial area. The subject, "Our Lord in Glory," is a striking one, and boldly treated by the Artist, Mr. G. Gregory Jones. Our Lord is represented standing on an orb, which is girded by the crown of thorns. He is holding the banner of victory with His left hand, and with His right hand giving blessing. A rainbow forms an arc overhead, and the nine choirs of angels, illuminated with rays of light, form a continuation of the halo around the Saviour's body. Lower in the Fresco are two full figures, the Cherubims with serpents, and further down on either side of the arch figures of Moses and St. Paul, representing the old and new dispensation. The walls on either side of the new oak Rood and Chancel Screen, are enriched with deep shades of orange red in cross-key patterns, whilst the massive granite Arch is divided from the Fresco by repeating patterns of *fleur de lis* in gold. There are in the Fresco 123 figures.

THE STATE OF KIRKSTALL ABBEY.

"RUDE REPAIRS."

BEFORE proceeding to patch the fragments of Kirkstall Abbey together, the Corporation of Leeds sought counsel from the Society of Antiquaries, and it was on the advice of that body, says a trenchant writer in a northern contemporary, whose views are clearly opposed to "ruthless restoration" but who is reconciled to the preservation of the remaining portions of the Abbey, that Mr. Micklethwaite, the Architect, and himself a member of the Society, was invited to undertake the duty. Mr. Micklethwaite's policy, judging it by such examples of his work as are already complete, appears to aim simply at the firmer establishment of those portions of the building which still remain above ground. He takes a shaky wall, and without attempting to reconstruct its parts, buttresses it where necessary in such a fashion that future generations will perceive at a glance that this was the original masonry, and that that was a mere buttress put up at the end of the nineteenth century to keep the wall from falling. In a number of instances, however, it has been found necessary to rebuild. Some of the arches in the Nave of the Church had lost the support of their original columns, and in order to preserve them the Architect was compelled to insert new shafts. His method of maintaining a distinction in such cases between the ancient and the modern workmanship is simple yet effective. The original pillars are round, whereas the new ones are merely blocked into a somewhat similar shape, but left unfinished. The difference, although only a difference in detail, is sufficiently self-explanatory. But Mr. Micklethwaite is not afraid of a startling contrast when he wants to make his meaning clear. For a daring example of his method one may take the treatment of the broken arch at the south-west angle of the Transept. Here the Architect has raised a new stone pillar which he carries to a great height, almost side by side with the original column, until it meets and supports the over-branching fragment of the arch. Nobody will every mistake this piece of work, considerable as it is, for anything but a gigantic prop. It is honest but incongruous, and at the sight of it the soul of the Philistine yearns for a compromise. There is perhaps only one notable instance of reconstruction pure and simple. Not long ago one of the minor beauties of the Church was the curiously ornate arch at the eastern extremity of the South Aisle, peculiar amidst its severe surroundings by the elaborate zig-zag decoration of the spandrels. When the Corporation took its present task in hand this part of the Aisle had just begun to give way. Pieces of the masonry were found lying on the ground. Fortunately none had been removed or destroyed, and accordingly they were replaced, without addition of any kind except the mortar by which they are held together. There are other examples of this kind of restoration, but none possibly quite so important or so grateful in its results.

Perhaps, however, it is too early yet to pass judgment upon the scheme. The work will not be completed till September. The only thing quite certain about it is that it will preserve for an indefinite stretch of time a relic in which the Ecclesiastical Architecture of successive periods between the twelfth and the sixteenth centuries is represented, and that in the meanwhile, and it may be for a long term of years, the purely pictorial — one might say the externally romantic — aspect of the ruins will be seriously marred. That is the price paid by us for a boon which posterity will enjoy. When, as a preliminary step, the ivy was forcibly divorced from the old stones to which it had clung for many generations, the act seemed almost fatal. But it was not to be avoided. Ivy will disintegrate stone and mortar as surely as it will caress the life out of a tree. One of the missions of the modern Archæologist is to go up and down the country stripping the loveliest bits of ivy from the most appropriate corners of interesting old buildings. At Kirkstall, it seems, we are to have an overgrowth of Virginia creepers to take the place of the banished evergreen. This may do something, for a season at any rate, to curve the sharp angles

and soften the crude patches which are now part of the form and colour of the Abbey. But we must look for our real consolation, apart from the practical one of the preservation of the ruins, to the new discoveries that have been made by the excavators. It is possible now to trace the whole plan of the great monastic pile which the first Abbot began to put together for the Cistercian Brotherhood more than seven hundred years ago. We know that they modified the appearance of the Cloister Court, still the most beautiful and, perhaps, the most complete part of the Monastery, by erecting a temporary roof on each side of it, so as to provide a sheltered walk in wet weather; and that in the cold season of the year they enhanced the comfort of this resort by screening a portion of it with curtains. The Guest-house, unearthed last year on the western side of the Abbey, is believed to be almost the only one remaining in England, and it will be guarded as a treasure. Other rediscovered relics are of a more portable character, and it is possible that the most interesting of them may ultimately be arranged under one roof.

PROFESSIONAL PARAGRAPHS.

MR. G. W. WILCOCKS, M.I.C.E., an inspector of the Local Government Board, has held an enquiry with reference to the application of the Carlisle Town Council for sanction to apply certain sums of money, amounting to £4,730, towards defraying a portion of the cost of the erection of the Art Gallery, Museum, and the buildings for the purpose of Art and Technical Instruction at Tullie House. The Surveyor, Mr. Howard-Smith, M.S.A., the Architect for the building, after giving evidence, conducted the inspector over the buildings.

At a sitting of the Consistory Court for the Diocese of Manchester, in the Derby Chapel of the Cathedral, before the Chancellor, a citation was decreed on the application of the Rev. Canon Jones, the rector of St. Mary's Church, Prestwich, and the Churchwardens, for a faculty to erect a new North Porch. The estimate of the Architects, Messrs. Austin & Paley, of Lancaster, is £200.

At the same Court, on the application of the Rev. Christopher Myers, Vicar of St. Bartholomew's, Bolton, and the Churchwardens, a citation was decreed for a faculty to complete the Church by the erection of a Tower in memory of the late Rev. Richard Loxham, of Great Lever. The cost of the work, amounting to £1,850, is being defrayed by the Rev. T. Loxham, of Great Lever.

For the erection of a Laundry at the Cross Deaf and Dumb School, Preston, the tender of Mr. J. Christian, builder, of Preston, has been accepted, at a sum of £1,335. The Architects are Messrs. Sames and Green, of Blackburn and Darwen.

THE Primitive Methodists, of New Shildon, Durham, are building new School buildings at a cost of £998. Mr. T. G. Henderson, is the builder, and Mr. J. W. Taylor, of Newcastle-on-Tyne, is the Architect.

MR. C. H. FOWLER, Architect, of Durham, has prepared plans for alterations to Snelston Church, near Norbury, Derby.

TENDERS are being advertised for new Hospital buildings at Rhyl, N. Wales, for the Royal Alexandra Hospital. The Architects are Messrs. A. Waterhouse, R.A., LL.D., and Son.

STRATHBUNGO Public School, which has been erected by the Govan Board, was recently opened by H. Shaw Stewart, M.P. Situated on a plot of 3,035 square yards, near Queen's Park Station, purchased from the patrons of Hutcheson's Hospital, the School is built in the Romanesque style of Architecture, is four storeys in height, and has accommodation for 1,438 pupils besides provisions for a Chemical Laboratory, Art Rooms, Laundry and Cooking Rooms, and Manual Instruction Workshops. The building measures 143 feet long by 76 feet broad. In the basement is a Swimming Bath 60 feet long by 17 feet wide. The cost of the building has been £17,166.

UPON the enlargement of Okehampton Workhouse it is proposed to expend £3,400. Detailed plans are to be sent to the Education Department for a new boys' School in East Street, Okehampton.

For the proposed new Workhouse for the Stockport Board of Guardians, Mr. W. H. Ward, Architect, has been instructed to prepare plans.

OUT of the twenty designs submitted for competition for the new Board School for Oaklands Mount, Harrogate, the following awards have been made:—First prize, £10 10s., Mr. T. A. Buttery, Architect, Queen Street, Morley; second prize, £6 6s., Mr. T. E. Marshall, Architect, James Street, Harrogate; third prize, £3 3s., Mr. George Bland, Architect, James Street, Harrogate. The estimated cost of the School on the above adjudication is respectively £3,147, £3,100, and £3,450.

AT Swansea the School Board recently held a meeting at which a report by Mr. E. R. Robson, Architect, on the proposed extension of Terrace Road School by underpinning was received. The report was considered satisfactory, and it was decided to proceed with the work. Contrary to the recommendation of the Building Committee the Board has decided to make the competition an open one.

BUILDING operations have been started on the new Wesleyan Chapel at Cross-in-Hand. The building will have seating accommodation for 150, with a Transept, holding 60, used as a School, and divided from the Chapel by sliding doors. It will be entered through a pretty Porch, built of half timber and red brick, there will be an open timber roof, and the pulpit is to be surmounted by a Gothic arch. The Architect is Mr. C. Bell, F.R.I.B.A., of Salter Hall Court, Cannon Street, London, and the builder Mr. Durrant, of Heathfield.

MR. JOHN SMITH, senior member of the firm of John Smith & Son, Architects, Shotley Bridge, near Consett, died on Sunday night week at the age of 75 years. He was a skilful artist, and designed many of the finest public and private buildings in North-west Durham. The deceased was for many years a member of the Renfieldside Local Board, and rendered valuable assistance as the Chairman of the Building and Sanitary Committee.

UPON the application of Mr. Delissa Joseph, F.R.I.B.A., the London County Council has given its consent to the formation of a new thoroughfare leading out of Crutchedfriars, to be called Rangoon Street. The street, which is the first street sanctioned in the City of London by the London County Council under the new London Building Act of 1894, cuts through the half-acre of land formerly occupied by the East and West India Dock Company's warehouses and recently sold by them.

THE Liverpool City Council has, upon the recommendation of the Library, Museum, and Arts and Technical Instruction Committee, decided to obtain competitive plans for the extension of the Museum buildings on the land bounded by William Brown Street, Byrom Street and Clayton Street, to be available in case such extension should at any time be determined upon, and to devote to this object out of the funds at their disposal a sum of not exceeding £200 to be given as a premium for the best designs.

PLANS were presented to the Town Improvement Committee of the Newcastle Corporation on Wednesday, for a large Theatre at Heaton for Mr. Weldon Watts, the lessee of the Queen's Theatre, Gateshead. We also understand that Mr. Watts has secured a very prominent site for a new Theatre in Gateshead. Mr. Hope is the Architect for both houses.

AN addition to the Yorkshire College, Leeds, erected at the expense of the Clothworkers' Company, London, was opened on Thursday afternoon by Mr. Sidney Wilson, the Master of the Company. It was stated that the Company had already expended £24,000 in building and equipment in connection with the Textile Department of the College, and had increased its annual subscription to £2,300.

IN connection with the building of the Flavel Memorial Congregational Church, Dartmouth, the Memorial Stone was laid on Thursday last by Mr. Seale Hayne, M.P. The Church, adjoining the New Ground, will consist of a Nave 58 ft. 6 in. long and 38 ft. wide, with recessed Organ Chamber, and will accommodate about 400 persons. The walls are being built of dressed limestone with buttresses, and the cost will be over £1,500. Mr. E. H. Back, Dartmouth, is the Architect, and the builder is Mr. Pillar, of the same town.

SOCIETY MEETINGS.

Glasgow Architectural Association.—Mr. Wm. J. Anderson, A.R.I.B.A., read a paper entitled, "The Early Development of the Christian Church," before Members of the Glasgow Architectural Association, last week. Mr. Anderson said that the history of early Church building was a subject of great importance in several aspects. To the Ecclesiologist it was of interest as the study of the earliest forms in which the Church was worthily realised, and it was his peculiar function to reconstruct its doctrines from its stones. To the Architect it was interesting in its evolution or gradual adaptation to its purpose, and as the chief link between classic and Mediæval Art. The former frequently attempted to construct the edifice on a pre-supposed symbolic basis, rejecting the aid of true Archæology, and deriving it from purely spiritual ideas; whilst the Architect found its prototype in the forms of surrounding buildings, the customs of the times and the habits of the race, under its necessity for provision for the wants of a new faith. The safest point of view was to reject symbolism in the plan and fabric of early buildings, and regard such purely as developments arising out of practical necessities. The art of planning or disposing buildings had at the time made great progress among the Romans, but one building was still the pattern of another to a greater extent than with moderns. It was rational to look for a model or models of the Church in the buildings which surrounded its inception. The lecturer proceeded to sketch the relation of the Church to society and public life during the early periods of its existence, and suggested the probable adaptation of a house on the Roman plan for the purpose of worship, and indicated the arrangement of the congregation. At times the waste places and catacombs were perhaps the chief meeting places of the persecuted sect. There the Christians had buried their dead, and had recourse to these hiding places for secret assembly and communion; probably these catacombs were held in veneration long after the necessity for using them had ended. Considering the other buildings with the forms of which the early Christians must have been familiar, the lecturer dealt with the possible influence of the Roman basilica or Law Court, and concluded that it was difficult to credit the theory that these buildings were ever used as Churches. Certainly this could not have happened till the time of Constantine, under whose reign the Christians emerged into the light of Imperial favour. Even then the Law Courts would be required for business purposes, and the only buildings which became useless were the Temples of the gods. It was a mistake to assume that there were no Christian Churches previous to the time of Constantine. There were frequent and long periods of toleration during the first three centuries, and there was every reason to believe that Churches were built and other buildings employed and adapted previous to the reign of Constantine, even in Rome itself. The lecturer was inclined to think that in such temporary abodes, a long process of adaptation to the forms of service must have been going on, which ultimately took form in the huge basilican Churches erected in Constantine's day. The key to the diversified types of plan, and perhaps in some measure to the general problem, was possibly the persevering continuance through everything of varying heathen superstitions and practices. The Arts of the Roman Empire came everywhere under the influence of the capital, yet Religion preserved its local colour and form. In order to understand the peculiarities of plan of the early Churches, it was necessary to have some idea of the customs of their services. The essayist described fully the service and the relative position of the four orders of catechumens or penitents to those in full communion. A description followed of the normal form of basilica Church, after Constantine.

Society of Engineers.—An ordinary meeting of this Society was held at the Royal United Service Institution, Whitehall, last evening. A paper was read on "Safety Appliances for Elevators" by Mr. Herbert W. Umney, of which the following is a synopsis: Pipe failures in Hydraulic lifts—Cause, effect,

prevention and remedy—Relief valves—Diaphragms—Formula for size of orifice—Ram grips—Break valve—Speed of falling lifts—Safety gear attached to cages of suspended lifts—Overhead and underneath spring gear—Stresses in wire ropes—Balance lever gear—Additional safety line governor gear—Inertia weight gear—Mathematical calculations—Compressed-air gear—Result of experiments—Relative efficiency of the different arrangements—Periodical testing of apparatus.

SAWDUST.

LORD FEVERSHAM has now completed the rebuilding of Duncombe House, which was destroyed by fire fifteen years ago. He has laid out £40,000 on the structure.

A COMPETITION among Italian artists has been set on foot for the execution of a reproduction in marble of the alto-relievo of the Lion of St. Mark with the Doge Gritti. This alto-relievo formerly ornamented the terrace above the piazzetta of the Ducal Palace in Venice. The winner of the competition will be given two years in which to complete the work, the price for it having to be decided by a Commission appointed by the Italian Minister of Public Instruction.

AN illuminated window, designed by Princess Louise (Marchioness of Lorne), has been erected at St. Anne's Church, Bagshot, in memory of the late Sir Howard Elphinstone, at the joint expense of the Queen, Princess Louise, and the Duke and Duchess of Connaught.

THE improvements which have been in progress in Lord Rosebery's house in Berkeley Square are nearly completed. The result will be to transform the sombre uniform frontage into a bright expanse of red brick, relieved by great bows and ornamental work, which will all harmonise very well with the red sandstone entrance. The house has been raised two storeys and a high modern roof put on.

THE Gloucester City Council has accepted the tender for iron pipes sent in by Messrs. Cochrane and Co., at £10,373. It has also decided to apply to the Local Government Board for sanction to borrow a sum not exceeding £5,000, for erecting a proposed sanitary depot and stabling, and a sum not exceeding £3,000, for works of street improvement, sewerage, and water supply.

ON Tuesday last, the Memorial Stone of the large and commodious Liberal Club premises which are being erected at Yeovil, was laid. The building will contain a roomy Entrance Hall, suitable Committee Rooms, a Billiard Room, Reading Room, and Library and Assembly Hall, the total cost being about £2,000.

MR. DANIEL WATNEY, the new President of the Surveyors' Institute, was one of the original members of the powerful Great George Street organisation. He is surveyor to the Mercers' Company, the Gresham Committee, and the Land Surveyors' Club, and a valuer to the Board of Trade. As a practical authority on the value of real property compulsorily acquired he stands in the front rank.

"RIVERSIDE STATION," is the name decided upon by the Dock Board for the new Station at Liverpool, which does not appear to quite give satisfaction to the Liverpoolians who would much prefer the high sounding title of "The Atlantic Railway Station," a name which they say expresses so well the main idea in the construction of the new line.

MR. B. P. BARNATO, of mining market fame, is the purchaser of No. 7, Great Stanhope Street, which adjoins the town residence of Baron Alfred de Rothschild. It is Mr. Barnato's intention to have the site cleared and a Mansion erected for his own occupation.

THE Committee of the Royal Ear Hospital, Frith Street, Soho Square, is appealing for funds to erect a new building. It is intended that the new building should include suitable accommodation and appliances for a School of Otology. The cost of erecting and fitting a suitable building is estimated at £20,000.

THE longest telephone-wire span in the World has just been completed. It is stretched across Lake Valen in Switzerland, connecting the town of Quinten, near Leistmann, with Murg. The total length measures about 80,000 ft.

ON Wednesday last, the anniversary of the Battle of Magenta, was performed the ceremony of unveiling the Monument erected to the memory of the late Marshal MacMahon. The Monument, which is the work of the Sculptor Secchi, has been erected by public subscription.

ACCORDING to the St. Petersburg *Novoye Vremya*, the Tsar has approved of the opening of a subscription throughout Russia for the erection of a Monument to the great French chemist Lavoisier.

THE first portion of the new Church for East Aldington, now being built, is nearing completion, the roof being in hand. The amount already spent for the part constructed is £5,000.

AN important scheme of College Extension will be considered by the Primitive Methodist Conference at Edinburgh. Two alternative schemes have been under the consideration of the College Committee, one providing for 20 additional students and a basement Kitchen, to cost £6,400; and the other providing for the same number of students, with new Library and Kitchen on ground floor, to cost £7,100, and the latter scheme has been recommended to the Conference for adoption.

THE Memorial Stone of a new Wesleyan Mission Hall, in Holderness Road, Hull, has been laid by Mr. Clarence Smith, M.P. The building is to accommodate 250 persons and will cost £1,110.

THE Colne Urban District Council, in response to an express wish from ratepayers and farmers, has decided to erect a new Cattle Market on a site of ground in Dockray Street, and application is about to be made to the Local Government Board for sanction to borrow £7,000 for that purpose. Colne has one of the oldest Cattle Markets in the land.

COLONEL W. M. DUCAT, R.E., held an inquiry at Newcastle-under-Lyne, for the Local Government Board, at the Town Hall, concerning the sanction to a fresh loan of £2,500, for the carrying out of the following public improvements which have recently been decided upon by the Corporation. The purchase of the Barley Mow Inn, Lower Street, for the purpose of widening a narrow and much frequented thoroughfare; a new Bridge over the Lyme Brook, at the bottom of Clayton Road; the conversion of the old School of Art premises for the purpose of giving more accommodation to the Fire Brigade; new hydrants, street improvements, and sewer extensions.

THE Prince of Wales has consented to become patron of the proposed Institute for Soldiers and Sailors to be built at Norwich.

AT the annual meeting of the Shipbuilding and Engineering Federation, held in the City Hall, Glasgow, on May 29th, it was resolved to take a vote of the whole of the societies comprising the Federation as to the propriety of admitting unskilled workmen's trade unions into the Federation. A resolution was also passed condemning the Government for persisting in giving work to and retaining upon the list of the Admiralty those firms in the London district who refused to pay their workmen the standard rate of wages.

THE whole of the loan of £9,500 borrowed in 1866 for the building of the Town Hall, Court-house, and Shambles, Retford, has been paid off. The last instalment was not due until 1896, but the Council has been able to pay all off, including an additional £500 borrowed on the Court-house.

THE financial statement of the various items of expenditure in connection with the erection of Colne Town Hall shows that the erection (exclusive of the site) has cost £10,297 8s. 10d. The clock and chimes cost £535 5s., making a total outlay of £10,832 13s. 10d. on the building. £12,000 was generally considered to be the outside cost.

AN ample number of guarantors have now been secured for the scheme of erecting a new Conservative Club in Market Street, Colne, at an estimated cost of £4,000. Accommodation will be provided for three billiard tables, Reading and Conversation Rooms, and Smoke Room, as well as a Lecture Hall. The excavating works have just been commenced, and the whole of the works will be carried out in a substantial manner.

The Builders' Journal
COMPETITIONS.

No. 3.—Swimming Baths.

Mr. John Johnson has kindly undertaken the task of adjudicating upon the designs in this Competition, and his award will be announced in due course.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

ANNOUNCEMENTS.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.
All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Publishing.

Editorial and Publishing Offices:

Talbot House, Arundel Street,
Strand, W.C.

A SITE has been purchased at Swindon on which to erect a Presbyterian Church to seat 600 person at a cost of £5,000.
The ancient Parish Church of Bunbury was re-opened on Wednesday last after being restored and provided with a new organ, at a cost of close upon £3,000. The Church, which is one of the most interesting buildings of its kind in Cheshire, from an Archæological point of view, was built in the reign of Edward III., on the foundation of a Norman Church. Mr. R. Brocklebank gave £1,000 towards the present restoration, and the Duke of Westminster and Lord Tollemache each £100, while the choir stalls were the gift of Mr. Hugh Aldersey, of Aldersey Hall.

Trade and Commerce.

We shall be glad to receive copies of catalogues from firms engaged in the allied building trades. These will be carefully looked through, any novelty noted, and—should its nature seem to demand it—fuller attention drawn thereto. We are particularly wishful to secure the friendly interest of designers and artificers in THE BUILDERS' JOURNAL, and, now and then, we might see our way to reproduce an outline sketch or illustration of any contrivance that struck us as being new or needed. Building covers up—figuratively, and in fact—so much ground, and we mean to cover the whole of it.
We should be further obliged if firms would indicate, by some suitable mark, the pages in their catalogues to which they would, in particular, desire to call our attention.

The Building Trades Crisis. Workmen's Manifesto.—An important development is pending in the crisis in the London building trades. The workmen, who have hitherto assumed the defensive, for the preservation of the 1892 agreement, now threaten to take the aggressive if an early settlement is not effected. In a manifesto which the London Building Trades' Federation has issued to the Union, the Executive declare that: "On the question of sub-letting, and the 'no disability' clause which the employers wish to insert, the attitude of the workmen remains what it has always been, and the probability of their departure gets more remote as time advances. So long as these demands are kept to the front by the employers, so long will the way be barred to a settlement." The manifesto then proceeds: "Only a formal acknowledgment has been received from the master builders in response to the workmen's communication (rejecting arbitration, and asking employers to resign the 1892 agreement), and no knowledge of their intentions can be gleaned. This suspense can only end unprofitably to those responsible. If, during the ensuing summer, the workmen are to be deprived of a code of rules through the employers' stubborn insistence on the conditions they seek to impose, then it will remain for the workers to consider whether they are to be compensated for the annoyance and disturbance which has been brought about. In the absence of such rules there will be nothing to prevent the trades from making efforts to remodel the terms of 1892 on their own basis, and in ceasing to be content with the conditions which that agreement brought into existence, and with which, up to the present, they have declared themselves satisfied."

The Public and Caergwrle Castle.—A case in which great interest was taken in Flintshire, came before the Caergwrle Justices on Thursday last. It affected the public right to use Caergwrle Castle and grounds of which Lord Derby is the freeholder, and Mr. Eccleston, a local publican, the tenant. The castle and grounds are a favourite resort for excursion parties, and Mr. Eccleston has laid out a portion of the hill for dancing, the green being enclosed by fencing. Parties resorting to the castle ruins have paid Mr. Eccleston a nominal fee for the privilege, but of late the public thought their rights were being encroached upon, and numbers of boys played football on the enclosed green and damaged the fences. Five boys were accordingly summoned yesterday, Mr. Eccleston stating that he brought them there to try his title. Evidence was given by some of the oldest inhabitants as to uninterrupted user by the public of the castle and grounds. The magistrates, however, found that some damage had been committed, and fined each defendant 6d. and 4s. 6d. costs. They expressed no opinion as to public right. A special case was asked for, and it will probably be argued in the Court of Queen's Bench.

Jellis's Tables.—Mr. R. J. Bush, the publisher of 92, Fleet Street, sends us Mr. John Jellis's tables for cubing timber. A glance at this little indexed booklet shows the Surveyor the cubic capacity of his logs. A very handy and useful little thing.

Building Society Mortgages.—Mr. Fred. Wetherfield, Solicitor of 1, Gresham Buildings, City, writing in a contemporary, says:—"The wonderful ways of building societies do not usually come out into the light of day until these concerns are in liquidation; but when this happens we see some strange things. A recent case, affecting the well-known Portsea Island Building Society (*Times*, May 21), is an example of the way rules are worded in order that money may be raised somehow or other. It appeared that this society had already exceeded its borrowing powers when, being short of funds, it wished to get a loan from the Imperial Life Assurance Co., and so a plan was hit upon by which the matter might be managed. A man named House had borrowed £17,000 of the society on the security of some property. It was now arranged that House should borrow £6,000 of the insurance company, on the security of the property mortgaged to the society, which would join in the new mortgage, on the understanding that this £6,000 would be paid over to it, the society consenting to let its claim for the balance of £11,000 be postponed. This was done; the society got the £6,000, out of which it paid all expenses. The deeds, &c., were handed over to the insurance company, which thus became first mortgagee, while the building society, of course, took the position of second mortgagee for its £11,000 due from House. All would doubtless have been well; but, unluckily, the society went into liquidation, and now the liquidator, acting for the creditors, came to the Court and asked that the whole transaction should be declared void, as being *ultra vires*, and against the rules of the society itself. It was, of course, a rule with this society, as with all others, that no money should be advanced upon the security of a second mortgage, and although this ingenious arrangement tried to hide this fact as far as possible, it is obvious that all the building society had left for its £11,000 was a second mortgage coming after the first mortgage to the insurance company for £6,000. The Court of Appeal affirmed the judgment of Mr. Justice Romer, declaring the transaction *ultra vires*. Nor would they allow the insurance company to stand as creditor of the society, because it had in form lent its money to House. If the Court had held otherwise, it would practically have enabled a building society both to exceed its borrowing powers and to lend money on second mortgage. The case may seem a hard one, for the insurance company loses its money; but, on the other hand, all the parties knew very well what was the real nature of the arrangement, although they left out of account the liquidation which followed, and which has upset the whole thing."

SAWDUST.

A MONUMENT to M. Carnot is to be erected in Limoges, his native city. The inhabitants have subscribed 45,000f. towards the Memorial, and a competition with respect to the plan will be thrown open to French sculptors. The bronze has been furnished by Limoges, and it is stipulated that the work must be ready by March 15th, 1896.

A NEW and interesting Egyptian Tablet has just been placed on exhibition in the Sculpture Gallery of the British Museum. The new arrival measures 3 ft. 10 in. in length by 2 ft. 1½ in. in height. At one end are the names and titles of Usertesen III., B.C. 2,300, together with his Ka, or banner-name, viz., *Heru Ankh Mestu*. These inscriptions are curiously engraved in high relief, and divided by a kind of canopy or tent.

A GREAT International Prize Competition and Summer Photographic Exhibition will be held from June 29th to July 6th next at the Agricultural Hall, Islington. There will be two distinct competitions—one under the Conference Rules, with Messrs. Hinton, Lambert, and Robinson as judges, in which the classes are as follows:—Landscape, Sea-scape, Hand Camera Work, Animal Study, Architecture, Scientific Work, Process Work, and Snap-Shot. Gold, Silver, and Bronze Medals are offered in Classes 1 to 4, and Silver and Bronze Medals in Classes 5 to 12.

THE members of the Mekran Mission have come across a collection of strange tombs on their march. The Mausoleums were nine in number, each of them a two-storeyed building surmounted by a dome. A Philistine pickaxe applied to the wall could make no impression; but an opening sealed up with mud was discovered, and the loosing of the seal of the upper storey revealed numerous skeletons clad in bright-coloured garments. In the lower storeys loose bones were stored with less concern, and some of them were of considerable size, "evidently those of a race of giants."

ON Nalachucky River, in the United States, there is one of the most peculiar of stone formations existing. It is known by the name of the "Devil's Looking Glass," a name which gives rise to a curious reflection, to wit the frequency with which stone formations, as in our own country, for instance, are prefixed by the common term for his Satanic majesty. The "looking-glass" in question is a palisade, which rises abruptly from the river to a height of about 200 feet. It is perfectly smooth, and about 100 feet wide. When the sun is at a certain stage it throws a shadow over the water, and reflects the sunbeams as a mirror would, dazzling the eyes of the beholder, sometimes almost blinding him with its brightness.

A REPORT of Messrs. Bramwell and Harris, engineers, respecting the sewage of Derby will be presented at a meeting of the Town Council to-morrow. It is proposed to erect a Sewage Pumping Station at Litchurch, at a cost of about £20,000. The sewage will be turned into a series of underground tanks, and will then undergo a chemical process of purification, and after being pumped to a higher level the effluent will be filtered into the river Derwent, close to Borrowash Mills. The cost of the whole scheme is estimated at about £82,000, and the annual cost of working will amount to about £7,500.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

ABERDEEN (N.B.)—For widening the Bridge over the river Bogie, at Huntly. Mr. J. Barron, C.E., 166, Union-street, Aberdeen:—

CONTRACTS OPEN. BOROUGH of SHOREDITCH.

TOWN HALL.
TO PAINTERS, DECORATORS, &c.
The Vestry of the Parish of St. Leonard, Shoreditch, invite TENDERS for PAINTING and DECORATING the INTERIOR and EXTERIOR of the TOWN HALL, Old-street, E.C., including the Large Hall, Staircases, Council Chamber, Vestibule, Committee Rooms, Offices, &c.

A copy of the specification and form of Tender may be obtained upon application at the office of Mr. T. RIDYARD ROSCOE, Surveyor to the Vestry, Town Hall, Old-street, E.C., between the hours of TEN and TWELVE a.m. accompanied by the payment of a deposit of £10 which will be returned after the Contract has been decided upon in the case of a bona-fide Tender having been received.

The person or firm whose Tender is accepted will be required to enter into a bond with two approved sureties in the sum of £100 each and to pay the workmen employed by him on the work such rates of wages and observe such hours of labour as are recognised by the trade unions.

Sealed tenders filled up on the official form and endorsed "Tender for painting, decorating, &c.," to be delivered at my office, not later than FOUR p.m. on MONDAY, JUNE 17th, 1895.

The Vestry do not bind themselves to accept the lowest or any Tender.

By order, H. MANSFIELD ROBINSON,
Solicitor and Vestry Clerk.

"Craftsmen." AN important, and a somewhat startling announcement is published in the last edition of the *Institute Journal*. It is nothing less than that a Special General Meeting will be held at the conclusion of the Ordinary General Meeting on Monday next, "To receive and consider a recommendation of the Council to establish under the provisions of the Charter a CLASS OF SUBSCRIBING MEMBERS to be called 'CRAFTSMEN,' and to make and adopt by-laws which shall define, regulate, and prescribe the conditions of membership and the mode of election and admission, and the privileges, obligations, and benefits of, and the payments to be made by the proposed new class." The most important clause of the by-laws, which the Council have prepared for recommendation to the meeting, is on the definition of a Craftsman. "Craftsmen shall be persons not professionally engaged in practice as Architects, who are working at any of the crafts connected with Architecture, and who have designed or executed such work or works as shall, in the opinion of the Council, promote the interests of Art." Never has the Royal Institute of British Architects done anything nobler than this attempt, tardy though it be, to recognise the affinity of the Craftsmen to what, in a concrete form, is known as Architecture. It is the breaking down of a barrier which was surreptitiously erected at a time when Art became debased and divorced from the affections of her foster brother, but every lover of the true and the beautiful, every earnest worker in what we ourselves have designated the "Glorious Art of Building" should join in this splendid proposal of the Institute, and carry it with unhesitating approval. It comes, this innovation, at a desperate moment in the history of Conduit Street. Is it just that the BUILDERS' JOURNAL should lay claim to a little of the propelling influence? We think it is. But whoever has propelled, and whose ever is the honour, the inactivity of the various successive Councils of the Institute was becoming a matter of the most momentous

character. It has come to an end. We now discover possibilities which we knew right well existed, but could not see. It would be ungenerous if we marred our approval of this measure by commenting upon what we hear was the chief motive of this advancement. It has been told us, and by men high in the Profession, that without the examination fees the Institute would almost go the wall. We do not believe it; neither do we believe that financial considerations have at all prompted this grand and startling admission of Craftsmen to the honours of connection with the Institute. It is only those who get about and hear, not at

ture worthy its greatest ambitions. There must be no failure now.

The New Council of the Institute.

The new constitution of the Institute Council and Committees, and the announcement, treated elsewhere, overshadows all else this week, unless it be that the festivities of the Association dinner come as a gallant relief to the density of Professional existence. What we had to say upon these elections may now remain unsaid, for the present, in face of the announcement that may change the whole aspect of affairs. At any rate, the new constitution must be given ample time to develop its intentions, if it has any, in advance of what has been accomplished. Mr. F. C. Penrose again becomes President—it would have been a hard task to have found a successor. It will be harder still next year unless our suggestion of a lengthened Presidency be entertained, which will sooner or later become an absolute necessity. In Mr. Aston Webb—the top of the Vice-Presidential poll—we have one of the most conscientious men in the Profession, whilst in Mr. James Brooks, the Gold Medalist, Mr. Ernest George, and Mr. Alexander Graham almost every phase of Architecture is represented in the same degree. That Mr. E. W. Mountford remains on the Council will give pleasure to many. In Mr. Paul Waterhouse, who evidently represents his father, to whom the Institute owes so much; in Mr. A. E. Street, one of the brightest of the younger School; and in Mr. Caroe, the new President of the Association and Architect to the Ecclesiastical Commissioners, we have three polished men of the World who bring University influences to bear upon the Council, even if their Architectural experience has had no startling development. Several other members of the Council, holding prescriptive rights in perpetuity to their positions, have but the thinnest connection with the modern practice of Architecture, but then they may be good men of business, clever and tactful and far seeing in their methods, able to bring

SOUTH AISLE, HENRY VII. CHAPEL AT WESTMINSTER: DRAWN BY F. T. W. GOLDSMITH.

key-holes forsooth, the murmurings of the winds of discord that have wrecked other Arts and other enterprises, who can honestly judge of matters which concern so deeply and so irrevocably the social prestige of the Architectural Profession. Some men brook no fear, nor see danger when it comes. We can affect the same fearlessness when it is wise, but there was danger lurking at the very doors of the Institute, which we trust has now been sent to the right about by the evidence of this action of its Council. But the admission of Craftsmen is only the foundation of improvement. It was the foundation that we wanted, and now we have got it, the Council should erect a superstruc-

Attention is directed to Several Important Announcements on Page 296.

experience to ballast the lighter but swifter craft that sail with them. We do not think that the Council's constitution is hopeful to the plaintive wail of Mr. Beresford Pite, that the Institute might do something to further the interests of Architecture as an Art. But, with this distinguished young Architect, we hope that renewed health and increased vigour may induce some artistic influence to bear upon its freshened existence. There is much it can do, and it should be up and doing.

The "Destruction" of Edinburgh.

CURIOSLY enough, while we have been dealing, in our current number, with the work of Mr. William Young, incidentally mentioning the Earl of Wemyss, that redoubtable Earl has been sounding a bugle blast in the columns of our Edinburgh contemporaries, and quoting the authority of Mr. William Young. Lord Wemyss has been aroused; Mr. Young aroused him and now he is endeavouring to arouse Edinburgh and to discover a Conscience and a love of Proportion in the hearts of Railway Directors. "Edinburgh," cries Mr. Young, "is about to be destroyed," and the Earl is losing no time in shouting this from the housetops. By the way, the ordinary housetops will no longer be of much avail if this monster hotel—which is the bone of conflict—for the North British Railway Company be allowed to dwarf the famous Carlton Hill and "destroy" the Modern Athens. Lord Wemyss, we are afraid, is a little late in the day. It is the age, unhappily, of Leviathan Hotels. "Views," "perspectives," "vistas"—all the happy things, the loss of which Lord Wemyss bemoans—must break or bow down before the caravansary and the corn elevator. In the soul of the North British there is no sentiment; and Lord Tweeddale spoke of "sanction" and "control," and the usual "safeguards." It is a pity Mr. Young's powerful note of criticism and of warning was not sounded earlier. We can hardly believe that the good people of Edinburgh, who love their city—a city which in a sense resembles the goose that lays the golden eggs—will allow it to be "destroyed." Even the North British is sufficiently interested in Edinburgh to prevent that. We are afraid that the hotel will soon look scornfully down on the doughty Earl, if by virtue of its sheer height alone. Dare we hope that that height will be mingled with a little dignity? The elevations we have seen convey a fretful and somewhat restless impression.

NEGOTIATIONS are practically completed for the acquisition of a site for the erection of a Sunday School and Lecture Hall in connection with the Lewes Congregationalists. The Tabernacle is a spacious building between the Goods Station and the river Bridge, and it is contemplated to acquire a portion of the works of the old Etna Foundry, in rear of the Chapel, and on this a commodious and useful block of buildings will be erected.

THE proposal of the Police Commissioners of Prestonpans, to accept a free site and about £900 from the Literary Institute Committee, for the erection of a Public Hall having been challenged by a petition signed by eleven householders, a test ballot was taken. Fifty voted for the erection of the Hall and 38 against. The Hall will seat about 600, and the cost is estimated at about £1,390.

THE United Operative Plumbers' Association of Great Britain and Ireland, recently held a special meeting at the Daulby Hall, Daulby Street, Liverpool, with reference to the plumbers' registration movement. Delegates were present, sent by operative plumbers' Societies from all parts of the kingdom. The following resolution was carried unanimously: "That this meeting of delegates of the United Operative Plumbers' Association of Great Britain and Ireland is agreed that the scheme of registration of qualified Plumbers is worthy of the support of plumbers, and instructs the Executive Committee to support and extend the scheme."

FUNDS are being raised to repair the Church of St. George-the-Martyr, Southwark. The cost is estimated at £3,000.

THE NORMAN CHAPTER HOUSE AT DURHAM.

RESTORATION AND RE-OPENING.

THE Chapter House of Durham Cathedral, restored as the final and the more important part of the Public Memorial to the late Bishop Lightfoot, was opened on Thursday last. The work, which has been of an extensive character, has occupied several years in completion, and its progress has been watched with considerable interest; whilst, though opinions, especially amongst archaeologists, may be divided as to the fidelity with which the ancient building has been copied in the restoration, they will agree that the work is one most appropriate in its fitness to the memory it is intended to perpetuate. It is not certain by whom the original Chapter House was built, but most authorities agree in giving Bishop Rufus as its founder about the middle of the twelfth century. It seems at least certain that it was completed under his regime, though said to have been subsequently vaulted and embellished by Bishop Skirlaw, and that it was agreed to be one of the finest specimens of Norman Architecture in the Kingdom. According to some authorities it was without a rival. It was of spacious dimensions, and measured from 75 to 80 feet in length, and about 35 in breadth, with an apsidal termination at the east end. It was built in the form of a theatre, vaulted with stone, without any pillars, the side walls being ornamented with pilasters and intersecting arches. It was lighted with five windows at the semi-circular east end, with two side lights and a window to the west. The vaulting over the Apse was singularly beautiful and cleverly done. The groins of the vault sprang from corbels supported by human figures in the manner Atlas is usually represented, the mouldings of the ribs being cut with a zig-zag figure. Below this, an arcade of semi-circular headed and intersecting arches ran round the building, except at the west end. Three rows of stone benches, one above the other, ran round the building, and on the top-most of these the monks sat whilst in chapter. In the centre of the east wall was a stone chair, with much carved work, which was the Bishop's seat when he "visited" the Cathedral, and wherein the bishop's of the see have been installed from the earliest times up to the installation of Bishop Barrington in 1791. Close to this seat was a wooden chair, fastened to the wall, and used formerly by the priors and subsequently by the deans when the bishops held their visitations at the Cathedral. The doorway was at the west end and opened into the Cloisters. On the inside, according to Dr. Greenwell's pamphlet on Durham Cathedral, "it remains tolerably complete but somewhat defaced by incorrect restorations in plaster. It is richly moulded and decorated with patterns characteristic of the early part of the twelfth century." The Chapter House was not only the place of installation for the bishops, it was very frequently their place of sepulture, and the floor was at one time covered with the monumental slabs of some of the most famous occupants of the see. To the south of the Chapter House was a Prison for recalcitrant monks, and at the east end of the Chapter House was a yard called the centry garth where the priors and monks were buried. The Chapter House remained in such condition until 1795. It is recorded that on November 20th of that year, at a meeting of the Dean and Chapter, it was ordered that the Chapter House being pronounced by Mr. Wyatt to be in a ruinous state be taken down, and that a new room be erected on the same site. Fortunately, correct plans of the building were in existence, having been executed by John Carter, an Architectural draughtsman, and from these a perfect idea can be obtained as to the appearance of the Old Chapter House. In 1796, the Chapter House was almost entirely demolished, and the general reason given by archaeologists for this proceeding is that the then Chapter desired a more comfortable room in which to transact their business. Be that as it may, the handsome east end, with its moulding, was pulled down and the room was much shortened by the erection of a lath and plaster wall with

three large windows. In this condition it remained almost a century, and doubtless would have gone on so, but for the decision of the Lightfoot Memorial Committee, under whose directions it has been restored to its former size and appearance. The present Chapter House is on the site of, and of the dimensions of, the Norman Chapter House erected in the twelfth century. To restore it to its original condition, as has been done, everything had to be new except the western portion of the walls. As restored, the Chapter House is an oblong room with a semi-circular Apse at the east end, the length, including the Apse, being 77 feet, the breadth 36 feet, and the height, to the crown of the vaulting, 44 feet. The building opens into the Cloisters by a great archway in the centre of the west end, which was open during the whole Monastic period, but after the dissolution of the Monastery and the consequent alteration in the use of the Chapter House, doors were hung in it. The crooks belonging to these doors were found, and have been used to hang the new carved oak doors on. On each side of this archway is a window opening, which would also have been open during the Monastic period, but would be closed at the dissolution. Above these openings is a large west window of five lights of the late Decorated period; and, besides this, the building is lighted with seven new windows of Norman character, enriched with zigzag ornament, running round the Apse and the adjacent walls. A stone bench and two steps run round the building, where remains found "in situ" showed them to have been; and the lower part of the wall is ornamented by an interlacing arcade and strings above and below it. The stone vaulted roof is carried on corbels that have been carved in imitation of the old ones, saved from the destruction of 1796, and preserved in the Chapter Library. Above the stone vaulting is a substantial timber roof of low pitch, covered with lead. The clearing away of the thick bed of rubbish, with the sleeper walls built in 1796, that so long had covered the floor of the western part of the building, has brought to light several very interesting grave slabs of the early bishops, and the removal of a portion of foundation wall, when the building was entirely completed, most fortunately brought to light the greater part of the ancient stone chair of the bishops, which, after lying buried for a period of close on 100 years, will now again be used for its original purpose. The building is heated by one of Grundy's patent hot air apparatus. The works have been from the designs and under the superintendence of Mr. C. Hodgson Fowler, F.S.A., Cathedral Architect. The total cost of the restoration of the Chapter House has been £5,537, and this, added to £1,473, the cost of the handsome marble Cenotaph erected in the Choir of the Cathedral, and unveiled in October 1892, brings up the total expenditure in connection with the Memorial to £7,011.

THE pinnacles of Greyfriars' Church Steeple, Dumfries, which were susceptible to injury by storm, are to be removed, and the positions they occupy are being finished off according to a plan prepared by the Burgh Surveyor. The Architect of the Church, having written suggesting a different mode of finishing off the vacant places, the Town Council decided, on the recommendation of a committee, not to interfere, the work having been let.

NEW Municipal Buildings which have been erected at Bath, at an outlay of £32,000, and form the South Wing of the Guildhall, a similar Wing on the north being devoted to Technical Schools, were opened on Wednesday last, when the Town Council took possession of its spacious new Chamber. This has a beautifully moulded ceiling, springing from marble pillars. In addition to the Council Chamber the Wing contains handsome offices for the various public officials, a new Court and necessary rooms, &c.

THE proposed new Bridge over the Medway, between Rochester and Snodland, will probably cross the river between Woudham and Halling. The Bridge will be a high level one, with approaches rising from each shore, and will cross the river in one span. The plans show a handsome Bridge, built on the cantilever principle, and the cost is estimated at £28,925.

TALBOT HOUSE, ARUNDEL STREET,
June 18th, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

THE new Municipal Buildings at Bath, of which Mr. J. M. Brydon is the Architect, were opened on Tuesday last. The feature of the new buildings, which form the South Wing of the Guildhall, is a handsome Council Chamber, which in proportion, decoration and fitting, is a great contrast to the old chamber in the Guildhall. A new Sessions Court is another feature, and a third is a Mayor's Parlour. There are numerous rooms for officials, committees, and persons having business at the sessions, many of whom were totally unprovided for in the Guildhall. The electric light is used throughout. The total cost will be about £32,000. A part of the scheme is the erection of Technical Schools in harmony with the present style of Architecture, to form the North Wing of the Guildhall, but this is yet far from completion.

HAND-WROUGHT silver is deservedly popular among those who can distinguish its merits from the insipidity of machine work. The individual characteristics of the artist and of the workman find ready expression in decorating the metal in line and in relief. Mr. Gilbert Marks (a relative of Fred. Walker and of Stacy Marks), as a trained artist, has done well to bring together a small number of silver plates, dishes, and vases worked from his designs, and often by his hand; and his work is now on view in London. There is no imitation of old patterns, no copying of Renaissance work. The artist chooses his designs, mostly floral in form, and works them partly from the reverse and partly from the front on hammered grounds, the natural colour of the silver being wisely allowed to speak for itself. The pattern traced is slight, and the least possible amount of decoration is used to relieve the plain hammered surface. The relief or *repoussé* work is usually from the flowers of an herbaceous garden, anemones or fritillaries; only one piece approached to a geometric pattern, the instance in question being one that represented a great deal of detailed work. Another piece had some suggestion of sixteenth-century Spanish design; one a suspicion of Venetian pattern. One of the best was a tall, narrow goblet on a pedestal, in which the artist had shown his most original sense of design, and this piece forms the most pleasing and successful example of his work. Two large plates, with deep centres and wide edges, also deserved attention for the lightness and grace of the decoration on the hammered and otherwise plain surface.

THE new Parish Church of Crathie, N.B., is opened to-day. Built of white granite, on a site nearly opposite Balmoral Castle, the pretty little edifice forms an interesting landmark in the district. The Church is of the early Scottish style of Architecture, the square Tower rising above the intersection of Nave and Transepts, and resting upon arches springing from four handsome granite pillars. The South Transept will be set apart for Her Majesty and those of the Royal Household who attend worship in the Church. Among numerous interesting gifts to the new building are a stained glass window from the Queen, com-

memorative of different members of the Royal Family; a granite Pulpit from the Royal Household (inlaid with a fine variety of Scotch pebbles, collected by Princess Louise in the Island of Iona); a granite Baptismal Font from the Duke and Duchess of Connaught; and a peal of four bells, two from Princess Louise and two from Princess Beatrice.

MR. ALBERT BRUCE-JOY, the Sculptor, who did the Matthew Arnold Memorial in Westminster Abbey, is making a very bold experiment. Though he is, perhaps, the first Memorial Sculptor in England, he is not satisfied with this, but intends to go to Paris for a year, to study once more in the ateliers of French Sculptors preparatory to resuming imaginative subjects for his own chisel.

THE Glasgow School of Art having been invited to contribute an exhibit of Students' work to an Arts and Crafts Exhibition organised by the city of Liege, Belgium, three cases of selected works, consisting entirely of Designs for Textiles, Needlework, Wall Papers, Metal Work, and Pottery, together with actual work in Stained Glass, Metal Work, and Printed Posters; also Architectural Designs, Modelling, and Decorative Painting were forwarded. The following letter from the President of the Committee has been received by the School:—"L'Œuvre Artistique, Liege. To the School of Art, Glasgow. Our Exhibition has been opened for about a fortnight, and the exhibit you sent us has been very much admired by everybody. It is with the greatest pleasure that in name of a certain number of Artists, friends of mine, as well as in my own name, I thank you for what you have sent us, and congratulate you very sincerely upon its worth. Our Schools of Art are far, very far indeed, from being so advanced as yours, and what has above all astonished us in your work is the great liberty left to the pupils to follow their own individuality. Such is so different from the ideas current in our Schools of Art that it is difficult for us to comprehend this freedom, although we admire it very much. I think the exhibition of the works of your Students cannot but cause serious thought and reflection to those here who direct Art instruction.—G. SURREIERER."

A LOUIS SEIZE piano, made by Broadwood to the order of a private lady, was recently inspected by a number of artists and musicians. It has occupied two years in construction, and the whole work has been executed in Messrs. Broadwood's own factory. The piano is a semi-concert grand in size, and the case and stand strongly resemble the Louis XVI. work tables and armoires which are now so valued. The lid is of mosaic in kingwood, with medallions containing trophies of musical instruments in marquetry, while the sides are inlaid with diaper pattern, ornamented with musical and floral trophies, framed with ormolu and rosewood mouldings. The marquetry is made up of foreign woods of natural colour, mingled with woods stained with different tints, while from the principal moulding are hung ormolu festoons of roses, tied with the Louis XVI. bow. The music desk is a delicate floral marquetry depicting field flowers and butterflies, while the candle-boards are of dark rosewood, bordered with tulip and lines of various woods.

THE directors of the National Museum of Antiquities, Edinburgh, have forwarded £7 10s. to Mr. James Reid, a workman at Langholm, as purchase-money for an ornamented hinge or hasp, picked up several weeks since near the parish burying ground, about a quarter of a mile outside the town. The place where the article was found, in the cleft of a rock, is on the site of Wauchope Castle, the cradle of the great Scottish family of Lindsay. Nothing of the Castle now remains, and the hinge is supposed to be several hundred years old. It had probably been fixed on a valuable chest, as it is richly ornamented. It is made of brass and beautifully gilt, the gilding being almost as fresh as the day it was put on. There are four snakes' heads on the hinge, which have been beautifully enamelled. Mr. Burnet, Architect to the Duke of Buccleuch, was instrumental in bringing the find to the notice of the Museum.

THERE is some talk in Berlin of celebrating a somewhat singular centenary—that of the origin of numbering houses. According to a German contemporary, this convenient method of indication was quite unknown, even in London or Paris, until a century ago. In 1795 the practice of numbering private houses was begun in Berlin. The method employed, however, was then exceedingly imperfect. The Brandenburg Gate was taken as the point of departure, and the numbers went on successively throughout the whole town, without any distinction as regards streets. Even to-day the system of numbering generally employed in the German capital leaves much to be desired, as the numbers run consecutively up one side of the street and back again on the other. Vienna claims the honour of having inaugurated, in 1803, the method of placing the odd numbers on one side of the street and the even ones on the other.

THE Boundary Street scheme of the London County Council is developing, and a large part of the land from which the slums have been swept is now under active building operation, the small first section having been finished. The part now in hand is much larger, and no less than eight blocks of building are getting their foundations. Some of these sub-structures are complete, and are ready for the houses to go up upon them. The original intention was to carry out the whole of this work through the Council's own Works Department, but, owing to differences of estimates on the part of the Architect's Office and the Works, this arrangement seems likely to break down.

ST. BARTHOLOMEW THE GREAT, the restored Crypt of which the Bishop of Stepney will dedicate on the 29th inst., is the oldest Church in London. There is a curious legend concerning its foundation. When Rahere, the King's minstrel, was journeying to Rome in 1120 in expiation of his sins, he dreamed that he was carried by a great monster to the brink of the bottomless pit. St. Bartholomew came and rescued him, and commanded him to build a Church. On his return home Rahere carried out the command, and St. Bartholomew the Great is the result. The Church was completed in 1133. Among the old registers in the Vestry is an entry of the Baptism of Hogarth the painter.

THE fine Bridge over Dean Street, Newcastle, now opened for traffic, adjoins the present arch, which was built nearly fifty years since. The new structure has been examined by Lieut.-Col. H. A. Yorke, R.E., of the Board of Trade. It bears two lines of rails, thus making four lines between the Central Railway Station and Heaton. The span of the old arch is 80 feet, while that of the new one is 106 feet. The new structure is of grey granite, of which there is 70,000 cubic feet; besides over 100,000 feet of dressed ashlar. The bridge was designed by Mr. Charles A. Harrison, the Company's Engineer, and the work carried out by Messrs. Walter Scott & Co., within two years.

IMPRESSIONISM is the keynote of the new Exhibition at the Egyptian Hall, under the auspices of the Dudley Gallery Art Society. The show contains good workmanship and careful drawing, while there are nearly eighty more pictures than usual. The president (Mr. Walter Severn) has contributed six water-colours, of which "Mentone, from the East Bay," is the most prominent. "When Wave Meets Wave" is a fine sea piece from the brush of Mr. E. J. Duval; while the soft evening light which Mr. Fred Dixey has portrayed in "A Flood on the River, from Richmond Hill," is as effective as any landscape in the Gallery. Mr. R. A. K. Marshall's "Eventide, near Rodborough, Gloucestershire," shows a picturesque prospect, seen through a leafy screen of trees in the foreground. Mr. B. J. M. Donne has contributed a powerful piece of work in "Notre Dame de Guerison, Courmayeur," in which the snowclad peaks disappear in the misty atmosphere. There are not many figure paintings.

MR. BERTRAM MACKENNAL, who has a noteworthy group in the R. A. Sculpture Room this year, and has been described as the founder of a new "School," hails from the Antipodes,

and is still under 30. He is the son of a Sculptor, and early shewed his abilities. He was allowed to travel, and visit England, France and Italy, studying Art in the capitals of each country. When only 24 he was commissioned to decorate the Houses of Parliament in Melbourne, and since this commission, which brought him fame in Australia, he has managed to build up a reputation.

ON Friday the new Clerkenwell Town Hall, which occupies the greater part of a triangular plot of ground bounded on one side by Rosoman Street, on another side by Garnault Place, and on the third by Rosebery Avenue, was opened by Lord Rosebery. The structure is of red brick, with white Ancaster stone dressings, prominent among its embellishments being the emblematic badge of the Knights of St. John of Jerusalem, carved in red brick. It is an addition to the public buildings of a district of London not by any means overdone with the ornamental, and presents a contrast to the old Vestry Hall, which shares with it the triangular plot of ground. On the ground floor the Medical Officer, the Surveyor, the Vestry Clerk, and the various clerks constituting the subordinate staff have offices. There are two excellent Committee Rooms also. The whole of this ground floor is, in fact, devoted to administrative purposes. The Corridors are floored with mosaic, the walls are tastefully embellished with ornamental tiling, and there are some handsome dwarf columns of Devonshire marble at the foot of a staircase up to the first-floor, the main features of which are a really beautiful Public Hall and Council Chamber. The Hall is 66 feet long 44 feet 6 inches wide, and 38 feet from floor to ceiling. It is tastefully adorned with Cathedral glass windows in harmony with the colouring of the interior, while a series of winged figures round the walls hold out clusters of electric light. The place is also fitted up with sun burners and gas brackets. The Council Chamber is smaller, but equally handsome. It is 48 feet long, by 29 feet wide, and 22 feet high. At one end of it is a Public Gallery. A special feature of the arrangement of this first floor is a broad and handsome Corridor running down the side of the Great Hall, constituting a Promenade from which the Hall opens. From these public portions of the floor the Council Chamber is divided by a transverse Corridor, at one end of which the Open Balcony over the Main Entrance affords an extensive view over Rosebery Avenue for a long distance right and left. This floor also comprises Cloak Rooms and other Offices, together with a Retiring Room adjacent to the platform that occupies one end of the Great Public Hall. This will be for speakers, or artists engaged in public entertainments of any kind. Staircases lead up to the floor above, and there is a small third floor, which will be taken possession of by the Public Analyst. The Architect is Mr. Evans Vaughan, F.R.I.B.A., and he has been represented on the building by Mr. W. Gannaway as Clerk of the Works. The builders are Messrs. Dearing and Son, of Islington.

THE Northampton Institute in Clerkenwell, designed by Mr. Mountford, is making rapid advance, though it may be another year or a year and a half before it will be fit for occupation. Mr. Mountford was the Architect of the Battersea Polytechnic, and he has brought to

bear on this building the experience gained at Battersea. There will be a fine Assembly Hall, a large Gymnasium, and an extensive range of Technical Workshops and Laboratories, as well as a good Swimming Bath. The expenditure on this building will be £70,000.

WHILE excavating at Carnarvon, a number of men came across a large cavity which appears to be a Roman well. Upon removing a stone slab which lay on the surface, a good-sized shaft was found. It is of oval shape, being seven feet by six, and at a depth of eighteen inches from the top it is sunk in solid rock to a depth of nearly thirteen feet. There is at present five feet of clear spring water in it. The spot where the well was discovered being adjacent to, if not on, the site of old Segontium, there is little doubt that the well may be added to the large number of interesting Roman remains disinterred at Carnarvon within recent years.

THE new Country Homes for the children of Mile End, which are proposed to be erected at North Weald, Essex, constitute the largest venture of the kind in London, or, indeed, in the country, the estimated expenditure ranging from £60,000 to £80,000. The plans, prepared by Mr. Burdon,

ABERLADY CHURCH, N.B. : WILLIAM YOUNG, ARCHITECT.

the Board's Architect, are for the housing and accommodation of 400 children. It is proposed that there shall be eight Cottages, for 160 boys, between the ages of seven and 16, each Cottage being arranged to accommodate 20 boys, in charge of a foster father and mother; 16 Cottages for 240 girls and infants, arranged for 15 in each, in charge of a foster mother; Probationary Home for 15 of each sex, in charge of a foster father and mother, who are to act as porter and portress and gardener; Superintendent's House, with Board Room attached; Schools for 160 children of each sex, with a separate Infants' Department to accommodate 100. These buildings are planned with a view to future extension. In addition there is to be a Hall to accommodate 600 children and adults, to be used for services and entertainments; Infirmary to accommodate 20 children of each sex, with requisite Offices, also planned with an idea to future extension; Isolation Infirmary for children of both sexes; Visiting Halls, Swimming Bath and Gymnasium, Village Shop and General Stores, Bakehouses, Bread and Flour Stores, Training Shop for carpenters, engineers, smiths, painters, glaziers, shoemakers, tailors, &c., Board Room, Laundry, Dynamo Room and Accumulators—it being proposed to light the village by electricity—Boiler-House, Water Tower and Power, Sewage Farm, &c. The roads will be so arranged that the Cottages form a half circle,

400 ft. apart, with the administrative blocks in centre, and facing a large ornamental lake and grounds.

A PAINTER in financial difficulties two years ago pawned his Gallery of Old Masters to an Art dealer in Vienna who lent him 55,000 florins at nine per cent. interest. In January the Artist ought to have repaid the loan and taken back his pictures, and as he was unable to do so the Art dealer had the pictures valued, intending to sell them by auction. Art connoisseurs have repeatedly declared the 70 old masters to be worth 200,000 florins, but the experts employed by the dealer put down their total value as 4,875 florins. The following are some of the items of their list; it is to be remembered that they did not express any doubt as to the genuineness of any of the pictures; A Titian, "The Annunciation," 200 florins; Murillo, "Adoration of Jesus," 20 florins; a Leonardo da Vinci, 100 florins; Paul Veronese, "Jesus and the Woman of Samaria," 150; Salvator Rosa, a landscape, 100. The list contains a large number of pictures of the Dutch School, put down at 10 and 15 florins each. The Painter appealed to the Court against this estimate, which has been declared utterly worthless.

THE Porch of the Scottish National Portrait Gallery has now been completed by the addition of Statues of Wallace and Bruce, which fill the lower niches on each side of the doorway. Wallace, who stands on the east side, is in the simple chain armour worn at the period. Over it is a long surcoat, tied at the waist with a long narrow strap, while the richly decorated sword-belt comes diagonally across the body with good effect. The face, which peers through the opening of the mail, wears a thoughtful look, and the overwhelming nature of the task in which Wallace was engaged is further represented by a slight curve of the shoulders, as if pressed down by a

load of care. The left hand rests on a long pointed shield. On it is emblazoned a lion rampant. The right grasps the hilt of his great sword with naked blade, to indicate that he died while his work was in progress. The Bruce, on the other side, appears with a more kingly air. He, too, is in chain mail, with short leather surcoat, on which the Scottish Lion is figured, and he wears an over cloak clasped at the neck with a brooch. On his head is an open conical helmet with the Royal circlet round it; on his knees and on the front of his legs are pieces of plate armour. Designed and executed by Mr. Birnie Rhind, A.R.S.A., the figures are exceedingly decorative.

MR. THOMAS REAY, Architect, of Newcastle, recently brought an action against the Churchwardens of St. John's Church, Low Fell, in which he claimed £45 for professional services regarding a proposed Parochial Hall and Sunday School-room. The dispute arose over differences of plans and estimates, a lower estimate than that upon which plaintiff's work had been based having been resorted to by the Churchwardens and Committee, and upon which they estimated they should be called upon to pay. After a number of professional and other witnesses had been called, the Judge gave judgment for Mr. Reay for the full amount claimed and costs, and in doing so he characterised certain remarks in correspondence as a

gross insinuation without justification upon Mr. Reay's character. He thought that Mr. Hooper (the Vicar) should have realised that a man was worthy of his hire.

ARTISTS are rapidly being driven away from St. John's Wood by the Manchester, Sheffield, and Lincolnshire Railway. Landseer's house, more recently occupied by Mr. H. W. B. Davis, R.A., has disappeared, and on its site huge model dwellings for five thousand of the working classes, who will be dispossessed by other demolitions, are being built. Edwin Long's Studio, half a mile further off, is half down, as a shaft for a tunnel has been arranged upon its site, and Mr. Robert Macbeth, its present tenant, has had to leave.

THE Reading Town Council has decided to vote a sum not exceeding £8,000 for building an Art Gallery for the town and extending the present Free Library and Museum buildings. A site for the Art Gallery has been secured by purchasing some houses adjoining the Free Library. These will be cleared away to make room for the handsome block of buildings it is proposed to erect. The plans have already been approved, and tenders will be advertised for forthwith for the execution of the work. The tenders will be confined to local builders.

THE transferring of the pictures from the National Portrait Gallery in Great George Street, Westminster, to the handsome new buildings at Charing Cross has already commenced, and the formal opening ceremony is expected to take place about the middle of November, by which time the bulk of the pictures will have been rehung. No arrangements have yet been made for the inaugural ceremony, but whatever proposals are made will of course be first submitted by the Trustees for her Majesty's approval.

AN Art Department has been provided at the Yorkshire College by the Clothworkers' Company at a cost of about £3,000. The room hitherto occupied by the Art Class will now be set apart as a Museum connected with the Textile Department. Ever since the establishment of the latter Department it has been intended to form a Museum, which shall contain a complete collection of specimens of woven samples and models of weaving machinery. In connection with some of the more important centres of the Continent, such as those at Aachen and Lyons, Textile Museums have for some time been in existence, but it is not proposed to take either of those as typical of what is required at the Yorkshire College. It is proposed to commence with such specimens and models as will be instructive and helpful to those employed in the weaving trades of the district.

THE Edinburgh Town Council has just had published an exhaustive account of the history of the City Municipal Buildings for the past 700 years, the work having been carefully compiled from the original records by Lord Dean, of Guild Miller. The most interesting bit in the volume, perhaps, is the history of Parliament House. Certain details in the book show that Edinburgh has had to pay a heavy pecuniary penalty for the honour of being the Scottish capital. The work contains several illustrations and plans.

SCOTLAND has done her fair share in the æsthetic as well as in the practical life of Britain, and she has initiated or developed more than one movement in Art during this century and the last. We have had a Scottish Exhibition lately at the Grafton Gallery, but it dealt almost entirely with the Art of an earlier age. The present departure of Scotland in the Art of Painting is of the first interest and magnitude. The more intelligent and dignified of the modern Scottish painters have produced work not unworthy of any School, and even the wilder and worse trained men, in their most extravagant Decorative decadence, deserve regard for their constant courage and enthusiasm. Therefore a really representative Exhibition of the young Scottish School would be indeed worth careful examination. Although it contains a variety of work and a few good canvases, we cannot call the Exhibition at the

Continental Gallery a really characteristic exposition of contemporary Art in Scotland.

THAT qualification could never be applied to a catalogue which omits the names of Melville, Guthrie, Lavery, Walton, Roche, Paterson, Macaulay Stevenson, and more, indeed. Moreover, figure pictures and portraits are few and second rate. The style of portraiture practised with so much dignity by Mr. E. A. Walton and others, is here somewhat weakly shown by Mr. Patrick Orr, while Mr. A. C. Holms is not so much Scotch as a poor adherent of Sir Edward Burne-Jones. Of the richly coloured mosaic in square touches which is the decorative formula of the Scotch School, there is only one example, "An Autumn Glade," by Mr. J. T. Kelly. Amongst the better canvases we noted work by Messrs. R. B. Nisbet, T. Robertson, A. Kay, Sherwood Calvert, A. K. Brown, G. Smith, R. C. Crawford, D. Fulton, R. G. Hutchison, and J. M. Henderson. Good work by other men, however, may be picked out, although a great part of the Gallery is so badly lit that one cannot be sure of the quality of many of the pictures.

A CORRESPONDENT writes: The famous collection of originals of Sir Godfrey Kneller's Portraits of members of the Kit-Cat Club are happily intact. The Painter, it will be remembered, was "limner" to the Kit-Cat Club; each member paid for his portrait, and the pictures hung in the "Club," which was held at the house of old Jacob Tonson, one of "the fathers of the bookselling trade." It is averred the Club was founded with other motives than mere conviviality, the principles of the Revolution of 1688, in the accomplishment of which most of the foundation members were actively concerned, being the foremost bond of their unity. The Gallery of Portraits remained in possession of the Tonson family; Jacob's son installed the collection at Barn Elms, and hence they have gravitated to the possession of Mr. W. R. Baker, of Bayfordbury Park, Hertford, through marriage with the descendant and heirress of the Tonsons. The collection is there treasured in its integrity; one portrait, that of the Duke of Marlborough, has always been missing; it was inferred that the great Jack Churchill had retained possession of his particular picture. The sketches for many of these Kit-Cat portraits, drawn by Kneller in chalk, are to be found in a collection at Hampstead, next door to the very mansion which formed the summer club-house of the "Kit-Cats," "The Upper Flask," situated "at Hampstead's breezy heights."

THE statement that an explosion which occurred in the Johann Colliery at Karwin, and by which ten men were seriously injured, was due to a miner accidentally breaking the glass of an electric lamp with his pick, is of great importance. It may be assumed that an incandescent lamp is meant, and it has always hitherto been argued that in the event of an electric lamp being broken no danger would ensue, inasmuch as the carbon filament would be instantaneously volatilised, and the lamp would be extinguished.

AT the annual Conversazione of the Royal Society held at Burlington House on Wednesday evening, the rooms contained an exhibition of great interest. The curator of the Maidstone Museum exhibited nine extremely interesting photographs, together with a map, ground plan, and section, of a Roman Temple, discovered on the east bank of the Meadway, at Wouldham near Maidstone. The Temple was accidentally found by workmen who were engaged in removing sand for ballast, and was excavated under the personal supervision of the exhibitor. So far this Temple is the only one found south of the river Tyne. Mr. Francis Galton, F.R.S., showed a curious experiment in magnifying fingerprints. The system claims to be of great use in cases of identification, and though it has not been tried often in England, it is said to be widely employed in India. Some most interesting instances of Japanese painting, ranging from the early part of the fourteenth to the beginning of the nineteenth century, were exhibited by Mr. Gowland, who selected the pictures to illustrate the effects of time upon the pigments employed by the old Japanese Painters.

MR. EDWIN ABBEY has just returned from America, where he has been to set up, in the Boston Library, the cartoons which he showed in London in the winter. He has still some ninety linear feet of wall space to cover, and Mr. Sargent has even a greater amount, whilst Mr. Whistler has not as yet completed any part of his portion. Meanwhile the work of another of the invited artists, M. Puvis de Chavannes, is on view in the Paris Salon, and the Trustees have given out that they have expended as much of the City of Boston's money as they can do on this portion of their trust, and that the City funds must in future be spent on filling the shelves.

AT the Executive Committee of the Association for the Promotion of Art and Music in the City of Glasgow, a report from the Architects was submitted, showing that the basement floor of the new Art Galleries, at present in course of erection in Kelvingrove Park, will be finished in about a month, and that the work done up to the present time has been thoroughly well executed. It was decided by the Committee to advertise for tenders for the superstructure and completion of the building.

AN interesting Mansion that has just changed hands is "The Old House" at Blandford, Dorset. It is especially interesting to antiquaries, having been erected about the year 1660 by the celebrated German physician, Dr. Sagittary, and from its being the only house left standing after the great fire at Blandford in 1731, when the destruction of the bobbins put an end to the lace trade for which the town was then noted. The construction is wholly of red brick, the walls and chimneys being profusely decorated with projecting blockings, rich mouldings, strings and architraves cut and rubbed with great labour when built up or "in situ," and not, as is commonly supposed, of bricks or work moulded before burning.

DR. JOHNSON'S Monument in the Market Square, Lichfield, is falling into decay, and regret is also not unnaturally expressed that Dr. Johnson's birthplace is unoccupied and not kept in adequate repair. A namesake of the great lexicographer rescued the house from the hands of despoilers some years ago, and it is a pity that it is not put to some useful purpose. The owner is willing to let it rent free to any suitable Society permanently established. The Lichfield Town Council has granted the requisite funds for the repair of the Monument, and for a tablet to be placed on the house recording the fact that it was Dr. Johnson's birthplace.

Two important Provincial Exhibitions have just been opened, the Royal Cambrian Academy and the Loan Collection at the Public Art Gallery, Wolverhampton. In the first the best known works are Mr. Anderson Hague's "Flowing Stream" and "A Sailor's Home," Mr. Robert Fowler's "Sea Fairies," Mr. Joseph Knight's water-colours, a landscape by Mr. H. Clarence Whaite, and "Thorns and Roses" by Mr. Sheridan Knowles. In the second there are examples of Jan Steen, Verboeckhoven, G. Poussin, Sir Peter Lely, Copley Fielding, George Cole, J. L. Herring, Sir Charles Eastlake, and many others. This Gallery has recently received a large number of important works from the Richards' Collection, which is now the property of the town of Wolverhampton.

A MEETING of the Committee and members of the London Library has been held, to consider the proposal to enlarge the building, which is found to be inadequate for the constantly increasing number of books. There are now 2,275 members of the library, which contains 168,000 volumes. The lease of some adjoining property having been secured, it is proposed to rebuild the premises, so as to afford spaces for all the additions to the Library which are likely to be made within the next thirty years. The following resolution, after discussion, was carried: "That as the Committee has, upon the advice of a competent Architect, recommended that a scheme of reconstruction of the Society's premises at an estimated cost of about £17,000 be adopted, provided that a sum of £5,000 at least be first

obtained by means of donations, this meeting authorises the Committee (with that proviso) to carry the scheme into effect."

ARRANGEMENTS are, we understand, now almost complete for the purchase of the property in Palace Yard required for the proposed addition to Westminster Abbey. The negotiations have been successfully carried through in the case of every house save one, and it has been agreed to refer the question of the amount to be paid for that to arbitration. With the property thus practically under its control, the Office of Works is in a position to proceed to the clearance of the site almost immediately, but the work will probably be deferred until the winter, in pursuance of the policy now followed in Government Departments of postponing the execution of projects of this kind until the period of the year when labour is in least demand. As soon as the houses have been pulled down the ground will be levelled and turfed, and left in that condition until the all-important question of the acceptance of Mr. Yates Thompson's offer to bear the cost of the erection of an Annexe to the Abbey has been decided.

THE first portion of the work of reconstructing Moorgate Street Station has been completed, and the next section of it is well in hand. The renewal was begun in the early part of last year, and the whole of the original ramshackle sheds covering the lines and platforms have been swept away and replaced by new ones. So far as the platform level is concerned, Moorgate Street Station is now modelled on the best type. Considerable advance has been made with the rebuilding of the Station Front. The old wooden building of the Metropolitan line still remains intact, but a clearance has been made at the other end of the Station, and a handsome new Portland stone Frontage has risen to the height of a fine central Archway, forming an entrance down to the platforms of the "foreign lines"—that is to say, the Great Northern, Midland, Great Western, and Chatham and Dover—having running powers over the Metropolitan.

THE annual Exhibition of the Home Arts and Industries' Association opened on Thursday last at the Royal Albert Hall, and remained open until yesterday. Founded in 1884, the Society was formed to teach the working classes such minor Arts as wood carving, inlaying, metal repoussé, basket making, leather-work, &c., and this is done by means of voluntary instruction given at the homes of the teachers or in rooms provided for the purpose in local districts. Commencing with forty classes, the useful work of the Association has spread over England, Ireland, Scotland and Wales, and it is a matter of great congratulation to be able to record that 500 classes are at work. The chief aims of the Association are to train the eyes and fingers of its pupils so as to increase their value as workmen, to fill up the idle hours of lads and girls, to promote pleasant and sympathetic inter-

course between the educated and the poor, and to revive old handicrafts which once flourished in England. While these may perhaps be termed aims common to many kindred societies, this particular Association differs from other existing organisations in the voluntary and informal nature of its work. Its object is educational and not commercial, and it assists isolated workers in remote and poor districts, where neither pupils nor teachers could conform to the regulations enforced by other agencies. Last year Mr. Watts, R.A., and Mrs. Watts started what is known as the "Watts Endowment Fund," Mr. Watts himself contributing £1,000: but it is hinted that subscribers do not increase in the same proportion as the classes, and that the more active the Association becomes the poorer it grows.

THE Exhibition, which was held in the top Gallery of the Albert Hall, consisted of a collection of miscellaneous articles, made wholly or in part by the pupils. They did not

included from all parts of the Kingdom, and those from Ireland were most encouraging.

THE success of Mr. Phil May's Exhibition of Black and White at the Fine Art Society's Rooms in New Bond Street, is increasingly encouraging for Artists. It is comparatively a new thing that well-known Artists should in their life-time offer to the public a collection of original drawings that have already served their original purpose by appearing in a journal or magazine. Up to the present time *Punch* has the run of the business. Mr. Harry Furniss began it with his exhibition of sketches, chiefly political and Parliamentary, that had appeared in that journal. Mr. Linley Sambourne followed suit. Then came Sir John Tenniel, whose work was on view only a few months ago. Now Mr. Phil May, the latest recruit on the *Punch* staff, has had an unqualified run of luck. His pictures have brought him in over £1,000, which, considering that they were all handsomely paid for by the periodical in which they appeared, is a nice little supplement to ordinary remuneration.

AT the annual meeting of the Royal Architectural Museum and Westminster School of Art, the Council had to express regret that the source of income which, above all others, should be well maintained—namely, that derived from the subscriptions of the members of the Architectural Profession—was confined to a fast decreasing body who had from the establishment of the Museum accorded to it continued and generous support. In spite of this fact, the Council were able to speak favourably of the finances of the Institution. This was, however, mainly due to the rapid growth of the Westminster School of Art, which is conducted in the building, the fees from which amounted in 1894 to £898, as compared with £700 in 1893; and to the grants received from the Technical Education Board of the London County Council, amounting to £380. The resignation of the office of President by the Bishop of Ely (Lord Alwyne Compton), who, from the foundation of the

Museum had been one of its warmest friends was recorded with regret, and the vacancy was filled by the Duke of Westminster. Those taking part in the proceedings included Mr. W. C. Cocks (who acted as Chairman at the outset), Sir A. Blomfield, Sir W. de Souza, Mr. Aston Webb, Mr. M. B. Adams, Mr. S. W. Lee, Mr. C. H. Hayward, Mr. W. Pain, and Mr. J. Seddon.

WE are desired by the Committee of the University Hall, to state that the competition designs for the New Settlement Buildings, Gordon Square, will be on public view at Dr. Williams' Library, Gordon Square, W.C., to-day (Tuesday); on Wednesday, from 10 a.m. to 10 p.m.; and on Thursday evening. The Architects invited to compete are: Messrs. C. C. Brewer and A. Dunbar Smith, M. S. Hack, Gerald Horsley, A. H. Mackmurdo, E. W. Mountford, Ernest Newton, E. S. Prior, Halsey Ricardo, W. Shirling, F. W. Troup, F. Waller, and H. Wilson. The Hon. Assessor is Mr. R. Norman Shaw, R.A.

THE AMSTERDAMSCH POORT, HAARLEM: SKETCHED BY F. T. W. GOLDSMITH.

compete for prizes, but had medals given to them for general excellence and originality of design and other merits. The Princess of Wales's Technical School at Sandringham had a very interesting exhibition, consisting of neatly made wooden racks, pedestals, stools, bookcases, and articles in copper; and another stand which proved equally interesting was that devoted to the Della Robbia Pottery. About two years ago Messrs. Dressler & Rathbone founded a pottery at Birkenhead, not so much for commercial purposes as to provide an attractive and practical occupation for boys and girls. Pots, vases, window boxes, and tiles were shown amongst the exhibits. A special feature of this pottery is that it will withstand the trial of our somewhat variable climate; and in order to avoid reliance upon merely mechanical work the use of steam power is strictly prohibited. Amongst the attractions of the Exhibition were a spinning competition, a loan exhibit of leather work from South Kensington, and a potter's wheel at work. Exhibits were

ANNOUNCEMENTS.

IN view of the character of this number, the widespread notice it will obtain, and the Professional interest THE BUILDERS' JOURNAL has aroused, we can best make here one or two announcements. We desire also to foreshadow a few further developments.

It was the wish of the Proprietors and Conductors of THE BUILDERS' JOURNAL to design a paper acceptable to the whole of those engaged in what we held and still hold and shall hold to be the Art of Building. We have succeeded beyond our expectation, even beyond our hope. We have full knowledge that in eighteen numbers THE BUILDERS' JOURNAL has sprung into authoritative acceptance and success. It is to consolidate this success, to win our way still further to the honest, critical, scholarly applause of the Profession, and to return the warmth of an exceptional welcome, that we have pleasure in making these announcements, one of which, the addition of large Lithographic Illustrations, we claim to be a bold stroke in these bold days of Journalistic enterprise, for our price and our present standard shall be maintained.

Nor with these immediate announcements shall we halt. Architecture is the grandest, the most definite, the most final of all the Arts; it endures beyond its day and generation; it comes down to us with the early history of the World. And our Journal shall, if we can make it, be worthy its ambition and its history—even its aspiration and its aim.

Our Special Issue.

It has been thought fit by the Publisher, in view of our new and more dignified heading—we have gone to the Saxon for design—and our thick, deeper tinted cover, to post a **Copy of this Issue to every Architect, Surveyor, Borough and Diocesan Surveyor and Clerk to Local Board** in the Four Kingdoms. We are aware that, in a great measure, we are sending to those who in the ordinary way obtain their BUILDERS' JOURNAL. Such duplication is unavoidable, and is of benefit if the thousands of our Subscribers will circulate their additional copy among their Professional or trade acquaintance and friends. This we ask them to do.

Professional Paragraph Forms.

For Professional use we have had designed a novel and a delicately printed Paragraph Form. This has been lithographed in several art tints, and **Fifty Thousand of these Forms** are sent in this distribution by post to all Architects in practice in the Four Kingdoms. Should any Architect fail to receive a number of such Forms, he should at once write to the Publisher, Talbot House, Arundel Street, Strand.

Double Page Inset Illustrations.

—With the Twenty-Seventh Number—the first of a Second Volume—we shall give separate Double Page Illustrations reproduced in the highest style of Lithography, on paper of especial quality. These Lithographic Plates shall equal, if not surpass, any Architectural Illustrations in the World. They will be suited to the frame or to the portfolio. Not exclusively devoted to current Architecture; they shall reproduce some of the finest Ecclesiastical and Domestic Work in Europe and America.

"Men Who Build" and "Our Impressions of Cities" will be made International and will continue to be fully illustrated.

For Contractors and Builders.

Especially for Contractors and Builders throughout the Kingdom who have begged us to strengthen our Contracts, we have determined, at some loss to ourselves, to publish each week an **absolutely complete list of Contracts Open**. We believe this has never been attempted by any other journal. The first complete list will appear in our 27th number.

The Builders' Journal.

MEN WHO BUILD.

No. 17.

MR. WILLIAM YOUNG.

"Architects ought not to live in our cities; there is that in our miserable walls which bricks up to death men's imaginations as surely as ever perished foresworn nun."

ANOTHER aphorism of Ruskin, and William Young quotes it in "Picturesque Architecture," which he was guilty of dedicating to Henry Howell, six and twenty years ago. These little works, emanating generally from young men in the thraldom of their ambition, do good. They shew emphatically that sketching was not a Fine Art a quarter of a century ago, and that if a few—a very few—could draw in decent perspective, the great majority could not. Since William Young compiled the first of a small series of illustrated works he has grown older, wiser, and nobler. I recently met him in his own house which he built some fifteen years ago, and when complimenting him upon his perfect little abode, he whispered: "Thanks! but I wish I could pull it down and rebuild it." And there we have the spirit of a true Architect. I can imagine him wishing to redraw his "Picturesque Architecture," and to rebuild half his "Town and Country Mansions;" but, then, Norman Shaw has said the same thing about his work.

There was a time when William Young was a Gothicism of the deepest dye. A quarter of a century ago the element was gasping in its last struggle for breath, and as a candle flickers at its brightest the moment before it goes out, the Gothicismists were at their brightest just before the Modern School crushed out the sincerity of what had gone before. I do not assert that William Young was ever a strong Gothic man, but his energy was unceasing, and his convictions terribly sincere. He was of the Burgess School, and nothing could be more self-convinced than that; for Burgess more than once took his convictions down to his scullery sinks and kept them in "touch" with his sincerity. And yet there was a canker worm somewhere in the heart of William Young. He had tramped every square yard of Sussex in his hunger for Norman and Gothic work. He had sketched and drawn and published evidences of his love for the *true* style, and

here he is to-day, steeped to his lips in reactionary Classic, and carving out the work of his life in the orthodox style. Philosophy is staggered, and not for the first time. Burne Jones may yet become a contributor to *Punch*.

Let it be written and known of all men that William Young has succeeded in his transition, whilst other men have ignominiously failed. When Sir Gilbert Scott, R.A., got no nearer than second in the two competitions—for the Home Office and another building, which, at the moment, being away from my books, I forget—it was Palmerston who said it was the first time he had ever heard that the stakes were to be awarded to the second horse "because he did not

win." Scott's design for the Home Office was naturally Gothic, but after its selection old Pam absolutely refused to sanction anything but a Classic building, and so a monstrous injustice to Architecture and to his fellow competitors was perpetuated by Sir Gilbert in the Classic contortion of the Home Office. And yet William Young, having studied and worked in Gothic all his life, submitted a Classic design in the Glasgow Municipal Buildings Competition because, in the words of a young friend—who certainly knows something of his motives—"there was an

GOSFORD HOUSE, FOR EARL WEMYSS: ADDITIONS BY WILLIAM YOUNG.

opportunity to strike out for Classic which he knew he understood and could handle freely." It is a story fresh in everyone's mind how Mr. Young's design was universally awarded the coveted honour, and how Glasgow watched with keen interest the development of his scheme. As the Manchester Town Hall is acknowledged to be the finest Gothic Town Hall in England, so must the Glasgow Municipal Buildings be considered the finest erected under Classic treatment. The peculiarities of modern life do not induce nobleness in our buildings, and if the ultra faddists see nothing truly noble in William Young's Glasgow pile, there is at least dignity and fine proportion, and the evidence of a master mind, in its entirety. Its detail errs, if any way, on the side of profuseness, but profuseness is the bane of all modern work, when mere eccentricity is not the ruling spirit. The fine staircase at Glasgow will serve as a model to all non-individualistic Architects, for we all know the way the Profession can incorporate other men's work by the aid of "plates" and the piquancy of a little "treatment!"

Mr. Young has done but very little ecclesiastical work; restorations and additions to Aberlady Church,—a view of which is given on another page,—a Church at Peebles, and one at Halton, Warwick; but his domestic work is extensive. Chelsea House, Earl Cadogan's fine town mansion, is by him, and he is now engaged upon the practical rebuilding of Culford Hall, the Suffolk residence of the same nobleman. Duncombe Park, Lord Faversham's Yorkshire House, has been twice rebuilt by Mr. Young; Haseley Manor, Warwick, and Holmewood, Hunts, are two of his best Gothic houses, and he is responsible for much at Elveden, Lord Iveagh's beautiful estate in Norfolk; at Chevening, for Earl Stanhope; at Panshanger, Earl Cowper's delightful Hertfordshire home, second only in the county to Hatfield; and at Newmarket, where he built extensively for the late Duchess of Montrose. Gosford House, for Earl Wemyss, is a fair example of additions to an existing work—at times a far more difficult job than to design a new house. At Gosford William

Young has successfully accomplished what few men are able to do. He has remodelled what was already a fine piece of work, has added two extensive wings, and has kept his additions subservient to what already existed. If it wasn't for the mere age of the external stone work, it would be impossible to detect that the house was designed by different men; and without discussing whether this is the right thing to do or whether it is not, it shows a facility for grasping the "spirit" of a building which makes Gosford House one

Drawing Room are not up to the moment's craze in things internal, but what of that! When all is said and done, Gothic was *not* a craze, and it will *not* die, and in that there is a grand consolation. In the intervals of practice—a practice of a nature that demands an enormous amount of personal attendance—William Young finds delight in the higher ethics of life; and it is only with some restraint that conversation does not often turn upon the economics of Social advancement while Modern Art is crying aloud for discussion. A happily disposed man is William Young, of keen artistic temperament, skill in design, and some of his recent perspective drawings are as fine as any that are hung upon the walls of the Academy.

THE excavations at Silchester, which have now been carried on for five years, are daily becoming more interesting. Only recently dye works, with their vats and mills for grinding madder root, have been discovered. The yearly expenditure is from £400 to £450, wages being about £300 and rent of land £35, but the subscriptions do not exceed £300, and the fund is in debt. Our English Pompeii needs a Mæcenæus.

THE proposal that the repairing with asphalt of Fenchurch Street, Liverpool Street, Mansion House Street, and the Poultry should, in view of the inconvenience of interrupting the traffic in those great thoroughfares, be carried on both day and night, has been negatived by the Commission of Sewers by 32 votes to 18. It is estimated that the repairs, with the men working in the daytime only, will necessitate closing the carriage traffic for one week.

THE Memorial to be erected to the memory of the late Earl of Pembroke is to take the form of a Statue to be placed in the town of Wilton, the cost being estimated at from £1,000 to £2,000.

It is said that Dr. Conan Doyle is going to build himself a habitation at Hindhead, in the loftiest part of that Pennine region on the confines of Surrey and Hampshire.

MR. VAL PRINSEP, R.A., opened on Saturday the Sixth Annual Loan Collection of Pictures arranged for the benefit of the people of Southwark and the Borough, held at the local Polytechnic in Borough Road. Paintings have been lent by the Queen, the Prince of Wales, Sir Henry Irving, the Chantry Trustees, and others. The Exhibition is to remain open daily, including Sundays, for three weeks.

A CORNER OF GLASGOW MUNICIPAL BUILDINGS: WILLIAM YOUNG, ARCHITECT.

of the finest things William Young has ever done.

When William Young erected his own habitation in Putney, the Metropolitan Railway had not reached his doors, neither had the speculative builder impeded his view across the green fields, Londonwards. "Ingleside" has his own Gothic influence strong upon it; tempered, perhaps, by more modern touches, in which the softer hand of woman is distinctly noticeable. The mantel of the Dining Room and the angle in the

CONSTITUTION OF THE R.I.B.A.

ELECTION RESULT.

At a business meeting of the Institute, Mr. Penrose, the President, referred to the British School of Archaeology at Athens, and read the draft of a memorial proposed to be sent to Lord Rosebery, urging the claims of the School to an annual grant from the Government. Whereupon it was resolved "That the Council, on behalf of the Institute, do memorialise the Prime Minister in the terms of the paper read to the meeting." The President read a letter from the Secretary of the Burlington Fine Arts Club containing an invitation to students to visit the Exhibition of the Art of Ancient Egypt now being held in the rooms of the Club, and then read the names of those elected to serve for the ensuing session.

President.—Francis Cranmer Penrose—unopposed. Vice-Presidents (4).—Aston Webb, 461; James Brooks, 418; Ernest George, 408; Alex. Graham, 385. Hon. Secretary.—William Emerson—unopposed. Members of Council (18).—John McKean Brydon, 399; George Aitchison, 397; Richard Phené Spiers, 392; Edward William Mountford, 384; Arthur Cates, 376; John Alfred Gotch, 376; John Slater, 374; Thomas Blashill, 367; John Belcher, 366; Campbell Douglas, 364; Edwin Thomas Hall, 360; Thomas William Cutler, 350; Paul Waterhouse, 349; Arthur Edmund Street, 344; Benjamin Ingelow, 340; Edward Augustus Gruning, 334; Henry Louis Florence, 331; Charles Hadfield, 315. Associate Members of Council (2).—Thomas Miller Rickman, 236; Beresford Pite, 216. Representatives of Allied Societies (9).—Alfred Culshaw (Liverpool Architectural Society), Edward John Dodgshun (Leeds and Yorkshire Architectural Society), Thomas Drew (Royal Institute of the Architects of Ireland), John Goodacre (Leicester and Leicestershire Society of Architects), William Henman (Birmingham Architectural Association), John Holden (Manchester Society of Architects), James Jerman (Devon and Exeter Society), Joseph Oswald (Northern Architectural Association), Thomas Lennox Watson (Glasgow Institute of Architects) [unopposed]. Representative of the Architectural Association.—William Douglas Carøe—unopposed. [The above members, who were declared to have been duly elected, compose the Council.] Auditors.—Fellow, Frederick Todd; Associate, William Woodward—unopposed.

The Standing Committees. Art Standing Committee.—Fellows (10).—Ernest George, 398; William Douglas Carøe, 388; Edward Ingress Bell, 376; John McKean Brydon, 374; Alfred Waterhouse, 372; James Brooks, 368; Edward William Mountford, 344; John Belcher, 342; Frank Thomas Baggallay, 310; William Young, 230. Associates (6).—Beresford Pite, 319; George Campbell Sherrin, 311; George Kenyon, 304; William Henry Romaine-Walker, 289; Henry Thomas Hare, 287; Alexander Nisbet Paterson, 282. Literature Standing Committee.—Fellows (10).—Alexander Graham, 422; George Aitchison, 414; Richard Phené Spiers, 402; Arthur Edmund Street, 376; Paul Waterhouse, 375; Frank Thomas Baggallay, 373; Benjamin Ingelow, 369; Edgar P. Loftus Brock, 361; Sydney Smirke, 341; Frederic Chancellor, 280. Associates (6).—Arthur Smyth Flower, 377; Andrew Noble Prentice, 376; Leslie Waterhouse, 337; Percy Scott Worthington, 333; Ravenscroft Eley Smith, 321; Banister Flight Fletcher, 216. Practice Standing Committee.—Fellows (10).—Edwin Thomas Hall, 353; Lacy William Ridge, 308; Samuel Flint Clarkson, 305; Thomas Batterbury, 282; Henry Cowell Boyes, 280; Joseph Stanislaus Hansom, 275; Walter Hilton Nash, 272; Edmund Woodthorpe, 265; George Enoch Grayson, 264; Edward Augustus Gruning, 261. Associates (6).—William H. Atkin Berry, 377; Augustus William Tanner, 358; Henry Thomas Hare, 346; Robert Stark Wilkinson, 341; Frederick Henry Appleton Hardcastle, 335; George Richards Julian, 297. Science Standing Committee.—Fellows (10).—William Charles Street, 398; Herbert Duncan Searles-Wood, 394; Lewis Angell, 391; Percival Gordon Smith, 385; Arthur Baker, 372; John Salmon Quilter, 368; Henry Tanner, 353; Henry Dawson, 334; Benjamin Tabberer, 330;

William Warlow Gwyther, 323. Associates (6).—Henry William Burrows, 353; Francis Hooper, 332; Max Clarke, 326; Bernard John Dicksee, 299; George Pearson, 280; Matthew Garbutt, 275.

The following candidates for membership were then elected—

As Fellows—Charles Busted Fowler (Cardiff), Francis Thomas Dollman [A.] As Associates—Herbert Phillips Fletcher, George Hubbard, John James Joass, Geoffrey Prater Armstrong, Walter Robert Jaggard. As Hon. Corresponding Members—Alexander Wielemans (Vienna), Ferdinand Fellner (Vienna).

THE FINEST VILLA IN THE WORLD.

THE new Villa for Mr. Cornelius Vanderbilt, built at Newport, Rhode Island, in place of the "Breakers," which was destroyed by fire about three years ago, is said to be the finest summer residence in the World. Situated high on a point in Newport's famous cliffs, a view from any of its windows takes in a marine picture of great attractiveness. The building is of Indiana limestone, and as there is not a particle of wood, it is considered to be absolutely fireproof. There are terraces all about the house, which is practically in three sections—a main house and two wings. Within are superb carvings, massive pillars of onyx and other marble of the most delicate shades, and a wreath of beautiful paintings. Mosaic figures and borders abound, all of which, as well as the paintings and carvings, have been executed by a corps of Italian artists. The Hall is in the centre of the house, and is spacious. From it, through many great doors, the Drawing Room may be entered on the left, the Dining Room directly a-head, and the Billiard and Reception Rooms on the right. Its height is limited only by the roof of the structure, and a Gallery runs completely around it at the second storey. The Architectural features and decorations are very fine, while the staircase and balustrade show some remarkably fine carvings. The Hall, like the Drawing Room, is as yet unfinished. The Dining Room is marvellously appointed, the altitude being two storeys of the house proper. Its windows are very high and arched above, and then there are smaller super windows. Every one of these opens upon a side terrace, from which a view of the sea may be obtained. The walls of the Dining Room are principally of Italian marble, with here and there an embellishment of mosaic work or tiling. They are, however, divided into sections by onyx pillars, which support heavy arches high above, the colouring of which is of old gold, bronzes, and pinks, blending delightfully and prettily carved. The ceiling is a series of paintings within a rich framework formed by the arches. The central design is an ethereal figure, driving three white horses with ribbons through the clouds. The picture is about 10 ft. by 5 ft. The other pictures are smaller, and represent children making garlands. At one end of the room is an immense fireplace, the setting of which is in conformity with the other appointments of the apartment. The Billiard Room, which adjoins the Dining Room, is no less beautiful. Its decoration is on Oriental plan. Everything is mosaic, in which the Artists have brought about some superb creations. The colours are generally dark, black and browns being used to a marked degree. The room is square. Its walls are broken into panels by heavy mouldings, while its ceiling is divided into domes and concave surfaces by arches and borders in relief. In this room every inch of walls and ceiling is mosaic, and the designs, it is claimed, are all original. Adjoining the Billiard Room and occupying with it the whole southern side of the house is a Reception Room or Library. Its walls, it is said, are to be hung with tapestries. The general style of the room has, however, not yet been developed.

Two stained glass windows have just been completed in Darrington Church, near Pontefract, at the expense of Major W. F. Lee. The Tower of this Church is under repair, and it is also intended to repair the bells and add a fourth one if the necessary funds—about £500 in all—are forthcoming.

ANCIENT CHURCH ARCHITECTURE IN THE MIDLANDS.

MEMBERS of the Archæological Section of the Midland Institute, Birmingham, recently visited Middleton. A short stay was made at Sutton Coldfield Church, which dates from the 12th century, but of this early structure only the south doorway—a good specimen, enriched with zigzag mouldings—a very rudely constructed Norman window on the north side of the Chancel, and some pieces of rubble walling remain. Of the next century, there are the North Aisle, which has a singular arcade of pointed arches, and a very graceful triplet of lancets in the east gable of the North Aisle, beneath which was once an Altar, as is evident from the brackets for statues, and a very interesting hagioscope, or squint, which, piercing the Chancel wall obliquely, affords a view of the High Altar from the east end of the Aisle. Previous to this addition the Church was but a very small and simple Norman structure of rude masonry. In the fifteenth century the strip roof, which probably covered both Nave and Aisle, was replaced by roofs of very flat pitch, and an upper tier of windows was added. The Tower is a good one of the 15th century, and of a distinctly Warwickshire type. The "Aylesford collection of drawings of Warwickshire antiquities" shows that it had, a hundred years ago, a tall and graceful spire. How this was destroyed is not known. The fittings and furniture of the interior are modern—all but the rood-screen, which, though mutilated, is an interesting example of late 15th century date. The Church retains several interesting sepulchre monuments—one, a fine and rare example of a brass to Sir Richard Bygham, a Justice of the King's Bench, 1476, and by his widow. There are also an interesting Jacobean mural monument and a marble monument of the 18th century to Sir Francis Willoughby. The party then drove on to Middleton Hall, the residence of Mr. Egbert De Hammill. The Mansion is of very many dates, extending from the 14th century to the Georgian period. Of the more ancient parts only a domestic Chapel can now be distinctly made out. This has an ambury with credence, and it retains a wagon-headed roof. It has, however, been divided by floors into three storeys, and can only be made out by careful search. There is a second Chapel of the 15th century, with very good arched and carved roof trusses, with wall posts and shafts ascending from the floor. Connected with the east end a very curiously contrived chamber of framed timber appears to have been utilised as a means of escape from the Chapel. The greater part of what remains of the Hall, so far as can be seen, is Georgian, the Hall and Staircase being very fine, with good details. A range of out-buildings of the Tudor period has been much altered, but retains interesting features. A moat, now dry, surrounds the house, enclosing a large area. Kingsbury was next visited, when the Church was carefully examined under the guidance of Mr. J. A. Cossins. Originally a Norman structure, it retains interesting features of that period, but has been much added to and altered. The Bracebridge Chapel of the 14th century is the most interesting feature, but this has been sadly pulled about, and latterly an Organ-Chamber has been built within it. What remains of the walls of the Castle Court, of probably the 14th century, and the Manor House, mainly of the time of Elizabeth, were then seen.

New Sunday Schools and Rooms are to be built at St. Michael's, Stoke. The building is expected to cost about £1,200, exclusive of between £200 and £300 for furniture.

An Exhibition of Examples of Stencilled Decorations, designed at Mr. Arthur Silver's Studio, is being held at 26, Garlick Hill, near the Mansion House Station. The object of the show is to prove that the use of stencils, far from being, as is generally imagined, an absolutely mechanical proceeding, is really a decorative process of great value. The exposition of the claims which this method of adornment has to serious consideration is made so complete that it can hardly fail to be convincing.

THE NEW CATHEDRAL AT WESTMINSTER.

RESTORING THE BENEDICTINE ORDER.

THE site of Cardinal Vaughan's future Cathedral, at Westminster, is at length showing some signs of preparation for the 29th inst., on which day the first stone of the building is to be laid. The Cathedral of Westminster has from time to time been much discussed in Roman Catholic circles. It was mooted for the first time soon after Cardinal Wiseman's death in 1865, a subscription being set on foot to commemorate his services to his Church by raising a Cathedral which should be to future generations a perpetual reminder of them. Doubtless they will be duly chronicled in the majestic fane which is being begun at Westminster, along with those of Manning, his friend and immediate successor. The amount raised at that time (something like £16,000) did, indeed, form the nucleus of a fund for the purchase of a site—not the present one, however, near Victoria Station. About ten years subsequently the Cathedral was again talked of, and an elevation plan, designed by Mr. Clutton, Cardinal Manning's nephew, was issued as a supplement to the *Tablet*. His designs did not find general favour, his selection as Architect being adversely discussed. Cardinal Manning sank his own predilection in favour of the Italian style of Architecture, deferring to the general preference for Gothic as being more native to the soil. Cardinal Vaughan, who, by the way, sometimes wears the Gothic mitre and copes, cherished by Wiseman and abhorred by Manning, has other views. The new Cathedral will certainly not be Gothic. Mr. Clutton's plans were laid aside, but the leaders of Anglo-Roman Catholicism were not really unmindful of the scheme, for a more favourable site presenting itself, they quietly effected its purchase, and it was said at the time that the vendors thereof were mightily annoyed when they found the purpose to which the fine piece of land was to be devoted. Not long afterwards the actual building was again talked of, and this time the proposal was made by Sir Tatton Sykes, an Anglican, to present to the Roman Catholics a Cathedral which was to be a copy of the famous votive Church of St. Stephen at Vienna. Again the *Tablet* presented its readers with a drawing, and again, for reasons which were not made public, the scheme came to nought. That it was not carried out can hardly be a matter for regret. It was hardly fitting that an ecclesiastical building of first-rate importance should be a mere reproduction of an essentially foreign style little suited to the smoke and soot-laden atmosphere of London. This time, at any rate, the scheme is to become an accomplished fact, and that on a scale which promises to be worthy. Mr. Bentley, the Architect, has done good and solid work of such dignity as to leave little room for doubt of his success in the present instance. His is a chance granted to few, and the absence of competitive designs frees him from any danger of haste. It is understood that the exterior of the building

will be plain and severe, and that ornamentation will for the most part be confined to the interior. Mr. Bentley, who has recently travelled in Italy to refresh his memory in its grand basilicas, may reasonably be expected to reproduce something of their calm beauty. Unfortunately it will be too much shut in to add

Benedictine Fathers. And it is this fact more than the dignity of the material building which will make the new Cathedral of Westminster an important factor in the religious life of London. In this respect it will be practically unique, for, save in the country Cathedral at Belmont, near Hereford, served by the monks of the same Order, there has not been in any Roman Catholic Cathedral in England any attempt since the time of Mary to carry out the complete services of the missal and breviary in their unbroken yearly round. In the new temple of English Roman Catholicism the thread of choral offices according to the ancient use, snapped more than three hundred years ago, will be resumed, and its roof will resound with the monastic chant at the daily High Mass and Vespers. These, as well as the other hours of the breviary, will be publicly performed each day as regularly as matins and evensong at any Anglican Cathedral. The regular fulfilment of choral duties on any large scale imperatively demands an important Cathedral establishment, with relays, so to speak, of officials set apart for the purpose. It will be necessary, therefore, to find house room for a considerable number of the Benedictine Monks who have undertaken to perform these duties. Their return to Westminster is a matter of wide interest. The foundation walls of the new building will enclose a space about 354 feet in length by 160 feet in width, so that the Cathedral, when finished, will be of noble proportions. This space is now being made ready for the ceremonies of the 29th inst. A temporary Altar will occupy a small enclosure near the Cardinal's house. Near it there will be seats for numerous ambassadors and notabilities, besides nearly 300 clergy, including several bishops.

THE Government has now chosen a site for the proposed Statue of Oliver Cromwell. It will be placed in the centre of the spare ground at the side of the Old Law Courts, to the immediate west of Westminster Hall; and, as the ground is sunk there, the pedestal will rest on a base, so that the foot of the Statue may be raised above the level of the roadway. The execution of the Statue, which is to be in bronze, will be entrusted to Mr. Thornycroft.

ROSSLYN's famous Chapel has been enriched by the addition of two beautiful stained-glass windows. One is from Blanche, Countess of Rosslyn, and the other from the Duchess of Sutherland.

THE Memorial to be erected to the memory of the late Earl of Pembroke is to take the form of a Statue, to be placed in the town of Wilton, the cost being estimated at from £1,000 to £2,000.

It has been decided to erect a new School Chapel on a site in Gidlow Lane, Wigan. The estimated cost, including site, is £1,400.

A HANDSOME Jacobean Mural Tablet has just been placed in Holsworthy Parish Church. The Tablet is composed of Sicilian marble, black marble, Portland stone, and bears family coats of arms for the past 200 years. It was executed by Mr. E. C. Westcott, of Dorchester, and is a splendid piece of workmanship.

NORTH-EAST ANGLE OF LADY CHAPEL, YORK MINSTER :
SKETCHED BY C. E. MALLOW.

Architectural beauty to any broad thoroughfare, but to the building itself its retired site will doubtless be a gain. Quiet will be assured, for the roar of traffic is well shut out from the great square, and quiet is essential to the fullest effect of the daily offices of the Church, which will be performed morning and evening by the

THE A.A. DINNER.

CRITICAL AND — CONTEMPLATIVE!

THERE is a contemplative as well as a critical side to Architectural interests, and the pleasant little "A.A." dinner at the Holborn Restaurant, on Friday night, struck the happy hour between the two. It is easier to be contemplative than critical—after you have dined—and we rather fancy that Charity got into the bowl. But no one was the worse for that, and all lived to fight another day. What suggestion was attempted was of the opulent order, brave words about New Buildings and Aspirations and Day Classes and generously to be spent-money, made one think that even Architecture was to have its Golden Age—Why not? The dinner and the discursive discussion disagreed with nobody, unless he were a churl, and the respectable show of spirits—in the loftier sense—made one quite sure that the A.A. is going to press onward to the mark of its high calling. So the little dinner may have signalled an epoch as well as satisfied an epicure. Much may be done, we know—after dinner—or dreamed; or determined; and tobacco, good fellowship, enthusiasm and decent wine have helped onward many a mighty movement, and we are glad the "A.A." dinner was a distinct success. Mr. E. W. Mountford was, of course, in the Chair for the last time, and many regrets paved his progress to the Council of the Institute.

Mr. A. Beresford Pite, in proposing "The Royal Institute of British Architects," said he was sure everyone of them wished well to it. They would not go out of their way to thank it for the handsome subscription to their education scheme; that was a blessing they were bound to take as a matter of course, but they were gathered together that night really as a representative body. They looked on every member of the R.I.B.A. as a fellow Architect actuated by the same high motives. (Hear, hear.) He thought it was quite impossible to conceive the Art of Architecture existing in England and being practised by Englishmen without there being a drawing together in some way of those individual practitioners of a common Art; and if they would grant that proposition they granted it practically as a proof of the necessity for the existence of such an Institute as they had in London—(applause)—for that Institution could not be representative unless all Architects cordially and heartily helped in making it representative of their own convictions. None of them could be so selfish in their own little view of life as to imagine that there were not more than one side, or two sides, or three sides to the vast variety of artistic problems with which they were brought face to face; and the discussion of those problems, and co-operation in dealing with them, was essential to their well-being as a Profession and body of Architects. One had only to look at the Institute generally to be conscious that a vast deal of work was done by that body—work which he could conscientiously recommend to the consideration of every member of the Association. He pointed out that one of the great advantages given to the new student was the admirable Architect's Library, and said such a Library, selected by Architects, and arranged by Architects, was an essential to their Profession. He next drew attention to the students' list of competitors and the various prizes, medals and rewards offered, and said that no one could deny the vast good done to any Profession by having a representative body of judges of students' competitive work, and by giving prizes for such subjects which would draw out the latent talent of the rising generation. The Institute did that for them, and did it in a broad and generous spirit. He ventured to throw out, what might be a timely hint, that should any attempt be made to confine this good work they would have to drink the Institute's health very low down in their toast lists at future dinners. He humourously referred to the fact that the Institute bestowed upon them a Journal and a liberal education upon the Art of officialism and red tape. One was forced to ask, he said, a very pointed question. Was the Institute resolved that it was quite impossible for it to do anything to further the interests of Architecture as an Art? They all admitted what the

Institute had done for Architecture as a Profession, and its usefulness with regard to fixing the professional status of a professional man; and they might hope that renewed health and increased vigour would produce an activity which would bring some artistic influence to bear upon them as a body. (Hear, hear.) He could not help hoping that the Institute would set itself the task of trying to solve the very apparent problem how best to further the interests of the Art of Architecture. (Applause.) It was not very easy for a youngster to dictate to so august a body as the Institute, but he thought the competition for prizes ought to be indefinitely extended. Why should not the Institute inaugurate a School of Design by inaugurating a series of rewards for Design? He did not see that it was at all impossible. (Hear, hear.) They were all cordial well-wishers for the Institute; and they wished it well in everything that would benefit themselves as professional men, but they certainly wished it renewed health—fresh health—and invigorated strength in all its dealings. (Cheers.)

Mr. Florence, in reply, said he was only informed a few minutes back that he was elected to respond to the toast. He had had no opportunity to prepare any of those carefully studied impromptus that were such an ornament to after dinner speeches. One would almost think, from Mr. Pite's remarks, that the Institute and the Association were entirely two separate and distinct bodies, but after a little further consideration they would see that those distinctions were more in matters of form than in reality. One was that the Association was enabled yearly to have a dinner—(laughter)—in the Institute it was one of the rarest things they did, so that looked as if the Association were more thriving than the well-paid members of the Profession. They who were members of the Institute, had nearly all of them been members of the Association, but they carried with them into the offices of the Institute the same feelings and the same ideas that they used to have when they held similar offices in the Association (applause). They had possibly altered some of those impressions (laughter), but they used to make the same sort of speeches ten or twelve or twenty years ago. After all, they were two grades of members of one large body, united by the same ideas. They had heard so many suggestions from Mr. Pite that he hoped he would have given them some idea as to how something might be done. One point seemed to refer particularly to the establishment of more prizes and higher rewards. That could scarcely be seriously considered, because if it was to be taken at all in that view the position of the Institute in regard to its financial condition would have to be very seriously considered. They certainly had no funds with which they could establish a series of gold medals, which seemed to be distributed with some profusion among members of the Association. When he was looking through the balance-sheets of the two Associations, he discovered a great amount of money spent by the Association on meetings of a festive character (laughter), and it seemed to him that the financial monetary assistance rendered by the Institute did not suffice to pay for this. Another point which he thought should be regarded was that they were not the Royal Institute of London Architects; they were the Institute of British Architects. Many of the suggestions that had been made, and many of those who made them, had rather seemed to take the point of view that they were representatives of London Architects alone, but he could assure them that in the deliberations at the rooms in 9, Conduit Street, the affairs of the Profession in the provinces received a large amount of attention, and a very great portion of the Institute's inadequate funds was expended in purposes connected with the provinces, an expenditure for which there was no definite or immediate gain to be shown, but it maintained greatly the good fellowship which the Institute endeavoured to promote among Architects in every part of the United Kingdom. As the Institute was recruited weekly and monthly and yearly from the Association, it followed that the development of its action in the future, and any efforts that might be made by it to increase the opportunities for the cultivation of Archi-

itecture as a Fine Art, depended very greatly upon the votes of their members. He must take it on the whole that the policy of the Institute was approved by the whole of the United Kingdom, because they saw how frequently the Council was returned to office, with the addition, sometimes of no change at all, and very frequently with a change of only one or two names. Therefore, in thanking them for the way in which the toast had been proposed and received, he felt he might say that the Association supported the Institute. (Applause.)

Professor Simpson proposed "The A.A." He admired the way the A.A. had stuck to its early love—that of Education—through thick and thin. The A.A. had gone steadily ahead, improving year by year, its scheme of education for Architectural students, and in consequence it was the one body in England to which every one interested in the question of Architectural Education turned for advice. One thing he was certain of and that was that in whatever way the A.A. might change, it would always receive the loyal support of its members. (Applause.)

Mr. W. H. Seih-Smith, in responding, said they wanted young blood in their Association, and they prided themselves on having a large amount of it (hear, hear). He supposed that they were evolving a more important institution out of the A. A. gradually. The evolution theory seemed based on environment. They certainly were becoming more charitable; the remarks made that night showed that there was a very kindly feeling existing between the Institute and themselves. The Association certainly did deserve the words of commendation uttered by Professor Simpson. There was no doubt that the Architects in England, especially young men beginning their studies, did look to the A. A. as being the body under which they could get education in the best way to train themselves for the Profession. The scheme which had been working now for two or three years was a great step forward, and he was confident in saying that it had met with very great success (applause). There were various reasons—and he did not think he was alone in his opinion—to lead one to think that some modification of that system would be necessary. It seemed to him that their Evening Classes must be kept up and developed in every way, and there was no doubt they would be a great success, but they must in addition to that have Day Classes with a thorough curriculum. (Hear, hear.) He thought the thing which crippled them most was the premises which they now occupied. They certainly ought to endeavour to build something for themselves. They wanted a good building; they did not want an expensive one, but a building which would be exactly adapted to their purpose, and then they would be able to establish Day Classes. It did seem to him an extraordinary thing if among the ten or twelve thousand Architects of England, they could not raise £5,000, which would be ample to build something of that kind. They must not rely on outside help; they must rely on themselves. He knew what an immense amount of time Mr. Mountford had spent on the Association during his two years of presidency; he knew also that this particular question of premises had been very near his heart from the beginning. (Applause.)

Mr. Banister Fletcher gave the toast, "The Instructors and Studio Visitors." He said the Instructors were mostly Architects, and had all been selected for their special aptitude in certain directions. The duties of an Instructor were, he believed, to instruct, but he thought the Instructors of the A.A. recognised more than that, and acted on the principle that their duties were rather to show the Students how to instruct themselves. (Applause.)

Mr. Farrow remarked in response that the endeavour of the Instructors had been to follow out the principles which guided the Education Committee when it formulated the present curriculum, to give the Students such an education as to make them Architects, and not merely to cram them for examinations. (Hear, hear.)

Mr. Stirling Lee said they were doing the highest and best thing in trying to combine the Arts, and in bringing all the Students in association with those men who were trying to work out all the problems connected therewith;

and if they could by any means relieve the Students in their studies, he was sure everyone would feel that they had done good work. (Hear, hear).

Mr. Goldsmith proposed "The Visitors," coupled with the names of Mr. H. W. Burrows and Mr. W. S. Weatherley. He said if ever there was a Society that was honoured by the friendship of men who represented all kinds of thought and all modes of work, the A.A. was that Society.

Mr. Burrows and Mr. Weatherley responded.

The Chairman, who was received with much enthusiasm, then proposed the health of the new President, Mr. Carøe. He said the presidency was no light position to hold, but he thought that with the courage and strength which Mr. Carøe had shown in his daily life he would successfully overcome the difficulties he would have to encounter later. (Hear, hear). It had been his (the Chairman's) good fortune to be intimately associated with Mr. Carøe for some years past both in the Association and the Institute; and he knew well the powers he had shown both on their Committee, and as hon. secretary of the Committee of the Institute, and also as member of the Council of the Institute, powers that would enable him to carry on the word of the Association to a higher pitch of excellence than it had yet attained. (Cheers).

Mr. Carøe replied, and claimed that he had done at least one thing for the Association, and that was when he gave to them as permanent secretary, Mr. Driver. (Applause). He concluded by proposing the health of the Chairman, which was accorded with musical honours.

The Chairman briefly replied and then gave "The Retiring Officers," which was responded to by Mr. Goldsmith and Mr. F. G. F. Hooper.

The proceedings shortly afterwards terminated.

NORTH OF THE TWEED.

NOTES FROM GLASGOW.

[BY OUR CORRESPONDENT.]

BUILDING in Glasgow continues to be brisk. Besides those intended for ordinary dwelling-house accommodation there are in progress and in prospect many buildings that, from their extent, their purpose or their design, are of considerable importance. The 28th of May is term day in Glasgow, and as it gives over possession there are always awaiting it many sets of plans, either of new buildings to be built or of existing ones to be converted. The business following the 28th is now added to that of a season of unusual activity, and speaking generally, Architects and Builders have not been so fully employed for a long time. The Dean of Guild Court, held previous to the term, was the heaviest on record; the total cases numbered 81, and the value of the linings presented to the Court amounted to the large sum of £146,000. At the last Court 28 applications, representing a value of over £100,000, were presented.

Among the works about to be commenced are alterations on the Corn Exchange (£15,000), Mr. W. F. McGibbon, Architect; Bible Training Institute and Young Men's Club, additions to the Christian Institute, Bothwell Street, Mr. Geo. Bell, Architect; the erection of Masonic Halls in West Regent Street (£12,000), Mr. J. L. Cowan, Architect; additions to the National Savings Bank at the corner of Ingram Street and Glassford Street, Messrs. John Burnet, Son & Campbell, Architects. In connection with the latter, there has been a little trouble over the adoption of the plans. Government sanction to expend £18,000 of the surplus funds was obtained, but in going more closely into the plans, the Architects found that a further sum of £8,000 would be required to complete them. The Trustees intend going on with the increased estimate notwithstanding adverse criticisms in certain quarters, and to this end application has again been made to the Government Department for permission to draw upon the surplus funds up to £26,000. A fine drawing of the proposed building by Mr. Alex. McGibbon, is presently exhibited in the Royal Academy. Extensive alterations are in progress at the County Buildings, Messrs. Clarke & Bell, Architects of the original, are directing the work.

No street in Glasgow has changed in the character of its Architecture within the past twenty-five years more than the fashionable shopping resort, Buchanan Street. One by one, the old dingy buildings have come down, giving place to edifices more or less important and interesting, till now there remain not more than a dozen or so to remind one of the former order. On the west side, an old building is being rapidly taken down to make way for Cranston's Tea Rooms, Mr. Geo. Washington Browne, of Edinburgh, Architect. Higher up, on the east side, workmen are no less actively employed clearing the site for offices for the Royal Insurance Company, Messrs. Thomson & Sandilands, Architects; and within a stone throw the striking building, erected from plans by Mr. Robert Thomson, for the North British Rubber Company, is fast approaching completion. The narrow frontage to Buchanan Street is bounded to the south by a lane, and to leave every inch available, the Architect has adopted a cantilever principle of construction, thus dispensing with the usual columns supporting the lintels. The very heavy corner masonry pier, forming a jamb to the oriel which is the full breadth of the front, is, in consequence, apparently supported on an inadequate surface of plate glass. The result from an æsthetic point of view is much to be regretted, the more so as the rest of the building is designed on the right lines for a site of this kind.

The extended premises built for the proprietors of the *Glasgow Herald* in Mitchell Street by Messrs. Honeyman & Keppie are nearly finished. The original part of the block facing Buchanan Street was designed by the late Mr. James Sellars, with whom Mr. Keppie was associated for a time. The new erection, which is partly used for Warehouses and Shops, is as perfectly fireproof as possible, and a prominent feature has been made of a lofty Water Tower, the contents of which are to be used in case of fire. As a result of this precaution the Fire Insurance Companies take discount off the ordinary rates. The design of the building is interesting, and displays, more especially in the treatment of the Tower, the individuality of Mr. Chas. R. McIntosh. While reserving an opinion on much of the detail, which is novel to the verge of eccentricity, one may without hesitation express unqualified admiration at the successful effort which has been made to depart from anything hackneyed or jejune.

The new Art Galleries in Kelvingrove Park, Messrs. Simpson & Allen, London, Architects, are progressing. The erection of the basement will be finished in a month, but the work is not sufficiently advanced to call for further remark. The Committee are now advertising for tenders for the superstructure and the completion of the building. The Theatre Royal, which was gutted by fire last March, is being reconstructed from designs by Mr. C. J. Phipps. A Company will play in the completed Theatre early in September.

The Glasgow Bridge across the Clyde was finally closed against all traffic last week, and is now in the hands of the contractors for demolition, previous to rebuilding. This is one of the busiest sites in Glasgow, as it forms the principal communication between the north and south sides of the river. A substantial Service Bridge, carrying the water and gas mains has been erected a short distance up the river. It was originally proposed to replace it by a bridge of four arches, from designs by Mr. Blyth, C.E., and to re-erect the old Bridge at a point in line with Govan Street, thus providing a new and direct outlet for cart traffic between the manufacturing and engineering districts of the south side and the east end of the City. Chiefly on the score of economy, the scheme was departed from, and the existing Bridge will merely be reconstructed. The Glasgow Institute of Architects made a request for a public exhibition of the drawings, but the Statute Labour Committee replied that as the work was simply one of reconstruction, it did not seem to them necessary to exhibit any drawings. The existing bridge, designed by Telford, consists of seven arches, and is graceful in composition,

and appropriate in detail. Had the first scheme been adhered to the reduction of the number of arches, and the resulting increase in the waterway would have greatly facilitated the navigation of the upper harbour. From an artistic point of view the change is perhaps not greatly to be regretted; too frequently in proportion as Engineering Science becomes greater Architectural Art becomes less. The new Bridge in Kelvingrove Park, replacing the original wooden structure extemporised for the use of the Prince of Wales when he laid the foundation-stone of the University Buildings, is almost finished. It is a pity that the Bridge has been made of a single arch. By raising the level of the Bridge the popular walk on the east side has been cut in two and irrevocably spoiled. A small land arch on that side would have allowed the walk to be retained.

Even in Glasgow, where an almost unequalled water supply exists, anxiety is felt as to the summer months should the present dry weather continue. This is due quite as much to the excessive quantity used in the City as to the smallness of the rainfall. At a recent meeting of the Water Committee the engineer reported that the quantity of water at present drawn into the city exceeded that at the corresponding period last year by nearly four millions of gallons per day. No doubt the constant increase in population has something to do with this. The engineer thinks that one reason for the extra demand made upon Loch Katrine arises from the leaky condition in which many of the pipes inside dwelling houses have been left by the recent severe frost. The *Herald* gives a timely note of warning on this point, and advocates greater economy in the use of the supply.

The Glasgow Institute of Architects (the Senior Architectural body in the City), and the Glasgow Architectural Association, have arranged a scheme of joint occupancy of premises. The Association has for a long time felt the want of more suitable and commodious premises, and the Institute which has hitherto held its quarterly meetings in the Chambers of the Secretary, on being approached expressed a desire to possess more permanent accommodation. A Joint Committee was appointed, with the result that a dwelling-house in a suitable locality has been leased, and after structural alterations, the new Rooms will be occupied in September. A caretaker will reside on the premises, and the Rooms will be open at all times. At the last Quarterly General Meeting of the Institute, eight candidates recommended by the Council, were elected members of the Institute, and the Association is looking forward with confidence to a large increase in its membership and usefulness when the work of the Winter Session commences. The Secretary of the Association, Mr. Walter R. Watson, has been appointed to assist Mr. Wm. J. Anderson, A.R.I.B.A., Principal of the Architectural Department in the Glasgow School of Art.

THE new Schools at Keir Street, Barnsley, were opened last week. The Schools will accommodate 300 scholars, and cost on average £12 16s. per head. The cost of site, erection and furnishing, &c., amounted to £3,765.

A NEW Infant School is about to be erected in the Parish of St. Lawrence, Longridge near Preston. The cost, together with certain alterations to the existing Girls' School, will be £1,000, which will be defrayed by subscription.

At the special meeting of the General Committee of the Walsall Hospital, plans were adopted for the restoration of the buildings which were wrecked by the late gale, and the addition of others, at a total estimated cost of £2,700.

THE Lords of the Admiralty have approved of the sum of £25,000 being included in the Navy estimates of 1896-97 for carrying out alterations in the existing buildings and the erection of new Workshops at Devonport and Keyham. This expenditure will greatly add to the efficiency of the Dockyard, and is independent of the expenditure under the Naval Works Bill of £2,000,000 on Dock extensions at Keyham, and of £30,000 for the enlargement of Keyham Engineering College.

A QUAIN CHURCH IN WEST CORNWALL.

A STUDY IN PERFECT PROPORTION.

THOUGH one of the smallest of the Meneage Churches, St. Mawgan Church, which was re-opened on Thursday, after extensive restoration, is the most interesting in a particularly interesting district of Cornwall. It is one of the typical low-lying Churches of the West, situated in the midst of the village, with elms and ashes grouped picturesquely in its neighbourhood. The Tower is noteworthy among Cornish Towers. It is massively built and well proportioned, with exceptionally fine Pinnacles. There is a good sun dial in the churchyard of last century date. The shaft of the old Cross, full 6 ft. high, is situated 300 yards from the Church, on which some rough lettering may be made out with the aid of a candle at night time, this being the light most favourable for tracing the inscription. The head is gone, but it was probably of the plain cross form previous to the round-shaped head in which the sign was delineated. The Cross may be classed among the earlier Cornish examples, being of late fourth or fifth century date. There are no remains of the Churchyard Cross except, perhaps, the rough stone, 2 ft. square, now lying in the Churchyard, having done duty as a Font Stone. On entering you cannot help feeling what a delightful little Church this is—so simple, and yet what exquisite proportion is to be found in all its details. Surely this Church, with its seven bays of arches, is more than 88 ft. long. Such effect can only be gained by perfect proportion. The capitals are only 8 ft. from the floor, yet the arcade would be too high if raised another 6 inches. Eighteen months ago the roof was falling down, and rain streamed in during rough weather, but yet hardly a new rib has been added to the roofs. All the old timbers have been re-used. The North Aisle and North Transept roofs are grand examples of carved roofs, added to the Church in the early part of the sixteenth century; and they now look as if they had never been disturbed. The carved angels at the feet of the principal ribs had gone, but facsimiles have been made from an old example. It is more than probable that the earliest form of the building consisted of a private Chapel for the Carminnow family. Their Chapel consisted of the present South Transept, to which the Church was afterwards added. The original Chapel may be safely assigned to the Norman period. Most of the east wall and the lower part of the south-west walls of the Chapel may be ascribed to this time. Unfortunately the Chapel suffered by being rebuilt in the early part of the present century, but the east wall is fairly intact in its original state, as a two-light tracery headed window was found during the restoration. This window was blocked up, part of it serving as a chimney at the time of the rebuilding mentioned, and a Vestry was jammed up on the outside, also blocking up a lancet of early fourteenth century date in the south wall of the Chancel. The head and arch of a similar window was discovered further eastward in the same wall. In further evidence of the antiquity of the east wall of this Transept, a Piscina, arched with the long rough stones characteristic of thirteenth century date, was discovered in the wall. It was necessary to connect this Chapel now forming the South Transept with the body of the later Church. The north wall was consequently removed, and substituted by an arcade of two bays, or in earlier times the opening may have been spanned by a stout beam. At the time of the restoration, the opening was spanned in this way, but it was a clumsy and comparatively modern erection, so twin arches were substituted, corresponding exactly with the opposite bays of the Nave arcade. The reasons for this treatment were manifestly correct from the carved capital facing this aperture on the east quoin. The Transept still contains the two stone effigies known locally as the Carminnow giants. The earliest features in wrought stone was found hidden in the wall of the Porch. It is a holy water stoup of early thirteenth century date, in good condition. It is unusually large, and is simply but boldly executed with a square projecting bowl. Perhaps the most interesting feature in the

Church is the elaborate hagioscope, made through the corner of the South Chancel and South Transept walls, which served as a passage from the Transept, or Carminnow Chapel, into the Sanctuary. This passage shows that the Chapel was separated, presumably by a screen, from the Nave. The walls over the passage are taken by piers of granite, one 13 inch thick, the other only 3 inches, the top being arched over. The passage is lighted by a small cusped window. The idea some people have that this was a hermit's cell, and the other similar passages, of which there are two in Cornwall, is erroneous. There is no foundation or evidence for the supposition. The North Aisle was added in the eighteenth century, the previous Church being cruciform. The North Transept is somewhat later. The carved roofs are equal to any in the West of England. All the principal ribs, purlins, and wall plates, are 6 inches wide, richly carved with different patterns; the bosses to these roofs are nearly all original. The Architect, who is familiar with West Country Ecclesiastical Architecture, knows of no other window with carved external jambs like the east window in the North Aisle. The effect of this window is very charming. The old Mausoleum of the Vyvyan family was situated at the west end of this Aisle, blocking up half the west window. This has been removed. There are several fine inscription stones, with carved devices upon them, which have been refixed in their original positions. The task of restoring such a Church has been a hard one, but the work has been well done by Messrs. Eva and Richards, of Helston. The Church may fairly rank as one of the quaintest and most picturesque in the West Country. The Architect for the restoration is Mr. Edmund Sedding, of Plymouth.

Professional Items.

THE number of Educational Buildings in Chesterfield has been increased by a new Board School. The new School is situated at Brampton, close to the Brampton Board School, built by Brampton prior to the extension of the Borough of Chesterfield. Provision is made for 280 children, at a cost of about £3,910. Messrs. C. Rollinson and Sons were the Architects, and Mr. W. Forrest, Chesterfield, the Builder. The place will be heated by hot water.

THE Free Church which is to be erected at Muthill, Perthshire, at a cost of £2,000, is from the plans of Mr. George T. Ewing, Crieff.

A NEW building is about to be erected in Park Row for the Leeds branch of the National Provincial Bank of England, from the designs of Messrs. Perkin & Bulmer, Architects.

THE first of five sets of Public Baths to be provided in Leeds by the Corporation, was recently opened by Councillor John Lowden, who was presented with a handsome gold key of Renaissance design, made by Messrs Chubb, as a memento of the occasion. The building is in the Kirkstall Road, and is built on the same plan as the Batley Baths, with two Entrances, one to the 1st Class and one to the 2nd Class Baths. Between these doors is the Office, above the Manager's House, and to the rear the Laundry. The Baths are arranged on one floor level, so as to obtain easy access and the minimum of labour in working. The size of the 2nd Class Bath is 89 feet by 46 feet, the water area being 75 feet by 30 feet. The depth varies from 3 feet to 6 feet. On both sides and one end is the Spectators' Gallery, to accommodate 250, underneath which are Dressing Boxes, having divisions of polished slate. The 1st Class Bath is 73 feet 6 inches by 33 feet 6 inches, the water area being 63 feet by 24 feet. Here the Gallery only extends along one side. Underneath again are the Dressing Boxes, in this case the divisions are of polished white marble. The Shells of the Baths are of concrete, lined with glazed white tiles. Lantern lights are used principally for lighting, and as little wood as possible has been introduced into the interior so as to facilitate the cleaning, which may be done by means of a hose-pipe. The contract sum has been £6,982, exclusive of land, Architect's fees, and Clerk of Works. Mr. Walter Hanstock, of Leeds, is the Architect.

It has been decided to proceed at once with the building of the new Porches and Cloak Room to St. Paul's Schools, South Hampstead, also to carry out the necessary repairs to the St. Paul's Church Parish Room. The Architect for this work is Mr. W. Hargreaves Raffles, of 9, Argyll Street, Regent Street, and the Builder is Mr. W. J. Moody, of 87, High Street, St. John's Wood.

THE Barnsley Board of Guardians has adopted plans prepared by Mr. G. Moxom for the re-organisation of the Workhouse, at an estimated cost of £500.

THE latest addition to Lynmouth is the Lyn Valley Private Hotel and Boarding Establishment which is situate at the side of the West Lyn and immediately fronting the East Lyn. Exteriorly the appearance of the building is effective, and the interior arrangements, Architecturally and otherwise, are equally satisfactory. The Hotel was designed by Mr. Smith Richards, Architect, of Barnstaple.

A NEW Chancel which has just been added to St. Paul's Church, Esholt, has been consecrated by the Bishop of Richmond. The cost of the work, which has been executed from the designs of Messrs. F. & T. H. Healey, Architects, Bradford, has been generously defrayed by the Misses Crompton-Stansfield, of Esholt Hall, who have erected the Chancel as a memorial to their parents, the late Major-General and Mrs. Stansfield. A new Altar has also been placed in the Church.

THE scheme to provide new Church Schools at Almondbury, Yorkshire, to supersede the old Schools and to accommodate 400 children, was inaugurated last week, when the Foundation Stone of the Infants' School, which will accommodate 130 and cost £1,000, was laid. The new Schools will be on a site of 1,000 yards of land given by Sir J. W. Ramsden, Bart. The Architect is Mr. E. W. Lockwood, of Huddersfield, and the contractors for masonry and joinery are Messrs. Graham & Jessop, of Mold Green, Huddersfield.

A NEW Wesleyan Chapel has been opened at Garton, near Driffield. The building, which stands within a few paces of the old one, includes a Schoolroom connected by folding doors, to be used on occasion as a Transept, will accommodate 200 people, and has cost about £800. The Architect was Mr. Joseph Shepherdson, of Driffield.

ON a site given by Mr. Walker, of Ravenshorpe Manor, a new Wesleyan Chapel will shortly be erected in Boltby. The building will be of local stone and in the Gothic style, and will accommodate 159. The interior woodwork will be of pitch pine, and the heating by hot air, supplied by the Sheffield Heating Company. The cost will be about £450, and it is expected the building will be finished by October 31st. Mr. T. Stokes, of Thirsk, is the Architect.

LANCASTER is to have a new Baptist Chapel and Sunday School in Nelson Street. The total cost of the new scheme is estimated to be £5,000, including School, Chapel and land. There was received on sale of the present premises and insurance claim, arising out of the fire a short time ago, £1,845. The Architect of the new premises is Mr. N. C. Lewis, Lancaster. For some years, the existing premises have been found too small, and the fire about twelve months ago brought the question of new premises to a crisis.

MESSRS. AUSTIN AND PALEY, of Lancaster, are the Architects for the new School Chapel, which is being built at Sedbergh, Yorks. The Chapel will be in the Perpendicular style of Architecture. The external walls will be of local stone, with dressings of Yorkshire Cullingworth stone, faced internally with pink flecked Runcorn stone. Roofs and fittings will be of pitch pine—the roof covered with flag slates and surmounted at junction of Nave and Chancel with a wooden Bell Turret, with leaded spirelet. The portion being erected at present will accommodate 280, and will cost £4,098. Messrs. Brassington Bros. and Corney, of Settle, are the contractors.

MESSRS. PUGIN & PUGIN, of Westminster, were the Architects for the Roman Catholic Church of the Sacred Heart in Talbot Road, Blackpool, erected in 1857, which was re-opened last week, after being doubled in size at a cost of £8,000. Mr. W. Eaves was the builder.

1ST PREMATED PLAN,
A. W. NEWMAN, 5, BLOOMSBURY SQUARE, W.C.

SWIMMING BATHS COMPETITION.

2ND PREMATED PLAN,
E. W. BANFIELD, 15, PENFOLD STREET, S.E.

SWIMMING BATH COMPETITION.

THE ASSESSOR'S AWARD.

- 1.—"Mac," A. W. NEWMAN,
5, Bloomsbury Square, W.C.
- 2.—"Shylock," E. W. BANFIELD,
15, Penfold Street, S.E.
- 3.—"Carlos," CHARLES S. STONE,
Woodridings, Pinner.

OF the many sets of designs submitted, unfortunately most have been prepared without knowledge of the details of such buildings. Students should visit existing works and make themselves acquainted with their arrangement as far as possible, and then consider how to utilize their knowledge for a plan on a certain site. It is more agreeable for an assessor to find greater merits than defects, but, with regret, it must be said the latter predominate in the present instance.

After careful consideration I award the 1st place to the design "Mac," 2nd to "Shylock," 3rd to "Carlos."

"Mac" has well arranged separate entrances for ladies and gentlemen, and provision made for ladies using Swimming Bath on certain days. The Plunge Bath, without a gallery, is well lighted and ventilated by top central lantern. No scum trough, spittoons or guard-rails shown. Channel on sides properly away from edge of Bath, but not shown so at ends. When the footway falls towards edge of Bath, it is a difficult matter for the Bath attendant to prevent, when cleaning down, the dirty water getting into the Bath. The Ladies' Private Baths are top-lighted, but I do not see how ventilation is obtained. The Men's Baths should have been top-lighted, the side windows are not sufficiently large for the requisite light and ventilation. The Laundry and Boiler House would be sufficient, but the latter requires to be sunk below water-level for warming the Bath; the Caretaker's Apartments are excellent, more ample than usual. The drawings are very neatly executed. Elevation picturesque, but rather too much the effect of a couple of Cottages, and the ventilating pipe to w.c. is a useful but not an ornamental feature to the front.

"Shylock" has a somewhat similar plan. Shower Bath is shown, but no Foot Bath; footway channel objectionably close to edge of Bath; Ladies' and Gents' Slipper Baths are shown the wrong way, the foot should be to the Corridor. There are small skylights in addition to side lights; a lantern light is the best arrangement; four urinals and two w.c.'s are not required by visitors to six Slipper Baths. Boiler House is properly sunk to a lower level. The Ticket Office would be rather dark without a glazed screen to the Superintendent's Office. A serious point is the position of stairs for superintendent's use; they are too close to the doors to Plunge Bath.

"Carlos" has separate entrances for the men and women. The Swimming Bath is placed at the side of site, thus giving good exits if the Bath be used for public meetings. The Private Baths are top lighted, but there is a great waste in Hall, and, therefore, the plan is not so compact as it should be. Subways are shown for pipes side of Plunge Bath, but there is nothing to indicate that this proper arrangement is continued to Private Baths. The Laundry is the best shown. The Boiler House (wrongly placed on ground level) would be of adequate size. The Caretaker's Apartments are sufficient. The elevation is very bold, and it is a pity that so large a frontage has not been better utilized.

"Myron" shows a simple plan. The Swimming Bath is badly ventilated. The four Caretaker's Rooms are without any fireplaces, two are in the basement, and one of these has the two windows under the entrance steps. It is a pity more consideration was not given to the work.

"Chevron," rather a straggling plan. One entrance only for ladies and gentlemen. Dressing boxes one side and end. Laundry and Boiler House of meagre dimensions. The elevation is of very suitable design, and had the plan been better a place would have been secured.

"The New Boy" shows one entrance only for men and women. The Women's Waiting

Room has a window overlooking Swimming Bath; it is presumed this is a special arrangement for "The New Woman."

"Nemo" breaks the side of Plunge Bath by the bases to the stanchions carrying the gallery; all supports should be next the boxes so as to leave the footway and side of Bath free.

Other sets were submitted by "Youth," "Thomo," "Edina," "Onward," "Fides," "Nautilus," and "Something Attempted." Drawings by "Horseford" and "Endeavourer" were delivered too late for consideration.

JOHN JOHNSON, A.R.I.B.A.

9, QUEEN VICTORIA ST., E.C.

[The Assessor may not object to our remarking that the only instance of really appropriate design in the elevations is that of "Myron," whose drawings we shall publish next week.—Editor, BUILDERS' JOURNAL.]

The Builders' Journal COMPETITIONS.

No. 4.—A Village Church.

Designs are required for a Village Church to seat 200 people. The site is a hill-side, rising one in twenty from North to South, and situate in a stone country. The cost is not to exceed £2,500. Drawings to be submitted on or before Monday the 22nd of July.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Publishing.

SOCIETY MEETINGS.

Liverpool Engineers at Rivington.—

Members of the Liverpool Engineering Society paid a visit to the Rivington waterworks of the Liverpool Corporation on the 8th inst. Owing to other engagements, Mr. Joseph Parry, M.Inst.C.E., the Water Engineer, was unable to join the party, who were accordingly accompanied over the works by Mr. R. T. Martin, the Resident Engineer. Proceeding to Chorley, the party drove the full length of the works from Heapey to Horwich, a distance of several miles, halts being made to view the most important engineering features. The various reservoirs, &c., have an aggregate area of 615 acres, and contain 4,107,000,000 gallons of water, and the works are completed by filter beds of over five acres in extent. The Upper Roddlesworth Reservoir is 38 acres in extent, the greatest depth of water being 64 feet, and the total contents about 180,000,000 gallons. The Lower Roddlesworth Reservoir is 16½ acres in extent; the greatest depth of water is 78 feet, and the total contents about 100,000,000 gallons. The Rake Reservoir is 14 acres in extent, the greatest depth of water being 78 feet, and the total contents 80,000,000 gallons. The Anglezark Reservoir is 197 acres in extent, and the total contents about 1,019,000,000 gallons. The two Rivington Reservoirs cover 275 acres, and contain 1,841,000,000 gallons, the greatest depth being 40 feet. The Chorley Reservoir covers 10 acres, and contains 48,000,000 gallons, the greatest depth being 39 feet. The Yarrow Reservoir is 65 acres in extent, and contains 840,000,000 gallons of water, the greatest depth being 93 feet. The filter beds are six in number, each 300 feet long and 100 feet wide and 10 feet deep, and are composed of layers of sand and gravel.

Society of Engineers.—At a meeting of the Society of Engineers, held at the Royal United Service Institution, Whitehall, on Monday evening, the 10th of June, 1895, Mr. Wm. George Peirce, president, in the chair, a paper was read by Mr. Herbert W. Umney, associate, on "Safety Appliances for Elevators." The author commented on the fact that although lift machinery had often been discussed by different learned Societies, yet the accessories had received but scant notice. He said that the importance of the detail selected as the subject of his paper was too obvious to require any apology, brought home to everyone has it had been by the recent sad death of a member of the Profession. The shock, caused by the sudden stoppage of the lift, was referred to, and the effect of a retaining valve noted as confining the consequent increased pressure to the consumer's own pipes. The more general application of a relief valve to prevent pipes being overstrained was advocated. The diaphragms usually placed in direct-acting and suspended lift cylinders to regulate the speed of the ascent were considered all that could be desired as a safeguard in order that the lift might descend slowly in the event of a pipe failing. The introduction of water balances for direct-acting lifts, while removing the danger of overhead gear, introduced another weak point—namely, the risk of the failure of any part between the balance and hoisting cylinders. The author next drew attention to a break-valve fixed next to the hoisting cylinder, which would only allow the lift to descend very slowly in case of any such accident. The subject of gears attached to the cages of suspended lifts was then considered. The increased use of wire ropes was referred to, and the author firmly asserted that when more than one rope was employed to raise the cage, the tension on all the ropes should be equal. Returning then to the improved gear, consequent upon the displacement of hauling chains by wire ropes, he showed a design based on similar principles to former spring gears. After mentioning the remote possibility of all the lift ropes failing at one and the same time, he drew attention to the fifth rope adopted by makers, of which he approved when applied also as a means of checking any excessive speed of the lift while at work. He then illustrated the passing of such a rope round a governor, and also another means of attaining the same object in a simpler way, by passing the rope over a pulley and attaching it to a small weight, which

would actuate the gear by virtue of its inertia when the speed of the cage became abnormal. He pointed out that this latter arrangement acted very well as a safety gear by itself, since its effectiveness varied not merely as the velocity, but as the square of the velocity, of the falling cage. He then complained of the inaction of the Government in not carrying out periodical inspection of lifts by Factory Inspectors, or some such officials.

Devon and Exeter Architectural Society.—At the annual meeting which this Society recently held, Mr. Arnold Thorne was elected president for the ensuing year, and Mr. Crocker vice-president, Messrs. Warren, Commin and Cole, were elected on the Council, and Mr. Tait was re-elected hon. treasurer. The resignation of Mr. Warren as hon. secretary was accepted with regret, and the selection of a successor was left to the Council. Mr. Ballam was re-appointed assistant secretary and librarian.

British Archæological Association.—The members of this Association recently held their concluding meeting of the session, Mr. C. H. Compton occupying the chair. Mr. W. de Gray Birch read a list of the places to be

visited during the forthcoming Congress at Stoke-on-Trent, in August. Mrs. Dent, of Sudeley Castle, sent for exhibition some further illustrations of tiles from Winchcombe Abbey. A paper was read by Mr. Walter Money on Shirburn Castle, Berks, and some notes on four Northamptonshire Churches of the Norman period, from the designs of a French Architect, were contributed by Mr. J. T. Irvine. Mr. R. B. Barrett then read a paper upon Caistor Castle and Sir John Fastolf, which was illustrated by some pen and ink drawings.

Trade and Commerce.

Granite Plaster.—We are glad to hear that our belief in the qualities of Granite Silicon Plaster, tested by us at the Building Trades' Exhibition, is justified, and that the material is worth attention. The manufacturers are The Granite Silicon Plaster Company, of 36, King's Road, St. Pancras.

Withdrawal of Tender.—At the last meeting of the City Council of Liverpool, it was agreed that Messrs. J. Paterson & Son, of Soho

Street, Liverpool, be allowed to withdraw their Tender for the erection and completion of the proposed new Central Fire Station and Police Buildings in Hatton Garden for the sum of £30,770. Alderman Bowring explained that thirteen tenders were received, and the lowest was accepted. After that had been done, the firm found out that it had made a mistake and could not carry the contract out. The Finance Committee was now seeking for new Tenders, and it was hoped that they would be opened in the course of the week. The Real Estate Committee of the Corporation has considered a list of firms who will be invited to send in fresh Tenders. The Liverpool Master Builders' Association has written to the Finance and Estate Committee expressing regret at the decision arrived at on the subject of the Tenders.

The Leicester Building Strike.—The Joint Conference, under the presidency of Sir William Markby, the mediator appointed by the Board of Trade, settled, on the 6th inst., the dispute in the Leicester building trade which has lasted ten weeks. The discussion occupied six hours. The result is that the employers have eliminated their claim to employ non-

GRANITE PLASTER

As supplied to Her Majesty's Government.

You can render and
float in one coat and
set same day.

You can paint or paper
within a few
days from finishing.

It is intended to displace ordinary lime plaster, and the price has been brought down so as to give to the Trade a first-class material, with all its advantages, at about the same cost.

WE CLAIM, BRIEFLY, THE FOLLOWING ADVANTAGES:—

It is fireproof, and a perfect non-conductor.

It presents, when finished, a smooth surface as hard as stone.

It is extremely simple to prepare and easy to apply.

It is the best thing for quick repairs.

It has no rival positively as a structural material.

Our Pamphlet, containing all particulars, will be sent free on application to the

GRANITE SILICON PLASTER COMPANY,

Telegrams :
'Sweetwater, London.'

36, King's Road, St. Pancras, LONDON, N.W.

unionists and piecework from the working rules on the unionists undertaking to allow both for six months. Future disputes are to be settled by a joint board, with a mediator, the old operatives are to be reinstated at an advance of $\frac{1}{4}$ d. an hour before any new hands are engaged, and the employers obtain an additional concession as regard apprentices. The men returned to work on Monday. The plumbers' strike still continues, but it is hoped that the negotiations in progress will bring about a settlement, there being no substantial point of disagreement left.

A Protracted Trial.—The case of Neelon v. the City of Toronto, has been carried to another stage in the Canadian Law Courts. Captain Neelon is a Contractor, who, while engaged in building the Toronto Court-house, was dismissed by the Architect, and who has ever since been trying to get a judgment in his favour. Appeal after appeal has been taken by Captain Neelon since the summer of 1892, who claims to be allowed to offer at his yet untried suit against the City, evidence of bad faith on the part of the Architect, Mr. Lennox, through whom Neelon was deposed. Such evidence, the judge, at the abortive trial of the action, declined to receive until it appeared that the Contractor had suffered an injustice as the result of the Architect's action. The Chancery Divisional Court, says a contemporary, confirmed the judgment of the trial judge in this and his further judgment that the Architect had the power to dismiss without the consent of the Court-house Committee of the City Council, which Mr. Neelon contended was absolutely necessary. Appeal was made to the Court of Appeals, and the Contractor again failed on both the question of the submission of evidence and as to the power vested in the Architect. A further appeal is likely to be taken. The costs of the suit already amount to over £4,000 sterling.

Manchester Sanitation.—Our scathing "Impressions" on the insanitary condition of Manchester, which were reprinted in the local journals, is already bearing good fruit, for we

are informed that the Corporation has recommended that an immediate application be made to the Local Government Board for power to borrow a large sum of money for Sanitary improvements.

Hull.—A scheme for the removal of an unhealthy area in Hull is under consideration by the Unhealthy Dwellings Sub Committee of the Corporation, as to the expediency of declaring insanitary a very large area, extending practically from Lower Union Street, through Trundle Street, to Waterhouse Lane. The scheme is an extensive one, and beset with difficulties; but perhaps the chief difficulty which will have to be faced is to what shall be done with the property when it is declared as unfit for human habitation, for it appears that while the Corporation has power to close the dwellings in the locality, it cannot remove them.

Threatened Strike of Edinburgh Masons.—A ballot was taken last week among Edinburgh Masons to see whether they will come out on strike, should the masters refuse to fix the wages for the coming twelve months at 9d. per hour, an advance of $\frac{1}{4}$ d. The men also want an eight-hours' day, but are willing to refer to arbitration the question whether they should work 45 or 48 hours weekly. The result has not yet been made known.

Water Finding.—Mr. Leicester Gataker, the well-known water finder of Weston-super-Mare, has just been very successful in discovering a good water supply on the estate of Mr. Herbert Strutt, J.P., C.C., near Belper, in Derbyshire. The diviner's predictions as to depth and flow were most accurate, as proved by sinking operations. This water finder has, from continual accounts, been most successful and influentially patronised in all parts of the country. We are informed that when people are sceptical of his powers, he will visit their estates, and bear all the risks himself, and take no pay unless he finds the water. We should imagine there are many landowners and public bodies who might benefit greatly by trying the diviner on such terms.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

ACCRINGTON.—Accepted for the erection of a bakery for the Accrington and Church Industrial Co-operative Society, Ltd. Messrs. Haywood and Harrison, architects, Accrington. Quantities by the architects:—

Cronshaw, Thos., Accrington, brick-laying and masonry	£966	0	0
Roberts, John, Accrington, slating ...	61	0	0
Robinson, John, Accrington, plumbing and glazing	79	0	0
Accrington and Church Industrial Co-operative Society, carpentry and joinery	330	0	0

ALNWICK.—Accepted for the erection of a pair of houses, Morpeth, for Mr. T. Sheel. Mr. Geo. Reavell, jun., architect, Alnwick and Morpeth:—

Middlemiss, T. W., masonry and bricklaying	£310	14	2
Haswell, G. and C., joinery	170	0	0
Atthey, T. W., slating	54	7	0
Daglish and Son, plumbing	85	0	0
Fairbairn, R., plastering	45	5	0
Jackson, R., painting	21	0	0
Total	£686	6s.	2d.
[All of Morpeth.]			

BOGNOR.—For erecting a residence at Bognor, Sussex, for Mrs. Ward. Messrs. Kidner and Berry, architects, London:—

Burrell, W., Arundel	£2,269	0	0
Scott, S. J., London	2,173	0	0
Wallis W., Littlehampton	1,949	0	0
Start, T., Bognor	1,668	3	0
Ditto, amended tender (accepted) ...	1,725	0	0

BROTTON (Yorks).—For the erection of co-operative stores, Brompton, Yorks. Arthur Newsome, architect, Middlesbro'-on-Tees:—

Tenders Accepted.			
Bolton, Loftus, brick and stone, &c. and joiner	£543	7	0
Heckle, Gainsborough, carpenter	348	0	0
Gowland, Skelton, plumber	74	4	4
Patterson, Middlesbro', plasterer ...	66	0	0
Mascall, Middlesbro', slater	51	0	0
Taylor, Middlesbro', painter	45	0	0
Total	£1,128	10	4

CROYDON.—Accepted for additions to Berkley Lodge, Upper Addiscombe-road. Mr. A. Broad, architect, 3, High-street, Croydon:—

Hanscomb and Smith	£268	0	0
[No competition.]			

"It promises to effect quite a revolution in Drainage Work."—THE BUILDER.

DOULTON'S PATENT Self-Adjusting Joint for Drain Pipes.

SUPPLIED ON BEST LONDON-MADE STONEWARE PIPES, EACH OF WHICH IS CAREFULLY TESTED UNDER HYDRAULIC PRESSURE, AND STAMPED

No Cement is required in making the joint, and skilled labour is not necessary.

It is not injured by any ordinary settlement of the ground, being designed to allow deflection.

THE JOINT HAS BEEN LAID WITH SPECIAL FACILITY IN WET GROUND.

By using Best London Stoneware TESTED Pipes, with DOULTON'S PATENT SELF-ADJUSTING JOINT a Secure Joint, in connexion with a Thoroughly Sound Pipe, is obtained.

Pipes with this Joint may be seen under test at the Show Rooms,

DOULTON & CO., ALBERT EMBANKMENT, LAMBETH, LONDON, S.E.

BRIDLINGTON.—For additions, &c., to No. 36, High-street (Contract No. 1); also erection of business premises, North Back-lane, for Mr. Sawdon. Mr. J. Earnshaw, architect, Carlton House, Bridlington Quay:—

Contract No. 1.		
Rennard, J.	£257	10 0
Postill, F. (accepted)	225	0 0
Contract No. 2.		
Rennard, J.	455	10 0
Foster, J. T.	452	5 0
Sawdon, J.	380	0 0
Postill, F. (accepted)	345	0 0

[All of Bridlington Quay.]

BURNLEY.—Accepted for additions to the Victoria Hospital, for the Board of Management. Mr. Wm. Hy. Colbran, architect. Quantities by architect:—

Whittam, Joseph, masonry and brick-laying	£220	0 0
Haworth, John, joinery and building	150	0 0
Ormerod, Whitaker, slating, &c.	22	8 0
Preston and Son, painting and plastering	42	5 0
Watson, William, ironwork	20	0 0
Bulcock, John	6	0 0
Estimated cost, plumbing, glazing, &c.	89	7 0

[All of Burnley.]

BURTON-ON-TRENT.—Accepted for building house and two cottages at Horninglow, for Mrs. Loverock. Mr. R. E. Carpenter, architect, Burton-on-Trent:—

Forbes, Horninglow	£590	0 0
--------------------------	------	-----

BURTON-ON-TRENT.—For building house and stable, Outwoods, for Mr. Haywood. Mr. R. E. Carpenter, architect, Burton-on-Trent:—

Hodges	£422	0 0
Lelly	401	0 0
Owen	372	0 0
Kershaw	371	10 0
Parker (accepted)	357	10 0

[All of Burton.]

CLARBESTON ROAD.—For building two semi-detached cottages for Mr. John Reed, Clarboston, R.S.O. Mr. J. Preece James, architect, Haverfordwest:—

Jones and Lewis, Lawheaden (accepted)	£325	0 0
---	------	-----

CLEETHORPES (LINGS).—For the erection of a public hall and club house. Mr. John R. Withers, architect, Shrewsbury:—

Nutley and Mashford, Cleethorpes... ..	£4,594	4 3
Ion and Lewis, Grimsby	4,337	7 3
Leafe, James, Boston... ..	3,395	0 0
Hewins and Goodhand, Grimsby	3,347	6 11
Jackson, G., and Sons, Hull... ..	3,125	0 0
Grant, M., Cleethorpes	3,092	18 2
Thompson, T. M., and Sons, Louth	2,937	0 0
Vickers, J. H., Nottingham	2,708	0 0

* Accepted.

CORNHILLS (Northumberland).—Accepted for the erection of a farmhouse at Cornhills, Kirkwhelpington, for Mr. Thos. Thornton. Mr. George Reavell, architect, Alnwick:—

Martinson and Welton, Bellingham, Northumberland	£1,059	0 0
CROYDON.—For alterations and repairs to Dunmere, Sydenham-road, North. Mr. A. Broad, architect, 3, High-street, Croydon:—		
Bulled, E. P., and Co.	£644	0 0
Page, S.	557	0 0
Barker, D. W.	425	0 0
Hanscomb and Smith (accepted)	335	0 0

CULLOMPTON (Devon).—For the erection of a billiard-room at Dellford House, for Mr. Albert Abid, Messrs. Edward Ellis and Sons, surveyors, &c., Bedford Chambers, Exeter. Quantities by the surveyors:—

Nicks Bros.	£537	10 0
Phillips, Hy.	525	0 0
Stevens and Son, Exeter (accepted)	512	0 0
Williams	507	10 0

[Surveyor's estimate, £527 17s. 7d.]

DERBY.—Accepted for the erection of new works for Messrs. Bemrose and Sons, Limited, Derby. Mr. E. R. Ridgway, architect, Long Eaton:—

Ford and Co., Talbot-street, Derby	£10,559	0 0
Eastwood, Swinger, and Co., Derby	1,342	0 0
Abell, Wm., Book-street, Derby, ...	769	0 0
King, J., Ltd., Liverpool, heating	785	0 0
Ford and Co., Talbot-street, Derby, ...	693	0 0

DUNGLOE (Ireland).—Accepted for improvements to the Parish Church. Mr. E. J. Toye, architect, Strand, London-derry:—

McFadden, James, Letterkenny	£440	0 0
------------------------------------	------	-----

DUNSTON (Northumberland).—Accepted for alterations to Dunston Steads Farm-house and Farm-buildings, for Eyre's Trustees. Mr. George Reavell, jun., architect, Alnwick:—

Appleby, M., Embleton	£410	17 1
-----------------------------	------	------

GLOUCESTER.—For the construction of a reservoir, &c. (two contracts) for the Corporation. Mr. W. Fox, C.E., 5, Victoria-street, S.W.:—

Firbanks, J. H.	£15,280	0 0
Ring, Alfred	13,967	0 0
Lawson, Geo.	9,696	0 0
Law, Geo.	9,185	0 0
Shaddock, W. C.	9,120	0 0
Nott, L. P.	8,700	0 0
Jones, W.	8,023	0 0
Ambrose, S.	7,975	0 0
Bell, Geo.	7,149	0 0
Jones and Fitzmaurice	6,880	0 0
Brebner, R. C.	6,258	0 2
Cruwys and Hobrough, Gloucester*	6,176	1 0
Davis, T. J.	5,770	17 10
Ewart, J. A.	5,709	19 7

* Accepted.

ENFIELD.—For erecting a school building and appurtenances, Seventh-avenue, Bush-hill-park, Enfield, for the Enfield School Board. Mr. G. E. T. Laurence, architect 181, Queen Victoria-street, E.C.:—

Almond, A. F.	£10,628	0 0
Batley, Son and Holness	10,554	0 0
Knight and Son	10,442	0 0
Gray, Hill and Co.	9,999	0 0
Wall, C.	9,980	0 0
Patman, L. and W. H.	9,633	0 0
Hart, P.	9,594	0 0
White and Son	9,220	0 0
Fairhead and Son	9,214	0 0
Hunt, C. H.	9,090	0 0

FOLKESTONE.—For the erection of school (Science and Art), Grace-hill, for the Town Council. Mr. Frank Newman, architect, 4, Bouverie-square, Folkestone:—

Wallis G. E., and Sons	£7,725	0 0
Pelts J. Q., and Son	7,715	0 0
Stiff, Herbert	7,585	0 0
Denne G. H., and Son	7,580	0 0
Fearon, T. L.	7,500	0 0
Hayward and Paramor	7,270	0 0
Lewis G., and Sons	7,250	0 0
Hoad, H. W.	7,235	0 0
Moody, H. M., Folkestone*	6,524	0 0

* Accepted.

GLOUCESTER.—For the supply and delivery of 2,800 tons 14 in. c. i. socket pipes, &c., for the Corporation. Mr. Wm. Fox, C.E., 5, Victoria-street, S.W.:—

Jordan, Exors. of Chas.	£13,717	3 0
Oakes, J., and Co.	12,549	13 9
Macfarlane, Strong and Co.	12,316	9 11
Stewart, D. Y., and Co.	12,041	12 6
MacLaren and Co.	11,894	17 7
Spittle, T., and Co.	11,715	10 5
Staveley Coal and Iron Co.	11,481	0 0
Roberts, J. and S.	11,467	8 9
Peel, C. E. and H. M.	11,294	3 10
Stanton Iron Co.	11,010	5 0
Cochrane and Co., Dudley*	10,373	12 6

* Accepted.

GREAT YARMOUTH.—For alterations to school buildings, Fritton, for the Managers. Messrs. Bottle and Olley, architects, 5, Queen-street, Great Yarmouth. Quantities by architects:—

Bray, J. F. W.	£248	0 0
Lacey, H.	245	0 0
Davey, R.	245	0 0
Grimble, F.	232	0 0

WM. CLOWES & SONS, LIMITED,

Law Publishers & Booksellers,

27, FLEET STREET, LONDON, E.C.

Just published, royal 12mo, cloth, 12s. 6d.

THE LONDON BUILDING ACT, 1894. With Notes and Cross References and an Appendix containing such existing Statutes as still affect Building Operations within the Administrative County of London; also the Bye-Laws, Regulations and Orders of the London County Council and of the Commissioners of Sewers of the City of London. By W. RUSSELL GRIFFITHS, LL.B., of the Inner Temple and Midland Circuit, Editor of "The Statutes Regulating London Building," and FRANCIS W. PEMBER, M.A., of Lincoln's Inn, Draftsman of the Bill as originally introduced into the House of Commons.

Now ready, Second Edition, royal 8vo, 1,100 pp., cloth, 25s.

THE PRINCIPLES OF RATING as applied to railways, Docks, Tramways, Gas and Water Works, Coal and other Mines, Electric Lighting Works, Manufactories, and other Hereditaments. With a complete Digest of Cases and all the important Statutes dealing with Local Rating. By EDWARD BOYLE, of the Inner Temple, Barrister-at-Law, and G. HUMPHREYS-DAVIES, Fellow of the Surveyors' Institution, &c.

Demy 8vo, cloth, 10s. 6d.

TENEMENT HOUSES and FLATS (The Law relating to), for residential or business purposes, including the Taxation and Rating thereof. With an Appendix of Precedents, Leases, Forms, and a Digest of Cases relating to the Inhabited House Duty. By Walter Clode, Barrister-at-Law, of the Inner Temple, Associate of the Surveyors' Institution, &c.

"Mr. Clode's work is the first of its kind, and contains a very large amount of information arranged in a thoroughly practical and most useful way."—*Daily Chronicle*.

"Mr. Clode's work will be a welcome addition to the Architect, Surveyor, and Estate Agent's legal library."—*Building News*.

Demy 8vo., cloth 20s.

THE LAW OF NUISANCES. With Statutory Appendix. By E. W. Garrett, M.A., of the Inner Temple and Midland Circuit, Barrister-at-law.

"Every matter that, in the eyes of the law, is regarded as a nuisance is considered. . . . While the work appeals more particularly to members of the legal profession, 'The Law of Nuisances,' there can be no question, will be found very useful by the general public, especially by officials of County Councils, Vestries and Corporations."—*City Press*

Demy 8vo., 930 pages, cloth 32s.

THE LAW AND PRACTICE OF COMPENSATION for Taking or Injuring Affecting Lands under the Lands Clauses Consolidation Acts, 1845, 1860, and 1869; Railway Clauses Consolidation Act, 1845; Artisans' and Labourers' Dwellings Improvement Acts, 1868 to 1882; Public Health Act, 1875; Elementary Education Act, 1870; General Metropolitan Paving Act; and other Public Acts (English, Irish and Scotch). With an Introduction, Notes and Forms. By the late Sidney Woolf, Q.C., and James W. Middleton, of Lincoln's Inn, Barrister-at-Law.

"The book is a most complete one on its subject, and may fairly claim to be an indispensable guide book for the compensation lawyer."—*Law Journal*.

CONTRACTS OPEN.

TO BUILDERS.

The Commissioners of Her Majesty's Works, and PUBLIC BUILDINGS, are prepared to receive TENDERS for the ERECTION of a NEW CROWN POST OFFICE at Newbury.

Drawings, specification, and a copy of the conditions and form of contract may be seen on application to the Postmaster. Bills of quantities have been prepared for the use of the builders by Messrs. KARSLAKE and MORTIMORE, of Old Queen Street, Westminster, and, together with forms of Tender, may be obtained at H.M. Office of Works on payment of one Guinea. The sums so paid will be returned to those persons who send in Tenders in conformity with the conditions specified below.

The Commissioners do not hold themselves responsible for the accuracy of the quantities, nor do they bind themselves to accept the lowest or any Tender.

Tenders are to be delivered before TWELVE o'clock noon, on TUESDAY, the 2nd of July, addressed to the Secretary, H.M. Office of Works, &c., 12, Whitehall Place, London, S.W., and endorsed "Tender for Newbury Post Office."

REGINALD B. BRETT,

H.M. Office of Works, &c., Secretary.
June 5th, 1895.

HANWELL URBAN DISTRICT COUNCIL.

CONTRACT FOR BROKEN GRANITE.

The Council are prepared to receive TENDERS for the SUPPLY of BROKEN GUERNSEY or CHANNEL ISLANDS GRANITE for the year ending 31st MARCH, 1895, to be delivered free at any place on the roads within their district, i.e., the Parish of Hanwell.

Forms of Tender (on which alone Tenders will be received) contract and sureties, bond, can be inspected at the Council's Offices any day between the hours of TEN a.m. and TWELVE a.m. on TUESDAY.

Tenders sealed, and endorsed "Tender for Broken Granite," to be sent in to me, at the Offices of the Council, not later than MONDAY, the 1st day of JULY, 1895.

The Council do not bind themselves to accept the lowest or any Tender.

Dated the 13th day of June, 1895.

By order,

WARREN S. JAMES,

Clerk to the Council.

Urban District Council Offices,
Hanwell, W.

The Corporation of Birkenhead are prepared to receive TENDERS for the ERECTION and COMPLETION of the ENGINE and BOILER HOUSE, and other Buildings, Walls, &c. (the chimney excepted), in connexion with the proposed Electrical Generating Station at Bentinck Street, Birkenhead.

Plans, specifications, and particulars, with the form of contract, can be seen, and (upon deposit of the sum of Two Guineas, which will be repaid upon receipt by the Corporation of a bona-fide Tender) bills of quantities with form of Tender can be obtained, on application at the Town Clerk's Office, Town Hall, Birkenhead, or at the office of Mr. JAMES N. SHOOBRED, Mem. Inst. C.E. Albany Buildings, No. 47, Victoria Street, London, S.W., on and after MONDAY, the 17th JUNE instant.

The Corporation do not bind themselves to accept the lowest or any Tender.

Tenders, which must be on the prescribed form, sealed and endorsed "Tender for Electrical Generating Station," must reach me not later than TWELVE o'clock at noon, on THURSDAY, the 27th JUNE, 1895.

By order,

Town Hall, Birkenhead, ALFRED GILL,
June 8th, 1895. Town Clerk.

NEW SHOREHAM SCHOOL BOARD, SUSSEX.

TO BUILDERS.

The Board hereby invite TENDERS from responsible and competent Builders willing to enter into a Contract and Bond to execute certain WORKS of ADDITIONS to the Shoreham Board Schools.

Bills of quantities, with form of Tender, may be obtained on payment of One Guinea (which will be returned on receipt of a bona-fide Tender) of the Architects to the Board, Messrs. LOADER & LONG, No. 54, Old Steine, Brighton at whose Offices the drawings and specification may be inspected.

Sealed Tenders, addressed to the Architects, and endorsed "Tender for Alterations to the Shoreham Board Schools," must be delivered at their Offices before TWELVE o'clock noon on MONDAY, JULY 1st, 1895.

The Board does not bind itself to accept the lowest or any Tender.

By order,

H. STOVOLD BRIGDEN,
Clerk to the New Shoreham School Board,
Church-street, New Shoreham.
June 11th, 1895.

CITY of CARLISLE SCHOOL BOARD.

WANTED a CLERK of WORKS for a New Board School in Carlisle. Must be thoroughly experienced and prepared to undertake superintendence of works whenever in operation.

The execution of the work is estimated to occupy about ten months.

Applications stating age, salary required, and full particulars of qualifications, with copies of not less than three recent testimonials, to be sent not later than TUESDAY, the 25th inst. to S. CARTMELL, Clerk to the Board, 27, Lowther-street, Carlisle.

11th June, 1895.

CITY of BIRMINGHAM.

The Improvement Committee of the Birmingham City Council REQUIRE the SERVICES of a gentleman having a knowledge of architecture and surveying, as MANAGER of the properties on the Improvement Scheme area.

The salary will be £300 per annum, with no pension.

Applications, stating age (which must not exceed 35 years), qualifications, and nature of past employments, to be addressed to "The Chairman of the Improvement Committee, Council House, Birmingham," and sent in not later than 1st JULY.

Canvassing members of the committee will be held to be a disqualification.

EDWARD ORFORD SMITH,

Birmingham, Town Clerk.
June, 1895.

GENERAL FOREMAN seeks RE-ENGAGEMENT.

Practical in all branches, with a view of partnership. Could invest £100 to £200 in same. References exchanged.—Z.Y.X., care of 88, Shirland-road, Maida Vale.

PLUMBERS and DECORATORS.—

WANTED, a WORKING MANAGER for the above; also to superintend a farrier's and a mineral water business. Must be used to bookkeeping and estimating. Countryman preferred. Write, stating age, salary (which must be moderate), experience, and reference.—KNIGHT, Tring.

APPOINTMENTS WANTED.

ADVERTISER (30) with 16 years' London experience; several years managing a West-end Builders, House Agents, and Surveyor's Business, wishes for a SITUATION in town or country, where his all-round knowledge will be required. Competent to make reports and superintend work, especially sanitation. Surveyor's office preferred.—"W.M.," c/o Smith's Advertising Bureau, 51, Morgate-street, E.C.

ADVERTISER desires ENGAGEMENT as

improver in architect's office. Fair draughtsman, neat tracer. Small salary required.—P. W. M., 2, Lincoln-villas, Willesden-lane, N.W.

ARCHITECT'S ASSISTANT requires RE-

ENGAGEMENT. Working and detail drawings. Specifications and quantities. Good references.—"S.," 8, Victoria-street, Shrewsbury.

TO PAINTERS AND BUILDERS.

The Board of Management of the South Metropolitan School District are prepared to receive TENDERS for REPAIRING and PAINTING the whole of the EXTERIOR PORTION of their CONVALESCENT ESTABLISHMENT situated at Herne Bay in the county of Kent.

Persons desirous of Tendering can, upon application to Mr. OWEN, Superintendent of the School, between the 17th and the 22nd instant (both inclusive) obtain a copy of the specification and form of Tender upon payment of the sum of Ten Shillings, which will be returned upon receipt of a bona-fide Tender.

A copy of the contract and bond to be entered into can also be seen at the School.

Sealed Tenders, addressed to the Board of Management of the South Metropolitan School District, Brighton-road, Sutton, Surrey, and endorsed "Tender for Repairing and Painting Herne Bay School," to be delivered not later than MONDAY, the 1st day of JULY, 1895.

Tenders will be opened on the following day, and the person whose Tender is accepted will be immediately informed of such acceptance.

The contractor will be required to enter into a contract and to find satisfactory security for the due performance thereof.

The Managers do not bind themselves to accept the lowest or any other Tender.

By order, HENRY BURGESS,

Clerk's Office, Clerk to the Managers.
South Metropolitan District School,
Brighton-road, Sutton, Surrey,
June 8th, 1895.

THE HACKNEY VESTRY.

TO GRANITE MERCHANTS.

TENDERS are invited for the SUPPLY and DELIVERY of GRANITE SPALLS and BROKEN GRANITE.

Specifications and forms may be obtained from Mr. JAMES LOVEGROVE, Chief Surveyor to the Vestry.

The contractor whose Tender may be accepted will be required to pay wages at rates not less, and to observe hours of labour not greater, than the rates and hours set out in the Vestry's Schedule, and such Schedule will form part of the contract, and penalties will be enforced for any breach thereof.

Tenders, sealed and endorsed, to be delivered at the Town Hall, Hackney, not later than FIVE p.m. on WEDNESDAY, the 26th inst.

The Vestry does not bind itself to accept the lowest or any Tender.

By order, GEORGE GROCOTT,
Town Hall, Hackney, Clerk.
June, 1895.

ARCHITECT'S ASSISTANT (an archi-

tect's son) desires immediate ENGAGEMENT. Thirteen years' City experience. Good references. Good all-round man. Salary £2 2s.—A. G., 166, Aldcroft-road, Haverstock Hill.

ARCHITECT and Surveyor's ASSISTANT

desires ENGAGEMENT, London. Sixteen years' experience in all branches of architectural profession. Efficient surveyor and leveller. Testimonials—"Rosebank," Lansdowne-road, Tottenham.

ARCHITECT and SURVEYOR'S General

ASSISTANT requires RE-ENGAGEMENT. Eight years' London experience in all branches. Plans, surveys, quantities, specifications, &c., and usual routine.—SURVEYOR, care of Messrs. Deacon's, Leadenhall-street, E.C.

ARCHITECTURAL DRAUGHTSMAN

(good) DISENGAGED. Dilapidations, land surveying, levelling, laying out estates, or Clerk of Works, Management of house property.—H. M., 62, Kelmescott-road, Wandsworth Common, London.

ARCHITECT'S ASSISTANT and ENGI-

NEER'S TRACER desires ENGAGEMENT. Neat Draughtsman, working drawings, details, quick and rapid tracer, good colourist, general office routine, &c.—T. R. F., "Montrose," Glynfield-road, Harlesden, N.W.

BUILDERS, HOUSE AGENTS, and SUR-

VEYORS. Advertiser wishes DAILY EMPLOYMENT in superintending work or accounts. Moderate terms. Special knowledge of sanitary work.—Write, HEATHER, 200, Buckingham Palace-road, S.W.

BUILDER'S CLERK. Aged 29. Expe-

rienced in book-keeping. P. C. Correspondence, measuring up and preparing accounts, &c. Fair estimator and draughtsman. Good references.—G. L., 8, Shore-road, South Hackney, N.E.

DESIGNS, Workings, Drawings, Details,

Tracings, Specifications from rough instructions. Low Terms. Perspectives artistically coloured from half-a-guinea. Shortest notice.—"Y," Advertiser Office, Croydon.

PRACTICAL MAN, wants SITUATION as

MANAGER of ESTATE, near London preferred, but would not object to country. Holder of Sanitary Inspectors Certificate, and two Science and Art Certificates for building construction. Excellent Testimonials. Thoroughly understands plans, &c., having carried out large contracts in London and Country. Good at figures and accounts.—Address, "SURVEYOR," 1, Grafton-road, Goldsmith-avenue, East Acton, London, W.

JUNIOR ASSISTANT requires SITUATION

in architect and surveyor's office. Five years general experience. Good draughtsman, tracer, colourist, &c. Perspective, details, and general office routine.—Apply, H. S., No. 8, Higher-terrace, Torquay.

The Beauty of London.

An infatuated writer, in a Northern contemporary, blinded by the glamour of the London season, or the aspect of the Thames Embankment when the sun is pouring through the tender green of the plane trees, has gone mad—not an unusual occurrence with newspaper men when they come to touch upon subjects they do not understand. He calls London the finest and most beautiful city in the World, comparing it immeasurably ahead of the cities of Italy, or the finest modern creations of other European lands. Men do not know their London even if they love it, or the wildest stretch of imagination could not conjure up the Beautiful in its narrow streets and feet-trodden highways. The greatest lack our buildings show is undoubtedly the lack of colour. It seems an extraordinary anomaly, but without colour very few things would be beautiful. Colour may be bright and happy, such as Mr. Waterhouse invariably gives us. What could be better than St. Paul's School at Hammersmith, or that incomparable building, the Natural History Museum, at South Kensington. On the other hand, we can have extremely fine colour in the deep greys of an old fine stone front, mellowed by age and not by soot. Worse colouring than the Constitutional Club in Northumberland Avenue cannot be found in the whole of London ; it is as vile in its way as the yellow faience of two eating-houses recently erected in the Strand, and little better than the crude browns of Frascati's Restaurant in Oxford Street. Mr. Halsey Ricardo's much-debated Front in Great George Street is an instance of good colouring. So is Colcutt's City Bank on Ludgate Hill—in cool greys—and the fine buildings modest John Dunn is erecting on the Norfolk Estate, adjoining the Temple. There is a wonderful future for glazed bricks and faience work in the London streets, however shocking, at

first blush, it may appear to be. But it is not colour alone that makes things pleasant to the eye of man. It is good proportion and sensibility of treatment, even the appropriateness of a design, which makes a build-

duality. The way to make a city hideous is to put four such erections as the Medical Examination Hall, the Savoy Hotel, " Balfour's Folly," and the Adelphi Terrace adjoining one another. And yet there they are gaping or blinking at the New Zealander as he saunters along the gardens at their feet, wondering which he shall admire or which spit at. We do not need to be told that nothing can prevent these things. We know it ; nothing material can, until Architects and the Institute obtain the recognition we crave for them, the recognition which is the birthright of a noble Art. That there are beautiful spots amidst the dreariness of our conquering City, we admit with pride. It is the satisfaction of our hearts ; but what is most cruel is the knowledge that these spots are obliterated as the years go on, and in their places the King of Commerce, defiant and debased, rears his ungodly head high up above the pavements which have been shadowed by nobler if less mighty things. Our Northern contemporary was wrong in deeming London beautiful. The writer was impressed by the glamour of the season, the historic renown, the richness of our commonwealth, and through his impression he thought he could detect beauty. It is almost cruel to disabuse him of his belief.

An Engineering Accomplishment.

REGARDED as an engineering feat greater things have been done than the Baltic Ship Canal, but in the sense of Imperial display the remarkable function of last week may be described as unparalleled in the history of the century. The German Emperor knows full well how to trick the elements—even appropriate thunder "clapped" applause!—and as he stood on the bridge of the *Hohenzollern* we may take it that he was a proud man. Questions of diplomacy and politics, with which we have nothing to do,

THE MANTEL IN THE DINING ROOM OF BOVENY COURT :
WILLIAM YOUNG, ARCHITECT.

ding, or a street, or a city beautiful ; and there are very few instances of these things in dear old dirty London. It is the unanimity of intention which is missing, the strong desire to improve the situation rather than to establish one's own striking indivi-

German Emperor knows full well how to trick the elements—even appropriate thunder "clapped" applause!—and as he stood on the bridge of the *Hohenzollern* we may take it that he was a proud man. Questions of diplomacy and politics, with which we have nothing to do,

got mixed with the cannonading, but considering the complexity of interests in Kiel Harbour, the affair passed off fairly well, and the French maintained their reputation as the Grand Nation. Singularly few were the engineering obstacles encountered in the sixty-four miles of the Canal; and the absence of locks, save at each end of the Canal, will indubitably aid the transit of ships along its course. The gain to Hamburg, Bremerhaven, Rotterdam, London, and Hull, varies from forty-four hours to fifteen hours. That the Canal is open to through traffic, not ending in a *cul de sac* as in the Manchester Ship Canal, should ensure an ultimate financial success to the Great Baltic Scheme. Furthermore, and apart from the commercial aspects of the undertaking, it may be maintained without exaggeration that, in virtue of the rapid and secured union of the Baltic and North Sea Fleets which it renders possible, the Canal doubles the capability of the German Navy. Against an attack by land, on the other hand, the Canal may be regarded as safe, on account of the difficulty of landing a large body of troops under the guns of the fortifications, and because of the constant readiness of strong land forces of the second line. In case of a coalition war, it secures to the German Navy the important advantages of the inner line. A circumstance which very considerably increases the value of the Canal is the position of the two German naval ports on the North Sea and the Baltic, which are brought considerably nearer one another by it, and enabled to support each other more easily. This consideration was of weight in determining the mouths of the Canal. The naval depôts, wharfs, and building and equipping docks are at Kiel, near the eastern end of the Canal, and there is no harbour in the Baltic so landlocked as that of Kiel, from which an enemy must keep at a respectful distance to avoid the risk of being attacked in the rear. The town of Brunsbüttel, at the western mouth of the Canal, is so situated that the ships of the Navy can pass unseen by an enemy between Wilhelmshaven and Kiel Harbour by a way avoiding the open sea as much as possible. The military advantages offered by the new waterway are also enhanced by the circumstance that Heligoland now belongs to Germany. That Island and the Canal form two mutually supplementary strategic positions. It would seem that Imperial rather than Commercial considerations have been the chief factor in urging the completion of this great engineering task.

A START has been made with proposed Co-operative Stores at Brotton, Yorks. Tenders, £1,128 10s. 4d. (not including fittings). Arthur Newsome, Architect, Middlesbro'-on-Tees.

DURING a brief but rather severe thunderstorm which passed over the Lochaber district on Thursday afternoon, a flash of lightning entered the Observatory on the summit of Ben Nevis, fusing the telegraph wire, and damaging an instrument at a point where the wire was exposed. The wooden lining of the Observatory caught fire, and for a time it was feared that the flames might spread and cause considerable damage, as the building is also lined with dry felt. Fortunately, the Observers, assisted by two visitors, who happened to be on the summit, succeeded in extinguishing the flames before very material damage resulted.

LIGHTNING conductors, according to Professor V. Jones, may become a source of danger instead of protection, especially when the continuity of the conductor has been severed. A great source of danger exists in an inefficient earth connection.

A NEW Masonic Hall is to be erected at Gourrock, in John Street, opposite the Central School. The probable cost of the feu and erection is expected to amount to about £1,000. The Hall will accommodate from 300 to 400 people.

ENLARGEMENT OF WESTMINSTER ABBEY.

SHOULD THE NATION PAY?

IN Old Palace Yard, Westminster, to the north-east of the main structure, stands a group of very old houses. As relics of a bye-gone age these buildings are interesting, and have their value in the eyes of the antiquarian, but their proximity to the Abbey itself is a source of danger owing to their liability to fire. It is quite possible that these houses might have been jealously preserved had they been situated elsewhere, but standing where they do their value becomes comparative, and, of course, they are a mere bagatelle when weighed in the balance with the venerable fane which holds the memorials of England's illustrious dead. And not only is the preservation of these dilapidated houses to be deprecated from a fire-risk standpoint, but as long as they remain where they are they will obstruct the view of the fine Architecture of Henry VII.'s Chapel, and of the ancient Chapter House. To the majority of Englishmen the idea of regarding Westminster Abbey as a mere "show place" is probably repugnant; but, nevertheless, there is no reason why the impressive outlines of the Abbey should not be displayed to the best possible advantage. There is, therefore, not the slightest justification for concealing a beautifully moulded portion of the edifice behind a facade of masonry of very subsidiary historical value, apart from the weighty consideration of safety; and it has been decreed that the tumble-down houses shall be demolished. The announcement is entirely in accordance with the strong recommendations submitted to Parliament by the Royal Commission, which reported as long ago as 1891. The Ecclesiastical Commissioners own the freehold, and all the leaseholders have been persuaded to agree to the scheme of demolition, which will be carried into effect as soon as Parliament is prorogued. The clearance to be thus effected will constitute but one portion of a scheme affecting the future of Westminster Abbey. For years it has been apparent that if the Abbey were to continue to be the depository of the remains of illustrious Englishmen, or of their cenotaphs or Monuments, the provision of more space would become an imperative necessity. Several years have elapsed since Dean Stanley reported that there remained but two spots available for Statues of men of the greatest eminence. In later years, no doubt, the honour of interment in Westminster Abbey has been much more sparingly conferred than it formerly was—not, perhaps, because there are fewer great men in modern times, but because we have become much more exacting in the matter of qualification. Scores of Tablets and other Memorials have been erected in Westminster Abbey to persons who were little more than mediocrities while they lived, and whose names do not now convey to the mind impressions of brilliant endeavour in any field whatever. We cannot, with any grace undo what has been done; and these mementos of respectabilities must be left undisturbed. But we can at least insist that, for the future, Westminster Abbey shall be a representative Mausoleum, and in order that this design may be carried out it is incumbent on the authorities to provide additional space. The feeling of veneration for the central edifice itself may possibly excite in some critics aversion to any patchwork project of enlargement; but surely there are modern Architects of sufficient ability and taste to design an Annexe in keeping with the central pile—of hitting the exact mean between servile Architectural insignificance and vain presumption. The plot of ground rendered available by the removal of the old houses now standing on the north-east of the Abbey is that which has been suggested as the site of a new Wing or Memorial Chapel. The Royal Commissioners, it is true, did not unanimously favour this site for the proposed enlargement, though since their report was issued there appears to have been a consolidation of opinion in favour of it. But in whatever direction Westminster Abbey may be extended, the task will have to be performed with the greatest delicacy, and after the most anxious consideration. And it is further a question whether the cost of building the new

Annexe should be defrayed out of the national purse, or whether it should be met by the munificence of a private citizen. In February of 1894, Mr. Yates Thompson, after consultation with Mr. Pearson, who had prepared plans for the Royal Commission, offered to give a sum of £38,000 for the construction of a Memorial Chapel, to be connected with Poet's Corner by a Cloister. The sum specified was the estimated cost of the fabric; the expenditure on the acquisition of property for the clearance and the site being £27,000 more, a sum which the present Parliament will be asked to provide. Mr. Thompson, in making his offer, stated that it would hold good for a year. The twelve months elapsed last February, but it is to be presumed that Mr. Thompson has agreed to an extension of time. The patriotic spirit which actuated Mr. Thompson is unchallengeable, but there have been some searchings of heart as to whether it would be expedient for a distinctively national institution to be beholden to this extent to the generosity of a private purse. Mr. Thompson appended to his offer some conditions which were perfectly reasonable, but it will remain for Parliament to decide whether, in the erection of a necessary addition to the National Valhalla, it would or would not be expedient for the representatives of the nation to have an absolutely free hand in the matter. Many of the most imposing ecclesiastical edifices throughout the country have been erected with moneys accruing from private benefactions; and, indeed, in earlier times the individual donor played a most prominent and even necessary part in the multiplication of those splendid piles of masonry which teach the lessons of history to all who care to learn them. But Westminster Abbey occupies a unique position. It is the resting-place to which, perhaps, the thoughts of great Englishmen instinctively turn when preparing to face the end, and it is the sacred duty of the nation to see nothing is done that is in any way likely to impair the historical and distinctively national characteristics of the great Mausoleum.

COLOURS EMPLOYED BY THE ANCIENTS.

IN antiquity, besides indigo and purple, few colours were employed, and these were obtained for the most part from the vegetable kingdom, but their purity was so great that they have kept well to our own times, after having undergone for centuries the action of the air and sun. The fact is particularly remarkable in the Egyptian tombs; the stone has been disintegrated by weathering, while the colours have been preserved. The colour that we meet most frequently is a mixture of a reddish-brown oxide of iron (red hematite) and clay, known under the name of Pompeian red. This colour, which has resisted for four thousand years the sun of Egypt and the action of the air, is equally proof against acids. The Egyptians reduced it, by rubbing between stones under water, to a degree of fineness that we cannot obtain nowadays by chemical precipitation. An equally precious yellow pigment, also much used, was formed of a natural oxide of iron mixed with much clay, chalk, and water, and browned by the action of heat; the mixture of the two colours gives orange. For this yellow colour, gold bronze or gold leaf was also employed. For blue, they used a glass coloured with copper minerals; this pigment was not less permanent than the preceding, even acids having very little effect upon it. Gypsum or plaster of Paris furnished white, and also formed the basis of pale colours when organic pigments were added to it, probably madder, for red. The colours were always thinned and rendered adhesive by means of gums. It is interesting to know, as is proved by inscriptions, the artists regarded their colours as imperishable.

THE Foundation Stone of the new Glasgow Sanatorium Hospital for Women was recently laid by Lord Blythwood. It will cost £8,000, and will accommodate 28 patients.

AT a meeting of the Rutherglen School Board, on Wednesday, it was resolved to obtain plans for the erection of additional accommodation at Eastfield School, the extra scholars required to be provided for being 300.

DARENTH AND ITS ROMAN REMAINS.

MR. GEORGE PAYNE, F.S.A., of Rochester, who has been superintending the excavations at Darenth, conducted a party of Architects, the other day, over the recently discovered Roman Villa, and gave a happily interesting description of the discoveries he had made. He pointed out that the field was only about a mile from the great Roman road which led from Dover to London, and about three miles from Springhead, which had been identified by Shrubsole and others with the Roman station Vagniacæ, mentioned in the Itinerary of Antoninus, and where many undoubted Roman remains had been found. On a hillside to the west could be seen traces of a British encampment. In later times, after the withdrawal of the Roman garrisons, the district was subjected to a Jutish occupation, a very rough class of settlers. Still later, in Saxon times, Darenth Village Church was built, and Roman tiles and bricks were re-utilised in the pre-Saxon work on the north side of the building. The foundations of the Roman Villa itself formed the quarry not only for that Church, but for many buildings constructed in later times. There was no evidence that it was ever burnt down, but he conjectured that it was gradually abandoned. The site was unusually low, and as the stream was tidal before the Mills were erected lower down, it was necessary to protect the Villa from floods, and so a long retaining wall on the west front towards the river was constructed. The house itself covered a larger area than any previously discovered in England, being at least 350 ft. square, and it probably extended towards the south an additional 300 ft. The lower or western portion of the area was divided into Dwelling Rooms, Baths, and other apartments and Corridors, and to the south were two large Courts, roughly 80 ft. square, separated from the house by a Corridor which ran along its entire front, and divided from each other by a long, narrow building, 84 ft. by 11 ft., with immensely thick walls, having at its further or southern end a semi-circular chamber. Had the curve of the arc been outwards, it would have been explained as a basilica; but, unfortunately, it was rounded off towards the long building. There appeared to be traces of a leaden lining, and he had little doubt that it was originally a cistern. Beyond this building to the south the remains were crossed by a more recent lane, for in the field on the outer side of the lane, belonging to another owner, trial bores had revealed traces of other buildings not yet excavated. The chief apartments were on the slope of the hill on the eastern end of the site, the portion furthest from the river. None of the rooms were very large, and the floors lay about 5 ft. below the present surface of the soil. These floors were generally of concrete, mixed with road pebbles, in a few cases covered with large flat tiles and in others with small cubes of red tesserae; but they had been disappointed so far in not finding any ornamental tessellated pavements, such as were frequently found in other Roman stations in Britain. In several cases traces of fresco paintings showing floral designs were found on the walls, but these had gradually perished after exposure to the air, and the frosts of last winter had greatly injured the remains. In another room the concrete floor has been taken up, so as to show the heating arrangements. These consisted of hypocausts, hollow flues, square on plan, formed on plain flat tiles, and communicating with round flues in the walls which led to a stoke-hole, one of these receptacles for fuel being used to heat a whole suite of rooms. On these flues, which were about 2 ft. high, the thick concrete floors were suspended, and the smoke was carried off by vertical pipes, still to be seen in position in the walls. In one room was discerned traces of alterations by which the room had been shortened and the doorway blocked up at a later period, and in another case an old floor had been discarded, and a new one put in at a higher level. A series of rooms nearer the river, at the western portion of the site, were all of less importance, and showed no traces of having been heated. Half-way down the slope, near the Eastern Court, were a series of three Baths; the largest, or Swimming-Bath, was 40 ft. by 10 ft., and was approached by

four wide and deep steps of concrete, having rounded nosings. At a later Roman period it would be seen a wall of alternate courses of tiles, flints and chalk was built across this Bath, and adjoining it were two smaller Baths each 7 ft. square, and one heated by a hypocaust. On the south of the Villa the foundations of Stables, Granaries and Outbuildings have been excavated. The temporary Museum contains articles turned up by the spade upon the site during the excavations, and include the bones of various domestic animals, including the sheep, goat, dog, horse and ox, deers' antlers, shuttle for net-making, the handle of

TOWER OF THE PEOPLES' PALACE :
BY E. R. ROBSON.

a fan; combs and hairpins have also been unearthed, together with two or three hones, fragments of Durobrivium, Samian, and Upchurch ware (all of coarse character); beads and broken pieces of glass from windows and bottles; bangles, armlets, and ornaments in bronze; small enamelled pieces of jet, a hatchet, bell, and studs of iron and lead. The coins were comparatively few in number, and ranged from Domitian, A.D. 81 to Gratian A.D. 375. After the remains had been thoroughly examined, Mr. Payne escorted his visitors to the parish

Church of Darenth. It consists of Nave, with collar-beam roof, and South Aisle; Western Tower; Chancel, which formerly had also a South Aisle, now walled up; and short Sacramentum, separately vaulted in chalk, and having its thick eastern wall pierced by three narrow and deeply-splayed lancets. The exterior masonry of these lights, and of part of north wall of Nave, and perhaps the lower portions of Tower, is apparently of rude pre-Conquest character. The responds to arcade and the square capital to the built-in column in South Chancel wall are of rude Norman character. The outer surface of the bowl of the large Font is symmetrically divided by rounded arcades into eight compartments, containing crude carving in high relief. These seemed to include infant baptism by immersion in a Font; a seated figure of King David with harp and crown, all proper, to quote the jargon of Heralds College; the Sacrifice of Isaac, the lion of St. Mark, the winged eagle of St. John, a man with spear, and what might represent to the *fin de siècle* eleventh century carver, a conventional ox. The whole is of the Early Norman period. The arcade in Nave is carried by octagonal shafts without neckings, and the windows are of all periods down to Late Perpendicular, the Pulpit being a low and miserable structure, made up of Jacobean panelling, and quite unworthy of the interesting fabric.

THE financing of the Jungfrau Railway scheme, already approved by the Swiss Parliament, for a railway from the Wengern Alp, via Eiger and the Moench, up the Jungfrau is regarded as assured, and the construction of the first section of the line is to be commenced in the course of the present year.

THE Brighton Town Council has finally decided upon a scheme for the alteration and enlargement of the Town Hall at an estimated cost of £30,000.

THE great 40-inch lens for the Yerkes telescope has just been completed by Mr. A. E. Clark, and will soon be shipped to Geneva, where a new Observatory has been constructed. This magnificent telescope is the largest in the World, and eclipses all, not only in size, but in focal range and power. The lens alone, when it came from Paris in the rough, cost £8,000, and since then an enormous cost has been incurred by the grinding and polishing of the lens, which have been going on for two years.

THREE of the great turbines, each furnishing 5,000 horse-power, and each four times larger than any in the World, are in position at Niagara Falls, and four more will be placed in the great pit, cut through the solid rock, 120 ft. long, 180 ft. deep and 20 ft. wide. The shaft from each wheel, sometimes of tubular steel, sometimes solid and eleven inches thick, extends up into the Power House, and to it is fixed a flying field of the great dynamo, 13 ft. in diameter and 15 ft. high. When this is revolving 250 times a minute, it sends forth an electrical current of 5,000 horse-power.

THE Leeds City Council has agreed to buy for its Art Gallery Mr. J. W. Waterhouse's last year's Academy picture, "The Lady of Shallott," and has succeeded in securing it on specially favourable terms from the artist, who is a native of that city.

MR. H. RICHARDSON, Surveyor to the Oldbury Council, has been appointed Surveyor to the Aston District Council out of seventy-two applications for the post.

MR. GEORGE LOPES, M.I.C.E., of the London and Brighton Railway, is the inventor of an Automatic Railway Electric Alarm for level crossings, a working model of which is now on view at the Imperial Institute Exhibition. The approaching train rings an alarm bell at the crossings, and keeps the gong sounding until the train has passed.

THE Worshipful Company of Fishmongers has contributed £1,500 to the decoration of St. Paul's Cathedral, the cost of the mosaic in the Chancel Dome representing the "Creation of Fishes."

THE Liverpool City Council, at its next meeting will be asked to accept a tender for the erection of the new Central Fire Station in Hatton Garden, subject to the Local Government Board's approving of the Council borrowing the money required for the building.

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,
June 25th, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

AN article on the Manchester Municipal School of Art in the new number of the *Studio* raises the question of the importance of Mr. Walter Crane's appointment as "Director of Design" nearly two years ago. At the time Mr. Crane drew up a series of "Suggestions" for the benefit of the Technical Instruction Committee and of the students. They began with a declaration that "the objects of the School are to give by a system of carefully considered and varied courses of study, with due regard to the bent and capacity of individuals, a thoroughly practical knowledge of Designing, Drawing, Painting, and Modelling, more especially in the varied forms of their ornamental application in association with Architecture and technical conditions of manufacture." Mr. Crane thus laid especial stress on Design, and the course which he sketched out in twelve stages was intended to "emphasise the essential relation of necessary units throughout all the branches of Art," while "strengthening the designing faculty and cultivating invention and observation." The old painters trained their pupils first by setting them to copy good pictures and then by leaving them to copy Nature, picking up hints about technique as they went on. Mr. Crane, on the other hand, would set the beginner to make a pattern immediately after he had had some practice in freehand drawing from "typical floral and ornamental forms." The first method produced painters, the second will at least produce designers, and may conceivably do more, though it is at present impossible to discuss its merits. Success alone can justify any scheme of education, and Mr. Crane's plan has not yet been properly tried.

LIKE almost all the Public Art Training Schools in the country, the Manchester School of Art has been dominated by the Science and Art Department. The perfectly organised and at the same time thoroughly pernicious system of "South Kensington," which dooms students to pass many useless examinations, and permits only those who have passed them to train others for the same wearisome ordeal, has too much money to spend in grants, prizes, and scholarships not to be almost omnipotent in all but the wealthiest Schools. The Manchester School has bowed to its authority and has had its reward. The students have passed the examinations of the Department with credit, and the School has drawn handsome sums yearly, the grant for the year ending March 31st, 1894, being £591 5s. out of a total revenue of £1,968 15s. 10d. When Mr. Crane was appointed it was thought, and the writer in the *Studio* still thinks, that Manchester had "committed itself to what is very like an incipient revolt" against South Kensington. But this does not seem to be the case. Mr. Crane's "Suggestions" were, as the writer puts it, only adopted "as materials for an alternative and complimentary course worked in with the older arrangements and fitted on to them as much as possible." As the Department "system" cannot be made to fit on to any reasonable course of instruction whatever, this means that the

"Suggestions" were for the time disregarded. But is it too soon to hope for their revival?

A CORRESPONDENT writes: "Although perfectly satisfied with the Architect who had the Infirmary building in hand, the Aston (Birmingham) Board of Guardians yet judged it best to put the proposed Cottage Homes to competition. Instead of selecting a certain number of competent Architects, and inviting them to compete, the new Board decided that it should be an open competition, with the result that nineteen sets of plans were sent in to compete for the work. Premiums of £70 and £30 for the best two sets were all that the Board committed itself to give. The Board was then naturally compelled to employ a professional Assessor, who was also a local Architect. His award has been announced, so far as the premiums go. This is, however, a small thing. Sets of plans worth, I am told—in time and labour—at least £150, are not sent in for the mere hope of obtaining premiums even of £70 and £30. But, forsooth, the proposal was made to pass over both of the successful competitors, and to give the work, with the substantial remuneration of the Architect's percentage, to one of the unsuccessful competitors. The successful competitors' plans would also be placed in his hands. Surely this was not part of the professional Assessor's recommendation? Was ever anything more unfair to other competitors, or unwise in the ratepayers' interests proposed to a representative body?"

THE question of the public Exhibition of pictures of the nude is just now being actively canvassed in Japan. A painter, M. Kuroda, has sent to the Kyoto Exhibition a picture of this character, which has been accepted and hung. Even the Commissioners have had to give a public explanation of their reasons for this course, and the police for their permitting it. The former, it appears, were divided upon the point, but decided in the affirmative, as otherwise they did not see how they would get out of a similar difficulty at an International Exhibition where many nudities would be most certainly presented. The police have had more difficulty in giving a satisfactory answer, seeing that they have but recently been checking the representation of suggestive scenes on the stage. The Press appears to be unanimous in the singular opinion that, whilst the foreigner is fond of representations of the nude, the Japanese is only offended thereby.

AFTER all, the proposed Roman Catholic Cathedral at Westminster, of which we gave a description in our last issue, is not to be a reproduction of the ancient Basilica of St. Peter. We learn from a statement by Cardinal Vaughan in the *Tablet* that this idea has now been abandoned. Mr. Bentley, the Architect, has produced the plan of a building, the style of which is Byzantine like that of Sant' Ambrogio, Milan, with certain details suggested by St. Mark's, Venice, and San Vitali of Ravenna. In the Apse will be the Monk's Choir, as in Sant' Ambrogio, visible from the main entrance. The Canon's Stalls will be in the Sanctuary.

A WELSH historic landmark, the Devil's Bridge, in the vicinity of Aberystwith, appears to be in peril of removal by the ravages of time and stress of weather. The heavy winter frost cracked the Bridge right through the middle. A portion of the southern side has also given way, and the whole structure, it is said, may collapse at any moment. The Bridge is believed to have been built by the Cistercian monks of Strata Florida, and spans a huge rocky fissure. For the sake of old and cherished association, and for the sake too of picturesque Wales, it is to be hoped the danger of collapse will be averted.

IN Edinburgh last week the Incorporated Gas Institute held its annual meeting. According to the President, Mr. Robert Mitchell, of that City, the present-day practice in gas engineering has reached the stage of "the stagnation of perfection." That is a great deal to say, particularly when one remembers that the industry about which it is said involves the labour of nearly 60,000 men engaged in carbonising an annual weight of coal amounting to twelve million tons. The capital sunk in gas works, authorised by Parliament, is no less than

sixty-eight millions sterling and there is to be added to the amount invested in the public gas undertakings a large number of private works supplying industrial concerns, noblemen's mansions, and offices, &c. Mr. Mitchell indicates one direction from which he anticipates progress in reducing the cost of production. That is the Lowe Water Gas Plant, an American invention, by which carburetted water gas of twenty-two to twenty-four candle power can be delivered into the holder at from 1s. to 1s. 3d. per 1,000 cubic feet. Mr. Mitchell, however, regards this as an enricher rather than a separate illuminant agent. Respecting acetylene, Mr. Mitchell finds its position "to be that of a photometric value of 240 candles, but has little more enriching effect than coal gas of sixty candles." Immense gas holders are, in the President's opinion, the most economical, and he further lays stress on the reasonableness of educating consumers up to the use of a higher candle-power rather than reducing the standard of illuminating quality.

OF all historic relics on the north side of the City of London, the most interesting is the venerable Gateway of the Grand Priory of the Order of the Hospital of St. John of Jerusalem in England, which forms the Entrance to Clerkenwell Close. It is mainly in commemoration of the numerous Historical, Biographical, and Literary Associations attaching to this locality that Messrs. Cadbury, Jones, and Co., of the Haymarket, have issued, in a handsome portfolio of large folio form, a series of historical notes on St. John's, Clerkenwell, written by the late Mr. John Underhill, together with a letterpress description of the Grand Priory, and a number of etched plates and other illustrations by William Monk. Mr. Monk's etchings are interesting, and Mr. Underhill has gathered together many particulars of the history of this curious nook in Old London from days before the Norman Conquest down to those of Dr. Johnson and Edmund Cave (Sylvanus Urban).

ARCHITECTS should bear in mind the Ecclesiastical and Educational Art Exhibition, to be held in St. Giles's Hall, Norwich, from October 7th till the 11th. Promises of support in the general trade section have been received from all the leading Church and School furnishers throughout the country, so that the Exhibition will be representative of the entire trade, and Clergy and Churchmen generally are being invited to contribute towards the Loan Collection, which promises to be of more than usual interest. The Church Societies, who have found by experience that the Exhibition forms a rendezvous for their friends and supporters, will again muster in force. The exhibits will include articles of every description used in the services of the Church, and in the fitting, lighting, warming, ventilating, and the decoration and embellishment of Churches, including stained-glass windows.

THE designs for the new Chapel of the Orphan Asylum, Wolverhampton, opened on Friday last, were by Mr. F. T. Beck, Architect, Wolverhampton, and Messrs. Willcock & Co., Wolverhampton, were entrusted with the work of building the Chapel, the cost being estimated at nearly £4,000. Cruciform in shape, the plans are so arranged internally as to provide Nave, Chancel, Transepts, Organ-chamber and Vestries; and in length it is about 100 ft., in width 50 ft., and is 40 ft. high to the apex of the roof. It is mainly constructed of pressed bricks, relieved by diaper-work, and is faced throughout with Hollington stone. The roof is covered with blue Bangor slates, and, except under the seats, where wood is used, the floor is tiled. There are three entrances to the Chapel, one in the North Transept for the children and two at the west end for the public. Oak and deal have been used in regard to the interior fittings, and the windows have been fitted with Cathedral glass, with delicate border traceries.

ANOTHER slice of "dormant" capital was invested in pictures at Christie's, when the Price Collection of the Early British School was sold for £87,000. With one exception—the Dudley in 1892—this is said to be the largest yield of any single picture sale during the past ten years. There were mighty bids.

A Gainsborough—the portrait of Lady Mulgrave—fetched 10,000 guineas, or just ten times as much as it realised 15 years ago. Some of the Turners fetched enormous prices, ranging from 6,400 and 5,200 guineas at their highest level. The Val d'Aosta went for 4,000 guineas; it was sold less than 20 years ago for less than £1,000.

THE new Town Hall at Hamburg, where an Imperial banquet, in honour of the opening of the Baltic Sea Canal, took place, replaces the ancient Rathhaus, which was destroyed by fire in 1842. It is an imposing structure, the creation of nine Hamburg Architects, of whom two have died since the Foundation Stone was laid in 1886. The style is German Renaissance, and the total cost is estimated at 10 million marks. On the walls of the Banqueting Hall are gigantic paintings representing old Hamburg, with its quaint old-fashioned Towers and buildings, and the old Brandenburg Fleet of wooden war-ships. Set over against this is a picture of a fleet of United Germany's most powerful modern iron-clads, while facing each other, from opposite ends of the room, are pictorial representations of the rock bound coast of Heligoland, and a map, in antique design, of the North Sea Canal.

IN his young manhood Mr. Clarkson, who has just published his "Memories of Merrie Wakefield," was engaged in most comprehensive surveys, which took him more or less all over the Kingdom, and brought him into constant contact with such men as Telford, the Stephensons, and Hudson, the Railway King—whose memory, however, he does not seem to particularly reverence. On the 9th of November, 1835, Mr. Clarkson, in his capacity of Surveyor, met George Stephenson and the Engineers, Surveyors and Promoters of the North Midland Line at the old Tontine Hotel, Sheffield. The prejudice and opposition to the locomotive, as well as the shifts of the poor, much harassed Engineers and Surveyors, and afford material for many a humorous paragraph.

THE American School at Athens in the excavations it is carrying on at Heraion of Argos has met with much success. The works rival in magnitude and importance those of the French School at Delphi. Professor Waldstein has 250 men at work under his direction. Two Temples and five other buildings have been discovered, and quite recently a large colonnade, in a good state of preservation, has been unearthed at a depth of twenty-five feet beneath the surface of the soil. The finds of relics have been numerous, and cover the whole period of Hellenic history. They include two marble heads of the most perfect epoch of Greek Art, and many gold and bronze objects, as well as vases and terra-cottas of the Homeric age. Many tombs have also been laid bare, most of them bearing Argive inscriptions.

ALTHOUGH there was in Liverpool in 1880 a Loan Ethnographical Collection, in which many of the specimens in the new Gallery, just opened in the Museum, were shown, there has been no Gallery entirely devoted to ethnography. Since 1880 ethnographical material has been steadily increasing by donation and purchase; but, owing to the exigencies of

space, it has been necessary to keep it packed away in the cellars under the Museum and Art Gallery, where there are at present numerous other large collections in all Departments, which there is no room anywhere in the Museum to display. The arrangement of the Gallery has been accomplished by the Assistant Curator of the Mayer Museum, Mr. P. Entwistle, under the direct supervision of the Director of Museums, Dr. H. O. Forbes, who for many years has made ethnology a special subject of study, especially that of the Indo-Malayan and Milanese races. The new Gallery is entered by two doors, one leading from the Egyptian Gallery in the basement of the Mayer Museum, and the other from the Aquarium. Near the Aquarium Entrance, the Exhibition commences with the oldest evidences of man, those of the Old Stone Age, the Newer Stone Age, and the Bronze Age, in Europe and Asia. The remainder of the space is arranged geographically, and there are few portions of the World unrepresented.

THE BLIND INSTITUTE, DEANSGATE, MANCHESTER: CHARLES HEATHCOTE, F.R.I.B.A., ARCHITECT.

ONE of the most interesting old Churches in Lancashire is the Parish Church of St. Cuthbert, Halsall, near Ormskirk. The Church stands on rising ground in the midst of a small village, where, as elsewhere in the district, are the remains of the old Village Cross. A few hundred yards from the building, between the Church and the new Rectory, are portions of an old stone house, forming part of the previous Rectory, pulled down about fifty years ago. These remains were so embedded in the comparatively modern structure, that their antiquity was not noticed. The foundations of this older building, which is not unlikely to have been the Manor House of the Halsalls, are shortly to be laid bare, and no doubt many interesting facts will be brought to light; but the remains which are now above ground indicate the existence of a fine great Hall, with open timbered roof, about 40 ft. long by 30 ft. wide, built during the Late Perpendicular period, probably some time during the reign of Henry VII. The Church, which is a most interesting structure, mainly of the Decorated period, was ably restored in 1886 by Messrs. Paley, Austin

& Paley of Lancaster. In the North Chancel wall is a beautiful recessed Tomb, measuring 17 ft. from floor to top of pinnacles. A minute technical description of the dress of the priest who lies within it is in preparation by the Historic Society, and a similar account of the still more beautiful recumbent figures on the Altar Tomb on the opposite side of the Chancel is to be given, and thereby it is to be hoped that the exact date of these monuments may be recovered. The three figures are all carved in alabaster, but no inscription remains to testify to their identity. The knight in armour is, however, clearly a Halsall, from the coat of arms carved on his breastplate. Whether the recumbent female figure by his side is his wife, is a question which may perhaps be solved by the researches of the Historic Society. One of the most noticeable features in the Chancel is the north door, opening into the Vestry and Organ-chamber, formerly a Chapel. The upper portion of the woodwork is covered with elaborate tracery, the effect being rich in the extreme; very few similar instances exist in England. The depth of the stone mouldings of the archway is also most remarkable for such a small door; they are about 2 ft. 6 in. across. The lock is of a massive character, and the key nearly a foot long. Some of the external carved gargoyles are of much interest. The curfew still peals out its warning on winter nights to the traveller, though the wild wastes which once existed here are now converted into well cultivated farms.

THE new Bridge over the Clyde joining Glasgow to Rutherglen was inaugurated on Thursday last by the laying of the memorial stone. The new Bridge, which replaces an older structure, erected as far back as 1775, is a handsome granite Bridge of three arches, the centre one of which has a span of 100 ft., each side arch having a span of 90 ft. In width the new structure is a great improvement on its predecessor, for whereas the Bridge of 1775 was only 16 ft. 6 in. between the parapets, the new Bridge is no less than 60 ft. between its parapets, which permits of a roadway 36 ft. wide,

with a 12 ft. pathway for passengers on either side. The old Bridge was not only too narrow for the traffic at this point, but its foundations were rapidly becoming undermined by the scour in the river. The engineers of the new structure have secured it against any similar mishap by carrying the new foundations down to the rock, through the overlying silt and boulder clay. The piers were founded by steel caissons, sunk by means of compressed air, and carried down to depths of 57 and 54 ft. respectively below high water mark. The abutments, which are 39 ft. 6 in. from front to back, are carried on timber-bearing piles owing to the soft nature of the banks, and are backed with Portland cement concrete, the upper portion being rubble concrete in Arden lime. The Bridge is now well advanced. The arches should be finished in the Autumn, and the structure itself opened shortly afterwards. The engineers of the undertaking are Messrs. Crouch & Hogg, C.E., the contractors being Messrs. Morrison & Mason, Limited, also of Glasgow. The cost of the works is estimated at £64,000.

THE Equestrian Statue to the memory of the late Field Marshal Lord Strathnairn, which is erected at the junction of the Brompton and Knightsbridge Roads, facing Sloane Street, has been unveiled. The pedestal is of Portland stone, treated in the English Renaissance style, and the Statue, which is of bronze, was cast by Messrs. G. Brond and Son, of Uxbridge Road, W. The outlay has been £3,500. Lord Strathnairn is represented in a Field Marshal's uniform, with helmet prescribed in the regulations for field service in the East. Mr. E. Onslow Ford, A.R.A., was the sculptor.

A GIGANTIC Warehouse has just been brought to completion at Sandon Dock, Liverpool, by the Midland Railway Company. It is estimated to have cost, including land, about a quarter of a million, and is said to be one of the finest buildings of its kind in the Kingdom. The building is five stories high, and is 322 ft. long, 176 ft. wide, and 84 ft. high. Some idea of the colossal undertaking may be gathered from the fact that before the foundation of the Warehouse could be laid 33,000 cubic yards of soil had to be excavated, while the unusual proportion of the building may be indicated by the following statement of materials used: Bricks, 6,000,000; stone, 1,800 tons; cement, 2,000 tons; concrete, 16,000 tons; slate, 700 tons; ironwork, 6,000 tons; lead, 100 tons; nails, 30 tons; glass, 1½ acres; and zinc, over ½ an acre. The area of the floor space is nearly 6 acres. The building itself is supported by girders weighing 10 tons each; these rest upon 96 columns, weighing 4½ tons each, the latter being carried through all the floors, resting upon a foundation composed of massive stone blocks, 12 tons each, embedded in brick and concrete, 16 ft. deep. The whole of the building and surrounding yard is lighted by the electric light, and each floor is supplied with three fire hydrants, all being of the latest description. The machinery and engines are also of a very complete kind, and fitted with all the newest improvements. The whole of the work has been carried out from the design by the Company's Architect, Mr. C. Trubshaw, F.R.I.B.A., of Derby, by Messrs. W. Brown & Sons, contractor, Salfords. It may be stated that Messrs. Brown & Sons have executed works at different times for the Midland Railway Company, to the amount of £5,000,000, including new Station and Hotel, Bradford; large Warehouse, Leeds; Alexander Dock Station, Bootle, &c.

A "WEDGWOOD Centenary Loan Exhibition," to celebrate the centenary of the death of Josiah Wedgwood, is to be held at Burslem, his native town and "the Mother of the Potteries," during July and August. The Exhibition will be housed in the Wedgwood Institute, the foundation stone of which was laid by Mr. Gladstone in 1863. The South Kensington authorities, the Corporation of Liverpool, Lord Tweedmouth and other London collectors, and Mr. Walker and Mr. Rathbone, the well-known Wedgwood experts of Liverpool, have lent their best examples of Wedgwood ware to the Exhibition, but the backbone of the show, which will certainly be the finest ever got together, is Burslem's own Wedgwood collection, presented *en bloc* to the town by Mr. Thomas Hulme, a well-known figure at pottery sales in London. Mr. Mundella is to open the Exhibition to-morrow.

THE life of a house proprietor does not always consist of the pleasure of collecting rents. Take the case of Mr. J. F. Thompson, a Camberwell man, who owns four houses in Willesden, which, unfortunately, he has allowed to fall into a state that makes them injurious to the public health. For this he was summoned before the Harlesden magistrates, and a letter from him was read promising to do whatever was requisite. The document contained the following curious picture of the sorrows of a house proprietor: "Do not think my bankruptcy is any fault of my own. I do not owe any man anything. Some two or three years ago I bought nineteen small houses. I got into the hands of what I call sharks. They not only took my houses, but run me into a loss of £2,000. This has nearly drove me mad. I have paid the ground landlord and he will not foreclose. I hope to be out of the hands of the trustees in about a

month. They are taking all the rents." In reply to questions from the Bench the unfortunate landlord stated that the £2,000 mentioned in his letter referred to law costs, and that Mr. Justice Vaughan Williams said he had been very harshly dealt with, and that it was very hard to lose so much money when he owed nothing, but the Bench made the order the District Council asked for.

MANY people are under the impression that the Obelisk of Luxor, which is a great feature of the noble Place de la Concorde in Paris, was placed there by Napoleon the First. But this does not appear to be the case. It was taken to Paris in the reign of Louis Philippe and put up where it now stands. The Obelisk is much talked about just now, for it has been discovered that it is in danger of toppling over. It is described as in a general state of dry rot, and crumbling away. Engineers have been sent post haste to Rome and to London in order to examine the Obelisk in the Piazza of San Pietro and Cleopatra's Needle on the Embankment, and to see whether anything can be done to support and preserve properly the rickety Monument. If the Luxor Obelisk be, however, really in a "general state of dry rot," it is to be feared that nothing can be done to effectually save it.

THE Town Council of Oswestry received at their last meeting a report from Messrs. Taylor, Sons, and Santo Crimp, of Great George Street, Westminster, with reference to the disposal of the sewage of the Borough. The present population is 9,000, and the scheme proposed provides sufficient for 11,000 persons. The town was sewered some years ago, and the sewage is now discharged into two small tanks at the dust-yard, where a small amount of purification is effected, and the effluent flows into the water course. The engineers remark that as the stream into which the effluent is discharged is very small, should a chemical process be adopted, the treatment must be followed by the application of the clarified sewage to land or to artificial filters. They suggest two alternatives, one for dealing with the sewage on a site of five acres by means of a chemical process, to be followed by filtration of the effluent through artificial filters, the other for treating it as at Wirbleton, on a larger farm 5½ acres in extent. The initial cost for filters and presses of the first scheme, for which the land had already been purchased, would be £9,450; but the working expenses, including interest, would be £1,248 a year. The cost of the additional land required for the larger scheme would be £3,200, and of laying it out and providing works £5,750, or £14,950. On the other hand, the working expenses would be so much less that, including interest on the larger original cost, it would be £732 a year. As spread over 60 years, scheme No. 1 would cost £6,000, and No. 2 £35,000, and on account of its greater efficiency they strongly recommended plan No. 2. After a long discussion, the Council adopted scheme No. 2, with the exception of the solidification of the sewage, and subject to the sanction of the Local Government Board.

Our Consul at Naples notices in his last report the progress that has been made towards the rebuilding of that town. Within the last few years vast portions have been pulled down, and the former narrow, tortuous alleys have been replaced by wide streets, lined on either side by handsome palaces. A part of the magnificent new thoroughfare called the "Rettillo," which runs from the Railway Station on the extreme east to the General Post Office in the centre of the town is now open to the public, and its construction has entirely altered the conditions of existence in Naples. It will be news to many people that no city in Europe, except London, has a traffic equal to that of Naples.

CO-OPERATION is advisable in many things, but not in chimneys. The co-operative chimney of a huge block of dwellings, or a street, or a parish, would be sufficient to poison the atmosphere of a town. Smoke is like poison. Served in infinitesimal quantities it may not do much harm, but administered on the co-operative principle it is decidedly dangerous. This appears to be the opinion of Mr. De Rutzen,

before whom the proprietors of Queen Anne's Mansions, Westminster, were summoned for permitting an undue quantity of soot in solution to issue from the chimney of a shed where the electric light is generated for the whole block of buildings. The manager argued that the smoke which the chimney emitted was not larger in volume than the combined quantities that would have come from the chimney-pots of all the flats, supposing each tenant had fires burning. In other words, it was smoke conducted on the co-operative principle, no tickets required. Mr. De Rutzen, after pleasantly remarking that the Mansions were the biggest and most unsightly block of buildings in London, condemned the inventors of the new system of smoke distribution to pay a fine of £5, with five guineas costs. They went through a similar process two years ago.

A LARGE and imposing Gateway at the South Queensferry entrance to the Hopetoun House grounds has been completed. The design was begun by Messrs. Wardrop & Anderson, Architects, and completed by Dr. Rowand Anderson, who has personally taken much interest in the wrought-iron work, which forms an important part of the scheme. The principal entrance consists of a large gateway, 15 ft. wide, with massive piers, 22 ft. high and 5 ft. square, faced with Ionic three-quarter columns, and surmounted by the appropriate frieze, entablature, and cornice of this order of architecture. On the top of the piers are to be placed the heraldic supporters of the Hopetoun House. Extending on each side is a crescent wing, divided into five divisions by double columns of the Tuscan order, and surmounted by an appropriate cornice. Standing on the top of a set of columns is a carved vase. Each wing is terminated by a massive pier rusticated and panelled, and at right angles outwards to these piers on each side is a wing wall with balustrade. The total length of the crescent, which terminates at the piers, is 90 ft. The main Gateway is filled with a pair of magnificent wrought-iron gates of a chaste and elegant design, having in the centre of each a medallion with wreath and the Hopetoun monograms. Above the gates is an ornamental fixed part of the Gateway, pyramidal in form, broken up by curved bands, foliage, and scrolls, having the monogram of the present Earl and the date 1893 worked into it, and finished off with an Earl's coronet. The total height of the Gateway is 22 ft. In the first division on each side of the great Gateway are smaller gates.

At the Art School at Bushey, presided over by Professor Herkomer, there are about eighty students, the ladies being in the majority. Professor Herkomer has no financial interest in the School, and gives his teaching freely. He is guide, philosopher and friend to all his pupils, and never loses sight of them in their after life, and is always ready to help them and put work in their way. In his new house, "Lulu-laund," he has provided a Picture Gallery mainly for the purpose of showing the best work of the students to anyone who goes to see him. Applicants to the Bushey School must send in a specimen drawing. When the Professor cannot discern any promise of real talent, a polite negative is sent. Doubtful cases are advised to obtain tuition from one of his old students, and after working for a time in their studios they can be drafted into his own preliminary class. Herkomer's view is that the Art School should be dominated by the personal influence of the artist, and he therefore limits the number of pupils, and has only one teacher to assist him.

A PLAN of the general lines of the Paris Exhibition of 1900 has been issued by Mr. Picard, the Commissioner-General. The River Seine will be the true centre and principal motive of the show. The Palais de l'Industrie is to be demolished, and a steel bridge flung across the Seine at that point, and few will regret its disappearance, as it blocks one of the finest views in the city, and is (for Paris) an ugly building. The Eiffel Tower will, however, be spared, as its removal would cost a largesum. Moreover, many people are still curious to see it, and probably it will be decorated in a new fashion. The principal entrance will be from the Champs Elysées, and the first buildings

seen on entering will be those of the Administration, and of Education and Instruction. To the right of this entrance, and facing the Invalides, will stand the Fine Arts building, and opposite to it the retrospective Museum of French Art. These two buildings will

THE FONT, EMANUEL CHURCH, WEST DULWICH: BY EDWIN T. HALL.

be permanent. This part of the Exhibition, namely, around the present Palais de l'Industrie, will be devoted to Art of all kinds. Between the Invalides and the Pont d'Alma, on the right bank of the river, will be situated the buildings for Horticulture, Social Economy, and the City of Paris. On the left bank, from the Pont d'Invalides to the Champ de Mars, the buildings for foreign nations, the army, navy, forests, hunting, and fishing will be located. The Trocadero will be the site of the Algerian, Tunisian, and other colonial exhibits. The Champ de Mars will contain the great industries and Agriculture. A Circular Electric Railway and other means of transport will be provided for visitors. The estimated cost of the works is over a hundred million francs, that is upwards of four millions sterling.

THE death of Mr. John Evan Hodgson, R.A., will be much regretted in artistic circles. He was well known in London, where he was born in 1831. His early years were passed in Russia, but he was educated in Rugby, and became a student of the Royal Academy in 1853. Three years later he exhibited his first picture, and he has been a regular exhibitor since. Up to 1869 he had chiefly painted Interiors and historical subjects, but a visit to Morocco turned his attention in a new direction, and he has since 1870 chiefly painted Moorish subjects. He was elected a Royal Academician in 1879.

THE Incorporated Society for Promoting the Enlargement, Building and Repairing of Churches and Chapels has made grants of money in aid of the following objects, namely, building new Churches at Maesteg St. Michael and all Angels', in the parish of Llangnwyd, near Bridgend, Glamorgan, £100, and Preston St. Augustine, Brighton, £80; rebuilding the Church of St. Lawrence, Carlton Miniott, near Thirsk, Yorks, £40; and towards enlarging or otherwise improving the accommodation in the Churches at Rettendon All Saints, near Battles Bridge, Essex, £30; Southtown St. Mary, near Great Yarmouth, £25; and Wandsworth St. Anne, Surrey, £35. Grants

were also made from the Mission Buildings Fund towards building Mission Churches at Rubery St. Chad, in the parish of the Lickey, near Bromsgrove, £25; and Stonebridge St. Peter, Middlesex, £10. The Society likewise accepted the trust of sums of money as repair funds for St. John the Baptist, Felixstowe, near Harwich, Essex, and St. John the Baptist, Leamington. The following grants were also paid for works completed:—Llanbadarn Fynydd St. Paternus, Radnor, £20; Norton St. Peter, Yorks, £20, balance of a grant of £90; Peterborough All Saints, £100; Holdgate Holy Trinity, Salop, £20; Rhosmarket St. Ishmael, Pems., £10; Ebony St. Mary, Kent, £10; Barmouth St. John, Merioneth, £35; Colehill St. Michael and All Angels', Dorset, £100; and Victoria Docks St. Luke, Essex, £45. In addition to this the sum of £237 was paid towards the repairs of ten Churches.

No remains of the original Trinity College, Dublin, now exist. Neither roof nor wall, not even a trace of the foundations. The College of 1595 was nothing more or less than a very small square Court, which has come down to us under the time-honoured name of "The Quadrangle." The fabric of Queen Elizabeth's College was removed early in the last half of the seventeenth century to meet the exigencies of increasing numbers of students. Within the quaint enclosure of the Quadrangle was the steeple of the ancient Augustinian Monastery of All Hallows, on the site of which Trinity College was built, with the Porter's Lodge on the ground floor. On the second story of the Tower was the bell, the predecessor of the famous Big Ben that resides in the Campanile, and whose rich and musical tones reverberated far and wide round Dublin. The Quadrangle was furnished with a row of houses on the east, west, and south, in all some seven buildings, Students' and Fellows', the north side being occupied, among other structures, by the Hall, Library, Regent House, and Chapel.

THESE edifices were built of thin red Dutch brick bedded in mortar, and supplied with wooden framework. The precincts of All Hallows covered 28 acres, and was made the very best use of by the Governing Body of Trinity College, its new owners. The earliest attention was turned in the direction of utilising the surrounding grounds. There is extant a lease of two plots of ground which was made in October, 1594, to a shoe-maker of the name of Peter Vaughney. This tenant undertook to lay out three fair gardens, planted with good and profitable herbs, as well as several sorts of fruit trees "The Fellows shall have free liberties, at their pleasure, to have their key and door to walk therein for their recreation, and they are to contribute twenty shillings to make a partition wall of mud between the orchard lying on the east and the said ground."

SATURDAY was another sensational day at Christie's, when the highly important Collection of Pictures by Old Masters of the late Henry Doetsch, came under the hammer. The Collection is the creation of the last twenty years, Mr. Doetsch aiming especially at the

acquisition of works belonging to the best periods of the various Schools of Italy and the Netherlands, but both the German and the Flemish Schools were represented. The Collection was peculiarly rich in portraits of the Medici family and of the Royal House of Spain. An unusually large number of the pictures were at one time or another in such renowned Collections as the Orleans Gallery, the Galleries of Charles I., the Marquis of Exeter, the Marquis of Donegal, the Marquis of Hastings, and the Duke of Roxburghe and others.

THE present Summer Exhibition of the Royal Institute of Painters in Water Colours, consisting of studies and sketches by the members, makes an agreeable change, both in aspect and style, from the usual displays of finished water-colour drawings. There is in it a great mass of inferior work for the exhibition of which, in the inchoate form of studies, no adequate reason is forthcoming; but standing out from the substratum of mediocre productions is a good sprinkling of fine and interesting things, throwing new side-lights on the talent of the painters to whom they are due. It would greatly add to the interest of such a collection as this if, on a future occasion—imitating the example of the Painter-Etchers—the Institute were to supplement the sketches of its members by a retrospective display of sketches by the deceased masters of English Landscape, with Constable at their head. Turner is never fully revealed in a preparatory sketch, but De Wint, David Cox, and Constable himself are often at their very best in this early stage. The last named painter, indeed, shows himself, in his marvellous notes and studies of earth and sky, the first, and, perhaps, the greatest of impressionists. It is not necessary on the present occasion to work through the whole Exhibition laboriously, drawing by drawing, but we may select for notice a few of the best and most distinctive things in it. Mr. John Fulleylove is infinitely happier in his finished studies than when he aims higher and seeks to make pictures of them. His "Arch of Titus, Rome," showing this familiar view of the Eternal City in the suffused warmth of veiled sunshine, is admirable, its genuine pictorial charm being attained by no sacrifice of Architectural truth.

A CAPITAL landscape, which further working upon would spoil, is, Mr. A. W. Weedon's

SILVER ALTAR PLATE: DESIGNED BY EDWIN T. HALL.

"Valley of the Arun from the Downs," with its far-stretching blue distance half wrapped in haze. Mr. Ed. M. Wimperis paints with his usual breadth and skill, and also with his usual lack of sympathy and true character, in "Broxtton, Cheshire."

The Builders' Journal COMPETITIONS.

No. 4.—A Village Church.

Designs are required for a Village Church to seat 200 people. The site is a hill-side, rising one in twenty from North to South, and situate in a stone country. The cost is not to exceed £2,500. Drawings to be submitted on or before Monday the 22nd of July.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Publishing.

The terms for free post Subscription to any part of the United Kingdom are SIX SHILLINGS AND SIXPENCE per annum by half-yearly or annual prepayments.

Advertising.

SITUATIONS WANTED, SITUATIONS VACANT, PARTNERSHIPS, APPRENTICESHIPS.

Per line, Sixpence. Minimum charge, Eightpence. Three insertions for the price of Two.

Prepayment in the above Advertisements is absolutely necessary.

Page or Paragraph Announcements, Trade Advertisements.

Prices on application.

Small Advertisements for current week's issue are received up to first post Monday morning inclusive.

MEN WHO BUILD.

No. 18.

MR. EDWIN T. HALL.

"It is our charter's boast that we, as a corporate body, exist for the advancement of Architecture, and Architecture is at its highest when its creations not only display the grace of artistic clothing, but are the shrine of healthy and vigorous life."—EDWIN T. HALL, at the Institute.

CAN any good come out of Nazareth? The City of London is not appreciated for any artistic tendency it may have beneath the contangoes of the Stock Exchange, or the real turtle of civic life. There is very little real "Art" within its old boundary walls and gates, themselves long since departed. The old demarcations have become obliterated and the City proper has lounged beyond its original limits, right round the compass, and yet we do not find that it has swallowed any Fine Art notions with its soup and champagne, or impregnated itself with any influences likely to mature its inartistic soul in times to come. The Corporation has done one or two "nice" things in its time. It has struggled against Fate, and the almighty dollar of Commerce—which, after all is the be-all and the end-all of a commercial community—has sat upon and dominated its every good intention. With the Art side of the City one does not, therefore, get too critical, for the men of many markets do not appreciate the fine work of Belcher and Norman Shaw, of Aston Webb and Colcutt, not even of Inigo Jones and Wren. The upward tendency of Brighton "A.s" and mangel wurzels rule their hearts with more potency than the aspect of a fine work in brick and stone, and that is perhaps why the income of a City Architect is immeasurably larger than his brethren of the West. How Edwin T. Hall came to install himself in Moorgate Street, and having done so, how he remains there, is one of those things which no man can explain, and none have the impertinence to enquire into.

It was the magical "craftsmen" business that prompted you to go Citywards, for it is, perhaps, mostly due to Edwin T. Hall that this new measure at Conduit Street is in the air. In the R.I.B.A. Report for 1894, reference is made to his proposal for the Institute to encourage and stimulate Craftsmen, by giving medals and other awards, and to exhibit their works with the Students' drawings so as to form an annual Exhibition, in a wide sense, of the rising talent in the Art and Crafts of Architecture. The suggestion, however, did not meet with the complete approval of the Council who referred the matter to the Art Standing Committee, who in turn appointed a Sub-Committee to meet Mr. Hall

upon the matter. Although the Sub-Committee, it is well known, were not only unanimous, but enthusiastic, in their acceptance of the suggestion, it was never brought to fruit until the Institute made the serious proposal dealt with in the last issue of THE BUILDER'S JOURNAL. Mr. Hall's suggestion and the later proposal of the Institute differ in this respect that the one brings forth the latent talent of unknown men, whilst the other is but a recognition of craftsmen who have made their mark. But from one blessing another may follow.

It would be somewhat premature to trace too closely the career of Edwin Hall, who, as Architecture goes, is only just in the hey

"IVY HATCH," IGHTHAM, KENT: BY EDWIN T. HALL

day of his practice. At the Institute—on the Council of which he has sat for some years—he has done perhaps more real good than any other member. For seven years he acted as Hon. Sec. of the Practice Standing Committee, and those who know what work

Architect of great resource can compete against all the recognised "Hospital" men, and beat them at their own game. Mr. Hall's drawings for the Lewisham Competition have been recognised by more than one competent authority to be masterpieces of hospital planning.

In an active practice of some years standing, Edwin Hall has shown an integrity of purpose which claims for him the friendship of the highest in the Profession. He has a keen sense of professional etiquette which has been more than once a shining light to men who come in contact with him.

Professional Items.

At the monthly Town Council meeting for the rebuilding of the Swansea Markets, the Swansea Corporation has decided to accept Messrs. Bennett Brothers', contractors, The Architects are Messrs. Wilson & Moxham, of Swansea, whose designs were selected in open competition in 1889 by Mr. Alex. Graham, the Assessor appointed.

FOUNDATION STONES OF NEW Wesleyan Chapel and Schools were laid on Wednesday last, at Bramhope, near Leeds. Mr. J. Morley, F.R.I.B.A., Architect, of Bradford and Harrogate, prepared the designs of the building, which is in the Decorated Gothic Style. The plan consists of Nave, Chancel, Transepts and Organ Recess. The fittings are of pitch pine, and will give accommodation for 170. A Tower and Spire, 120 feet high, form a feature at one angle of the building. Behind the Chapel is the School with Class Rooms, Vestry and detached House for caretaker. The cost will be £2,200. The exterior walling will be of Apperley and Bradford Stone, with Ashlar dressings of Guiseley stone. The windows will have tracery heads, filled with ornamental leaded lights. The contractors are:—Mason, I. Lawrence, of Horsforth; Joiner, S. Kaye, Pool; Plumbers, Shuttleworth & Sons, Otley; Slater, W. Walker, Otley; Plasterer, A. Taylor, Eccleshill; Painters, Couldwell & Sons, Leeds.

At a meeting of the Finance Committee of the Newcastle Corporation, held on Thursday last, Mr. Leeson presented a report estimating the cost of repairing St. Nicholas's Lantern at £1,700 or £1,800, and stating that it would be dangerous to recommence ringing the bells in the present condition of the Lantern. It is asserted that the Corporation is responsible for its repair.

THE Memorial Stone of a Wesleyan Mission Hall was recently laid at the corner of Tudor and Belle Vue Roads, Lower Easton. The building will consist of a lofty Hall, 70 ft. by 52 ft. This will accommodate 500 adults, or 750 children, and an additional 70 or 100 in an end Gallery. The two sides will be arranged for sub-division into six Class Rooms (each 14 ft. by 10 ft.). There will be on the ground floor also a Men's Bible Class Room, 23 ft. by 18 ft., capable of accommodating 80; an Infant School, with Gallery for 120; Vestry and Lavatory accommodation. Upstairs will be two Class Rooms, each 18 ft. by 14 ft., accommodating 50 each. The Hall will have an open timber roof, and all the rooms boarded dados, the joinery being of pitch-pine. The Contractors are Messrs. Wilkins & Gosling, and the Architect is Mr. J. H. La Trobe, F.R.I.B.A., of Bristol. The estimated cost is £1,600.

THE rebuilding of the "Fleece Inn," Rochdale, is being carried out by Messrs. J. & J. Coates, under the superintendence of Mr. Thos. A. Filton, Architect, of Manchester. The contract price is £1,970. Mr. Filton has also in hand the erection of thirteen Workmen's Dwellings at Rhodes, West Manchester.

THE Wesleyan community at Totley Rise have long desired a new Chapel. The Trustees having determined to commence operations at once, seven foundation stones were laid on Thursday. The building will serve both as a Chapel and School until funds permit of the erection of a large Chapel, for which ample space has been left on the front portion of the land. The building will be cruciform in plan, the Chapel, forming the Nave, being 45 feet by 22 feet. There will be a School Room, 31 feet by 15 feet, and two Class Rooms, 15 feet by 10½ feet. The Vestries and the Class Rooms will be divided from the Chapel by revolving shutter screens, permitting the rooms to be thrown open into the Chapel, and thus give accommodation for 360 persons on special occasions. The building will be of stone, the Architect being Mr. Joseph Smith, of Hartshead. The Contractor is Mr. J. Vasey.

A SKETCH STUDY FOR DESIGN: BY EDWIN T. HALL.

that Committee at Conduit Street turns out in a session, will appreciate to the full what such a service means. It was but just, therefore, that at the recent election of this same Committee, Mr. Hall's name stood at the top of the poll. In 1890 Edwin Hall was selected to represent the Institute before a House of Lords' Committee on a Bill affecting building, and for years he worked on the draft for a Bill to codify and amend Metropolitan Building Acts—a measure brought to fruition by the London Building Act of 1894. He was one of the three members of Council appointed to confer on this Bill with the London County Council, and to represent the Institute in Parliament; and the Corporation of London retained him as their Architectural adviser on the Bill when it was before the House of Commons; others interested having followed suit. If comparison be made of the original draft Bill of the County Council with the final Act as passed, a moderate idea of the work of modification and alteration will be arrived at, and how much study and technical knowledge is necessary to keep public bodies from violating the dictates of Building Science. Although these facts tend to prove the technical reputation of Edwin Hall; and although, as is not generally known, every single clause in the new Building Act came under his personal consideration, the artistic side of his capabilities must not be ignored. He has rather a fascinating method of preparing his drawings. First of all, his most constant companion is a sketchbook of goodly dimensions, and rumour says that it has been discovered under his pillow more than once. In this book is jotted down every Architectural "thought" that meets him. All his designs are first considered in it pages, first a sketch plan and then a sketch perspective, from which the geometrical drawings are afterwards made.

Mr. Hall does not profess to be *facile* with his pencil, but you have seen worse "facility" from men who do, and the charm of detecting the growth of a design, from a sketch, however rough, hidden away in these series of sketch books is not a very common pleasure. They contain designs for wrought iron grilles and railings, furniture and fittings, lamps, and Communion plate, and all the many details crowding in upon a busy Architect's consideration—even a suggestion for a new "manhole" has its pride of place. Last year Edwin Hall entered upon one of his rare competitive crusades and pulled off the Park Hospital at Lewisham, which will prove the largest work he has yet done; and the more honour to him, for it proves how an

AN INTERIOR OF "IVY HATCH."

A GREAT CONQUEROR'S TOMB.

THE first point one would naturally visit in Samarkand is the famous Gur Ameer, or Tomb of Tamerlane, which stands in a pretty little park on the edge of the Russian settlement. You pass a dilapidated archway—covered in part by beautiful tiles—lined with beggars, priestly or otherwise, and the Tomb of the great Conqueror stands before you. It is built of small, burnt bricks, and has very massive walls. Like the other historic remains of Samarkand, it is quite in the Persian style of Architecture. The apex of the Dome is about one hundred and fifty feet from the ground. The Dome, whose outline is very graceful, is spherical, and its surface is fluted or ridged, but its top has lost all its glazed bricks, and has been restored in plaster by the Russians. This white plaster is, of course, fatal to a fine general effect, and you accept its presence only as a cheap method of preserving the remainder of the work. The Tomb had evidently once four grand porticos on the four sides, probably with four minarets also at the angles. Only a portion of one minaret is now in position; it is round, smooth, slender and graceful. The colours of the glazed bricks are mostly light and dark blue, white, yellow, and green. The dark blue is, however, largely the predominant tint. Plain brown bricks often stand between the glazed ones, and afford a pleasing contrast. The bricks have a glazing like porcelain, which is about one-eighth of an inch thick. Sometimes the surface is smooth, with several colours running together; sometimes it is indented, or indented and raised, like a cameo, sometimes it is in low relief. But let us enter the Mausoleum, merely pausing to notice that there are small domed structures, right and left of it, containing tombs of some of Tamerlane's family, and of some of his high Ministers. At the entrance are small but prettily carved doors, and just within sits a molla, round about whom, on the walls, many Persian texts have been placed as vows by the faithful. The lower wall of the great Dome was once covered with finely carved slabs of alabaster, in the style of a deep wainscot, but these are now mostly lacking, and their place has been filled with ugly, glaring cement. The Dome is partially lighted by four openings near its spring, which have been filled in recent times with wooden screens perforated in ornamental designs. On four sides are high arched recesses with ceilings in the broken stalactite style so frequently observed in the Alhambra at Granada, and also in Mohammedan countries. On the floor a low, carved stone railing surrounds a number of tombs, or rather, cenotaphs—for the actual tombs are in a vault below—that of black marble in the centre being Tamerlane's. It is a long, narrow, and low block of smooth stone, with a bad fracture in the middle, said to have been caused by an earthquake. The other cenotaphs of special interest are of a greyish sort of stone. The pavement without the railing is of great blocks smoothly worn by the feet of pilgrims and travellers for several hundred years. In one corner near the entrance a rough flight of steps conducts to a low, dark vault, where are the true tombs. That of Timour is a yellowish marble slab, completely covered with inscriptions of raised Persian letters, which embrace many selections from the Koran and a genealogy of his family.

At an adjourned meeting of the Coseley Urban District Council, held at the Public Offices, Coseley, Staffordshire, on Wednesday, June 19th, tenders were submitted for altering and enlarging the Public Offices, building new Council Chamber, etc., from plans and specifications prepared by Mr. Chas. W. Shackleton, the engineer and surveyor to the Council. The tender of Mr. Thos. Jones, builder and contractor, Roseville, Coseley, Staffordshire, was accepted, and the work will be commenced forthwith under Mr. Shackleton's superintendence.

THE foundation stone of the new School Buildings which are about to be added to the Royal Medical Benevolent College, near the Epsom Downs, will be laid on Tuesday, July 9th, by the Prince of Wales. The original structure, to which considerable additions have since been made, was opened by the late Prince Consort about forty years ago.

METAL IN ROMAN BUILDINGS.

THE frequent use of the arch in Roman Architecture instead of beams and joists as now practised, and the frequent use of bricks, may serve to explain why metal was not more required in their building and great engineering works, such as the celebrated Stone Bridge over the Rhone, built in the reign of the Emperor Trajan, consisting of 20 arches, and other great works. That timber, however, must have entered largely into the construction of their buildings is shown from the conflagrations of their cities. Cæsar's Bridge over the Rhine, constructed when the Romans first invaded Germany, was made of timber, also the Pons Publicus at Rome. Although it is not easily ascertained from history to what extent iron was used in the construction of buildings by the Romans, and although from its perishable nature, it could not be expected that many of its applications would reach these times, yet there is ample evidence, from what has been shown, that its utility was appreciated, and its use common. It has been said that the large stones of the Aqueduct Bridge at Nîmes have been jointed together without cement by ligaments of iron. In domestic buildings iron was used, according to the Roman authorities, for many purposes, similar to those to which it is now applied, such as the making of nails, bolts, locks, hinges, hooks, pillars, gates. For the last of these probably bronze was more frequently used, as the two Gates of the Temple of Janus, which were opened in war and shut in peace, consisted, according to Livy, of brass. The Brazen Gate of the Pantheon is described to have been of great magnitude and fine workmanship. When historians have recorded that there were 420 Temples at Rome crowded with Statues, one may easily conceive that bronze casts would be extensively used. Even brazen columns or pillars were constructed at Rome, as the Columna Ænea. At the Columna Mænia, named after C. Mænia (A.C. 417), were placed the brazen beaks of captured ships.

"PRESENT-ABLE" ARCHITECTURE.

There is Poetry in Architecture and Architecture in Poetry. We are not aware that there is very much Architecture in this particular poem, but it comes from a Scotch friend, and is welcome. There are pessimists in the land of porridge.

Why should fine fancies e'er us haunt
On thinking out why should we wait;
Why study, when the thing we want
Is Architecture "Up-to-Date."

The subtle curve, long level line,
Did well enough with dullard Greek,
The sober Art of Auld Lang Syne—
What's wanted now's a startling freak.

Who cares for Order or for Law,
The "free" in Art's the latest style,
How'er detail be rude or raw,
Or misproportion'd be the pile.

All in-and-out and up-and-down,
No peaceful plane on which to rest
The eye; the thing's to "take the town,"
And give—of course—what pleases best.

To live to please, and please to live,
That's our philosophy to-day;
Why do the right that we may give
Delight, when only—we're away!

When dead, it matters not to us
What those who live may say or think,
We get the money now, the fuss
Of future fame's not worth its ink.

Glasgow, June 1895. G.

THE new Roman Catholic Church, erected at Retford, by the Dowager Duchess of Newcastle, was opened on Thursday last. The building is of iron, lined with pitchpine, which gives it a light appearance. It will be remembered that there was some hostility to the building occupying the site upon which it now stands, in Queen Street, West Fields; but the requirements as to the building line having been complied with, all further obstacles vanished, and the work was completed without further interruption.

ANOTHER "ELECTRIC" RAILWAY IN LONDON.

THE Central London Railway, for which three Acts of Parliament have been obtained, is now to become an accomplished fact. These Acts, passed in the course of the last three years, authorise the construction of an Underground "Electric" Railway, running in a line from Shepherd's Bush to the open space in front of the Mansion House and the Royal Exchange, and thence to Liverpool Street where, subject to arrangements being made with the Great Eastern Railway Company, it is proposed to construct a terminal Station underneath their terminus. By the system of constructing underground lines, so successfully illustrated in the Electric Railway running from the Monument to Stockwell, and by the line now actually in course of construction between the City and Waterloo, the new line will be carried out without the least disturbance of the streets, or any peril to property. The length of it will be six miles and a-half, and there will be fourteen Stations. Starting with Electrical Generating Works and a Station at Shepherd's Bush, there will be another Station at Queen's Road, and one at Holland Park. The next will be at Notting Hill Gate, another at Westbourne Terrace, and another at the Marble Arch. Running straight down Oxford Street, there will be Stations at Bond Street, Oxford Circus, Tottenham Court Road, the British Museum, and Chancery Lane. The line will run under the Holborn Viaduct, to Newgate Street, where there will be another Station, and thence with a slight twist—unless the alterations contemplated by the City authorities should first be carried out, in which case this curve will nearly disappear—into Cheapside. The next Station will be at the Bank, and thence the line will traverse the Royal Exchange into Broad Street and on to Liverpool Street, passing in its way under the Circle Railway.

Throughout its length the tunnels will be cut through the London clay. There will be two tunnels, as in the City and Southwark Electric Railway, but of larger diameter. They will be driven along by what is known as the Great-head Shield, on precisely the same system as is adopted on a gigantic scale for the Blackwall Tunnel. There will be no opening of the streets at all. Property will be purchased in accordance with the Parliamentary powers conferred for the Stations at the various points indicated, and from these various properties the tunnels will be driven, while the traffic overhead will go on quite undisturbed. From the West End to the City the two tunnels, one for the up line and one for the down, will run side by side. The engineers, however, are forbidden to go under any building, and in the narrow City streets there is not sufficient room to carry the two lines side by side. They are to run along therefore one above the other, the lower one going past Bow Church, Cheapside, at a depth of no less than 80 ft. below the surface of the roadway. Emerging in the open space in front of the Mansion House and the Royal Exchange, the new line is to bring about a remarkable London improvement. We all know the crowded and dangerous condition of the streets just here. Arrangements have been made with the Corporation by which the Company will be allowed to plant their Station underground in the middle of this space, on condition that they construct a spacious Subway for pedestrians all round it. This Subway will be 15 ft. wide, and will be accessible by easy flights of steps from all the surrounding thoroughfares. Foot passengers will thus be able to avoid crossing the roads at this point. A person may start at the Mansion House, descend a few steps, cross the end of Cheapside, of Princes Street, Threadneedle Street, Cornhill, Lombard Street and King William Street, and return to the Mansion House in perfect safety, while from this Subway he will also be able to pass down to the Station of the City and Waterloo line, or to that of the Central London Railway, which is to have, in addition to the several entrances at the end of the converging thoroughfares, two broad flights of steps leading down from each side of the pavement immediately in front of the steps of the Royal Exchange. The ground at this point

in the City, it need hardly be said, presents a wonderful tangle of pipes and drains and cables and wires, and for these also the new Railway has undertaken to make ample provision. Beneath the Subway for foot passengers will be another Subway about three times as large as will be required for taking in all the underground pipes and so forth, and which may therefore be expected to obviate any further disturbance of the roadway for generations to come. The main features of the new line will be those of the City and Southwark Railway, with such modifications and improvements as the experience gained by that undertaking has suggested. That line, it may be remarked, was originally intended for working by cable. Electricity was an afterthought. This new line is planned for electricity. The tunnels will be larger than the existing ones, and the trains, instead of accommodating 100 passengers each, as on the existing line, will be designed for 336. Special care is to be taken for the lighting of

the evening, but that the busiest parts of the day, both in and out, are the afternoon and early evening, from about three till six or seven that is. It is computed that between the City and the Marble Arch people take about 300,000 rides daily. The promoters of the new line are of course hoping not only to get a large share of this traffic, but to create something of that morning and evening influx and outflow which at present appear to run in other channels.

The development of a habit of travelling is one of the most interesting phenomena of modern London. This was very strikingly brought out in evidence taken by a Committee of the House of Commons in 1890. It was then shown that in 1867, when the population of the Metropolis was about three millions, the total number of passengers carried by the Metropolitan and District Railways and the omnibuses and trams was upwards of sixty-four millions. In 1889, with a population of four millions, passengers were nearly 422 millions. Popula-

by adopting it, and have resolved to spend three and a-half million dollars in effecting the change.

AN extension of the Antley Wesleyan Chapel, Accrington, which will cost £2,700, has been commenced.

It is proposed to erect in St. Peter's Church, Oxford Street, Newcastle, some permanent Memorial to the late Canon Raines, who, for so long a time, was Vicar of St. Peter's.

ON Tuesday afternoon, Bishop Wilkinson consecrated the English Church of St. John, this being the first consecration by an English Bishop at Boulogne. The event created considerable interest in the town. The Church cost £6,000.

WHILE removing a hedge at Thornham Farm, Witheridge, Devonshire, a labourer discovered three common earthenware pitchers, the total weight of which, when empty, is about 60 lb. They contained a number of silver coins dating

Stations and carriages—a point in which the City and Southwark has been very defective from the outset. The Stations are to have staircases as well as hydraulic lifts, and it is intended to keep up a service of trains at intervals of about two minutes and a-half throughout the day, the whole journey from end to end occupying about twenty-five minutes. The Company have taken very elaborate pains to arrive at precise ideas of the great human tides which sweep up and down the main thoroughfares they propose to traverse. They have employed a large staff of officers, some of whom have been stationed at numerous points along the route, while others have spent weeks in riding to and fro in omnibuses, all of them tabulating figures showing how many rides people take over various portions of the route. These results have been set forth in scientific curvilinear form, and curiously enough they appear to show—not as on London Bridge and some of the Railways, a stream into town in the morning and a stream out in

tion had increased by a third; but travellers had multiplied sevenfold. It is evident that the establishment of a new service creates a new travelling public, and this, it is safe to assume, would especially be the case with such a service as that proposed and along such a route. For a passenger line there is nothing comparable to it in the World. As we have shown, recent engineering achievements have quite disposed of all practical difficulties in the carrying out of the line, and electricity as a motive force tends continually to become cheaper. The cost per train mile on the Liverpool over-head line has been reduced to 3½d. or 4d., and on the heavier City and Southwark they are, we understand, now working at a fraction under 6d. So important are the reductions already effected considered to be, that the Manhattan Elevated Railway of New York, which carries over 200 million passengers a year, and which only a year or two ago, after exhaustive enquiry, pronounced against electricity as too costly, have now decided that they can effect a large saving

from 1600 to 1650. The coins were of the sizes of a florin and half-crown, but much thinner.

It has been decided to erect in Paris a Statue to the memory of Victor Hugo. The situation selected is the Square in the centre of the Avenue called after the poet, and near the house where he died. The subscription list recently opened for this purpose has already reached a total of many thousand francs.

IN sawing through a white oak log, 3 ft. in diameter, a few days ago, a sawyer at Blanchester, Ohio, came across the date 1780 carved in the wood near the middle of the log. The figures were very distinct. The carving was, doubtless, done when the tree was young, and in some way the wood grew around and over it without filling up the carved furrows.

ON Thursday last was laid the Memorial Stone of a Free Library and Reading Room at Abingdon, which is being erected at a cost of about £2,000 by the Governors of Christ's Hospital.

EARLY RAILWAY REMINISCENCES.

THE Railway Exhibition at the Imperial Institute, has inspired some one to make the excellent suggestion that a Railway Museum should be established. It is rather a matter of surprise that so obviously interesting a collection has never been thought of before. Materials must surely be abundant enough. It is said that some of the earliest carriages built by the South-Western Company have been discovered by Mr. Sekon, who describes them as being of the most primitive construction. Seriously speaking, a collection—if it could be made—of specimens of the earliest Railway carriages would be extremely interesting, and would probably astonish most present-day travellers by the iron road. Third-class passengers, especially on the northern lines, travel now in comfort, which is perfect luxury compared with what their predecessors had to put up with in the early days of steam transit. Third-class carriages on most lines, fifty odd years ago, were simply what we should now call cattle-trucks. They had neither roof nor seats. Some of the trains in these early days had a seat for the guard placed outside and above the last carriage. There he perched, commanding a view of the whole train, and thence he applied his primitive brake. Something similar to these perches for the guard may still be seen in use on the brake-vans of goods trains, if not of passenger trains, on the Western Railway of France. Specimens of these various kinds of early railway carriages, if it be still possible to unearth any of them, should certainly find places in the proposed Museum. But if there are none preserved, it should still be possible to construct models thereof from old drawings, or from the recollections of those among us—a rapidly diminishing class—whose memories of the first beginnings of railway travel are still green. Another obsolete class of carriage, which should be represented in the Museum, is the covered vehicle which had iron rails round the top to protect the passengers' luggage, which in the early days was packed upon the roofs of the covered first and second-class carriages. Examples of coaches of this kind with their luggage-laden roofs can be seen in the once popular engraving of Mr. Frith's picture of the Railway Station. But the Railway Museum need not confine itself to obsolete types of conveyances. Possible objects of interest are very numerous. There are the tickets, for example. Has anyone, we wonder, in these days of collecting mania, been able to bring together a collection of early Railway tickets. Just as the practice of placing luggage upon the roof of the carriage was a survival of the stage-coach system, so the first railway tickets were paper vouchers such as had formerly been issued to travellers by coach. The passenger gave the booking-clerk the fare, together with his name and address, which were duly recorded, and received in return a paper receipt torn from a book in which the counter-foil remained as a permanent record of the transaction. The system was very cumbrous, and naturally soon disappeared as railway travellers multiplied. Some of these elaborate vouchers are still in existence, and should certainly find a home in the Museum. Another very interesting section would contain specimens of the first time tables issued for the guidance of passengers, together with copies of the early editions of "Bradshaw." It would probably be difficult to discover many ancient time-tables, but at least one, containing the trains between Liverpool and Manchester in January, 1831, has been preserved. From this it appears that trains started from both ends of the line at the same time, meeting and passing about half-way between the two towns. There were four first-class trains daily—at 7 and 10 a.m., and at 1 and 4 30 p.m.; but only two second-class, at 8 a.m. and 2 30 p.m. respectively. But at the bottom of the bill it was announced that—"In addition to the above trains it is intended shortly to add three or four more departures daily."

THE Eastbourne Guardians invite tenders for painting and cleaning works at the Work-house Infirmary. Specifications may be obtained at the office of the Architect, Mr. F. E. Cooke.

MAGNITUDE IN ARCHITECTURE.

IN placing Sculpture in juxtaposition with Architecture, it is obviously a point of no small importance to consider the scale thereby imparted to the composition. It will hardly be necessary to demonstrate with argument that with which every artist must be acquainted, namely, that magnitude is relative rather than actual, and that by skilfully proportioning details, or by placing in juxtaposition features with the size of which by habit, experience or instinct we are acquainted, with those of which we have no other data for determining the magnitude, the artist can impart a fictitious scale to his composition; or that by diminishing one feature and exaggerating another, he can, by this comparison, produce an idea of magnitude which the actual size does not possess. In practice this has but too frequently been lost sight of, and in many instances where circumstances institute the comparison it has been rather the result of accident than design. Perhaps this remark might be more justly restricted to the revival and later production of Art, since in the works of the Antique we continually observe not only its application, but the success with which it has been attended. The principle must, however, obviously become of peculiar importance in the case of Sculpture, since the proportion of the human figure is that with which we are most naturally and necessarily acquainted, and one which we perhaps more readily apply than any other (adjusting everything to this scale instinctively); and, although to a certain extent, the scale of the sculptural accessories, particularly the isolated figures, will be indicated by various circumstances in the proportions of the Architecture, it is not absolutely or invariably so, and the advantage to be gained by skilfully adjusting this scale must never be lost sight of. When, by being in due proportion to the members of the Architecture, it would become too colossal, it might be preferable to adopt a different species of decoration, since, where the ordinary features of the composition are merely increased in actual size, and the same relative proportions observed, the scale by which we measure is increased in nearly the same ratio. We may also observe that the undue exaggeration of the human figure beyond its natural proportions, so far from invariably producing an effect of grandeur, is sometimes productive of impressions akin to those resulting from actual deformity; the proportioning of these parts is, however, a point which must depend solely upon the judgment of the artist, and one for which no rule can be laid down. A careful study of the best models, and an accurate observation of works already executed, will form the best and perhaps the only guide.

THE CHARTERHOUSE.

AS another result of the Agricultural depression, the number of pensioners at the Charterhouse, which used to be eighty, but was reduced ten years ago to fifty-five, must be still further reduced, writes Mr. Walter Besant, unless the Governors make up their minds to continue the Charity by selling the site and the buildings. Many of the farms belonging to the Charity are paying no rent at all, and things are going from bad to worse. Since the whole country is going to certain wreck and ruin, as a natural consequence of the agricultural bankruptcy, it must be expected that our charities will disappear first. But to sell the Charterhouse! Heavens! The very thought makes one tremble. To sell the Charterhouse—that ancient and venerable place—one of the few monuments of the past that have descended to us! Stand within the first Court—there are two Courts left of the old Monastery—and look round. The place was founded by that gallant knight, Sir Walter Manny. First he gave the City a new Burial Place. It is now called Charterhouse Square; it contains the ashes of a hundred thousand London citizens; they died of the plague. Disturb not their ashes lest you revive the plague bacillus. Sir Walter gave a Chapel to this Cemetery; he then built beside it a Monastery of Carthusians—that rigid and austere Order. In his own Monastery he lies buried, the King and bishops and the barons of England attending his funeral. After 200

years the Brethren—a harmless, holy, austere, bigoted company—were driven out and executed with a horrible brutality which makes the blood boil. Then the Duke of Norfolk had it—I believe that he built the present State Rooms; and then Sutton converted it into the noble charity which still exists. One thing it has lost—the boys. It was a wicked and a cruel thing to take the Charterhouse School from its own place. We had enough mock Etons already; it was a City School, and belonged to the City. They pretended, I believe, some nonsense about health; that it was mere pretence was shown by the Merchant Taylors' School taking the place of the old School directly after it was taken away. The old almsmen, the boys, the memory of the dead, the Chapel, and the Hall made up one harmonious foundation—and they spoiled it.

TRAINS TO PASS OVER EACH OTHER.

THE specification of the United States patent, dated March 25th, 1895, is an interesting bit of engineering literature, designed to secure legal protection for the very simple method, proposed years ago, of enabling two railroad trains to pass each other on the same track without collision. The frequent attempts of trains to thus pass each other have been attended so uniformly with disastrous consequences that the feat has become pretty generally recognised as an impossible one, and most engineers have concluded to desist from further efforts to accomplish it. The plan now proposed in all seriousness seems to be the exact counterpart of the one which was mentioned in 1893, and of which the appended particulars may be of renewed interest at the present time. The idea is altogether very simple, as most really great plans and ideas are. The inventor of earlier years proposed, as the present one does, to place on the front of every locomotive going in one direction a long, inclined plane and on this were to be two rails. These were to come close to the regular track at the forward and lower end of the plane, and at the upper end were to be connected with other rails running along the tops of the cars and down to the main track again on another inclined plane at the rear end of the train. When the train provided with this attachment would meet another train on the same track, the latter would simply go over the former, its weight making the connection of the front of the inclined plane and the rails on the main track perfect, and acting, at the same time, as a brake on the speed of the train underneath. It is, of course, perfectly evident that if this invention had been properly appreciated and generally adopted, the number of double-track roads the World over would not now be half as great as it is. A single tract, with occasional switches for heavy freight trains, would have answered all purposes, and the cost of building railroads would have been decreased by an important percentage. The project is truly American.

THE Standing Joint Committee of the County of Aberdeen has decided to erect new Police Stations at the following places and cost:—Culter, £1,017; Insh, £631; Ellon, £604; Strathdon, £691. The plans are by Mr. J. D. Watson, C.E., County Buildings, Aberdeen.

THE Queen was present at the formal opening of the new Parish Church of Crathie, on Tuesday last, of which her Majesty laid the foundation-stone about two years ago. The new edifice is within a stonethrow of Balmoral, and occupies the site of the former place of worship. It is designed in the Early Scottish style of Architecture, and takes the form of a Cross, with Nave, Apse, and Transepts. The South Transept is set apart for the Queen and members of the Royal household, while the other on the North, facing it, is reserved for the Heritors of the Parish.

Professional Items.

New infants' departments of the Churchgate Board Schools were opened recently at Loughborough. The building is a substantial red brick structure, with overhanging eaves, roofed with grey Welsh slates. It is situate on the east side of the passage leading from Church Gate to Baxter Gate, and contains large School Room, 62 ft. by 23 ft.; two Class Rooms, 19 ft. by 18 ft., and 16 ft. 6 in. by 18 ft. respectively, and a Cloak Room, 23 ft. by 10 ft. 6 in. The flooring is of 2 in. red deal blocks, and there is a glazed brick dado to the walls. This is utilised for the window sills, by having the top course of bricks glazed throughout. The ceiling is 21 ft. to the roof line, and 13 ft. 6 in. to the tie beam, the roof above the latter being of an open design, with woodwork of varnished deal. Glazed screen doors divide the Class Rooms from the main apartment. Accommodation has been provided for a total of 240 infants, boys and girls. The whole building, including Cloak Rooms, is to be heated with hot water, the apparatus having been fixed by Messenger & Co., Loughborough. The general contract was let to Messrs. T. Barker & Son, for the sum of £1,700. The Architect was Mr. George H. Barrowcliff, A.M.I.C.E., of Loughborough.

The old Schools attached to St. John's Church, Park, Sheffield, have been enlarged at a cost of £2,000. The Schools will accommodate 300 girls and 300 boys. The girls are to be on the lower floor and the boys on the top floor, and for each department there is a School Room and four Class Rooms, with Cloak Rooms, and Teachers' Room. The rooms are 14 feet high, and are heated with slow combustion open fire grates. The Class Rooms are divided from the School Rooms by glazed pitch-pine partitions. The ventilation is good, and all the rooms are exceptionally well-lighted. A room with a range in it has been set apart for the girls to learn cottage cookery. Mr. Joseph Norton was the Architect, and the work was carried out by Mr. George Webster.

The new School at Keir Street, built by the Barnsley School Board, was recently opened. Great difficulties have had to be overcome in connection with the erection of the Schools. A site was first obtained at Old Town, opposite the present Infants' School there, but when the building had fairly begun to rise, the site began to sink, and the walls to crack, so that it became necessary to remove the building to another place, and the present site was then obtained. The Schools, admirably designed, well lighted, outwardly imposing, inwardly bright and cheerful, are from designs of Mr. C. Robinson, Architect, and are intended to accommodate about 300 children, with ample provision of Cloak Rooms, Playground, &c. Architecturally and in every other respect the buildings are a conspicuous success. The cost of the Schools had been:—Site, £393 10s.; total amount of contracts, £2,726; furnishing, cost of asphaltting the yard and making the street, £645 10s.

Two Tablets have been erected by Lord Donington, in the Parish Church of Castle Donington. The Tablets were designed by Messrs. Pugin, and are highly decorative in character, each being different in design.

The Church of Holy Innocents, Selhurst Road, South Norwood, will be opened to-morrow. Messrs. Bodley & Garner, are the Architects, and the builders Messrs. G. F. Smith & Sons, Milverton, Leamington. The stone used was supplied by the Bath Stone Firms, Limited, Bath.

BUILT by the workmen of the Londonderry Bottle Works, Seaham Harbour, to perpetuate the memory of their late employer, the Robert Candlish Memorial Hall, is to be opened on Saturday by the Marchioness of Londonderry. The Hall is built with red bricks, having terracotta mouldings, head-pieces, and other ornamentations. There are reading, game, and Conversation Rooms, and a large Room for Assemblages. Portraits of the deceased Robert Candlish and other personages distinguished in Science, Art, Engineering, Literature, &c., adorn the windows and the interior of the building. The Architect is Mr. Frank Caws, of Sunderland.

A NEW Board School was recently opened at Chesterfield, in which provision has been made for 280 children, at a cost of about £3,910. Messrs. C. Rollinson & Sons were the Architects, and Mr. W. Forrest, Chesterfield, the Builder. Separate playgrounds are provided for the boys and girls.

A HANDSOME Mission Church, which has been erected at Caddy Field, as an offshoot of the Halifax Parish Church, was dedicated on Wednesday last. The estimated cost, including site, is about £1,200, and the accommodation 250. Mr. W. Swindon Barber, of Halifax, is the Architect.

UNDER the superintendence of Geo. H. Fellowes Prynne, Esq., a Stained Glass Window has been designed and executed for East Antony Church, Cornwall, in memory of William Henry Pole-Carew of Antony. The centre light is a "Nativity," the two side lights being "the Adoration of the Magi" and "the Shepherds" respectively, with backgrounds of colour, no landscapes or perspective being used. The whole is enclosed in a setting of elaborate tabernacle work. The designing and execution were entrusted to Messrs. Percy Bacon & Brothers, of 11, Newman Street, London, W.

ADDITIONS are about to be made to the Victoria Hospital, Bromley, at a cost of £550, for which Mr. W. H. Colbran is the Architect.

MESSRS. A. WATERHOUSE AND SON, Architects, have prepared plans for additions to the Manchester Town Hall.

THE new Church erected by the Albion Independent Congregation, Ashton-under-Lyne, was recently opened. It is a large and beautiful building, in the Early Perpendicular style. A Tower and Spire which rise to a height of 200 ft., form a striking feature of the edifice. The total length is 174 ft., and width across Transept, 117 ft. The stained glass Memorial Windows were designed by Sir Ed. Burne-Jones. Building—began five years ago, on a site which is the best in the town—has cost nearly £50,000.

IT has been decided to add a Chancel to S. Mary's Church, Todmorden, of such a style of Architecture as to suggest the advisability of a new Nave at some future time. Three or four Architects are to be invited to compete. The Church occupies the most commanding site in the centre of Todmorden. The work, which will cost about £1,000, is expected to be done this year.

THE three windows recently dedicated at St. Hildas Church, Sunderland, form part of a scheme to be carried through the whole Church, commencing and ending at the East Window. The subject is "I am the vine ye are the branches"; the vine treated extending through all the lower lights, with figures standing on the branches and returning in the opposite direction in the upper lights.

THE Library, Museums, and Arts and Technical Instruction Committee will recommend to the Liverpool City Council at their next meeting "That the Special Sub-Committee appointed by this Committee on the 20th November, 1894, to report as to the extension of the Museum buildings be re-appointed, and that they be instructed to prepare conditions under which the premium, authorised by the Council, for designs of the proposed extension, should be offered."

THE Local Government Board, in reply to the application of the Wandsworth and Clapham Guardians for sanction to the purchase of Tooting College, at a cost of £40,000, for the accommodation of the aged and infirm, state it is advised that in consequence of the original design of the College having been for one sex only, it would be unadaptable for the use of both sexes. It would not consent to bedridden persons being retained in the buildings; but having regard to the great necessity for increased accommodation being provided, the Board would not refuse its consent to the purchase of the College. It has been decided that the Architects of the two Boards should consult as to the necessary alterations.

OUT of a number of applicants, Mr. H. Richardson, Assoc.M.I.C.E., Town Surveyor, Oldbury, has been appointed by 21 votes out of 25 to be Surveyor to the U.D.C. of Aston Manor.

FOR the erection of St. Wilfred's Church, The Boulevard, Hull, the tender of Messrs. Colley and Levitt, of Hull, for £3,222, has been accepted. The Architects are Messrs. Smith, Brodbrick, and Lowther, of Hull.

THE Markets and Public Halls Committee of the Chesterfield Town Council has recommended that the Council adopt the plan of the borough surveyor, and approved by the Architect, whereby the whole of the interior of Stephenson Hall will be utilised as the auditorium, with Dressing Rooms, at a cost of £1,500, and that application be made for a loan for carrying out the scheme and the erection of a Caretaker's House, at a cost not to exceed £200.

THE proposed extension of Shieldhall Hospital, Govan, comprises four small Probationary Wards at a cost of £1,350, a new Smallpox Pavilion at a cost of £2,800, a new Scarlet Fever Pavilion at a cost of £2,350, and an addition to the administrative block at a cost of £750. The Burgh Surveyor has been instructed to prepare working plans.

A COMPETITION has recently taken place for a large block of buildings to be erected at Preston by Mr. N. Miller at a cost of about £50,000. The block includes an Hotel, two Arcades, and a number of Shops, and is to be erected on an important site, bounded by Church Street, Lancaster Road, Jackson Street, and Birley Street. Three prizes were offered, and the first prize of £150 has been awarded to Messrs. Essex, Nicol & Goodman, of Birmingham, the Architects of the Technical School and new Dead Meat Market. Mr. Salomans, of Manchester, acted as Assessor in adjudicating upon the designs. One of the conditions to be fulfilled was that in the event of any internal or partition wall having to be removed at a future time, such removal should be no detriment to the stability of the structure.

ON Wednesday last, the Stoke Rural District Council met to consider the twelve applications for the post of Surveyor to the Council and Engineer to the Bucknall Sewage Scheme. In the end it was announced that Mr. Larnar Sugden, F.R.I.B.A., had been unanimously elected, and he will forthwith open an office in Hanley or Stoke for the transaction of his duties.

THE Local Government Board intimating that after considering the report of its inspector they had sanctioned the Council's application for a loan of £5,000 for erecting a new Library at St. Philip's. Plans have been prepared by Mr. Gough, Architect, and tenders for the new building will be immediately invited. The site of the new Library adjoins Holy Trinity Vicarage in the New Road, the Committee having the land at a rental of about £15 a year from the Ecclesiastical Commissioners. The Reading-Room will be 70 feet long by 40 feet in breadth, and the floor will be laid with wood blocks in herring bone pattern. The various departments will be on the ground floor, and all the equipment will be of the most modern type.

WE understand that the design adopted by the Tramways Company for the building proposed to be erected at S. Augustine's Bridge Bristol, was selected from among several sent in by local Architects. It was at first thought that a building costing about £1,000 would answer the purpose, but having regard to the importance of the site, the directors decided eventually to go to an expenditure of £5,000, so as to secure a better class of building, and one that would be an ornament to the locality.

THE East Grinstead Urban District Council has instructed their Surveyor, Mr. William Willis Gale, A.M.I.C.E., to prepare specifications and take out quantities for an Infectious Hospital, to be erected according to his plans at an estimated cost of £3,000. The Local Government Board has held its enquiry, and sanctioned the loan.

NEW Church Day Schools, to accommodate 570 girls and infants, are about to be erected in St. Mark's Parish, Wolverhampton, from the designs of Mr. Joseph Lavender, F.R.I.B.A., Architect of that town (such designs having been selected in competition). The builder is Mr. Henry Gough, also of Wolverhampton, whose tender for the whole of the work (exclusive only of furniture and fittings) is £2,000.

THE ARCHITECTURE OF MANCHESTER.

BUILDINGS IN PROGRESS.

WE are glad to note that Manchester is rousing herself to the importance of Architectural and Sanitary questions. In a contemporary, the following keenly critical comment upon current Architecture in the City appears:—The site of Messrs. Constantine's Baths and Office, Manchester, is conspicuous, and the requirements lend themselves to a picturesque treatment of that corner. The building, unfortunately, has obviously not been designed in perspective. The front to Oxford Street presents a very tolerable elevation, though sham gables are put in with a mistaken idea of thereby improving the appearance. The St. James Street side appears like parts of three different and mean-looking buildings, instead of making an effective part of a picturesque and dignified whole. The chimneys, too, are not made to contribute as they might and should to the general Architectural effect. With more painstaking but without more expense, this building, with its special requirements and conditions—all favourable to real artistic effect—might have been a great gain to our street Architecture. As it is, even the Oxford Street front is marred by the rear parts of greater height, which are very conspicuous when the building is seen from a little distance, and in which there has been no attempt at design—probably because it was thought that it would not be seen. This ought to have been tested on paper before being put into work. The corner block No. 12, Mosley Street, looks, with the sun upon it, bright and pleasant in the freshness of its new stone. How long will it be before the smoke and dirt are so engrained as to induce the wish that it was of washing material? The design, though not mean, is distinctly commonplace. At the best it is inoffensive, at least as to the Mosley Street front and part of the side. A little way down the side street the stone changes to brick with objectionable suddenness. Here, too, advantage has not been taken of the dormers in the roof to get from them help towards a picturesque skyline. Nor are the chimneys made to contribute to what with a little more imagination and skill, yet again without more expense, might have been a marked improvement to Mosley Street. The important point of name-boards that meet commercial needs and which yet form a part of the Architectural design has been left very much to chance and the tenant. There is a new front in King Street, between Cross Street and Deansgate, that attracts the eye as being a little out of the common way, and which also shows care and good taste on the part of the designer. Perhaps there was no liberty to make it hold up its head higher. The way the name is carved in low relief on the front is good. So are the twin gables. So are the roof dormers. But the prevailing fault in shop fronts is to be found here—that is, the heavy superstructure standing on a void. The new stone building at the corner of Cross Street and King Street for the Alliance Assurance Company is far enough advanced to justify a word of criticism. The general outline as exhibited in the sketch is much more satisfactory than the instalment of executed work. The ornament is coarse and yet feeble, as if the designer were afraid of his own handiwork. It makes one long for such a master-hand as that of the late Edward Walters, or for such treatment of street Architecture as the new Public Library at Chelsea, where there is power, boldness, strength, delicacy, freshness of design, simplicity, and absence of the commonplace. It was said at Liverpool lately by a very eminent authority that when an Architect cannot design he "descends to ornament." Of this we see abundant examples in Manchester. The Chelsea Library proves (if proof were wanting) that a building may be graceful and beautiful with little or no "ornament" about it. In a narrow street like King Street a building wants all the light it can get. In that at the corner of King Street and Cross Street much of the most valuable part of the windows on the first floor is obstructed by heavy mullions, which look ugly and make one wonder what possessed the Architect to put them there. The new Temperance Hotel in

Deansgate has good, bold design in its main lines. It is a pity that it has the very common fault of crude, ill-designed detail. If the mouldings and ornament had been of the highest class they need not have cost any more to execute—perhaps even less. We watch with interest the progress of the Rylands Library in Deansgate. In some cases at least, less costly work would have been for the advantage of the building. The site is much too confined a site for such an important and costly building, and the few great windows should not be blocked up, as they are, by very close and intricate tracery. It darkens the rooms and catches and retains the dirt. Mr. Champneys has not observed that in these great smoky cities soot lodges on strings and on window sills, and when the rain comes it is washed down the walls, producing an effect like tears on a chimney-sweep's face. There are, of course, means to prevent such disfigurement, but Mr. Champneys has not used them. The colour of the stone of the Rylands Library is delightful. But will there in a few years be on the outside any trace of its present charm? In several other recent buildings in Manchester a warm-coloured stone has been used with admirable effect. If the stone stands well, the only thing to be alleged against it is that the brightness of its early days will so soon be lost. There is a welcome movement in parts of Manchester in the direction of wider streets which should by all manner of means be encouraged.

ISLAY STONES AND CROSSES.

IT is round the walls of the Cathedral at Iona, that the best known examples of the Carved Crosses and Monumental Slabs peculiar to the West of Scotland are to be seen. There are, however, several hundred other specimens scattered throughout the burying-grounds of Argyllshire, and not a few in neighbouring counties. In "The Carved Stones of Islay," by Robert C. Graham, F.S.A., a work recently published, a selection is made from the island of Islay. Islay is rich in interest to those who concern themselves with the relics of early times. Besides Chapels and graveyards, there are some twenty-two hill forts and sites of forts, mostly in three principal groups, each of which is contained in a circle of less than six miles diameter; as well as the remains of later fortifications once held by the Lord of the Isles. The Islay stones include a remarkably large proportion of crosses, many of which show exceptionally good work; for, generally, more care seems to have been lavished upon crosses than upon tombstones. Some of the carvings are "works of Art in the fullest sense of the term. The stones belong to various periods. There are little crosses rudely cut on undressed slabs of stone, and these are probably the most ancient. Then in the crosses of Kildalton and Kilnave, and in the cross-bearing slab found at Doid Mhairi, now in the garden at Ardmersay, there are examples of a style which seems to have been directly derived from Ireland; but far the greater number belong to the thirteenth, fourteenth, and fifteenth centuries, when the Art assumed and retained its special Argyllshire character, the plaited work of the Irish monuments developing into the richly foliated scrolls which form one of the great beauties of the West Highland carving. . . . There are a few bearing dates of the seventeenth century. In some cases they are old stones adapted; but others seem to have been carved at that time, and these show the decadence of the Art, the designs being plainly the work of artificers who had lost the former skill, their productions only emphasising by contrast the beauty of the earlier specimens." Between the hand of time, the iconoclastic spirit following the Reformation, the vandalism of the tourist, and other thoughtless depredators, the Argyllshire stones appear to be in a deplorable condition. They cannot be figured and recorded too expeditiously.

It is announced that the Duke of Norfolk has just given the sum of £10,000 to the building fund of the New Roman Catholic Westminster Cathedral, and twenty-seven "founders" have each subscribed £1,000, in addition to which £12,000 has been given to Cardinal Vaughan by another donor for one of the Private Chapels to be erected in the building.

SAWDUST.

MR. JAMES DIGGLE, C.E., F.G.S., of Heywood, has been appointed Engineer of the Milnrow (near Rochdale) Sewerage Scheme.

THE Monument commemorating the hundred- and fiftieth anniversary of the capture of Louisburg, in Cape Breton Island, by the New England forces from the French was unveiled on Tuesday last. The Monument has been erected by the American Society of Colonial Heroes.

A MOST interesting Home Arts and Industries' Exhibition has been held at Crompton. Among the most interesting of the exhibits was the beaten copper work, from designs by Mr. Alfred Waterhouse, R.A., done at the Classes at Yattendon Court, his fine country residence. There were also examples of Pottery, Leather Work, and Carving, &c., from Helensburgh, Gorebridge, Kirkly, Lonsdale, and Windermere.

THE Local Government Board has intimated to the Middlewich Urban Council that it has sanctioned the borrowing of £12,000 for the purpose of providing a new Water Supply to the Town, which is greatly needed. The Urban Council is giving £2,550 for purchase of land in connection with the scheme.

THE Corporation of Burnley proposes to borrow about £70,000 for various schemes. Of this sum £30,000 is for surface water drainage; £16,000 widening main street; £12,000 building new Refuse Destructor and Health Depot; and £5,000 for extending Electric Light Works.

It has been decided to take down the present Church of Holy Trinity, Southport, and to rebuild it on a slightly enlarged site, wholly within the limits of the present churchyard. The cost is estimated at £16,000, but it is not proposed to carry out all the sections at once.

In connection with the use of the prismatic compass, a correspondent informs us that on one occasion, when surveying with that instrument, the assistant in charge of the survey, found that the angles taken were incorrect, but upon his suggesting that the operator should remove his hat, the instrument was found to give proper readings. Upon examination it was found that a piece of wire ran round the brim of the hat to give stiffness, and was the cause of the trouble.

THE Portuguese Chamber of Deputies has been destroyed by fire. The Galleries of the Archives were consumed. The fire was due to the carelessness of a workman who was doing some soldering work for the repair of the glass Dome which surmounts the Chamber. The man went to his dinner, leaving his brazier burning, and the fire caught some of the wood-work of the roof. Four persons were injured.

SIR FREDERICK LEIGHTON has returned to England from Brittany in, we trust, much better health. It is hardly probable, however, that he will undertake the arduous duty of receiving the guests at the Royal Academy Soirée, which is fixed for July 2nd.

THE Bridges Committee of the Glasgow Town Council has instructed Mr. White, the Master of Works, to prepare plans and get estimates for the erection of a new Stone Bridge to be built at Govan Street at the Green. It has also been decided to prepare plans and get estimates for the erection of a Suspension Bridge further up at the bend of the river leading across to Oatlands Square. As this Bridge would take the place of the ferries, it would be a great saving and advantage to the many who cross the river at that point.

THE Marchioness of Lorne is a regular workwoman when she is Sculpturing. She tucks up her sleeves, covers up her dress with a large white apron, and sets to work in the most business-like way. Lately she has been devoting her attention to animals, and has made some very successful pieces of Sculpture from living models.

MESSRS. BEMROSE AND SONS, LTD., of Derby, are about to erect extensive works, and have accepted the following tenders: Ford and Co., Talbot Street, Derby, £10,559; wrought-iron work, Eastwood, Swinger and Co., Derby, £1,342; cast-iron work, William Abell, Brook Street, Derby, £769; heating, J. King, Ltd., Liverpool, £785; new Engine Houses, Ford and Co., Talbot Street, Derby, £693. Mr. E. R. Ridgway, of Long Eaton, is the Architect.

THE COVENTRY COMPETITION.

MR. CHARLES BARRY'S REPORT.

MR. CHARLES BARRY, the Assessor appointed to assist the County Council in the conduct of the competition for designs for Municipal Buildings, having carefully inspected the drawings sent in, prefaces his

sections as required, with little, if any, derangement of business. The warming and ventilating arrangements have received very careful attention, and in an artistic view this design would harmonize better than most others with the old buildings of St. Mary's Hall, which are in any case to be retained and to form part of the Municipal Buildings of the future."

OUR SWIMMING BATH COMPETITION: DESIGN BY "MYRON."

Elevation to Street

report by saying that many of the designs displayed much ingenuity in dealing with a very irregular site and with the ancient buildings to be retained, and that consequent on such ingenuity it had been found possible by most of the competitors adequately to provide the accommodation required in the Instructions, and which have been satisfactorily complied with generally. "I have selected three designs," says Mr. Barry, "and advise the Council to award the premiums to them in the following order:—For the design marked 'Leofric the Saxon' the first premium of £150; for the design marked 'Red Crescent' the second premium of £50; for the design marked 'Advance' the third premium of £50. All have been carefully adapted to the area and peculiar shape of the site, and with each design there is a detailed report, dealing carefully with the several points referred to in the Instructions. No contemplated cost was named in the Instructions, and the competitors have treated this question by using various rates per foot cube in making up their estimates. The authors' estimates of the above three designs are as follows:—'Leofric the Saxon,' £33,668; 'Red Crescent,' £33,915; 'Advance,' £27,891. The cubes sent in by the authors, as required by the Instructions, have been carefully checked, with the following result:—'Leofric and Saxon,' author's cube, 872,264, cube as checked, 904,681; 'Red Crescent,' 922,700, 948,451; 'Advance,' 979,387, 804,604. It will be noted that the cubes of the two first designs, as submitted by their authors, are rather understated, though not to a material extent. The cube submitted by 'Advance' is, however, larger than from the drawings. I think it would not be safe to estimate the new building at a less rate than 10d. a cube foot taken all over, but as to this the Council will no doubt be advised by its officer, the Surveyor who would necessarily have more local experience as to cost of buildings in Coventry. But assuming that a rate of 10d. a foot is fairly correct, the probable cost would work out thus: 'Leofric' the 'Saxon,' £37,695; 'Red Crescent,' £39,519; 'Advance,' £33,525. It is right, however, to say that though the design 'Advance' is good in arrangement and of considerable merit in design, and, therefore, deserving of a premium, the author has taken too small a ratio for the sizes of many of the apartments, and if this design was to be executed its cube contents would have to be somewhat enlarged, and its cost would probably then approximate to that of the other two designs. I have no hesitation in expressing my opinion that the design marked 'Leofric the Saxon,' is decidedly the best of all those sent in. It could be carried out readily in

SAWDUST.

It is proposed to rebuild the Redcoat Schools, Stepney Green, at an estimated cost of £3,000.

The Dewsbury Board of Guardians has decided upon the alteration of the Old Infirmary and Infectious Hospital of the Workhouse, and the expenditure thereon of a sum not to exceed £2,800.

The new coat of paint which Buckingham Palace will be given this year will cost over £2,000. The last time the facade was painted was in 1882, and it then required two tons of white lead to perform the task. The painting has been put off from year to year owing to the expense and the succession of State functions.

It has been erroneously assumed that London is without any Monument of Oliver Cromwell. In a prominent position in the Architectural Court of South Kensington Museum is an original model in plaster of a Colossal Statue of the Lord Protector, by John Bell.

It is proposed to spend £3,000 upon the purchase and alteration of premises for use as Local Government Offices by the Stroud Urban Council. The new premises are at the corner of George Street and Bedford Street, one portion being now in use as a shop and another (years ago the site of the General Hospital) as solicitors' offices.

The Secretary for War has approved the plan of the proposed Bridge across the Hudson River between New York and Jersey City. It is estimated that it will cost 25,000,000 dols., and require ten years for its construction. The Bridge, which will be suspended from twelve cables, will span the river without support. Between the pierhead lines on either shore there will be a clear opening of 3,110 feet, and the Bridge at the centre will be 150 feet above high water mark. The Bridge will carry six railway tracks. The Main Towers will rise to a height of 587 feet.

The forthcoming erection of a School for boys in St. Paul's Parish, Truro, is warmly welcomed by those desirous of staying off the threatened School Board. For a long time the Education Department has been dissatisfied with the School accommodation, and gave notice recently that if the deficiency were not met, steps would be taken to form a School Board. The proposed new School will provide for at least 200—50 more than the deficiency notified by the Department. The site is near the Church and the Diocesan Training College. £1,400 was the original estimate of cost, but owing to the unevenness of the site this will be increased.

IMPORTANT discoveries have been made at Nancy, which will carry the history of the place back several centuries. Two streets, dating from the sixth century, have been traced, and the excavations have already laid bare seventy tombs of warriors, women, and children. At the feet of each is a vase of coarse earthenware. Jewels of silver and gold, enamelled glass, fibulae, scissors, and hair tweezers have been found, as well as Gaulish money and one gold coin of Justinian.

Perspective Sketch

A NEW Wesleyan Methodist Chapel is to be built at Totley Rise, in the Sheffield Brunswick Circuit, at a cost of £1,575, the land being given by Mr. Ebenezer Hall.

The re-opening of the Lady Chapel of Lichfield Cathedral is fixed for Wednesday, July 31st, when Bishop Legge will dedicate seven stained-glass windows and a number of other gifts to the Cathedral.

For building an Art Gallery for the town of Reading and extending the Free Library and Museum Buildings, the Town Council has decided to vote a sum of £8,000.

The leaders of the Gidlow Congregational Mission, Wigan, have determined to erect a new School-Chapel on a site secured in Gidlow Lane. The estimated cost, including the site, is £1,400.

SOCIETY MEETINGS.

The Incorporated Association of Municipal and County Engineers.—The annual meeting of the Incorporated Association of Municipal and County Engineers will be held at Halifax on Thursday, Friday, and Saturday, 27th, 28th and 29th inst. President, Mr. Edward Rice Sweet Escott, M.I.C.E., Borough Engineer, Halifax.

Northern Architectural Association.—The members of this Association held an outdoor meeting on the 15th inst. for the purpose of visiting the new Tennis-Court erected by Captain Sir Andrew Noble within the grounds of Jesmond Dene House, from the designs of Mr. F. W. Rich, Architect, who conducted the party over the building. Tennis-Courts of this description are not at all common, only 33 being known to exist in the United Kingdom. Among the oldest of these is that at Hampton Court, another being at Lord Salisbury's seat at Hatfield. Sir Andrew Noble's Tennis-Court has been built by Messrs. Leslie and Co., of London, who have also constructed other modern Courts. Sussex bricks have been used throughout the building, which covers an area of about 800 square yards, including the Bath and Dressing Rooms and Master's Residence. Subsequently the party proceeded to inspect the Reception Room at Jesmond Dene House. This Mansion, the nucleus of which was originally built in 1822, has, during the last quarter of a century, been amplified by Sir Andrew Noble—Mr. R. Norman Shaw, R.A., and Mr. F. W. Rich, acting as his Architects.

Sheffield Society of Architects and Surveyors.—The members of this Society have made quite a new and attractive departure. In addition to the valuable and instructive lectures which they have had, they, on Saturday, June 15th, commenced a series of excursions to places of historic interest in the neighbourhood. They were permitted by his Grace the Duke of Devonshire to go through Hardwick Hall. There were present Mr. Charles Hadfield (President), Mr. C. J. Innocent (hon. Secretary), Messrs. B. Bagshawe, E. M. Gibbs, J. Smith, T. Winder, H. W. Lockwood, T. H. Waterhouse, J.P., F. Ward, J. T. Cook, C. F. Longden, J. B. Mitchell-Withers, J. E. Benton and others. The party assembled in the Great Hall at Hardwick at 12.45, and under the guidance of Mr. Bagshawe were conducted through the house. For many years, Mr. Bagshawe has been a student of the Hall and its contents, has been allowed to examine its muniments and everything that can throw any light on its history, and his explanations, historical and descriptive, of the building and of the many objects of interest which it contains, were greatly appreciated by the members. Mr. Bagshawe pointed out various objects especially deserving attention among the pictures, the furniture, the tapestry, &c., calling notice particularly to the portrait of Lady Grace Talbot, which in his opinion, contained a representation of the ancient Gateway leading to the Castle in Sheffield; and also to the portraits which have been misdescribed as the Earl and Countess of Shrewsbury. They were evidently intended to represent the father and mother of Lady Arabella Stuart. Mr. Bagshawe also exhibited to the members the accounts kept by the Countess of Shrewsbury of the furnishing of the Hall—the cost of the various articles, even to the brass candlesticks now on the walls, and the names of the persons who supplied them—the whole written in a bold masculine hand. He pointed out that the character of this remarkable lady had been greatly misrepresented by historians, including the Rev. Joseph Hunter. Before leaving the Long Hall, with its unique collection of historic portraits, Mr. Bagshawe was, on the motion of the President, seconded by Mr. Innocent, cordially thanked for having obtained permission for the visit, and for having accompanied the members.

Suffolk Institute of Archaeology.—The annual excursion of this Institute took place on Thursday, the neighbourhood visited being the highly interesting one of Great and Little Waldingfield and Long Melford. The first halt was at Great Waldingfield Church, where the Rector read a most interesting and valuable

paper, in which he pointed out the various features of the Church, explained the nature and extent of the alterations which had been carried out at various periods, and he was careful to explain that, in later years at any rate, special care had been taken to preserve as far as possible the original style and character of what was really a fine Church. The party then drove to Little Waldingfield Church, it is a simple but a good specimen of the Perpendicular style of Architecture. The Priory is remarkable for being built over some crypts possessed with very good roofs. After this, Kentwell Hall, Long Melford, was visited, and also Melford Hall, the seat of Sir Wm. Hyde Parker.

Lincolnshire Archaeological Society.—At the meetings at Stamford, in connection with this Society, two papers were read, one by the Rev. Canon Syers, on "Barnack, its Church and Quarries," and the other by the Rev. Andrew Trollope on "The principles which should govern the Restoration of our Churches." The journey lay through Barnack, Bainton, Ufford, and Whittington, and at each place the Rev. A. Sutton read a paper descriptive of the Architectural and Archaeological features of the Church. Barnack Church has a Tower of remote antiquity; probably of Danish origin. Most of the great Churches in the neighbourhood, including Peterborough Cathedral, are built of the famous local stone known as "Barnack rag." Upon their return to Stamford, the members proceeded to inspect the Churches of the town. Special attention was devoted to the Parish Church of St. Martin's, where the great Lord Treasurer Burleigh lies under a gorgeous canopied tomb. His effigy is in full armour, with the red robes and star of the garter, and with the Treasurer's wand in his hand. William Wissing, the famous Dutch painter, whose best work is at Burghley House, lies buried under the Gallery of this Church. The remaining five Parish Churches in the town were visited in turn, and great interest centred in All Saints', which belongs to the first quarter of the thirteenth century, and therefore to the purest period of the Early English style. The Church is supposed to have suffered from the violence of the Lancastrian army. Its graceful Steeple which rises to a height of 152 feet was given by William Browne, the founder of Browne's Hospital, and an uncle of Robert Browne, who was the founder of English Congregationalism. Several other places of interest in the old-World town were also visited.

THE foundation-stones of a new Wesleyan Church, to cost £4,700 have been laid at Catford, in the Lewisham Circuit.

FUNDS are needed to re-arrange and improve the ancient and picturesque Church of St. Chad, Lichfield. For the full completion of the work £1,000 will be required.

THE Walsall Town Council has resolved that application be made to the Local Government Board for sanction to a loan of £12,000 for defraying the cost of the proposed Public Baths.

TENDERS to the amount of £8,641 10s. 8d. have been accepted for the new Union Joint Hospital at Keighley.

MISS NELSON has sold the well-known Fiars Carse Estate, near Dumfries, for £27,500. Burns resided at Ellisland close by. It was in the Dining Room of the old house, which has been incorporated with the new, that the Bacchanalian contest for the whistle took place, which the poet neighbour celebrated in song.

At a recent meeting of the Harborne Charity Trustees, held in Birmingham, Mr. Ralph Heaton, Architect and Surveyor of Corporation Street, Birmingham, was appointed Surveyor to the estates.

FOR nearly a year operations have been in progress for the restoration of St. Michael's Church, Linlithgow. The Church is one of the most important specimens of an ancient Church now existing in Scotland. The congregation is now able to worship in the Church, but the formal opening, which is to be performed by the Rev. Dr. McLeod, Moderator of the General Assembly, will not, however, take place until some improvements which are yet to be carried out have been completed.

Trade and Commerce.

A Builder's Disagreement.—Edmund Pike, builder, brought an action, at Torquay, against William Brendon, another builder, concerning damage alleged to have been done plaintiff's boundary wall by defendant's excavations. The claim was for £10. Mr. Clode for plaintiff, Mr. T. B. Eastley for defendant. On a portion of the Haldon Estate, situate between Bronshill Road and Lower Bronshill Road, Ellacombe, plaintiff built a couple of houses, and built an ordinary 4 ft 6 in. boundary wall, the foundations of which were about 15 in. deep. Defendant subsequently took a plot of ground adjoining, and in excavating undermined plaintiff's boundary wall in some places, so much so that a portion of the wall fell. Mr. E. Pike said the cost of rebuilding the wall was £8 1s., and other damages brought the total claim to £10. The wall was built in 1888, and was solidly constructed.—Mr. J. Mountstephen's opinion was that the wall fell because the ground was excavated. The wall was well built.—Questioned as to the foundations, the Judge said the depth of the foundations depended on the soil.—Mr. Mountstephen: You are quite right, your Lordship.—His Honour: You see Mr. Mountstephen confirms me. (Laughter.)—William Tucker, who built the wall, said the foundations were well laid, about 15 inches deep. He also assisted in rebuilding the wall.—J. Pike gave similar evidence.—Mr. Eastley held that all defendant was called on to do was to leave a sufficient foundation to keep the wall up, and he should prove that there was sufficient foundation and a good resistance bank of the best material. There need have been no resistance bank if the wall had been properly built. He maintained that it was owing to bad construction that the wall fell.—W. Brendon alleged that some of the mortar used in the construction of the wall was made of mud. The wall was not tied as it should have been. He estimated that the cost of rebuilding the wall was £6.—Cross-examined; The wall stood for seven years before it fell. The wind had something to do with its fall.—H. C. Goss, surveyor, agreed with Brendon's views.—Richard Yeo, builder, said he examined the wall for defendant. He did not know why the wall fell, and declined to have anything to do with the case.—E. Richards, Manor Office Architect, said there was not sufficient foundation to the wall. It would have fallen in any case.—Mr. Pike acknowledged that he (the Architect) had often complained of his work.—Mr. Pike: I don't acknowledge it.—A mason in Brendon's employ supported defendant's case.—His Honour, giving judgment, did not think the wall went down to the shale, or that its fall was caused by defendant. Verdict for defendant with costs.

Remarkable French Brewery Well.—A two-inch Driven Tube Well has just been fixed at Mr. C. Ernout's Brewery, Pont de Nieppe, near Dunkerque, the extraordinary depth of 112 ft. from surface being reached. The perforated point forming the bottom of the well was covered with a fine perforated brass strainer, as the water-bearing bed consists of fine sand. A supply of 800 gallons per hour has been obtained, which rises close to ground level, and is connected to a direct-acting steam pump. The water is used for brewing the black beer for which this Brewery is celebrated. 7 ft. of peat, 13 ft. of running sand, 49 ft. of stiff clay and 43 ft. of sand were passed through. Messrs. Alfred Williams & Co., Artesian Well Engineers, 39, Great Eastern Street, London, supplied the Well, and the work was carried out under the supervision of Monsieur Georges de Geyter, the Brewer's Consulting Engineer.

An Important Building Case Decision.

—In the Court of Appeal last week Lords Justices Lindley, Lopes, and Kay delivered judgment in *Chasty v. Ackland*, an appeal from the judgment of Mr. Justice Cave at Exeter, in February last, whereby his Lordship granted a perpetual injunction in a mandatory form restraining Mr. Ackland from permitting the continuance of a new building he had erected upon his freehold premises, No. 24, West Southenhay, Exeter, so as to interfere with the access of air to the adjoining house. His Lordship also awarded the plaintiff £10 damages in respect of obstruction

of ancient lights. Defendant did not appeal from that part of the order awarding the £10 damages, but against that part of the order in which his Lordship granted the mandatory injunction. —Lord Justice Lopes, who read the judgment of Lord Justice Lindley and himself, said judgment was given for the plaintiff, and an injunction restraining the defendant from maintaining a new building beyond a certain height on the ground that it obstructed the light to which the plaintiffs were entitled in respect of certain ancient lights, and on the ground that it obstructed the free passage of air over and above the plaintiff's premises, and, therefore, created a nuisance. So far as the loss of light was concerned, plaintiff was awarded £10 damages, and on this point there was no appeal. It was said that defendant's premises prevented the carrying off of bad smells by the interruption of the free passage of air. Every man had a natural right to enjoy the air pure and free from any noxious vapours, and any man who sent foul air into his neighbour's premises ought to be restrained; but a man could not impose upon his neighbour the obligation to keep away improper smells. He was unable to agree with the learned judge that the plaintiff had any case in connection with the claim for the nuisance. It was contended that irrespective of the nuisance, the plaintiff had a right to the free passage of air over and above his premises, and the right to have any disagreeable smell carried away by the current of air that would pass over the premises, which right it was said the defendant, by his building, had infringed. There was, however, nothing to prevent the defendant building on his own land, and such a right as the plaintiff had set up could not be supported either by the authorities or the Prescription Act, and a man was not bound to see that his neighbour had proper ventilation. In his opinion, what the defendant had done he was entitled to do, and constituted no legal wrong. In those circumstances the verdict for the £10 would stand, and the defendant would pay the costs with regard to that issue; but the defendant would be entitled to such costs as were incurred by the contention in respect of the air. —Lord Justice Kay concurred.—Lord Justice Lindley said he agreed with both the judgments,

but considering the importance of the case he would like to add that no one had a right to complain of his neighbour for building on his own land, even though it might diminish the flow of air on the land adjoining, unless there was an immemorial right to the user and an agreement binding the owners not to build. In this case there was no such agreement, and the plaintiff had failed to produce the existence of any contract binding the defendant not to build over his own land. Plaintiff's claim to relief could not be sustained, and the defendant was entitled and must succeed on his appeal. Judgment accordingly.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

ABERDEEN.—Accepted for the erection of pavilion, &c., for the Town Council, Mr. John Rust, City architect, 224, Union-street, Aberdeen:—

Pringle and Slesson, masonry ...	£839 0 0
Jamieson, George, carpentry ...	485 0 0
Blaikie, John, and Son, plumbing ...	763 10 0
Stephen and Gibb, plastering ...	287 17 0
Cullie, George, slating ...	95 6 8
Donald, George, and Sons, painting and glazing ...	65 0 0
Tindal, James, bellhanging ...	11 0 0
Abernethy, Jas., and Co., iron ...	41 13 0
McKinnon, Wm., and Co., engineering ...	112 0 0
Total, £2,700 7s. 5d.	

[All of Aberdeen.]

ABERDEEN (N.B.).—Accepted for the erection of public school buildings, Craigton, Peterculter, for the School Board. Messrs. Ellis and Wilson, architects, 181a, Union-street, Aberdeen. Quantities by architects:—

Buchan, Robert, masonry.	
Garvin, Jas., and Sons, carpentry.	
Rhind, McGregor, slating.	
Stephen and Son, plastering.	
Horne, Wm., plumbing.	
Masson and Son, painting.	
Total, £3,287 2s. 3d.	

[All of Aberdeen.]

ALDEBURGH (Suffolk).—Accepted for alterations and additions to "North Lodge," Aldeburgh, for Mr. John Driver. Mr. T. E. Key, architect, 5, Bloomsbury-square, W.C., and Aldeburgh:—

Knowles, G. O., Aldeburgh ...	£1,310 0 0
-------------------------------	------------

BOURNEMOUTH.—For building residence, on the West Cliff, for Mr. E. Howard May. Messrs. Creek, Gifford, and Oakley, architects, Bournemouth:—

Entwistle and Cox ...	£3,550 0 0
Hoare, W. ...	3,465 0 0
Kitcher Bros. ...	3,440 0 0
Jones and Son ...	3,386 0 0
Davies and Lambert ...	3,370 0 0
Brown and Son ...	3,362 0 0
George and Harding ...	3,355 0 0
Chinchen, W. J. ...	3,300 0 0
M'William and Son ...	3,299 0 0
Jenkins ...	3,227 0 0
Hoare, F., and Son ...	3,162 0 0
Lucas ...	2,994 0 0

[All of Bournemouth.]

CLEETHORPES (Lincs.).—For the erection of public hall, &c., for the Public Hall Company. Mr. John R. Withers, architect, Shrewsbury:—

Nutley and Mashford ...	£4,594 14 3
Ion and Lewis ...	4,337 7 3
Lea's, James ...	3,395 0 0
Hewins and Goodhand ...	3,347 6 11
Jacksaw, G., & Sons ...	3,125 0 0
Grant, M. ...	3,092 18 2
Thompson, J. M., & Sons ...	2,937 0 0
Vickers, J. H., Nottingham* ...	2,708 0 0

Spirit Levelling.

THE Glasgow City Fathers—by right of their Scots descent we had better call them Bailies—have had a warm discussion upon the propriety and pecuniary value of a number of Artisan Dwellings it is proposed to put up. It is always a difficult thing to prevent Artisan Dwellings from falling into the hands of the Aristocracy, we know, for the Age, we are so often told, is Levelling—Spirit Levelling! In Glasgow, however, it is the middle-class tradesman who is to be feared. He aspires to be an artisan, and has no objection to cheap houses. In fact, if one Mr. Pirrie is to be believed, "the class of people who would occupy these houses would be pretty well-to-do tradesmen, who should be provided for by private enterprise." Is Private Enterprise, we ask, so dead in Glasgow that it will not, or cannot, supply the domestic roof to the pushing tradesman? The tradesman must have his hearth and home, and Corporations may rush in where Private Enterprise and Angels fear to tread. But the Glasgow schemes do not seem to us half bad, and—on paper at any rate—they provide a reasonable profit. On one site, rating shop floorage (for the Corporation is also venturing upon shops: are these also for the "pretty well-to-do tradesmen?") at value of one shilling, one and threepence, and one and sixpence per square foot, and charging 21 houses of two apartments at £9 15s., and six houses of two apartments at £9 18s., there will be a gross rental of £453 8s. 9d. derived. The buildings will

probably cost £4,335, and the ground area is 790 square yards. Here, therefore, after the customary abatement and $3\frac{1}{2}$ per cent. interest are met, there remains a surplus profit of £188, which, we think, is a fairly smart success—for a Corporation. On a second proposed block, computed at identical floorage values, and charging three houses of three apartments at £12 10s., twelve houses of two apartments at £9 15s.,

porate enterprise. Another member of the Council wanted to know "whether they were going on a commercial basis in building property of that kind." We only know of one commercial basis—that is, profit. If the Corporate figures be strong enough for the test, the Corporation scheme is certainly commercially based, and there is really no reason why it should do more than charge reasonable interest and make a moderate surplus. Corporations do not always need to be Molochs. For what we can see in the discussion the Glasgow Corporation may get on with its levelling—and building.

WE have had sent us a New Field. by Sir James Blyth, Bart., of Blythwood, Essex, whose Model Dairy we illustrated in our first issue, a letter in which he makes an appeal for more consideration to be given to the planning and sanitary arrangements of farm dairies. In face of the fact that although of late years improvements in the utensils and machinery connected with the manufacture of butter and cheese have followed each other in quick succession, no cheap and simple

BULLER'S WOOD, CHISLEHURST: ERNEST NEWTON, ARCHITECT.

eleven houses of two apartments at £9 10s., and sixteen houses of one apartment at £5, there is shewn, roughly, a profit of £200 clear of abatement and interest. Again, in McLeod Street a block works out to £36 surplus. Mr. Pirrie's main point seemed to be that a poorer class of tenants would be evicted in order to make room for these model buildings for the hapless pretty well-to-do tradesmen. He mistrusted Cor-

form or Dairy, built upon modern principles and adapted to the requirements of the hour, is yet offered. On the other hand, catalogues containing innumerable designs of Green Houses, Orchard Houses, and Vineries, constructed cheaply on scientific principles and adapted for use are perpetually disseminated, and models are on view in nearly every Show Yard. What is required is an easily constructed building, combining

equability of temperature, perfect ventilation, good drainage, modern sanitation, every facility for expeditious and thorough working, cleanliness, durability, and cheapness in construction. Sir James Blyth's aim is to offer inducements to Architects, Builders, Implement Makers, Engineers and others, to prepare plans, designs, or models for competition. Sir James suggests that the exhibits should be shown in three groups: Group 1.—Drawings, plans or designs for large or small Butter or Cheese Dairies, and also for Creameries or Factories. Group 2.—Models of easily constructed and permanent Dairies for Butter and Cheese. Group 3.—Portable Dairies—removable by a horse to any part of the farm. If the Council of the British Dairy Farmers' Association approve of Sir James's suggestion and feel inclined to make such an Exhibition a feature of their forthcoming Dairy Show at Islington, he generously offers to place at disposal a sum of £300, so that £100 in prizes can be allotted to each group. An Exhibition of Drawings, Plans, limited-sized Models, and Portable Dairies, would do undoubtedly much good by opening up the subject of the construction of well arranged Dairies on modern and scientific principles. We understand that a Sub-Committee of the British Dairy Farmers' Association has considered the proposal, and that the scheme will be brought before the Council at its meeting to-morrow.

Board Bigotry. THERE has been another little "breeze" in Cornwall, at Liskeard, and breezes of this description are not quite as welcome as cooler airs. The Liskeard Board of Guardians would seem to have gathered together under a weight of indigestion or ignorance—or both. We are not in love with Boards of Guardians at any time; they are more portly than principled bodies, and they possess, as a rule, no soul. But Liskeard has a Board which possesses neither soul, sanitation nor spiritual interest. We are not told if Liskeard be proud. To begin with, the Building Committee had submitted plans (prepared by Mr. Samson) for an Infirmary (among other additions and alterations) at the Workhouse. It was estimated to cost £3,946. Whatever the cost, it would appear to be urgently needed. It came out in discussion that the existing Infirmary could accommodate 25 patients. The Local Government Board man happening to turn up suddenly at Liskeard Workhouse found fifty-eight patients within. Record does not say how they were found or where they were stowed. Even now, as one hot anti-sanitator admitted, there were thirty-six, although the number of "patients had declined." Declined? We think it very likely. You may cast declined into declension, Accusative: Death. However, Liskeard Board is going to fight the Local Government Board upon the matter, and we sincerely trust the Local Government Board will not decline the issue. The Liskeard Board then fell foul of the Bishop of Truro, a suggested Chapel, and an anonymous donor who wished to give something; the Board was in queer mood; it would not spend and no one else should give. The Workhouse has no Chapel, "but," said a Guardian, "the inmates had the privilege of attending any of the places of worship in Liskeard, and consequently a Chapel was not needed at the Workhouse." We are inclined to think that the unhappy inmates of Liskeard Workhouse will not be very prone to meet their friends of better fortune under the Church and Chapel roofs that shelter Members of this Board. The manner in which these stupid Boards talk of "spiritual interests," "sanitation," and "science," and the contempt in their references to "inmates" absolutely disgust right-minded men.

"THE DESTRUCTION OF EDINBURGH."

LETTERS FROM THE EARL OF WEMYSS AND MR. JOHN BRYDON, F.R.I.B.A.

WHAT RUSKIN THOUGHT OF EDINBURGH FORTY YEARS AGO.

CONSEQUENT upon a leaderette which appeared in our columns of the 18th of June, we have received two very important communications upon the matter of the construction of a huge Hotel in Princes Street, Edinburgh, by the North British Railway Company. Earl Wemyss, being a Scotch Peer, is naturally deeply concerned in this attempt to destroy the grandeur of the most picturesque City in the United Kingdom. Mr. J. M. Brydon, on the other hand, speaks purely from the Architectural view of the matter, and these two letters, backed up, oddly enough, by a lecture which Mr. Ruskin delivered in Edinburgh more than forty years ago, should go far—if anything can with Railway Directors—to induce the reconsideration of this thing.

LETTER FROM THE EARL OF WEMYSS.

To the Editor of THE BUILDERS' JOURNAL.

SIR,—I venture to appeal to you to come to the rescue, and try to save our beautiful capital city from impending destruction by this Frankenstein monster Hotel. I have no wish to discuss its Architectural merits or demerits *per se*. All I would say on this point is that though possibly well adapted for a hydropathic establishment, or colossal Hotel in the Highlands, or on the slopes of our Pentland Hills, it is unsuited by its surroundings for the intended site. Its towering Towers, gabled mansard roofed front, and its highly ornate decorated character must be admitted by all who have seen the design to be wholly out of character and keeping with its immediate Classic neighbours—the General P.O. and the Register House. It is of its stupendous, overpowering, all-crushing proportions that I would speak. To these I would apply a foot rule. It is not a question of taste that is mainly and primarily at issue, but simply one of measurement. We must get at the figures, and "facts" that will tell and "winna ding." To give a rude idea of the colossal, overshadowing character of the proposed building, I was anxious that rough boards and poles, should be erected on the top of the buildings still standing on the proposed site. In this I failed—as I learn, did also a member of the Town Council, who at one time made a similar proposal to his co-councillors. Happily there is still a way by which anyone, as he walks along Princes Street from West to East, may gauge the question for himself, given the measurements of the height of the buildings in question, and of the flagstaff standing thereon, and comparing these with the heights of the most important features of the Hotel. I append the necessary figures, and whoever will compare these measurements on the spot will, I think, be more than satisfied as to the "facts" of the case, and of the absolute necessity for delay and reconsideration of this question, so vital to our Scottish capital. I offer no further remarks thereon. I simply place this matter for consideration before the readers of your spirited Journal, if you will kindly give publicity to my letters and figures as I have placed them before the Town Council and citizens of Edinburgh—aye, and before the railway authorities themselves; for I am convinced that Lord Tweeddale and his co-directors would be the last persons to wish to destroy the beauty of Edinburgh as this Hotel, if erected, will assuredly do. I enclose some outline drawings which you may perhaps also be induced to publish, showing the size of the Hotel as compared with the surrounding buildings and the Calton Hill, &c. A sound judgment may thus be formed as to the disastrous effect the Hotel will have on our beautiful city—beautiful still—railways, Parliament, and Town Councils notwithstanding.

I am, Sir,

Yours faithfully,

St. James' Place,

June 25th, 1895.

WEMYSS.

On the receipt of Lord Wemyss's communication, we visited his Lordship in St. James'

Place and obtained the details of the objections which he—in conjunction with many Edinburgh friends—offers to the proposed buildings. He had possessed himself of photographs taken from every conceivable point in the City where the Hotel would come into view, and from these photographs he has had prepared an accurate sketch, showing Mr. Beattie's building blocked into its actual site. This drawing, which was telegraphed for from Gosford House, does not reach us in time for publication this week, so that we deem it advisable to hold over the Scale Section Cartoon, showing the relative heights of the existing buildings with that in contemplation.

LETTER FROM MR. J. M. BRYDON, F.R.I.B.A.

To the Editor of THE BUILDERS' JOURNAL.

DEAR SIR,—I am glad to see by your issue of the 18th inst., that some protest is being made against the erection of the monster Hotel in Princes Street, and sincerely hope the note of warning sounded by Lord Wemyss and Mr. William Young may not be too late. This is no question of the design of the Hotel, or of the merits of the recent competition, but of the size and scale of the building itself. If carried out as proposed, it will dwarf the whole of its surroundings and be a discordant note in an otherwise unequalled prospect. In support of this I enclose you a sketch by one of the competitors in which the realisation of his design is shown in the famous view from Edinburgh Castle. As a design it is exceedingly clever and picturesque, but that is beside the question: in bulk this Hotel will be utterly out of place. Look at the Post Office—itsself a large building—a little to the right; look at the well-known Register Office on the left; look again at the Bank of Scotland, another fine building, more to the right and nearer the spectator; and above all, look at the famous Calton Hill—the "Acropolis" of Edinburgh—in the background. The new Hotel is out of proportion with one and all—it changes the entire scale of the view, and if carried out the beautiful harmony of the scene will be "destroyed" for ever. And all for what? Princes Street is already a street of Hotels: where then can there be the demand for such a leviathan as this? It may be true that railway directors have no conscience, that on the principle of nothing being "sacred to a sapper," they think only of dividends; but surely as citizens they must be alive to the claims of one of the most beautiful cities in the World. If not, surely the people of Edinburgh will not stand quietly by and see the beauty of their fair City impaired that the North British Railway Company may make money. Why need this building be so high? Railway Hotels are not exactly the abodes people choose for a long stay; their customers are more or less birds of passage; surely then a few bedrooms less cannot seriously endanger the accommodation, and the height might be reduced by a couple of stories at least. Will you, Sir, take the matter up in conjunction with your Edinburgh contemporaries and see what can be done?—I am, &c.,

J. M. BRYDON, F.R.I.B.A.

77, Newman Street, W.

25th June, 1895.

WHAT RUSKIN THOUGHT OF EDINBURGH FORTY YEARS AGO:—

I think myself peculiarly happy in being permitted to address the citizens of Edinburgh on the subject of Architecture, for it is one which, they cannot but feel, interests them dearly. Of all the cities in the British Islands, Edinburgh is the one which presents most advantages for the display of a noble building, and which, on the other hand, sustains most injury in the erection of a commonplace or unworthy one. You are all proud of your city; surely you must feel it a duty in some sort to justify your pride, that is to say, to give yourselves a right to be proud of it. That you were born under the shadow of its two fantastic mountains; that you live where, from your room windows, you can trace the shores of its glittering Firth, are no rightful subjects of pride. You did not raise the mountains, nor shape the shores; and the historical houses of your Canongate, and the broad battlements of your Castle, reflect honour upon

you only through your ancestors. Before you boast of your city, before even you venture to call it yours, ought you not scrupulously to weigh the exact share you have had in adding to it or adorning it, to calculate seriously the influence upon its aspect which the work of your own hands has exercised? I do not say that, even when you regard your city in this scrupulous and testing spirit, you have not considerable ground for exultation. As far as I am acquainted with modern Architecture, I am aware of no streets which, in simplicity and manliness of style, or general breadth and brightness of effect, equal those of the New Town of Edinburgh. But yet I am well persuaded that, as you traverse those streets, your feelings of pleasure and pride in them are much complicated with those which are excited entirely by the surrounding scenery. As you walk up or down George Street, for instance, do you not look eagerly for every opening to the north and south, which lets in the lustre of the Firth of Forth, or the rugged outline of the Castle Rock? Take away the sea-waves, and the dark basalt, and I fear you would find little

where they form a background for other battlements, built by the hand of man. There is no necessity felt to dwell on the blue river or the burning hills. The heart and eye have enough to do in the streets of the city itself; they are contented there; nay, they sometimes turn from the natural scenery, as if too savage and solitary, to dwell with a deeper interest on the palace walls that cast their shade upon the streets, and the crowd of towers that rise out of that shadow into the depth of the sky.

That is a City to be proud of, indeed; and it is this kind of Architectural dignity which you should aim at, in what you add to Edinburgh or rebuild in it. For remember, *you must either help your scenery or destroy it*; whatever you do has an effect of one kind or the other; it is never indifferent. But, above all, remember that it is chiefly by private, not by public effort that your City must be adorned. Neither the mind nor the eye will accept a new College, or a new Hospital, or a new Institution for a City. It is the Canongate, and the Princes Street, and the High Street that are Edinburgh.

City, with and without this projected Hotel, may be shown, and we shall then consider that we have done something at least to prevent a heartless wrong to one of the most beautiful Cities in the United Kingdom.

As the result of a recent sale, the authorities of the National Gallery have become possessed—for about the sum of two thousand guineas—of a picture (ceded to them by Messrs. Agnew), which represents the Art of John Sell Cotman, at least far more adequately than does the only example of his work hitherto lodged in Trafalgar Square. Both, of course, are oil paintings; the one which since 1882 has been in the National Gallery is a river scene—possibly on the Yare—and the one which will immediately be added is an important marine subject, painted with great solidity and force, in the sanest and soundest manner of the Artist. We are glad that this canvas—the work of one of the two splendid and important masters of the Norwich School—should take its place alongside of the already more numerous representations of the Art of "Old"

"THE DESTRUCTION OF EDINBURGH."

THIS is the sketch mentioned in Mr. Brydon's letter, and was submitted by one of the competitors in the recent competition. In the left foreground we have the Picture Galleries "lying low" with the view beyond; Scott's Monument in the left-hand middle distance, and beyond it further up Princes Street, on the opposite side of the way, the Register Office. On the immediate right is the Bank of Scotland "commanding" the Railway Station in the dip, and rising above the waters of the Firth of Forth the famous Calton Hill rears its head over the City. Right in the centre of the picture—which is taken from the Castle Hill—stands the Hotel, crushing out the General Post Office, which is just seen peeping round the corner at the end of the North Bridge. Although the "Hotel" shown in the sketch is not the actual design of the successful competitor, it shows all too sufficiently the iniquity of erecting such a structure, to the utter destruction of the symmetry of the City.—ED., BUILDERS' JOURNAL.

to interest you in George Street by itself. Now I remember a city, more nobly placed even than your Edinburgh, which, instead of the valley that you have now filled by lines of railroad, has a broad and rushing river of blue water sweeping through the heart of it; which, for the dark and solitary rock that bears your Castle, has an amphitheatre of cliffs crested with cypresses and olive; which, for the two masses of Arthur's Seat and the ranges of the Pentlands, has a chain of blue mountains higher than the haughtiest peaks of your Highlands; and which, for your far away Ben Ledi and Ben More, has the great central chain of the St. Gothard Alps; and yet, as you go out of the gates, and walk in the suburban streets of that city—I mean Verona—the eye never seeks to rest on that external scenery, however gorgeous; it does not look for the gaps between the houses, as you do here; it may for a few moments follow the broken line of the great Alpine battlements; but it is only

Here we have a few plain facts, and the impression of the finest living writer on Architectural subjects. We have written to Mr. Ruskin, enclosing him all the papers and information upon the matter, but we believe his state of health and his advanced age may debar him from expressing an opinion. The Marquis of Tweeddale, the Chairman of the North British Railway Company, has expressed his happiness to meet the Editor of THE BUILDERS' JOURNAL this (Tuesday) morning upon the subject, so that next week we shall be in a position to comment upon the whole aspect of the case. In the meantime, we invite the co-operation of all friends in Edinburgh to communicate with us. We cannot find room for much correspondence, but every atom of fact which will assist in the defeat of this project will be welcome. We are glad to know that the Editor of the *Evening News* (Edinburgh) co-operates with us. We have in view a public demonstration in Edinburgh at which limelight views of the

Crome, by whom the Gallery in Trafalgar Square possesses four pictures. Yet it may still be well to remind the visitor to our National collections that the genius and individuality of Cotman, like those of David Cox, are never sufficiently displayed until opportunity has been given to obtain a knowledge of his water-colours. The water-colours of Cotman—whether the more sober productions of his earlier time, abounding in an almost unequalled breadth and force and noble reticence, or those chromatic visions which record the enchanted dreams of his later years—evince, even more than his oil paintings, alike the range of his themes and the certainty and charm with which he employed his material.

A STAINED glass window is to be erected in St. Patrick's Cathedral, in memory of the late Sir Robert Stewart, Mus.D.

A new Country Hotel has just been erected at Newcastle. Mr. J. T. Cackett was the Architect, and Mr. Thomas Weatheritt, the Contractor.

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,
July 2nd, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

THE competition for the proposed new buildings of the University Hall Settlement, has been decided in favour of Mr. Dunbar Smith. Mr. R. Norman Shaw acted as Assessor, twelve Architects having been invited to compete, including Messrs. Gerald C. Horsley, E. S. Prior, Ernest Newton, H. Wilson and E. W. Mountford, &c. The site selected for the new buildings is very central and well situated for the work of the Settlement, being at the corner of Tavistock Place and Little Coram Street, W.C. Mr. Passmore Edwards promised £4,000 towards the building fund and lately he has increased this sum to £10,000. The Committee have decided, in recognition of Mr. Edwards' gift, to call the Settlement "The Passmore Edwards Settlement." The Duke of Bedford has given £800 to the building fund and Mrs. Humphry Ward £500; the latter is the Secretary and it is largely due to her efforts that the scheme is so near realisation. It is proposed later on to erect a House of Rest in connection with the Settlement, and with this object in view additional space has been reserved in Tavistock Place; the Duke of Bedford having given the Committee the refusal of two houses up to October, 1897. The present scheme, including the land, will cost about £20,000, and of this sum rather more than £12,000 has already been promised.

MR. FREDERICK W. STEVENS, F.R.I.B.A., Companion of the Star of India, and an eminent Architect in Bombay, recently visited the studios of Messrs. Harry Hems & Sons for the purpose of inspecting the sculpture now in hand there for the new premises of the Standard Life Assurance Company, at present erecting from Mr. Stevens' designs in Dalhousie Square, Calcutta. The new edifice is the first important building ever erected entirely of brick and stone in the Empire's capital city. The work that Messrs. Hems are engaged upon is, in the main, the sculpture in stone that will adorn the main facade. The principal feature of this is a large pediment thirty feet long and seven feet high. Therein, grouped in various artistic attitudes, are seen the ten virgins, all carved in the round and each individual figure over six feet high. Another Statue, yet in the clay, represents Atlas bearing upon his shoulders the Globe. It is of colossal size, and a fine study in the nude of a herculean figure. Two other large Statues are entitled respectively "Life" and "Death." The former is shewn as a voluptuous fair-haired woman who holds a distaff in one hand and a lighted torch in the other. "Death" is of withered form enveloped in sackcloth grasping a scythe in one hand, whilst with the other she holds up a skull. Mr. Stevens, whose offices are in Green Street, Elphinstone Circle, Bombay, is now on an official visit to this country. He was the Architect for the new Municipal Buildings at Bombay. The sculpture upon these public buildings was all carved in Messrs. Harry Hems and Sons' studios. Mr. F. W. Stevens, assisted by his son, have important buildings in India, which are now being erected, and will collectively cost fully a quarter of a million of money. Amongst other foreign commissions Messrs. Hems and Sons are at

present carrying out are the choir fittings in carved oak for the new Cathedral at St. John's, Newfoundland. The new Cathedral is being built from the designs of Messrs. G. G. and J. O. Scott, Architects, of London, and sons of the late Sir Gilbert G. Scott, R.A.

At a meeting of the heritors of the parish of Auchterarder, Perthshire, sanction was obtained to the taking down of the two old bells which have done duty in the steeple of the parish Church since 1754, in order that these may be replaced by a new bell, which the congregation intend to provide by subscription. One of the bells has, indeed, summoned the parishioners to worship for a very much longer period than since 1754, and is said to be 700 years old, having tolled in the Auld or Laigh Kirk, the ruins of which still stand north of the burgh. The bells, along with some other interesting antiquarian relics—a pre-Reformation baptismal Font and the framework of an old spiral clock in the steeple—are to be retained by the heritors of Auchterarder.

AN interesting Exhibition of Wood Carving has been on view at the Carpenters' Hall, London Wall. The Company has established an Annual Art Competition in carving and woodwork for the encouragement of artistic design and workmanship. A number of prizes and medals are offered for different classes of work both to professional carvers and to students. About 170 exhibits were sent in, but no competitors have entered in several of the classes. The gold medal for any newly carved work has not been awarded this year, as the judges did not consider any exhibit of sufficient merit. The silver medal was gained by Mr. Colley for a frame carved with a design of flowers and fruit, and ornamented at the top with three cherubs in very high relief. Miss F. M. Bartholomew took the second prize for a carved jamb for a chimney-piece, and in this class, too, the first prize has not been awarded. The first prize for an enriched ogee moulding was awarded to Mr. G. W. Redmond; a bronze medal for a set of panels to Mr. J. Osmond; and a prize and certificate to Mr. W. M. Barnes for some very delicate carving in low relief, so fine that the specimens resemble plaques rather than woodwork. The students competing come from the Day and Evening Wood Carving Schools at King's College, from the ladies' branch at Kensington, and from the Carpenters' Company's School in Great Titchfield Street. Besides the wood carving, there was also on view a large number of specimens of the work done by the students at the Associated City Companies' Trade Training Schools, Great Titchfield Street, in masonry, painting, plaster work, and other trades.

THE Exhibition of Arts and Crafts at the Manchester City Art Gallery, one of the best Exhibitions ever held in the Gallery, is now closed. The attendance of visitors was large at the outset, 40,845 persons being admitted in the first week, and it increased rather than diminished towards the close, for within the 11 weeks during which the Exhibition was open, 527,577 people inspected its contents. Few out of this immense number can have gone away disappointed, for the collections were varied enough to suit all tastes, and several of them were sufficiently important to claim the attention of all engaged in the respective industries which they represent. The characteristic feature of this Arts and Crafts Exhibition, as distinguished from those previously held in London, Liverpool, and elsewhere, was the prominence given to things intended for the daily use of the many as opposed to luxuries reserved for the enjoyment of the few. The textiles, the pottery, glass, metal work, and furniture on view in the Galleries afforded welcome proof of the fact that our manufacturers are steadily improving their designs as well as their workmanship. There were scattered through the rooms many beautiful objects which the ordinary man could not hope to possess, such as Morris tapestries, modelled plaster friezes, elaborately carved furniture, Kelmscott books, and some of the choicest bookbindings that have been executed in modern times, but they were not numerous enough to make a visitor feel that he was in a museum of rarities which could necessarily have no imme-

diate influence on his daily life. As the "Arts and Crafts" movement arose out of a belief on the part of certain earnest men and women that even the simple objects of the household need not be stamped with the vulgarity and ugliness that rapidly growing manufactures seemed to bring in their train, it is important to emphasise the theory now when the movement seems for the time to be diverging from its old lines. The "Arts," if we may so express it, have been unduly favoured to the neglect of the "Crafts," whereas both should receive equal encouragement.

As we recently noted in our leader columns, the Mayor of Truro (Mr. Trevail, F.R.I.B.A.) designed the Passmore Edwards' Free Library now being erected in that city. Some two or three malcontents in the City Council, who are opposed to Mr. Trevail's crusade against insanitary conditions in Truro (the Mayor is also chairman of the County Sanitary Committee), tried to upset Mr. Trevail on legal technicalities, but the Architect-Mayor was "one too many" for these. A proposal of a county wedding gift for Mr. Passmore Edwards, Junior, whose father has done so much for Cornwall, has been warmly received.

THE restoration of the Parish Church Tower at Shoreham was not taken into consideration before it was needed. Mr. B. Ingelow, Architect, has recently inspected the Tower, and his remarks thereon are anything but satisfactory. He recommends the entire rebuilding of the north-east pier, which contains the stairs to the belfry, up to the level of the caps, and also the stair turret. That the restoration will soon have to be undertaken may be gathered from Mr. Ingelow's remarks. He says, speaking of his recommendations, "I do not think this work should be long delayed, and it would be well, before the autumn gales, to shore up and centre the two arches opening from the Aisle into the Choir and Transept. Whatever is done must be done thoroughly; mere repairs would not be of any use."

BIDEFORD'S famous old Bridge has again come into prominence by the refusal of the County Council to interdict the passage of traction engines across it. So long as traction engines are allowed to use the roads, it is perhaps illogical to prevent them going across a Bridge which is part and parcel of a main road, though this is done in many places. To avoid the Bridge at Bideford would mean a very long detour, and it is urged that if the Bridge is unsound, or, at all events, unsuited to heavy traffic, its trustees have money enough to strengthen it. There is no doubt that the present structure is inadequate to the traffic, and on wet days foot passengers have need to be wary of mud splashes, so cramped are the footways. Some of the residents have, moreover, doubts as to the stability of the structure itself. It must be admitted that traction engines, with their enormous loads, are not only a very great nuisance, but are most destructive to roads. At the last meeting of Barnstaple Highway Board it was reported that 5½ perches of road at Challacombe had been torn up by traction engines, and six culverts destroyed.

THE Irton Hall Estate, in West Cumberland, the historic seat of the Irton family, consisting of 1,935 acres of land, in the parishes of Irton and Gosforth, and comprising the mansion and demesne of Irton Hall, together with nine farms, has been purchased in private by Sir Thomas Brocklebank, Bart., Springwood, Allerton, Liverpool, and Greenlands, Cumberland, and his family, from the representatives of Messrs. S. and J. Lindow. Mr. Jonas L. Burns-Lindow, who has occupied the Hall, died recently. The Irton Hall Estate is one of the finest in West Cumberland, and adjoins Sir Thomas's estate of Greenlands. The estate comprises lowland, woodland and upland, and is beautifully wooded with ancient timber, coppice, and plantations, and is skirted on one side for three miles by the river Irt, on which there are many lovely bits of scenery. It is situated on the borders of the Lake District, and between the mountains and the sea, in one of the most beautiful parts of Cumberland, and commands charming views of the valleys of Gosforth and Irton, of the dales of the Esk and Miter, and of Irton Pike, Muncaster Fells, Wasdale Screes,

and Scawfell. The Hall has been almost entirely rebuilt since 1872, at a cost of £32,000. The old Norman Tower was restored at the same time.

THE provision of a Mayor's Chair and Corporation Pew in a Parish Church is a piece of work not often commissioned now-a-days.

MAYOR'S CHAIR, PARISH CHURCH, DEAL :
DESIGNED BY BURKE DOWNING.

Our illustration is from a photograph taken while in the Sculptor's Studio, and shows the Mayor's Chair recently erected in Deal Church, the Pew for Members of the Corporation extending right and left of it. The work was entrusted by the Corporation to Mr. Burke Downing, A.R.I.B.A., F.S.I., of London and Merton, Surrey. The carving was executed by Mr. N. Hitch, of Vauxhall, who, under the personal direction of the Architect, modelled every portion of it.

MEMORIAL gifts of Pulpit, Lectern, and Altar Rails, to St. Aidan's (Bishop Woodford Memorial) Church, Leeds, have been completed. The base of the Pulpit is of Bath stone. The central clustered shaft, cusped arches and ribs, are of Caen stone, the arches being enriched with spandrels and bosses of choice specimens of Numidian and Italian coloured marbles. The Pulpit is supported by seven columns of vert Campan marble, with richly moulded Bases in Breche Sanguine, one of the choicest of the marbles from the rediscovered ancient quarries of Numidia. The capitals, in pink alabaster, are carved in a variety of forms. Above the Caen stone arches is a bold moulding running round the Pulpit. This and also the top moulding is of dark green marble from Genoa. Sculptured panels represent six scenes from the life of St. Aidan, the missionary to whom two-thirds of England owed its Christianity. At the angles are columns in pink alabaster of exquisite spiral form, with carved capitals, and red marble bases. The remainder of the Pulpit is of pink alabaster, and enriched with carved panels and frieze. It is approached by a flight of 13 steps in Bath stone, supported by columns of vert Campan marble to correspond with the main structure. The hand-rail, balustrades, and newel, are of Caen stone, richly worked and moulded. The Lectern is of polished brass, and consists of a massive central shaft, standing upon a richly moulded base of novel form, and is surrounded by pedestals attached to the main shaft by buttresses, upon which stand four angels with extended wings blowing trumpets to the four quarters of the globe. The top consists of a revolving double desk, richly chased and pierced, and surmounted by a figure of St. Aidan, having at the sides brackets with angels supporting candlesticks. The Pulpit, Lectern and Altar Rails, have been designed by Mr. A. Crawford-Hick, Architect of the Church, and the orders executed by Mr. A. S. Hagyard, The

Studios, Leeds. The models, sculptured panels and carving, are by Mr. John Roddis, Sculptor, Birmingham.

UNEXAMPLED success has attended the Art Loan Exhibition of Pictures at the Guildhall, close upon 190,000 persons having already visited it. It is announced that the last day and hour of its being open will be Sunday, July 21st, at 7 p.m. As the apparent result of its public spirit and energy of action in the direction of Art, the Corporation has recently received a valuable presentation, by which its own Permanent Collection will be enriched.

An interesting ceremony took place at Notre Dame, when the Cardinal Archbishop of Paris, assisted by Monsignor Gaspari, Professor of the Catholic University of Paris, representing the Roman Congregation of Relics, and Abbé Many, of St. Sulpice, solemnly transferred the supposed remains of the True Cross, given by King René in 1476 to the Celestin Monks of Avignon, and other well-known relics of the Passion of Christ, to the richer reliquaries, by special authorisation of the Pope, and in the presence of the Cathedral Chapter the documents referring to the relics, which are of a most interesting character, were sealed up after the copies already existing were verified.

At the Hotel de Ville, Paris, the Artistic Decorations Committee recently examined the works ordered but not previously accepted. It received among others Benjamin Constant's painting for the Ball Room ceiling, "The City of Paris receiving the Nations of the World;" M. Binet's painting for the Salon of the Siege of Paris, M. Flameng's for the Salon of the Cariatides, and M. Dubuffe's for the Turrets Galleries. A number of decorations for panels above doors, corners of ceilings, embrasures, and niches, were also accepted. M. Denys Peuch, the Sculptor, presented an allegorical bas-relief for the Salon of the siege of Paris. M. Peuch is a young Sculptor of great talent. The copyright of his exquisitely beautiful bas relief in the Champs-Élysées Salon has been bought by M. Barbédienne. It represents the Vision of St. Anthony of Padua, who dreamt that as he was praying in the Cloister of the Monastery, the Virgin, seated on a cloud, was wafted to him, and confided to him the infant Jesus.

THE four hundredth anniversary of the re-foundation of St. John's Hospital, Lichfield, by Bishop Smyth in 1495 has been celebrated. The Hospital was originally founded before the middle of the 13th century. It was one of the numerous houses that the Order of St. Augustine erected just outside the gates of cities for the relief of poor and impotent persons, and especially for the relief and enter-

tainment of travellers and pilgrims. Two or more Brothers of the Order lived in the house with the Prior. In 1495, it having fallen into very great disorder, and the buildings being in bad condition, Bishop Smyth, then Bishop of Lichfield and visitor, rebuilt the Hospital; added largely to the endowment by uniting and appropriating to it the Hospital of Denhall, in Cheshire, which was chiefly intended for seafaring men, and the Chapelry of Freeford; and gave it new statutes. By those statutes, under which, with a few alterations since made, it is still governed, it was made more entirely an eleemosynary institution for the free instruction of scholars, and for the maintenance of thirteen poor men. It is now desired to improve the arrangements of the Sanctuary, and to provide a heating apparatus and a Vestry. After payment of necessary expenses of management, repairs of properties, the net income is about £600. The maintenance of the thirteen "brethren" (including matron, medical attendance, &c.) is about £310.

LINDFIELD Parish Church, which has been enriched with a beautiful carved oak decoration of the Baptistry, is becoming interesting by reason of its carved oak fittings. The carved oak Pulpit was presented in 1888, and since then a Vestry has been added, enclosed in panelled oak. Later, a canopied oak Reredos, a fine piece of workmanship, was erected. The Vicar's desire is to replace the green-painted woodwork in the Church with oak. This is a low dado which runs round the whole interior, and whatever might have been the original effect, it does not now harmonise with so much oak work. This will possibly be the next improvement of the ancient building. The Church has been described by a critic as being "much knocked about by restorers in 1848." Underneath the present whitewashed roof there is no doubt some beautiful oak panelling, which would be in admirable accord with the present aspect of the Church if the panels were brought out in their original state.

THE consecration of the Side-Chapel and the dedication of the rich iron Chancel Screen and the Sanctuary Candlesticks at St. Peter's, Eaton Square, mark the completion of a large amount of decorative work in glass, marble, alabaster and metals which has been in progress for the last five years at a cost of over £6,000. The Screen, designed by Sir Arthur Blomfield, A.R.A., is an excellent example of modern iron-work, and is the gift of Mr. S. E. Palmer. The Chapel, richly decorated, and with triptych at the east end, is a Memorial to her parents from Mrs. Parr; while the large Sanctuary Candlesticks, copies of those in St. Paul's, are the gift of Captain Powney of the Guards.

HARDWICKE HALL, DERBYSHIRE : THE VISIT OF THE SHEFFIELD SOCIETY OF
ARCHITECTS AND SURVEYORS.

A FEW days ago the Architect attached to the Sorbonne, in visiting the Chapel, found that several slabs had become loosened through lapse of time, and among them a stone covering the head of Richelieu, and a cast of the great Cardinal's face taken immediately after death. A Paris correspondent says that the Tomb has been formally sealed up in presence of the Princess of Monaco, representing the Richelieu family, the Princess's first husband being the late Duc de Richelieu. M. Hanotaux, Minister of Foreign Affairs, as a historian and as an admirer, and, it is said, disciple of the great Cardinal statesman, attended, and among other persons present were the Director of the Fine Arts Department, the Vice-Rector of the University of Paris, and the Chaplain of the Sorbonne. The remains of Richelieu were scattered in the Revolution of 1793, with the exception of the head.

THE proposal to carry along the Central London Railway through Newgate Street into Cheapside, has turned attention once more to the long talked of improvement at the corner between St. Martin's-le-Grand and St. Paul's Churchyard. This is one of the most congested and dangerous spots in London, and sooner or later a clearance of some of the house property standing out so awkwardly in the way of traffic across the southern end of St. Martin's-le-Grand will certainly have to be made. The new Electric Railway proposes to establish a Station near this point, and it would improve the line to get this property out of the way. Before the Railway is brought along there will clearly be the time to do it, and it has been reported that City people are thinking of setting about it.

JULIUS OLSSON and Louis Grier, two artists living at St. Ives, in Cornwall, are starting in the beginning of July a School of Landscape and Marine Painting. When practicable the work will be carried on in the open, and that should be almost always, seeing what is the climate of St. Ives. A spacious Studio, however—and Studios are large in St. Ives, where a big boat-building loft may be rented for next to nothing—will also be provided for the use of students.

THE Luther Monument, which was recently unveiled in the New Market at Berlin, is the work of two sculptors. It was commenced by Professor Otto, and, after his death, completed by Professor Toberentz. The head of the Reformer is the work of Toberentz. The idea of the Monument is to represent the special relation of the Saxon Reformer to Prussia. Hence Luther is represented in his 56th year, the time in which the Reformation was introduced by the Elector Joachim II. into the Mark of Brandenburg—that is to say, in the year 1539. Luther stands in a firm attitude, dressed in the long cassock, or "talar," which was subsequently adopted as the official dress of the Evangelical German Clergy. He is clasping the Bible to his breast with the left hand, and pointing to it energetically with his right hand. The Monument, after the precedent of the famous work at Worms, is adorned with a number of subsidiary figures. At the basis of the pedestal sit several scholars and divines, in eager disputation.

THROUGH the generosity of M. Edmund de Rothschild, the Louvre Museum is to have the treasure of silver cups, vases, and other articles, all finely chased and embossed, found

at Bosco Reale, near Pompeii. It is affirmed that the sum of £20,000 was paid for the antique *trouaille*, which dates from about the first century of the Christian era. The price asked had been deemed too high by the experts from French and other Museums, who had inspected the treasure. On one of the vases is depicted a dance of Death, and the names of Aristophanes, Euripides, and other Greek figures are engraved under the figures. This work is said to be unique and highly interesting, both artistically and archæologically. There is likewise a *putera* of the same pattern as that in the Hildesheim Collection at Berlin.

THE Archæological Society of Athens has decided to take in hand the repairs required to prevent the ancient Temple of the Parthenon from falling into a more dangerous and ruinous condition than it is in at present. The repairs are to be carried out on the lines suggested by the eminent German authority, Professor Durrm, who, after a careful and minute inspection of the structure, drew up a series of detailed instructions on the subject. A commission of Architects has been appointed to superintend the work of reparation. Three celebrated Archæologists—Mr. F. C. Penrose, the eminent English authority who has written a most masterly work on Athenian Architecture; the German Professor Durrm; and the French Archæologist, M. Magne—have been requested

the idea that the rural labourer is dissatisfied with his lot, because life in the villages is so terribly dull and monotonous, and that he flocks into the towns, not so much for better pay, as because he desires to participate in the pleasures and the excitement to be found there. And so the true way to check the migration is to make the villages as attractive as the towns. "Every fair-sized village ought to have, on however small a scale, all the attractions of a capital—its Public Library, its Gardens, its Clubs, its handsome tree-bordered street." The village should also, we suppose, have its Theatre, its Concert Hall, its electric light, its busses, and its tramcars. Having got all these, if it were possible to get them, the village would still be without the one great attraction of town life—the crowd of bustling humanity in which the individual is absorbed and with whose current he is carried along. We are told that the plan of converting the villages into miniature cities has already been tried with success in America, and that it deserves consideration in this country. Perhaps the scheme would have more chance if it were not so very ambitious. Village life might surely be brightened without importing into the country everything which is especially characteristic of the town.

THE storm raised over the projected Statue to Cromwell has evoked some unpleasant reminiscences. People—

amongst them, Mr. Conan Doyle, the novelist—are asking why a monument in stone should be denied to the Protector who made England's enemies tremble, when there exists one to Frederick Augustus, Duke of York, Prince Bishop of Osnabruck, and Commander-in-Chief of his Majesty George III.'s forces on land? There is no denying that the Duke of York's column in St. James's is one of the most prominent decorations of London. It is of Scotch granite, it stands 124 feet high, and was designed by Wyatt and surmounted by a Statue by Westmacott. Londoners are to this day privileged on the payment of sixpence

HOUSE, SUTTON COLDFIELD, ENTRANCE FRONT: ERNEST NEWTON, ARCHITECT.

to give their views and advice on the details of the proposed repairs.

It is just 500 years since the Parish Church of Bradworthy was destroyed by fire, for it was in the year 1395 that the fabric was struck by lightning and burnt to the ground. The present has, therefore, been thought an appropriate year for starting the work of restoration. This is not the outcome of any desire to merely beautify a Church which is already in a good condition, but is a work forced upon the congregation by the unsatisfactory state of the fabric. A huge crack has been discovered at the west end, doubtless a legacy left by the lightning, which struck the Tower and destroyed one of the pinnacles a few years since, and which the pressure of the roof has tended to materially increase. Both the north and south walls have given out to the extent of some inches, while the foundations are in many places unsafe. A meeting of those interested in the work has been held. It was unanimously resolved that the work of restoration be undertaken and proceeded with as funds allow. Some of the work is an absolute necessity, such as pointing the Tower, making good the defects in the foundations, and putting the walls and roof in a satisfactory condition. A new roof is desirable, but, failing funds for that purpose, it is proposed to temporarily brace the walls.

A REMEDY for the overcrowding of cities and towns is suggested from Italy. It is based on

to survey the City from the top of the column. Yet, what did the Duke of York do to deserve the honour? History records that he displayed dismal military incapacity as Commander of an expedition to the Netherlands against the French in 1793. Worse still, history also relates that in 1811 he was forced to resign his appointment as Commander-in-Chief, owing to the scandal caused by the shameful traffic in military commissions.

THE Memorial Stone of new Sanitary Chambers for Glasgow was laid by ex-Bailie Crawford, Convener of the Health Committee. Built from plans by Mr. A. B. M'Donald, the City Architect, the Chambers will enhance the Architecture of the quarter, harmonising with the Municipal Buildings on the same line of street. They are situated at the corner of Montrose and Cochrane Streets, and are estimated to cost about £17,000. To quote from the Lord Provost's resumé of new work undertaken during the year 1893-94, "the front elevations are being treated in the style of a modified Italian Renaissance. The first storey is bold in style, with rusticated courses and round-headed windows, and forms a substantial base for the lighter and broader treatment of the second and third storeys. Above the main cornice, the sky line is broken by a rich balustrade, interrupted at intervals by peditments and finials. At the corner where

the two streets meet there will be a square Tower rising to a height from the pavement of 70 feet."

SPEAKING at the ceremony, Professor Burdick, of New York, said that before he left America on his first visit to this Motherland, he had been told by friends who had visited Scotland, simply as tourists, that he ought to spend not more than a day in Glasgow, and push on to Edinburgh and the Highlands. But he had, as a great many other Americans had, come to look upon Glasgow as the type of the very best kind of modern municipality. The problem of municipal government in the United States was one of the most serious that concerned the statesman and the student of social economy. They had not been able to solve that problem for themselves. He did not see anything in the experience thus far of American cities to lead him to hope that they could, without studying carefully the institutions of other lands, solve the question, and the eyes of their best students were being turned towards Glasgow as towards no other city of Europe, because they had learned to believe that there some of the most vexatious, most difficult, and most complicated problems, if they had not been solved, at least were on the way to solution. But, after studying Glasgow for a short time, he confessed to a feeling that they would not learn from Glasgow, after all, the secret of good municipal government. Glasgow had an advantage over them. How to be progressive and at the same time conservative was something that an American had not yet learned. How long it would take him to learn it was a matter of speculation. It seemed to him that the ancient University, and still more ancient Cathedral, in the traditions for which they stood, in the conservative influences which they wielded, were forces which could not be duplicated in America for generations. But they hoped to learn something from such wonderful experiments as it had been his pleasure to see. He did not know of anything in America comparable to that ideal place, Belvidere Hospital; he did know anything in the large cities of America comparable to the Corporation and Private Lodging Houses of Glasgow; he did not know anything which equalled the great Public Baths of Glasgow. In all these respects certainly America had before them examples which they could imitate, and he trusted they would prove themselves good imitators.

It is highly probable that the existing political crisis will interfere with the arrangements made for the opening of the new Wing of the Albert Memorial Museum, at Exeter. The Duke of Devonshire promised to perform the ceremony, and July the 19th was fixed as the date. Under existing circumstances there will, in all likelihood, have to be a postponement.

TREETON CHURCH, near Rotherham, which is mentioned in "Domesday Book," has been undergoing restoration since 1866, and upwards of £4,000 has been spent upon it. An interesting addition has just been made by the erection of a Chancel Screen of carved Austrian oak. It is the gift of Mr. F. J. Jones, of Treeton Grange, and is, as the inscription records, a memorial of the donor's wife, a former parishioner, who died in December, 1893. When the Chancel was restored in 1866 some mutilated fragments of the lower portion of the ancient Screen of fourteenth century date testified to the existence in old days of this feature so necessary for the artistic furnishing

of the sacred building, the want of which had been made more apparent since the work of repair and decoration recently executed. The new Screen is fixed in practically the same position as the old one. It is of a light and open character, and designed on the lines of the adjoining screens to the Brampton Chapel. More richness and importance is given to it by a beautifully carved cornice and cresting. The Screen has been designed by Mr. C. M. Hadfield (Sheffield), executed by Mr. F. Dealy, and the carving is the work of Mr. Frank Tory. Mr. Hadfield, the Architect, has supervised the work.

THE important eastward extension of the Transcaspian Railway system, now confirmed by Imperial rescript, will run from the present terminus at Samarcand through Djisak, Begovat, Khodshent, Kokand, and Margellan to Andishan. From Samarcand to Andishan the distance by the proposed track is a little over 516 versts. It is estimated that no fewer than 778 Bridges of all sizes will have to be constructed, but the only ones of importance will be those spanning the Siab (near Samarcand), the Saravschan, the Sapsar, and the Aksu. For the branch line to Tashkent two routes are under consideration. The cost of the new extension from Samarcand to Andishan will be at the rate of 38,933 roubles per verst.

In the course of some remarks at the Wedgwood Centenary Exhibition, Mr. Godfrey Wedgwood mentioned an interesting story con-

THE GARDEN FRONT, HOUSE, SUTTON COLDFIELD: BY ERNEST NEWTON.

cerning Mr. Gladstone's famous Collection of Wedgwood, which some years ago he was obliged to sell. Mr. Mundella rallied him on his loss, and said: "I thought that collecting was like dram drinking, a thing impossible to give up, and in which the appetite grows with what it feeds upon." Mr. Gladstone replied, "There is no cure for it, but to give it up altogether."

CONSIDERABLE progress has been made with the building of the Free Library, Abingdon, which is being erected from designs of Mr. J. G. T. West. The front elevation is in Queen Anne style, and the red brick is relieved by stone dressings and timbered gabled bay windows on the second floor, with a pair of French doors and a balcony over the central entrance. The front part of the ground floor will be occupied by two Shops with separate entrances, and there is a separate central entrance to the Library, which leads, through a corridor, to the Central Hall, in the rear of which is the news room, where stand accommodation will be provided for 40 daily and weekly newspapers. This part of the building is of one storey, with glass roof. Adjoining the central hall, on the west side, will be the Lending Library, affording space for 10,000 volumes. On the second floor, above the Shops and Central Hall, a Reference Library and Magazine Room, 38 ft. by 20 ft., and this will be divided into bays by bookcases placed at right angles to the walls. There will be a third floor above, comprising rooms for Caretaker and

Librarian. The whole building will be heated by hot water, and fitted with approved ventilation and sanitary arrangements. Towards the cost of the work the Corporation has made a grant to Christ's Hospital of £250, and in consideration of the building being let to the Library Committee rent free, the Council has also agreed to maintain the institution, the annual expenditure being estimated at £150. Mr. Grant, of Banbury, is the builder.

As a result of the Exhibition held by the Royal Scottish Geographical Society in connection with its Franklin commemoration meeting, a number of interesting and valuable objects have been presented to the Society, which is naturally considered the rightful custodian of geographical relics of public interest. Mr. John Allen Brown, F.G.S., F.R.G.S., has presented a well-executed miniature portrait of Captain Weddell, R.N., who made voyages of discovery in the Antarctic seas between 1820 and 1824, and then reached a higher southern latitude than any other previous or subsequent discoverer except Sir James Clark Ross, who surpassed him in 1842. Mr. Brown has given the original log of the *Beaufoy*, one of Weddell's vessels, also his original charts, and numerous letters and other documents relating to him. Professor Chiene has presented an extremely interesting collection of documents which belonged to the late Dr. Robert Goodsir. These include letters written after the sailing of Franklin's last expedition by his brother, Dr. Harry Goodsir, who went out as assistant-surgeon of the *Erebus*; letters written to Dr. Harry Goodsir by his father, and others written from the Arctic regions by Dr. Robert Goodsir himself, who joined two search expeditions in the hope of ascertaining the fate of his brother Harry. The Collection includes a number of letters relating to the dispatch of the Franklin expedition.

THE Finance Committee of the London County Council has presented a report upon the financial aspect of the Council's policy in building dwellings for the working classes. Some of the buildings erected, it had been found, could not earn the 3 per cent. on the outlay required by the Council, and it was recommended that the letting or selling, for the purpose of building workmen's dwellings, of lands already acquired by the Council, should be first considered before the Council decided itself to build. In the event of the Council building, it was proposed that the rents charged should not exceed those ruling in the neighbourhood, and that the building should be so designed that they should bring no charge on the rates. Further, the Home Secretary, or, if necessary, Parliament, should be asked to modify the conditions in cases where the Council was compelled by statute to re-house on particular undesirable sites, and to enable them to build on other more desirable sites.

In illustrating the work of Ernest Newton we are indebted to "Academy Architecture," for the use of the blocks of the House at Sutton Coldfield. We have pleasure in acknowledging the courtesy of Mr. Koch, the editor.

A TABLET has been placed in the Church of St. Giles's, Cripplegate, recording the fact that Oliver Cromwell was married there to the daughter of Sir James Bouchier, in 1620. The many descendants of the great Protector who have been recently discovered will be glad to know that the memory of their famous ancestor is not altogether forgotten in the City. The same Church was the burial-place of an even more illustrious Puritan—John Milton.

DEATH OF PROFESSOR HUXLEY.

AFTER a gallant struggle against a complication of insidious diseases, Professor Huxley succumbed on Saturday at his residence in Eastbourne. The World had been aware for some time of the critical condition of the Professor's health, and the announcement will not cause surprise, but the regret will be just as universal and as great at the loss to Science and to Literature of so distinguished a man, the regret being mingled with sympathy for the family by whom he was dearly beloved. Professor Huxley was stricken down with influenza as long ago as the beginning of March, and before he could shake it off, bronchitis supervened, and symptoms of lung and kidney complaints manifested themselves. These diseases, coupled with a cardiac affection of long standing, were enough to break up the strongest constitution, and it is a remarkable proof of the Professor's vitality that at the age of seventy he withstood their ravages so long. Several times he rallied in a surprising manner, and about a month ago so far regained his strength as to be able to be carried into the garden. The inevitable relapse, however, soon followed, and for a fortnight past the distinguished patient may be said to have been hovering between life and death. The exhaustion consequent upon the kidney complaint was accompanied last week by an accentuation of the heart trouble, and when Dr. Yeo visited him in company with the Professor's son and Mr. H. D. Farnell, his Eastbourne medical adviser, on Friday, he found him in an extremely weak and critical state. On Friday night and Saturday morning his condition grew worse, and all hope was abandoned, and he passed peacefully away at half-past three o'clock in the afternoon, in the presence of his wife and one of his daughters, other members of the family arriving from London just after he had drawn his last breath. Throughout his illness the Professor's mind remained perfectly clear, and he was able to read, not only books, but the daily newspapers, and to take interest in all that was passing in the World. He continued his writing up to the beginning of last week, and read up to the day before his death. He was conscious to the last, and knowledge of his coming end was borne with equanimity, his strength of character and his amiable disposition never forsaking him.

A NEW Public Library for the Parish of St. George's, Hanover Square, was opened yesterday, from designs of Mr. A. T. Bolton, on a site in Chapel Place North, South Audley Street. The elevations are of red brick and terra-cotta, in the style which has almost become the accepted one for buildings of a public or semi-public character. The design, in spite of many good qualities, lacks repose and simplicity.

THE BUILDERS' JOURNAL

AN ARCHITECT-URAL REVIEW

MEN WHO BUILD.

No. 19.

MR. ERNEST NEWTON.

HERE was a time when Ernest Newton favoured the Architectural behests of Bloomsbury, locating himself but a few doors from "The Master," and forming one of those little nests of Artmongers who dream dreams o' nights and wake to the realisation of more sober things on the morrow. But the remove was not a great one. Raymond Buildings was the limit of his migration, perhaps it was that the rookery in the elms of Gray's Inn was too subtle in its influence for him to go farther afield; and the quiet of the old Inn, the rickety stairways, the spacious empannelled rooms, are just what an Architect—a man who deems the practice of Architecture an Art, and not merely a profession—loves, and what such a dreamer of dreams longs for. It were easy to impress oneself with the surroundings of his own beautiful home—the home he had in his mind when he penned the introduction to his "Book of Houses," which Batsford published for him five or six years back. "It has somehow become an accepted fact," was what he wrote, "that people of moderate means may not even contemplate the possession of a home of their own; the speculating builder fosters this idea, and having seized on a Suburb, proceeds to cut down the trees, uproot the hedges, and transform country into town as fast as he can. His next step is to divide the land into regular plots, and build house after house, each an exact counterpart of its neighbour, monotonous and unhomelike. Then come the tenants, all of different mould, each takes his house, gets into it somehow, and calls it home."

But one gets a clearer insight into a man's convictions when the domestic influence is not uppermost, and the stern reality of Gray's

Inn leaves the artist himself the prime figure in the picture.

Mr. Newton is still young, but old enough to have already made an indelible mark upon the Architecture of the moment, for his methods are the methods of the master under whom he served, the methods of the man who has himself done more for English domestic work than the century has otherwise accomplished. It is twenty years ago since Ernest

Newton stepped into the office of one Norman Shaw, to serve him for a period of three years "faithfully and well, his secrets keep, and all his just commands truthfully obey," and then for a further term of three years to occupy a responsible position in "the master's" drawing office, saturating himself with Architectural lore and discovering what good Architecture really is.

Mr. Newton has done a wise thing in pitching upon the "small" house as the field for his talent, and his studies in this direction have resulted in a great number of the most perfect "plans" we have yet seen. Ernest Newton is a modest man. He claims that he has done nothing big, but the drawings of Buller's Wood and the photograph of a portion of the house, shewn in this number, go far to prove the great charm of his work.

The Stables of Bickley Hall, which Mr. Raffles Davidson has sketched so charmingly, shew the broad purpose of their Architect.

BICKLEY HALL STABLES: BY ERNEST NEWTON.

The crowding of detail into every part of a building is to him a cruelty, and he is more severe even in this conviction than Mr. Norman Shaw himself. One of the few Churches he has yet done is illustrated on the walls of Burlington House. It is the Church of St. Swithin, Lewisham, and every atom of exterior detail has been devoted to the large east window, where the drawing is delicate and very fine. Otherwise, the Church is a mass of plain brick work and plain buttresses. Nothing, again, could be simpler or more perfectly planned than the house at Sutton Coldfield, also shown at the present Royal Academy; but as much can be said of everything emanating from his pencil.

An enthusiast is Ernest Newton. His "preconceived ideas" he has never wavered from. How Architects have unblushingly divorced themselves from all connection with craftsmen passes his understanding. And he laughs when he thinks of it. Is there a mason, or a joiner, or a layer of bricks

when he first entered the office of "the master." Upon the mantelpiece of his own room the "master's" portrait rests, and he lovingly takes it down, faded as it somewhat is, to shew you. A grand fellow you venture to remark: "More than that; much more" comes from Ernest Newton; "a King of men." The petty frictions of one's work worry even me at times, but for more than twenty years of privileged friendship with Norman Shaw, I never once found him aught but the most courteous, the most kind, the most considerate of men." Side by side with the Royal Academician stands a portrait of "the boys," three chubby little rascals, looking happy and contented from their morocco frame. You fancy you detect a second ambition in the eye of their Sire, as you replace the portrait, but at the moment one is sufficient. Ernest Newton has before him a splendid opportunity. Already his work is widely known and appreciated. It is the work of a pure Artist and a careful constructor. It has upon it

all or most of them were born), a while ago. The highest titular distinction was won by Henry. He became an Associate some twelve years ago and a full member of the Royal Academy in 1893. He was also a member of the Royal Society of Painters in Water Colours. The highest artistic distinction was, perhaps, his brother Albert's. Posterity will do full justice to that rare and incomparable talent, which was left absolutely unrefreshed by the Burlington fountain of honour, to the last. But Henry Moore was almost a great painter, and he had no equal in his rendering of certain effects of sea and sky. He was not in the least a showy or a tricky craftsman. He had the family taste for the more delicate and imaginative aspects of Nature. The sea of late years was his favourite subject; but it was by no means his only one. He painted landscape with great power. His marine pictures were almost wholly without incident in the common acceptance of the term. His "Coming Home" was but a great expanse of sea and sky with a few fishing boats to break the line between. The water, for the water's sake, was his delight. He wanted no more than the play

BULLER'S WOOD, CHISLEHURST: ERNEST NEWTON, ARCHITECT.

who cannot teach us something? What do we know of metal work? We are as Architects, merely units in the Concrete Art of Building, going back to the work of the craftsmen in stone and metals for our inspirations. "Styles" in Architecture is another red rag to Ernest Newton. Where is Style? he asks, and what is it? Is it not wiser to call the character of one's work an Individualism rather than a "Style." You do not stay long in Raymond Buildings, for the convictions of Ernest Newton are an open book to you, and his methods as well known. He does not dive into Egyptology to impress you with the depth of his ideas. "I build houses," he seems to say, "and if I plan them well and build them soundly, and invest them with the sacredness of home, I am content." He knows the sacredness of home, and the happiness coming from a beautiful house, and every atom of his conviction develops from the step he took more than twenty years ago,

the influences of the man he reverences so much, and you will sadly fail in your judgment if Ernest Newton does not rise to be one of the finest domestic Architects of his time.

THE WORK OF HENRY MOORE, R.A.

MR. HENRY MOORE, R.A., the eminent painter of sea pieces, who has not been long in following his brother Albert to the grave, was an Artist by race. He was in his sixty-fourth year—at any rate he was born at York in 1831. He had long complained of failing health, but many friends tried to persuade him that he exaggerated his own symptoms; and, in trying, perhaps, succeeded in persuading themselves. A few, more discerning, were sorrowfully obliged to take him at his word. His father was a well-known portrait painter, and all the five brothers were Artists of merit. An Exhibition of the work of the whole family was opened at York (where

of the waves in their innumerable diversities of form and colour. It was the same, or much the same, when he called the picture "Outward Bound," "Hove-to for a Pilot," or "Perfect Weather for a Cruise." The name was, in no sense, indicative of incident or subject; the sea was the sole theme. When he painted a storm there was no attempt to associate its effects with human emotion, in the sense of any personal experience. The marshalling of the forces of air and water for the conflict was enough for him. He seemed to disdain the aid that other painters derive from those common objects of the artistic seashore—the fisher women with their babies waiting for the belated boat, or the lifeboat crew on their errand of peril. "The sea, the sea, the open sea," with the expanse above it, was all that he cared for. No artist has given a truer impression of the beauty and glory of space, of the majesty of the illimitable. His simplicity and sincerity, his entire freedom from all the showman's devices of the craft, all tend to make his death, in a very peculiar sense, a loss to English Art.

THE HOMES OF THE HOHENZOLLERNS.

THE two Castles of Hohenzollern and Sigmaringen are bound together by the history of the race who for centuries have held sway there, and who from Prussia's throne hold the balance of power in Europe. The Castle of Sigmaringen is the more interesting of the two, but, as the Stammschloss or Cradle of the Zollerns, Hohenzollern is of the earliest interest. The scenery reminds one of the rock palisades on the Elbe, or the peaked isolated pillars on the Meuse. Strange isolated towers and spires of rock start up by the frozen river's banks. Little towns flit past, with red roofs and Churches with deep-red Domes; and at Laufen, the Elbe is again brought to mind by the great, high, isolated, ill-looking fortress, like unto Konigstein. On the right, high up on its pure, dazzling, snowy, icy height, stand the deep brown walls of Hohenzollern. A curious and cleverly built winding roadway and tunnel leads up to the top of the rock, and the capstone of this work is engraved with the name of Carl Anton, Prince of Hohenzollern-Sigmaringen, 1852, he who gave up his power to Prussia. Arrived at the top of this twisting gangway, a terrace is reached, and, standing upon the balustrade, are two fine stone figures of men with lances, in fifteenth century armour.

One first enters the Stammbaum or Genealogical Tree Hall. Here the walls are decorated with the usual tree, having circles on its branches with the names of the Hohenzollern and Hohenstaufen ancestors. This is illuminated with, on the left-hand side of the door, the figure of an angel who bestows a blessing on all who enter these walls to look out over the glorious Schwabenland—i.e., Swabia. The following long room is called the Library, and its walls are painted with some interesting pictures of legends of the Castle. One is of the white maid bearing provisions through the enemy to the Castle. Another depicts Frederick of Ottingen forcing his way through the besiegers in 1423. Another, in crude colours, illustrates the miraculous founding of the Church of Mariatzell, that lies just below the Castle. Angels are bearing the ready-built Church down from the skies to the valley. One picture that the villagers like to talk of shows how an impious archer shot three arrows at the Crucifix at Stettin, and fell back dead at the third shot; and yet another points out how far back the Zollerns have been connected with Portugal, for an illustration is given of the Emperor Frederick III. and Eleanora of Portugal visiting Zollern in 1466. Verses illustrating how Tradition assists History, and a chronicle of all the eventful dates of the Castle's history, are illuminated upon the pillars; and from these we glean how full of history has been this mountain stronghold since 1061. For a year (1744-5) the French held it. How terribly that holding has been repaid. The other rooms of the Castle are small, but pretty, and are fitted up as dwelling-rooms to be used when emperors or kings or princes dwell for a while, or stay a night, in this sky-lit Fortress; from whence in old days its owners swept down, and gathered unto themselves booty and power, until the whole flat land of Prussia fell beneath their rule. In 1576 a note occurs that in the Armoury were three hundred suits of mail; now there are four million armed men who move at the Hohenzollern's bidding.

SANITATION IN SCOTLAND.

AT the Conference of the Sanitary Inspectors' Association of Scotland, held in Dundee, Lord Provost Low took a retrospective view of sanitation in the middle ages, and said it must be admitted glimpses of truth on this important question began to be visible even then, for they found that in 1388 a bill was passed through Parliament against the pollution of rivers and ditches, while another was passed in 1489 against the slaughtering of cattle within burghs. It was also interesting to note as a curious historical fact that the father of William Shakespeare was fined in 1552 a sum of £2 for depositing filth in the public street, and again in 1558 for not keeping his gutter clean. Continuing, he sketched what he considered an ideal hygienic condition, remarking, in connection with the treatment of infectious diseases, that it was not only necessary to isolate those suffering from contagious disease, but also the suspects, and he would not be surprised if by-and-bye it were admitted universally that a house for suspects was as much needed as a house for those really affected.

Mr. W. W. Kelso, Sanitary Inspector, Paisley (the President for the year), speaking on the subject of "Sanitary Law and Administration," said the greatest and most powerful factor for promoting the health of the people

all persons desirous of becoming sanitary inspectors, and grant diplomas to those who pass successfully, and that a sum be set aside out of the yearly Government grant for the purpose of educating in sanitation intending inspectors. After an interval the proceedings were continued, when Councillor Elliott, sanitary convener of Dundee Town Council, read an interesting paper on the sanitary condition of Dundee seventy years ago. Mr. George Dunne, Govan, discussed the question of "The Destruction of House Refuse by Burning," describing what had been done in this way in Govan, which claimed to have been the first town in Scotland to introduce the system of disposing of offensive waste matter in a thoroughly satisfactory way. Mr. James J. Little, Paisley, dealt with the question of "Sanitary Conveniences for Country Villages." Mr. John Frew, County Inspector of Linlithgow, followed with a paper on "Hindrances to Sanitary Improvements in Counties." One great hindrance was, he said, the old ideas of many tradesmen, and their antipathy to any innovation in the way of modern appliances of workmanship. With regard to the owners of property, factors, and speculative builders, with whom the inspector had to come in contact, Mr. Frew said some of them were anxious and willing to do everything in their power to secure the comfort of their tenants and the sanitary condition of their properties, while another class was skilled in the art of how not to do anything, all the while appearing superficially to be willing and even anxious to have everything made right. He urged that sanitary laws should keep pace with Sanitary Science, and that the knowledge of Sanitary Science was much in advance of that possessed when the Public Health Act was passed in 1867. Hence the difficulty experienced in the practical application of that knowledge to the removal of certain elements which were now known to be hindrances to the advancement of public health in counties.

THE HALL OF BULLER'S WOOD, CHISLEHURST: BY ERNEST NEWTON.

should be the Public Health Act, granting that it was up to date in its provisions. As a matter of fact, however, with the powers at present possessed, the local administration of Sanitary affairs must reach the last stage of neglect before the Central Board could or would interfere. Either the Imperial Parliament or the Local Government Board should fix the standard of the qualifications required by all who wished to enter the Sanitary Service. Further local administration should be more under the control or supervision of the Central Administrative Authority, and it would therefore follow that the powers of the Local Government Board, as the Central Administrative Authority, would require to be considerably strengthened and extended. Mr. Gilbert Thomson, Lecturer on Civil Engineering and Sanitation, Glasgow and West of Scotland Technical College, read a paper on "The Technical Education of Sanitary Inspectors." He said it would be desirable to have two full courses of instruction, one dealing with the physiological and medical aspects of an inspector's work, and the other dealing with the engineering or structural side, together with a shorter course on sanitary law. On the motion of Mr. P. Fife, Glasgow, a resolution was passed declaring that the time had now arrived for the Local Government Board of Scotland to consider the question of appointing a Board of Examiners, who would examine

issued a circular. In doing this the Council has drawn up the following rules for the guidance of intending contributors: "1. It should always be the aim of the photographer to show the details of the object taken, rather than to present a pleasing picture by attempting to include effective surroundings. 2. A building should be taken from all its sides, or from as many points of view as are necessary to show the whole of it, and if it possesses any special feature, such as a doorway or window, or a fireplace in the interior, these should be taken separately. 3. On the back of each view should be written in pencil the name of the object shown, its aspects, the name of the Ecclesiastical Parish within which it stands, and the Riding. For example: Longacre Hall, Doorway in north side, Parish of Dale, West Riding. 4. The views should be of half-plate size, and should be printed by bromide, platinum, or carbon process. They should in all cases be sent unmounted. Although the Society requests compliance with the above rules as far as possible, yet photographs of other sizes, or printed by different processes, would not necessarily on that account be declined."

MR. GILBERT, R.A., has completed the Memorial of the late Mr. Frank Holl, R.A., and it has now been placed, by permission of the Dean and Chapter, in St. Paul's Cathedral.

"WEDGWOOD."

DEVELOPMENTS IN POTTERIES SINCE HIS DAY.

IN celebration of the Centenary of Josiah Wedgwood, the virtual founder of the Staffordshire Potteries, an Exhibition of old Wedgwood ware was opened on Wednesday last, at Burslem, by Mr. Mundella. The Centenary celebrated was that of Wedgwood's death. A hundred years ago he died, at the age of sixty-five, at Etruria Hall, then the most magnificent place in North Staffordshire, a beautiful house embowered in woods, and looking out upon a country which still bears traces of its former loveliness. Great mounds of refuse from Lord Granville's iron-pits and furnaces rear their mighty sides of fiery molten stuff—veritable clouds of smoke by day and pillars of fire by night—between Etruria Hall, where Josiah Wedgwood spent the last happy days of his life, and the beautiful banks of Hartshill, Bosford, and Wolstanton, still pretty, if only by contrast with their dismal surroundings. Deep marl quarries and clay pits have been cut out of the sides of these banks to obtain some of the raw

made at the Cauldon Works with such success that there is some prospect of a time when the firing of china and earthenware will no longer be a smoke-producing process; the consumption of coal will be reduced by more than one-half, and the lustre, brilliancy, and delicacy of the colours employed in decoration will be immeasurably enhanced. But while these wonderful developments—the results of a century of experiments made by keen and highly cultivated men—have been going on, the work completed by Josiah Wedgwood a hundred years ago remains, in many ways, unapproachable, and the great firm he founded remains where he left it, in the front rank of the Art Potters of the World. The Collection of old Wedgwood, which is now on view at Burslem, in connection with the Centenary celebration, is, without exception, the largest, most representative, and most beautiful that has ever been brought together. Collectors in all parts of the country have contributed handsomely of their treasures. The unique collection made by Mr. Hulme, a Burslem potter, who has made the choice of Wedgwood ware the crowning effort of a busy

Josiah Wedgwood's spirit in employing the best art for the preparation of decoration in the best materials. It was only in that spirit that Great Britain could hope to keep ahead in the competition with other countries in the markets of the World.

ASHGROVE HOME, Maybole, has been purchased for £2,000 by two ladies as a home for Glasgow City children, and handed over to the Glasgow Evangelistic Association.

At St. Saviour's Church, Dartmouth, the second section of the work of restoration has been accomplished. The last section included a new North Porch.

At a largely attended meeting of the Edinburgh and Leith Master Builders' Association, held at 20, George Street, presided over by Mr. David Heron, President of the Association, it was, after full consideration of a circular sent by the operatives to employers, unanimously agreed not to entertain the proposal for an eight hours' day. It was reported by several employers who had work in the country that their men requested, and were allowed, to work a ten hours' day.

THE ENTRANCE FRONT, BULLER'S WOOD: BY ERNEST NEWTON.

material required by the busy and thriving towns of the Potteries, Stoke and Longton, Burslem, Hanley and Tunstall, with their quarter of a million of potters and miners, a marvellous increase of population since Wedgwood's days, when the whole annual product of the district was less than £7000. Many changes and developments have taken place since Wedgwood's time. Other large firms have arisen, and other Artists have come to the front. Minton's has obtained fame. The name of Solon, whose graceful and delicate handling of the process of *pâte sur pâte* is not less characteristic than were the classic designs of Flaxman, is becoming widely famous. The Cauldon ware of late years has won a place at International Exhibitions, which has raised it to a level with the products of Minton and Copeland in the markets of the World for choice Art; while at Chicago, Doulton's Burslem work challenged a first place with the charming issues from the Cauldon kilns. Among the recent developments in the Potteries is the introduction of a famous enamelling kiln, concerning which there is at present much talk in the smoke-laden part of the country. Experiments with this German invention have been

public life, and has generously presented the result to his native town, is the nucleus of a perfect representative collection. Other amateurs in all parts of the country have contributed generously; and, of course, the National Collections at South Kensington and the Geological Museum have been freely drawn upon. Unquestionably, nothing so truly representative of Wedgwood's work, with the reproduction of the Classic Homeric and Virgilian story, in British historical studies, in grouping and portraiture, in decorative work, in articles of vertu and jewellery, has ever been collected before. A fine collection of the allied modern English Art in water-colours has been lent from South Kensington, and a beautiful representation of photographic work arranged by the Staffordshire Potteries' Society, adds a feature of attractiveness to the Exhibition. The Wedgwood Institute and Museum was opened about 30 years ago by Mr. Gladstone. The building occupies the site of the old brick house in which Josiah Wedgwood began potting. In the Lecture Hall of the Institute, at which Mr. Woodall, M.P., presided, Mr. Mundella spoke at length on Art manufacturers and the influence which had been exercised by men of

The Foundation Stone of a new Baptist Church in connection with the Church in Chapel Street, Long Eaton, was laid on Tuesday last. The site of the new building is in Clumber Street.

The Memorial Stone of the new School at Alloway (not far from Burns' Cottage) was laid recently. The School has been designed by Mr. John Murdoch, C.E., Ayr, and is already partially erected. It will be a prominent object in the well-known landscape, and it will stand detached from other buildings a short distance along the Doonholm Road, and its appearance will be worthy of its situation. The School will give greatly increased accommodation for class work, which has long been much needed at Alloway, and will add greatly to the comfort of teachers and scholars.

On Wednesday last the Hammersmith Vestry appointed Mr. Walter Herring, of Trafalgar Buildings, Charing Cross, to be the Quantity Surveyor to the new Town Hall proposed to be erected on the site of the existing Vestry Hall, Broadway, Hammersmith, from the design submitted in competition by Mr. H. Richardson. The building is estimated to cost £25,000.

HONOURING THE GOLD MEDALLIST.

MR. JAMES BROOKS ON "CAPABLE ARCHITECTS."

SPEAKING of the work of Mr. James Brooks, Mr. F. C. Penrose, in presenting to Mr. Brooks the Royal Gold Medal at the meeting of the Institute, gave a *resumé* of the eminent Church Architect's career, recapitulating many of the facts which recently appeared in the "Men Who Build" series of *THE BUILDERS' JOURNAL*, and then described the style of Architecture which Mr. Brooks had chosen for the majority of his Churches as either the Lancet, or else the Transition into Curvilinear which succeeded it. In a few instances (one of them being the Church at Hornsea) the Perpendicular style has been used very effectively. The treatment was invariably vigorous, and with a simplicity somewhat bordering on severity, particularly as concerns the exteriors. Mr. Brooks's fame, no doubt, rests mainly on his ecclesiastical designs; but they were by no means his only achievements. Among his works might be cited a large Brewery, an Hotel, many secular buildings, two Hospitals in connection with sisterhoods, extensive Stables built for the Marquis of Londonderry, labourers' Cottages, gentlemen's Mansions, one of the most remarkable of these being in South Africa. Mr. Brooks was Architect to the Diocesan Society of Canterbury, and was one of the Consulting Architects to the Incorporated Society for Building Churches.

Mr. Brooks, after thanking his brother Architects for the honour they had done him, said the Medal was annually conferred on Architects and men of letters, and was wisely not confined to Englishmen. He felt most keenly his position in having to address his fellow Architects on receiving the Medal, for he, unfortunately, was not an orator. His mind went back to those distinguished men, who in the past had filled the position he occupied that evening. He could mention name after name, but he did not wish to be invidious, although he felt as deeply as they could the honour which had been conferred upon him. An Architect was not like a Painter; the Architect's buildings stood out in their goodness or badness, and more often the latter than the former. They stood before the whole World, and made History, while the Painter's pictures went into the Picture Galleries and other places, and were more hidden from the eye. Architects, then, had a duty to perform, namely to endeavour, as far as lay in their power, to hand down their works in their humble way, as he only could hope to do, and to imitate in some slight degree those great Masters who had left behind them such monuments of their skill and ability. He referred to such men as those who had designed Durham Cathedral and Christ Church, Hampshire, both built by the same Architect. When he looked at those works, and studied those buildings, as he had studied Durham Cathedral and Christ Church, Lincoln, Ely, Salisbury, Hereford, Winchester, and other great buildings, as well as the great Collegiate Churches—which to their great regret were mostly in ruins—not to speak of the Parish Churches great and small, and then looked at his own poor efforts as an Architect, he had felt what a gulf existed between those works and his. He could attribute many of his shortcomings to the little amount of training which existed in his time. It was true that he had at a very early age a love of invention. He could give some of his efforts in that direction, and to mention one he might say that when his father first presented him a watch, he was proud and contented, but he soon got tired of looking at the outside. Wishing to see the inside, he soon found out a way to take the watch to pieces, although he found it was not an easy thing to put it together again. Not to be daunted, however, he discovered the way to do this, and from that time he regularly did the cleaning. Without the gift of invention he would ask how could a man become an Architect, as the Architect's works ought to be full of invention. Even where there was this natural gift, it could not be fruitful without systematic training and study. In his early days this great advantage did not exist. No doubt they had Professor Donaldson's lectures then, but he could not see that these gave them such insight into the com-

plete knowledge of their Art as was necessary. The Institute, however, was now offering to all young men who chose to avail themselves of it the curriculum presented for their guidance and teaching, so that they might become much more accomplished Architects than they possibly could if they had to come into their sphere of life in a sort of "tumble-up way." The Examination had now been divided into three classes: first, the Preliminary; secondly, the Intermediate; and third, the Final. He did not wish to be misunderstood on this point, for he was not going to say that the Examination was going to make men, who had not got the genius of Architects, capable Architects. He was quite aware that anyone might pass these examinations, but they would not qualify such a man to become an Architect. It was merely the means to an end; it was only the foundation and not the superstructure. If the student did not possess the natural genius requisite, no examination could impart it to him. But to those who went through this systematic training which the Institute supplied, it facilitated the acquiring of such knowledge as an Architect should possess, before he could with any success enter upon his calling. No one reaped these advantages so fully as the natural born genius, for it enabled him to obtain in a much shorter time the completion of his studies, and to make an earlier start in life on his own account than he otherwise would. By this training and the examinations, the student felt some confidence in himself, and this was a great advantage over the "tumble-up way" he had to pursue in gaining the small amount of the Art and Science of Architecture that he possessed. He was proud to receive so great an honour as the Royal Gold Medal, after the long list of medallists who had received it in former years, and of whom he was the last and the least. At all times he had endeavoured to do his duty; he had loved his Profession, and had striven hard for it. This was not the only time he had received the favour of the Institute. He had, through their very great kindness, been elected year by year to the Council, although he thought it was time for him to retire, and allow some other person to occupy his position. For four years in succession they had honoured him by electing him one of the Vice-Presidents of the Institute, and the Medal was the last honour which they had conferred upon him. He had strong feelings, because he loved the Art which he had been practising for so many years. He had been endeavouring to impress on the works that he had been carrying out for years some little originality, to show that there was some individuality in the man who had erected them.

THE City Commission of Sewers has decided to take the necessary steps to widen the entrance to Great St. Helens, Bishopsgate Street. The freehold of 120, Fenchurch Street is to be acquired at a cost of £5,082, for the purposes of improvement. The Commission has further decided to pay £100 for a piece of land thrown into the public way in Watling Street. Cheapside and the Poultry are to be re-paved by night as well as day at an extra cost of £260, and at a saving of four days out of the total twenty-one during which the street would be closed.

THE Clifton and Bedminster Executives of the Association which is endeavouring to secure the building of a Bridge between Hotwells and Bedminster, have passed the following resolution:—"That in the interests of both districts the Clift House site be approved, and that the Secretaries of both Committees be instructed to transmit a copy of the resolution to the Docks' Committee and to each of the representatives of the Bedminster and Clifton Wards." It will be seen that the resolution coincides with the view of the majority of the Bridge Sub-Committee, and with the opinion of the Docks' Engineer.

ON Thursday last, the new Primitive Methodist Chapel, which has been erected in Ford Street, Coventry, was formally opened. The new building is Gothic in style, and will accommodate about 400 worshippers; and the School in the basement will seat 250 scholars.

POSSIBILITIES OF PHOTOGRAPHY.

COLOUR SENSATION.

NEW and important possibilities for Photographic Art appear to be opened up by the discovery of Dr. Joly, of Dublin, which constituted the special attraction at the recent *soirée* of the Royal Society. It is not, apparently, a complete solution of the problem of Colour Photography, but it is certainly the most important contribution to that end that has yet been made. Hitherto, the production of natural-coloured photographs, even in the form of glass transparencies, has been a somewhat complex process, and the range of this new development of Photographic Art has been limited. It was necessary to unite by optical projection three separate images, whereas, by the process of Dr. Joly the glass plate, when held against the light, exhibits the objects in their original colours; and this result is obtained, we are told, by taking a single photographic image in the camera in the ordinary way. From an interesting paper on Dr. Joly's exhibits in the *Times*, we gather that every range of colour and texture can be dealt with by the new process. The writer describes the portrait of a gentleman seated on a garden-seat, with the flesh tints of the hands and face in their natural colours, and every detail of costume and lighting chromatically differentiated as in a hand-painted picture. Flowers are vividly rendered in all their chromatic glories. Other examples of the new process are the exterior of a red brick building in Trinity College, Dublin, fronted by a lawn, with hawthorns, and above the greenish slates a pale blue sky; the reproduction of a water-colour drawing of an Irish peasant girl, wearing a red handkerchief over a blue dress—an exact reproduction of the original, exhibited beside it; some delicately-coloured Indian and blue china, a lacquered brass microscope with burnished German-silver reflector, a thin green glass tumbler, and, finally, the visible solar spectrum. For the production of these results, it seems, it is necessary to use in combination with the ordinary sensitive plate a specially-prepared colour-plate or transparent screen, through which the rays of light pass before striking the negative. Under a strong lens or microscope the colour plate reveals a multitude of fine transparent lines of three different fundamental colours, succeeding each other over and over again in close juxtaposition, to the number of from two hundred to three hundred to the square inch. The plate exposed under this screen is developed in the usual manner, when it is found to embody in a single image all the three separate pictures, each produced by a special colour-selective action required by the older methods of composite Colour Photography. The exposure of the camera for this process is somewhat longer than that required for ordinary photographs, say from three to five seconds for a well-lit landscape; but in other respects the operation is the same. It should be understood, of course, that the negative obtained in this way shows no colour so far; but when the positive is produced, and combined with a plate ruled in three tints, chosen according to the colour-vision theory, the original image will appear as a brilliant transparency in natural colours. The choice of tints for the screens is based upon the now accepted principle that all our colour sensations are referable to the action, single or combined, of but three fundamental sensations. In other words, three fundamental colours are impartially supplied by the covering-plate, and these are automatically selected, and combined by the positive in such a manner, as to reproduce the object or image in its proper colours. The discovery obviously opens a new and important field for Photography, and must add greatly to the realistic effect of the stereoscope and kinetoscope; but the full solution of the problem of coloured photography can hardly be looked for until physicists have found some sensitive substance which will itself faithfully adopt and keep the colours of the image.

THE Kilkenny Guardians have obtained consent from the Local Government Board to the loan of £2,955 for the erection of labourers' cottages in the several divisions of the Union.

ARCHÆOLOGY IN THE MIDLANDS.

A DELIGHTFUL EXCURSION.
[From a Correspondent.]

MEMBERS of the Archæological section of the Birmingham and Midland Institute made an interesting excursion last Wednesday. They went by train to Shipton-under-Wychwood, and then drove to Burford, Oxfordshire, where the Church was visited. They were met by the Vicar (Rev. Anthony Cass), who spent more than an hour in showing the many peculiar features of the building. The piers of a Norman Tower in the centre of the Church, forming an obstacle to the clear view from many parts of the Church toward the Chancel were pointed out. The throwing into the Church of a large Early English Lady Chapel at the south-west corner about the time of Henry VII. caused this obstruction to be still more inconvenient, and bearing in mind that at that time a view of the Altar was as important as in later times has been a clear view of the Pulpit, it was thought by the late Mr. G. E. Street that an Altar and Reredos erected under the first bay of the Nave Arcade was used as a people's Altar. Seeing the admirable choice of this position, it appears highly probable that this view is correct. The curious wooden screen work was probably added at a period after the Reformation, forming what was used for many years as the Priory Pew. There is the unusual feature of a lantern of Norman date under the Tower, which, formerly hidden, has been judiciously opened to the Church. The numerous Chapels and Monuments render this Church one of the richest and most interesting in the Midlands. There is an especially fine Elizabethan Monument to Sir Lawrence Tanfield, grandfather of the Lord Falkland who was killed at Newbury. The beauty of the figures adorning this Monument suggests that it must be the work of an Italian Artist. The scene of the execution of some of the Levellers by Oliver Cromwell, one of whom has left his name cut on the lead of the Font, was passed in the churchyard, and a fine view obtained of the lofty Spire rising above the richly-wrought Porch and series of interesting windows. Leaving the Church, the party proceeded to dinner at the "Bull Inn," through a long street abounding in picturesque bits of stonework. The party then visited the Priory, a decaying House and Chapel, the seat of the Tanfields, Lord Falkland, and Lenthall, the Speaker of the Short and Long Parliaments. Here Dr. Cheatle, a descendant of the Lenthalls, acted as cicerone. The House was sold early in the present century, and now forms a beautiful ruin, surrounded by shady walks and fine trees. The picture of "The Empty Saddle," by S. E. Waller, a Basford man, depicting a portion of this House, will be familiar to many. It is remarkable that no Monument of the Lenthalls appears in the Church. Speaker Lenthall desired that he should be buried under a plain stone, with the words, "Vermis sum," but even this humble memorial was not found. From Burford a drive by the Quarries—the stone from which has built Blenheim and is now refacing the Oxford Colleges—brought the party to Shipton Court, which was visited by the kind permission of Mrs. Read, the present tenant. This Elizabethan House has been much altered internally, but its grounds and ornamental water are quaint and picturesque, as is also the history of the descent of the property. The Church of Shipton was next visited. It has a fine pyramidal broach Spire, with singular Crosses at the base. The interior has been much restored. Mr. T. Brookes, the owner of the adjoining Rectory Farm, showed the interesting features of his house and buildings, which probably formed part of a Priory or Nunnery. The "Crown Inn" has a fine mediæval roof and stone Entrance Gateway. This, in all probability, was an ancient Hall, open from the floor to the roof, but now divided into two floors and rooms. The Architecture and the charming variety of very interesting gardens and picturesque grounds rendered this one of the most successful of the Archæological excursions of the Midland Institute.

A BUST of the late President Carnot was unveiled, on Tuesday morning last, in the Place Cassini, at Nice.

THE FIERCE STRUGGLE IN ART.

MR. WHITWORTH WALLIS ADVISES DECORATIVE WORK.

SPEAKING at the opening of the Annual Loan Exhibition of Pictures, in the Walsall Free Library, Mr. Whitworth Wallis referred to the Birmingham Art Gallery and Museum, which he had the honour to direct, as a School of Archæology and of Art; a School where they were always endeavouring to bring the best influences of the Art of the past to bear upon the Art of to-day, so that the study of Beauty and its introduction into material objects, the household chattels of the present time, from jewellery to enamelled ware, pots and pans, might be fostered by the students and artisans engaged in the numerous industries connected with the great Midland metropolis. There were no limits to the progress to be made in this direction, just as there were no boundaries to the reality of the earnestness which the working man—or better still, the manufacturer—might bring to bear in beautifying the objects which it was their business to produce. Art could be more than water-colours and oil paintings, bronze or marble statues. There was just as much Art in a beautiful chalice from some old Monastery, in the wood-carving of Cathedral choir stalls, or the painted saints upon its windows, and in the thousand and one objects of every-day life if endowed with beauty of form and design. He hoped for the founding of Museums, not of fossilised and barbarous curiosities, such as the bridle worn by a Derby winner, or the handcuffs worn by Palmer the murderer, which were offered to him—but objects which should have more than a passing interest for the student and workman—a Museum to which men might bring their wives and families after their work was done (for it must be open in the evening), and by contemplation of the objects be lifted out of themselves. The study of such objects would bit by bit raise a more intelligent idea of what was good and what was bad in taste and in style, and the occasional half-hour spent in looking at such treasures should provide pleasure, not at the time but after, for the reason that being things of beauty they should be joys for ever. He warned his hearers not to regard the study of Art as a light or gentlemanly calling, by which they might easily stride up the ladder of Fame as a member of the Royal Academy. All really great Art demanded the devotion of a lifetime industry, together with earnestness, a vivid, lofty imagination, and a fine sense of noble colour—the latter a godlike gift, vouchsafed to few. He asked all who had such a conception of the ease of Art to pause before they entered upon the fierce struggle for life and fame among the already overcrowded ranks of picture-painters, and see if they could not turn their attention to design for manufacturers, to the interior decoration of houses and public buildings, and to illustrations of books, similar to the good work done in this respect by the Birmingham School. Three fields of Art to be explored and conquered were here opened to them, and it was infinitely to be preferred that they should assist in the production of beautiful and delight-giving specimens of industrial and Decorative Art, than that they should eke out a precarious existence by the painting of meretricious and effete pot-boilers. Having enlarged upon these points and impressed upon his hearers that the highest Art was closely and generally allied to extreme simplicity, and that the possession of ample means was helpless in the domain of Art without cultured taste and refinement, he said the best and greatest Art, the gentle-hearted adoration of the fifteenth and sixteenth century Italian, the stern and vigorous realism of the Dutchman, the mystic ideals of the Flemings, the golden glories of the Frenchman Claude, the ineffable beauties of Ramsey, Gainsborough, and Reynolds; the brilliant colourings of Turner; the fresh, breezy landscapes of Constable, Crome, De Wint, and dear old David Cox; and last, but not least, the triumphs of that most remarkable development of Art, or Art movement, of modern times, the works of the English pre-Raphaelites, Mr. Norman Hunt, Millais, and Ford Madox Brown—those, and the works of kindred spirits,

would endure. The study of Art was a life study; it was never finished, and never could be finished; therefore, he did not think it should be looked upon as a fascinating and a profitable way of spending one's time, but rather as a pursuit which should lift one out of the materialities of Time, and carry one forward to higher refinement and higher progress.

A NEW WATERING PLACE.

A CORRESPONDENT writes: The discovery of a new Watering Place, where the sands are, like Mr. Weller's knowledge of London, "extensive and peculiar;" where there is a 'virgin forest, luxuriant with wild flowers, as a background to the *plage*, offering shelter from the sun's rays, and affording many cool, delightful spots for *al fresco* refreshments; to be thither brought in baskets by persons about to picnic; where there is a picturesque country, through which winds a river offering excellent sport to anglers, while game and wild fowl possess their country seats on and about its banks for the greater part of the year—the discovery of a new watering place of this description comes "as a boon and a blessing to men" generally, and especially to the capitalists (meaning those who reside in the capitals) of Paris and London, from both of which centres Paris-Plage, on the coast of France, in the Pas de Calais, is equi-distant. From Paris it is to be reached by the Northern Line in four hours; from London the same. French Artists have known its attractions for a long time; but it has been left for an English Columbus to discover its capabilities, and to propose and scheme out the development of its undeniable resources. Paris-Plage will be absorbed in Mayville, and considering that it takes no more time and very little more trouble or expense to go from London to Cromer, for example, than from London to Mayville, while the advantage is offered of a complete change of air, living, language, manners, and customs, there can be no doubt that the jaded and the wearied ones will look forward to the time when Paris-Plage of the present will be the Mayville of the future, a new international seaside resort, beneficial alike to the native and to foreign visitors. The golf links should be equal to those of Sandwich. The place itself, before the great transformation scene is commenced, while yet the diligence, or 'bus, takes *messieurs les voyageurs* from Etaples (the station for Paris-Plage) to the unploughed sands of the future Mayville, is well worth a visit. Starting early from London, you can be there for lunch; spend a happy afternoon, and return by night boat from Calais, or come back as early as you like next day.

ON the subject of the protection of life and property from fire in London, the attention of the Fire Brigade Committee was called to certain of the Fire Engine Stations, which were either unsuitable for the purposes of the Brigade or in inconvenient positions. One of these was the Shoreditch Fire Engine Station in Old Street. The building, which stands on ground of which the Council owns the freehold, was erected in 1868, accommodation being provided for eight men. The number of men at present attached to the station is eleven, a number which will have to be increased. To enable more men to be lodged in the building extensive structural alterations would have had to be made to the Station. The Chief Officer, however, suggested that a larger Station be built on a site affording better means of egress. In due course plans were prepared for the new building, in connection with which an interesting ceremony took place last week.

THE Committee of the Photographic Salon will open its third annual Exhibition at the Dudley Gallery, Piccadilly, on Monday, 30th September. The Exhibition will remain open till the 2nd November. The latest dates for receiving pictures for submission to the Committee of Selection will be from the 1st to the 16th September.

THE new Pier at Mingary has recently been completed. Mr. John Adams, Glasgow, was the contractor; Mr. Wolfe Brennan, C.E., Oban, Architect. The Pier is chiefly of concrete, and faced with timber. The frontage extends to nearly 60 ft., and the depth at low water 12 ft.

Professional Items.

THE Sandon Road Wesleyan Church, Birmingham, has been further beautified by the addition of three stained-glass windows in memory of the late Mrs. C. H. Barnsley, of Osmington, Hagley Road. Two are placed on the south-east side, and one on the north-west. One of the former represents Dorcas standing in the portico of her house and presenting a garment to a poor, thinly-clad boy. In the background is an attendant with a vessel containing loaves of bread. The one adjoining depicts "Jesus in the Home at Bethany." The window on the north-west side of the Church represents "Jesus in the act of receiving and blessing little children." The windows are the work of Messrs. Swaine, Bourne & Son, King Edward's Road, Birmingham, who also executed the large window in the Chancel, with which the memorial windows perfectly harmonise. The artistic design, careful treatment, richness of colour, and excellent workmanship leave nothing to be desired, and these windows, besides supplying a fitting memorial of the deceased lady whose death was so great a loss to the Church, serve to make it one of the most beautiful of the Churches of the city.

THE newly opened Robert Candlish Hall, Seaham Harbour, is built from designs by Mr. Frank Caws, of Sunderland, and is of red brick, relieved with terra-cotta around the windows and doors. The interior comprises a large Hall on the basement, and on the right side is a room fitted as a Library, and available for games and recreation. Upstairs is a Reading Room and a Committee Room. The windows in the basement are of stained glass. In the lower part of the building, over the Main Entrance, is a portrait of the deceased Robert Candlish, entwined in a wreath of laurel leaves bearing the motto, "*Honi soit qui mal y pense*" Born 1828, died 1887." At the end of the Hall, facing the Entrance, is a white plaster medallion set in the wall, with a terra cotta setting, bearing the inscription, "Robert Candlish, born 1828, died 1887. This building is erected in memory of the late Robert Candlish by his workmen of the Seaham and Londonderry Bottle Works and their friends."

THE New Conservative Club at Seaham is to be constructed with bricks, faced with pressed bricks, and on a stone base. Although built on the flat principle it will have a most substantial appearance. The plans were designed by Mr. George Braban, of Seaham Colliery, and the structure is to be erected by the colliery masons. There will be a spacious Entrance Hall, at the far end of which there will be a bar, 10 ft. by 7 ft. The first room on the right will be devoted to billiards, and is 36 ft. by 26 ft., and will contain two tables. On the opposite side of the Hall there will be the Reading Room, 26 ft. by 24 ft., and next to it a Smoke Room, 26 ft. by 24 ft. These two apartments are to be divided by a wooden partition, which can be removed, thus forming a large room 48 ft. 9 in. in length and 26 ft. broad. There will also be a Committee Room, 25 ft. 6 in. by 12 ft. 6 in., Caretaker's Rooms and other conveniences.

MR. W. T. MARTYN MEAR, Rock, Cornwall, designed the new Church Sunday School and Percival Institute at St. Minver. Its style is Gothic freely treated, and is built of stone with Condry's buff brick dressings. The sliding screen or partition, which is of wood, having trefoiled heads to panels, permits of one of the Schoolrooms being thrown into the Institute, should more room be required for lectures, &c. The ceilings are of wood, that of the Institute being panelled. Separate entrances are provided for the Institute and Schools. The Verandah at the south-east elevation forms a Pavilion for spectators, when cricket or other games are being played in the recreation grounds. The large bay window forms a pleasing feature in the north elevation, and is an excellent lounge. The rooms are heated by the Grundy combined system of open fire and warm and ventilating grates. The building, exclusive of site, has cost £500.

THE Gymnasium and Band Room at Otley, which was opened on the 22nd ult., is built in the form of a "Model Village," for which it will be used during the summer months. The scheme has been undertaken at the cost of Mr. Henry Dacre, Solicitor, Otley and Leeds, and provides accommodation for a large Gymnasium (63 ft. by 36 ft.), Band-room (42 ft. by 24 ft.), Reading Room, Work Room, and Dressing Room, Baths, &c. The grounds attached to the building are laid out with Summer-house, Fountain, Band-stand, &c. The contracts have been carried out by T. and Wm. Maston, masons; J. Denison, joiner; Hill & Nelson, slaters; Geo. Farrand, plumber; Helliwell & Co., patent glaziers; and J. Bagshaw & Sons, iron roofs, &c. Mr. A. Marshall is the Architect.

It is proposed to erect a Memorial Drinking Fountain to the late Mr. Wentworth, at the junction of Doncaster Road and Sheffield Road, Barnsley, and the work has been entrusted to W. Oxley and Sons, Sculptors, Barnsley. The structure will be 15 feet high and three feet six inches wide at the base. The trough attached will be six and a half feet long, and will have a separate trough for dogs under it. The drinking fountain is Gothic in character, and very handsomely proportioned, and the design, which is by an Aberdeen Sculptor, is exceedingly pretty and effective.

THE Lancaster School Board has placed first the plans sent in by Mr. Robert Walker, F.R.I.B.A., Architect, Windermere and Lancaster, under the motto "Up to Date," for a large School for 1,000 children. The infants are accommodated in a separate building, with a "Mixed School" for the elder children. The large School Room, 92 ft. by 26 ft., is surrounded on three sides with eight Class Rooms and the Main Room; and the Class Rooms are divided by glazed movable partitions so that the headmaster has supervision over the whole School.

THE project for the extension of Margate eastward has been definitely quashed, having been twice thrown over by the Town Council, who have also passed resolutions directing that no further private practice of a professional kind is to be conducted by the Borough Surveyor or in his office. This latter order is very salutary, for there has always been an impression—of course a wrong one—that persons whose projects skirted very closely on infringement of the Building Bye-Laws would be wise in employing Mr. Latham as their Architect.

SATISFACTORY progress is being made with the new Board School now in course of erection at Ashford, Kent. It is on the Central Hall principle, with six Class Rooms, Central Hall, and two Cloak Rooms and Lavatories, and has been designed by Mr. Henry J. Jeffery, Architect and Surveyor, of Ashford, who is also superintending its erection. There is to be a Master's Residence in close proximity to the School. Messrs. Amos & Foad, of Whitstable, are the builders.

A NEW Chapel was dedicated by the Bishop of Norwich at Ditchingham, Norfolk, last week. It will be completed during the present autumn, and we shall report more fully on the subject later on. It has been erected by Mr. Robert Morris, Ditchingham, from designs by and under the superintendence of Mr. Augustin Frere, F.R.I.B.A., London, who also designed the whole of the Community House buildings and other works which have been erected for the Superior.

At a recent Parish Council meeting, held at Quainton, near Aylesbury, Mr. Ernest Luckett, Architect, of Aylesbury, submitted plans and sections of proposed new Water Works, which include about $1\frac{1}{2}$ miles of $2\frac{1}{2}$ in. cast-iron main. After a careful inspection of the plans the Council expressed approval of the scheme and ordered tenders to be obtained for the work. It is at Quainton that the M. S. & L. Railway joins the Metropolitan Extension from Baker Street to Aylesbury.

THE Brighouse Industrial Society recently opened a large block of new Shops and Ware-

houses in King Street, Brighouse, erected at a cost of about £6,000, from drawings by Messrs. Sharp and Waller, Architects, Brighouse. The buildings are lighted by electric light throughout, fitted with hydraulic lifts and heated by hot water on the low pressure system.

A CHAPEL and Caretaker's House for the Calvinistic Methodists, are about to be erected at Newton-on-the-Hill, one and a-half miles from Yorton Station and about seven miles from Shrewsbury. The scheme has been approved by the Montgomery and Salop Presbytery, and the new Chapel will replace an old one at Houston, situate about a mile distant. Messrs. A. B. and W. Scott-Deakin are the Architects.

BRAMLEY CHURCH as it now is possesses a good deal of historic interest, but for meeting the requirements of a growing village it is inconvenient and altogether inadequate. Restoration would not improve matters, and the cost would be as great as the project on foot for building a new Church. The total cost is estimated at over £1,000. The plans are by Mr. J. D. Webster, of Sheffield.

THE picturesquely situated "Knowle" Hotel, Sidmouth, is being greatly enlarged. New Drawing Rooms, Billiard and Smoking Rooms, Lavatories, Hall and Staircase, over a score of new Bedrooms, four or five Private Sitting Rooms, and considerable alterations to the offices, &c. Messrs. J. Begg & R. S. Balfour, of London, are the Architects.

MR. G. H. GADD, Architect to the Bromsgrove and North Bromsgrove Urban Councils, has just completed for the Board of Guardians a ground plan of the Workhouse, Infirmary, and Vagrant Wards, denoting the drainage and all internal arrangements. The plan has been much admired, and great satisfaction pronounced by the Guardians on the workmanship.

It has been unanimously decided to recommend to the Liverpool City Council at its next meeting that Mr. Harcourt E. Clare, the present Deputy Town Clerk, be appointed to the position of Town Clerk in the place of Mr. G. J. Atkinson, deceased. The salary attached to the post is £1,600 per annum.

THE tender of Mr. J. Fidler, Eckington, for £3,385, for the Restoration of Whittington Church has been accepted, with a proviso that the work be split up by the Architect, so that the contract can be stopped as soon as the sum in hand has been reached. The work is to be proceeded with at once.

A NEW Theatre is being erected in Lord Haddon Road, Ilkeston, Derby, for Mr. H. Vincent Clarke. The stage will be 35 ft., and the proscenium opening 27 ft. The auditorium will seat 1,400 persons. The plans have been prepared by Mr. U. Dymock Pratt, Architect, of Long Row, Nottingham.

THE tender of Mr. Thos. Adams, of Green Lanes, N., amounting to £4,039, has been accepted by the Shoreditch Vestry for the construction of Pipe Sewers, Manholes, Gullies, &c., in the Haggerston District of the parish of St. Leonard, Shoreditch.

MESSRS. JOHN EATON & SONS have been appointed Architects for a new School, about to be erected at Ashton-under-Lyne, for the Deaf, by the joint School Boards of Ashton, Stalybridge, and Dukinfield.

THE re-opening of Bridge Street Congregational Church, Walsall, took place on Thursday afternoon, after very extensive alterations and improvements, including the addition of an ornate new Front in terra cotta and brick. The Chapel is one of the historic Nonconformist buildings of the Midlands, its erection having taken place in 1791, when sermons were preached by the then celebrated W. Jay, of Bath, and Captain Scott, an ex-captain of the 7th Dragoons, whose appearance in the pulpit in full regimentals was at least a novelty. The extensions have been carried out by Messrs. Bailey & McConnall, Architects.

The plans of Mr. Ridler (of Homer & Ridler, of Bucklersbury, E.C.), have been chosen for the Woking Public Hall. The premium is a commission of 2 per cent. on the outlay!

For the new Waterworks, Berwick, the estimate of Messrs. M'Knight & Co., Edinburgh, at £1,135, has been accepted, subject to the approval of the engineers, Messrs. Leslie & Son, Edinburgh. There were seven estimates, and the highest was £2,120.

MESSRS. SHARP AND WALLER, Architects, Brighouse, are preparing plans for a new Infectious Diseases Hospital and Administrative Block, to be built at Clifton for the Brighouse Joint Hospital Board.

MR. A. MARSHALL MACKENZIE, A.R.S.A., Architect, Aberdeen, is at present at Mar Lodge, in connection with the Duke of Fife's intention to erect a Residence which will take the place of the Lodge recently destroyed by fire.

PLANS have been prepared for a Grammar School to be built at Motham-in-Longdendale; and also for an Infant School at Broadbottom, the adjoining parish. Messrs. John Eaton & Sons, Ashton-under-Lyne, are the Architects.

In the restoration of Flintham Church, it is proposed to remove the Choir to the Tower, which divides the Chancel from the Nave. It is intended to block the present door in the Tower and insert a window, making the Entrance to the Church by a door at the end of the Nave, on the same side as the present door in the Tower. Mr. Hodgson Fowler (Durham) has the work of restoration in hand.

The belief of antiquarians that the lane at Grassington known as Scar Street marked the site of a Roman paved way has been confirmed by the discovery of part of the pavement. Some navvies laying service pipes came upon it at a depth of between 2 ft. and 2 ft. 6 in. The Rev. Bailey J. Harker, whose researches first established the remarkable importance of Grassington (anciently Garston) as a British and Roman military centre, has seen the excavation; and some of the worn stones are to be preserved. It is hoped that the discovery will renew public interest in the labours of the Committee which, with the Duke of Devonshire as president, was lately formed for the purpose of thoroughly exploring the very extensive sites of ancient camps to be seen in and above Grass Wood (Silva Garrs).

THE annual meeting of the Archaeological Institute will be held at Scarborough, from July 16th to the 23rd inclusive, under the presidency of the Archbishop of York. The arrangements for the meeting are: Tuesday, July 16th, opening of the meeting, after which the Castle and St. Mary's Church will be visited; Wednesday, 17th, Bridlington and Burton Agnes; Thursday, 18th, Whitby; Friday, 19th, Beverley; Saturday, 20th, Old Malton and Kirkham; Monday, 22nd, Helmsley and Rievaulx; Tuesday, 23rd, Pickering and Lastingham. An extra day will be devoted on Wednesday, July 24th, to York, where the numerous Parish Churches will be visited, most of which contain fine painted glass. Professor Boyd-Dawkins will be president of the Antiquarian Section, and Sir George Sitwell, Bart., President of the Historical Section.

A VERY ominous crack at the east end of St. Mary Elms Church, Ipswich, was discovered some two years ago, and nothing was done with regard to it until within the last few months. Meanwhile the crack has been widening; the east end and the east window were threatened. The foundations have now been strengthened, further supports have been added to the east end, with the result that St. Mary-at-Elms is once more safe. St. Mary-at-Elms is supposed to be one of the most ancient Churches in the town. It is believed to be one of the Churches mentioned in Domesday Book; whether that is so or not, it is a great deal older than any register in the Church, and the register goes as far back as 1454, which is over 400 years ago.

SOCIETY MEETINGS.

Edinburgh Architectural Association.

The members of this Association, to the number of 40, went for their annual excursion on the 22nd ult. to the Island of Bute. After visiting the interesting old Chapel of St. Blane, which dates from the time of Malcolm Canmore, and which was described by Dr. Rowand Anderson, the leader for the day a visit was paid to Mount Stuart House, over which, by the kindness of the Marquis of Bute, the party were shown. The Architect was Dr. Rowand Anderson. The great Entrance Hall, worked out in marbles, was greatly admired.

Bradford Society of Architects and Surveyors.—This Society held its summer excursion on the 21st ult. at York. Among those present were Mr. Wheeler Smith (President), Messrs. H. Perkins and A. B. Burleigh (President and Secretary of the York Architectural Society), Messrs. T. H. Healey, Charles Gott, C. H. Hargreaves, W. B. Woodhead, B. D. Fairbank (hon. Secretary), John Hindle, R. Armistead, T. C. Hope, B. Cowgill, James Young, H. Marten, J. Flew, Thomas Barker, C. E. Milnes, C. H. Gott, and A. G. Adkin. The party viewed the Minster, St. Mary's Abbey, and other interesting buildings.

Lincolnshire Archaeological Society.—A number of members of this Society recently inspected Burghley House, Stamford, and other places of interest. An Archaeological find has been made in an old foundry yard in St. Peter's Street, Stamford, in the shape of a large Subterranean Chamber, containing fragments of human bones. The ancient Church of St. Mary the Benniwerk occupied a site in this immediate neighbourhood, but its exact position is not now known. A similar chamber was found on the Uppingham Road, in front of St. Leonard's Priory, Stamford, a few months ago.

Royal Society of Antiquaries of Ireland.—The third meeting for the year of the Royal Society of Antiquaries of Ireland will be held at Galway on the evening of Monday, July 8th. The excursions in connection with the meeting will extend from July 4th to July 10th. The fourth general meeting will be held on Tuesday, September 10th, at Wexford. There will be an excursion of the Society to the Loughcrew Hills on Monday, August 5th.

The British Archaeological Association is to hold its annual Congress at Stoke-upon-Trent, under the presidency of the Duke of Sutherland. The meeting will open on the 12th of August.

SAWDUST.

OWING to the closing of the Bridge over Limehouse Basin, which has been rendered necessary in consequence of the rebuilding which is now going on, persons have been compelled to make a detour of something like three miles in order to get from Poplar to Millwall, and *vice versa*. In order to minimise this inconvenience the County Council has made arrangements with the Dock Company for both pedestrians and vehicular traffic to pass through the Docks direct. As this privilege can only be exercised between six a.m. and ten p.m., great inconvenience is felt by workmen residing at either end of the Docks who have to be at work at six a.m. at the opposite end. These men have the alternative of making the detour of three miles or of losing a quarter, or even a whole day's work, by waiting until the gates open at six o'clock. An indignation meeting is to be held at Millwall.

A FORTHCOMING novelty at the Dyke Park, which is now frequently offering some special attraction for visitors, is a Pyramidal Railway, which will be 70 ft. in height, and is to be illuminated by the electric light.

THE Corporation of the city of Chichester invites tenders for the erection of a Manager's House and two Cottages on its Sewage Disposal Works near Chichester. Tenders should reach the Office of the Town Clerk by July 11th.

THE total weight of marble sent by sea from Carrara and Massa during 1894 was 72,999 tons. Out of that quantity 19,293 tons were imported to Great Britain, and 28669 tons to America.

The Builders' Journal

COMPETITIONS.

No. 4.—A Village Church.

Designs are required for a Village Church to seat 200 people. The site is a hill-side, rising one in twenty from North to South, and situate in a stone country. The cost is not to exceed £2,500. Drawings to be submitted on or before Monday the 22nd of July.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Publishing.

The terms for free post Subscription to any part of the United Kingdom are SIX SHILLINGS and SIXPENCE per annum by half-yearly or annual prepayments.

Advertising.

SITUATIONS WANTED, SITUATIONS VACANT, PARTNERSHIPS, APPRENTICESHIPS.

Per line, Sixpence. Minimum charge, Eighteenpence.

Three Insertions for the price of Two.

Prepayment in the above Advertisements is absolutely necessary.

Page or Paragraph Announcements, Trade Advertisements.

Prices on application.

Small Advertisements for current week's issue are received up to first post Monday morning inclusive.

Talbot House, Arundel Street,
Strand, W.C.

An improved path has been made up Vesuvius which starts from Pompeii. It is managed by the Directors of the Hotel Diomedea at Pompeii, and to a good pedestrian the labour is not excessive. The ascent is made on ponies to the base of the cone, but the cone itself is reached on foot by means of a mountain path, which our Consul describes as excellent.

THE Parks Committee recommends that £1,470 should be expended in the construction and drainage of footpaths, the formation of two ornamental ponds, shrubberies, and a rivulet, the erection of rustic Bridges and wire-fencing to the paths, and boundary fencing and gates at Brockwell Park. Although there has been considerable opposition, the recommendation was adopted by the London County Council at its last meeting.

MR. WILLIAM SPINKS, A.M.I.C.E., son of Dr. Spinks, Warrington, has been elected President of the Sanitary Engineering Section of this year's Congress of the British Institute of Public Health, to be held at Hull in August next.

SAWDUST.

THE Halifax Corporation has found it necessary to extend the Electric Light Department. When the new plant was laid down a year ago about 2,000 lamps, each of 16-candle power, had to be supplied. Now the demand has risen to 3,500, and in order to meet the anticipated increase next winter, it has been decided to double the present motive power, which is equal to 500 horse. An order has been placed with the Electric Construction Company, Limited, for a 300-unit dynamo, to be coupled direct to a 600 horse-power vertical engine of the Politt & Wiggall make.

THE public memorial to Mrs. Siddons will take the form of a Monument, representing Sir Joshua Reynolds's picture of "The Tragic Muse," to be erected on Paddington Green.

THE will of Mr. George Francis Trollope, of Sloane Gardens, S.W., and Streatham, Surrey, who died at 96, Marina, St. Leonard's-on-Sea, on March 13th, was proved on May 17th, the gross value of the personal estate amounting to £61,845.

SEASONED timber is about twice as strong as green timber, but well-seasoned timber loses its strength with the absorption of moisture. Timbers of large sections have equal strength per square inch with small ones, when they are equally free from blemish. Knots are as great a source of weakness in a column as in a beam. Long-leaved pine is stronger than the average oak; and bleeding timber does not impair its qualities.

THE Restoration of Metz Cathedral, which was suspended twenty-five years ago through the Franco-German War, is to be resumed.

BUXTON is to be furnished with a new Church for the population residing in Higher Buxton. The Duke of Devonshire will be asked to give a site for the proposed Church, the vicinity of Darwen Street being considered suitable from various points of view.

THE old and inconvenient Passenger Station at Prestatyn, is to be replaced by a more commodious and conveniently arranged one.

THE Memorial Effigy of the late Dr. Harvey Goodwin, Bishop of Carlisle, will be unveiled by the Archbishop of York, in Carlisle Cathedral on Sept. 17th.

SEVEN memorial stones in connection with a new Primitive Methodist Chapel and Sunday School at Bruntcliffe, Morley, were recently laid by the Mayor of Morley (Mr. C. Scarth), and Alderman S. Stockdale. The estimated cost of the building, inclusive of the site, is £1,250.

THE new Congregational Church, which is being erected at St. Anne's-on-the-Sea, at a cost of £8,000 (exclusive of land), is nearing completion, and is said to be a very handsome building.

A TOURNAMENT was held by the Tower Hamlets Rifle Volunteer Brigade on the 22nd ult. to celebrate the completion of the alterations and additions to its Headquarters, which have been carried out at a total cost exceeding £2,000.

THE Carnarvon School Board has had under consideration several schemes for improving the accommodation, the present buildings having been partially condemned by the Education Department. It has been decided to submit to her Majesty's Inspector for the District and the travelling Architect of the Department, a scheme involving certain alterations which are estimated to cost £2,500.

CONTRACTS for extensive engineering works are about to be allotted by the Belgian railway authorities. The cost of the works, the contract for which will be allotted on July 3rd, will exceed 2,000,000 francs; towards the middle of August a further contract, involving the expenditure of some 5,000,000 francs, will be allotted for the construction of a new Railway Station. Further details as to conditions of tender have been asked for, and, when received, can be seen at the Commercial Department of the Foreign Office, between the hours of 11 and 6.

SERIOUS subsidences, imperilling the safety of three public works and several tenements, have taken place on burgh lands at Paisley. The oil works of Messrs. Highgate have been closed, and the Victoria Foundry is to be shut on Thursday. The firms, it is stated, will hold the Paisley Town Council responsible for damages caused by the subsidences, which are alleged to be due to mineral workings.

THE Paris Exhibition of 1900 is to cost more and to contain a larger area of buildings than the Chicago World's Fair. Part of the scheme for laying out the grounds consists in the destruction of the Palais de l'Industrie and the conversion of a part of it to exhibition purposes. An avenue will be built to connect the Champs Elysées with the Esplanade des Invalides.

THE Bosco-Reale treasure has been purchased and presented to the Louvre by Baron Edmund Rothschild. It consists of forty silver articles, which were tied up and concealed in a niche at the time of the destruction of Pompeii in the year 79. The Louvre had declined to give the 500,000 frs. demanded for the collection.

THE National Gallery has just acquired the grand sea-scape, by Cotman, sold at the late Price Sale. Messrs. Agnew, the purchasers, having ceded the picture to the Trustees.

A FRENCH photographer has recently been able to photograph objects under water. His apparatus consists essentially of a barrel filled with oxygen, surmounted by a glass, which holds an alcohol lamp. By means of a mechanical contrivance, powdered magnesium is

A CHIPPENDALE DOG GRATE: BY THOMAS ELSLEY.

thrown on the flame of the lamp, which flares whenever a view is taken. The equilibrium of the barrel is preserved by means of suitable vents in the bottom, which admit water as the oxygen diminishes.

A LADY connected with Liverpool has given to the Chapel of Ease of St. John, Walton Road, a Chalice of pure gold, with a cross of diamonds and pearls of enormous value.

THE Local Government Board not approving of the details of the new set of plans of the proposed new Board Room, at Poole, to cost £1,200, which have been forwarded to it, Mr. H. F. J. Barnes, Architect, has been requested to confer with an Architect to the superior Board in London on the matter.

AFTER a discussion lasting several hours, the Worthing Town Council on Monday decided to obtain the £110,000, required for the new sewerage and waterworks, by means of a private loan, in preference to the creation of Corporation Stock. The money is to be obtained at 3½ per cent., with £1,000 for commission, including stamps and legal charges.

A NEW stained glass window has been placed in Maxwell Parish Church, which completes the number of memorial windows on one side of the Interior. The window is the gift of Mr. Alexander Moffatt. The window is a very fine one, and is designed by Messrs. Ballantine & Gardiner, Edinburgh.

Trade and Commerce.

THE Peterboro' Brick Manufacture is increasing in a most rapid manner, and probably bricks in this locality can be manufactured cheaper than in any other district within an equal distance of London. The raw material from which these pressed bricks are made is locally known as "knots," the bed being of great thickness. These "knots" can be taken direct from the ground, and without either previous preparation or admixture of any kind, made by machinery into bricks, and the bricks stacked in the kiln ready for burning in less than ten minutes. This can be done all the winter, even during the hardest frosts. The raw material contains a great amount of natural fuel, and it is to this the cost of coal for burning the bricks is so very low. If a portion of these "knots" was enclosed in a vessel, with a pipe attached and enclosed in an ordinary house-fire, after the "knots" had become ignited, gas would be thrown off and could be lighted like coal gas. The bulk of the bricks made go to London and the district round, in addition to the towns and villages within a very large radius of Peterboro', the total output being probably one hundred millions yearly. The cheap and easy method of manufacture, the low cost of fuel, combined with the great and increasing demand, enables the brickmasters to successfully compete with other districts for the London trade. In addition to the pressed bricks large numbers of wire-cuts are made,

besides white-faced bricks, drain pipes, copings, plinths, bull nose, and many other kinds known in the trade as fancy shaped bricks. The trade is making many of the brickmasters rich men, the rapid and easy method of manufacture enabling them to reap large profits.

The Pneumatic Brushless Painter (Cleaver's Patent).

Thoughtful and observant men, accustomed to technical manipulation, have long been conscious that one particular process has not partaken of the general advance observable in other crafts. Thus, while the worker in iron and wood, stone and clay, is aided in his toil by improved tools and any number of labour-saving implements, the painter still does his work slowly and tediously with a brush. A new era would now appear to have dawned, and its advent was signalled the other day by a visit of several London Press representatives to the Barry Docks, Cardiff, to interview the subject of this notice and to witness its performance. This apparatus is designed to secure the rapid and effective

application of paints and varnishes to surfaces of all kinds without the intervention of a brush. This is effected by bringing the paint or varnish into an atomized condition, *i.e.*, into the form of a fine spray, so that it can be impinged or injected equally and evenly over the surface to be treated. The paint or other liquid to be applied is contained in a closed vessel into which air is pumped, whereby the paint is forced through a tube at a rate dependent on the pressure of the air supplied to the vessel. At the orifice of this tube, the stream of paint is met by a blast of air issuing from a nozzle, the blast being supported through a flexible tube whereby the stream of paint is pulverised and projected in the form of a spray, the blast being produced by a hand-operated air pump or compressor provided with a reservoir in order to render the blast continuous. The result is a uniformly level surface which the most skillful "layer on" would vainly attempt to rival in finish. In the process shown at the Barry Docks, the operator stood on a stage with the apparatus slung from the top of the work (the hull of the *s.s. Racine*), while the air pump at the bottom of the dock was worked by another man. At this test, eight feet (super) were covered with anti-fouling composition paint in six and-a-half minutes, and in another, an ordinary railway wagon was completely painted in sixteen minutes. Doors, window frames,

stencilling, &c., being done with equal rapidity. It is claimed that this machine will do, in one and three-quarter minutes, as much as a hand brush painter can accomplish in fourteen and a-half minutes. It will be seen that this invention will prove of immense advantage where much painting of a rough nature has to be done. It never occurred to any of the Press men present, beside our own, that the Pneumatic Brushless Painter is only an old delightful friend—the scent fountain—applied to the use of paint.

Messrs. Alfred Williams & Co., Hydraulic Engineers, 39, Great Eastern Street, London, E.C., exhibited at the Royal Agricultural Show at Darlington, one of their "Halladay" Standard Pumping Windmills, also a variety of pumps for working by hand and power. The Abyssinian or Driven Tube Wells were shown, also a complete set of Artesian Well Boring Plant, with improved steel socketed tubes for lining the bore holes. Messrs. Williams tell us that they have executed work for India, Turkey, Canary Islands, Balearic Islands, and France. A "Halladay" Windmill, erected on a Steel Tower, has just been fixed by them at Haslemere, Surrey, on Mr. John Grover's estate, and in connection with it is a set of three throw pumps, at the bottom of a well over 220 feet deep, and capable of delivering about 1,500 gallons per hour. It is contemplated using this Windmill for electric lighting purposes also.

Messrs. Joseph Kaye & Sons write us that under Professional Items, in our issue of the 18th ult., in commenting upon the Kirkstall Road Baths, we inaccurately accredited Messrs. Chubb with the manufacture of the Gold Key used at the opening ceremony. We are glad to know that this Key was designed and manufactured by Messrs. Kaye, and that they supplied the whole of the locks and fastenings fitted in the building.

The Self-Lock Roofing Tile Company.—We are requested to announce that from to-day, the address of this Company is 9, Gracechurch Street, City.

Glasgow.—The Glasgow Corporation Waterworks annual report states that during the year the amount expended on new works was £195,385, while the capital expended on the new works being constructed under the Acts of 1882, 1885 and 1892, now amounts to £1,086,377. Regarding these works, the report states that the new Reservoir at Craigmaddie is fast approaching completion. The Blane Valley section of the new aqueduct, 5½ miles long, was brought into use on the 30th April. The Loch Chon section, 3½ miles in length, is expected to be opened by the end of next month; and the Black Rig contract, and the laying of the double line of 48-inch pipe across the Endrich Valley are making fair progress. The laying of the 36-in. mains from the Craigmaddie Reservoir to the city is almost

finished. On an average the quantity of water sent into the city and district during the year was 46,866,029 gallons per day, an increase of 2,281,944 gallons per day compared with the previous year.

A Labourer's Action for Damages.—At the Shoreditch County Council, Robert Hilken, a dock labourer, of James Street, Commercial Road, claimed damages from William Richardson, a builder, for the death of his child Robert, a boy of nine, who was killed by the fall of a wall in James Street on March 24th last, on the occasion of a great gale. Mr. Eldridge appeared for the plaintiff, Mr. Rolland was for the defendant. Mr. Eldridge said this was an action arising out of an accident which happened as a consequence of the great gale on the last Sunday in March. Defendant had ordered certain buildings in James Street, of which he was the owner, to be pulled down. The whole of the insides of the houses were destroyed, leaving the outer wall standing as a bare shell. To save expense, no hoarding had been erected, and no struts were placed to protect the wall. About twelve noon on the day in question the wall fell into the street, burying three people beneath the ruins; one of them was the little boy whose father was the plaintiff in this action. A number of witnesses were called on behalf of the plaintiff.—Judge French, in giving judgment, commented strongly on the absence of the District Surveyor without any satisfactory explanation. Judgment was given for the plaintiff, the damages at £50, with costs.

Visit of Municipal and County Engineers to Messrs. Oates & Green, Halifax.—The Annual Meeting of the Incorporated Association of Municipal and County Engineers, taking place this year at Halifax on Friday last, many members of the Association were taken to view Messrs. Oates & Green's works at Horley Green and Ellen Royde. Messrs. Oates & Green, now one of our foremost firms, made a humble beginning, and bit by bit, by dint of hard work and perseverance, they have become one of the largest manufacturers in their line of business. They started in 1859 with a few hands, and now find employment for about 500 men and boys. The firm possess three works all within half-a-mile of each other: the Horley Green Pipe and Glazed Brick Works; the Ellen Royde Pipe, Retort and Fireclay Works; and the Beacon Fireclay and Common Brick Works. At Horley Green, the party was shown into the Pipe and Sink Sheds, probably the most extensive sheds used for such a purpose to be found in any fireclay works in England. These sheds have only just been completed, and were built to replace those which were destroyed in the gale of December last, by the disastrous fall of one of the chimneys. The sheds are furnished with all the latest steam pipe arrangements for regulating the temperature, and thus securing even drying. The pipe and brick making machines and grinding mills were also visited. Before leaving the Pipe

Department the visitors were shown the new Patent Pipe Joint with which we have already dealt and of which we think highly. Later, the party adjourned to the Ellen Royde Works. These have been entirely rebuilt during the past three years, these works are quite a model in their way. Here are produced large sanitary pipes up to 42 in. in diameter, with a strength quite equal to any of the cast iron pipes used for sewerage purposes. The machinery which makes them is wholly automatic and turns out a mile or two per week. In the Retort Shed a very large portion of space is devoted to the production of fire bricks and blocks for gas works, steel and iron foundries, glass and copper works. The firm received their guests with cordiality and courtesy.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

AMERSHAM.—For the erection of a villa residence near Amersham Station, for Mr. J. Sladen. Mr. Guest Luckett, architect, Aylesbury:—

Shelwin, H. H., Waddesden	£920	0	0
Darlington, G., Amersham	900	0	0
Read, C. W., Watford	869	0	0
Brown, E. J., Watford	845	0	0

Herbert, G.	120	95 5	6,508 15
Tree and Bolley, Exeter*	295	200 0	6,445 0

* Provisionally accepted.

A. Extra price for building brickwork in cement.

B. Extra price for completing the work in twelve months.

FARNBOROUGH.—For erecting four houses at Farnborough, for Mr. Bridger. Mr. W. E. Trevena, architect, Farnborough. Geo. Munell, Blackwater (accepted). The lowest of five tenders received

FRODSHAM (CHESHIRE).—For erecting a gardener's lodge, Netherton, for M. Steele, Esq., M.D., J.P. Messrs. Linaker and Son, Architects:—

Shallcross, Thos., Ashton	...	...	£584 0 0
Davies, Thos., Frodsham	...	...	549 0 0
Gleave, Geo., Frodsham	...	...	529 0 0
Littler, John, Frodsham (accepted)	...	...	520 0 0

FRODSHAM (CHESHIRE).—For erecting additional wing to residence, "Netherton," Frodsham, for M. Steele, Esq., M.D., J.P. Messrs. Linaker and Son, architects:—

Forester, Geo., Chester	...	...	£1,880 0 0
Davenport, C. W., Warrington	...	...	1,580 0 0
Whittingham, E., Newport, Salop	...	...	1,500 0 0
Davies, Thos., Frodsham	...	...	1,482 0 0
Shallcross, Thos., Ashton	...	...	1,449 0 0
Gleave, Geo., Frodsham	...	...	1,395 0 0
Littler, John, Frodsham (accepted)	...	...	1,382 0 0
Collinge, Rd., Runcorn (Plumbers' work)	...	...	89 3 0

FRODSHAM (CHESHIRE).—For erecting three dwelling houses for Mrs. Bowden, Overton Hall. Messrs. H. Linaker and Son, architect:—

Beckett and Co., Hartford	...	...	£1,084 6 0
Clarke, L. H., Frodsham	...	...	893 0 0
Gleave, Geo., Frodsham	...	...	882 0 0
Littler, John, Frodsham (accepted)	...	...	873 0 0

LETTERKENNY (Co. Donegal, Ireland).—For plumber's work at the District Lunatic Asylum, for the Board of Control of Lunatic Asylums in Ireland. Mr. Wm. McElwee, Foyle-street, Londonderry, architect:—

Rooney, Jas., Londonderry	...	...	£5,276 0 0
Baird, Wm., Dublin	...	...	4,785 0 0
Williamson, A. D. and Co., Coleraine	...	...	4,120 1 9
Mitchell, Andrew A., Letterkenny	...	...	3,075 9 1
O'Neill, J., & Co., Omagh	...	...	3,870 11 11

* Accepted.

LONDON.—For alterations and additions at the Chatsworth Arms, Lower Clapton, for G. T. Poole, Esq. Mr. G. S. Stevens, architect:—

Parsons, F.	...	...	£1,353 0 0
Simpson Bros.	...	...	1,249 17 0
Wales, G.	...	...	1,099 11 0

LONDON.—For alterations to house at Westminster for the Hon. Alfred Lyttleton. Mr. Richard Creed, architect:—

Fleming and Watson	...	...	£2,088 0 0
Scott, S. J.	...	...	1,450 0 0
Leslie and Co.	...	...	1,290 0 0

LONDON.—For alterations at The Unicorn Tavern, High-street, Shoreditch. Mr. R. A. Lewcock, architect, 88, Bishopsgate-street Within, E.C. Accepted for 1st contract for structure:—

Hood, A.	...	...	£966 0 0
----------	-----	-----	----------

LADDERS, BARROWS, STEPS, TRESTLES, SCAFFOLDING, For Sale or Hire.

J. BATCHELAR & CO.,
48, HAMMERSMITH ROAD, W.

Quantities, &c., Electrographed
Equal to Lithography and 50 per cent. CHEAPER. Prices and
specimens on application. Lithography at moderate rates.

OLDACRES & CO.,

59 & 60, CHANCERY LANE, LONDON, W.C.

N.B.—No connection with any other firm.
Telegrams, "OLDACRES, LONDON."

LONDON.—Accepted for structural works at The Old King's Head, Tooley-street. Mr. R. A. Lewcock, architect, 88, Bishopsgate-street Within, E.C.:—

Parsons, W. T., Deptford	...	...	£120 0 0
Goodall, contractor	...	...	£1,274 0 0
Heath, barfitter	...	...	580 0 0

Found—A Site. WHY not a National Opera House? asks a correspondent who has found, alas, only the site. Paris, Vienna, Berlin, may be forgiven their pride in theirs; London has no National Theatre. If Mr. A. W. Hutton had found the money, his scheme might have looked healthier, though even sites are getting difficult in London. But the British Public is to be purse-bearer, meanwhile Mr. Hutton finds the site. It is the large unoccupied space opposite the Horse Guards. We might be induced to admit the justice of the site, and we are cordially enthusiastic in any project that will enhance the general *ensemble* of what, in vulgar parlance, is described as "the finest site in Europe"—from Trafalgar Square to Westminster Abbey. It is true also that a National Opera House would give a much-needed opportunity to Architecture, but we are afraid that that would be the only opportunity it would yield. Why not a National Opera House is simply answered. There is no National Opera. No Englishman of the hour appears able to compose grand opera; we go to Italy, to France, to Germany for our musical comedies, and serve up comic opera as side-dishes. Covent Garden Theatre does fairly well for the one, and half-a-score of private Theatres for the other. Mr. Hutton's suggestion that the "Opera House"—once built—be "leased at a moderate rent to the County Council," makes us cry out to our gods and little fishes. The County Council is a useful body in many ways, but Colour and Orchestration have perplexed it before now. What would happen, granting grand opera, we cannot, stretching our imagination to its uttermost, conjecture. Nothing more terrible can be conceived than a National Opera "attitude" on tragic themes, or a County Council with its cast-iron convictions engaged in settling musical morals. It has been well said that Music has no morals. The County Council had better leave that Well alone—it is bottomless.

In the Land of Chaldea. The Babylonian Tablets now on view in the new Assyrian Room of the British Museum are of such remarkable interest that archæologists and lovers of antiquities should lose no time in recommending them, so to speak, to their friends. Business men might

"THE CUB STEALER": BY HENRY TEIXEIRA DE MATTOS.

be coaxed into a visit. Here, once again, the marvellous universality of Babylonian documents and monuments is demonstrated, in this regard surpassing the records of Egypt. Odd, it indeed is to have to recognise in these little packages of clay—each with its clay cover—the business records and legal deeds of a trading firm, who, at

least forty centuries ago, were the leading representatives of bankers in the land of Chaldea! We now know that from the very earliest times the southern cities of that land, particularly, had become the centres of wealthy trade; finance had grown, and the farmer went into his near Chaldean town much as the farmer of to-day goes to his county town, to bank. These tablets clearly demonstrate that in the twenty-fourth century before the birth of Christ there were trading guilds in such cities as Ur, Sippara, and Larsa, and that such a guild was being organised in Babylon—a new city in those dim distant days. These tablets, which were the discovery of Dr. Budge during his comparatively recent excavations at Deir, have been added to the small existing Collection, and the evidence of these early trading guilds has thereby been greatly strengthened. The tablets are of the kind known as envelope tablets, being in duplicate. A small piece of clay is inscribed with the legal record of the transaction, and round this a clay envelope is enfolded upon which the deed is written a second time; both copies being attested, dated and sealed. Dr. Budge discovered the tablets, stored in jars, in long narrow chambers, and found that they chiefly referred to the period B.C. 2300-2000, according, nevertheless, with the commercial and legal directions given to Jeremiah centuries later! One tablet tells of the sale of "a whiteslave from the land of Gatum"—South Kurdistan; in payment thereof the trader received "240 measures of oil." These marvellous discoveries prove that the business methods of those remote times varied little from our own, save that finance was entirely

on a silver tariff, the ingots being weighed. Laws were strict, commerce was conducted on legal lines; slave dealers, money lenders, lawyers, merchants, all at work. The 'cute deal; the reprisal; the cancelled contract; the case in court; in Chaldea four thousand years ago! How old, how very old are all the smart schemes of our vaunted modern age.

Room and Air!

We have read with interest, mixed with a little preliminary alarm, a paper on the "Physiology of Recreation," by Mr. Charles Roberts, in the current *Contemporary*. Is Recreation, we asked, also to become a matter of Science? Is our Leisure no longer our own? A man will die hard for his leisure; dog-like, he clings to it. But Mr. Roberts has masked in a modern phrase a plea for mirth and muscle. He demands "Air and Room;" he puts in a word for Street Architecture, and, as Air and Room and Street Architecture concern ourselves, we are glad to back up Mr. Roberts. We must split a truth with him, to begin with, however. "The saddest feature of our modern social condition and overcrowding in towns is that children have forgotten how to play." *Educated* children, Mr. Roberts should have interpolated. It is Education—we say it fearlessly—that is responsible for the ten-year old men and women who dine with us, and then pass their judgment upon the play! Education should go farther or retreat; it has not yet recognised that the body is the steam boiler of the individual; that the brain is the delicately-organised engine. Boiler—and engine! Our forefathers, it may be, were all boiler, but are we not all engine? So, taking the educated child in the "middle" and "lower" classes, we agree with Mr. Roberts. The Public Schools of England—Rugby, Eton, Harrow, Uppingham, Malvern—alone estimate, at its right value, the right arm that, together with the clever head, or even without it, has made England great in the conquests of the World. By all means, then, let us have the "Air and Room" that Mr. Roberts demands, and the enlarged playgrounds for city and town Schools, and the teachers who have played themselves and still know how to play; and the keen competitive rivalry of the grand old games; and the element of Physical Culture that really makes as much for the happiness of existence as a schooled intellect or o'er much philosophy. And, for all the pessimism about children, we know corners of Clare Market or Seven Dials where children can be found, any evening, shouting with delight. We have watched for hours the little untutored lasses of London, hatless, without speaking acquaintance with soap tablets, dancing to Italian organs in perfect step and rhythm, free and lithe and happy, having forgotten Rule of Three, Board School restrictions, and the Official Frown. And so it is not yet too late: Let us go back to the Greeks, for a little of their exaltation of physical beauty; let us cease making the children top-heavy with a weight of learning, tottering upon broken reeds of limbs. Mr. Roberts is even more right when he comes to the elders; it is no recreation for the agricultural labourer to go and dig on his allotment in the evening when he has been ploughing all day; no recreation for the brain worker to change his pen nib and his book. "Take the hint" says he, "make the streets more beautiful, orderly, instructive, Architecturally and otherwise; throw open Picture Galleries, Museums on Sundays, still more Parks and Gardens!" Let the hint be made a mandate by all means. Schools and Codes, Curriculums and Systems abound; we lose our individuality beneath them; would the children of to-day *gain* theirs? Let us give them "Room" then, at once—and "Air."

THE National Monument to Sir John Macdonald was unveiled in the Parliament Grounds at Ottawa on Tuesday last.

VISCOUNT BRIDPORT has arranged for a collection of his porcelain and decorative objects to be put up to auction in London in the near future. The "lot" that is likely to attract most attention is a fine marble bust of Lord Nelson, by J. Flaxman, R.A.

A NORTHERN EGYPTOLOGIST'S COLLECTION.

"DARK AGES" AND "BRILLIANT PERIODS" OF ART.

MR. R. C. CLEPHAN, of Southdene Tower, Low Fell, whom members of the Newcastle Society of Antiquaries recently visited, is an enthusiastic Egyptologist, and the purpose of the visit was to inspect his Collection of Antiquities. Mr. Clephan had his treasures admirably classified, and described them in an interesting way; having something to say, also, concerning the ancient Arts of Egypt, with which he has made himself familiar. Sculpture and Painting, he said, go back into the remote past of ancient Egypt; indeed, as far as we could learn, as early as Architecture itself. The oldest examples of buildings, beyond those of the most primitive, contained, more or less, delineations of the forms of men and animals in wood, stone, clay or pigments. These representations were, however, mostly confined to the Tomb and the Temple. Indeed, the influence of Religion upon Art, in all its branches, was simply immense. A glorious immortality was a living faith with this interesting people, and everything was made and done with that end in view. These Arts, Sculpture and Painting, were inseparable allies on the banks of the Nile from the earliest period yet disclosed, owing to the inexorable canon that every figure must be coloured, painted or enamelled. The Egyptians were apt to conventionalise from the earliest periods, and this came out strongly both in form and colour. Flesh tints, as far back as the Fifth Dynasty, were strictly stereotyped—the male being always coloured a reddish brown and the female a pale yellow. These and other conventionalities had their origin in pre-historic times, and they ruled Egyptian Art throughout all its phases and periods to its close. The Egyptian mode of treating the human body in drawing appeared most strange to us. They tried to show every part of the human frame in a profile drawing; the eye, arms, and shoulders presenting a front, and the lower portions of the body a three-quarter view. They were eminently realistic in their treatment of both Arts; but neither humour nor caricature was lacking. The earliest example we had in Sculpture was the Great Sphinx, which was pre-historic, and characterised by both power and subtlety of a high order. In Architecture, he would not be far wrong in assigning the Temple to the same uncertain period. Models for the Schools in the Pharaonic ages were most interesting, and he had been fortunate in securing one. It was cut in soft limestone, and was probably a bust of the reigning Pharaoh. The position of the features was determined by the cubic block being squared in lines, and these squares were seen on the reverse of the bust almost as distinctly as when they were made, thousands of years ago. The bust dated to probably between the Nineteenth and Twenty-sixth Dynasties, and was, therefore, about 3,300 years old. Mr. Clephan next exhibited an artistic and beautiful figure of Isis, probably belonging to the Third or Fourth Dynasty. The head of a figure closely resembling the Sheykh-el-Beled at Gizeh was very striking. The ancient Egyptians rather illuminated than painted, as we understood the term, and this branch of Art was the handmaiden, so to speak, of Sculpture. The treatment of both men and animals was, in a sense, very faithful to nature. There was but little attempt made in the direction of perspective. One striking fact must not be overlooked: that in pre-historic times—that was to say in periods anterior to Menes, who reigned probably nearly 7,000 years ago—Art must have served a long apprenticeship to have attained the level at which we found it. The recent find near Memphis by M. de Morgan exhibited the goldsmith of the Third Dynasty at his best. The period covered by Egyptian Art was a vast one, dark ages alternating with brilliant periods of progress; then Decadence and Renaissance following each other in a positively bewildering manner. Mr. Clephan was not able to illustrate the Art of Painting by many original examples, as the frescoes were painted mostly on plaster; but he exhibited some original

work on wood and cloth, and several beautiful copies of fresco painting, giving an excellent idea of the treatment and technique of the Egyptian Schools. He displayed, also, some very interesting specimens of weaving, in which handicraft the Egyptians excelled from an early period. Herodotus mentioned the use of the loom in Egypt. The linen was especially very smooth and soft. Embroidery was practised early, and Mr. Clephan exhibited a specimen which was about 3,500 years old. There was also included in Mr. Clephan's Collection a most interesting series of scarabs. These were fashioned on the model of the Khafer beetle (scarabæus sacer), which was the emblem of terrestrial and celestial life. The scarab was worn in life as a charm against death; and in death a large variety, inscribed with the Thirtieth Chapter of the Book of the Dead, was put inside the mummy in place of the heart, which was removed with the viscera, and preserved in the sepulchre with the mummy, in a vase. Scarabs were found in great quantities, in various sizes, and cut in many substances—limestone, granite, and precious stones. Many were enamelled in green, turquoise, and lapis lazuli. Some were inscribed with royal and other cartouches, others with various cabalistic or ornamental devices, the meaning of which was known only to the wearer. The smaller scarabs were used as phylacteries, or as ornaments strung into necklets, or bracelets, or as earrings. His own Collection was somewhat extensive, and all varieties were well represented. Mr. Clephan also exhibited examples of Egyptian, Ptolemaic, and Roman lamps, funerary cones representing the stone bread for the Ka, or shadow (the mummy being provided with the real article, a piece of which was handed round), vases, figures of men and animals, beads, and other things. The inscribed potsherds were curious, as representing the ruder written communications of the people, such as receipts for money and goods, letters, and messages of various kinds. As to metals: as might be seen from the Beni Hassan Frescoes, the Art of Smelting was an early one in ancient Egypt; but it went back further than that. Gold, silver, iron and lead were all used in the early dynasties; but bronze was the favourite metal after the Eighteenth Dynasty, before which period he did not think it was known. The description generally used contained 84 per cent. of copper, 14 per cent. of tin, and a little iron. The number of Art objects found in this metal were countless, and it was largely used for domestic utensils. The gold work was of a high order of merit, and until quite recently it was supposed that the oldest examples went no further back than the Fourth Dynasty; but in that land of surprises some highly artistic specimens had just been found of the Third. This discovery carried us back to a period more than 6,000 years ago, and it was both startling and suggestive to find such beautiful design and excellent workmanship at a period so very remote.

At a meeting of the Edinburgh Town Council Mr. W. N. Colam, M.I.C.E., was, in conjunction with Mr. Cooper, the Burgh Engineer, elected Engineer for the construction of 18 miles of cable tramways which are to be laid down at once in the City.

THE sale of a Church by public auction deserves to be recorded. In consequence of the union of the West and South United Presbyterian congregations in Duns, the Church of the former was no longer required by the congregation. It has just been put up to public competition, and knocked down at £170. It cost £2,000 to erect seventy-four years ago.

OVER 4,000 square yards of land at the northern end of the town of Douglas is to be purchased at 9s. 3d. per yard for the purpose of providing Elementary School accommodation for 1,000 children, and Bourne Hall is to be rented at £5 per annum for the same purpose.

A LARGE earthenware jar, not more than 6 in. below the surface, filled with small Roman copper coins was found during some excavations on Mr. Harry McCalmont's estate at Bishop's Wood, Hereford. A second vase, also full of similar coins, was found. The majority are of the reigns of Constantinus the Great and Constantius, A.D. 338-360.

THE BOOKS OF THE BATSFORDS.

HOLBORN FIFTY YEARS AGO.

NIGH on for half a century ago, when Holborn was still Holborn, and had not run away—by means of Viaducts—to the City, when much of the elder-fashioned still faced the traffic bravely, and it was possible to be sure of your bed and beef at your Inn, many booksellers had their shops, with open fronts, tempting the passer-by, and old scholars knew no other Mecca. Booksellers and publishers were modest men in those days, issuing or handling books with reverence and gentility, not as if they were a crop of sudden summered strawberries in Covent Garden Market. A book was a book, to be bought or hungered after; possibly one walked in for a timid "look round," darting out if the bookseller approached you, all too conscious of the only halfcrown in your pocket. And yet those stolen peeps into plates and pre-

faces; those hidden glimpses of the glorious World of Letters; those curves of beauty; and, of course, those steel engravings; were they not the Promised Land, a Paradise for students without the gates? It was on this sparer manna that many of our greatest men were bred and fed, and in those slower days when books were fewer and worthy of a lifetime's toil, there grew up a race of ardent, significant men, whose like it is not easy to match to-day. And yet more books were bought than one would think, for Architects at least denied themselves and were content to live and die in the neighbourhood of Holborn or Bloomsbury, and had not come to dream that they should build houses unto themselves.

Perhaps it was on such a silent day that B. T. Batsford, bookseller, 52, Holborn, began to put up the shutters of his open shop with a feeling in his heart that in the depths of future days there could be no "lower deep." He had not sold book or pamphlet; no one had even asked the price of a "work;" the story does not say if a bookworm had bored his way, humbly, in and out. But just as the bookseller was jamming the last bar home through the last wooden shutter of that old style of shutter that keeps its fellows just and firm and upright, someone came and asked if he had a book upon "The Dog." It happened that Knight was publishing quite a cheap, useful series (the masses were beginning to enquire for such) upon animals. "Oh, yes! I have a book upon the dog." "What is the price?" "Sixpence." The enquirer went home with the equipment of a veterinary surgeon, and Batsford turned over his sixpence for luck.

From that quiet and quite simple beginning the Batsfords, father and sons, have built up their publishing business, and can show you, moreover, a stock of Architectural books unrivalled in England. They publish, they purchase; and it is the easiest thing to find Mr. Batsford in his "shop," though now it has a front and plate glass, I dare swear.

Seventy-four years ago, in a Hertfordshire village, Mr. B. T. Batsford was born. Even Hertfordshire villages were not absolutely at peace in those days. The Lord of the Manor turned an angry eye upon a number of his tenants, and the tenants fled to London for shelter and bread. Mr. Batsford's father came up with his young family, and at twelve years of age Bradley Thomas was apprenticed to Bickers, who sold books at high prices and believed in his apprentices working pretty well a sixteen hours' day.

"It was go up to the top storey for this and to the cellar for that," says Mr. Batsford, "and a meal when you could. Apprentices were apprentices in those days."

I dare say young Batsford had his share in the running among the Theological and Architectural tomes that were heavy enough to bend a man's back. Looking at some old catalogues, lent me by the firm of "Taylor's Architectural Library, No. 56, High Holborn"—Taylor stood pretty well where Mr. Batsford did in 1849—I find "Dr. Brook Taylor's Method of Perspective Made Easy, both in Theory and Practice,"—which surely must have been a comforting work—and "The Perspective of Architecture: a Work entirely New" (how many books have claimed that!) "The Carpenter's Pocket Directory" and "Crunden's Convenient and Ornamental Architecture" cheek by jowl.

Taylor's Library was a well-known resort at the beginning of the century, and "The Antiquities of Athens" were in their Fourth vol. in 1825. Mr. Batsford shakes his head if you enquire if the young student of to-day is exactly consumed with a burning thirst for information upon "The Antiquities of Athens."

"Architects cared more to form libraries in those days, and educated men all thought it necessary to include in their libraries at least a few Architectural works of repute. Many of the best collections were made fifty years ago, when Weale was a great publisher of such books, but he was very high priced. Yet I think it was quite as easy to sell a dear book then as it is now. Weale sold his second-hand collection of books in 1860, and that was my opportunity. I bought all I could, and soon on my shelves were to be seen Theological, Architectural, Engineering, and Mining books in friendly fellowship."

By-and-bye Mr. Batsford tells you why the Theological books lost ground; the prelates and parsons of that stiff-necked day were prone to argument, but, as it seemed to Batsford, too intolerant of view; the broader minds and moods had not yet come into play, and the bookseller was a broad-minded man.

And princely purchases were made, now and again, at the shop in Holborn.

"Once an Indian Prince came, with his suite and his interpreter, and, of all books, what do you think he wanted? A book on Candle Making. We found him his book on that Art, and sold him hundreds of pounds' worth of books on other Arts, and they had to go to the Bank of England to replenish their exchequer before they could pay. That was something like a day!"

"Very different," I said, "to 'Do you keep a book about The Dog?'"

Mr. Batsford runs on in anecdote once you get the wheels of memory turning, and I am told of the rage for modern antiques in the way of fittings and furnitures upon the Gothic movement, and, later, the Renaissance movement coming into vogue.

"There was a shop in Holborn where the supply of real antiques ran out every day, but the shopkeeper had workrooms at the back where they turned out new real antiques. His customers were always made happy, for if he had not got what they wanted in stock, he was always attending a sale the next day. So they brought forth, from the back, more real antiques."

Even big Architects took humble positions—upon occasion. Mr. Batsford often saw Wyatt go on his hands and knees rummaging for ideas among gigantic and musty old folios, many of them French or German, and virgin ground—to English Art.

"The young men, too, especially in the railway surveying days, were not without their perquisites and their pride, and in the heyday of those times even a junior was said to earn his guinea a day for carrying the chain!"

Mr. Batsford has many other good stories in stock as well as books; he should write his Reminiscences of Old Holborn; of the days when Architects looked grave men at twenty-five; of the studious nights those fellows spent, treasuring a snapped-up second-hand volume; of the open shop fronts and the booksellers Dickens knew so well how to prove had hearts and consciences. Many a time, no doubt, in the dull gloom of winter nights, when the gas lamps flickered and bleared in old Chancery Lane, Dickens went by with his rapid eye,

though Mr. Batsford never knew him enter the shop.

Presently we talk of Style in Architecture—*bête noir* of Ernest Newton—Mr. Bradley Batsford, eldest son of his father, and I, and he tells me more than one significant thing. "Do you know, no English Architectural books of any moment have been published for twenty-five years! Foreigners come to us—Germans particularly. 'Where are your English works, your books on current Architecture?' 'We haven't got any,' we say. 'Practically, there are none.' They are astonished, and well they may be! You will remember Gotch's *Architecture of the Renaissance in England*; that is one of the more important works we have published. We are now endeavouring to do something worthy English Architectural reputation; for instance, our portfolio (soon to be published) on *London Churches of the XVII. and XVIII. Centuries*, and another important work on the Architecture of what we have ventured to call the "Later Renaissance in England," which will be edited by Messrs. John Belcher and Mervyn E. Macartney, and will to some extent form a sequel to Mr. Gotch's work."

I am shown delightful plates, marvellous impressions of the work of Wren and Inigo Jones, of Hawksmoor and of Gibbs. For the first time London Churches are to be done full justice, and one cannot but commend the enterprise of the Batsfords in publishing sixty-four plates with letterpress, by G. H. Birch, F.S.A. three guineas. Here is a permanent pictorial record of London's Churches, timely enough, ere some, at least, are swept away.

We talk of the Gothic revival of the century, of its ultimate development, of the influence—the extraordinary influence—of Viollet-le-Duc, especially in his *Intervention de l'Etat dans l'enseignement des Beaux Arts*, and his *Dictionnaire Raisonné de l'Architecture Française*. Wonderful indeed was the enthusiasm these works aroused, and pernicious, possibly, was the pilfering they encouraged among men who lacked individuality and resource. French Gothic has been responsible for so much. As for Modern Architecture, Norman Shaw, speaking upon occasion to Mr. Batsford, said, "Ah, well, our Architecture is not so much a Style as a Fashion," and how true that is! We chat long, Bradley Batsford and I, for if any man in England knows Architectural works he does, upon the

tendencies of the young men of the day, how even good drawing is not always backed up by scholarly writing, of the inevitable repetition that is bound, more or less, to exist. A Scholar—he knows how often

and how easily it is possible to trace the work of the present day back to its source, but it is well to be reserved in these things.

Let me end with unwritten words of appreciation of the superb collection crowding the shelves at Batsfords', from roof to basement.

MR. FORBES, of the little North Tyne village of Birtley, is the possessor of a most interesting piece of workmanship, in the shape of an ordinary oblong kitchen table. It is entirely composed of old oak, and contains something like 3,000 separate pieces. There are contributions from almost all the Castles and Churches in Northumberland. A piece from the old Roman Bridge that once crossed the Tyne may be seen, whilst one or two stray chips come from Ireland.

BUILDING operations in connection with the proposed new Literary Institute, which is being erected at the bottom of Meeching Road, Newhaven, have been commenced.

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,
July 9th, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

WITH regard to the restoration of the Collegiate Church of St Saviour, Southwark, the funds already contributed have been expended in re-building the Nave, incorporating therein every fragment of the ancient structure which came to light, restoring the Northern Transept, which was found to be in a perilously ruinous condition, building heating chambers, and providing warming apparatus, and in the partial restoration of the Lady Chapel and South Transept, which works are now in hand. The Committee has still about £3,000 in promises for these works, and this is sufficient, but the instalments on these are not due, and the available funds are absolutely exhausted. In addition to the sum named, about £5,000 is needed for the restoration of the Choir and Tower, and until this sum is forthcoming the restored Church cannot be opened. The exterior repairs are estimated to involve an expenditure of about £6,000. Now that the restoration of this ancient and historic Church, "next to Westminster Abbey, the finest mediæval building in London," is so near completion, it seems a pity that the works should cease for lack of funds.

A MANCHESTER correspondent criticises what may be described as the lay view of *The Daily Graphic* with regard to the introduction of glazed tiles in London house building. Our contemporary "was glad to see that this use of tiles was being followed by the use of glazed bricks, and hoped that this innovation will bring about the downfall of the abominable stucco and the accompanying nuisances that its frequent paintings invariably bring about. A variety of colours can be introduced into these glazed bricks, and an application of the hose of a fire engine once a year would keep them far cleaner and more wholesome than the application of several coats of paint once in seven years does to our stucco fronts." *Apropos* of this, our correspondent writes: "We had a building in Manchester which was covered with white glazed bricks, procured from the best manufacturers. These bricks in a town like ours become begrimed with soot and other atmospheric impurities, the heat of the sun cracks the surface and the rain drives in these impurities, and no amount of washing and cleaning can make the front even presentable. Surely the well-known expression 'A little knowledge is a dangerous thing' applies to the theory of *The Daily Graphic*?"

BUCTON CASTLE, recently visited by members of the Lancashire and Cheshire Antiquarian Society, was, said Mr. Andrew, supposed by some to be British. If it was British, he had no doubt it was also Roman. The Britons used neither mortar nor lead, and both had been found there. The position of Bucton was the most important part of the question. It was so placed as to dominate three Roman roads. One ran at the foot of the hill, one along the top of the opposite hill past Luzley, both of which were feeders to the grand artery road, the second Iter of Antonine, a road which ran through the Kingdom. Mr. Andrew had been on the same road at Gloucester. It is the

road that runs past Oldham Park, through Hey Chapel and Austerland, to Custleshaw and Cambodunum. This main trunk road was overlooked by two Watch Towers, one of which was Hartshead (an ancient beacon hill observable from the Derbyshire hills) which was probably worked by Roman soldiers from Bucton, which might contain a centurion's command. The other Watch Tower was probably at Strines Dale, perhaps near Woodward Hill, "strines" signifying Watch Tower. This was certainly only theory, but the three roads were three great facts, and the Roman legions must for centuries have tramped over them. Mr. Andrew called attention to the trenches at the foot of the hill. These he considered specimens of primæval agriculture. These trenches had been washed out by the rains of sixteen centuries, and at one time formed terraces up the side of the hill. He presented lithograph copies of similar terraces, called linches, in the open fields at Clothall, Herts. They were used for growing cereals by the ancient hillfolk. If he was right in his surmise, these terraces were quite as important in Archæology as the Castle on the top of the hill.

THE further portion of the restoration work at the ancient Priory Church of St. Bartholomew the Great, West Smithfield, finished under the superintendence of Mr. Aston Webb, consists of a very interesting little Crypt under the Lady Chapel. It is to be turned to a useful purpose as a Mortuary Chapel, where the inhabitants of the crowded parish may place the remains of their deceased friends prior to interment—no inconsiderable boon when the family dwelling-place is limited to one or two rooms. A good deal has been done also towards the restoration of the Lady Chapel itself, which for years was used as a fringe factory. The tracery has been re-inserted in the windows, and the building has been re-roofed, its full completion awaiting the advent of another £1,000. The Church itself is one of the oldest in London. It dates back to no less remote a period than 1123, when it was founded by Rahere, a member of the Chapter of St. Paul's, in consequence of a vision which he had of St. Bartholomew. After the Reformation the Church fell into bad repair.

THERE is much merit at the right moment in a glass of Bénédicte, and, therefore, we are pleased to see that at Fécamp, in Normandy, the new buildings for the manufacture of the liqueur have been inaugurated. It will be remembered that the old Distillery was destroyed by fire in January, 1892. The fire broke out in the early hours of the morning of January 12th, in an oil and colour shed, and spread with such rapidity that the whole building was soon enveloped in flames, but the Laboratory was saved. The Abbey itself, a building of historical associations and venerable antiquity, was, however, doomed. The loss entailed by the disaster exceeded the sum of £80,000. The new buildings, which occupy the site of the old Monastery, are in the Renaissance style, and in every respect reflect credit on the Architect.

MR. THOMAS CHATFIELD CLARKE, whose death we are sorry to have to record, had been in failing health for a year and a half, and during the last six months had suffered much. Mr. Clarke was born at Newport, I.W., in 1829, and established himself in London as an Architect and Surveyor in 1855. He soon took an influential position in his Profession and became surveyor to the Fishmongers' and Cordwainers' Companies, to the Trustees of Dr. Williams's Library, and to other public Institutions. He was well known as an expert in cases of compensation and those having to do with light and air. He was the Architect of the Bishopsgate School for Girls, the Royal Bank of Scotland in Bishopsgate Street, the new offices of "The Daily News" in Bouverie Street, the new School of the Mercers' Company in Barnard's Inn, and of various buildings in other parts of London. As a public man, Mr. Chatfield Clarke has lived a life of large and useful activity. He sat for Finsbury on the first and second School Boards for London, and took part in the settlement of the religious difficulty which is associated with the name of Mr. W. H. Smith. As a Liberal he contested

Poole in 1884, Hammersmith in 1885, and Grantham in 1892, but did not succeed in entering Parliament. In the Isle of Wight, where he had a country residence at Wooton, he was President of the Liberal Union, and was regarded as the leader of the Liberal party in the division. He took an active part for many years in the proceedings of the British and Foreign Unitarian Association, of which he was one of the Vice-Presidents. He was a Fellow of the Royal Institute of British Architects from 1862; and last year was President of the Surveyors' Institution, and delivered the inaugural address after the commencement of the painful internal malady of which he died. Mr. Clarke took a keen interest in many philanthropic and religious movements. He was a magistrate for the County of Hants and for his native town of Newport, and an active and useful member of the City Liberal Club, as well as of the Reform and National Liberal Clubs.

A FEATURE of the Industrial Exhibition to be held in Berlin is a separate Pavilion, covering about 1,200 square yards of ground, to be devoted to modern city improvements. Here will be shown the details of the management of educational, hospital, and benevolent institutions. An exhibit will also be made of sewerage, gas and water systems, as well as bridges, markets and public baths. These will be illustrated by models and drawings, as well as by original objects.

THE contractors for the new Organ at Bath Abbey, Messrs. Norman, Sons, and Beard, of Norwich, have practically taken possession of the building with a staff of fifteen skilled workmen, who are busily engaged in building the handsome and expensive instrument, which is more than usually complicated, and will occupy practically four positions in the Church. Two large wind chests are already placed between the huge piers supporting the Tower, on either side of the Central Aisle. On these have to be placed the sounding boards and certain metal pipes with ornamental fronts. To support these structures girders have been fixed into the piers. The wind chests, which now look uncommonly ugly, are to be encased in carved oak panelling. They are many feet above the seats underneath, and a clear view will be obtainable between the piers from the north to the south sides of the Church. The Pedal Organ will be in two sections in the North Transept, one portion against the west wall and another against the east wall; they will not project far into the Transept and the window will be practically clear. The Manual and Organist's Seat will be almost immediately behind the Pulpit. Large trunks are being laid in trenches right across the Church to convey the wind, as the Organ will be blown by a silent gas engine in a cellar outside the South Transept. About ten weeks is the time it is calculated will be occupied in the erection of the Organ, and Week-Day Service in the Abbey will be impossible until September. It is expected that the total expense will not fall far below £3,000.

PROFESSOR HERKOMER, R.A., has undertaken to adjudicate in the Arts Section of this year's Welsh National Eisteddfod. The competitions are numerous, and the Industrial Section also constitutes a striking proof of the growing tendency to associate the ancient Welsh Institution with the permanent national welfare of Wales.

WE are requested to state that the Science and Art Department has received from the Foreign Office a translation of a Note from the Austro-Hungarian Ambassador, which states that the Retrospective Exhibition to be held at Vienna, as already notified, from January to May, 1896, in commemoration of the Congress of 1814, will—besides portraits, autographs and personal mementoes—comprise illustrations of incidents or scenes connected with the event, examples of furniture, china, glass, tapestry, Embroidery, Linen and other clothes, and, generally, objects illustrative of the period of the Congress, or of the early years of the century, that is, from 1800 to 1820. Copies of the prospectus of the Exhibition may be obtained on application by letter addressed to the Secretary, Department of Science and Art London, S.W.

THE Peterborough Cathedral Restoration Committee is issuing an appeal for £12,000 to repair the damage done by the storm in March, to secure the safety of the West Front, and to complete the repair of the Transepts. Lord Lilford has given £500, and about £1,500 has been promised.

A CASKET, containing an autograph letter from the Ameer of Afghanistan, which was presented to her Majesty by the Shahzada, is a noteworthy example of the jeweller's art. It is described as being the largest and most valuable ever executed. The length is over 18 inches, the width 13½ inches, while the height exceeds 14½ inches. Octagonal oblong in form, it consists of solid 18-carat gold, lavishly embellished with diamonds, rubies, emeralds, and other precious stones, all of which take rank as specimens of brilliancy, purity of colour, and perfection of cutting. The main body of the Casket is divided into panels, composed of delicate tracery of an arabesque character, separated by pillars of lapis lazuli, the centre panel on both sides containing the arms of Afghanistan richly enamelled in heraldic colours. From the four half corners spring magnificent half stars, containing upwards of 178 fully-cut brilliants in each. The lid is slightly domed, and chased with devices emblematical of the flora of Afghanistan. Ascending from this are six pillars of lapis lazuli, with gold capitals of a Turkish character, surmounted by six Mohammedan crescents, each composed of twenty-four large brilliants, capped by turrets in gold. From the top of the temple thus formed are six chased and jewelled arches, crowned with the sixteen-point diamond star of Afghanistan, having a diameter of 4½ inches, and composed of 168 magnificent brilliants, weighing from one and a half to three carats each, the centre stone being valued at £1,500, measuring three-quarters of an inch across and weighing 17½ carats.

In view of the erection of new buildings for University College, Cardiff, a petition was sent some time ago to Sir William Harcourt, then Chancellor of the Exchequer, soliciting a Government grant. A reply has been received from the Treasury stating that the Lords Commissioners are prepared to accept the principle of a grant spread over a certain number of years, such grant in each year to equal the amount contributed from private sources, but not on the whole to exceed £20,000.

ELSTOW Church, which is inseparably connected with the memory of Bunyan's earlier days, is, states a contributor to "Cathedrals, Abbeys and Churches," itself a building of some size and considerable interest. Parallel with the wall of the Churchyard is the village green, and an ample tract of rough greensward, bordered by homely cottages. At its western end is the stump of an old stone Cross; towards its eastern a brick-and-timber building—the Market Hall in the days when Elstow enjoyed so much dignity. On the edge of the Churchyard are three broken trunks of great elm trees, still putting forth tufts of branches. All these must have existed when Bunyan was a lad. Many a time he must have loitered about the Market Place; he may, perchance, have seen that Cross broken down, if it had escaped the earlier reformers; he may have scrambled up those elms, defiant of the beadle, for they would be young trees in his boyhood. Little doubt this green by the Churchyard wall was the place where he was playing his game of tip-cat on that Sunday afternoon when the call to repentance sounded in his ears, and that life began which he has narrated in his great allegory.

MR. HAMO THORNYCROFT, the distinguished Academician, who has helped to fill the Sculpture Room of Burlington House this year, is a sculptor by birth as well as by training. Both his father and mother belonged to that profession. He himself was born 45 years ago in London, and was educated at Macclesfield, and at University College School, London, before passing on to the Academy School, where he carried off medals and prizes. His first contribution to the Academy was made in 1871. Among his most striking works are a nude statue, "Teucer," bought by the Chantrey Fund Committee, "The Sonata of Beethoven," "Medea," and "The Mirror" (1890), his diploma work.

STANDING in the centre of an open field at Hoxne, near Eye, in Suffolk, there is an Obelisk erected to the memory of King Edmund, who

No part of this anathema is now visible, but the tradition is so well known that a bridal party will take a circuitous route rather than pass over the Bridge.

IN the town of Wallsend, Northumberland, an interesting discovery in the form of the remains of long-hidden buildings of a massive character has been made. The locale of the newly-discovered ruins is within the walls of what, in former times, were the gardens and private grounds in connection with Buddle Hall, in which Mr. Buddle, the celebrated mining engineer of that name, lived and died. Within the grounds, and some 50 yards from the northern entrance, there was a green mound, some 20 feet in height and 300 feet in circumference, which being surmounted with the model of a cannon, pointing towards the gate,

imparted a military aspect to the surroundings. After the death of Mr. Buddle, the late Mr. Andrew Leslie, shipbuilder, rented the Hall and grounds for a number of years, but, on his removal to Coxlodge Hall, the old Hall at Wallsend was let in tenements, and the gardens and grounds fell into ruins. It was not, however, until the estate changed hands, a few months ago, and a series of new streets were planned, that arrangements were made for the removal of the mound to make way for the new erections, with the result that, only a few feet under the surface, the workmen uncovered a massive wall running from north to south, and composed of huge blocks of free stone, laid in regular layers, and rising to the height of some seven feet above the level of the ground. Excavating on the other side of the mound, the workmen have also laid bare what appears to be a continuation of the wall, which at this point is upwards of four feet in thickness, and intersected by an opening, slightly vaulted. At the south side of this archway, which is less than three feet in width, an iron bolt projects from a block of freestone. The wall is supposed to be either Roman or connected with the buildings of the original Wallsend Colliery. The Roman Wall was commenced by the Roman Emperor, Ælius Hadrianus, in the year 120, with the view of strengthening the chain of forts erected by Agricola, about the year A.D. 80, from the Solway Firth to the mouth of the Tyne, as a barrier to the incursions of the Scots and other fierce northern tribes, and it was completed in 207-8, by the Emperor Severus. This vast military barrier extended from Wallsend, through Newcastle, and terminated near the Irish Sea. There were 18 military stations on the Wall. Newcastle got its name of Pons Ælii from the Bridge across the Tyne built by Ælius Hadrian. In 449, it was still known as Pons Ælii; and about that

time the inhabitants of the North of England asked and received the assistance of the Scots and Picts, whom the Romans had failed to subdue, to aid them in driving out the invaders, and in 547, they invited the Saxons to aid them in driving their old allies out of the country to the north of the river Tyne.

A HOUSE in Piccadilly is an expensive luxury. Many people wonder what is the market value of one. Here is a case in point. The *Estates Gazette* says that "the finely-situated town house, No. 146, Piccadilly, adjoining the residence of Lord Rothschild and Apsley House, has just been sold by Messrs. Grogan and Boyd. The price has not transpired, but we believe it is about £50,000. The house has a very fine garden, extending back to the park." Mr. C. D. Rose was the late owner.

met his death at the hands of the Danes in 870. On the site of the Monument stood an oak-tree, in the branches of which the king sought refuge from his foes. At nightfall he emerged from his leafy hiding place and secreted himself under the Bridge which spanned a stream called the "Goldbrook." A wedding party, however, passing over the Bridge in the evening, observed the king's gold spurs glittering in the moonlight, and in this way his retreat became known to his enemies. He was taken back to the tree in which he had previously hidden himself, and shot with arrows, and his body was afterwards removed to Bury St. Edmunds and interred in the Monastery there. On Goldbrook Bridge is inscribed a record of the event. Local tradition has it that many years ago the existing inscription was followed by the words, "Cursed be the wedding party that passes this Bridge."

THE Collection of Japanese works of Art belonging to Sir Trevor Lawrence, Bart., Fellow of the Japan Society of London, was formed between the years 1869 and 1894. The earlier part of that era was the great period for collectors. Japan had its unrivalled Art treasures almost intact, and it was still in the infancy of its present too well developed attempt to imitate and degrade them for exportation. We all know how the whole country has changed in the last thirty years or so in commerce, war, and political organization. But only the few are aware how much it has also changed in Art. One of the richest parts of the Collection is that containing netsukés, okiminos, and statuettes. The statuettes are properly classed with the others, because most of these are only statuettes meant to serve a use. The use is of the slightest. The netsuké is a button fixed by a cord to any small article, such as a pipe case or tobacco pouch, to prevent it from slipping through the wearer's girdle. Such things with us would be buttons and nothing more, set off with perhaps a little meaningless ornament. In Japan they are carvings in ivory, wood, or similar substances, as exquisite in their way as any work on the Greek gems. The taste, the fancy, the humour of the people—the last especially—all are here. The pipes, the tobacco pouches, the pipe-cases, the inkstands, the brush-cases, exhibit the same wonderful variety of illustration of the national life. The lacquer work, in which the Japanese easily surpass all other nations, is particularly well illustrated in the Collection. Hanging pictures, embroideries, and miscellaneous things in wood, ivory, and other materials form another division, and after them come the ceramics. Nothing these wonderful people may do in the future can ever quite equal, as a contribution to the World's treasures of mind and taste, what it has done in the past.

In connection with the Church of St. Raphael, where the marriage of the Duc of Aosta and Princess Hélène took place, there is a story not generally known. It was built (says the *Saturday Review*) with the moneys of a converted Jew named Raphael. Just after the building was completed, Raphael had a dream that he would die within a week after the consecration of the place of worship. As a matter of course he endeavoured to delay the consecration by fair and unfair means, until a priest, with the help of a licensed victualler from the neighbourhood, who procured a bottle of *absolutely pure* wine, consecrated the edifice. Then he told Raphael, who took to his bed and died three days afterwards.

A SINGULAR ceremony has taken place at Neuilly-sur-Seine, in the course of which a reliquary was handed to Count Urbain de Maille, representing the Duc de Madrid, by M. Edouard Drumont, in the presence of a group of Legitimist notabilities and a notary. This reliquary consisted of a crystal oviform vase, opening in the middle, and surmounted by a fleur-de-lis in copper-gilt. In it was suspended a dried human heart, and at the bottom of the vessel were some pieces of broken crystal. The heart, if certain documents and traditions are to be accepted, was that of Louis XVII., and the proceedings opened with the reading of an autograph letter from Don Carlos, in which the writer thanked M. Drumont for the homage which he had paid to this precious relic of the Royal martyr, which he, the Prince, accepted in order that it might be deposited in the Chapel of the Castle of Frohsdorf. As in such a matter everything depends upon the genuineness of the relic, the solemn declaration of the donor was regarded as a pious proof of its Royal origin. He affirmed, raising his hand as Frenchmen do in a Court of Law, that the heart was certainly the one which he had inherited from his mother, and that it came into her possession from the hands of M. Gabriel Pelletan, who in his turn had treasured it for fifty-three years, he having rediscovered it at the Archbishopric, and recognised it as the one which his father had entrusted to Monsignor de Quelen. Dr. Pelletan had, it appeared from documentary evidence, made so bold as to abstract the heart of the young King when he conducted a post-mortem examination of his body upon his death in the Tour du Temple, by order of the Comité de Sûreté Générale. The doctor pre-

served the heart as an object of adoration and veneration, and on the return of the Bourbons endeavoured to restore it to Royal keeping. Circumstances, however, were against him; but immediately before his death, in 1828, he supplicated by letter the Monsignor de Quelen, then Archbishop of Paris, to receive the treasure, in order that it might be handed to the Royal family. The Archbishop accepted the sacred trust and gave a receipt for the heart. Then came the Revolution of 1830, and with it the sack of the Palace. The vase was broken in the Courtyard, by one Lescroart, who was ignorant of its value, and he carried away merely the papers which were found with the vessel, but subsequently by his aid M. Gabriel Pelletan recovered the fragments of the shattered vase, which still bore the number seventeen and the stars mentioned in the receipt which had been given by the Archbishop. Further search revealed in a heap of sand the Royal heart.

STANDING on one of the highest points in Sussex, 600 feet above sea level, the new Church of St. Leonard, Turner's Hill, commands a magnificent panorama of Sussex and Surrey scenery. The style is founded upon that of the 14th century, and local stone from the Selsfield Quarries has been very extensively used in its construction, the fine quality and colour of this stone adding some distinction to the building. At some future date it is intended to complete it by adding a Western Tower and Porches, and to introduce a West Window. The Church at present consists of a Nave with Clerestory and side Aisles, and a Chancel with Aisles of which that to the north is gabled and intended for an Organ Chamber. Space is provided for about 400 persons. The Architect was Mr. Lacy W. Ridge, F.R.I.B.A., of 5, Verulam Buildings, Gray's Inn.

THE Bolsover Colliery Company has decided to build a Model Village at Creswell on similar lines to the one at Bolsover. There will be between three and four hundred houses, Co-operative Stores, a Reading Room and Institute, and a Dissenting place of worship. The Village will be built on land situated between the Midland and East to West Railway.

OLD English mezzotints and coloured engravings seem to be in great favour with collectors, judging by the prices secured at an auction sale held by Messrs. Phillips, Son & Neale. The catalogue included 134 lots, which realised an aggregate of nearly £1,200. Amongst the best prices realised was £40 for a portrait of Mrs. Hardinge; "A Nest of Cupids," by Schravonetti, after Miss Aspinall, £41; "Maternal Love," by Tomkins, after Russell, £37; "Mrs. Q. W. Blake," after Huet Villiers, £33; a pair of opals—Lady playing harp and a lady contemplating a miniature, £30; "Mrs. Mills," by J. R. Smith, after Englehart, £41; "Georgina, Duchess of Devonshire," by Tomkins, after Downham, proof, £40. A small painting by G. Morland, with engraving, fetched 66 guineas.

ERECTED at Dalry by the Corporation of the City of Edinburgh, the new Baths have all but reached completion, and will, it is expected, be opened in the course of a week or two. Situated on a site in Caledonian Crescent, in its general aspect the interior of the new building is very similar to that in Infirmary Street, but a number of improvements have been introduced which go to place the new building ahead of the old in respect to general completeness. The building itself is a brick one, with a handsome stone Front to Caledonian Crescent. A prominent feature here is the Entrance Hall, laid with tiles, and well lighted from all sides. One matter which has been aimed at in the construction of the building has been the provision of sufficient light and air, and, in both respects, this object has been attained, the interior of the building having a light airy appearance, while absolute cleanliness is ensured from the fact that, owing to the construction of the building, there being no basement flat, the hose can be turned on to any portion of it. Most of the pipes used, it should also be stated, are of iron, as being less subject to expansion and contraction than lead. The estimated cost of the building, exclusive of site and furnishing, is about £9,000.

A CHICAGO Architect, Mr. J. Sidney Villere, has received from the brothers De Reszké, the famous Opera Singers, a commission to build them a princely Lodge at their country seat in Poland. Every part of the structure is to be completed in Chicago and sent to Poland in sections. This is believed to be the first instance in which Western ideas of Architecture and comfort have been adopted by any foreigner of artistic tastes.

WHEN Huxley was a small boy his great ambition was to be a parson. Some years after his ambition was to be a working engineer. He has said that he often wished to be what the Fates were dead against. For example, both he and his great friend, Mr. Tyndall, were at one and the same time candidates for Professorships in Toronto University, and, as the Americans would say, they were both "licked." At an earlier stage in his career some of his friends thought he might probably spend his days as a Navy surgeon, for, like his illustrious master Darwin, he served on board a British man-o'-war; and like him, too, he collected great heaps of Natural History facts from the remote seas and lands which he visited. On the North Australian coast the Fates were taking good care of young "Sawbones," coaching him up to become one of the most distinguished anatomists and physiologists of the century.

IMPORTANT alterations have been made at the Manors Railway Station, Newcastle, in connection with the doubling of the lines, and increased traffic is noticeable at Elswick and Heaton. Time was when Newcastle had but one Railway Station; now it has six—the Central, the Manors, Heaton, Elswick, New Bridge Street, and Jesmond, with almost the certainty of a seventh, at West Jesmond, at no very remote date. The first Station was the house standing near All Saints' Schools at the Manors, and was used in connection with the North Shields and Newcastle Railway opened in 1839. The second Station was a stone house that is yet standing in Railway Street, Scotswood Road, and the third was a long wooden erection situate at the upper end of the Forth—at no great distance from the Infirmary. The latter was succeeded by the Central Station. There is no need to refer to the history of the other Newcastle Stations. All that need be said is that they are the product of the rapid increase of the City.

THE new Free Library for Hammersmith is to be built in the style of the English Renaissance, the walls being of red brick, with stone mullioned windows and cornices. A reference to the drawings shows that simplicity of arrangement has been aimed at, the leading idea of the Architect (Mr. Maurice B. Adams, F.R.I.B.A., of Chiswick) being complete supervision through all the public departments at a glance from the issue counter in the Central Hall. This is so placed that the entrances to all the rooms are in immediate view of the officials in charge of the issue counter, while the glazed screens will enable them to see all that is going on without leaving their posts.

AFTER much procrastination, an energetic effort is being made to completely restore the old and historic Church of Saint Eustache, near the Central Markets, in Paris. A report has been drawn up on the subject by M. Lamouroux, who points out that the restoration is absolutely necessary. The patching which has been carried on intermittently for some years is utterly useless, and the Church remains a peril to the public. Last year, for instance, the foundations were discovered to be in a dangerously disastrous condition. It is estimated that over £28,000 will be required for the work of restoration. Most of this money will be advanced by the City, and the Government will also furnish some funds. Saint Eustache was finished in 1642, and is a curious mixture of the Gothic and the Renaissance styles, like the old Hotel de Ville. It contains the tombs of Colbert, the Minister of Louis Quatorze, and the poet Benserade. The work of restoration will require at least six years, according to M. Lamouroux, who strongly insists on the necessity of preserving an edifice which is a national monument.

The great wheel has revolved on its own axle at last. It has taken a long time to complete, but an undertaking of this kind cannot be hurried; and England can now boast of having beaten the Yankee in the matter of big things, by having the biggest wheel on record. The Ferris Wheel at Earl's Court is considerably larger than that which was one of the features of the Chicago Exhibition, and it is quite an undertaking—a twenty minutes' revolution, we believe—to go round it. As a vantage point from which to see London, with its maze of streets and housetops, it quite puts St. Paul's in the shade.

WHAT may be regarded as the chief work in which the Clyde Trustees have been engaged for the past twelvemonths is an extensive hydraulic installation. The hydraulic system of cargo cranes was adopted by the Trustees after they had received tenders for both hydraulic and electric cranes from specifications prepared by Messrs. Deas and Baxter. The designing of the buildings for the hydraulic installation was entrusted to Messrs. Burnett, Son, and Campbell, Glasgow. The Engine House measures 131 feet by 22 feet. While avoiding undue ornamentation, the Architects have endeavoured, by an effective disposition of the Accumulator Tower and Smoke Stalk, and by emphasising the necessary horizontal lines of the Boiler Shed and Engine House, to give dignity and style to the structure, and by its incorporation with the gateway and building to render it essentially a portion of the Dock. The contractors for the work were Messrs. John Paterson and Son, Limited, Glasgow.

DR. HENRY D. LITTLEJOHN, of Edinburgh, who has just received the honour of knighthood, has a wide reputation as an authority in matters of public health and medical jurisprudence. For years he has been officer of public health for the city of Edinburgh, and in a wider capacity he has come before the public as officer of health to the Board of Supervision in Scotland. The British Institute of Public Health, when holding its annual Sanitary Congress in Edinburgh a few years ago, elected Dr. Littlejohn to the presidential chair, and the University of Edinburgh at the same time conferred upon him the honorary degree of LL.D. We congratulate Dr. Littlejohn upon this timely recognition of his services in Sanitary matters, holding as we do that Governments too often pass the skilled Specialist by for the tub-thumping politician or the large-pursed partisan.

ST. GEORGE'S, Hanover Square, is wealthy enough to do things handsomely in the matter of Free Public Libraries and Reading Rooms provided out of the rates. This is made manifest in the case of the new Library in Chapel Place North, South Audley Street, which is a terra-cotta building, adjoining some public gardens, where the leafy trees give a pleasant view from the windows. There is a spacious Reading Room and Lending and Reference Libraries. All the fittings, desks, tables and bookshelves are of oak. The building itself has cost over £6,000, exclusive of furniture and equipment, and the site has been obtained from the Duke of Westminster at a nominal rent. A noteworthy feature is a Children's Lending Library for young people between ten and fourteen years of age.

THE official career of Mr. A. C. King, the head of the Educational Library at the South Kensington Museum, and senior keeper of that Institution, has been brought to a close by his retirement under the age limit regulation. The vacancy thus occasioned makes the third important post under the Science and Art Department which will be at the disposal of the

new Vice-President of the Council, the other two vacancies being the Directorship of the Dublin Museum and the Curatorship of the Bethnal Green Museum. One of the last official acts of Mr. Acland was the sanction of the purchase of the large and valuable Collection of Woodwork of the Mediæval and Renaissance periods at the Peyer sale in Paris.

LORD TENNYSON was not a sailor, and not even an amateur yachtsman, although he could write about the sea and seamen with charming, and on occasions, with powerful effect. The proposed Tennyson Beacon, to be erected on Highdown, Freshwater, is, nevertheless, quite appropriate. The site of the Beacon forms part of the Manor of Farringford, Tennyson's celebrated home; and the spot was a favourite of his. Mr. Pearson, R.A., has designed the tall Iona Cross, 32 feet high with the pedestal, which, when put up, is to form a Beacon for mariners; and the Trinity House and Board of Trade have agreed to accept it as national

To the memory of the late Emperor of Germany a Memorial Church is now being built in Berlin, and the designs for the stained glass windows, which are to be contributed by the Empress Frederick, the Freemasons of Germany, Count von Moltke, and sundry officers of the Emperor's bodyguard, were thrown open to competition. Several German and French firms, as well as English ones, entered the lists, and the designs of Messrs. Campbell, Smith & Co., of Newman Street, Oxford Street, were accepted as being the best. They have chosen as their subject for the large Choir Window, the gift of the Empress Frederick, three over life-size figures of Our Lord, St. Paul and St. Peter, with attributes introduced into the borders surrounding them.

It is suggested that, after the present year, instead of the award of one Art Scholarship annually, tenable for three years to the School of Art, Liverpool, together with a grant of £50 per annum for maintenance, there should be awarded (a) two Scholarships annually, one giving free admission to the School of Art and another to the Day Classes of the School of Applied Arts, with a grant in each case of £30 per annum, tenable for two years; (b) one Scholarship annually, open to students of either of the above Schools of not less than two years standing of the value of £60, and tenable for one year at an approved Art School or under an approved teacher in London, Paris, or other place approved by the Technical Instruction Sub-Committee.

At the recent Exhibition of the Home Arts and Industries Association, which has just closed, the Della Robbia Pottery showed a very important exhibit, having a stall some 30ft. in length allotted for their wares, filled with a most interesting variety of the home and cottage industries, including wood carving, iron work, embroidery, inlaying, spinning and hand-woven goods, baskets, leather stamping, and brass work. Some 400 pieces had been transported from the modest little workshops at Birkenhead. Most of these, with the exception of some few patterns which had to be reserved to execute orders from, found purchasers, and no little admiration was expressed at the remarkable development and improvement which was manifested since the previous year's exhibit.

THE Bill for the Improvement of Dunoon Pier has passed through the Committee of the House of Commons. The Police Commissioners have for a number of years been in negotiation with the present owners of the existing Pier, and an agreement to purchase has been arrived at. The purchase price is £27,000, and, in the opinion of the Commissioners, is a reasonable bargain. The net revenue from the Pier and other property purchased is £2,500 a year, and all that is required to pay interest and to provide sinking fund on the sum borrowed is £1,600 a year. The Commissioners propose to give accommodation at the Pier to the extent of 440 feet in length, and this will allow three large Clyde steamers to come alongside at the same time. At present the Pier could only accommodate one. The difficulties of coming in and clearing out are very great, and sometimes as many as four steamers were waiting outside to come in. The Commissioners have come to an arrangement with the steamboat owners exempting them from dues for ten years, and no doubt after that period the dues from that source will be an additional and valuable security. The £40,000 to be borrowed is considered ample for the new works and for the purchase.

A NEW building is to be erected for the accommodation of the members of the Essex County Council.

A SKETCH BY F. T. W. GOLDSMITH.

property and to keep it in good repair. The only little difficulty that remains is the cost. The price of the Beacon is £1,000, of which £750 has been subscribed. There is no fear, however, of the remainder not being raised with ease.

THE plans for a Tower, to be erected on a commanding position on the heights above the town of Oban, on a spot known as Battery Hill, have been prepared. The Tower, which will rise to a height of 100 feet, will be 250 feet above sea level. The design is in the old English style, pierced with twelve ornamental Gothic windows. It will contain an internal spiral staircase, with platforms at intervals, from which magnificent views of the bay, the sea, and neighbouring islands will be obtained. At some future time it is intended to build in connection with the Tower a Choir Chapel, a Museum, and a Gallery of Art. These buildings are to be reached from the Tower by ground arches. The Tower itself is to cost between £5,000 and £6,000.

"GAINSBOROUGHS" AS AN INVESTMENT.

THE picture buyer, who haunts Christie's with a cheque-book, will be staggered by an article in the *Speaker* called "The Commercial Connoisseur." This pours odium on the speculators who give ten thousand pounds for a Gainsborough simply as an investment. "It is the genius of Capel Court that presides at Christie's, and directs the beat of the auctioneer's hammer. It is not the favourite Artist who is knocked down to the highest bidder, not the delicate quality of his style, not the exquisite pleasure that is yielded by his brush. It is his value as an investment. He is a competitor not with the great painters of his age and school, but with Brighton A's and the mysterious railways of the American continent. . . . Ten thousand is given for a Gainsborough because the investor thinks this is a prudent appropriation of his money. He has a strong faith in the stability of Gainsborough stock, just as old ladies believed in Consols. Consols were never beautiful; they did not make a rainbow of imagination in this vale of tears; but they inspired a sense of comfort and security. So the owner of the Gainsborough, when he hangs it on his wall, will think of it, not as a lovely picture, but as his ten thousand pounder—a thing of canvas, paint, and frame in which he has sunk a fortune." There is a good deal more to the same effect, and unless we are much mistaken, the picture investor will be displeased. His reply would probably run something like this: "Why on earth should I be assumed to care nothing for a valuable picture which I purchase at a very high figure? The nation gave seventy thousand for an Old Master out of the Blenheim Collection. That was done in order that a monumental work of its kind might become national property. This was not a speculation on the part of the Treasury; it was a judicious investment, governed by a genuinely artistic motive. Why am I more of a huckster than the nation? I have a real pleasure in the possession of a costly painting. I do not gloat over it solely with the idea that it represents so many thousands. Some wealthy men buy diamonds for their wives, because diamonds are always so much capital, but that does not prevent them from appreciating the effect of the gems round a woman's neck." On this it might be remarked that diamonds are products of Nature rather than Art, and that there is no comparison between their barbaric splendour and the subtle genius of a noble picture. Money invested in diamonds is, so to speak, in its natural element. It is earth to earth and dross to dross. Still, there is something to be said for the connoisseur who has the double satisfaction of genuine pride in an artistic possession and the knowledge that the money he gave for it is always safe. But is it always safe?

MEN WHO BUILD.

No. 20.

MR. JOHN FRANCIS BENTLEY.

THE truth must be told though the heavens fall. It was the Cardinal Archbishop himself who begged John Francis Bentley to come out of his shell, that by stepping into the sunshine of his reputation, instead of basking in the shadows of his Art, he might aid in pronouncing the welcome of the new Catholic Cathedral of Westminster, and by such indirect means help to swell the funds necessary for the completion of so ambitious a scheme.

John Francis Bentley belongs to a small coterie of Architects of whom the World—in the common sense—knows nothing and sees less, and of whom the vast majority of their professional brethren never hear of. He was articled in the middle fifties to Henry Clutton, who himself prepared complete drawings for the Cathedral in the French Gothic style, close upon thirty years ago—some period before he became totally blind and relinquished practice. Although Henry Clutton was a man of great Architectural skill and worked in many instances in conjunction with Burgess, Mr. Bentley never took kindly to office routine, but registered a vow that he would never enter another Architect's office, although he lingered on with Mr. Clutton for some two years after his articles had expired. It was during this time that a little episode occurred which throws a very happy light upon International Competitions of five and thirty years ago. Clutton and Burgess prepared an elaborate set of drawings for Lisle Cathedral, and Burgess, who was always a very shrewd and clever man of business, had all the sheets lettered up in French. The reports and detailed estimates of the works, which were very voluminous, were translated and almost rewritten by Frenchmen, and when the whole thing was complete, young Bentley was deputed to take the drawings to Paris and despatch

them from there to their destination. The shrewdness of Burgess was justified, for the judges, strong in their conviction that the Englishman's drawings were the work of Viollet-le-Duc, awarded them the premium and any amount of praise. When, however, the mistake was discovered, our French friends found a way out of their trouble, and, as history knows, Messrs. Clutton and Burgess did not build the Cathedral at Lisle.

When Mr. Bentley threw off the yoke of his probationary period, he started to study the works of Europe, and we hardly know whether for the last thirty years he has taken greater pains in hiding himself in Venice, in Ravenna, and in Rome, or in retiring to his rooms in the Adelphi, where he might shut himself away from all contemporary work, and create just what his soul dictated. You yourself do not know many

of the fine things John Bentley has done, but if you had never seen anything beyond the interior of Carlton Towers—the joiners' work alone of which cost over £30,000, it would have sufficed to determine the capability of its Architect. If you mistake not, Corpus Christi, at Brixton Rise, is another of Mr. Bentley's Churches, and when completed will be the largest Gothic Church in London. For many years he was a Goth pure and simple, more English in his methods than his old master, and than even Burgess, but the Eastern Churches have always impressed him by their magnificence of colour, and

PLAN OF THE CATHEDRAL AT WESTMINSTER: T. F. BENTLEY, ARCHITECT.

thirty years of ardent study have made him one of England's great colour masters.

At a time when Continental Italy was in so distracted and deplorable a condition as scarcely to have the spirit, or the power, to undertake any work of magnitude, Venice, apart from the scene of strife and already enriched by commercial enterprise, began a second Cathedral in honour of St. Mark. Their previous building having been destroyed by fire, the Venetians determined to take S'anto Sophia—which they considered the most splendid Church in the World—for their model, and accordingly sent for the best Greek Architects, who thus brought the Byzantine style into Italy for the second time. Every vessel that cleared out of Venice for the East was obliged to bring back a certain amount of marble for the

Russia. For weeks at a stretch Mr. Bentley has studied this particular Church, in face of Ruskin's assertion that it has neither grace nor elegance, but a sort of barbaric magnificence formed on the plan of the Greek Byzantine Churches, and, like them, adorned with clumsy mosaics. San Vitale at Ravenna is another of John Bentley's favourite studies, principally for its close affinity in planning to St. Sophia's and its wonderful mosaic work, all of which has obtained the admiration of successive ages. These with, of course, Santo Sophia itself, and several other of the Early Christian Churches in Dalmatia and Greece, have provided the inspiration for the new Cathedral of Westminster, the Foundation Stone of which Cardinal Vaughan laid a few days since. The construction of the Church will be proceeded with exactly

invariably fixed in wrong positions, and I have seen really good interiors gradually "waste" away and the mouldings and arches go for nothing, under the influence of stained glass ignorantly disposed.

Mr. Bentley does not believe in the manufacture of pretty drawings, and for thirty years has had no cause to make one. Within the shell of his own convictions, out of which he has stepped, in this instance, for the benefit of others, there is the atmosphere of refinement, of truth and fidelity to the canons of Architectural Art; and if that truth and fidelity prompt him—in his work—to begin just at that point where the ordinary Architect leaves off, it is because he knows that ordinary work is invariably bad, and extraordinary work ten times worse.

SKETCH OF THE NAVE OF THE CATHEDRAL: J. F. BENTLEY, ARCHITECT.

Cathedral, which took nearly a century to complete. In 1071, Doge Domenicho Silvio, by the aid of Greek Artists, began to decorate the interior with marble and mosaic until the whole fabric was encrusted, and so completely was St. Mark's of foreign extraction that it produced for centuries no effect whatever upon the Ecclesiastical Architecture of other parts of Italy, for the external appearance of the Cathedral is no less Byzantine than its interior. From the number of its cupolas St. Mark's has often been said to savour of a Mosque; whereas the truth is that the Mahomedan House of Prayer was copied from the Christian, and not the Christian from the Mahomedan. Both the Turkish Mosques and St. Mark's are descended from St. Sophia, which is equally the parent of the Churches of

after the method of the Ninth Century. The whole fabric will be erected in ordinary London stock bricks, which will eventually be entirely encased with the richest marbles and mosaics, as funds allow. The mosaic decoration of the Nave will portray the history of the Catholic Church in England from the coming of Augustine to the present time. The Transepts and the Sanctuary will contain the history of the Mother Church, and the twelve Chapels will follow their respective dedications. Not a square inch of stained glass work will appear in the whole Cathedral, the Architect requiring a "pure white light" to enhance the value of his interior. I should like to be commissioned, he says, to destroy five-sixths of the stained glass in English Churches. Beyond the vileness of its design and colouring, it is

CALLINGTON Church Bells, which have been in bad condition for many years, are to be restored by Mr Aggett, of Chagford, who has contracted to complete the work by the harvest festival.

THE Minister of Public Works, Rome, states that the Italian Government has always been perfectly ready to listen to the proposals of Switzerland for the construction of a Simplon Tunnel, and that the Italian Government looks very favourably upon the enterprise.

As an indication of the interest now taken in Natural History, over 100,000 persons have passed through Mr. Rowland Ward's jungle at the Empire of India Exhibition since the opening day.

The Stourbridge County Court is to be considerably extended, so as to provide a second Court for the Registrar. The second Court will be on the upper floor, and the work will shortly be put in hand.

"THE DESTRUCTION OF EDINBURGH."

A CHAT WITH THE MARQUIS OF TWEEDDALE.

IT was good of the Marquis of Tweeddale, being the Chairman of the North British Railway Company which contemplates erecting the monster Hotel in Princes Street, to meet us in our Crusade against "The Destruction of Edinburgh," and if suavity of manner be calculated to turn away opposition, then the opposition we feel it our duty to make to this monstrous scheme would be ended. But there is hope for us. Not that we think it at all possible, or even probable, that the forces we are bringing to bear upon the authorities will have any happier result than that of reducing the proposed height of the erection, and thus bringing it more into scale with the surroundings. Lord Tweeddale was accompanied at our interview by the Marchioness, who, as many people know, is about the only woman in the peerage who has more than once taken up an official position on the foot-plate of a railway engine and successfully driven an express train. We commenced our onslaught upon his Lordship by fearlessly asserting that Railway Directors had no souls, and the Marchioness as fearlessly agreed with us, but when we came to closer quarters, the Chairman stuck to his last, and insinuated that his Company would like, if we had no objection, to obtain a little interest on the capital sum, over £200,000, we believe, to be expended on the suggested building. It is thought that the loss of two floors—two floors of bedrooms—would be a very serious reduction of income, especially as first-class Hotel accommodation is almost an unknown luxury in Edinburgh. It was our counter suggestion that the new offices of the Company need not be incorporated in the Hotel building, which could then be reduced in size; but there is the cost of administration in two separate buildings to be considered, which, in our belief, is not an insuperable difficulty. After discussing many other

anxious to express them over a *nom-de-plume*. We detest such weakness, and only under very exceptional circumstances shall such communications be considered, although correspondents who do not accept the responsibility of their own convictions, need never fear that the BUILDERS' JOURNAL will betray their confidence. Amongst all the letters we have yet received upon this Edinburgh matter, there are no less than eleven written over fictitious signatures, five of which are from men who mirror our own convictions, and whose positions could

well have supported the dignity of their own names.

MORE CONVINCING SKETCHES.

We publish in this issue a sketch taken from Princes Street, with Mr. Beattie's building blocked in to actual scale. This will show, even more strikingly than did the competitive perspective which appeared in our last issue, what the purpose of the Railway Company really is. We also insert a sectional sketch of the late existing building and the proposed building, with the heights of the various features plainly marked thereon. Then

communicate with him. We will try again.

It should be stated that all the sketches which are published this week were prepared under the direction of Lord Wemyss, and are those referred to in his letter which concurrently appeared in the *Edinburgh Evening News*.

RESTORING A WELSH CHURCH.

THE interesting Church of St. Michael, Michaelston-y-Vedw, near Cardiff, supposed to be the Church of St. Michael built by St. Medw, one of the missionaries sent by Rome to South Wales in the first century, is being carefully restored by Messrs. Seddon & Carter, of Cardiff. The walls of the present Church are thirteenth century, but there are fragments remaining of pre-Norman work that might be part of the original Church of Medw. These, however, have suffered greatly, as have also the thirteenth century stonework details, by a fire which must have taken place at the end of the fourteenth or early in the fifteenth century, for early fifteenth century details remain untouched. The thirteenth century Church was a simple parallelogram, 78 ft. by 24 ft., lit by lancet windows of the simplest form. It was, after the fire, divided by a Chancel Arch to make a Nave 52 ft. long and a Chancel 26 ft., and a finely proportioned battlemented Tower was at the same time built at the west end. It is probably to this date also that the South Porch belongs, the South Chapel being about a century later. The lancet windows had all been blocked, mostly about a century ago, when eight large wooden windows were inserted; but five of these lancets have been opened up, although, unfortunately, most of their stonework had been either removed or destroyed by fire, and in one of them was found the interesting fragment of thirteenth century decoration, painted on the plaster in red outline of the Saint—most likely St. Medw. In the restoration, the greatest care has been taken to preserve every fragment of old work, of whatever date, which can in any way explain the history of the Church. The fifteenth century roofs of the Chancel and Porch have been restored to their original state,

PROPOSED NORTH BRITISH HOTEL, EDINBURGH, LOOKING TOWARDS CALTON HILL.

details which it is not wise at the moment to disclose, Lord Tweeddale was good enough and honest enough to offer us any personal assistance he could to further any legitimate effort we might make to save the dignity of the City of Edinburgh. We shall avail ourselves of his kind offices a little later. In the meantime, we invite correspondence from everyone interested, but, on no consideration, do we invite communications to which anything but the name of the writer be appended. Many Architects are a weak-kneed lot of fellows—all anxious to express most decided opinions upon everything and everybody, but extremely

there are two sketches of the site, one as it appears with a very uncouth erection upon it, and the other with the suggested Hotel in all its glory. As Mr. Brydon asserted in his letter, and as he has repeated to us strongly since, the question of whether Mr. Beattie's design is a dignified one, or whether it is not, does not in the faintest degree influence our intentions. We wrote to Mr. Beattie asking him to address us a communication, but Mr. Beattie was away from his office, and beyond thanking us for forwarding advanced proofs of the letters already published, it did not occur to his "firm" that it was possible to

though, unfortunately, it was found impracticable, even with the greatest care, to use many of the old timbers. A new ceiling has been put to the modern roof of the Nave. The floor has been relaid to its original level, with a slope of about a foot from east to west of the Nave; the Tower Arch opened out, the old lancet windows restored, and two new stone tracery windows inserted in the place of two of the old wood ones. The old Altar stone, which was found in the pavement of the Chancel, has been restored to its proper use. The cost, when completed, will be about £1,000, and it is hoped to open the Church by the end of August.

LEEDS NOTES.

[FROM A CORRESPONDENT.]

L EEDS leaves one with the impression that its people, if they have any love for Art, are either too busy or will not take the trouble to beautify their streets. Many schemes for the improving and widening of streets have, during the last twenty years, been formulated by the City authorities, but these have been carried out in a piece-meal way, and the effect cannot be said to be satisfactory.

The City has a good Art Gallery, at which there has been this Spring one of the best Exhibitions of Pictures and Sculpture to be

cannot be said to be a success. At the top the chimneys have been made the most important feature, being arched together in a curious way, and carried up to a great height, so that it is impossible, at first sight, to say whether they are chimneys or simply ornamental features, while the gables between have dwindled to mere dormers.

The new Corporation Baths in Kirkstall Road, the first of a series which the Council is building, by Mr. W. Hanstock, seem excellently planned and thoughtfully carried out. The front seems to be somewhat out of character with the purpose of the building.

Two new Banks will shortly be in progress, one for the National Provincial Company, by Messrs. Perkin & Bulmer, which will have the lower story in granite, and be Renaissance in style; and the other for Messrs. Williams, William Brown & Co., by Messrs. Waterhouse & Son, which will also have its ground story in granite. It is to be hoped that these will add breadth and dignity to the Domestic Architecture of the City.

A limited competition is now being held for another new Bank for the Yorkshire Banking Co., which is to be erected on one of the finest sites in the City, at the corner of the City Square and Boar Lane. The site should give an opportunity for a very imposing building. The City Council has under consideration the entire rebuilding of the Markets, and the erection of a handsome Stone Front to Vicar Lane. The Committee proposes having a competition for this building, offering premiums of £100, £25 and £5.

MONEY prizes, amounting to £200, for the beautification of Stations, have been offered by the North-Eastern Railway Company. The floral decoration of the larger town Stations on the Company's system would be impossible except in a few instances, and the intention on the part of the directors was, no doubt, to encourage country stationmasters and their staffs to spend their spare time in such a way as to give pleasure, not only to themselves, but to the railway passengers. One of the conditions of the competition is that existing buildings should be utilised as much as possible, and it is curious to note the many ingenious devices employed at some of the Stations.

The eight hundred portraits at Bethnal Green Museum have now been removed to the new National Portrait Gallery. The transfer occupied a fortnight. Mr. Cust, the director of the Gallery, states that the pictures will not be ready for public view for about six months yet. An expert restorer has been commissioned to examine all the pictures carefully and to restore them where necessary. This is a work which will occupy a considerable time.

A CONTEMPORARY states that the Secretary of the Glasgow Architectural Association, Mr. Walter R. Watson, has been appointed to assist Mr. Wm. J. Anderson, Principal of the Architectural Department in the Glasgow School of Art.

At a meeting of the Perth Presbytery on Wednesday last, it was agreed to restore the Middle Parish Church, Perth, to the state it was in before the recent fire.

THE NEW CHIMES AT THE ROYAL EXCHANGE.

A PROBABLY unique performance of the new Carillon set up in the Tower of the Royal Exchange by Messrs. Gillett and Johnston, of Croydon, and identical in mechanism with the automatic chimes supplied by the firm in question to the Town Halls of Manchester and Hove, to Wakefield Cathedral, and to Eaton Hall, the Duke of Westminster's seat in Cheshire, was heard last week. The machinery of the old chimes, constructed on what is known as the "Belgian principle," by Messrs. Dent and Co., nearly half a century ago, had suffered so severely from wear and tear that of late years its "functioning" had been productive of discordant sounds, eminently calculated to grieve the judicious ear. At its best the former Carillon, though consisting of sixteen bells, had only been able to play four tunes, and had for no inconsiderable period of time played them sadly out of tune, two or three of the bells belonging to the upper register having not only undergone deterioration of tone, but lost their true pitch. The new machinery is constructed to play twenty-one several and distinct tunes, three of which are sacred melodies, to be exclusively performed on Sundays, and eighteen secular airs, told off into three week-day groups, representing the English, Scotch, and Irish nationalities respectively. After a short statement, chiefly referring to the mechanical improvements characterising the new Carillon, had been made by Mr. Gillett to a small party of persons specially invited to hear the first public performance of the entire series of English, Scotch, and Irish melodies, Mr. Deputy White severed a ribbon traversing a portion of a small room in the lowest storey of the Royal Exchange Tower, and by so doing set free the weights by which the mechanism is worked, and which will henceforth be released by the action of the great clock at nine a.m., at high noon, and at six and nine p.m. respectively. Forthwith the chimes rang out the solemn strains of "Rockingham" ("When I survey") with perfect truth of intonation, and followed on with the more cheerful measures of "God Bless the Prince of Wales." It is noteworthy that the peal of bells is tuned in such sort as to play tunes written in or transposed to the natural key and that of G, its dominant fifth. The barrel, bristling with massive metal pins, which, as it revolves, raise and release the hammers that strike the bells, is worked by a 15 cwt. weight connected with the clock; and

THE VIEW OF CALTON HILL, EDINBURGH, AS IT IS.

seen out of London, but the public are too indifferent to visit it.

Architecture, too, cannot be said to have advanced much during the last thirty years; in fact, since the Town Hall was built about 1858, there has not been a really fine building erected in the town. Of the most recent may be mentioned the Prudential Insurance Company's block in Park Row, by Mr. Alfred Waterhouse, R.A. This building is excellently planned for its requirements and substantially constructed—and I am aware that this cannot be said of all the most modern buildings in the town, many of which evidence the desire to build something adapted to requirements in the cheapest manner possible—but the Front of the Prudential Building cannot be said to be in Mr. Waterhouse's most happy manner. The Front is too crowded; it wants plain wall space.

The same Architect has designed the Yorkshire College, a large block in brick and stone. The latest addition to this group is the College Hall, which was opened last year. Externally, it has a dignified aspect, but inside it is bare, with a flat ceiling and a gallery running right across the main window (this, however, was not the Architect's fault), and, moreover, its acoustics are defective.

In connection with the Yorkshire College, a large new Medical School has been built from designs by Mr. W. H. Thorp. This building is one of the finest of its kind, admirably fitted up, and adapted to its purpose. The elevations in brick and stone shew considerable feeling, especially the side towards the Infirmary, but it is a little lacking in dignity, breadth and repose. Its Architect has too great a love for prettiness in detail. The same may be said of the new banking premises of the Yorkshire Penny Bank, by Messrs. Perkin & Bulmer. The directors of this Bank deserve praise for allowing their Architects unlimited means and a free hand; but the building shews this rather too clearly externally in the mass of carving lavished upon it.

The same measure of praise honestly given to these buildings cannot be given to two other works of a public character. The first of these is the large mass now being built on the finest site in the City, the new Post Office. This has been designed by Mr. H. Tanner, of Her Majesty's Board of Works. Here the greater part of the site has been covered with low shed-like buildings, with a false-looking Front carried up several stories higher. Too much thought seems to have been expended on this Front while the sides and back have been left to look after themselves. Even the Front

THE VIEW, AS IT WILL BE.

the hammer specially affected to the service of the tenor bell weighs forty pounds, the weight of the other hammers being proportionate to the graduated sizes of the smaller bells.

IN connection with the Methodist Free Church at Cleckheaton, new Sunday School premises, which will comprise a Lecture Hall and seventeen Class Rooms, are about to be erected at a cost of £5,000.

STILL another of the Newmarket famous landmarks has been removed. The old King's Stables, at the end of the Beacon Course, which were erected by James I. in 1609, have been pulled down.

POTTERY OF FIVE THOUSAND YEARS AGO.

AT University College, London, the Exhibition of the objects unearthed by Professor Petrie, in Egypt, will no doubt attract many who wish for detailed knowledge on the subject. Surprised as scholars must have been at the first details of these explorations, they will indeed be more astonished when they examine the large and complete Collection of Antiquities belonging to the race who some five thousand years ago established

a large and flourishing settlement in Middle Egypt. The excavations during the season of 1895 were conducted by two parties—that of Professor Petrie supported, as on former occasions, by Mr. Jesse Howarth and Mr. Martyn Kennard; and a second detachment of explorers working for the Egyptian Research Account, under Mr. Quibell and Mr. Duncan. The field covered by the work of the two parties was a small one, extending from Ballas to Nagada, about thirty miles north of Thebes, and on the west bank of the Nile. Here shortly after the fall of the Twelfth Dynasty and during the weak period of the Thirteenth, a large horde of foreigners established themselves. The ancient Egyptian town of Set-Nub, which had been founded as early as the time of the Fourth Dynasty, was deserted, and the new race founded a settlement—it can hardly be called a town—about a hundred yards away from the Egyptian town. The tombs are totally different from any of those of the native Egyptians, being on the average not more than five feet deep, and with the body laid in a crouching attitude and facing south. The objects in the tomb seem certainly to indicate a belief in immortality, as we find vessels for food and drink as well as toilet requisites. These latter objects are especially curious, consisting of combs of bone and ivory neatly carved, with handles in the form of stags or gazelles; large jars (one holding over two gallons is exhibited) of scented fat; and slabs of slate

with a small portion of green malachite upon them, and a rubber. These objects were, no doubt, used to prepare the paint with which to adorn the body. They have, however, an interest beyond revealing to us the vanity of this ancient race, as the forms which they assume afford interesting information as to the surroundings of these people in their primitive home. They assume the form of various animals—the gazelle, ibex, elephant, fish of various kinds, and the turtle. Whatever opinion may be formed of the theories put forward by Professor Petrie during his very brilliant archæological career, he has at least the merit of having been the first to show that

it is the small objects, and above all the pottery, which are the most important in establishing the date and the character of a primitive settlement. Here the study of the pottery is indeed the solution of a number of difficult problems which arise in connection with this astonishing discovery. The earlier pottery is indeed remarkable. The beautiful contours of the vases and their unvarying regularity of form at once arrest attention. We find that the whole of this work is hand made and not worked upon the potter's wheel, each article being built up, smoothed, and

between the pottery decorated with a wavy line as a handle and that found by Professor Petrie and Mr. Bliss in the excavations at Tel Hesi, the site of the ancient Lacish. There seems little doubt, therefore, that we may class these invaders of Egypt as part of the same race whom we find later in the fair Libyans and the Amorites of Syria. More remarkable still are the series of painted vases, which are probably, as Professor Petrie suggests, imported ware. The vases are of a buff colour, with the designs painted in red. The designs represent ships, with many oars and two large

steering oars, and double tents like cabins on deck. The most curious feature, however, is the standard with which each ship is provided, and which is placed upon a pole over the principal cabin. These standards vary, and either represent the names of the ships or the towns from which the traders came. They include such emblems as an elephant or ostrich, or trees, birds and hills. Much of this pottery resembles that of Crete, Cyprus and the Troad, and would seem, along with the ship vases, to connect the importers with the wandering bands of traders and merchants who sailed round the coasts of the Mediterranean.

NOTHING could be done to extinguish the fire in the Tower of the Parish Church at Callington, Cornwall, which was discovered to be on fire early on Tuesday morning, and which burnt itself out in less than three hours, destroying the splendid peal of six bells, cast by Pennington in 1777, and the clock erected by public subscription about thirty years ago. The Tower, which is of granite, and about 100 ft. in height, surmounted by four pinnacles, is seriously damaged, and the upper portion will have to be rebuilt.

MIDDLETON TOWERS, Norfolk, for many years the home of the late Sir Lewis Jarvis, has been sold privately for less than half the amount it was valued at a few years ago. The Castle of Middleton was built in the reign of Henry VI., and that part of the present Mansion

which up to a recent date was known as the Old Tower, was the gateway of the original building. Sir Lewis Jarvis, at enormous cost, had the whole place restored.

TENDERS are invited for the preservation and repairs of the local Harbour at Ancona for a period of five years. Some further particulars may be seen on personal application at the Commercial Department of the Foreign Office, between the hours of 11 and 6 daily.

AN Architectural competition has been opened by the proprietors of the *Figaro*, limited to French Architects, for designs for an important addition to their premises in the Rue Drouot.

INTERIOR OF ST. MARK'S, VENICE: FROM A DRAWING BY H. L. FLORENCE.

polished by the hand. The fact of the polishing being vertical and not horizontal is proof of this. This hand-made pottery is particularly interesting, as the custom exists to this day among the Kabylee tribes of North Africa, whose pottery bears a most striking resemblance to that of the "New Race." It, however, survives also in Egypt, where there is a large production of hand-made pottery at Ballas and other districts of Middle Egypt, entirely the work of women, the wheel-made pottery, which is a very extensive industry in Egypt, being entirely the work of the men. The pottery, however, affords more information than this. There is a distinct resemblance

HENRY TEIXEIRA DE MATTOS.

WE lately paid a visit to 49, Hugh Street, Eccleston Square, the studio of Mr. de Mattos, a Dutch Sculptor, a man well-known in his own country and ambitious, like so many foreign artists who have come over to win honour and distinction in the land of their adoption. To do this is open to every man of talent and energy, and talent and energy Mr. de Mattos possesses. Doubtless a painter has fairer prospects than a sculptor, for the sculptor's Art is less popular amongst us and more costly in its production. Few private individuals have space enough in their own houses for the exhibition of Sculpture, and public bodies have but little money at their disposal for its commission. The time may come when our Parks and other places of public recreation will be adorned with statuary by well-known men, and public funds devoted a little more lavishly to the acquisition of it.

In Mr. de Mattos' Studio, Mr. J. Sherwood Westmacott resided, previous to his retirement from active work. He was a man of great talent, a worthy successor of his uncle, Sir Richard Westmacott, R.A., and his cousin, Professor Westmacott, R.A. Nothing could be more striking than the difference in the work, conception, and execution of Mr. J. Sherwood Westmacott and in that of Henry Teixeira de Mattos. In the former's work refinement and delicacy of execution were noticeable in every detail; in the latter's, vigour, boldness, and a certain ruggedness of treatment prevails. Mr. de Mattos is an "impressionist" in marble, and delicacy of execution is supplanted by bolder handling, which may shock many preconceived ideas of what Sculpture should be. But it is refreshing to discover a man who has the courage of his opinions, combining the creative talent with a thorough knowledge of his Art. Mr. de Mattos' work commands a great deal more than this even. We give two illustrations of his conceptions: "The Cub Stealer," and a Crucifixion. The first is life size, or perhaps, more than life size, a work only suitable for a large Gallery. It represents a powerful negro robbing a panther of her young, and the infuriated animal has surprised him in the act. Characteristic ferocity is powerfully shewn in both figures, and the terrible strain upon the negro's strength is admirably depicted.

This is undoubtedly a work of genius: it is terrible in its inception; can lay, and does lay, no claim to please the many; but it is nevertheless a fine imagination and appeals to men who know what Art really is.

The Artist here illustrates his views on how Sculpture of this class should be treated. It is fierce and bold and the chisel marks are undisguisedly shewn and lend a rugged charm to the work, refreshing in its vigour, original in its conception, a departure from the tameness which so frequently characterises modern Sculpture. The other example of this Sculptor is one which from the dawn of Christianity has exercised a fascination for Artists and has claimed more of their devotion than any other.

Mr. de Mattos tells us that this is the first time he has attempted to represent the sublime tragedy of the Crucifixion, and how absorbed he became in working out his conception of it. This figure of the dead Christ is no conventional representation, no tame effigy, but a "man of sorrows" who has suffered that most terrible and agonising torture, death on the Cross. There is the dead Christ; the head has sunk upon the breast, the muscles of the arms and chest show the terrible tension; the whole figure expresses the agony that has now been passed, and the drawn features tell the tale of resignation and suffering. The Artist relates how, to convey his ideal, he modelled from a man who hung by his hands, and so painful was this, that only for a few minutes could the model sustain the strain of it. "Too painfully real" will be the verdict of

many, may be of the majority, perhaps. But here is a man who has dared to depict the realism of that dread event of Calvary. For our own part, we welcome the daring, and would fain see the work of such men as Mr. de Mattos in our Churches, than the constant reproductions of tame Sculpture which are generally to be found, and upon which it were waste of words to comment upon.

Happily there are signs that Architects are becoming alive to the importance of intrusting the sculpture of the figure to individual Artists, and not to tradesmen. The late J. D. Sedding set a noble example in this respect, and other men are following in his steps, so that the time may come, and soon, when our Churches may have Painting or Sculpture by distinguished men. Who that has travelled abroad and visited the old Churches, has not found how his imagination has been fired, his intellect aroused and his eye educated and charmed by beautiful Art, the work of men whose names are deathless, and who have made the Churches famous for their conceptions? In our own time Reredoses by the hundred have been erected, windows put in, paintings executed, and

A CRUCIFIXION: HENRY TEIXEIRA DE MATTOS.

yet it would be difficult to point to many that rise above mediocrity. If Architects pressed upon their clients how all important it is that the figure, if represented at all, should be represented by accomplished hands; and if Architects would be content to interfere as little as possible in what is best left to the Artist, our buildings would gain in interest, our Churches would be more beautiful, and Painting and Sculpture would find a home amongst us, and the men would be forthcoming to do good work. Mr. Richmond's beautiful mosaics in St. Paul's Cathedral point to this most desirable consummation.

There are many objects of interest in Mr. de Mattos' studio, which illustrate his individuality. His busts are powerfully modelled, and he can use his brush with skill and ease. We shall welcome the news that Henry Teixeira de Mattos—who has taste, like most good men, the bitterness of hope deferred—has obtained the appreciation his work demands.

A NEW Chancel has been added to the Church of St. Sabinas, Woolacombe, at a cost of £200.

THE FAMOUS SPEETON CLAY.

YORKSHIRE GEOLOGISTS AT FILEY.

AT a point about four miles from Filey, recently visited by members of the Yorkshire Geological and Polytechnic Society, the purple boulder clay gives place to a black clay, known to Geologists by the name of Kimmeridge clay. This in its turn is succeeded by the Speeton clay, which is of neocomian age. This particular section of clay, which underlies the chalk, is of special interest to both the amateur and the professional Scientist, and Geologists from all parts of the World come to see it. To amateurs it is attractive because it yields such fossils and ammonites and belemnites which lend themselves so readily to an effective display when placed in a cabinet; while those who may perhaps be best described as professional and technical Geologists regard the beds as of value because of the unique character of their situation and development, and because, in the opinion of many, they give the key to some of the problems relative to the succession of secondary rocks. The Speeton beds are the marine equivalent of

the Wealden deposits of the South of England, which are fresh-water deposits. The beds at Speeton have been carefully studied by Professor Judd, and more recently by Mr. G. W. Lamplugh, of the Geological Survey, and he divides them into three zones by means of certain belemnites. The lowest zone is represented by *Bel. Lateralis*, the zone above it by *Bel. Jaculum*, and the upper bed by *Bel. Brunswickensis*. Bearing this division in mind, a section of the party made minute examinations, and were successful in finding specimens of all these three belemnites. Other fossils discovered included *Crioseriasturte*, *Exogyra sinuata*, *Vermicularia Sowerbyi*, *Am. Speetonensis*, and many more that the Geological Student might expect to find here. Struggling bravely over the huge boulders that carpet the beach beyond this point, the explorers passed under the shadow of the great perpendicular cliffs—the paradise of the climber and a favourite haunt of those who in due season find pleasure in shooting the beautiful gulls that cluster hereabouts. It was, of course, to see that most interesting geological object—the section of red chalk, that the travellers, by this time footsore with their travels, imposed upon themselves this further mortification. As most people who have read anything about the geology of this part of the coast are aware, this section of red chalk is the Hunstanton limestone, corresponding to the Gault of the South of England, and forms the base of the cliffs. It is a delightful spot for the fossil hunter, but its inaccessibility at certain states of the tide is a difficulty which has yet to be got over. To reach the place it is necessary to trudge for a long distance over a rough roadway

of big boulders, and then, as one disappointed Geologist expresses it, "the tides are up almost before you can get there." The upper beds of the chalk have not yet been properly worked out. They certainly offer a rare field to adventurous Geologists, who would probably be able to attain their object by chartering boats or descending by means of ropes after the manner of the famous egg climbers on the Bampton side of the cliffs. The exploration of the upper beds has been accomplished to some extent from the inland, but the results await verification and amplification, such as only a thorough examination of the seaward sections could furnish.

THE funeral of the late Mr. Thomas Chatfield Clarke took place at Highgate Cemetery, on Wednesday last. Mr. Shoppee (ex-President) and Mr. Rogers (Secretary) were present on behalf of the Surveyors' Institution, of which the deceased was President last year, as well as representatives of numerous other organisations with which he was prominently connected.

Professional Items.

ARMADALE, SKYE.—Mr. Woulfe Brenan, C.E., Oban, has made a survey of the Bay, and is now preparing plans for the new Pier which Lord MacDonald proposes to erect at this port for the south of Skye.

BIRMINGHAM.—The following is a list of the papers which it is expected will be read during the autumn meeting of the Iron and Steel Institute, which takes place in Birmingham on August 21st, 22nd and 23rd next:—(1) "The Direct Puddling of Iron," by E. Bonehill; (2) "The Thermo-Chemistry of the Bessemer Process," by Prof. W. N. Hartley, F.R.S.; (3) "The Hardening of Steel," by H. M. Howe; (4) "The Mineral Resources of South Staffordshire," by H. W. Hughes, F.G.S.; (5) "The Iron Industry of South Staffordshire," by D. Jones, Secretary of the South Staffordshire Ironmasters' Association; (6) "Tests of Cast Iron," by W. J. Keep; (7) "Small Cast Ingots," by R. Smith-Casson; (8) "The Estimation of Oxide of Iron in Steel," by A. E. Tucker, F.I.C.; (9) "Tests of Cast Iron," by T. D. West; (10) "The Use of Nickel in the Metallurgy of Iron," by H. A. Wiggins.

BRADFORD.—At the last meeting of the Bradford (Yorks) School Board plans were passed for new Infants' Department at the Princeville School, and the addition of the present Infants' School to the Mixed School, at an estimated cost, for building and furniture, of £2,300. The total amount of work passed was for £4,419.

BIRKENHEAD.—Additions are to be made to the "Claughton Concert Hall," Birkenhead, which comprises a large promenade room. The contract has been let to Messrs. McLachlan & Batkin for £600. Plans have been prepared, and the work will be under the superintendence of T. Taliesin Rees, Architect, Hamilton Street, Birkenhead.

BURNLEY.—The Foundation Stone of St. Alban's Church, Todmorden Road, Burnley, has been laid. On plan, the Church will consist of Nave of seven bays, with small Transept towards the easterly end of South side, and Organ Chamber on the North. A lofty arch will give entrance to the polygonal-shaped Sanctuary, the windows of which are high up above the adjoining Vestries. Accommodation will be provided for 673 adults. Externally the Church will be of stone. The west window is a large six-light traceried one, and over it is a niche for the Statue of St. Alban. The Architect is Mr. Medland Taylor, F.R.I.B.A., of Manchester.

CAMELFORD.—The Chapel which is to be enlarged and to have new Schools, in Fore Street, Camelford, was built about sixty years since. Outside it has rather a bold appearance, but the interior arrangements would not favourably impress a lover of Architectural beauty. One of the side Galleries is erected over a narrow roadway leading to the river. At one time it was thought advisable to sell the Chapel and build suitable premises on a new site, but Messrs. Wise & Wise, Architects, of Launceston, were consulted, and plans were prepared by them for what will be practically a new Chapel and School Room. The School Room will be mainly over the roadway already referred to, but will allow for two good Vestries or Class Rooms under. There will be two entrances, the main one opening into the Vestibule leading to the new Gallery at the end of the Chapel, the other—the present entrance—leading to School Room, Vestries, and Lavatory. The windows will have leaded lights of tinted glass. Pitch pine will be used for the interior of the building, and the walls will be built of stone obtained from the Fenterton estate, with granite dressings. The contractors are Messrs. Hooper & Dennis, the amount of their contract being £645.

CARDIFF.—Mr. E. Seward is preparing plans for a new Museum building in Park Place, to cost about £12,000, for the Cardiff Corporation.

DEVONPORT.—Mr. Henry Geo. Luff, Architect, has been commissioned to prepare plans, &c., for converting No. 7, Fore Street, Devonport, into a Conservative Club for Devonport. The premises, when completed, will have a spacious Bar, Billiard, Reading, Card, Smoking, and Secretary's Rooms, and a Bowling Saloon and necessary Offices. A handsome Portland cement Front is to be erected in the place of the present glass bulk, which, when finished, will be a great improvement to Devonport.

EDINBURGH.—The Theatre Royal has been under extensive alterations. A very complete installation of the electric light has been made. The ceiling has been formed into panels with effective wood mouldings, and the panels filled in with high relief cordelova, a material made from pulp and extremely light, which gives all the effect of modelled plaster work. The treatment in silver and blue is novel and successful. The wall spaces immediately under the ceiling and the recesses above the boxes to the right and left of the proscenium have also been covered with this material, a high relief design being used and treated in rich gold ornament and ivory background. The walls of the house have been papered in a rich tone of red, which enhances the value of the ivory and gold plaster work. The whole of the decorations have been carried out by Mr. Thomas Hall, 8, George Street.

IRELAND.—The Council of the Institute of Civil Engineers' of Ireland has awarded a Mullin's Gold Medal to Mr. W. Kaye Parry, A.M.I.C.E., for his paper, entitled "The Application of Recent Advances in the Study and Treatment of Sewage."

KILMALCOLM.—The new Free Church at Kilmalcolm stands at the junction of Bridge-of-Weir Road and Glebe Street. The style adopted is the Early English period of Gothic Architecture, which is treated in a bold, effective, and simple manner. The whole of the mason work is of white freestone from Auchinlea Quarry, all the openings having chiselled chasings, and the walls are faced with rock-faced rubble work. Including the end Gallery, the Church has comfortable sitting accommodation for 450 persons. The floor has a slight fall towards the Pulpit, which is placed in a shallow recess and kept as low as possible. The wall on both sides of the Pulpit is finished with cusped panelled woodwork, 7 feet high. The Spire rises to a height of 105 feet. The cost of the erection is nearly £3,000. Mr. Wm. Tennant, Hope Street, Glasgow, was the Architect.

LANCASTER.—The plan for the Marsh Board School will consist of a Large Hall to accommodate 180, two Class Rooms 72 each, and six ditto to hold 60 each—making total of the mixed department, 684. The Infants' Department will consist of Large Room for 180 infants, Babies Room for 60, and Class Room for 60—total 300. Total capacity of School accommodation, 984. The estimated cost of the Infants' School, to be built first, is £2,000, exclusive of boundary walls and playground. The Corporation has decided to apply for power to borrow £17,000 for the purpose of opening out New Street, adjoining the L. & N.W. Railway Station.

LIVERPOOL.—The tender of Messrs. Henshaw & Son, Chatham Street, Liverpool, for the erection and completion of the proposed new Central Fire Station and Police buildings in Hatton Garden, in accordance with plans and specification and quantities, for the sum of £33,594 has been accepted, subject to the Local Government Board approving of the plans and sanctioning the borrowing of the sum of £35,000.

MANCHESTER.—The Manchester School Board has under consideration the re-building of the Central School, Deansgate, in a central position, in consequence of its purchase by the Great Northern Railway Company. In view of the large public expenditure thereby involved, it seems desirable that the Technical Instruction Committee and the Manchester School Board

should come into conference, with the object of considering whether or not the work now carried on in the day and evening departments of the Central School might not be provided for in the new Technical School Building.

MEVAGISSEY.—The new Chapel and School at Mevagissey, which about twelve months ago were destroyed by fire, will be of modern style, and of more elaborate Architecture than the old. The Chapel, to be built of local stone with granite dressings, will be in Gothic style, and will accommodate about 400 people. In the Front will be two entrances, with double doors opening outwards. The windows will have Cathedral-tinted glass. The interior fittings are to be of pitchpine and mahogany. Attached to the Chapel will be a Vestry, and adjoining a School building, with Class Rooms. The work will probably be completed by next March. The Architect is Mr. F. C. Jury, of Tregonissey, St. Austell, and the builders, Messrs. Moyle and Mitchell, of Chacewater.

NOTTINGHAM.—In the competition for new Chapel and Sunday School, for the United Methodist Free Church, Gregory Boulevard, Nottingham, the design of Mr. F. W. Dixon, Architect, of Manchester and Oldham has been selected.

OKEHAMPTON.—The Okehampton School Board has accepted the tender of Messrs. Harris & Sleeman in £493 18s. to erect Fowling Down School. The only other tender was Mr. J. Brooking, Northlew, £495. Mr. Harry Geen's plans for East Street Boys' School were adopted, and he was asked to prepare an estimate.

OTLEY.—The Corner Stone of the Science and Art Schools at Otley was recently laid by Mrs. Fawkes, of Farnley Hall. The accommodation on the ground floor comprises four rooms, to be used for Model and Freehand Drawing, Painting, Perspective and Geometrical Drawing, and Art Master's Room. The rooms are separated by movable partitions, so as to be convenient for large or small Classes and Exhibition purposes. The upper floor will be used for Laboratory, capable of accommodating twenty-four students, with Platform at one end and Class Room adjoining. There are also rooms for Manual Labour Classes—Wood Carving, Cooking, &c. The drains are glass-lined iron pipes, and all stone is from local quarries. The Corridors giving access to the rooms are fire-proof red polished concrete. A. Marshall, of Otley, is the Architect.

PENARTH.—The Penarth School Board is about to invite a limited number of Architects to submit designs in competition for new Schools at a total cost of about £8,000, though it is understood only a portion of the Schools will be built at present.

PONTEFRAC.—Messrs. Tennant & Bagley, of the Market Square, Retford, have been successful in getting their plans accepted by the Pontefract Town Council for the new Hospital, estimated to cost £5,000.

RENDCOMB, GLOS.—St. Peter's Church, Rendcomb, Gloucestershire, was re-opened on St. Peter's Day, after undergoing considerable alterations from the designs and under the superintendence of Mr. F. R. Kempson, of Cardiff and Hereford. Messrs. Collins & Godfrey, of Tewkesbury, being the contractors. During the progress of the work some interesting features were brought to light, among them being portions of a thirteenth century Arcade and the north doorway to the Nave.

STRATHBLANE.—The Window erected in Strathblane Parish Church to the memory of Mr. Guthrie Smith, has for its subject Christ appearing to the woman after His resurrection, as recorded by St. Matthew, when He met them, saying, "All Hail." The robe of Christ is in white, the other robes are respectively ruby and a deep yellow. The figures in the bottom panel represent the angel appearing to the Marys at the sepulchre and saying to them "He is not here, for He is risen." The canopy is Gothic in style, and is treated in

silvery tones of white on a blue background. The Window was constructed by Messrs. J. & W. Guthrie, Glasgow and London, to the design of Mr. Gould.

ULVERSTONE.—Building operations have been commenced for new Infant Schools, Church Walk, Ulverstone, to hold 300 children in connection with the Church, from plans by Messrs. J. W. Grundy & Son, Architects. The Memorial Stone will be laid on the 23rd inst. by the Duchess of Devonshire.

YELVERTON.—Mr. Charles King, Princess Square, Plymouth, has designed an excellent edifice to accommodate about 150 worshippers, as a Chapel of Ease to the Parish Church of Buckland Monachorum. It consists of a rectangular building and Vestry, lighted with lancet windows, a group of five well-proportioned windows being placed at the east end, and all being filled with Cathedral glass. A hanging lamp in front of the Chancel and six lamps on handsome brackets, serve for lighting the building at night.

YORK.—At St. Peter's School, York, the new Gymnasium was recently opened by Major-General Thynne. The Gymnasium is 60 ft. by 30 ft. and 33 ft. high inside. At the entrance nearest to the School are two Dressing Rooms with Gallery over. The building has an open timber roof. The style of Architecture is Late Gothic to harmonise with the existing buildings. The room is lighted by four tall mullioned windows on each side and by a large traceried window facing the Clifton Road, and others over the Gallery. Over the west doorway are carved the arms of the Dean and Chapter of York, and over the south doorway a sun-dial and armorial bearings. Mr. Francis W. Bedford, A.R.I.B.A., of Leeds and Westminster, was the Architect. The carrying out of the main portion of the work was entrusted to Mr. T. P. Barry, of York.

THE ORGAN IN BACH'S TIME.

THE Organ as it existed in Bach's day, and as in most essentials it exists now, is an instrument peculiarly suggestive in regard to the realisation of the finest and most complete effects of harmony, of modulation, and of that simultaneous progression of melodies in polyphonic combination which is most completely illustrated in the form of composition known as the fugue. It is so for two or three reasons. In the first place, it is the only instrument in which the sounds are sustained with the same intensity for any required length of time after they are first emitted; however long a note may have to be sustained, its full value is there until the moment the finger quits the key; a quality which is invaluable when we are dealing with long suspensions and chains of sound. Secondly, the opportunity of playing the bass with the feet on the pedals, leaving the left hand free for the inner parts, puts within the grasp of a single player a full and extended harmony and a freedom of manipulation such as no other instrument affords. Thirdly, and in the case especially of fugue compositions, the immense volume and power of the pedal notes impart a grandeur to the entry of the bass part in the composition such as no other medium for producing music can give us. In the time of Bach this splendid source of musical effect was confined to the great Organs of Germany. The English Organs of the day had, in general, no pedal board, and it is probably owing to this fact more than to anything else that Handel's published organ music is so light, and even ephemeral, in style, as compared with Bach's—that he treated the Organ, as Spitta truly observes, merely like a larger and more powerful harpsichord: without the aid of the pedal it would be rather difficult to do otherwise; and the English Organs of the day were in every respect a much lighter and thinner affair than the "huge house of the sounds," the thunder of which was stored in the Organ Gallery of many a Lutheran Church.

The Spire of St. John's Church, Bognor, is being rapidly completed, and it is expected that the work will be finished during the present month.

SOCIETY MEETINGS.

Members of the Society of Engineers Visit Dover.—A visit was paid by the Society of Engineers to the Outer Harbour Extension Works, the existing Harbour, and the Electricity Supply Co.'s Station, at Dover, on the 3rd July last. Among those present were Mr. Wm. Geo. Peirce (President), Mr. Joseph Bernays, Mr. Jabez Church, Mr. Charles Gandon, Mr. George A. Goodwin, and Mr. A. T. Walmisley (Past Presidents), Mr. G. Maxwell Lawford (Vice-President), Mr. Charles Mason (Member of Council), Mr. J. C. Coode, Sir William H. Crundall, J.P. (Mayor of Dover), Sir John Jackson, Mr. G. A. Pryce Cuxson (Secretary), and others.

The Dover Outer Harbour Extension Works now under construction at Dover have been designed for commercial purposes, and not as a Harbour of Refuge, the chief object being the provision, in all states of weather and tide, of accommodation for the embarking and landing of passengers on and from 'cross channel steamers. The powers for the construction of the Harbour were obtained by the Dover Harbour Board in 1891. The work now under construction, as a first instalment of the complete design, is the East Pier, the contract for which is being carried out by Sir John Jackson, Messrs. Coode, Son, and Matthews being the engineers.

The Admiralty Pier and Inner Harbour affords protection to the western side of the new works. There are two basins: one known as the Wellington Basin of about 3½ acres, with gates of 70 ft. opening, and the other, the Granville Basin of 4½ acres, with gates of 65 ft. opening. The present Outer Harbour of 13½ acres will become an Inner Tidal Harbour at the completion of the extension works. A new Lighthouse with a masonry Tower, surmounted by a lantern of the fourth order, is being erected at the turret end of the Admiralty Pier, and the slipway at the upper end of the Wellington Basin is capable of hauling up a safe load of 800 tons. Mr. A. T. Walmisley, as Engineer to the Dover Harbour Board, has charge of the Admiralty Pier and Inner Harbour.

The Dover Electricity Supply Co.'s Station consists of offices occupying the west portion, and adjoining these are the Engine and Boiler Rooms. The Engine Room, which is faced with glazed bricks throughout, is 100 ft. in length by 30 ft. in width; the Boiler Room is 100 ft. long by 45 ft. wide. The Engine Room contains the main engines and dynamos, which at present are two 100 K.W., one 75 K.W. and one 50 K.W. Morley Alternators, each coupled direct, through a flexible coupling, to Raworth vertical compound condensing engines, in which forced lubrication is adopted. Situated on one side of the Engine Room are two continuous current dynamos, coupled direct to vertical compound tandem engines. The Engine Room also contains two Tangye's centrifugal pumps, coupled direct to vertical engines, which draw water from the river Dour at a point about 100 yards distant, for use in the condensers, attached one to each of the main engines. All the engines are supplied with steam from a ring main, situated in the Boiler Room and drained by a McDougall steam trap. There are at present twenty-one public arc lamps in the streets, each of 2,000 N.C.P. The contract for the whole of the machinery has been, and is being, carried out by the Brush Electrical Engineering Company, Limited.

Institute of Civil Engineers.—The Council of the Institute of Civil Engineers has re-appointed as treasurer Mr. Hugh Lindsay Antrobus; as hon. secretary, Dr. William Pole, F.R.S.; and as the secretary, Mr. James Forrest, which office he has filled for the past thirty-nine years.

The Architectural Association.—The district round Cheltenham has been chosen for the excursion of this Association, and will furnish some Gloucestershire houses of Architectural interest, and some degree of freshness will be imparted by a steam launch trip up the Avon in the Pershore country, starting from Tewkesbury. The excursion will thus encroach to some extent upon the places visited during the Worcester excursion, when Mr. Aston Webb was president, and it nearly reaches the neighbourhood com-

prised by the Warwick programme. Cirencester, with its grand Church and great Porch, is too far across country to be reached from Cheltenham, and difficulty of access will exclude Northleach and Stowell, where Earl Eldon has a new house of some consequence. On Monday, August 12th, going northwards from the headquarters at Cheltenham, the excursionists, under the guidance of Mr. W. D. Caröe, will visit Southam House, with its farm-buildings, and Bishops Cleeve, with its Church and old houses, will make out the day. On Tuesday, Tewkesbury Abbey, old Bridge, and timbered houses in the streets will be seen, with the river trip to follow. Wednesday is to be devoted to Chastleton, on the borders of Oxfordshire. On Thursday, Broadway, interesting by reason of the old houses and Church, Staunton, Stanway, and Brickland will be visited. Friday is to be occupied at Severnhampton, Winchcomb, and Sudeley Court. On Saturday, the Associationists will take the City and Cathedral of Gloucester on their way home.

Congress of Archaeological Societies.—Delegates from all parts of England attended the Congress of Archaeological Societies, held on Thursday last, at the rooms of the Society of Antiquaries, at Burlington House, London. The subjects brought forward for discussion were (1) the better preservation of Municipal records, (2) County bibliographies, (3) the treatment of monumental remains, and (4) the present state of the Ancient Monuments Act. Sir John Evans, in speaking on the first subject, said that it was very desirable that all ancient records, whether in the hands of County, Municipal, or Charity authorities, Guilds, or other bodies, should be calendared, kept in a fireproof place, and rendered accessible to the public where possible. Mr. Paley Baildon expressed an opinion that the present custodians of such documents were in many cases grossly incompetent; and suggested that an Act of Parliament should compel all bodies of the kind to deposit their charters, &c., either in the Public Record Office or in a specially constructed building in each county. In discussing the treatment of monumental remains, Mr. St. John Hope pointed out the great amount of damage that was being done to sepulchral brasses and other monuments in Churches. One of the worst pieces of vandalism mentioned was the removal of several important 17th century tombs from Gloucester Cathedral when it was restored by the late Sir Gilbert Scott. They are now buried in the Dean's garden. Perhaps the most useful thing done by the Congress this year has been the bringing before the meeting the question of the Ancient Monuments Act, which has now become a dead letter, the Government having refused to schedule any more monuments or spend any money on those already placed under the Act. Mr. G. L. Gomme proposed that pressure should be brought to bear on the Members of Parliament for each county to compel the Government to put the Act into force.

AFTER several years' arduous work in sinking operations on a large scale at Aberdare Junction—a virgin coal district—by the Dowlais Company, what is known as the four-foot seam of fine steam coal, corresponding with the vein worked at Albion Colliery, has been reached by the sinkers. The coal won proves to be seven feet thick.

ON Tuesday a new Bridge over the River Welland was opened at Spalding. The Bridge, which is for vehicular traffic, has been erected by the Midland and Great Northern Railway Companies. With the exception of foot-bridges, there is only one other Bridge over the river at Spalding—about a mile distant from the present structure.

SHOREHAM is rapidly becoming a favourite place for those fond of residences of the Bungalow type, a number of these having been erected since last summer, while others are in course of construction. The beach where the Bungalows are situated is thus becoming quite a busy spot, and though practically shut off from the town by the river, the residences are easily accessible by way of the Norfolk Bridge.

PLANS for the new Hospital at Inverurie, have been prepared, and the expenditure on the site and buildings is to be kept within the sum of £2,000.

SAWDUST.

AN interesting little function which recalled the brilliant opening ceremony of the Bexhill Municipal Buildings, took place prior to the last meeting of the Bexhill Council, Viscount Cantelupe unveiling a Tablet, commemorative of the opening, which has been placed in a Corridor of the Municipal Buildings. The Tablet has been excellently carved by Mr. G. Roselieb, the design being the work of Mr. Stanley Young, son of Mr. H. Young. On either side of a bronze plate there are figures representing "Agriculture" and "Justice," supporting a canopy, carved in oak.

ON Friday the Foundation Stone of a new Lending Library in St. Domingo Road (opposite St. George's Church) was laid by Lord Stanley, M.P. The building contains a Lending Library, a large News Room, and general Reading Room for men, and separate rooms for women and boys; while accommodation is also provided for various technical classes.

HOLY TRINITY Church, Bristol East, for some time has been in a dilapidated state. Efforts are being made to raise several hundred pounds to restore the churchyard walls, to clean and paint the Church, and to improve the lighting. At a meeting of the Church Council recently, it was resolved to erect Choir Stalls, so as to have the Choir at the East end of the Church.

THE new sewer through Cross Street, Moretonhampstead, has just been completed by Parker Brothers, the contractors. It is not the intention of the authorities to proceed with another section of the work for some months, it being thought best to do it in sections at convenient times, so that the streets shall be clear and in good order during the time when so many visitors are staying in the district.

THE Prince and Princess of Wales have consented to open the new Front Building of the Royal Free Hospital on Monday, July 22nd. The cost of the new buildings, and of various other improvements which have been carried out during the past two years, amounts to £30,000, towards which sum £24,000 has already been raised.

THE Rotherham Town Council has applied to the Local Government Board for sanction to borrow £21,500 for the purchase of land, and the erection thereon of police buildings; for the purchase of the Mechanics' Hall; and for the alterations to municipal buildings. Mr. F. Herbert Tulloch, M.Inst.C.E., an inspector of the Local Government Board, has been appointed to hold an inquiry on the 16th of July. Increased accommodation for the police is urgently needed. The scheme, which has been on hand for a considerable period, includes the provision of a Borough Court.

ON Tuesday last the Foundation Stones of new Schools in connection with Rounds Green Church were laid. The total cost of the Schools will be £600. The accommodation provides for about 320 children. The building when erected will be used as a Sunday School, also, if necessary, for Elementary School purposes. Previous to the ceremony a service was held in the Church, at which the Bishop of Coventry preached.

THE "Cattley" Memorial Window at Worcester Cathedral was recently dedicated by the Dean. The Window was designed and executed by Messrs. John Hardman & Company, of Birmingham, is a four-light one, and is situated at the west end of the North Aisle. The original intention was to represent the subject of the Ascension, but as this subject is not suitable for a four-light window, the Artists suggested that as Worcester was the first Cathedral to be thoroughly restored, the design of the Window should be founded on the text, "Lord, I have loved the habitation of Thy house, and the place where Thine honour dwelleth."

At the sale of the treasures of a Japanese Daimio, at Foster's Gallery, 54, Pall Mall, two old sword-guards by Hirata Donin realised £15 each, a fine lacquer writing-box and panel by Ritsuo £45, and old coloured prints by Hiroshige, Haronobu, and Outamaro, in series, from £25 each set.

THE Camberwell Guardians have borrowed £2,000 from the London County Council, for the erection of Workhouse Workshops.

Correspondence.

"THE ARCHITECTURE THAT MUST BE ORIGINAL."

To the Editor of THE BUILDERS' JOURNAL.

DEAR SIR,—I am an optimist, and rejoice in that which is good—the Greek of Thomson, the Italian of Barry and Charles Wilson, the Roman of David Hamilton and Stark, and the Old Scottish and Italian of Rothead; also such good work as that of the Edinburgh men of fifty years ago—the High School by Hamilton, the Royal Institution and the Quadrangle of the University by Playfair, and the Calton Jail and the Royal Bank (Glasgow) by the Elliots.

But I abominate that prevalent Architecture which must be original—something that was never done because it was never worth doing; the new but not the true—original only in being a departure from what was the outcome of original Genius, as Tom Thumb and the Siamese Twins were departures from the original and true type of humanity. A common example of the prevailing "originality" is the wanton prostitution of "the Orders"—in their application, their proportion and their details; in the acute accentuation of particular features instead of a regular rhythm throughout; and in the suffocation of parts, to which the plan invited breadth, by masses of pompous and obtrusive ornament—"where honey-suckles, ripen'd by the sun, forbid the sun to enter." Shakespeare, who knew a good deal about most things, said "the World is still deceiv'd with ornament," and it is remarkable that the Edinburgh High School, the Quadrangle of Edinburgh University, and the principal facade of Glasgow St. George's Church—all buildings of the highest excellence—have scarcely been touched by the carver's chisel.

Many of our modern buildings remind us of the tricks of the modern musician in his "Variations" on old Scottish airs, in which the old Scottish air peeps out at intervals as a rippling brook endeavours to do occasionally from among the weeds that entangle it. The Architect has chosen a correct enough model, but he cannot let well alone; his individuality is greater than that of him by whom the style was created. Nevertheless, the old model is, in the hands of Genius, susceptible of endless varying. The Temple of the Parthenon was the model of at least part of the Edinburgh High School, and the Italian Palaces of the London Reform Club-house. What is wanted, and what seems to be despised, is Judgment. In a paper on "Greek Thomson" that I read some years ago before the Glasgow Architectural Society, I said: "He had, with the rich inventive imagination, the twin concomitant of Genius, the exact and all-governing Judgment. Genius sees its own limits. If it has not paced all its perimeter, it knows at least its own diameter. Judgment deters it from seeking to look into the unknowable. If its range be within a garden of culture, it will not seek to overleap the walls that it may explore the briars and brambles of the wilderness beyond.—I am, Dear Sir, Yours most truly,

THOMAS GILDARD.

133, Berkeley Street, Glasgow.

THE Foundation Stone of St. Alban's Church, Burnley, one of four new buildings about to be erected in the town as the result of an endowment by the Rector of Burnley, was laid on Saturday by Mr. W. A. Lindsay. It will seat 800 persons.

JULY 23rd has been fixed for the laying of the Foundation Stone, by the Duchess of Devonshire, of the new Infant School at Church Walk, Ulverston, Lancs.

EXTENSIVE alterations and additions are being carried out at the Trent Valley Brewery, near Lichfield, by Messrs. W. Sapcote & Sons, contractors, from plans prepared by Mr. R. E. Edmonds, C.E., of Colmore Row, Birmingham.

ALTERATIONS are to be made to the old Infirmary and Infectious Hospital at the Dewsbury Workhouse, at a cost of not exceeding £2,000.

THE Vestry of Hammersmith propose to pave with Jarrah wood, Goldhawk Road, Queen Street and Fulham Palace Road, at a cost of £22,000.

The Builders' Journal
COMPETITIONS.

No. 4.—A Village Church.

Designs are required for a Village Church to seat 200 people. The site is a hill-side, rising one in twenty from North to South, and situate in a stone country. The cost is not to exceed £2,500. Drawings to be submitted on or before Monday the 22nd of July.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Publishing.

The terms for free post Subscription to any part of the United Kingdom are SIX SHILLINGS and SIXPENCE per annum by half-yearly or annual prepayments.

Advertising.

SITUATIONS WANTED, SITUATIONS VACANT, PARTNERSHIPS, APPRENTICESHIPS.

Per line, Sixpence. Minimum charge, Eighteenpence. Three Insertions for the price of Two.

Prepayment in the above Advertisements is absolutely necessary.

Page or Paragraph Announcements, Trade Advertisements.

Prices on application.

Small Advertisements for current week's issue are received up to first post Monday morning inclusive.

Editorial and Publishing Offices:

Talbot House, Arundel Street,
Strand, W.C.

THE Eastbourne Corporation invites tenders for a cast iron curb, of the outside diameter of 35 feet, 1,000 tons of Portland cement, and 6,000 to 7,000 tons of cast iron pipes. Tenders should be sent in by July 22nd.

FOR the erection of a handsome and commodious Wesleyan Chapel in Palace Avenue, Paignton, the tender of Mr. Lammacroft, Dawlish, at £1,893 10s., has been accepted.

MR. J. M. BARRIE's article, under the title of "Old School Re-visited," written for the American Press, is to be illustrated with interior and exterior views of the Dumfries Academy, at which he was educated.

A NEW Baptist Chapel has been opened in the village of Trull. The edifice, a very pretty one of brick, with Bath stone dressings, has been built at the expense of Mr. T. Penny, of Taunton, the cost of furnishing being defrayed by subscription.

THE new English Church of St. James the Apostle, at Grindelwald, will be opened on July 25th.

Trade and Commerce.

The Glasgow Harbour Tunnel, which passes under the Clyde at Stobcross, was opened last week. The tunnel connects Mavisbank Quay, on the south side, with Finnieston and Stobcross Quays, on the north side, and consists of three tunnels, 16 feet in diameter, the side ones for vehicular traffic, and that in the centre for the passage on foot. The approach on either side is by a circular shaft, 80 feet in diameter, in which are operated the hydraulic hoists, raising and lowering the vehicles as they leave or enter the tunnels. The shafts are formed of cast iron segments, and lined with brickwork. The tunnels themselves are also lined with cast-iron segments, filled in with concrete and lined with glazed brick, presenting a particularly neat and pleasing appearance. All the tunnels were driven by means of shields and compressed air. The outer skin of the segments was coated by "grafting" with Arden lime, blown through a hole in the lining by air pressure. Each shaft contains six divisions for as many lifts, half being devoted to ascending to half of descending traffic. The maximum weight allowed for is about five tons, and the speed about 4 feet per second.

Power to determine Building Line.—Allen and Another v. London County Council.—In the Queen's Division, Mr. Justice Wills and Mr. Justice Wright heard a special case stated by a Metropolitan magistrate, who had made an order for the demolition of a certain building in the Metropolis as being beyond the building line. The question raised was whether the decision of the Architect as to the building being beyond the building line was conclusive and binding on the magistrate. A complaint had been made to the magistrate by the London County Council that the appellants began to erect a building beyond the general line of buildings on the north-western side of Birchington Road, Kilburn, without the consent of the County Council, contrary to section 75 of the Metropolis Management Act, 25 and 26 Vic., c. 102. The appellants, on November 13th, 1894, began to build four shops and houses upon the land at the corner of Birchington Road, Kilburn High Road, having a frontage of 22 ft. to Kilburn High Road, and 58 ft. to Birchington Road. This front in Birchington Road extended 16 ft. beyond the general line of buildings, as determined by the certificate of the Superintending Architect of the London County Council, who stated in it that the main fronts of the buildings in a certain row of houses formed the general line of buildings on the north-western side of Birchington Road, "in which road the building in question is situate, and the building in question would project beyond the prolongation of the said general line." It was contended on behalf of the appellant that the Architect had not by his certificate found that the building was situate in the "street, place, or row of houses" described as the north-western side of Birchington Road, and if he had so found, he had placed the building in a "street, place, or row of houses" in which the same was not situate. The respondents contended before the magistrate, that the certificate had determined that the building was situate in Birchington Road, and that such determination was binding on the magistrate. The magistrate adopted this

view on the authority of the case "London County Council v. Cross," and directed the demolition of so much of the building as was beyond the line. The question for the Court was whether the certificate showed that the house in question was situate in the street, place, or row of houses on and for which the general line of buildings was determined; whether it was the duty of the Architect to decide and find the situation of the appellants' building, and, if so, whether his decision was binding on the magistrate. The Court decided in favour of the London County Council, and gave judgment accordingly. Mr. Justice Wills said the question raised was whether the certificate of the Superintending Architect of the London County Council, who now represented the Metropolitan Board of Works under the Metropolis Management Act of 1862, deciding whether a particular building to which the building line applied in a street was decisive of the point in dispute. Looking at the Act apart from the authorities, the learned Judge would have thought that the tribunal which should decide that was the magistrate. But the matter had been much discussed both in the Divisional Court and in the House of Lords. It could not be said that the authorities were satisfactory. In 1886, in the case of "Barlow v. Vestry of St. Mary Abbott's, Kensington," Lord Watson held, without hesitation, that the Architect was the person to decide, while Lord Bramwell equally unhesitatingly held it was the magistrate. Lord FitzGerald agreed with Lord Watson. The majority of those learned Lords, therefore, were against the view that the magistrate was the deciding tribunal. The point also came before the Divisional Court in "London County Council v. Cross," where Mr. Justice Denman and Mr. Justice A. L. Smith both adopted the view that the Architect was the person. It was true that the case was subsequently overruled on another point, and, therefore, could not be called a binding judgment; but it seemed better to follow the views of this majority of Judges rather than to set up his own opinion. The point was not so important as it might seem, because the London Act of 1894 had made provision for the appointment of a tribunal of appeal against the Architect. On the second question the Architect must be taken as meaning to decide and determining that the building in question was in the street to which the building line

applied. Mr. Justice Wright, solely in deference to the judgment of the other Judges, concurred. Mr. Wedderburn, on behalf of the appellants, asked for leave to appeal if leave were necessary. This was granted.

Extension of the Tudhoe Iron Works.—The Directors of the Weardale Iron and Coal Company, in London, on Tuesday, decided to lay down new and larger rolling mills at a cost of £120,000.

Nettlefold's, Limited.—The sixteenth meeting of shareholders of Nettlefold's, Limited, was held at the Queen's Hotel, Birmingham. Mr. J. A. Kenrick, the chairman, said in moving the adoption of the annual report, that he wished to state that for the recreation of the employes they had a Club and Institute building, which had a Library containing 352 volumes. At King's Norton they had a very prettily laid-out Recreation Ground, to which a small addition had been made during the past year, and this was highly appreciated. Turning to the report, the result of the year's trading was a profit of £99,596 16s. 8d., and to this had to be added the amount brought forward, £38,032 17s. 9d., making a total of £137,629 14s. 5d. After paying the interim dividend and the interest on the preference shares, there remained £111,554 14s. 5d. Of that, £1,500 would go in directors' remuneration, and it was proposed to place to the reserve fund £25,000, and to the depreciation account £25,000, and to carry forward £12,979 14s. 5d., the amount placed to the depreciation account being practically taken, as he then foreshadowed, from the large amount carried forward last year. Then they would require £5,000 for interest on the preference shares, and they proposed to pay on the ordinary shares a dividend of 10s. per share, with a bonus of 10s., making practically 15 per cent. for the year.—The report was unanimously adopted.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

BOWYDD, BLAENAU FESTINIOG.—Accepted for lecture room and minister's and caretaker's houses. Owen Morris Roberts and Son, architects:—

Removing a Stigma. THE action of the Prince of Wales in calling attention to the emaciated finance of the British School at Athens was singularly opportune. It is one of the unpleasant paradoxes in which our nation unwillingly indulges, that while we still inculcate in our Public Schools and Universities a love of Latin and of Greek, and cultivate the regard and reverence of Classic achievement and tradition, we allow ourselves to be outstripped in the race of research by Germany, by America, and by France. We talk of Athena, worship her, but do not seek out her Temples. It is so simple to take even the Parthenon for granted, as if it were part of a stock at a valuation. The love of Greek Form, Greek Literature, and Greek Art is lapsing in the land; the Spirit of Commercialism—a mental Juggernaut—is rolling the Dead Languages to dust, and Archæology alone may remain to interest us in the ruins and remains of a great and glorious Past. For this reason, granting that we Moderns have to lose our acquaintance with the Greek language, it is essential that we should have a band of devoted scholars and students willing to garner for us what there is yet to learn in these Classic Cities of dead Empires; Empires where Man worked in his Might. It is only by perpetuating this love for Classic record and literature that we can again attain to or even approach the breadth and power of the Homeric line; or the austerity and imperishableness of the Greek Column. Architects and Archæologists are directly interested in this spirited attempt to revivify the British School at Athens. We have been following too closely in the later footsteps of Greece; poor and impoverished, the British School has been struggling on, with its

timid income of £500 a year, and its envious eyes at the German and French Schools which dig to the tune of generous thousands per annum. No wonder that at Delphi, at Olympia, we have been outrivalled. On the slopes of the Acropolis British scholars have worked under disheartening conditions, while the Foreign Schools have made discovery upon discovery, to the amazement and the appreciation of the World. It is time, it is high time, this was ended. A wealthy nation like our own, with its con-

the Prince having thrown all his influence into the scale, we shall soon learn that Mr. Penrose's building at Athens is all too small for the savants and the students who will flock thither in England's name. One of the most valued experiences a clever young Architect can have is a six months' course of study of Greek Art—in Greece.

The Cathedral of South London. WE have been requested to point out the claims of St. Mary Overy, Southwark, now undergoing restoration. There is, surely, little need to extol here what is admittedly the finest mediæval building in London, excepting, of course, Westminster Abbey. In our last issue we gave an engraving of the interior, from a sketch by Mr. Burke Downing. St. Mary is a shrine for all Architects, and we should be prone to commiserate the professional man who had not studied its wonderfully sedate and restful lines. Visitors to London, however, do the round of the Churches north of the river and very frequently forget or overlook this magnificent Southwark Church. For their benefit and direction we might remind them that St. Mary Overy has memories and records of Gower, Father of English Poetry, who was interred within its walls in the first decade of the fifteenth century. Two hundred years later, William Shakespeare's brother Edmund, "a Player, was buried in ye Church with a fore noon knell of the great bell." Fletcher and Massinger lie under its roof; Henstowe, one of the first Theatre Managers of fame in London, is buried here; Alleyn, too, actor colleague of Shakespeare, was connected with the Parish as Warden. It is intended that the Church shall become, in all but name, and possibly in name also, the Cathedral for South

"RHINEFIELD" FROM THE ROOFS: ROMAINE-WALKER AND TANNER, ARCHITECTS.

vincing Museums to prove what search can do, what earnest study has done, should remove this stigma of dilatoriness; should arouse enthusiasm for the British Schools and Exploring Parties in the East. We cannot—mere *amour propre*, if nothing else, would forbid it—permit the prizes to be won again and again by the scientific persistence of Germany or the ardent enterprise of the French. The re-modelling of the British School at Athens has begun in the right place; the movement comes from the top, and we have every reason to believe that,

London. South London is in the diocese of Rochester. Up to the present £33,000 has been spent, but another £17,000 is needed. As the work goes forward, it is more and more apparent how much St. Mary Overy is worthy careful and complete restoration.

The Craftsman Class.

THE attempt on the part of the Council of the Institute to bring the general body of its members into closer touch with Craftsmen by instituting a new Class, was discussed at its special meeting last week, and eventually adjourned until next session. It was just that so wise a measure, as this will undoubtedly prove to be, should not be hustled through at the fag end of the session when everybody is dreaming of a little rest from labour and toil. But an adjournment of this kind is apt to cool the energies of promoters, and it is greatly to be hoped that the men who are responsible for it will simply look upon delay as an opportunity to gather further arguments in favour of their scheme. Opposition is sure to exist. Nothing much is worth having that cannot be opposed on fairly reasonable grounds; but when all is said and done, it will be found that the "Profession" and the "Art" of Architecture, as represented by the Royal Institute of British Architects, has nothing to fear by a closer alliance with the reputable craftsmen of the country. If nothing, however, is to be attempted but the mere formation of another section of members who, on the payment of a substantial yearly subscription, are permitted to walk up and listen to a deadly dull paper upon the recent discovery of a prehistoric toothpick in Timbuctoo, then there would be just as much reason and as much benefit to Architecture, if there were no restrictions whatever as to membership. But we understand that the innovation is the beginning of bigger things, and as such we shall welcome it—ere its opponents have meddled and muddled with it—as the first spark of real effort the Institute has shown for years.

Stone and Sand.

LABOUR, Building Labour this time, had its little joke at Brighton on Sunday, and the Sabbath was more than usually disturbed—even for Brighton. It seems that the Brighton Building Trades' Federation had got to celebrate itself somehow, and from the way it conducted itself we can well believe that it *was* its first anniversary! By and by, when the Federation has grown its corner teeth, it will cease from mixing politics with its bricks and mortar. For the moment the temptation—with the Election pending—was too great. The brass bands and general *ensemble*, and broad good humour ended in a considerable amount of recrimination and a bad attack of virtuous indignation. We still hope that sermons in stone can be builded without the common clap-trap of party-strife, and we should be sorry to think that the Art of Building began to base itself upon the shifty sands of clever politicians. Federation, within the well demarked bounds of common sense, is all very well, but Party frenzy, either way, may be well left alone. For this reason we deprecate and regret that the Federated Artisans of Brighton found time to quarrel on Sunday, when all should have been amity, brotherhood—and British ale. Mr. Dew, who indeed fell upon the company "gentle from heaven," was nearer right than wrong when he exclaimed to his fellow-workers: "A plague on both your parties!" Let us keep to our building; the cobbler to his last, and the controversialist to the nearest orange box he can find in the political pell-mell.

COVENTRY MUNICIPAL BUILDINGS COMPETITION.

A CRITICISM.

THE City of Coventry has done so much in the past for Architecture, and has still such a wealth of beautiful work left to instruct and to delight all lovers of Art, that she deserves the very best that the Architectural genius of the country can give. But we doubt much if the Corporation of Coventry has set to work in the best way. What particular reason there was to have limited the recent Competition to some eight or nine men, is not quite clear, but the interests of Architecture and the historic City itself would have been best served by having a Preliminary Open Competition and a second limited to the best dozen of the first. As it is, one left the Exhibition of the Drawings at the School of Art with the uneasy feeling that Architecture in this case—able as the majority of the drawings undoubtedly are—has again not had a chance of doing her best.

The interest of the problem was focussed in the beautiful Hall of St. Mary, alone worth a visit to Coventry. It is situated opposite the south side of St. Michael's Church in Bailey Lane, and it is on the ground around the old Hall that the new Municipal Buildings are proposed to be built. The site extends about 70 ft. eastwards from the old work in Bailey Lane and about 280 ft. from the angle there in St. Mary Street to the principal front (about 80 ft.) in Earl Street. There is also another piece of ground west of St. Mary's Hall, with a frontage of 80 ft. in Hay Lane and a depth of 140 ft., or so, to the west side of the Hall. The depth of the St. Mary Street frontage is only about 70 ft. It will be seen from this that the site is a somewhat complicated and restricted one, and it is generally agreed that a great opportunity has been lost by the Corporation in not acquiring the Baptist Chapel at the corner of Hay Lane and Bailey Lane; the extra space would have been invaluable for the plan, cramped as it is, and it would have almost made this portion of the City architecturally complete. The key to the proper disposal of the new buildings was of course to be found in the old work, and the only designs which harmonised in any way with St. Mary's Hall were those under mottoes "Red Crescent," "Mighty Maze but not without a plan," and "Leofric the Saxon," the first premiated.

The conditions, which gave little or no information or restrictions as to sizes of the different rooms and no stipulated sum for the outlay, asked for the following accommodation:—City Council Chamber, Mayor's Parlour, and Offices of the Town Clerk, City Accountant and Surveyor, Weights and Measures Offices, Gas and Waterworks Department and Health Offices, the City Police Court, Magistrates Room and Offices, accommodation for City Police, Fire Brigade Station and Caretaker's Room and "such other rooms as competitors thought necessary." There was a very important clause referring to ancient lights, but no information concerning them given, and another important item was the desire of the Corporation that the work should be so designed as to be easily erected in blocks, the Police Department being the first proposed to be built.

The First Premiated Design, "Leofric the Saxon," is simple and easily read in the main lines; a long, straight Corridor extends the whole length of the St. Mary Street Front, connecting the Main Entrance in Earl Street with the Council Chamber, which is placed on the first floor at the angle of Bailey Lane. The Police Court is on the ground floor next the Entrance Hall, with a special entrance in the centre of the St. Mary Street Façade. The Entrance for the Council Chamber is the old one in Bailey Lane, through the finely groined fifteenth century gateway that has been used for ages, and all this portion of the new work is placed *en suite* with St. Mary's Hall, excellently for civic festivities, &c., and, moreover, is upon the quietest portion of the site. The Fire Brigade occupies the Hay Lane Front, a distinguishing feature externally, in which is the long narrow niche for the fire escape. The Police Cells and accommodation are placed in a half basement under the Police Court, the Parade Room and Caretaker being at the north

angle of St. Mary Street. There are several points in detail of the arrangement of the basement which need be re-considered, the planning of the Housekeeper and Constables' Apartments is not very good. On the ground floor from the Earl Street Entrance is a spacious Entrance Hall, the main staircase being on the left hand, with access to the Mayor's Private Room and Police Court beneath. On the right, at the angle, is the Medical Officer of Health, and the Chief Constable's Room. Witnesses, Solicitors, &c., in connection with the Police Court, are all on the right hand side of the Corridor and face St. Mary Street, the Weights and Measures and Gas Departments being at the Bailey Lane end of the same street. On the first floor, over the Entrance, is planned the Water Department, with the City Accountant at the angle of Earl Street. The City Surveyor has his Public and Private Offices, facing St. Mary Street, with the General Drawing Office in a quiet position at the back and a north light. The Town Clerk's Offices are next in the Corridor and are all well lighted to the street.

Externally, the principal feature is a low square angle Tower, next the Main Entrance, which, in the perspective, composes well with that of St. Michael's and Holy Trinity in the background. The whole design is modelled, more or less, on the type of St. Mary's Hall, and the best part is the way in which the new work of the Council Chamber, &c., in Bailey Lane, is grafted on to the old. The Front to St. Mary Street is simple and well-balanced, and shows a study of some of the Oxford Colleges. It could be brought into a more harmonious relation with the principal Front; as it is, the two seem a little disconnected, and the Tower is a trifle too large in scale for the rest of the design, and needs binding to the Fronts a little more. The continuity of the lines in St. Mary Street is broken at this angle, which is unquestionably a mistake, and could very easily be remedied.

Mr. Hare well deserves the second place with his set under motto, "Red Crescent." His plan is admirable in distribution of parts, although a mistake is made in placing the Council Chamber away from the Old Hall, and longitudinally to the Principal Front at the angle of Earl Street and St. Mary Street. The Fire Brigade occupies the other angle in Bailey Lane, and the whole of the Police accommodation is in Hay Lane, the Police and Fire Brigade Drill Yard being at the back of the St. Mary Street Front, the continuity of the plan on this side is seriously interfered with by the Archway to Drill Yard. There is no way of communication with the old part on the ground floor without coming into the street, a defect which, however, could be easily remedied. The Municipal Offices are well planned, the principal Entrance is in Earl Street; the Gas Department occupies the left hand on entering, and the City Accountant the right at the angle of St. Mary Street. The Medical Officer is between the latter and the Fire Brigade. The Borough Surveyor and Town Clerk are on the first floor, the latter at the Bailey Lane angle. One point in which the first premiated design scores over this, and most of the others, is in the large amount of space obtained around the back of the Old Hall. Mr. Hare's plan is a little crowded at this part, which, for the sake of the ancient lights and for light and air generally, is a somewhat serious defect. The elevations, designed in a most sympathetic type of Late Gothic, and excellently drawn, are quite in keeping with the old work and yet have a character of their own. The elevation of Police Court to Hay Lane is a particularly happy, well-balanced, and thoughtful piece of work. The three gables and the projecting oriels on the first floor, and the square-headed, severely treated entrance, are all well expressive of the purpose of this part of the building.

We like Mr. Hare's alternate design in Jacobean, by itself, better than the Gothic Front to Earl Street, although it is not, of course, quite so much in character with the old work; but it is quieter and has rather more repose than the other. The Front to St. Mary Street is not so successful as other parts, and its repose is rather needlessly disturbed by the centre gable; it would have gained much in breadth at this point if the straight lines of the

parapet had been unbroken. The design, however, as a whole is most able and well deserved second place, and shows to much advantage in Mr. Raffles Davison's pen drawing.

The set of drawings which, in our opinion should have received third place, if not something better, is that under the motto: "A mighty maze but not without a plan" (by Messrs. Unsworth and Newberry). It is one of the best designs we have seen for some time. The Architecture is founded on a quiet type of Renaissance with Gothic feeling, and the whole design is quite in harmony with St. Mary's Hall. The elevation to St. Mary Street is a most delightful and happy composition, inspired doubtless, by St. John's College, Oxford, but with much individuality of its own; the long lines, broken only by the three projecting oriels on the first floor, with much plain wall surface

almost identical with the first premiated), the City Accountant, with the Gas Show Room and Gas Offices at the angle of Bailey Lane and St. Mary Street; the Fire Brigade is midway between, with an entrance in St. Mary Street. The whole of the Police Court accommodation is obtained in Hay Lane, which, if it were not that it relegates the Fire Brigade to St. Mary Street, is a good point. The Police Drill Yard and Parade Room occupy the remaining space up to the old Hall and are well planned in relation to it. The cloister-like Corridor connecting this part with the other buildings is a capital feature. The Council Chamber is placed on the first floor, and at the back of the St. Mary Street Front and at right angles to it, about midway between Bailey Lane and Earl Street. The Mayor's Parlour and Committee Room, &c., occupy the opposite angle and the

minor arrangements in the main building, but the plan in its principal lines is not so good as the other three just mentioned, and the difficulty of the blending of the old and new work is not very happily met. There is, however, much ability evident in the whole design as might be expected of these well-known artists. The perspective (a pen drawing) shows the Principal Entrance in Earl Street and is rather roughly drawn but strong and effective nevertheless.

The remaining drawings do not call for any special remark, with the exception perhaps of "Advance," the third premiated design, which has good points in plan. The Grand Corridor, 22 feet wide! on each floor is a very good idea for a less cramped site, but here, where the ground is so valuable, it is far too wasteful an arrangement, and moreover unnecessarily re-

COVENTRY MUNICIPAL BUILDINGS—THE FIRST PREMIATED DESIGNS.

VIEW SHOWING FRONTS TO EARL STREET AND ST. MARY STREET, THE SPIRES OF ST. MICHAEL AND HOLY TRINITY CHURCHES IN THE BACKGROUND.

between, cleverly obtained without sacrifice of light to the various rooms, are excellent; and the projecting turret at the Bailey Lane angle serves well to mark the corner, and balances with a similar but rather shorter turret at the other end. A capital detail in pencil shows a portion of the Principal Front to Earl Street with its fine feature of a recessed arcaded Entrance of five bays and an open Loggia over, on the first floor of three bays, showing also a liking for a certain little Manor D'Angon in Normandy. The plan is not quite so good as the first two, and for this reason may not have been placed. On the ground floor, entering from Earl Street are arranged the Medical Officer of Health and Weights and Measures on either side of the Principal Entrance, farther along the Corridor (which latter, in position on all floors, is curiously

Front to Bailey Lane, and are schemed, as in the first premiated design, to be used in connection with the old Hall.

The authors of "Lux" send a clever set of drawings, showing much ingenuity of plan, but the florid type of Gothic adopted is not quite worthy of men who do such excellent work as Messrs. Gibson and Russell. The design, however, shows to better advantage in the geometrical drawings than in the perspective; the somewhat unpleasant German character is less evident and appears far better adapted to the Gothic of the surrounding buildings. In plan a mistake is made in the placing of the Council Chamber and Police Court—the former takes the angle of St. Mary Street and Earl Street, whilst the latter is at the other extreme in Bailey Lane. The Fire Brigade is planned in Hay Lane, and here much ingenuity is shown as well as in

duces the area of important rooms. The Police Court is placed in Hay Lane, and the author does not propose to disturb the existing work in Bailey Lane (which is a pity, for the building is a disgrace to the City), and rebuilds the Fire Station almost in its present position in St. Mary Street. "Londin," by Messrs. Gordon & Wilkinson, has many excellent points in plan, but wasteful withal, and the elevations are in some parts commendable, notably the Bailey Lane Front, but unsuitable and out of harmony with the surroundings. The designs sent under mottoes "Experience" and "Experience A" shew good schemes in the planning, but the elevations, in a heavy type of Renaissance with Dutch features, show scanty respect or care for the old work "Fortis in arduis" and "Practical" are both designs which show little or no appreciation of the possibilities of the site.

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,
July 16th, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

A COMMITTEE of friends and former pupils of the late Mr. Reginald Stuart Poole has been formed with the view of erecting some permanent memorial of him, and it has been decided to appeal for assistance from all those who have experienced the benefits of his teaching, help or encouragement. It is hoped that sufficient subscriptions may be received to provide for a life-sized portrait medallion, or possibly a bust, which might be placed in some building associated with his work.

FOR the suggested new Fountains in Manchester there are two main questions—the sites and the designs. The sites, when chosen, should influence the designs. One step has been taken, by the erection of full-sized models on the sites at present proposed. A second step in this direction should be the exhibition to the public of the drawings. From the models it is clear that both the Fountains in question are to be for drinking only. If the models at all fairly represent the designs, it must be confessed that it would be a misfortune were they carried into execution. They do not even convey to the mind what is properly meant by Design. The model in Portland Street, especially, suggests the piling up of granite, marble, or stone by one who has little knowledge of Architectural forms. The exhibition of the drawings would either go far to justify the choice of the design or would confirm this criticism upon the model. The model of the other Fountain, now at the corner of Oldham Road and Butler Street, is less open to criticism, as it is much smaller than the other, and much less ambitious and pretentious. But it does not appear to have been designed for that site.

THE house in Paris of the famous Sanson family, who were from generation to generation for so many years what the French grandiloquently call the Executors of High Works—in plain language, the public executioners—is, it is said, about to be demolished. The Sansons have a place in French history, not only because they continued so long to hold their odious office, but because two of their number, a father and son, held office during the evil days of the Reign of Terror, when they were kept so busily engaged with their guillotine. The last of the Sanson dynasty was dismissed from his post in the reign of Louis Philippe, in 1847, under remarkable circumstances. Although he had inherited a comfortable fortune from his father, the executioner of the Revolution, he got into pecuniary difficulties, and was guilty of pawning his guillotine, surely the most lugubrious pledge ever taken by mortal pawnbroker. An order came from the Procurator-General for the execution of a criminal, and the necessary apparatus was not forthcoming. The prison authorities had perforce to get it out of pawn, and the execution took place.

SIR GEORGE HAYTER'S historical picture of "The Trial of Queen Caroline," is to pass into the custody of the National Portrait Gallery. The picture is a large one, measuring 13 ft. 9 in. by 8 ft., and was painted for the first Lord

Dover. It is an heirloom, and so could not be included in the sale of the Clifden properties. The heads in the picture are nearly all portraits.

THE last stone has been placed in position on the top of the Central Spire of the Mitchell Tower of Marischal College, Aberdeen, and the mason work has reached its highest point. Arrangements have been made for the opening of the new Students' Union and the inauguration of the Graduation Hall and other gifts to the College and University by Dr. Mitchell, of Jesmond Towers, Newcastle. The contemplated arrangements provide for a celebration extending from Tuesday, the 22nd of October, to Friday, the 25th of the same month. Meanwhile, Dr. Mitchell has given another practical proof of his interest in the University extensions at Aberdeen. He has signified his intention of defraying the cost of laying the Picture Gallery with an oak floor similar to that of the adjoining Graduation Hall.

A MOST interesting book, particularly to Archæologists and Antiquarians, has just been published, entitled, "The Early History of the Town and Port of Hedon, in the East Riding of the County of York," of which Mr. J. R. Boyle, F.S.A., is the author. Hedon, a sleepy, Old World place, which we happen to know well, has, nowadays, a reputation to keep up—if nothing else. It is a port still, on the north bank of the Humber, older than Hull, dating from certainly soon after the Norman Conquest, and with a Church almost worthy to rank as a Cathedral, as far as proportions and beauty of structure go. The fame of Hedon was apparently short lived, for as early as 1206 its trade had largely passed over to its new rival Hull, which had had greater advantages of maritime commerce given to it, and had

consequently by that time paid to the Exchequer, in two years, more than five times the amount of duty that the already declining Hedon paid. By Henry II.'s reign, Hedon had, perhaps, attained its zenith, having the privileges of free burgage, its "gild merchant," and its hanse. In that reign, too, its beautiful Church of St. Augustine's—the only one remaining of its three ancient Churches—was built, in the churchyard of which a Grammar School was afterwards erected, with its top rooms or "camera," assigned afterwards to the schoolmaster at the moderate rent of 3s. per annum—a rent which he never paid—"only 3d. for the garden." History does not relate what the schoolmaster's income was, but if the figure was not in proportion to the rent the modern schoolmaster would look back with envy to the easy circumstances of pedagogues of the twelfth century. Many interesting relics of the past are noted in this history of Hedon. Its pillory, its ducking-stool at the brink of the town pond, the bull-baiting that took place on its market hill; its royal bakehouse where all for a time were compelled to bake their bread—all take us back to a past remote from our own days.

M. FELIX FAURE, President, has inaugurated at the Louvre the Hall of African Antiquities, which has been talked of for so long. It is near to the Gallery containing the bronzes executed by the founders of the Renaissance after the Antique. A part of the new Collection consists of the statues presented by the Bey of Tunis so long ago as 1852, but which for upwards of twenty years were lost. They were finally discovered in a lumber shed at Toulon, and when the Museum authorities claimed them the Marine Department refused to give them up, and a red-tape war ensued.

CEMALLOWS
95.

INTERIOR OF THE
COUNCIL
CHAMBER

COVENTRY MUNICIPAL BUILDINGS: THE COUNCIL CHAMBER.

THE Spire of St. John's Church, Bognor, the top stone of which is now in position, is constructed of Carsham Down stone, is octagonal, and has four brooches—at the east, west, north and south angles. From the top of the cornice to the sill of these windows is 8ft., the openings being 3ft. 6in. From the top of the cornice to the second windows, which are on the opposite angles, is 31ft. to sill, and to top of windows 43ft. From the top of these windows to the top of the stonework is 26ft., the full height of the Spire from the top of the cornice being 70ft. Surmounting this is a gilded Cross of ironwork 7ft. in height, which is fixed by an iron rod 16ft. 3in. passing downwards through a block of Portland cover stone 9in. thick, and weighing over a ton, the rod being bolted on the underside of the stone, and the cavity 6ft. through the stonework from the top for the rod to pass through being afterwards filled up with cement. From the base of the Spire to a distance upwards of 43ft. the stonework is 9in. in thickness, tapering off to a thickness of 8in. for a distance of 10ft. 8in., the remainder being solid to the summit, the top stone being of Portland stone 2ft. 7in. thick. The Spire was commenced on the 1st of April.

ONE of the New York financial papers makes the startling statement that "there are twenty well-built towns in Kansas without a single inhabitant to waken the echoes of their deserted streets." It is said that Saratoga, one of these deserted villages, has "a 300,000 dol. Opera House, a large brick Hotel, a 20,000 dol. School House, and a number of fine business houses, with nobody to claim even a place to sleep." All of this came about by booming on borrowed capital without resources enough to pay the interest.

GREAT pressure is being used by the Contractor of the new Sheffield Town Hall to hasten the work, and the building should be well completed before May next year. There are now 250 men employed in some twenty trades, under exceptionally favourable conditions as to weather and rapid progress. The bulk of the mosaic flooring and wall tiling has been completed in Surrey Street; the whole of the pitch-pine floors laid, and the greater part of the oak and pitch-pine joinery fixed. The lead and the plain glazing is virtually complete to the windows, and all iron casements are fixed. The wood block floors are being laid in the basement. The steps to Surrey Street Entrance, excepting those on the causeway, are in position; the Vestibule generally has but little needed to complete it. The Council Chamber ceiling is nearly completed, the stone carving there about done, while the wall dado for the same is being delivered. The plastering to Pinstone Street generally is being pushed forward, and the fibrous plaster ceilings for Reception Rooms, Accountant's and Water-works General Offices, are about to be fixed. The carving to principal stairs is finished, and the polished marble wall linings are being placed in position. The marble stair itself is partly fixed.

AN application to authorise the acquisition of land required for the purposes of an Electric Railway to the summit of Snaefell, the highest Manx mountain, has come before the Manx Legislature. Several members urged that the matter should be adjourned, in order that the question of public rights on the mountain might be inquired into and considered. It was stated that the public only ascended the mountain by permission of the proprietors, but this statement was disputed, and eventually the matter was referred to a committee. It is the intention to build an Observatory on the summit, but not otherwise to build on the mountain.

REGARDING the famous Roman Duct at Bath, a report has been presented by the two members who had been commissioned by the Committee to inspect the Duct, which has been explored for a distance of 300 ft. The exploration has been very interesting in itself, but the Mayor, in suggesting that the work should be stopped, was only giving the opinion of a good many other people. The report states that here and there, at irregular intervals, it is crossed transversely by massive horizontal stones or lintels, once by a pointed arch, and

COVENTRY MUNICIPAL BUILDINGS COMPETITION—FIRE BRIGADE STATION AND POLICE ENTRANCE IN HAY LANE.

twice by circular arches. At one point the walls are of very massive masonry, many of the blocks on their faces being 16 ft. by 3 ft. The roof is now so low that the explorer has to travel as best he may; indeed he has to crawl upon his knees, his candle in his hand, until he reaches the barrier of solid masonry which at present represents the end of his journey. The report concludes: "The absolute uncertainty of what may be the cost of following the Duct to its destination—the distance which separates us from the river—the consideration of the further cost of fitting it for permanent service, and guarding against silting up by the action of floods, lead your sub-committee to the conclusion that it cannot recommend any further expenditure upon this interesting discovery." The surveyor of works was, naturally, anxious that the undertaking should be further prosecuted, but it was agreed that the work of excavation should be stopped until the Council had considered the report. The Somerset Archaeological Society will be meeting in Bath at the end of July, and the Duct will be an interesting point for exploration.

THE place which the Duke of Fife is to build in succession to Mar Lodge is likely to be on a larger scale altogether. A faithful description of the Mar Lodge which the flames destroyed would be that it was a result of evolution from one thing to another. The new Mar Lodge will arise complete, will hardly be of wood from roof to roof, and it is practically settled will occupy a different site.

A MEMORIAL to the late Dean Elliot, in the shape of a recumbent figure has been placed in Bristol Cathedral. The cost has been £500, contributed by friends of the late Dean. The effigy is of the finest Parian marble of life size, and rests on a base of tinted marbles. The position is within the most eastern of the canopied recesses in the North Aisle of the Nave, close to the tablet already erected to the Dean's memory. Mr. Forsyth, the Sculptor, has earned a reputation by his success in similar works. Among these may be cited the follow-

ing: Bishop Parry (Canterbury Cathedral), Bishop Fraser (Manchester), Archbishop Magee (Peterborough), Bishop Claughton and the Earl of Dudley in Worcester Cathedral. The effigy represents the Dean as he was some twenty years ago or more, and before he became enfeebled by age.

MR. GEORGE ALLEN will publish early in the autumn season a book entitled "The Principles of Art according to John Ruskin," by Mr. W. White. The work is partly a compilation and partly a collection of original writings by Mr. Ruskin not before published.

RELATIVE to the sudden appearance of wild flowers on the waste ground opposite the Horse Guards, Whitehall, not the least surprising thing is the profusion of bracken to be found there. This is the more remarkable because it is excessively difficult to acclimatise bracken by artificial means in open spaces in towns. When Clissold Park was being laid out in 1888, the late Mr. Joseph Beck, to whom its preservation was largely due, taking advantage of his double position as a Common Councillor and a member of the London County Council, induced the verderers of Epping Forest to allow several cart-loads of soil, impregnated with bracken seed, to be taken from the Forest and shot down in a shady corner of the Park. At the end of seven years one or two meagre, struggling stalks are all that remain to attest his efforts. The bracken prefers the hard earth and the free air of heaven. The seed-laden wind bloweth where it listeth, and deposits its precious burden not in the luxuriant verdure of a public park, but on some desolate bit of building land.

THE Duke of Devonshire will preside at a banquet of the Sussex Archaeological Society to be held at the Queen's Hotel, at Eastbourne, on the 25th inst. The Duke and the Duchess will be present at the Battle of Flowers and Rose Fête on the 26th inst. One of the features of the procession will be coaches with Lancastrian and Yorkist colours, and the Duke of Manchester will pioneer the red rose coach.

THERE will be held in Geneva, from May 1st till October 15th, 1896, a great National Exhibition, representing its industries, both mercantile and agricultural. Of the forty-seven sections of this Swiss Exhibition, the most prominent will be those sections containing the clock and watch-making industry and the Arts of the jeweller and goldsmith.

AMONG the historical corners which lie almost hidden in London, out of the beaten route of many visitors, St. John's Gate, Clerkenwell, is one of the most interesting. It has, since 1886, been in the possession of the Knights of the Revived Order of St. John of Jerusalem in England, but it has had a chequered career since it formed part of the great Priory of the original knights. The Gate and the Crypt of St. John's Church alone remain of that venerable pile of buildings. From the literary and artistic point of view there is much that is of interest in these relics, and the album published by Messrs. Cadbury, Jones and Co., furnishes historical notes and letterpress descriptions of the Priory by John Underhill, to accompany the series of masterly etchings by William Monk, R.P.E., which present views of the exterior of the Gate, a fine specimen of the Perpendicular style, the interior of the Council Chamber and of St. John's Church, including the Crypt, showing three bays of the Norman Church formerly standing on this site.

WE hear from a correspondent that the Bath Town Council is naturally annoyed, not to say indignant, at the strictures which the Recorder thought fit to pass upon the accommodation, planning and dimensions of the new Sessions Courts, which were opened for the first time on Friday week. The new Court, it is generally admitted, might with advantage be loftier, but it was a case of preferring the administration of Justice or the transaction of municipal business. The Recorder thinks he should have been on the first floor, and occupied the position now taken by the new Council Chamber, and not on the ground floor underneath that apartment. There was not space enough to put both on the upper floor, and the Town Council, not unnaturally, secure the best position.

THE town of Reading is to be presented by Alderman Hill with the valuable facsimile of the Bayeux tapestry which has recently been exhibited in the Town Hall. The tapestry, which forms a pictorial history of England before the Norman Conquest, has been handed over by the donor free of conditions, and it will be placed in the new Art Gallery which is about to be built.

At Sotheby's a dispersal of antiquities has occupied two afternoons. The highest price was for a pair of Old English fire-dogs, enamelled, probably made in the time of Elizabeth or James I., £86; and a similar pair brought £50. A Greek Amphora, discovered near the Dipylon at Athens some eighty years ago by Mr. MacMichael, fetched £66. A neck ornament formed by eight thin plates of perforated amber, and a pair of hollow bosses of thin leaf-gold from earrings, found together in a tumulus at Lake in 1806, and some beads and other ornaments, £41; an interesting "St. John's Head" of alabaster, English work of the 14th century, £45; and one half or side of a stone mould in Syenite for casting bronze celts (a very rare object) found at Bulford, near Amesbury, £30. Most of these, with a variety of urns, bowls, rings, arrowheads, &c., came from the Collection of the Rev. E. Duke, of Lake House, Wilts, and sundry Babylonian contract tablets belonged to Mr. R. P. Greg, of Buntingford, Herts.

DOMESTIC stained glass usually leaves about as much to be desired in the way of artistic treatment as possible. It is the more remarkable because it really is a beautiful Art, and there is no reason why, with the aid of capable Artists and enterprise in manufacture, coloured windows should not be a thing to be desired, rather than avoided, by every one. At the Arts and Crafts Exhibition at Manchester, more than one exhibitor showed that this could be done, and the exhibits of Mr. Oscar Paterson were notable, not only for their colour, but their originality. Chief amongst these were his designs for window sundials—a novel method

of clocks which would have been in constant working order during this year of sunshine, but might strike at times for months to come if placed *in situ* within the four-mile radius.

THE experiments made in the navigable conditions of the Seine from Rouen to Paris are such as to give it a unique position amongst French inland waterways, and it now occupies a place midway between such tidal waterways as the Seine below Rouen, the Gironde so far as Bordeaux, the Loire so far as Nantes, and the ordinary rivers and canals of the country. It is navigable not only by small ocean steamers plying regularly between London and Paris, but also by coasting steamers of a still larger registered tonnage running between Paris and Nantes, Bordeaux and Bayonne. These vary from 600 to 1,000 tons burden. The tow-path has fallen into complete disuse; traction upon the river is wholly by steam, and a swifter and larger class of steam tow boat and lighter is now being placed upon it. A doubling of the locks and a great enlargement of their capacity has been, next to the greater depth of water obtained by dredging, the chief improvement made in the Seine. There are nine locks, or rather groups of locks, between Rouen and the fortifications of Paris, i.e., over a distance of 234 kiloms.

At length the Monument to the memory of Sergt.-Major John Allen, who rode in the ranks of the 13th Light Dragoons at the charge of Balaclava, October 25th, 1854, and who died in Leek last year, is completed and erected. The Committee (with the assistance of Mr. Larner Sugden) has been at some trouble in selecting a design and inscription which would tell to future generations how Leek once possessed one of those veterans who answered to the roll call after that fearful ride through the "Valley of the shadow of Death." The motif of the design is Cornish (at Linkinhorne) of the thirteenth century, with panel enrichment from Iona, and lettering of later date to suit modern perception. The stone used is Wetton's brown Kerridge, a warm relief from the abounding "white sepulchres." Mr. E. Hassall has executed the masonry, Mr. Millson the carving, and Mr. E. Phillips the relief gilding.

M. ADRIAN DIACONU, an Architect and Antiquarian, claims to have found in the ruins of the ancient Roman camp of Bersovia, at Bogdan, near Temesvar, unmistakable evidence that the Romans, and, in particular, the officers of the Fourth Legion (Flavia Felix) understood, as early as the second century, the Art of Printing, and made use of movable types while encamped at Bersovia. The reported discovery is said to be confirmed by two Bucharest savants and Members of the Academy, after a careful examination of the proofs collected by M. Diaconu.

THE old Church of St. John, at Leipzig, where Bach is buried, was lately pulled down. His grave, as the record states, is on the south side, and he is interred in an oak coffin. This was a rare distinction in 1750, only two of the 1,400 who died in Leipzig in that year being buried in oak. With these facts to guide them a committee of specialists began their search. Only two oak coffins were found, and the first examined contained the skeleton of a woman. The second, however, brought to light the skeleton of an elderly man, and when the bones were properly arranged, a general resemblance to Bach's figure was shown. There can be no doubt that the remains are his.

A REMARKABLE state of affairs exists at Kershaw Bridge, in the parishes of Ashreigney and Chulmleigh, and under the joint authority of Torrington and Chulmleigh District Councils. Some time ago the Bridge was partially destroyed by a flood, and since then the two authorities have been in disagreement as to the proportion of cost which each should pay towards re-building, with the consequence that the structure is impassable for vehicles, and a detour of about three miles is necessary. The point at issue is whether Chulmleigh Council is liable to the centre of the Bridge or the centre of the stream. Chulmleigh says the centre of the stream is its limit, and that it would be illegal to do work in another parish, while Torrington contends that the Bridge

should be evenly divided. The cost of the repairs would be about £400, of which the County Council would be responsible for some £150, and it is said that Chulmleigh District Council proposed that the work should be done without prejudice to the points in dispute.

THE celebrated Collection of Drawings and Engravings by the Early Masters, which was formed by the late Mr. John Malcolm, of Poltalloch, and deposited in the Department of Prints and Drawings at the British Museum in 1893, has been offered by its present owner, Col. J. Wingfield Malcolm, to the Trustees of that Institution for purchase at the price of £25,000. The Treasury, on the recommendation of the Trustees, has agreed to the purchase, and a vote for the sum required will be included in the supplementary estimates to be laid before Parliament.

MR. MERRYWEATHER, of fire-extinguishing machinery fame, is decidedly of opinion that London is insufficiently protected from the danger of fire. If two or three really big fires were to burst out suddenly in the Metropolis, he would not answer for the consequences. The whole city might be left a mass of smouldering ruins, as it was once before, more than two hundred years ago. The present organisation would be incapable of coping successfully with such a difficulty, although he admits that it suffices to meet all ordinary emergencies. Although much is said of the efficiency of Fire Brigades on the other side of the Atlantic, Mr. Merryweather is of opinion that we have nothing to learn in this respect from our American relatives. In fact, we are ahead of them. We have now in England engines with which we can get up a pressure of one hundred pounds to the square inch in five and three-quarter minutes, and what is equally important, the engine, tender, and hose box, unlike those in use in most American cities, form one single machine, and consequently always arrive at a fire together.

ONE of the most remarkable feats of electric lighting yet carried out is the erection of a double row of row candle-power lamps on either side of the Gedney Channel, Sandy Hook. High-pressure current is supplied to the lamps by a submarine cable six and a half miles long, and the lamps are mounted on posts 12 ft. high attached to floating buoys. In this way a narrow channel, hitherto impassable after dark, has been converted into a comparatively brilliant thoroughfare, in which ships can pass in the night.

THE Berlin Anthropological Society has just made an interesting excursion to the "Schliebener Circular Wall" at Merseburg. This ancient wall lies in a charming landscape, clad in woods of oak, ash and beech. Professor Virchow, youthful and enterprising as ever, and his eldest son, formed part of the company. The Schliebener Wall belongs to the old German period. It was built some 200 years B.C. and forms an ellipse, the widest part of which measures some 500 ft. An excavation was undertaken in the centre of the ellipse, but only a few fragments of pottery were found. The wall is 5 ft. wide and 18 ft. high. Virchow plucked a nosegay of wild flowers. The Schliebener Wall has furnished the Museums of Berlin, Leipzig, Halle and Dresden with many interesting antiquities, and has been well described by German archaeologists, one of the most famous of these writers being F. A. Wagner, who is buried at Schlieben, and on whose tomb stand three of the most beautiful urns, found by himself. The inscription on his tomb runs: "Here, in this earth, Christians, Jews and Heathens are equal." A monument is to be erected to him on the top of the hill next August. It is a curious fact that so far north in Germany there are vineyards belonging to Schlieben which produce a quite tolerable wine.

AUTUMN will bring many Photographic Shows. In addition to the Annual Show of the Royal Photographic Society of Great Britain, which will be held in Pall Mall from September 28th to November 14th, there will be a Photographic Salon at the Dudley Gallery from September 30th to November 2nd. At Lancaster there will be a section of the Industries

and Art Exhibition devoted to photographs. It will be open from August 17th to the 31st. On the Continent there will be two International Photographic Exhibitions, one at Amsterdam from September 8th to September 25th, and one at Brussels from August 31st to September 30th.

In the central panel of the Hackney Vestry's Hall, a portrait of the Lord Chief Justice is to be hung, and we note that a bust of the late Lord Bowen has been unveiled at Rugby, the ceremony being performed by Lord Davey, whose friendship with the deceased judge began at the famous School and lasted throughout his career. It is to be regretted that a similar monument to his memory has not been erected in the Royal Courts of Justice. The busts of departed judges would find a fitting place in the Central Hall and the Corridors of the building. Sir George Jessel is the only occupant of the Bench whose features have been perpetuated in marble in the precincts of the Courts. Why the memories of judges like Lord Hannen, Lord Coleridge, Sir James FitzJames Stephen, Lord Bowen, and Lord Selborne are not deemed worthy of the same honour it would be hard to say.

THE Glasgow Harbour Tunnel, which passes beneath the Clyde at Finnieston, has been opened. For long a need has been felt for improved means of communication across the Clyde at the harbour. Various schemes had been mooted, such as High-Level Bridges, Swing Bridges, but at length a Tunnel was decided on. The approach on either side is by a circular shaft, 80 ft. in diameter, in which are operated hydraulic hoists, raising and lowering the vehicles as they leave or enter the Tunnels. The Tunnels are lined with cast-iron segments, filled in with concrete and lined with glazed brick, presenting a particularly neat and pleasing appearance. The hoisting appliances were supplied by the Otis Elevator Company (Limited), of London. Messrs. Simpson and Wilson, C.E., of Glasgow, were the engineers.

SPECIFICATIONS, estimates, and plans are being prepared by order of the Viceroy Chang for the establishment of large Ironworks at Nankin, China, similar to those at Hanyang, built by the same official a few years ago. These new ironworks are intended to supplement the Hanyang Ironworks in supplying the materials for the Trunk Railway to connect Canton and Peking. The preliminary line will be between Yangchow on the Yangtze and Ts'ingkiangpu on the Grand Canal. These two Cities will then be the starting points for the extensions north and south. From recent accounts it is considered probable that the Yangchow-Ts'ingkiangpu Railway will be begun some time in the latter part of this year or early next spring.

ON Saturday last the Institution of Junior Engineers visited Messrs. Willans & Robinson's Works, Thames Ditton. These works were started in 1881 by the late Mr. P. W. Willans and Mr. Mark Robinson, for the manufacture

of the Willans' three-crank compound engine. In 1885-6 Mr. Willans designed his well-known central-valve engine. Metric measurement was adopted at the works in 1893 for all new designs, the result being completely satisfactory. In the Erecting Shop is an electric traveller to lift 25 tons; and on the wharf a crane lifting eight tons, fitted with "whipping jigger." The Pattern Shop wood-working machinery and the Foundry Farcot fan are driven by electric motors. In the Machine Shop are to be seen machines for slot drilling, special vertical drill, works' engine, gauging of cylinders and trunks, and parts of Willans' engines in various stages of progress.

THE sale of the presentation plate, enamelled gold boxes, sword hilts, and other treasures, formerly in the possession of Admiral Viscount Nelson, attracted a large gathering of spectators to Christie's, and the prices given for the best

San Joachim, the Grand Cross of the Order of San Joachim, the Jewel of the Neapolitan Order of San Ferdinando, and the Grand Cross of the same Order. All these, with the exception, of course, of the medal in memory of Trafalgar, were worn by Nelson at the time he was killed. Amongst the presents and objects of personal use, the gold sword hilt presented by the Captains of the Fleet brought £1,080. It is formed as a terminal figure of a crocodile, enamelled with an allegorical group, the arms of the Admiral, a representation of the Battle of the Nile, and the names of the donors. The oval gold box presented with the Freedom of the City of London, the borders chased with oak and laurel foliage, and the lid inlaid with an enamel illustrating the engagement off St. Vincent, 1797, realised £1,050. The silver-gilt inkstand, a gift from Sir William and Lady Hamilton, fell at £520; an oblong box of oak, mounted with silver, inscribed

"The gift of the Corporation of Thetford, Norfolk, to their gallant countryman," &c., fetched £85; a circular silver box, the lid engraved with the arms and motto of the Town of Plymouth, £90; the combined gold fork and knife, engraved with initial and coronet, presented to Nelson by Countess Spencer at the time when Earl Spencer was First Lord of the Admiralty, £260; a commemoration medal of the Nile victory with a chasing of the fleet in relief, 145 guineas, and another similar, 145 guineas; and a gold sword hilt, chased and spirally fluted, and studded with paste diamonds, presented by the King of Naples, £170. The necklace of brilliants, consisting of the stones removed from the Sword of Honour presented by the King of Naples, was put up at £500, and reached £1,250; the aigrette of rose diamonds, given by the Sultan of Turkey after the Battle of the Nile, went at £710; and a brooch formed of pastes, the fastening to the "Cloak of Honour," also given by the Sultan, was knocked down at £260. The service of silver, engraved with coronets and initials, was dispersed in different lots.

THE possibility of Newhaven developing into a much larger and prosperous town seems to be well in view. Recently the Newhaven

THE GREAT HALL OF RHINEFIELD: BY ROMAINE-WALKER AND TANNER.

of these relics were sufficient to show that sentiment and patriotic feelings are still rife amongst those who in a busy age can afford to indulge in them. Eleven items were withdrawn from auction, for the good reason that by private purchase they have been acquired by the Chancellor of the Exchequer from Lord Bridport to become the property of the nation, the sum stated to be given for them being £2,500. The country thus possesses the gold medal for the victory of Trafalgar, inscribed "The combined fleets of France and Spain defeated.—Horatio, Viscount Nelson, Vice-Admiral and Commander-in-Chief, on the 21st October, 1805"; the Service medals for the victory of St. Vincent, with original riband, inscription, and date 1797, and the Nile, 1st of August, 1798; the Gold Star and Badges of the Turkish Order of the Crescent, the Jewel of the Order of the Bath, with riband, and another of the Sardinian Order of

Guardians applied to the Local Government Board for leave to borrow £600 for the purchase of land adjacent to the present Workhouse, for the purpose eventually of building new premises, and the purport of the Local Government Board's answer seems to be that it is desirable for the Guardians to reconsider their proposal to the extent of purchasing another acre. It is probable that the suggestion of the Central Board will be carried out, for it was decided last week to ask the owner of the land in question to sell an additional acre. There can be no doubt as to the growth of the town. The Harbour Company are deepening the entrance to the harbour every day, and some months ago it was seen that a water-logged vessel drawing some inches over thirty-one feet of water could get into the port easily. This facility for berthing large vessels must eventually increase the import and export trade of the port.

LEEDS having been raised to a city, the Corporation there are about to place in the Town Hall an engraved brass, recording some interesting facts. In the days of the Domesday Book it was described as a farming village. In 1207 the lord of the manor gave the inhabitants a limited charter. Charles II. granted a new and enlarged charter, and the Council was made to consist of a Mayor, twelve Aldermen, and twenty-four Assistants. In 1833 the Municipal Councils Act was carried, and Leeds was divided into twelve wards, with sixteen Aldermen. Two years ago it gained the charter which conferred on it the coveted distinction of being called a city. It is curious to note the rivalry between Bradford and Leeds. Like most neighbours they are a little jealous of each other, as Sydney and Melbourne in Australia, or Chicago and New York on the other side of the Atlantic.

WHITTINGHAM in East Lothian, the ancestral home of Mr. Balfour, is a beautiful place. The Mansion was erected seventy years ago by Mr. Balfour's grandfather, who may be regarded as the founder of the family. The building is roomy; it has about fifty apartments, some of which are large and handsome. The Library, which runs along one side of the house, is, with its long row of tall windows and solid pillars, particularly handsome. It is well stocked with works of History, Philosophy, Religion, and general Literature, ancient and modern.

THE casket in which the illuminated certificate of the freedom of the City of London was presented to Viscount Peel, bears in the centre an enamel painting of the Houses of Parliament from the river, surrounded by a band bearing between enamelled ornaments the names of the various qualities ascribed to the late Speaker. In the corners of centre panel are seen the rose, thistle, shamrock, and leek, in raised gold on blue ground. At each side is a sunken panel containing an ornamental design in relief. The lid bears an ornamental arch, wherein are seen the maces in saltire, surrounded by an arrangement of oak and laurel leaves, and bearing the motto "Pro bono publico." Above this, on a highly raised throne, flanked by bracelets of light open work, appears a figure in rich modelled gold, symbolical of Justice and Prudence, represented by a female holding the scales and sword of Justice, and the bit representing Restraint or Prudence. At each corner is a flaming vase. The ends of the box contain ornamental medallions in form of enamelled monogram, A.W.P., and the arms of the late Speaker in heraldic colours. The casket rests on a massive stand of silver gilt, burnished and friezed, supported by four recumbent British lions, modelled in silver, richly gilt, and bears in the centre the full arms of the City of London, also in correct heraldic colours.

MEN WHO BUILD.

No. 21.

MR ROMAINE-WALKER.

BOND STREET, but not in its glory—of fashion and fancy, fair women and fine steeds, and alluring shops where the little natsuki from Japan, and the beaten bowls from Benares, vie with Fuller's maddening confections, the diamonds of Streeter, marquetaire magnificences of Wertheimer, or the blue and cinnamon concoctions of the modern potter. And there are a myriad milliners in Bond Street, Art milliners too, and you are not the man to deny that the woman who deftly arranges the newest thing from Paris—delightful flowers and lingering laces, wondrous straws and ribbons of ethereal charm—has not the touch of genius that makes all things beautiful. Then there are prints, modern antiques, of paper and printer's ink—frauds on the face of them, but none the less interesting, to the casual purchaser. And other *artistes*, in boots and hats and gloves. Silversmiths,—mere middlemen of patent shoes and patent hearts, who buy and sell their wares, as a butcher does his meat, by the ounce or by the ton—mediocrities, set out on pink plush, to debauch the eye of the brazen and the fool. There is an Artist in fish—a man of Scale. His fine salmon, lusciously bathed in pounded ice, red mullet in their season, and trout—the truly beautiful trout—displayed upon the honest slab, not pell mell like the humble sprat, but in gradation, according to social priority in the fishy World. In short, Art of a kind touches all things in Bond Street. The honest trader in fruits knows the value of colour far better than we think he does. He studies the various greens of his apples, the tones of his lemons, the brilliant shades of his oranges. He appreciates the tender softness of the trailing fern, cunningly disposed among the ripening water-melons, and the sombreness

of the grape is not without merit in his schemes of window decoration. The Architect could do worse than study the Architecture of God's own natural things.

One wonders what all this has to do with Romaine-Walker; nothing more, perhaps, than that, like yourself, he studies "as he runs," and finds sermons even in the superficial influences of Bond Street. As he runs, say you, but Romaine-Walker never runs. He is more of an Architectural epicure, one that seeks for the dainties of his Craft, leaving the solid joints to others who may relish

them. At first flush one would think he cultivated the dramatic touch, and in truth he does, for he has done good dramatic work—the decorations of the Empire Theatre, for instance, and with some actors he has a close friendship. Tall, with an intensely dramatic face of the Forbes Robinson type, Romaine-Walker enhances the teachings of his beloved Italy by bringing the finality of refinement into the Bohemian promptings of his nature. His marriage with an Italian lady has aided in the development.

Romaine-Walker had the advantage of tuition under Street—and to this day he

"RHINEFIELD": THE TERRACE FRONT: ROMAINE-WALKER AND TANNER, ARCHITECTS.

never ceases to thank that master's thoughtfulness in insisting that his pupil should go through the modelling shed, study the Antique, and draw from the life. Soon after commencing his practice, Romaine-Walker had the good fortune—in the Art sense—to become associated with the late Duke of Marlborough, a man who has never been properly understood and perhaps never will be. The Association ripened into an intense friendship, the one connecting link between the two men being their equal love of Art. If Romaine-Walker ever discusses his patron, it is to pronounce him a giant of artistic conceptions, to extol his wonderful perceptive faculties, and to add a noble tribute to a man whose fate it was to defy and to revel in the World's opinion of himself.

In Mr. Walker's own room, with its cherry red silk curtains toning the glare of the sun and making his apartment "hotter" than it otherwise would be, stands a model of the magnificent organ which he designed for the Duke, at Blenheim. Willis, its constructor, admits it to be equal to his creation at Albert Hall, and it stands in the celebrated gallery that will establish Vanburgh's reputation for all time. A follower in many respects of the late Mr. Devey, Romaine-Walker delights in models, and he has a miniature wooden skittle representing himself, by which he is able in walking round his models to determine exactly the aspect of his buildings from any point. With his own hands he designs every atom of detail in his works, and nothing delights him more than to hunt Europe for old panelings and carvings which he can incorporate in his own interiors. The greater part of the staircase in the house he built for Mr. Theo. Zarifi was constructed in this way, and the Bachelor Wing at Canford which he did for Lord Wimborne, owes much of its fine woodwork to Mr. Walker's travels in the South of France, so thoroughly did he "learn" his France with the Duke. There is a characteristic little story that may now be made known. It is admitted on all hands that the finest living authority on French work and Art of the Louis XVth and XVIth periods

is the great Duveen, now a close neighbour of Romaine-Walker in Bond Street. Like all really good men Duveen is not a little proud of his accomplishment, but he has on more than one occasion fearlessly asserted that he was himself a long way behind the late Duke of Marlborough in this respect.

More than to any other phase of Architectural Art Romaine-Walker has devoted himself to the study of Colour. All

approaching its perfection exists in Western Europe. So closely, indeed, has Mr. Walker studied the motive of Colour, that he admits to having studied the actual dispositions of his clients before he attempts to colour the rooms in which they live, and, surely, the Art of the Artist can go no further than this.

In his own "house" in Hyde Park Mansions, Romaine-Walker has run wild over his love of panelling, and his oak room is very fine. When he is not sojourning in the homely Palaces of England, revelling in the delights of a peculiarly pleasant practice, or yachting, or dallying through Southern Europe, he may be discovered sipping the nectar of Dramatic Art, or coatless, and hidden from the World behind the cherry red curtains of his study, pouring over his drawing board, or a design which he intends sending over to workmen in his beloved France.

VISITORS to the Assyrian Sculpture Galleries of the British Museum may remark a winged figure holding a bucket or basket, and presenting what seems a pine cone towards a tree. This was formerly supposed to be a "cherub" offering a cone, the emblem of reproduction, to the "sacred tree" of the Babylonian mythology. Some years ago, however, Dr. E. B. Tylor suggested that it symbolised the fertilisation of the female date palm with the inflorescence of the male tree, and the explanation has been generally accepted. Dr. E. Bonavia has lately given a still more probable elucidation of the mystery. He shows that the bucket is evidently meant to carry holy water, and that the cone is an aspergillum, such as is still found in the East. The winged figure is, in fact, a "rain-bringer."

It is represented that the "Wesley Tree" at Cambo, Northumberland, is greatly decayed. Various appliances have been used to keep the parts together, supplemented and fortified by a substantial fence. A new tree has also been

planted close by and a stone Monument, erected by Sir George Trevelyan, bears the simple inscription: "John Wesley preached here on his 79th birthday, June 17th, 1782."

THAT most conscientious Art critic and subtle literary craftsman, M. Gustave Geffroy, has almost ready for publication the fourth volume of "La Vie Artistique." The frontispiece, a feature of the series, will on this occasion be by Raffaelli.

THE GREAT ORGAN AT BLENHEIM PALACE: DESIGNED BY ROMAINE-WALKER.

shades of red are his particular delight, except the shade of bood, and that has the extraordinary physical effect upon him of turning him faint immediately he meets it. The finest colour thing he has yet done is the Smoking Room at Rhinefield, which takes the form of an absolutely perfect Mosque, over which he spent ten years of persistent study and attention. Nothing

THE DESTRUCTION OF EDINBURGH.

"A MOUNTAIN OF FOLLY!"

We content ourselves this week with giving a selection of letters we have received from all parts of England and Scotland. We insert a letter over an initial because the writer has explained why he uses it, in place of his own name, and his explanation seems good. We also publish a communication which goes, it seems to us, wide of the mark, and enters into details which have all along been rigorously excluded from the controversy. The question whether Mr. Beattie's design is good or bad Architecture is not the point. We are prosecuting our endeavours to prevent or to modify the action of the North British Railway Company, and shall at the right moment announce the result of our efforts.

SIR,—Correspondence in newspapers has no charm for me, it takes up valuable time; it distracts attention from one's work, and to me it is not a pleasant occupation, but this monster Hotel business compels me to lay aside my usual quiet work and to raise my protest against the erection of a mountain of masonry in the shape of this Hotel; its size, its height, its situation will be the destruction of one of the fairest cities in Europe; all buildings in its immediate neighbourhood will be dwarfed and spoiled, and the view of Calton Hill will be mainly obscured and blotted out from view.

I cannot believe the citizens of Edinburgh can realise what the result will be if this mountain is raised to the position it is to occupy, or they would take immediate steps to save their City from destruction, and themselves from the disgrace that will follow from their supineness. Once build this monster Hotel, and the beauty of Edinburgh is gone for ever. The only way for laymen to realise the true effect of this huge monster, is to adopt Lord Wemyss' suggestion—put some scaffold poles up to the level of the ridge of the Hotel, and then it will be apparent what destruction of view will follow. I am confident that long before the scaffolding is up to the height I have suggested, there will be a shout of indignation that will stop this mad scheme of the Directors of the Railway Company.

Another way is to appoint a Commission to receive evidence of experts, or have a model made of that part of Princes Street with the model of this Mountain of Masonry set up in its place. Then I am confident the eyes of the citizens will be opened, and we shall have this fair City of Edinburgh preserved for the enjoyment of generations yet unborn. We who admire and have enjoyed its beauty must do all in our power to hand it down to posterity. If once destroyed it can never again be restored.—I am, Sir, yours faithfully,

JAMES BROOKS, V.P. F.R.I.B.A.
35, Wellington Street, Strand, W.C.

SIR,—Edinburgh is altogether an exceptional city, and the people have, up to the present time, in all their buildings, avoided shutting out the view of the beautiful natural surroundings, and have observed a harmony and unity of character in the Architecture of the City.

The proposed North British Hotel will be an entire departure from the course which has hitherto been followed.

That the huge building, apart from its Architecture, will be out of scale with its site and surroundings, and will destroy the beauty of Edinburgh, has been demonstrated by Lord Wemyss, by letters, drawings and figures in *The Scotsman* and *Evening News*, and by *THE BUILDERS' JOURNAL*, so that the citizens of Edinburgh have been duly warned of the coming destruction. Hitherto they have been proud to bear their city called "the Modern Athens," and that they have not risen in revolt to prevent this name being turned into one of derision by the erection of this gigantic Hotel in the very centre of the most beautiful view in their city, must be due to the fact that the public do not, and possibly cannot, understand the effect a building will have on its surroundings, from a drawing.

The Scotsman dishes up to them the weak argument, that because the Cockburn Association or some patriotic citizen has not protested against this monster building, therefore it is all

right, and tries to lull the people into indifference by saying that after the Hotel is built, "Edinburgh will still stand where it did." Yes, Mr. Editor and Patriotic Citizen, it will; but it will nevermore be what it was, "the Modern Athens."

It would be a sounder argument to say that because the Cockburn Association and the Patriotic Citizen have not protested, therefore this is an instance where "familiarity breeds contempt," and that people who only see Edinburgh occasionally seem to be more keenly alive to its beauty than those who see it every day.

We have a Society for the protection of ancient buildings, but we have no Society for the preservation of the beauty of ancient cities, to take this matter up. But surely, the directors of the North British cannot be altogether indifferent to this question of preserving the beauty of Edinburgh. It is not too late for them to appoint a committee of experts to advise them and see whether something cannot be done to save the beauty of Edinburgh from destruction by at least reducing the height of the proposed building.

After all the matter rests with the citizens of Edinburgh; it is not yet too late for them to bestir themselves. Let them remember they are the heirs for life of a city without its equal in the World, a city built up amidst natural beauty by the care and good taste of those who have gone before them, and it will be an everlasting discredit to the present citizens of Edinburgh if in the future it shall be said of them, "They inherited a city which for its beauty was called 'The Modern Athens' and in sheer carelessness and indifference they Americanized it into a 'Scottish New York.'"

I am Sir, yours faithfully,
6, Lancaster Place, W.C. WM. YOUNG.

SIR,—It may not be surprising that a Railway Company should invite Architects to compete in the designing of a monster Hotel, but it is perhaps astonishing that half-a-dozen Architects, men, like Michael Cassio, of "reputation," should be found, if not eager for the fray, at least ready to enter it—that Architects, who of all men should be interested in a beauty which in some degree was by their own Profession created, should engage with their eyes open in a conspiracy for its destruction. The names of several of those Architects whose genius has conferred grace and grandeur upon the Scottish Metropolis have been put upon imperishable record; but men from various causes have attained immortal notoriety—"See Cromwell, damn'd to everlasting fame"—and it may be that each of the selected six was animated by the noble ambition of, by a rare opportunity, making his mark in unmistakable form upon a City unique by no less its picturesqueness than its historical associations. It is more customary in Edinburgh than in Glasgow for the Architect to inscribe his name upon his work, and it would be interesting to not only our own posterity but also to the Macaulayan New Zealander to know who was the Architect of "the observ'd of all observers."

Did no one withstand the temptation? Dr. Anderson wrote a long letter, but not about "the destruction of Edinburgh." When some years ago it was proposed to raze the Guty Steeple and the Consistory House of Glasgow Cathedral, the leading Architects of Glasgow, those who had some regard for picturesqueness, as well as veneration for antiquity, issued a protest. But the select six could not protest against "the destruction of Edinburgh." Did the Association as a body? Did the Cockburn Society? Did the Corporation? Did the representatives in Parliament? Did the citizens generally? As sings "the poet" in "Don Juan," "What, silent still? and silent all?"

"When the oldest cask is opened,
And the largest lamp is lit;
When the chestnuts glow in Embro',
And the kid turns on the spit;
When young and old in circle
Recite the tale or ditty,
Will grateful Fame proclaim the name
Of one who spared a city?"

Dr. Johnson had a poor opinion of "patriotism," and of Scottish patriotism he would likely have had the poorest. There is now neither the genius nor the patriotism, or we might have

another "Curse of Minerva" directed against the spoliation of not the Ancient but "the Modern Athens."

It cannot be lost sight of that the beauty of Edinburgh may be regarded as one of its "assets," and this beauty destroyed, it is probable that the North British Railway Company may carry fewer passengers.

The style of the chosen design is one better suited to the old town than to the new—where indeed the Scott Monument would have more sympathetic surroundings.

I am, Sir, yours faithfully,
Glasgow, July, 1895. G.

SIR,—Having carefully perused the articles, headed as above, in your valuable paper, and being interested in the subject, I beg leave to crave your indulgence with regard to the following remarks.

In your issue of 2nd inst. you publish a sketch, submitted in the recent competition by one of the competitors, which is to some extent misleading. Mr. Brydon, in his able letter, takes exception to the "monster Hotel" on the ground that it is out of scale with its surroundings. In this he is correct so far as the sketch published is concerned, and it is with the object of correcting this impression that I enclose a sketch, from the same point of view, of Mr. Beattie's design.

The most important point of a design in a situation such as this, seems to have been by all the competitors, save Mr. Beattie, overlooked—viz., harmony, not with any individual building, but with the whole surroundings, which are essentially of a pointed and rugged character, and naturally any design of a square treatment is utterly unsuitable for such a position. Again, a point in which Mr. Beattie's design is eminently superior to any others submitted is, that he has recognised the necessity of having a prominent feature, in the shape of a Tower, placed in such a position as to lead the eye from the Scott Monument to that of Nelson on the Calton Hill. This will become evident by placing a small piece of paper, or the finger, over the Tower in Mr. Beattie's design and removing it after a few moments' observation, when the necessity of such a feature will, I think, at once be admitted.

In reference to the sketches in your issue of the 9th inst., which I understand were made under the personal supervision of Lord Wemyss, No. 1 is calculated to a great extent to create a wrong impression. His Lordship has taken advantage of a want of knowledge of Architecture on the part of the public, in respect that he has merely blocked the Hotel out in black, whilst the surrounding features remain in outline, thereby drawing the attention of the eye entirely to the black mass in the centre of the picture, and preventing a proper reading of the design in conjunction with the adjacent buildings.

In No. 3 a certain argument in favour of his Lordship's view, namely, the blocking out and dwarfing of the Calton Hill, has been taken advantage of by lowering and shortening the point of sight, thereby placing the Hotel in a position which admittedly covers the Calton Hill, but one which, supposing the corner to be left clear, and the Post Office alone remaining, would have the same effect.

In reference to this sketch, may I ask where is the Nelson Monument? I suppose it to be behind the small turreted chimney in the centre of the building, but we are again led astray by the fact that the position of this chimney is wrong, as a glance at the design will at once make clear.

Finally, I would say if the amenity of Edinburgh is so much at heart with its citizens, let them prevent, if possible, any building being placed on this site, but if build you must, then the design most suited for the situation is that of the successful competitor.

I am, Sir, yours faithfully,
WM. NICHOLSON CUMMING, A.R.I.B.A.
213, Leith Walk, Edinburgh.

SIR,—The thanks of all true Scotchmen—and Englishmen, too, for the matter of that—are due to you for the very spirited manner in which you have taken up this matter; and, as an Edinburgh man, I want to add my most energetic protest to those you have published against this outrageous project. Edinburgh—"Modern

Athens"—stands unique for its marvellous Classic and picturesque surroundings, and I have always been proud to think how jealous its inhabitants have been, that, in the laying out of the New Town, nothing should be done either in plan or structure that should mar the unequalled views from every point that are the delight of all. I wish to goodness Ruskin's lecture on Architecture, delivered in Edinburgh forty years ago, could be read by every man, woman and child in Edinburgh; there the whole matter is summed up in the quotation you have rightly printed in italics, viz., "You must either help your scenery or destroy it." Can any man living put it better than that? And yet, what are we about to do? Why! we are going to "destroy our scenery" at the bidding of the Directors of the N.B.R., who want to rear a vast building, towering into the clouds, that will simply obliterate from every point of view the very features we are all so proud of. It isn't a question of Design—that, as far as I know, may be admirable—but it is a question

DESIGN IN ITS DECORATIVE ASPECT.

A BIRMINGHAM EXHIBITION.

DIFFERING in character from any special Exhibition held at the Corporation Museum and Art Gallery, Birmingham, a Loan Collection has been secured by Mr. Whitworth Wallis. It deals entirely with the Arts of Design in their decorative aspect. The Collection, which covers to a limited extent the ground covered by the Arts and Crafts Exhibition in London, though small, contains in some of its departments some of the noblest and choicest examples available in this country. The Art of Pictorial Decoration in various media is exemplified by Ford Madox Brown, Burne-Jones, Walter Crane, Richmond, William Morris and other masters. In addition, a few examples of designs for metal work, are shown in the Long Room, and there has been arranged in the Wedgwood Gallery

Art has taken of late in the province of Design, but suggest the question why the execution is so far mainly in the hands of foreign craftsmen. Sir Edward Burne-Jones is represented for instance by a design, "The Tree of Forgiveness," for the roof of the Apse of the American Protestant Episcopal Church in Rome. This design, forming part of a scheme covering a space of about 800 square feet, is intended to fill one of the arches. It is rich in the devout and poetic symbolism in the expression of which Burne-Jones is such a master, as witness the mystical illusion of the Crucifixion in the "Tree of Life." The mosaic decoration of St. Paul's Cathedral is illustrated by a number of the accepted designs by Mr. W. B. Richmond, A.R.A., whose "Prometheus," presented by him to the Gallery some years ago, has rendered his power of working on a colossal scale familiar to Birmingham students. The selection embraces a number of the designs in miniature and enlargements on the ultimate scale of some of the more striking details. It

TINTERN ABBEY: THE WEST WINDOW OF SOUTH AISLE.

of Scale. Any leviathan structure of that kind on such a spot will simply ruin the whole picture. Cannot the Railway Company fashion their requirements in a building that will not extend, say, the elevation of the Post Office, and otherwise be conformable to the Classic surroundings? At any rate, good design or bad, hotel accommodation or no, the thing is an intolerable nuisance in that particular plan, and I do hope that all lovers of our beautiful Capital will arise in their wrath and sturdily say, No!!—I am, Sir, yours faithfully,

GEO. A. LAWSON, H.R.S.A.

6, Marlborough Road,
St. John's Wood, N.W.,

SLONK HILL, at Shoreham, is a favoured site for Cottage Homes, the erection of which the Guardians of the Steyning Union have under their consideration.

A RECUMBENT effigy of the late Dean Elliot, which has been placed in Bristol Cathedral, was unveiled on Saturday.

a large historical collection of lace. The Art of Frescoe Painting has among its illustrations, as one would naturally expect in a Modern English Collection, an illustration of Ford Madox Brown's mural decoration, the chief example of this Artist here being the cartoon representing "The Expulsion of the Danes from Manchester," designed for the Manchester Town Hall. The design, apart from its technical lessons, tells its story with vigour, and is full of points of human interest. On the opposite wall are three pen-and-pencil studies for "Lancelot at the Shrine of the Holy Grail," the wall picture painted by Dante Gabriel Rossetti, in the Union Clubroom, Oxford, in 1857. These possess a melancholy interest as a memento of the ambitious early attempt of Rossetti, with the aid of Burne-Jones and other pre-Raphaelites at fresco painting, and of the pathetic failure of artistic aptitude through lack of technical experience. A kindred Art, that of Mosaic Decoration, is illustrated by several notable examples. These not only show the high position which native

is open to question whether the work is not a little too fine for scenic effect; but at any rate, the composition, drawing, and colouring, and their adaptation to the Architecture will be found full of interest for students. The subjects include several of the "Creation" series, with enlargements of the heads of Christ, Kings David and Solomon, the Recording Angel, the Sybils, and other important figures. Another of the Architectural decorative departments very beautifully exemplified in the Collection is that of stained glass. Here Burne-Jones, of course, is *facile princeps*. In the designs "Judgment Day" for the great window of East Hampstead Church, Sir Edward's power in composition in the studied use of vacant spaces and in the pose and expression of stately figures is grandly illustrated. The mail-clad figure of the angel St. Michael proclaiming the "Dies Iræ" contrasts strikingly with those of the angels below, the one on the right beatifically reflecting the joy of the blest, and that on the left expressing in attitude and gesture horror at the fate of the wicked.

BRITISH STUDENTS AT ATHENS.

"THE CITY OF THE VIOLET CROWN."

WHY has the British School at Athens received so little support? The study of Greek Archaeology has never been more popular in England than it is at present. Not only are young Classical scholars devoting themselves to the subject in greater numbers every year, but the public follows with keen interest the progress of the explorations in Greece, Cyprus, Crete, and Asia Minor carried out from time to time by English and foreign scholars. Schliemann's work at Troy, Tiryns, Mycenæ, and elsewhere, inspired scholars to dig, and the Germans at Olympia, the French at Delphi, the Americans at Argos, the Greeks at Eleusis, and our own countrymen at Megalopolis and in Cyprus have already followed his example with striking success. While the German, French, and American Schools at Athens continue to prosper, it is unpleasant to find that the British School is falling behind the rest, solely for want of funds. At the influential meeting of friends of the School held under the presidency of the Prince of Wales on Tuesday, it was stated that the income of the Institution was little more than £500 a year, three-fifths of which is contributed by the University of Oxford, the Hellenic Society, and Mr. Walter Leaf, while the rest is given by about eighty persons. We, who are supposed to be the wealthiest nation in the World, can only afford £500, but France gives her School £3,120, Germany gives hers £2,400, and the American School has an income of £2,000 a year. The French and the Germans do not limit the work done by the amount of the yearly income, but contribute large sums for special explorations. For instance, the German Government has spent £40,000 at Olympia and the French Government £29,000 at Delphi, while our Archaeologists have had the greatest difficulty in collecting a few hundred pounds from friends for the small but extremely fruitful excavations which they have made on various sites. The result is that unless the British School receives prompt and liberal assistance it will have to abandon the research work which has formed the more important part of its labours, and English scholars will be debarred from sharing in the discoveries which are certain to be made in the near future. Hitherto, perhaps, the School has been too little known outside learned circles to meet with the support it needs, but now that its case is fully set before the public, we must, if possible, partly by Government allowance and partly by private munificence, elevate British energy and good taste a little more nearly to the level of these brilliant and ardent foreigners. Before quitting office Sir William Harcourt, we have reason to believe, promised that he would propose a small annual vote for the British School of Archaeology at Athens. The new Chancellor of the Exchequer will certainly not fail to carry out this reasonable and intellectual grant. But for the purposes of good work in this rich field there is needed a steady supplemental revenue for the School, for a term of years running, say, to ten; and this ought to be easily accomplished. It is perhaps necessary to know Athens well, and to have wandered for days and weeks among the enchantment of its ruins to appreciate the full force of such an appeal that England should do her part in saving all that can be found of her antique splendour and grace and wisdom. Next to the emotion caused to an imaginative traveller who stands by the Lake of Galilee, or by the well at Nazareth, or upon the hill at Bethlehem, to be upon the Acropolis, in the shadow of the Parthenon, is surely the most overpowering. The scene alone would affect the most careless eye with delight, as you look one way to the Saronic Gulf, to Salamis and Egina; and another way along the verdant peninsula between Cephissus and Ilissus, to Hymettus, Lycabettus, and the purple range beyond which lie Marathon and Thermopylæ. The mild air has never lost that soft benignness of which Sophocles spoke; the olives, Pallas Athene's gift to Athens, beautify its plains and gentle hills with their green and silver; at the foot of the great rock of Cecrops basks in the sunshine the little city—white and red-roofed—which, in some form or other, has been there

since fifteen hundred years before Christ. Much has been taken from the "City of the Violet Crown," but enough is still left to overwhelm the observant eye and mind with a sense of the commanding mastery of the Greek genius in Architecture and Glyptic Art.

A MEETING IN ST. JAMES'S PALACE.

AT the meeting organised on behalf of the School at Athens, and held in St. James's Palace, the Prince of Wales said: "I have called you together to consider with me the interests of the British School at Athens, an Institution in the existence and welfare of which I have been much concerned from the very outset; and which I am convinced is of the highest importance to Classical study in this country, and, therefore, to the education of the Queen's subjects and the advancement of learning. The School was established twelve years ago. A fine plot of ground was generously granted by the Greek Government on the slopes of Lycabettos. With the funds which had been subscribed at our first meeting a house was erected, designed by the first director, Mr. Penrose. In the Library and Reading Room of this building meetings are held in which problems of Classical learning are discussed; the students are guided in their studies by the directors; and it serves as a rallying-place not only for all special enquiries into Classical subjects, and for Artists and Architects, but also for the number of British travellers who seek the inspiration and knowledge which a tour in Greece inevitably suggests. I am assured by competent authorities that a large number of 'advanced' Students coming from our Universities have continued and completed their studies at our Athens School with the greatest profit, and that these graduates have produced original work which has commanded the approval and respect of foreign scholars. We can all understand how such work, pursued on the very soil of ancient Greece, acts as a practical supplement to the more theoretical studies in our Universities at home. It appears to me to supply to our young pupils what active service abroad or on the high seas gives to soldiers and sailors whose training has been confined to parade grounds or harbours. Besides the useful service it performs of giving the finishing touch to the education of our scholars, remarkable advance has been made by the School in original research, exploration, and excavation. Of this, those who are competent to speak, will tell you more. Where all have done such good work it would be invidious to single out a few names. But I must draw your special attention to the names of the first director, Mr. Penrose, the present director, Mr. E. A. Gardner, and to the successful efforts of the Chairman, Secretary, and Treasurer of the Managing Committee here. Nor must I forget Professor Waldstein, of King's College, Cambridge, who has helped us so much in various ways." The Prince then referred to the grants made by the French, German, and American Governments, spoke of Sir William Harcourt's offer (already indicated), and, after acknowledging the proffered help of the Universities, appealed also to the liberality of private individuals, which, in this country, had never flagged. A number of preliminary resolutions having been passed, Sir F. Leighton proposed, "That this meeting pledges itself to use every effort to place the School upon a sound financial basis, so that in point of dignity and efficiency it may worthily represent this country among the other foreign Institutes in Athens." He said he must only speak very briefly in support of the resolution in consequence of the injunctions of those very tyrannical persons, his medical advisers. To no cause, however, would he give his assistance more readily or more eagerly than to that which they had met to advocate, because it was in a great degree bound up with the Profession to which he had devoted his life. He was delighted to see His Royal Highness in the chair, because his presence there and his generous gift to the funds of the School testified how deep an interest the Prince of Wales felt in the undertaking.

THE Guardians of Eastry, Kent, have approved a scheme for alterations to the Workhouse at a cost of £3,200.

AN ANCIENT CALEDONIAN HILL FORT.

BUILDING BEFORE THE LIME PERIOD.

AN antiquarian discovery of extraordinary interest has been made near Overtoun Castle, Dumbartonshire, the country residence of Lord Overtoun. An ancient Caledonian Hill Fort has been laid bare by excavation on the summit of Dumbowie, one of three well-known landmarks in this part of the ancient Colquhoun county—Dumbuck, Dumbowie, and Dumbarr. The find is the result of the researches of Mr. John Bruce, F.S.A.Scot., and Mr. W. A. Donnelly, Artist, both of whom, by their recent discovery of what Dr. Anderson calls one of the most important groups of rock sculptures hitherto discovered in Scotland, had already won the appreciation of archaeologists. The present find has been sprung as a surprise on all who have known this hill for the last 50 years or more, no evidence of the building being visible. The workmen engaged on the excavation have up to the present laid bare the walls of the Fort to one-third of their circumference. Their ascertained height inside is about 5 ft., descending on the outside curve to a depth of 32 ft., with a base at least 30 ft. thick, ascending to a breadth of 4 ft. thick at the top. The stones are laid in courses without mortar and very little earth, the outside course being laid like slates, one on the top of the other. The stone is freestone, or white sandstone, while the rock on which it is built is hard whinstone. What of the building that has been left standing and at present laid bare is of a methodical style, showing evidence of a practical knowledge of building as practised before the Lime Period. Further developments of importance are expected. Up to the present the productions have been intensely black organic earth, earthy matter mixed with rust, 40 or 50 broken bones, and pieces of charcoal. The above were found below the level of the original floor, and near the living rock. Under a slab of freestone also a necklace of what appeared to be paste or clay, strung on a thread was discovered. The bones were got at opposite sides of the enclosure, and in each case smoothed pieces of quartz were found, placed round the bones as if by design. The Helensburgh Antiquarian Society are taking interest in the matter, Mr. Bruce, Mr. Wymess, and Mr. Miller, of that Society, giving assistance to the excavators, and guiding the work to a practical issue. They are also in correspondence with the parent Society in Edinburgh, so that a proper value may be placed upon the find. Mr. Donnelly has men engaged to execute a series of drawings of the scene and the developments. The side of the Fort commands one of the finest views in the kingdom—from Ben Lomond to Goatfell, from Argyllshire to Perth, with the whole valley of the Clyde—while at its feet is the ancient Royal Burgh town of Dumbarton and Castle Rock; to the east, the Auchintorlie heights and Long Craigs; while at its base are the policies of Overtoun and Barnhill, Milton Glen, and Barnhill Dam, a lovely sheet of water. The present indications give hope for further developments of a most interesting kind.

COVENTRY HALL, the ancient seat of the Earls of Coventry, at Stréatham, has been purchased by the nuns of St. André of Tournai, who will in a few weeks open it as a School. The Belgian nuns have also already commenced to build large Schools in the parish for the daughters of the Roman Catholic working classes.

AT Bournemouth, the Town Council has resolved that plans and estimates of the proposed new Cemetery shall be prepared at once; and that a new Fire Station be erected at a cost of £800.

TO-MORROW the Memorial Stone of the Tower of Emmanuel Church, Compton Gifford, will be laid. Of the £3,500 which the Tower will cost, one-half has still to be raised, and the Spire is estimated to cost an additional £1,600 or £1,700.

A NEW School, erected by the Independent Methodists at a cost of £320, has just been formally opened at Wingates, Westhoughton, near Bolton.

THE old Presbyterian Church in Fisher Street, Carlisle, has been reconstructed and enlarged. The total cost amounted to £3,400.

INDIAN ART AT EARL'S COURT.

AT Earl's Court, the Fine Art and Loan Section of the Empire of India Exhibition, is superior to the collections of former Exhibitions. It has the dignified air of a Museum, and the Collection is by no means badly arranged, its contents being seen without unnecessary trouble. These consist chiefly of Pictures in various mediums, Ornamental Designs of all sorts, Carved Woodwork, Pottery, Bronzes, Arms, Silver, Carpets, Brocades, and all kinds of Stuffs. We might class the exhibits as Pictorial Art and as Art applied to the Decoration of Objects; or, again, as really native Indian Art, and as European Art illustrating or in some way connected with India. If we take Pictorial Art first, we shall find European work by deceased and living artists alongside Indian work, old and indigenous as well as recent. Most of the pictures, whether passable or not as Art, have at any rate an interest apart from the æsthetic side, and are, generally speaking, valuable as documents for the instruction of those who have not been in India. Amongst pictures that one regards chiefly from the æsthetic standpoint, as if they were in the Academy, the most serious or the largest are to be found in the long list of works contributed by Mr. Edwin Lord Weekes, Mr. Nettleship, and Mr. R. W. Allan. Mr. Weekes, indeed, fills an entire room himself with sketches and with large pictures, some of which have attracted notice in the Salons of Paris. As naturally more than one Painter has depicted the same scene, the visitor learns a good deal from a comparison of the different renderings of such buildings, for instance, as the Taj Mahal at Agra, which has been painted by Mr. Weekes, Mr. Allan, Mr. Reginald Barratt, Mr. W. Duncan, and, last century, by Hodges on the commission of Warren Hastings. One room is entirely devoted to relics of the old East India Company, and the first Collection made in commemoration of the body which governed India both long and gloriously. A case containing pieces of plate presented to eminent Anglo-Indians is well worth mention. The race capable of presenting such hideous and ludicrous tributes to its illustrious men may be fitted to govern Orientals; it is certainly unfitted to guide their æsthetic instincts. These epergnes and candelabra are the justification of all the follies of the ultra æsthetic movement, all the gush and exaggeration of the Arts and Crafts Society. We will not say much about the pictures painted by Indians in European style, for they show us nothing new nor admirable. For beauty they cannot be compared to old native specimens of the Art of Illumination such as may be seen in the series of "Kings of Delhi." The Mooltan pottery, although neither ancient nor very original in colour and design, is another instance of bright effective colouring and bold simplicity of pattern. The improved ware produced under European instruction may be, and we believe is, of stronger and more durable substance, but it is sadly inferior in force and harmony of colouring. The tints are sad and neutral for the most part, and when a contrast is attempted its opposition is discordant. Most of the metal work in platters, bowls, vases, and other vessels, as well as in the ornamentation of arms and armour, shows a wonderful sense of beauty in shape and intricacy in pattern. The love of elegance has prevented the artist from overloading the better specimens with figured designs; indeed, however elaborate the pattern may be, it is not allowed to bury or deform the general proportion of the objects. The statuettes of gods and animals may be crudely constructed from our point of view, but the shape aimed at is always effective and decoratively conventionalised. Such a shield as 1,494 is not easily beaten for suavity of pattern by the work of any nation. The effect is rich, and yet, as considerable parts are plain, the pattern has an air of largeness and tranquility. Its border consists largely of the elegant cursive characters of Arabian or Persian writing.

Carved wood and ivory and metal form a good part of the Exhibition, and not the least charming, as will be admitted by those who look at the screens, doors, panels and figures, ancient and modern. But of all the decorative

work, ancient or recent, in metal or wood, nothing surpasses the Siva Shrine, a very old monument in brass and copper of the most severe and stately design. The invention of the fabulous animals and the rays which surround the god are beyond praise. The carving of the support is exquisitely soft and yet full of character, whilst the pillars and friezes introduced are all copied from very ancient Indian Temples at Tanjore and Madura.

AN OLD-WORLD ESSEX BOROUGH.

NO one can look at the fine Druidical medal found many years since near Moot Hall, Maldon, and then at the hill upon which the town stands, without feeling that the latter was a spot on which the Britons lived and worshipped long before the Romans were known in the land. There is, indeed, a tradition that Queen Boadicea did battle with the invaders on the lands lying to the northward, where the Railway Station now stands. It is certain, however, that from time to time the Romans occupied Maldon, that King Alfred stayed there while his men built Witham, and that the Danes besieged it again and again. But the square weather-stained fifteenth century Moot Hall is nearly all that remains of the historic past. For hundreds of years this building has been the Municipal Hall, the Court House, the Prison, for Maldon is an old-World little borough, with its curious charters and ancient privileges. It has its Mayor, Aldermen, Councillors, and Town Clerk, to say nothing of its Commission of Peace and Court of Quarter Sessions. Upstairs in the Munitment Room are yellow crinkled old parchments, some with great red seals, all with royal signatures. These are the charters granted to Maldon by successive monarchs. They begin with Henry II., followed by others, from Edward I. down to George III. Under the first, freemen were allowed curious exemptions from feudal service. They were relieved, for instance, from "danegeld," "carriage," "scutage," "tallage," "hostage," and similar other unintelligible taxes and services. Free toll in every English market and fair, and over every Bridge and road was likewise given them. They were exempt from the frequent calls to build or repair Castles and Causeways, from all foreign service, except for finding for forty days, at their own expense, one ship for the King's use whenever he found it necessary to wage war. During the reign of Queen Mary, Maldon had to provide a prison at the Moot Hall, and within the Liberty "tumbrel, pillory, and gallows." Tumbrel, pillory, and gallows have gone, but to remind evil-doers, nice bright polished steel handcuffs hang just inside the open door. According to Mr. Percy Lindley, the display of manacles or hand chains dates from the days when witches were common to the district. The imps, employed by the wise women to work their spells on neighbours' pigs and cattle, and batches of bread and brewings, found secure hiding-places in the Blackwater islands and salt marshes. Within the present century, spirits of one sort and another have been discovered in these haunted grounds, but hidden away in tubs, and run to earth by officers of her Majesty's Excise. As late as George II. witchcraft was a punishable crime. In the dark days of the Commonwealth, among Essex witches tortured or burnt to death in 1579, three Maldon witches were tried and roasted at Chelmsford. Inside the Moot Hall are hung portraits of Elizabeth and Anne, Charles II., George III., and Dr. Plume, Maldon's townsman and benefactor. From the roof one of the most beautiful views imaginable is to be obtained. Towards the east is the broad Blackwater flowing in great winding reaches to the sea, elsewhere is to be seen the Chelmer, to the west rise the dark heights of Danbury, to the north-east the high plateau of Tiptree Heath, and to the south the spreading waters of the Crouch, while further beyond still is the distant and glorious old Thames. Standing here one can easily understand why Saxons, Romans, and Danes made Maldon a centre and a fortress. During the restless tenth century the town must have been in the thick of the fight. For with the Danes established at Mersea, and hovering off the Essex coast,

Maldon was one of the first Saxon strongholds in the way of the Vikings on their inland incursions. Coming to 933, we are told that in that year Unlaf, with 93 ships, laid waste all the district round Staines, Sandwich, Gypswic (Ipswich) and Maeldun (Maldon). But while the history of the borough would fill volumes, that of the Dengie Hundred adjoining is even more interesting. Beeleigh Abbey is gone and forgotten, so is the city of Ithancester. A word or two as to the Blackwater—the glory of Maldon—may here be of interest. The river still rises and falls with the tide, as it did when the Romans were in the zenith of their power. Naturally its waters are salt, saltier than even the sea—16 miles distant—itsself. For a dip in the briny, then, there is no better than the Blackwater. Just below the town the stream suddenly widens and goes on increasing till at Bradwell the estuary is about four miles across. As yet its beauties have hardly been discovered, but ere long the Blackwater should be one of the many popular boating centres in England.

MY JOURNEY TO ATHENS.

A JOURNEY to Athens and back can be accomplished easily in three weeks, but you should give a week to the Acropolis itself. It was not until I was actually on the spot that I understood how beautiful Greek Architecture was, and how nearly it was allied in spirit to that of the thirteenth century. From that time I took a near view of the latter Art, and things which had before appeared arbitrary and confused became clear and logical. I saw the same mind working at Athens as at Chartres, but in a different climate, under different conditions, and with different material. I had been told that Greek Architecture was beautiful, but I could not believe it for I had only seen it represented in books, where the white columns were shaded until they looked like those thickly coated with soot on the outside of St. Paul's. It was impossible to believe that these things could be beautiful; but on the spot itself they were very different, and I saw that, dry bones as they were, the climate, which afforded the broad lights on their surfaces, and furnished the glorious blue sky which formed the background, made every difference. I also saw that each building was placed with the most consummate art, and turned exactly in the direction where it would be seen to the very best advantage from certain points of approach. Further investigations showed traces of the colour, which, by artfully designed ornaments, principally in bright tints and thin lines, softened down the intolerable glare of the white marble when first the edifice was built. It is a curious fact that colour thus applied upon a bright surface at a distance, not only, as might be expected, loses its individuality, but also gives a light tint of its prevailing colour to the marble. Of course there were other parts covered in great masses, such as the triglyphs, which would be seen as local colour even at a distance. From Mr. Penrose's book I learnt how, by almost invisible corrections of the lines of the Architecture, the same softness was given to a hard marble building as we see in a sketch. Everyone knows how a design always looks better in a sketch than it does in a careful drawing (I am referring to geometrical drawings), and how very often the building itself looks even harder than the geometrical drawing, especially if the latter is touched up with stone joints, real or imaginary. The Greeks were perfectly aware of this fact, and provided for it accordingly. B.

SOME criticisms having been raised as to the height of the Pedestal upon which Lord Strathnairn's Statue has been placed, it is interesting to know that Mr. Onslow Ford has, as a precedent, the Colleon Statue at Venice, which is placed at exactly the same elevation.

THROUGH the sinking of a caisson of the great Bridge in course of construction at Nag-el-Hamad, Egypt, forty workmen recently lost their lives.

A MEMORIAL is to be fixed in Llandaff Cathedral in recognition of the brave deeds of the old 41st—the Welsh Regiment. On the tablet will be inscribed the honoured names of the officers who fell in the Crimea.

Professional Items.

ASTON, BIRMINGHAM.—The Guardians of the Aston Union have appointed the first premiated Architects in the recent competition for Cottage Homes, Messrs. Franklin Cross and J. R. Nichols, of Union Chambers, Temple Row, Birmingham, to carry out the work. The Architect's estimate for the Homes was £25,200. The scheme embraces Homes for Boys and Girls, Probationary Home, School, Place of Worship, Infirmary, Workshops, Swimming Bath, Bakery, Stores, Superintendent's House, Fire-engine Station, &c., which will be erected upon a site near the Gravelly Hill Workhouse.

BARNSELY.—Some time ago the Barnsley Salvation Army Citadel Company (Limited) was formed, and the result was that a site was bought in Wellington Street for about £450, and a new Barracks is now in course of erection, from the designs of Major Gordon, which will cost about £2,200, and accommodate 850 worshippers in the main building, whilst the smaller meeting place in the rear will accommodate about 200 children. It is built of brick, with stone dressing, Mr. Henry Burrows being the contractor.

BEBINGTON, CHESHIRE.—The new Wesleyan School Chapel at Bebington, was opened on Thursday last. The works have been carried out by Messrs. W. H. Bleakley & Co., of Birkenhead, from plans prepared by Mr. T. Taliesin Rees, also of Birkenhead. The contract was £930, furniture and fittings, £100. The building is faced with red pressed bricks, relieved with white Storeton stone dressings. Woodwork, pitchpine. The windows are filled with Cathedral lead lights. The design is Late Gothic. The accommodation includes School Chapel for 300 persons, two Vestries, w.c., Lavatory, Heating Chamber, &c. The above is the first portion of a large scheme, the plans of which have been prepared by Mr. Rees, and includes a large Chapel, Vestries, &c., to cost about £3,000.

BIRMINGHAM.—The autumn meeting of the Iron and Steel Institute will be held at Birmingham from August 20th to 23rd. The Mayor of Birmingham will hold a reception in the City Council House on the evening of the first day.

Bow.—For a new Science Wing to their Schools in Tredegar Square, Bow, the Governors of the Bow and Stepney Foundation have selected from a limited competition the designs of Messrs. T. Chatfield Clarke & Son. The addition will be fitted with all modern improvements and is to be commenced at once, Messrs. J. & J. H. Cocks having secured the contract.

BUXTON.—On Wednesday morning Mr. A. Blomfield, son of Sir Arthur Blomfield, met the Churchwardens of the Parish Church to consider the proposed restoration of Buxton Parish Church. Mr. Blomfield produced and explained a sketch plan which shows how a new Chancel could be added and seats provided for the choir. Sir Arthur Blomfield has been asked to submit the approximate cost of carrying the work out.

CASTLEFORD.—Plans and designs by Mr. Geo. F. Pennington, Architect, Castleford, have been approved by the Building Committee for new Wesleyan Sunday Schools and Church Buildings, proposed to be erected in Wesley Street, Castleford. The buildings are designed in the Renaissance style, and are to be built of local bricks with stone dressings.

DEVONPORT.—The Spire at St. Mary's Church, Devonport, which is in an insecure condition, is about to be restored from plans by Mr. Henry C. Luff, of that town, who has given his services.

DUMBARTON.—The committee has decided to give a commission to Mr. Hamo Thornycroft, R.A., of London, to execute a life-size statue in bronze of Dr. Denny, as also a suitable pedestal for the same. The statue of the distinguished shipbuilder will be erected in the Burgh of Dumbarton.

DUNDEE.—Plans have been passed for a large undertaking at Victoria Road by the Committee of the Dundee Town Council. The buildings consist of fifteen tenements of dwelling-houses. The newest improvements in sanitary fittings will be introduced. Large open spaces have been left for thorough ventilation. The elevations show oriel windows on the main frontages, with two towers flanking the principal corners at Victoria Road. The erection of the buildings will be proceeded with at once, but it is expected that this will occupy two years, although about one-half will be got ready for Whit-Sunday next. The entire buildings, which will cost upwards of £20,000, are to be erected from plans by Messrs. McCulloch and Jamieson, Architects.

EAST BUDLEIGH.—A stained glass window of some historical interest to the Electrical World has been placed in the pretty Church of East Budleigh, commemorating as it does the laying of the first telegraph cable between this country and America. The subject chosen for illustration is "Christ stilling the tempest." The memorial inscription is as follows: "In memory of Vice-Admiral George William Preedy, C.B., who, when Captain of H.M.S. Agamemnon, with the Captain of the U.S.S. Niagara, successfully laid the first Atlantic cable uniting Europe and America in 1858." The window is the work of Mr. F. Drake, of the Close, Exeter.

EDINBURGH.—The Prudential Assurance Company has obtained a warrant to take down the London Hotel, a large edifice at the south-east corner of St. Austin Square. The Architect for the new building is Mr. Waterhouse, R.A., and the work is proposed to have an exterior carried out in terra-cotta details. If so, it is to be hoped that the colour will be something more consistent with the grey stone around it than the usual brick red. The tenements of this square have been in great part altered from the original design, which was, like that of Prince's Street, very commonplace, with the exception of the Royal Bank.

EPSOM.—For the purpose of laying the foundation stone of the new lower School which is about to be erected, from designs by Sir Arthur Blomfield, A.R.A., as an addition to the Royal Medical Benevolent College, the Prince and Princess of Wales paid a visit to Epsom last week.

EVERTON.—The Foundation Stone of a new Lending Library, Reading Rooms, and Technical Class Rooms in St. Domingo Road, Everton, has been laid. The new building will contain a Lending Library, a large Newsroom and general Reading Room for men, and separate rooms for women and boys, all of which the Committees hope to make thoroughly comfortable and attractive. On the upper floor and in the basement accommodation is provided for various Technical Classes.

EXETER.—A new Class Room, erected for infants at St. Sidwell's Church Schools, Exeter, has been opened. The room is capable of accommodating between 60 and 70 children. The Architect is Mr. Jerman, and the contractor Mr. G. E. Saunders, both of Exeter.

FORD.—A new High Altar, from designs by Mr. Pugin, has just been erected in the Catholic Convent Church at Ford, in the Liverpool diocese.

GRANGE-OVER-SANDS.—The Grange-over-Sands Congregational Church is approaching completion, to the designs and under the superintendence of Mr. E. Howard Dawson, Architect, of Lancaster.

KILBURN.—The Committee of the new Unitarian Church to be erected in Kilburn, has selected from a limited competition the designs of Mr. Howard Chatfield Clarke, of Bishopsgate Street Within. The design is for a Church to seat 400, with a Congregational Hall and Offices attached.

LANDRAKE.—A new Wesleyan Chapel was

opened here on Wednesday. Just twelve months ago the four Memorial Stones were laid, but the progress made was slow owing to the severe winter, and the outside of the structure is scarcely complete yet. The Chapel, of local limestone with red brick dressings, adjoins the northern side of the old Chapel. It has a Nave and two Transepts, and the pitchpine wood open benches will seat 150 people. The old Chapel is to be converted into Sunday School Class Rooms, and has folding doors opening into the new building, the Pulpit being so placed as to command a congregation in both buildings. The Chapel, about 50 feet by 30 feet, was designed by Mr. S. P. Hosking, built by Mr. T. Hawke, and fitted by Mr. J. Churchward.

LIVERPOOL.—Dr. Whiteside, the Roman Catholic Bishop of Liverpool, recently laid the foundation stone of Schools which are to be erected in connection with St. Charles' Catholic Church, Aigburth Road, Liverpool. The new school premises will accommodate 150 children, the dimensions of the building, which is to comprise School Room, Class Rooms, and Cloak Room on one floor, being 46 feet by 44 feet. Messrs. Sinnott, Sinnott and Powell are the Architects, and the contract is let to Mr. Fogarty, Old Swan, the estimated cost being £980.

LONDON.—Last week the Duchess of Teck formally opened the imposing building in Great Ormond Street, Bloomsbury, which will henceforth be devoted to the growing work of the London Homœopathic Hospital. The foundation stone was laid in June, 1893, and on all points the internal requirements of scientific Hospital construction have been considered in preference to external Architectural effect, but, notwithstanding this, the Architect, Mr. W. A. Pite, has designed a structure which is a distinct acquisition to the neighbourhood. Upon the purchase of the site and the erection and furnishing of the building an expenditure of £45,000 has been contemplated, and the present amount of the building fund is £35,000.

NEATH.—The new Bank premises which are now being erected for the London and Provincial Bank at Neath, on the site of their old offices in the Parade, when completed will form an imposing and striking feature of Architectural merit. The plans, which have been prepared by Messrs. Wilson and Moxham, Architects, Swansea, were selected in competition, and the design shows that they have given every consideration and care in planning the Bank to make it convenient and artistic in every detail. The Façade to the Parade and side road is built of boxground stone. The Entrance to the Bank Chamber is in the centre, and forms a bold relief. On either side are projections which are carried up on the first and second floors with Corinthian columns, terminating with a heavy cornice, which runs round the building. On the ground floor are the Bank Chamber, with Manager's Room, Lavatories, Strong Rooms, and Muniment Rooms. There are also the Manager's Dining Room, Kitchens, and offices on this floor. The two floors above are devoted to the use of the Manager. The contract is let to Mr. Abraham George, of Neath.

NEWPORT (SALOP).—On Thursday a public enquiry was held before Assistant-Commissioner Coore, with reference to the proposed removal of the Grammar School to a new site offered by Sir Thomas Boughey. A resolution which had been passed unanimously by the Urban Council was handed in by Mr. Dickenson, the chairman, in favour of the proposal, and that was the only formal resolution laid before the Commissioner. The only definite opposition was raised by Mr. Barrow, whose reason was that an architectural and historical feature of the town would be removed to where it would not be seen.

PONTYCLUN, GLAMORGANSHIRE.—The new Church of St. Paul's, Pontyclun, is built in a late period of Gothic Architecture, and consists of a Nave, with a Chancel, Vestry, and Organ-chamber. Accommodation is provided for 350 people. The walls are built of local stone,

with Bath stone dressing, and the windows are all built with traceried heads. The main walls are grey, and the roof is of green slate with red tile ridges, surmounted by a bell-cote furnished with two bells. The walls inside the Church are coloured buff. The contractor was Mr. John Morgan, Llantrisant, and the work has been carried out under the superintendence of Mr. E. M. Bruce-Vaughan, the Architect. The cost is £1,500.

ROCHDALE.—At a meeting of the Rochdale Town Council, the Chairman of the Paving and Sewering Committee reported that the Local Government Board had given sanction to the Corporation for the borrowing of £40,000 on condition that extra land could be had at its Sewage Farm, and if they had permission from the Railway and Canal Companies to make the sewers under the railway and canal. They had obtained the consent of both companies, and had engaged Mr. G. F. Deacon, C.E., of Westminster, to superintend the work required in carrying the Sudden Valley Sewer under the Rochdale Canal. Mr. H. G. F. Barham, of Pontypridd, had been engaged to act as resident engineer.

STAFFORD.—Memorial Stones of the new Baptist Chapel, in Lichfield Road, were laid on Wednesday last. The new Church is being built from designs prepared by Mr. E. Harper, Architect, Brimingham, and the work is being carried out by Mr. G. H. Marshall, of Smethwick. It is proposed to erect a Church and Schools on a commanding site in Lichfield Road, hitherto occupied by a number of tumble-down straw-thatched Cottages. The buildings will be in the Tudor-Gothic style, with bricks and stone dressings; but the Spire will be of stone, with open tracery. The Church is to accommodate 310 persons on the ground floor, while in a Gallery over the Main Entrance room will be provided for 115 more. There will be a large Church Parlour, a Deacon's and a Minister's Vestry. The School-room will accommodate 250 scholars on the ground floor. There will be six Class Rooms, four of which will be divided from the Central Hall by movable partitions. Provision will be made for an enlargement of the School accommodation, if necessary, at any future time. The Church will be heated with hot-water pipes on the low-pressure system, and it is expected that the electric light will be installed.

STRETTON.—The Foundation Stone of a new Church to be built at Stretton, near Burton, the entire cost of which, estimated at over £15,000, is to be defrayed by Mr. Gretton, was laid recently. The Architects are Messrs. Somers Clark and Micklethwaite, of Westminster, and the builder is Mr. Halliday, of Stamford. The Church is to accommodate over 400 worshippers.

WAKEFIELD.—At a recent meeting of the County Council it was resolved to repair Harewood Bridge, at a cost not exceeding £1,200; and Brotherton Bridge (on the Doncaster and Tadcaster main road) at a cost of £300. The salary of Mr. William Holmes, the county sanitary inspector, was increased from £175 to £200 per annum; and to make application to the Local Government Board for sanction to borrow £5,000 for the purchase of a site and the erection and furnishing of a Police Station at Castleford, and £1,500 for the erection and furnishing of a Petty Sessions Room at the same place.

WALSALL.—The Walsall Town Council has accepted the tender of Mr. R. M. Hughes for the erection of Public Baths in Lichfield Street, in accordance with plans and specifications by Messrs. Bailey & McConnell. The contract price is £6,971.

WESTHOUGHTON.—At a meeting of the Westhoughton Burial Board, held on Monday, July 8th, the contract for the formation of new Cemetery and erection of Public Conveniences, Draining, &c., was let to Mr. Wm. Pollitt, Bolton, at £650. The work has been commenced, and is being carried out from the plans and under the direct supervision of T. Greenhalgh, Surveyor, Nelson Square, Bolton.

SOCIETY MEETINGS.

The Liverpool Engineering Society in Wales.—A large party of the members of this Society has paid a visit to the Dinorwic Slate Quarries, Llanberis, and the Snowden Mountain Rack Railway. The party was accompanied by Professor H. S. Hele-Shaw, M.Inst.C.E., the President of the Society.

Royal Scottish Society of Arts.—A meeting of this Society was held last week in the Hall, 117, George Street, Edinburgh. The Society proposes to offer for competition a Keith prize of £50 for improvements in electric energy meters for domestic supply. Competitors will be expected to submit, in addition to a descriptive paper, accompanied by detailed drawing, a working meter adjusted for a mean pressure of 115 volts, and suitable for a house in which the minimum number of Watts being taken at any time is 4,000. Special importance will be attached to the minimum load at which the meter can register correctly, and to the energy absorbed by the meter when the consumer is using a light load, or when no energy is being taken. Conditions of the competition were discussed and adjusted, and it was agreed that the award should be made during the session of 1896, the Society reserving right to withhold the prize in the event of there being nothing deserving the award. Alternatively, the Society may award a smaller amount should anything meritorious, but not deserving the full prize, be sent in.

Derbyshire Metallurgical and Engineering Association.—A well-attended meeting of the members of this Association was recently held, when an interesting paper was read by Mr. W. J. P. Burton, Science lecturer, upon "Crich Hill" geologically. This remarkable mass of rock, Mr. Burton stated, formed one of the most striking landscapes within a radius of ten miles; its peculiar dome-like shape, and the tower-like structure on its summit, made it a striking figure. The paper was illustrated by diagrams, photographs, and an exhibition of mineral specimens and fossils.

National Registration of Plumbers.—The Annual Meeting of the Sheffield centre of the National Registration of Plumbers was held on Thursday evening, at the Town Clerk's Office. Mr. Charles Hadfield, F.R.I.B.A., presided. The election of officers and public representatives for the ensuing year was first proceeded with, Mr. C. Hadfield being elected chairman, Ald. W. H. Brittain, vice-chairman, Mr. H. Waddilove treasurer, and Mr. J. B. Mitchell-Withers honorary secretary. The following were elected public representatives for the coming year:—Sir H. Stephenson, Dr. Littlejohn, Professor Hicks, Professor Ripper, Messrs. E. M. Gibbs, C. F. Wike and J. D. Webster, Dr. A. Jackson, the Mayor and the Master Cutler. These, with twelve master plumbers and twelve operatives, form the Council for the coming year. Alderman Hind, a member of the Plumbers' Company, and Chairman of the Hospital, Health, and Parks Committee of the Stockton Town Council, gave a very interesting address. He referred to the old organisation of the Company, and the great benefits that had accrued from the action they had taken, at very considerable expense, in establishing centres throughout the country. He said that the country centres might say, "Why should we send a portion of our money to London, to be dealt with by the central organisation?" As a matter of fact, the Plumbers' Company, since the movement was established in 1886, had spent over £10,000 out of its funds in furthering the objects of the Association, and Sir Stuart Knill, the late Lord Mayor and Master of the Company, had spared neither time nor trouble in furthering the interests of sanitary work. He urged that this centre should do all it could to increase the interest in technical teaching.

Sheffield Art Society and Sketching Club.—The monthly meeting and Exhibition of this Club was held in the Rooms, Tudor Place, on Thursday night. Mr. Frank Saltfleet presided, and a number of members were present, with their work done at the sketching trips to Padley Woods during the past month. About forty pictures were on the screens and

easels. Mr. Saltfleet was represented by a large watercolour of Padley Brook, with rocks, trees, ferns and water exquisitely painted. Also four large sketches of other districts, all of which showed a masterly touch and a wonderful tone. Most of the other pictures were of brook and rocks in Padley Woods, and exhibited a marked improvement in the general work of the members. The following were represented:—Messrs. Willis Eadon, W. B. Hatfield, Linley, Hunt, Holland, Backhouse, Loxton, Redfearn, Hemsworth, Fidler, Hall and Brady.

The Cymmrodorion Society.—This Society, established for the encouragement of Literature, Science and Art, as connected with Wales, gave a conversazione and concert on Thursday evening, in the galleries of the Royal Institute of Painters in Water Colours, Piccadilly. The entertainment was attended by about 300 of the members and their friends.

SAWDUST.

ERECTED on a site given by Lord Mostyn in East Llandudno, the Duke of Clarence Memorial Church has been opened. £5,000 or £6,000 more is still required to build a Chancel, Aisles, Tower and Vestries.

A MEMORIAL CHAPEL and Vestry have been opened at St. Mary's Church, Dover.

THE London County Council is considering a proposal for lighting the Victoria Embankment and Waterloo and Westminster Bridges, at an estimated cost of £16,590.

THE Church of St. Mary Magdalene, Rodborough, near Stroud, is undergoing restoration, and the Foundation Stones of the new Chancel and extension of the North Aisle have already been laid.

THE new Technical School at Preston will cost about £16,000, independently of fitting and furnishing. The design provides a Shed for classes in Weaving and Designing, with space for 80 hand looms and 20 power looms in motion, with rooms for all the preparatory processes; a Shed for cotton spinning machinery, a Lecture Room, &c. The building will also include an Agricultural Department.

AT Nelson, the Baptist Denomination has purchased a site near the present Chapel, on which it is intended to erect a Sunday School capable of holding 1,000 scholars. The Chapel is also to be enlarged and made capable of holding 350 more worshippers. The total scheme will involve an outlay of £5,000.

SALCOMBE Waterworks, recently opened, are of an extensive and most complete kind, and able to supply a town of much larger dimensions than Salcombe. The new high level Reservoir is on the highest land in the district, called the Berry, and is 50 ft. long by 30 ft. wide and 10 ft. deep, and is closed in with 4½ in. brick arches in cement on rolled iron girders, and holds over 80,000 gallons. The works have cost over £3,600, and have been carried out by Mr. Jenkins, Contractor.

THE Ossett Town Council proposes that a bill be promoted in the next session of Parliament for the purpose of acquiring the works and plant of the Ossett Gas Company, and also to enable the Corporation to establish an electric lighting plant.

AT Sefton Park, Liverpool, two Wafer Fountains have been built, which consist of about a dozen jets each, and will prove a great source of attraction to visitors. It is intended to erect two Fountains in Stanley Park, and also one in St. Peter's Gardens.

THE Malcolm Collection of Drawings and Engravings by the Early Masters, now at the British Museum, has been offered by Colonel Malcolm to the Trustees of the Museum for £25,000, and the Treasury, on the recommendation of the Trustees, has agreed to the purchase.

A LARGE new Signalling Cabin at Waverley Station, Edinburgh, has just been brought into use. It has about 200 levers, and is one of the largest in Scotland. There are believed to be half-a-dozen larger in England, including that in the Central Station, Newcastle.

SOME improvements have been lately carried out at Frogmore Lodge, which is officially regarded as being part of Windsor Castle. A rustic Tea Room has been built in the grounds, which is both comfortable and picturesque, in which the Queen now breakfasts every morning.

The Builders' Journal COMPETITIONS.

No. 4.—A Village Church.

Designs are required for a Village Church to seat 200 people. The site is a hill-side, rising one in twenty from North to South, and situate in a stone country. The cost is not to exceed £2,500. Drawings to be submitted on or before Monday the 22nd of July.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Strand, W.C.

SAWDUST.

MR. F. GRIFFIN, of the National Art Training School, and formerly of the Glasgow School of Art, has been appointed, out of 200 applicants, to the post of Art Master at the new Technical Schools at Bath.

THE American Sculptor, W. H. Rhinehart, left a legacy to the Peabody Institute of Baltimore that now amounts to about one hundred thousand dollars. The Trustees of the Institute have determined to use this fund for the establishment of a School of Sculpture in connection with the Institute.

THE great chimney attached to Murphy's Chemical Works in Vauxhall Road, Liverpool, is considered to be the second highest in the country. On Tuesday there was considerable interest shown in many parts of the north-end of the city, owing to the fact that workmen were seen to be engaged almost at the top of the chimney. Ladders had been fixed up the whole height, and viewed from a distance they looked like lines of thread, while the workmen resembled nothing more bulky than knots tied in the thread. Near to the Chemical Works some hundreds of people were gathered watching the dangerous altitude at which the "chimney jacks" were engaged.

ON Tuesday last the new Infirmary block at Aston, Birmingham, which has been recently erected at a cost of £10,000, was formally opened by the Chairman of the Board of Guardians (Mr. A. Taylor, C.C.). The new building, which is a three-storeyed one, contains six Wards, two on each storey, each 84 ft. long, and Six Separation wards, and to each of the large Wards have been added a Bath Room and Lavatory. In the centre of the building is a large stone staircase, and at either end of the building is an iron fire-escape staircase, accessible from each Ward. The wards will accommodate 163 inmates, and the estimated cost per bed per annum will be about £60. The building is an improvement on the old Infirmary block.

A NEW Mission Church was opened on Thursday at Heck, a small hamlet in the parish of Hensall, between Pontefract and Goole. The total expenditure has been about £600.

ALTHOUGH the proposed Street Clock Tower has not yet taken shape at Tunbridge Wells as a memorial to its late distinguished Vicar, Canon Hoare, a less pretentious but equally beautiful Memorial Tablet has been erected at Holy Trinity Church. It is placed on the south wall of the Chancel, and is of polished alabaster with linings of Devonshire marble. The design is by Mr. Egbert Cronk, and the Tablet is 10ft. 6in. by 4ft. 6in.

Trade and Commerce.

The Sky Sign Nuisance. A Case Dismissed.

—The representatives of the Savoy Hotel (Limited) recently appeared at Bow Street Police Court to a summons issued at the instance of the County Council, charging them with unlawfully retaining a sky-sign without the licence of the County Council, contrary to Section 128 of the London Building Act, 1895. Mr. Chilvers appeared for the Council, and Mr. Marshall Hall for the Company. Mr. Chilvers described the sign to which exception was taken, and argued that it was a sky-sign within the meaning of the law. He called Mr. George Townsend, a Surveyor in the employ of the Council, who said that the sign was fixed to the roof of the Savoy Hotel. It consisted of a series of boards in three sections, to which large embossed glass letters were attached. The letters, which were about 7 ft. high, formed the words "Savoy Hotel and Restaurant," on three different sides of the Hotel. The sign was fixed to the roof and chimney stacks. Witness, in reply to Mr. Hall, said he had heard that the sign as it now appeared had been suggested by the District Surveyor. Mr. Marshall Hall said the large letters, "Savoy Hotel and Restaurant," were originally put on the roof of the Hotel as a protection for the servants when duty or pleasure took them there. It was a dangerous roof, at a high elevation, and some protection was required. Originally, these letters had nothing but the sky behind them, and they undoubtedly formed a sky-sign. Then the District Surveyor suggested that a board should be put behind the letters. This was done, and he urged that the letters as they now stood were not a sky-sign within the meaning of the Act. It was perfectly clear that the object of the Act was to protect the public against dangerous and unsightly signs. In this case the sign was neither dangerous nor unsightly. It was an advertisement certainly, but not a sky-sign. It had been said that in certain parts the sign was slightly raised from the roof, but that was merely to let rain-water run away. Mr. Chilvers admitted that there were a great many cases similar to this. It was a case of considerable importance, and he wished to quote Mr. Justice Mathews as to the object of this Act. Mr. Vaughan said that was unnecessary. The preamble was sufficient to show the object of the Act, which was directed against the dangerous and unsightly sky-signs popular a few years ago. In his opinion, this structure was neither unsightly nor dangerous. Nor, in his opinion, was it a sky-sign in the popular acceptance of the term. He considered, therefore, that he would be going contrary to both the spirit and the provisions of the Act if he accepted the contentions of the County Council. He, therefore, dismissed the summons. On the application of Mr. Hall, the magistrate, Mr. Vaughan, allowed £5 5s. costs. He refused to state a case for the opinion of the High Court, and this decision he adhered to when Mr. Chilvers repeated his application.

The Joiners' Strike at St. Helens.

—His Honour Judge Collier, who last week heard the case for both the master builders and joiners of St. Helens, has given his award. The position remains unchanged, with the exception of rule 11, which states that notices shall expire on the 1st May. His honour alters this rule so that the notices expire on the 1st September. A satisfactory solution of the difficulty will, doubtless, be found in the award.

Messrs. W. & R. Leggott.—Most of our readers, says *The Building News*, know the firm of Messrs. W. & R. Leggott, of Bradford, and High Holborn, London, manufacturers of fan-light, skylight, and roof-light openers, mortise locks, door furniture, fire-brasses, brass hand-rails and fittings generally used in the building trades. Architects, especially, have long been aware that everything is made and fitted on the premises, starting from the raw material to the finished article. The firm has earned a well-deserved World-wide reputation for goods. All the details are watched by practical men. In the Foundry, the Machine Rooms, Fitting Shops, the Polishing Rooms, the Lacquering and Japanning Rooms, the Annealing Room, and

the Warehouse, honest work and skilled intelligence control everything. The men employed in the Factory have nearly all been brought up and trained from boys in the works. At four o'clock every afternoon the men are all supplied with tea at the firm's expense. The Shops are well lighted and ventilated, and the comfort of the workers is studied throughout. For the past ten years the business has been steadily increasing, the receipts to June having been much larger than any previous year since the business was first established. Messrs. Leggott have just turned their business into a limited company, but, as in the majority of cases where the business is a really good thing, it is not offered to the general public; all the shares are in the hands of the proprietors, employees and friends. The share capital is £30,000, in £5 shares.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

ALNWICK.—Accepted for alterations and additions to Jubilee House, Alnwick, for Mrs. Smart. Mr. George Reavell, Jun., architect:—

Armstrong, John, Lesbury, masonry ...	£58	0	0
Forster, W., and Son, Alnwick, joinery ...	73	0	0
Purdie, Jos., Alnwick, slating ...	7	15	7
Reavell, J. N., Alnwick, plumbing ...	38	16	0
Pickard, Geo., Alnwick, plastering ...	25	7	6
Robertson, A., Alnwick, painting ...	6	14	0

£209 13 1

ALNWICK.—Accepted for the erection of house at East Acres, Alnwick, for Mr. David Elliot. Mr. Geo. Reavell, Jun., architect:—

Scott and Thompson, masonry.	
Nettleship, Charles, joinery.	
Purdie, Joseph, slating.	
Wilkin and Dickman, plumbing.	
Davison, Robert, plastering.	
Jackson, George W., painting.	
(All of Alnwick.) Total, £358 2s.	

BLYTH.—For the erection of villa residence at Marine-terrace, Blyth, for the executors of the late Ulrik Fredrik Arveschong, Consul. Mr. W. E. L. Thompson, architect and surveyor, Waterloo, Blyth:

Lowan, T., Catherine-street, Blyth ...	£650	0	0
Macfarlane and Co., Trotter-st., Blyth ...	606	0	0
Heatley, J. W., High-st., Blyth ...	593	0	0
Phalp and Bird, Lynn-st., Blyth ...	560	0	0
Leiburn, Wm., Simpson-st., Blyth* ...	520	0	0

Add for provisional sums, £53.

* Accepted.

BOURNE (Lincs.).—For additions, &c., to house, Hacconby, for Mr. Brown. Mr. F. G. Silcock, architect, West-street, Bourne:—

Bloed, A. T. ...	£673	0	0
Chappell, Hy.* ...	480	0	0
Gelsthorpe and Sons ...	450	0	0
Wright and Wall ...	406	19	0

[All of Bourne.]

* Accepted subject to revision.

CAMBORNE (Cornwall).—For the erection of school buildings, College-row, Mr. S. Hill, architect, Symon's-terrace, Redruth:—

Julian, Jas. ...	£2,684	0	0
Colliver, John ...	2,475	0	0
Nettle, R. ...	2,440	0	0
Mills and Turner ...	2,415	0	0
Trounson and Turner ...	2,312	3	0
Carcke, A. ...	2,266	0	0
Moyle and Mitchell, Chacewater and Leedstown* ...	2,044	0	0
Mills, E., and Son† ...	926	0	0
Hodge, C.† ...	905	0	0

* Accepted. † Carpentry only.

CLACTON (Essex).—For paving, &c., Wellesley-road, and three others, for the Urban District Council. Mr. A. R. Robinson, surveyor, Town Hall-buildings, Clacton-on-Sea:—

	Wellesley.			Jackson.			Edith.			Coach.		
	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.

Rackham, G.†	2,115	0	0	647	10	0	394	12	8	293	10	0
	* Accepted.			† Withdrawn.								

* Accepted. † Withdrawn.

CORWEN (Wales).—For additions to the Union Work-house, for the Union Guardians. Messrs. J. Williams and Son, architects, Dee-view, Corwen:—

Jones, D. R. ...	£959	8	0
Owen, John, Cerrig-y-Druidion* ...	798	0	0
Davies, Wm. ...	780	0	0
Williams, John ...	750	0	0

* Accepted.

CROYDON.—For alterations to Nos. 53 and 55 Brighton-road. Mr. A. Broad, architect, 3, High-street, Croydon, Quantities by the architect:—

Saunders, E. J. ...	£645	0	0
Barker, D. W. ...	630	0	0
Hanscomb and Smith ...	559	0	0
Bullock, A. ...	549	0	0
Smith, W., and Son ...	519	0	0
Bulld, E. P., and Co. (accepted) ...	494	0	0

BISHOP'S STORTFORD.—For the construction of water-works (four contracts) for the Urban District Council. Mr. R. S. Scott, C.E., North Street, Bishop's Stortford. Quantities by Mr. John H. Blizard, A.M.Inst.C.E., 9, Victoria-street, Westminster, S.W.:—

Contract No. 1.—Reservoir, Cooling-pond, &c.		
Glasscock and Son	£2,598	0 0
Hipwell, S.	2,500	0 0
Vickers, J. H.	2,498	12 7
Catley, A. T.	2,488	0 0
Parmenter, S.	2,439	0 0
Cook, R., and Co., Phoenix wharf, Church-road, Battersea, S.W.*	2,380	0 0
* Accepted.		

Contract No. 2.—Well.		
Freeman, W. S.	£1,000	0 0
Hipwell, S.	875	0 0
Cook, R., and Co.	850	0 0
Vickers, J. H.	798	0 0
Tilley and Son	717	5 0
Batchelor, R. D.	697	11 9
Ingold, G.	658	13 0
Brown, W., and Sons, Tottenham*	625	16 0
(Accepted.)		

Contract No. 3.—Alterations and additions to engine house.		
Fuller, T.	£191	5 0
Hipwell, S.	185	0 0
Glasscock and Son	184	0 0
Chambers, H.	175	0 0
Vickers, J. H., Nottingham (accepted)	172	16 0

Contract No. 4.—Alterations to one Engine.		
Freeman, W. S.	£155	8 6
Robinson, A.	105	0 0
Northrop, J.	65	0 0
Lampitt, J., and Co., Banbury (accepted)	62	18 6

FARNBOROUGH, HANTS.—For the erection of a dwelling-house for Miss Sherwood. Mr. W. E. Travena, architect, Farnborough.

Finch, Frimley (accepted).
Lowest of five tenders.

HALIFAX. —Accepted for alterations and additions at Clapton-lodge, Halifax. Mr. Arthur G. Dalzell, architect and surveyor, Albany-chambers, Halifax:—		
Foster, Adam, Halifax, masonry	£153	5 0
Hanson, Joseph, Halifax, joinery	120	13 11
Holdsworth, John, Halifax, plumbing and heating	128	0 0
Bancroft, J., and Son, Halifax, slating and plastering	56	9 1
Berry, John, Halifax, ironfounding	33	0 0
Mainzer and Co., Ltd., London, parquet flooring	76	10 0

LLANDILO. —For the Llandilo intermediate school for the School Managers. Mr. David Jenkins, architect, Llandilo:—		
Williams, J., Swansea	£2,940	0 0
Davies, D., Cardiff	2,638	0 0
Meredith, A., Newbridge	2,550	0 0

COMPETITIONS.

LUDLOW GRAMMAR SCHOOL. TO ARCHITECTS AND OTHERS.

The Governing Body contemplate providing SCHOOL
BUILDINGS and PREMISES, including Head-master's
house, Offices, and Play-ground, suitable for thirty
boarders and ninety day scholars, at a cost of not exceed-
ing £4,500, and planned with a view to convenient exten-
sion on part of the Cricket Field, situate on the Bromfield
Road, Ludlow.

The Governors offer two prizes of £25 and £10 for
PLANS, which, in their opinion, are the best and most
suitable, and which will meet with the approval of the
Charity Commissioners.

In the event of the winner of either prize being retained
as Architect, such prize will be merged in his commis-
sion.

Plans to be enclosed in sealed envelopes, endorsed
"School Plans," and to be delivered at our offices not
later than FRIDAY, 2nd day of AUGUST next.

ANDERSON, SON & TYRRELL,
Clerks to Governors.

55, Mill Street, Ludlow,
2nd July, 1895.

ROYAL LONDON OPHTHAMIC HOSPITAL.

The Committee of Management are prepared to
RECEIVE and CONSIDER APPLICATIONS from
firms of engineers desirous of submitting SCHEMES
and ESTIMATES for the VENTILATION, WARM-
ING, and SUPPLY of HOT WATER for domestic
purposes, or either of them, for the new Hospital about
to be erected in the City-road.

Persons desirous of Tendering should send in written
applications addressed to the Secretary, on or before
the 22nd JULY next, and each application must be
accompanied by full particulars of works of a similar
nature carried out, with testimonials.

R. J. NEWSTEAD, Secretary.

CONTRACTS OPEN.

TOTTENHAM URBAN DISTRICT COUNCIL.

TO CONTRACTORS.

The Council invite TENDERS for the CONSTRUCTION
OF CONCRETE CULVERTS and Other Works
in connection therewith, in the 3rd section of the Stone-
bridge Brook, between Napier-terrace, St. Ann's, and
Effingham-road, Green Lanes.

The plan can be seen, and specification, quantities,
schedule of prices, and forms of tender obtained, on
application to Mr. P. E. Murphy, Engineer to the
Council, at their Offices, Coombes Croft House, 712,
High-road, Tottenham, any day during office hours.

Sealed tenders, on the form supplied, endorsed
"Tender for Concrete Culverts, &c., 3rd Section,
Stonebridge Brook," to be delivered to me by Twelve
o'clock noon on TUESDAY, 23rd July, 1895.

The sum of Ten Shillings will be charged for the
quantities, which will be returned on receipt of a
bona fide tender, accompanied by the specification,
quantities, and schedule of prices, otherwise the deposit
will be forfeited.

No other form of tender will be received.

Security will be required for the due performance of
the contract.

The Council will not be bound to accept the lowest or
any tender.

By order,
EDWARD CROWNE,
Clerk of the Council.

Tottenham, July 12th, 1895.

LADDERS, BARROWS, STEPS, TRESTLES, SCAFFOLDING, For Sale or Hire.

J. BATCHELAR & CO.,
48. HAMMERSMITH ROAD. W.

Quantities, &c., Electrographed

Equal to Lithography and 50 per cent. CHEAPER. Prices and
specimens on application. Lithography at moderate rates.

OLDACRES & CO.,

59 & 60, CHANCERY LANE, LONDON, W.C.

N.B.—No connection with any other firm.

Telegrams, "OLDACRES, LONDON."

SWANAGE SCHOOL BOARD.

TO BUILDERS.

The School Board for Swanage are prepared to receive
TENDERS for the ERECTION of NEW SCHOOLS in
Townsland-lane.

The plans and specification may be seen at the Town Hall,
Swanage, between the hours of TEN and FOUR, from
July 10th to 24th, inclusive.

Tenders are to be delivered not later than TWELVE
o'clock noon on the 25th instant, and will only be received on
forms obtainable from me.

The Board do not bind themselves to accept the lowest or
any Tender.

S. J. S. TATCHELL,
Clerk to the Board.

WILLESDEN SCHOOL BOARD.

TO BUILDERS.

The Board will shortly be ERECTING two SCHOOLS,
each to accommodate 1,250 children, and invite builders
desiring to be placed on a selected list for TENDERS, to
apply on or before the 20th JULY, and state particulars of
recent large works carried out by them.

W. VINCENT,
Clerk to the Board.

Public Offices, Dyne-road, Kilburn, N.W.
July 6th, 1895.

TO BUILDERS.

TENDERS are required for the ERECTION of
SCHOOL BUILDINGS for deaf, dumb and blind, at the
Mount, Penkhull, Stoke-upon-Trent, Staffordshire.

Plans may be seen and quantities obtained at the Offices of
the architects, R. Scrivener and Sons, Howard-place, Hanley,
on and after Tuesday, the 16th inst.

Tenders, properly endorsed, to be sent to me on or before
TEN a.m. on THURSDAY, the 25th inst.

Neither the lowest nor any Tender necessarily accepted.

W. T. COPELAND, Clerk.

School Board Offices, Stoke-on-Trent.

TOTTENHAM URBAN DISTRICT COUNCIL.

TO CONTRACTORS.

The Council invite TENDERS for CURBING and
ROADMAKING, &c., in White Hart-lane, Tottenham.

The plan and specification can be seen, and quantities,
schedule of prices, and forms of tender, obtained on ap-
plication to Mr. P. E. Murphy, Engineer to the Council,
at their Offices, Coombes Croft House, 712, High-road,
Tottenham, any day during office hours.

Sealed tenders, on the form supplied, endorsed "Ten-
der for Curbing, &c., White Hart-lane," to be delivered
to me by Twelve o'clock noon on TUESDAY, the 23rd
July, 1895.

The sum of 20s. 6d. will be charged as a deposit for the
quantities, which amount will be returned on receipt of
a bona fide tender accompanied by the quantities and
schedule of prices; otherwise the deposit will be for-
feited.

No other form of tender will be received.

Security will be required for the due performance of
the contract.

The Council will not be bound to accept the lowest or
any tender.

By Order,
EDWARD CROWNE,
Clerk of the Council.

Tottenham, July 12th, 1895.

GUILDFORD CORPORATION.

NEW CATTLE MARKET.

TO BUILDERS, CONTRACTORS, and OTHERS.

The Corporation are desirous of receiving TENDERS for
the LAYING OUT and CONSTRUCTION of a NEW
CATTLE MARKET in the Woodbridge-road within the
Borough.

The work will be divided into two sections, Contract No. 1
comprising the Builder's Work, &c., and Contract No. 2 the
Iron Work.

Plans and specifications may be seen on application to Mr.
F. T. MALTBY, C.E., the Borough Surveyor, at his Offices,
Tunsgate, Guildford, from whom bills of quantities and form
of Tender may be obtained on payment of 41 is. which will
be returned on receipt of a bona fide Tender.

Tenders, endorsed "Tender for Cattle Market Contract
No. —," must be sent to me on or before MONDAY, the 5th
day of AUGUST, 1895.

The Corporation do not bind themselves to accept the
lowest or any Tender.

FERDINAND SMALLPEICE,

Town Clerk's Office, Guildford.
July 8th, 1895.

TO ENGINEERS and OTHERS.

The Guardians of Kensington are desirous of re-
ceiving TENDERS for SUPPLYING and FIXING an
ADDITIONAL BOILER and making other Alterations
and Additions to the Boiler Power of the Laundry, at
their Workhouse in the Marloes-road.

The plan and specification may be inspected at the
Office of Mr. T. W. Aldwinckle, the Architect, 1, Victoria-
street, Westminster, and Tenders, on a form to be
obtained from him, must be delivered at the Guardians'
Offices, by or before Two o'clock on THURSDAY, the
25th July inst.

The Guardians do not bind themselves to accept the
lowest or any Tender.

By Order,

JNO. H. RUTHERGLEN,
Clerk to the Guardians
Guardians' Offices,
Marloes-road, Kensington, W.,
July 10th, 1895.

GREAT WESTERN RAILWAY.

The Directors of this Company are prepared to receive
TENDERS for ALTERATIONS and ADDITIONS to
the Passenger Station at Bath.

Plans and specification may be seen and forms of Tender
and bills of quantities obtained at the office of the Engineer
at this Station, between the hours of TEN a.m. and
FOUR p.m.

Tenders addressed to the undersigned, and marked outside
"Tender for Works at Bath," will be received on or before
TUESDAY, the 23rd instant.

The Directors do not bind themselves to accept the lowest
or any Tender.

G. K. MILLS,
Secretary.

Paddington Station, London.
July 3rd, 1895.

TO ENGINEERS and IRONFOUNDERS.

CONTRACT No. 3.

The Ramsbottom Urban District Council are prepared to
receive TENDERS for CAST IRON FLANGE PIPES
and VALVES, &c., required at the sewerage works at Sum-
merseat. On and after the 23rd July drawings and specifica-
tions may be seen, and bills of quantities obtained on
application to Mr. THOS. NUTTALL, C.E., 12, Market-
street, Bury, on payment of 20s., which will be returned on
receipt of a bona fide tender and the documents. Tenders,
endorsed "Contract No. 3," must be delivered at the Offices
of the Council on or before the 30th JULY.

The Council do not bind themselves to accept the lowest or
any tender.

JOHN W. BARLOW, Clerk.

Council Offices Ramsbottom.

The Antiquity of the Yorkshireman.

In the Ridings of North and East Yorkshire, the members of the Royal Archaeological Institute spent a delightful summer session last week. The East Riding is peculiarly rich in ecclesiastic work, while the North Riding proudly wears Whitby Abbey on the crest of that famous hill—beneath which nestles the "haven" of the old town—as signet of much inland treasure. Yorkshire is essentially a student's county, be the student either architect or archaeologist, antiquarian or historian. Professor Boyd Dawkins hit the mark when, in the course of his address on Wednesday evening to the members of the Antiquarian Section, he observed that the study

of antiquities, so long a mere dilettante study, had now become an exact Science, and employed the same method of rigid induction as any of her sister subjects. The Professor, full of one of his favourite themes, in considering the question of the antiquity of man in Yorkshire, spoke of the hippopotamus wandering as far north as Kirkdale or Leeds. We do not wish to be guilty of levity, or we might be tempted to ask the hippopotamus a personal question. We must conclude, however, that nothing but his tusks remain to fertilize what soil Leeds will still permit he surrounds to possess. Man, said the Professor, found his way to Britain when our land formed part of the Continent, and the mammoths of the Palæolithic came by the aid of their own solid stride. The relation of Palæolithic man to the glacial phase of the Pleistocene period was clearly shown by the distribution of his implements in Yorkshire and in the South of England. They had been discovered in abundance in the caves of Cresswell Crags, on the southern borders of the county, and are met with in both caves and river deposits south of a line connecting the Bristol Channel with Peterborough. Why were they absent from the post-glacial river deposits to the north-west of that line? The advance of the Palæolithic hunter over Yorkshire was barred either by the masses of ice which had left their traces in the ice-

worn hills of this district, or by the waters of the sea which covered northern and middle Britain during a submergence of not less than 1,200 feet. The Palæolithic implements in the caves in the district, covered more or less by the glacial drift, showed that man was living in Yorkshire in pre-glacial times, while the absence of the implements in the post-glacial strata could only be explained by the existence of one or the other of these barriers. It could not be said that any great addition to our knowledge of Palæolithic man had been made during the last 20 years. If the Palæolithic and Neolithic inhabitants of these islands were separated by the great climatic and geographical changes slowly

ROMAN THERMÆ OF FIESOLE: VIEW OF THE NATATIUM, LOOKING THROUGH ARCHES TOWARDS THE FRIGIDARIUM.

brought about in untold ages, still more were they separated by their habits, manners, mode of life, and general archaeological condition. The Palæolithic men were nomad hunters, ignorant of all Arts except sawing, implement making, and the use of fire. It was strange that in the midst of this savage life one section of the cave-men should have left figures of the animals on which they lived, scratched on bone, antler, and stone, with remarkable spirit—as, for example, in the caves at Cresswell—handles carved in the shape of animals, such as kneeling reindeer and standing mammoths, in the caves of France. The Arts of Drawing and Sculpture were developed to a high degree.

The Neolithic men were not only hunters, but farmers and herdsmen, growing wheat and flax, and keeping herds of short-horned oxen and swine, and flocks of sheep and goats, and a breed of large dogs. To them we owed the domestic horse, so dear to all true natives of Yorkshire. They were spinners and weavers, and miners of flint for the manufacture of implements which they turned to use in the clearing away of the forest, and the development of carpentry. They lived in fixed habitations, generally circular tents, half sunk in the ground. In spite, however, of this immeasurably higher culture, they were singularly devoid of the art of reproducing natural forms, which

their Palæolithic predecessors carried to so high a pitch in England, France, and Switzerland. Turning to the Bronze age in Europe, Professor Dawkins said that the many skeletons which had been met with in almost every part of the British Isles proved that the use of bronze was introduced by the tall, broad-headed Goidelic ancestors of the Irish Celts, and the Gael of Scotland. Cremation was first practised in Great Britain in the age of Bronze. On the subject of pre-historic Archaeology in the district of Scarborough, he remarked that the Neolithic remains belonged to the long-headed Iberic race of men—the oldest living stock in Europe—to whom the small, dark Yorkshire men and women of to-day owed not only their dark hair and eyes, and long

heads, but the taste for horse-flesh which, as every one knew, was one of the attributes of the dwellers of the county. Professor Dawkins generally contrives to make the Remote Ages interesting, but he never did mankind a greater service than when he settled for us—last week—the antiquity and genesis of the Yorkshireman. It is a subject upon which some bones have been broken—bones not altogether the property of the Palæolithic Age!

Wood Pavement.

DR. BLYTH, the Medical Officer of Health for the parish of St. Marylebone, set an admirable example to other London districts by

the periodical publication of his "Sanitary Chronicles." These contain a mass of information and comment upon all matters connected with the health and vital statistics of the parish. The most interesting part of last week's issue is a report by Dr. Blyth upon wood pavement considered in relation to public health. Dr. Blyth points out that the slightest fall of the barometer results in the abstraction from the earth of a large amount of the air in it, and that therefore a large proportion of the air supplied to a house that is not built on an impervious foundation, such as concrete, is often necessarily impure. Asphalte and wood paving find the gases emanating from the soil, and these are delivered into the basements of houses, as if through pipes, unless the foundations are impervious. Dr. Blyth further desired to know whether the emanations from wood pavement in hot weather came from the surface, or whether the blocks are saturated throughout. He therefore procured two blocks, which had been six years in the pavement of Oxford Street, one from the centre of the road, and one from the channel. He cut slices from the top, middle, and bottom of each of these, and carefully analysed their contents. The centre block showed most ammonia in the top layer, whilst the channel block was saturated at the bottom by a layer of foul water flowing beneath, and gravitating to the lowest point. At the rate shown by his specimens, 1,000 square yards of wood pavement would yield over a pound and a quarter of solid ammonia. But Dr. Blyth does not feel justified in declaring that wood pavement is responsible for any of the diseases—such as ophthalmia and sore-throat—which it is often said to produce. For purposes of health he is of opinion that asphalte pavement is much the best. At present it is justly disliked because of the ceaseless sharp rattle made by horses' feet, and because it is so dreadfully slippery in wet weather. Dr. Blyth believes in the coming advent of compressed air for street locomotion. Wood pavement, moreover, is four times the cost of granite pavement averaged at per yearly cost on the life calculation of fifteen years for wood and thirty for granite.

A Suburban Villa.

A case, before Sir Forrest Fulton, illustrates once again how necessary it is for an Architect to be in a position to protect himself from the astuteness or jerry mandering of his clients. There is nothing quite so effectual as being able to take your wrongs into Court. Mr. H. G. Grierson had no doubt in his own mind, nor, for the matter of that, had the Jury. A Mr. Edgington, whose licensed victualling career had enabled him to retire early, bethought him that a house at Croydon might add to the enjoyment of life. Croydon suggested the suburban Villa. But there is more than one way—we assert it boldly and fearlessly—in which to build a suburban Villa, though we are aware that the evidence is a little against us on the point. However, Mr. Edgington, being anxious to have all in proper form, called in Mr. Grierson, Architect and Surveyor, and spoke generally and specifically of plans and specifications. Mr. Grierson set to work and produced one set of plans; the client did not like them, we presume, for presently there was a second set of plans in the field. No. 1 went under and No. 2 was adopted. So the house is now being built—at Croydon—to cost £500. We note Mr. Grierson's modest charges—£15 each set—too modest, in our opinion, for we strongly hold that the Institute Scale should be lived up to and maintained in proper dignity. Defendant—who was of a retiring disposition—had paid £10. We are glad Mr. Grierson won his case—full amount.

AN OLD GLASGOW ARCHITECT ON SOME OLDER ONES.

By THOMAS GILDARD,

HONORARY MEMBER OF THE GLASGOW ARCHITECTURAL ASSOCIATION.

IN December, 1838, I was apprenticed for five years with Messrs. David and James Hamilton, whose office was at the head of Buchanan Street, on the site now occupied by the George Hotel. Mr. Hamilton was in about his seventieth year, and was a man of most impressive presence, frank and kindly in manner, with a bearing of ease and dignity. He was, to use a common expression, somewhat "aristocratic" in appearance, and in social intercourse was distinguished by much grace and courtesy. James, his son, had not much more than attained his majority. He was tall and remarkably handsome; his fine features somewhat of an Italian cast, and his long glossy black hair rolling in ringlets. When I entered the office the late Mr. Rothead had been in it six months, a draughtsman, and the late Mr. Baird, a year or two.

As the house and office were together, the "lads," as we were called, were almost every morning favoured by a visit from Mrs. Hamilton, who took a seat, and had a kindly chat with us for half-an-hour or so. It seemed almost as if we were living "in family," and, although it is a long time since, there remains with me a pleasant impression of the homely, hearty kindness I experienced from all the Hamiltons under the old-fashioned arrangement of house and office together.

Mr. Hamilton had formed an excellent library, of not only great books on Architecture, but of books illustrative of Painting and Sculpture. He had also many choice line engravings, and other things that might be expected in the house of a family all of inborn, and some of highly-cultivated taste. Mr. Hamilton was the recognised head of the Profession, his position was unique, and, as his fame had gone beyond Glasgow, he had, I might almost say, frequent visits from men of eminence in the Arts, bearing letters of introduction. I remember seeing Kemp, the Architect of the Scott Monument, and Mr. Hamilton taking him down stairs to see the office, and, I have no doubt, that we also might see him.

Mr. Hamilton was architect of the Royal Exchange and Hamilton Palace. In both of those buildings, as in several others, he was fettered by the condition of retaining a portion of an existing building. In the Exchange the old Stirling Mansion (afterwards banking office) is veneered within and without, and what is retained of the old Palace is what was its front elevation, now doing service as its back. It seems strange that the Glasgow of little more than sixty years ago, the Glasgow that had the spirit and discernment to erect such a magnificent building as the Exchange, should have been so "penny wise and pound foolish" as to incorporate with it any of the petrified skeleton of a former structure. In both buildings the difficulty has been most successfully overcome—in the Exchange by the adaptation of the old walls, and in the Palace by the reconciliation of the new Front with the old; indeed, the taking down of the fine façade, now the back of Hamilton Palace, would be a thing to be regretted. Of course the Exchange was finished before my time, but the work of the Palace was still being carried on, both Mr. Rothead and Mr. Baird having occasionally some detail of it upon their boards. These buildings, from their magnitude and importance, would otherwise confer a reputation upon any Architect, but in their quality they may be taken as specimens of Hamilton at his best.

The Portico of the Exchange is grandly proportioned and admirably detailed, and where there is a variation from the example it is made with great judgment. The scale of the order upon the sides is different from that on the front, and I have heard it said, by those much more able to judge than myself, that the junction of the two is effected with much art. The fine proportions of the Reading Room have been often the subject of praise, and the area-railing and the lamp-irons are seemingly among the first attempts in Glasgow to give an Art character to such accessories. I may mention that in the "after-measurement" of the

Exchange "the line" was "held" by our venerable Treasurer, Mr. Howatt. The Portico of the Palace is of the same high quality as is that of the Exchange, and the detail of the building throughout is bold and vigorous. Some of the graces of his Art may have eluded him, but, at least, when in his zenith and in his later years, Mr. Hamilton's work was largely characterised by that easy power which "gave the World assurance of a man." Whatever other fault it may possess—the detail may sometimes lack purity, and sometimes refinement—it has never feebleness.

"Void of weak fever and self-conscious cry,
Truth, bold and pure in its own nakedness"—

it is singularly free from all meretricious artifice; defects are not sought to be diverted from or disguised by cunning of mere handicraft or costliness of material, nor is regard importuned by any undue obtrusion of special parts or "features." The Architecture is as honest as is the masonry—stone being treated as stone, and not as wood or plaster.

While I was in the office, besides Hamilton Palace, there were being designed and executed Lennox Castle, the Western Club House, and the British Linen Company, the Union, the Clydesdale, and the Western Banking Offices, and such smaller works as Hutcheson's Hospital School, a Church at Ascog, Saint Fillan's Villa, near Largs, the Lodge at the Fir Park Necropolis, the completion of the Normal Seminary, and additions to Stonebyres and Camis-Eskan Mansions.

Lennox Castle is in the Norman style. In its composition are united breadth and picturesqueness, and, as it stands on a considerable height, these are seen to advantage. Mr. Hamilton, no doubt, knowing how to compose the building with the landscape. The plan is excellent, both for convenience and vistas; indeed, the "Architectural Publication Society's Dictionary" considers it as one of Hamilton's best.

I do not know if Mr. James participated in the designing of Lennox Castle, but he was considerably exercised as joint Architect of all the other buildings I have mentioned, excepting of course, Hamilton Palace and the Royal Exchange, which were too early for him to have had any share in.

The site of St. Fillan's Villa is a knoll commanding two views of the Firth of Clyde, and to embrace these, recourse was had to a peculiar plan, something like the letter A in outline, the Entrance being in the lower side of the bridge, and the Entrance Hall resolving itself into a triangle, with large semi-circle on each side. The Lodge of the Necropolis is of the same style as is Lennox Castle, and the detail is very similar.

The addition to Stonebyres House is very good in its way, but it is scarcely of the same period as the original building. The old house is Scottish, and the addition is Jacobean; but in Mr. Hamilton's time Architects were not so familiar with the niceties of some of the Mediæval styles as they are now.

The little Church at Ascog is beautifully situated on a promontory, and, as "the right thing in the right place," forms one of the most interesting objects in a singularly interesting landscape. It is exceedingly simple in design, seemingly modelled on some sort of the rural Architecture of Italy. I think it is to be regretted that the roof is not covered with red tiles instead of harsh blue slates.

I am not familiar with the addition to Camis-Eskan House, but, as far as I remember, it was something plain, as if it had been part of the original. In the addition Mr. Hamilton had, at least, the satisfaction of exercising his judgment, perhaps not so brilliant a faculty as is the imagination, but always entitled to, yea, demanding recognition.

After Mr. Hamilton's death, the Western Bank was considerably altered by Bryce, of Edinburgh, and since the Company's bankruptcy it has been altered again, some vestiges, however, remaining that show the genius of each Architect, and tell that once it was a public building. The Clydesdale Bank is on a minor key, and looks plain, perhaps even commonplace, compared with that which we see in the elevations of more recent banking offices. Several years ago the Clydesdale Bank re-

moved to a palatial building in Saint Vincent Place, designed by Mr. Burnet.

Although not without blemishes in composition and detail, such as two windows instead of three in the upper storeys of the Wings, and some questionable foliated ornament—which, indeed, was Rothead's—the Western Club House enjoys a greater dignity than do most buildings in Glasgow, and this not because of its size—generally an impressive element—but of its breadth of treatment, repose, and that quiet unconscious power which is always favoured by the unspectacled critic. There is nothing petty about it. All is large and liberal, broad and massive, an outcome of a mind that had no room for littleness—playing with “bits,” and toying with stones bedded in mortar as if they were gems set in gold. “And, to add greater honours to his age,” this, although one of Hamilton's latest works—carried on, indeed, while in his last illness—is wholly different in style from any of those in which he chiefly achieved his fame. In the Western Club House, and a contemporary work, the British Linen Banking Company's Office, there is a remarkably ready apprehension of the change that was coming over the spirit of Architecture, the new and freer manner that has been ascribed to a succeeding generation.

In thirty years' time the Club House became too small, and an addition was built from designs by Mr. Honeyman. This addition is a continuation along Saint Vincent Street, and much improves the proportion of this elevation, for, although the building is throughout characterised by greatness of manner, in the frontage towards Saint Vincent Street the windows are so tall and comparatively so close together, that the facade has perhaps as much of the vertical as the horizontal in its composition. Mr. Honeyman has judiciously carried along the lines of the original building, his principal innovation upon the genius of his example being a bay or oriel window upon the second floor. This gives interest to the elevation, and although placed at an irregular interval, like to a discord in music, in no wise disturbs the general harmony of the design. But it is possible to “manage with disjointed skill the matter well the manner ill,” and a bay-window resting upon a balcony (a parallelogram in plan, and extending lengthwise beyond it), the balcony carried by consoles over a three-light window, seems to be a somewhat illegitimate construction, both æsthetically and mechanically. For the three-light window, the consoles, and the balcony, there is warrant from the Buchanan Street elevation, but when consoles have “a double debt to pay”—to carry besides a balcony a bay-window—they should

surely be of a more powerful outline, and a larger treatment. Mr. Honeyman has thought fit to vary them, and having varied them at all, might have varied them more, and made them greater for their greater purpose. The endeavour apparently has been to continue the genius of the design, by carrying into the addition in Saint Vincent Street a prominent feature from the Buchanan Street elevation, and to compose with this a wholly new if not foreign element, and by this composition to subserve two purposes—to vary, by something distinctive, the fenestration on two floors, which would other-

or from his manner being so very different from that of the time in which Mr. Honeyman was engaged upon it, but from the consideration that to do no more than continue the original design would be to render the whole facade commonplace, and that to do more might be to disturb the whole composition. Mr. Honeyman has done more without disturbing, and, in that “more,” has added a new interest.*

The principle elevation of the Union Bank as designed by Mr. Hamilton, was taken down some years ago, and another elevation

has been put in its place by Mr. Burnet. The chief feature of Mr. Hamilton's design was a Roman-Doric frontispiece of six columns with pedestals, and balusters between them, forming a screen-wall. The frontispiece had a depth of about 10 ft. in which access was had by the screen-wall between the extreme columns of each end being left open. This frontispiece is now part of the Royal Princess's Theatre, but the diameter of the columns being reduced to three-quarters, and they being veneered upon the walling, the effect, of course, is very different from what it was when they were entire, with a shadow-depth of ten feet behind them. Besides the alteration on the front towards Ingram Street by Mr. Burnet, there was the taking down of the Telling Room, which was towards Virginia Street, and the substitution of another from a plan by Mr. Salmon. The original Telling Room had access from Virginia Street by a Roman-Doric Colonnade of four columns. Between Mr. Burnet's Façade and Mr. Salmon's Telling Room, there is now comparatively little representative of David Hamilton.

While speaking of the Western Club House, I incidentally mentioned the British Linen Company's Bank. There was in one of the sketch-drawings an idea to finish the circular corner with a Dome, but this intention was departed from, in deference, I believe, to the dignity of the Exchange. I remember Mr. Hamilton showing his sketch-design to Mr. Rhind

of Edinburgh, the Architect of that admirable work, the Commercial Bank in Gordon Street. Immediately after the British Linen Bank was completed, a lithograph drawing of it was published, showing Statues on the pedestals of the balustrade that crowns the main cornice.

(To be continued.)

THE Crediton Board of Guardians has decided to obtain estimates for carrying out certain alterations for the better accommodation of inmates in the Workhouse.

* There is a perspective view of the Western Club House in *The Art Journal* of October, 1889.

DETAIL OF A TERRA-COTTA FRONT: BY ROMAINE-WALKER AND TANNER.

wise have been commonplace, and, on the two others, to derive from this a legitimate apology for a change of spacing of voids and solids, necessitated from the frontages of the old and the new buildings having to each other (for the design) no proportional relation. This want of proportional relation has also stood in the way of a continuously regular division of the panels, windows, and trusses (a study from Piranesi), which form the frieze, and of the blocks in the main cornice. An addition to the Western Club House was not an inviting subject, and this not from the high reputation of the Architect of the original building,

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,
July 23rd, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

THE programme of the sixth International Geographical Congress, which is to be held in London within the next few days, is practically complete. There are to be two distinct aspects to the Congress of Geographers, as to most other Congresses—the one the ostensible object of its assembling, the other social, and in this latter respect no effort has been spared to justify the traditions of English hospitality. The Duke of York, who is hon. president of the Congress, is taking a personal interest in its labours, and will be present at more than one of its meetings, as well as at the reception on the opening night at the Imperial Institute. The subjects to be discussed cover a very wide field and include such matters as photographic surveying, geodetic surveys, geographical definitions, and orthography, and cartography, which have a greater interest for Scientific Geographers than for the general public, but the discussion on the extent to which tropical Africa is suited for development by white races or under their superintendence is certain to attract a large audience.

RECENT centuries have so relentlessly waged war against the picturesqueness of mediæval Cities, that it is difficult for the fancy to reproduce the full effect of the aspect of Florence at the beginning of the fourteenth century. In every Street were stronghold Palaces, built for the needs of war as well as peace, flanked by lofty Towers, the shape of whose battlements gave sign to which of the great parties, Guelf or Ghibelline, their possessors owed allegiance. The number of Towers in Florence was to be reckoned by hundreds. The Florentine masons had inherited the old Roman art of solid building. They knew how to lay stones so that they should be as firm in wall or buttress as they had lain in their native beds. Palaces and Towers were built with a double wall of cut stone of blocks of uniform thickness, and the space between the sections of the wall was filled in with a concrete of lime and pebbles, by which the whole was bound together in a solid mass. The Towers were usually square, few were less than 100 feet, many were more than 200 feet in height. They were entered by a small door opening directly upon the narrow staircase which filled their whole interior space, with here and there a passage in the wall leading to a loophole, or to the door by which the defenders of the Tower, if assailed, might pass out at a safe height on to a moveable platform which was supported by brackets of stone.

For the purpose of inspecting a number of barrows, which have, by permission of Lord Hotham, been opened by Mr. Mortimer, of Driffield, a number of the members of the East Riding Antiquarian Society recently visited Scorboro', the residence for many years of the late Mr. James Hall, M.F.H. Mr. Mortimer explained that these barrows, which numbered about 170, and extended over five acres of land were no doubt part of a graveyard of early settlers, pre-Christian, probably pre-Roman; but whether early or late Roman he could not say. Some of them contained skeletons of

human beings, but there was no evidence of flint or stone implements or weapons. Members then visited the beautiful Church of Scorboro', built by Mr. Hall, between 30 and 40 years ago, and which, it was explained, being modern, had no Archaeological interest. Proceeding to the village of Leconfield, Mr. Boyle, of Hull, described the Church. He did not think a Church existed there before the Conquest, inasmuch as no mention is made of it in the Domesday Survey. The present Nave was no doubt the core of the original structure, which was built in Norman times, and which consisted of a Nave the width and length of the present one, and a small Chancel, which had disappeared. The Nave was without Aisles, but as time went on, and the population increased, the North Aisle was added, and this was done by piercing the walls, a style of alteration peculiar to that period—between 1290 and 1310, probably to save the roof of the Nave, which was a costly part of the building. The South Aisle was added a few years later. The Church contains a few specimens of stained glass of the fifteenth century. The Society was also invited to inspect the fine rectangular moat which formerly surrounded Leconfield Castle, one of the Yorkshire residences of the famous William De Percy, who came over with the Conqueror, and who was the founder of the Abbey of St. Hilda, at Whitby. Mr. Boyle gave an account of the history of this family, some members of which were buried in Beverley Minster.

WE learn from the latest issue of the *New York Science* that Mr. Archibald has offered to be one of the six men to build a Hall of Science for Syracuse University, at a cost of about \$150,000. The University has also been offered \$10,000 and \$100,000 as individual subscriptions towards a new Medical College. It is likewise worth knowing, if only for the sake of imitating it, that an Institute of Science has been opened at Lille, in France, which cost £65,000. This sum, with an endowment of £800 per annum, has been provided by the Municipal Council of the City, the Academy of Lille, and M. Philippart. Pure Science—natural and physical—is to be taught; the wise founders believing that practical—money-making—results will follow. But the higher education is what they aim at.

It is curious to contrast the continued dulness of the iron and steel trades in this country with their marked and rapid advance in the United States. The quarterly meeting just held at Birmingham and Middlesbrough, shows that little, if any, progress had been made in those districts during the past month, for though business in certain lines is rather more abundant, prices are no better, and in some cases even have receded. The average selling price of iron in the Cleveland district during the months of May and June is officially declared to be 4d. per ton less than for the previous two months. In the Staffordshire district the average may be fractionally higher, owing to the rise in blank sheets, but there is certainly no appearance yet of a coming boom in any part of the United Kingdom. In the United States, on the other hand, prices and production have been rapidly advancing for nearly three months past. Both crude and finished iron are quoted higher every week. The most conspicuous advance last week was in steel rails, which were formally advanced by the manufacturers 2 dollars, or 8s. per ton. This movement is ascribed to the growing demand for rails in the United States, where the indifferent success of railroad enterprise does not prevent large extensions and new enterprises when new lines of communication appear to be called for in the interests of Industry and Commerce. Rail-mills, long idle, are being rapidly put in condition for the resumption of active operations, and the makers of steel billets are increasing their output proportionately. The railway rolling-stock branch is sharing in the improvement, the additional requirements of the railroad companies already placed this season being estimated at over ten million dollars, or, say, £2,000,000. The advances in pig-iron and tinplate bars have also been very great, so much so, indeed, that these products have almost reached the limit up to which the present tariff gives them protection against outside competition.

At the Cascades, a range of mountains in North America, and near the River Columbia, there is what is termed a "travelling mountain." The mountain is a triple-peaked mass of dark brown basalt, six or eight miles in length, where it fronts the river, and rises to a height of almost 2,000 feet above the water. This huge body is slowly but steadily moving down the river, as if in the future it would dam the Columbia and form a great lake from the Cascades to the Dalles. Indian traditions would point to immense movements of the mountains in this region long before the white man betook himself to Oregon; and among the early settlers the mountainous ridge was known by the name of "travelling" or "sliding" mountain. In its forward and downward movement the forests along the base of the ridge have become submerged in the river. Another curious phenomenon exists in Nevada. This is a travelling mountain of sands, which keeps constantly moving like an immense glacier. It crawls steadily along over valleys, never ceasing, the sands making a low musical sound as they rub against each other.

A NUMBER of Model Houses are in course of erection at Killamarsh, after plans by Mr. W. H. Wagstaff, Architect, Chesterfield. The buildings are arranged in semi-detached pairs, the front doors, placed apart from each other, opening into a lobby, which admits to the front room and living room, right and left. The front rooms are of convenient size, and having only one door, afford considerable wall space. They have projecting windows, with broad window bottoms, and stand for flowers or tree-pots, and have tiled register grates and tiled hearths. In each dwelling is provided a bath with water supply. From front to back each pair of houses occupy an area of about 1,000 square yards. There are three bedrooms on the first floor, each entered from the landing. We understand that these dwellings, which have been sanctioned by the Chesterfield Union Rural Sanitary Authority, may be erected at a cost enabling them to be let for little over the ordinary rent of cottage houses in the neighbourhood. The plain details given will strike most people conversant with colliery villages as a great advance upon the dwellings commonly occupied by that class.

"THE grace of detail and power of design manifested in the Rylands Library, Manchester, excel anything we have had among us for a very long time," writes a Manchester correspondent. "Now that the building is undergoing cleaning we can see better the colour of the stone; though the sense of pleasure is diminished by the knowledge that sooty grime will ere long make it very much the colour of all other stone in Manchester. So far as it has gone, the warm-coloured stone building next to the Union Club is satisfactory to the eye. It cannot be called powerful or original, but it is the sort of building that helps the dignity of a street. One regrets that this new building is not set back to the front face of the Union Club. And then, as it does project a yard or so before the Club, one is sorry again that this projection—which is intended to be for ever—has no special treatment, but is just left alone. A new facade in Spring Gardens that promised exceedingly well has, since it was favourably noticed in your columns, been surmounted by a name panel of a character and design that goes far to spoil the whole.

"THE Inland Revenue building in Deansgate, opposite the School Board Offices, by its newness invites a word, which is soon said. It is an utterly commonplace design of no interest whatever, and yet the building is not inexpensive. The little brick Church of St. Agnes, within the borough on the south side of Manchester, has just been enlarged. Two points may be noticed. It is a brick design, not a design for a stone church carried out in brick; and the new North Aisle has been so added as to be an integral part of the whole enlarged Church. It does not look merely stuck on. In Clarence Street, near Albert Square, is an addition of a sort that one welcomes as a relief to the dulness of street Architecture. A very plain Warehouse has its conspicuous corner covered with a sort of trefoiled stone oriel. We have yet to see

how it finishes at the top. The corbelling out at the base is a little weak in design, and it is a pity that at the sides, where the new stone joins the old brickwork, the new oriel is recessed, instead of projecting as one expects in such a case. The suspicion is excited that this may be just a dainty bit taken out of a sketch-book. If so, a little more pains should have been bestowed on it in making a harmonious

A DESIGN FOR FONT AND COVER, TWELFTH CENTURY.

marriage of the new with the old. In Market Street a building is going on that fairly takes one's breath away—a vast mass of wrought stone work miraculously standing upon nothing. The new School Board Offices in Chapel Street, Salford, which you have already illustrated, present a dignified street front. But there has been little attempt to suit the design to the material—terra-cotta."

SOUTH KENSINGTON MUSEUM seems for once to have outwitted the Louvre, for it has succeeded in carrying away from Paris a most interesting Collection of Mediæval French Wood and Iron Work. A portion of the Collection is destined for the Museum of Science and Art in Edinburgh, and another for Dublin, but it is not known yet how the Collection is to be divided. The purchase was made from M. Peyre, a decorative Architect in Paris, who managed to pick up a number of interesting spoils of the Revolutionary period. M. Peyre approached the South Kensington authorities some years ago, but he wanted too much, and the transaction fell through, until at last the South Kensington Trustees got what they wanted at what they consider a fair price. Mr. Purdon Clark, Mr. Armstrong, and Dr. Middleton went to Paris, on behalf of the Museum, to go through M. Peyre's collection, and they picked out 325 pieces at a cost of something like £11,000. The woodwork, some of which is in excellent preservation and most tastefully carved, belongs to the fifteenth and sixteenth centuries, and looks as if it had mostly come from ecclesiastical buildings. In one or two cases, where the *fleur-de-lis* figured among the carved work, it has been chiselled out, and the faces of the human figures have also been destroyed, this being, no doubt, the work of the Revolutionary period. Although the Collection is mostly wood, such ironwork as there is is very fine, and forms a very interesting contrast to the Collection of German ironwork in the upper gallery, which was brought

together last year. In the two types of workmanship, and dealing with the crafts of the middle ages, the national characteristics of the two nations are evident. The German work is mainly represented by massive gates, heavy candelabra, and the like, beautifully fashioned, but cumbersome to a degree; while the French work is, on the whole, of a more delicate texture. In many of the various types of ironwork contained in the two Collections there is a marked resemblance of style, pointing strongly to the fact that in the fifteenth, sixteenth, and seventeenth centuries the handicrafts of the two countries were in closer relation than in the present day, both emanating from the Italian School, and gradually striking out into opposite paths of thought and work. Among the best specimens shown in the new Collection is a quaint tripod stand, around the upper surface of which there is some very elaborate repoussé work. There are also examples of elegant candelabra, door knockers, and other ornamental house appointments, which go to make up an Exhibition that is at once unique and very interesting.

An important Railroad remaining to be built in the World is the one now being promoted to connect the eastern end of the Mediterranean with the railroad system of India. The route

to be adopted is not that suggested by Sir. E. Watkin, but the one recently surveyed by Mr. C. L. Black. This route begins at Port Said and ends at Karachi, a little beyond the frontier of Beluchistan. The line will be 2,000 miles long.

M. WENUKOW, the Russian Geographer, has sent to the Paris Academy a description of a

shut off from the sea by a strip of land, but must have subterranean communication, for the tides of the sea are noticed in the lake, though in much diminished effect. Russian scientific men have discovered that the small lake contains three different kinds of water. On the surface it is fresh water, coming from a few brooks and from the rainfall; lower down it is salt water, and at the bottom sea water mixed with mud and sulphurous hydrogen gas.

A REREDOS erected in the Parish Church of St. Peter, at Landrake, is made entirely of veined and polished alabaster, while the statues and panels are of pure white Castellino marble. The Reredos proper rises up from the Chancel floor, and is plain polished alabaster as far as the massive Retable. Above this line the structure is divided into five compartments, the middle one being the larger. Each forms a recessed panel or niche. The centre is occupied by a cleverly-sculptured figure of Our Lord ascending in the midst of rays of glory and a visca piscis. In the side niches are representations of SS. Matthew, Mark, Luke and John. Above each figure is much beautiful and delicate tracery, and upon either flank and between every statue the face of the Reredos is exquisitely diapered. The whole is surmounted by a carved cornice, and pierced cresting. Above all, standing out in distinct outline on each flank are angels, and other heavenly beings stand at intervals. These have their wings down in repose, and hold inscribed scrolls. The wings or sides of the Reredos are somewhat lower than the main portion, and cover the wall space from the north even to the south. They, too, are divided into panels, two on each side. Within these the Lord's Prayer and Belief are engraved in the marble on the north side, and on the left the Ten Commandments. All the characters are gilded. A carved cornice and cresting surmount both wings. The Reredos has been made and erected by Messrs. Harry Hems & Sons, Exeter.

BORN in the quaint and beautiful old house of Wooser's Alley, in the ancient Abbey town of Dumfermline, Amelia Paton, the sister, friend, and fellow worker of Sir Noel Paton, has proved herself a true child of Art. She is descended from the Robertsons of Struan and the McDiarmids of Glen Lyon, families who are distinguished in the history of Scotland. Of Art training, strictly speaking, Amelia Paton had none, for in her young days women were not supposed to have pretensions to Art, and consequently her early struggles, to be allowed even to try her hand at modelling, were severe. She had unaided to work out her own

MEASURED AND DRAWN BY R. B. MARTIN.

singular lake on Kildin Island, which island lies near the coast of Russian Lapland, not far from Kola. It is a palæozoic rock separated from the granite continent by an arm of the sea. Upon it is a lake which seems to be entirely

Artistic salvation. Her first attempt resulted in a highly satisfactory head of her brother, then Mr. Noel Paton. Since that many other famous men have been her sitters, including Carlyle, Livingstone, Sir David Brewster,

Stanley, and Sir Roderick Murchison. The Livingstone Statue stands in the East Princes Street Gardens, Edinburgh, next the Scott Monument; while her magnificent Statue of Burns has the place of honour in the Square in Dumfries; but perhaps her best work is a Bust of Shelley.

IN the cemetery discovered at Syracuse a short time ago, the sepulchres which have been opened date mostly from the eighth and the earlier part of the seventh century B.C., when burial was general, although the custom of cremation was slowly making its way. The objects found in the tombs are of an interesting character. The cinerary urns, containing the remains of those who have been cremated, are richly ornamented. With the skeletons are found small terra-cotta vases of old Corinthian design, bronze and iron ornaments encrusted with amber and ivory, ear-rings, and scarabæi of glass set in silver. Another, but much less ancient, cemetery has been discovered in Macedonia. It is of the Roman period, and was laid bare by the construction of the Salonica and Dedeagatch scheme. In it have been found many coins bearing the effigy of the Emperor Probus (276-282 A.D.). The most remarkable work of Art that the site has yielded is a well-preserved bas-relief of the busts of three persons. It has been handed over to the Turkish Government, who now claims all antiquities discovered in the Sultan's dominions, and will be placed in the Museum of Antiquities in the Old Seraglio at Constantinople.

MUCH difference of opinion being found to exist among French experts as to the best kind of wood for use in street paving, the Paris Municipality has undertaken an experiment which will be watched with interest. The Faubourg Montmartre, one of the great arteries of the French capital, along which particularly heavy traffic passes all day long, is being repaired with no fewer than six different kinds of wood. These are pitch-pine, pine from the great swampy district in the south of France called the Landes—the inhabitants of which have to walk about on high stilts—teak, red karri, box, and a particularly hard wood from Borneo. Each of these materials has particular qualities of its own, such as impenetrability, non-slipping surface, and so forth. From time to time a Committee of experts will visit the place, and draw up a report as to the substance which best stands the rough wear and tear.

OLD Sèvres porcelain, including the famous Coventry vases and some specimens of the Queen's service at Windsor, came under the hammer at Christie's. The high prices anticipated were certainly realised in the case of single plates and dishes, and the total for less than 150 lots amounted to £15,964; but the vase and pair of jardinières, which in 1874 were sold as the property of Lord Coventry for 10,000 guineas, did not on the present occasion reach their estimated worth. The bidding ceased at 8,000 guineas, when the general impression seemed to be that they were bought in. The auctioneer's book assigned them to one Mr. Pilkington, but the highest offer in the auction room was from Baron Schroeder, who exceeded 7,000 guineas. They carried with them two remarkable record prices, as, after leaving the possession of Lord Coventry, they had changed hands privately from Lord Dudley's collection for £10,000. Those who visited Christie's during the past few days, or when these precious objects were on view in the same place twenty-one years ago, will know that their attractions consisted of rose-du-Barri ground with bands of green, richly gilt, and painted with figures and flowers by Morin. A single plate from the service, which formed a portion of that celebrated dessert service made for Louis XVI., afterwards purchased by George IV., and now at Windsor, brought 106 guineas, several others realising over 100 guineas each. These were of gros-bleu ground decorated with leaves, roses, and gold scrolls, and medallions with Classical subjects in the centre. An oval dish with paintings by Dodin fetched 255 guineas.

We are desired by the Turners' Company to state that their Twenty-sixth Annual Prize Competition in Turnery will be held at the

Mansion House, by permission of the Lord Mayor, on October 23rd, 24th, and 25th next. Prizes in money, medals, certificates, and, in the higher classes, the Freedom of the Company, will be presented to the successful candidates, according to merit. The competition will be in turning in hard and soft wood, xylomite, celluloid, vulcanite, and other materials, and there will be special classes for apprentices, amateurs, and schoolboys. The qualities considered in awarding the prizes will be beauty of design, symmetry of shape and utility, and general excellence of workmanship, fitness of the work for its intended purpose, good copying, novelty, and polishing, carving, and inlaying. The exhibits must be delivered at the Mansion House in the week ending October 18th, and the judges will be Mr. J. J. Holtzapffel, Mr. Alfred Bevan, Mr. W. Brinsley, and Mr. A. Murray, City Surveyor.

AN Institute erected by Mrs. R. W. Barbour, of Bonskeid, as a memorial of the late Rev. R. W. Barbour, has been opened and handed over to the inhabitants of Pillochry, N.B. The building, which occupies a central site in the village, is distinctly Scottish in character, and adds to the Architectural features of this Highland resort. It has a frontage of 55 feet, with a width of 50 feet, and has been so planned as to provide ample accommodation either for recreation, social intercourse, or intellectual improvement. The Institute, which was erected from plans prepared by Mr. J. Murray Robertson, Dundee, has cost about £3,000, and is a model of taste and comfort.

THE Royal Cornwall Geological Society, the Royal Institution of Cornwall, the Royal Cornwall Polytechnic Society, and the Mining Association and Institute of Cornwall, at their annual joint meeting were greatly interested by a demonstration of rock drill machinery at Wheal Agar. The new air-compressor recently erected on the mine by the Tuckingmill Foundry Company was inspected. A practical demonstration was then made of the "Rio Tinto" and the new "Little Hercules" rock drills, both of which are manufactured by the same company. The experiments were under the direction of Mr. McCulloch, the patentee. The "Little Hercules" drill bored 13½ inches in one minute; the water-supply became choked after about half a minute, air pressure, 70 lbs. With the "Rio Tinto" and "Little Hercules" working together, the former did 5 inches in one minute and the latter 12½ inches in 57 seconds, each working with 1½-inch drills. The new drill bored a horizontal hole 5 feet 4½ inches in 8 minutes, 53 seconds, or 18 minutes from start to finish; and a vertical hole 2 feet 11 inches in 6 minutes 38 seconds, or 9 minutes 30 seconds from start to finish. The "Rio Tinto" drill weighed 300 lbs., had a 3½-foot piston, and was 4 feet 6 inches long, and the new drill weighed 200 lbs., had a 3½-foot piston, and was 3 feet long. After the demonstration the party was entertained at luncheon by Mr. George J. Smith, J.P. Mr. Smith presided over a company numbering nearly 150, and proposed "Success to the four societies represented." Dr. G. B. Millett responded on behalf of the Royal Geological Society of Cornwall. The Mayor of Truro (Mr. S. Trevel) acknowledging the toast on behalf of the Royal Institution, said those joint meetings, if continued, would do a great deal of good in the county of Cornwall. He had watched with a great deal of pleasure the performance of the rock drills, and he hoped the enterprise of the Cornishmen who were now producing that new rock drill would be rewarded, and that it would become the drill of the future. The granite was one of the hardest specimens to be found in Cornwall.

ONE of the curiosities of Paris, which has a special attraction for astronomers of all countries, is the Mercury Bath at the Observatory. This Bath resists all vibrations of the soil, and its surface is in no way perturbed by the oscillation caused by the passing of the trains on the line to Sceaux. Before the advent of this invention the astronomers were complaining a good deal of the manner in which the neighbouring railway had affected their most delicate apparatus. At that period there was some talk that the Observatory should be

removed. It was not the first time that this idea had been mooted, but the reasons at bottom were not exactly concerned with the advancement of Science. They had more to do with personal feeling. Once again the proposal is made by certain Municipal Councilors to suppress the Observatory, or, at all events, to sell the land which was annexed to it in the time of Le Verrier. The revival of the attack has led to profound emotion in scientific circles.

ALTHOUGH there was no striking achievement to record, said Mr. Macmillan at the recent annual meeting of the British School at Athens, whose claims we urged in our last issue, the School has had a fairly good session. Seven students were admitted, or re-admitted. Mr. E. F. Benson, besides continuing his work on the cult of Asclepius and the fourth-century heads at Athens, took part in excavations at Alexandria. Mr. J. L. Myres carried out researches in Cyprus and Crete. Mr. R. Carr Bosanquet made a careful study of the lecythi in Athens. Mr. E. R. Bevan, like Mr. Benson, was engaged in excavations at Alexandria. Mr. John Duncan and Mr. Adam Fyfe Findlay worked at questions bearing on the history of Christianity, thus proving the usefulness of the School in a department not hitherto within its sphere. Mr. J. E. Brooks did preliminary work. Mr. Herbert Awdry, Assistant Master of Wellington College, went through a course of Archæology, thereby emphasising the value of the School as an adjunct to the ordinary Classical education. No excavation was undertaken in Greece by the School, funds being too scarce. Owing to the generosity of Dr. Edwin Freshfield, one of the trustees of the School, there was at last a good prospect of at least part of Schultz and Barnsley's admirable work on Byzantine Architecture being published in the coming year.

LORD LINGEN, the chairman, in moving the adoption of the report, disclaimed all pretensions to the name of Archæologist. He could only speak as a scholar of fifty or sixty years ago. In those days, Archæology, as a Science of objects which appealed to the senses, and as it now appeared in the publications of the Hellenic Society and the British School at Athens, hardly entered into ordinary Classical study. There were several reasons for it. The all-important task of settling the text of the Greek Classics and the rules of grammar occupied nearly the whole time of the scholars who adorned the end of last century and the first third of this. Their labours almost necessarily turned the Classical instruction of the time towards verbal criticism. Besides, travelling abroad was difficult, costly, and seldom undertaken by schoolmasters. Museums were fewer and poorer than now; books of illustration much more expensive. One who had not actually seen it could hardly realise the enormous difference between the Classical work of half a century ago and the Classical work of to-day with all its realism. But we should dearly purchase our increased archæological knowledge if it led us from the study of that grand literature which taught the life and significance of ancient remains. The Archæology to which the British School at Athens offered a home was that of the scholar, not of the dealer.

THERE is some prospect that at last London's finest Boulevard—the Thames Embankment—will be lighted by electricity. An attempt was once made in this direction, but it was when electricity as an illuminating agent was in its infancy, and the experiment was a failure. But experience has shown that the electric light can nowadays be relied upon, and, while several of London's great arteries have abandoned gas for the arc lamp, it is a pity that the Thames Embankment should lag behind. The cost of the work, it seems, including the lighting of Westminster and Waterloo Bridges, would be about £16,000, this being nearly £4,000 less than an estimate submitted last year. The difference is accounted for largely by adopting less ornate buildings for the generating plant and omitting the gardens from the lighting scheme. It is expected the London County Council will give its sanction to the scheme, and if so, the work will be taken in hand at once.

THE members of the Photographic Convention have had a most successful Annual Meeting at Shrewsbury. On Wednesday last a good proportion of the members visited Haughmond Abbey and the adjacent hill, the leaders being Messrs. Burson, Ebrall and Hill. On their return the annual dinner took place, followed by a smoking concert, at the Music Hall. During the day, meetings of the Committee and the Council were held. On Thursday the members had a full day's excursion. They divided themselves in the morning into two sections, one of which visited Church Stretton, and secured some photographs of the picturesque hills in the neighbourhood, while the other had a circular ride through Atcham, Wroxeter (where the Roman ruins of Uriconium are situated), thence to Cressage and Acton Burnell, where a very early Parliament was held. Returning to the rendezvous at Shrewsbury, Mr. F. R. Armytage, M.A. (Organising Secretary of the County Council), read a paper on "The Camera as an Aid to Technical Instruction;" Mr. Andrew Pringle, F.R.M.S., one entitled "Ten Minutes of a Life History," being an application of photomicrography; and Mr. A. Maskell one on "Pictorial Photography, the New and the Old."

ON Wednesday last Mr. Robert Bradbury, Surveyor to the Rotherham Rural District Council, who for over five years has held the appointment of district main road surveyor in the High Peak of Derbyshire, under the Derbyshire County Council, was the recipient of a handsome case of mathematical instruments, presented to him by the county surveyor, Mr. J. S. Storey, and two of his assistant surveyors, Mr. D. Robinson, Crich, and Mr. R. C. Cordon, Duffield. Mr. Bradbury has had charge of a very large district in the county, and he has given great satisfaction in the performance of his duties.

THE York new Sewerage Works, which were commenced four years ago, were on Thursday opened by the Lord Mayor, Alderman W. McKay. For many years numerous complaints were made of the sanitary condition of the city, and when the York Extension and Improvement Act was passed in 1884, some thousands were added to the population and eleven miles added to the city roads. The added area was in a most insanitary condition, and when the Act was passed it was understood that the Corporation of the city should provide a proper and efficient scheme of drainage. Mr. Jas. Mansergh, the eminent sanitary engineer, was called in, and he prepared a scheme which was subsequently extended to include the added area. Intercepting sewers have been constructed, and the existing branches have been connected to the new system, so that instead of the sewage flowing into the rivers or streams, it is now conveyed by gravitation to the eastern boundary of the city on the left bank of the river, to the Pumping Station at Fulford. At this point the main sewer is a little more than 16 ft. below summer level of the river. The total length of new sewers is 17 miles 527 yards. The pumping plant consists of two overhead vertical cylinder triple expansion engines, working single acting ram pumps, each engine capable of delivering 4,320,000 gallons of sewage per day, through the 27 in. rising main to the tanks at Naburn. In addition, there are two engines and centrifugal pumps, to be used in times of heavy rain, each capable of discharging 14,400,000 gallons per day into the river. Steam is generated in three Lancashire boilers, 6 ft. 6 in. in diameter and 22 ft. long. In ordinary dry weather one of the triple expansion engines and its pumps will deal with the sewage, while the second one is a stand-by in case of repairs, or for dealing with moderate rain storms. When all the pumping plant is at work a little more than 37,000,000 galls. per day can be lifted out of the sewers. The works for the treatment of the sewage have been constructed on the left bank of the River Ouse at Naburn, a little more than two miles below the Fulford Pumping Station. These works consist of six precipitation tanks, which have a total capacity of 1,500,000 gallons, so arranged as to be used either for the intermittent or the continuous process. The tanks have been placed at a sufficient elevation to allow of the clarified liquid being distributed over adjoining land for filtration. The estimated total cost of

Watt and Co.; Fulford Pumping Station, found the work for which the City Council has obtained borrowing powers is £191,100, while the expenditure up to the present time is £186,120. The resident engineer under whose superintendence the works have been carried out is Mr. James McKie, A.M.I.C.E., and the works have been executed by the following firms:—Main intercepting sewers, Mr. A. Kellett; Fulford pumping plant, Messrs. J.

"IN MEMORIAM": DESIGNED BY
BURKE DOWNING.

dation and wells, Messrs. Parker and Sharp; Fulford Pumping Station, building, Mr. A. Kellett; Naburn Treatment Works, Messrs. Parker and Sharp; sludge pressing plant, Messrs. Goddard, Massey and Warner.

MR. W. BURGESS, of the Tuckingmill Foundry, in a paper on "Economy and Speed in Air-compressing and Rock Drilling," described the

air compressor erected at Wheal Agar. This engine was the first made on the lines of Mr. McCulloch's patent, and such being the case, it was impossible to avoid some small defects of detail. Whatever had been found wrong had been altered and improved, and none of those alterations had in any way affected the principles on which it was built. It was a generally accepted datum that hitherto it had taken 10 cwt. of coal per day to drive one drill. They had done it with 5 cwt. They had driven six drills with a weekly consumption of coal of from nine to ten tons, and these figures were more or less proved by facts that could not be controverted. For the four weeks ending March 23rd, a period in which they drove four inches short of 38 fathoms of levels, their coal cost them per each fathom of ground driven 16s. 0 3/4 d., and if there had been given them the full amount of work expected under their agreement with Wheal Agar, their cost per fathom would have been still further reduced to 12s. 6d., and all these figures included the supply of coal to two forges used to sharpen their bits. It had been also generally accepted that to arrive at the total cost of rock boring to the mine they must double the price given to the miner for doing the work. The economiser was no new invention. It had been in use fifty years or more, and they recognised in its use a save in fuel, but the strongest reason that actuated them in putting it down was the fact that by its use the life of the boiler was considerably lengthened, but he denied that the economy in fuel was due solely to the economiser. The "Little Hercules" new drill which had been at work was a short and light drill, a combination which, when they took into account its effective power, had never yet been attained.

THE re-opening, after restoration, of the ancient Parish Church of St. Luke's, Farnworth, near Widnes, took place yesterday, the ceremony being performed by the Bishop of Liverpool. The work has been carried out under the supervision of Messrs. Austin & Paley, of Lancaster, and includes the building of new Choir and Clergy Vestries on the north side of Chancel, with Heating Chamber under; cleaning and repairing the stonework and roofs; the abolition of the Galleries at west end and portion over South Chancel Aisle, and the opening out of the Tower Arch into the Church. The old "box pews" have also been swept away, and the whole area of the Church covered with bed of concrete, so as to exclude all ground gases arising from former interments, and new floor laid throughout—the Chancel with encaustic tiles, the seat blocks with wood blocks, and the Aisle passages flagged. The heating is effected by hot water on the low pressure system, fresh warm air being introduced through trenches in the Aisles, with additional coils above ground behind the seat blocks. The old oak panelling has been adapted to form a dado round the Church. The new benches are of oak, those for the Choir being finely carved with traceried elbows, similar to the old example found in a garden at Farnworth. The tops of the desk elbow are finished by carved emblems of the Evangelists St. Luke and St. John. These were cut by Mr. Bridgeman, of Lichfield. The Pulpit is of oak, with stone base, the upper portion being panelled, with canopied and traceried work, the two octagonal angles containing figures of St. Luke and St. John. The upper portion of the Pulpit, the Lectern and Sedilia, also the carving of Choir Stalls, Altar Table and Rails, Organ Case and Chancel Screen, have been executed by Messrs. J. Hatch and Sons, of Lancaster. The Organ itself is by Messrs. Connacher and Co., of Huddersfield, and is a gift. The west window is filled with stained glass, by Messrs. Shrigley and Hunt, of Lancaster. This, and also the Pulpit, is the gift of Miss Riding and her sister. The heating has been carried out by Mr. H. Wormwell, of Accrington, and the general Contractors for the work were Messrs. G. Woods & Sons, of Bootle, Liverpool. The cost has been about £3,000, exclusive of gifts.

WE have to acknowledge the courtesy of Messrs. Bemrose & Sons in placing at our service the photo-engraving of the Roman Thermae at Fiesole which appears in the current issue of the *Reliquary and Illustrated Archaeologist*.

"THE DESTRUCTION OF EDINBURGH."

Pressure upon our space compels us to hold over a number of further letters upon the subject.

The majority of our Correspondents continue to be unanimous in their condemnation of this monstrous scheme. We can assure our readers that we are not allowing the grass to grow under our feet in the matter.

THE A. A. VISIT TO BLYTHWOOD AND STANSTEAD.

By rail to Bishops Stortford, then, in carriages provided by Sir James Blyth, to Blythwood, and finally, a visit to the Farm, Dairy, and new Church composed last Saturday's "summer visit." Some score of A. A. men joined the excursion, and after being hospitably entertained at lunch by Sir James Blyth, they were conducted by Mr. W. D. Carøe to the new Church, or rather, fifteen year old Church with new Tower. Both are from Mr. Carøe's designs, so that members had an opportunity of comparing the President's later with his earlier methods. The interior of the Church is most successfully treated, and elicited general praise from the visitors. The Farm Buildings, where Sir James keeps his famous herd of Jersey cows, were next visited, and then the Dairy (in itself well worth a visit) which has been illustrated in this Journal. The Misses Blyth afterwards dispensed tea. A pleasant afternoon was concluded by a drive to Stanstead, the party returning to town in the evening.

COMPLETION OF THE ALBERT MEMORIAL, EXETER.

THE Memorial in Exeter to the late Prince Consort—the Albert Museum—commenced thirty years ago, is complete. On Saturday the newly added portion, the south-east Wing, was opened by the Duke of Devonshire. This building, of which Devonians generally are justly proud, stands without a rival in the West of England. It may be said to be the result of nearly half a century of labour on the part of Devonshire men. The structure has been erected piecemeal, and the addition of the present Wing has made it complete. There is little probability, however, of the new Wing being in entire use until October next. The style of Architecture deviates slightly from that of the old building. The walls are of Pocombe stone with Hamhill dressings; the huge columns in front are of Devonshire granite polished. The tracery of the windows is of Hamhill stone. From the main Entrance of the Museum in Queen Street, there is a passage way, on each side of which there is a lofty Class Room, 30 feet by 22 feet, with wooden dadoes, and floors of wooden blocks—which, by the way, have been used throughout. On the Paul Street side there is a spacious Museum Room, 57 ft. 9 in. by 41 ft. 6 in., and here it is proposed to display the Natural History Collection, although, it must be confessed, it is not well adapted for such a purpose. With a view evidently of getting as much light as possible—and undoubtedly it is a splendidly lighted room—the Architects have provided many windows. Only one of the four walls is without either windows, an arch, or a door. Immediately above the Museum Room, there is a very large apartment, set apart for the Art Gallery. There are also two well lighted Lecture Rooms, one about 48 feet by 22 feet, and the other 48 feet by 27 feet. At the rear of the ground floor Class Rooms and approached by steps is a small Laboratory adapted for the preparation of specimens, but which will be used at present in connection with technical education. The Laboratories are fitted with an air pump, balances, and numerous apparatus for the use of the students in the prosecution of their studies. The premises throughout are fitted with the electric light apparatus, and they are to be heated with hot water by the high pressure small bore system. The Architects are Messrs. Fulford, Tait and Harvey; the builder Mr. Woodman. Messrs. Easton and Sons supplied the stone-work. The carving in connection with the new additions has been carried out by Messrs. Harry Hems and sons.

MEN WHO BUILD.

No. 22.

MR. SOMERS CLARKE.

ALTHOUGH a bachelor of the deepest dye, Mr. Somers Clarke has surrounded himself in his Drawing Room at Whitehall Court with all the little knick-knacks which appeal so much to woman's heart. But Mr. Somers Clarke is, in his artistic connections, a courageous man, courageous enough to cover his floor with the ordinary plain linoleum of commerce, which his hand-maiden has honestly polished until it is a shiny black, much like a negro's face in its Sunday aspect. Anything more charming upon a floor it would be difficult to imagine, and the cleanliness of the hard surface over the velvet piles and Turkey abominations one usually treads upon is strikingly manifest. Dust has its greatest enemy in Mr. Clarke, and in face of the possibility that you may be converted to his methods of attacking dust, he takes you over to one of his fireplaces to dissect the gas apparatus he has come to the conclusion, after a trial of many years, is the best. He uses a stove somewhat like the system of Dr. Pridgen Teale's, *i.e.*, with a gathered throat, arranged by bringing the fire brick back well over to the front of the grate, so that, until the adjustable hood is pulled out there is only an aperture an inch and a-half in depth. But in cases where the ordinary registers or slow combustion stoves are fixed a sheet iron hood attached to a four-inch pipe need only be inserted up the chimney to ensure a perfect draught. After experimenting with all manner of burners—atmospheric and others—Sugg's have, in his opinion proved themselves to be the best, and he is never tired of singing their praises. It is because of the smoke and dust which London revels in that Mr. Somers Clarke spends the winters of his life in the lands of the ancient Egyptians, where he can steep himself to the lips in Egyptology and join exploration parties through the livelong day. Upon the grand piano—which serves in moments of forgetfulness or of extreme pressure as a very excellent table for the reception of drawings—lies a formidable pile of exploration plans, the result of last year's work, to which Mr. Clarke hopes to add during the coming winter in the East. Throughout the whole of his professional career Somers Clarke has taken an intense interest in the history of Architecture, and, as a very prominent member of the Society of Antiquaries, has devoted the greater part of his time to the study of ancient work, upon the restoration of which there is no more capable authority in England. He is widely travelled, and Europe is but a book of reference to him.

It is pleasant, from the topmost windows of Whitehall Court to gain a panoramic glimpse of the west of London. Colcutt's Tower of the Imperial Institute stands up a prominent figure in the picture, and beyond it that awful Wheel at Earl's Court—the engineering Frankenstein that objects to go round—intrudes itself upon the view. Nearer home one gets a peep at Messrs. Leemings' Admiralty Offices, and disappointing they are, now that one can judge them "in

the flesh." But as nothing could be worse than the Hotel Metropole—except it be "Balfour's Folly," in the Adelphi, which is mercifully unseen from Mr. Clarke's windows—one can forget the disappointment in the picturesque picture that spreads across the green of the parks and loses itself amid a maze of towers and steeples far beyond the limits of the Great City. Of the "destruction" of that City Mr. Somers Clarke speaks with saddened heart—of the want of suitability in most things Architectural, of the ruin of what is good, and the arrogance of what is bad; it pains him when he thinks of it. Of the veneering propensity of modern work he also speaks—the veneering of handsome fronts tacked on to bald and

unconvincing buildings, without an atom of Architectural feeling anywhere but on the street elevations. There is little hope for Architecture in our cities if no more sincerity than this is ever to show itself.

From the want of dignity of London Buildings it is but a short drop to more interesting things; and a pleasant half-hour is devoted to other lands where Architecture is more an Art of the Million than it is here, and where its study and its practice are more encouraged. And then to the far East of Egypt—dear, delightful Egypt, where Somers Clarke revels while London is bathed in fog and mist. He works there, freed from the depression of the English climate, and when he goes back later in the year he goes back to one of those delightful craft that float lazily upon the Nile, and takes the place of the English house boat, which has never yet lured an Architect to make his home.

Amongst so much fine work up and down the counties, so many fine restorations, so much historic research, you cannot specially note one work more than another. St. Martin's Church, at Brighton, is perhaps the largest of Somers Clarke's individual efforts—plain and bold in its external aspect, rich and dignified within. With his partner, Mr. J. P. Michlethwaite, there is an extraordinary bond of unity of conviction between the two men, who have produced between them much sincere and fine work, honest in its purpose and great in its truthfulness.

It has been resolved to recommend the erection of a Dome on the Calton Hill, Edinburgh, to provide accommodation for the large telescope at present in the City's temporary premises at Murrayfield.

THE COLOURS OF IRISH MARBLES.

THE colours of the marbles of Ireland are almost as numerous as those obtained from Italy. The dark colours vary from jet black to dark dove colour, purple, blue and grey. The light colours vary from the pure snow white, cream coloured, pink and light grey. The variegated consist of the serpentine,

are extensively met with, and belong to the formation familiarly known as the lower lime stone. The merchantable beds of the best quality are met with in the Counties Galway, Limerick, Carlow and Kilkenny; in the counties of Mayo and Waterford black marble is also met with. At the former places they have been extensively worked. Wherever the black marble beds are met with they

marble are frequent. They are generally more or less marked with fossils, and inferior to those beds belonging to the lower or light coloured limestone formation, and seldom receive a good polish. Wherever the limestone formation prevails in which the marble beds occur, the economy of raising it is dependent on the depth of over-laying rock or soil which requires to be removed, and of the

ST MARTIN'S CHURCH: LEWES ROAD: BRIGHTON: SOMERS CLARKE JUNR. ARCHT

black and white veined, mottled, and those marked with fossil organic remains. The serpentine is excluded, from its common use for the purposes to which marble is applied, and from its being so commonly called the "green marble," although it is not, strictly speaking, a marble. The black marbles, which are those of most value in Ireland,

are assorted with limestone beds, and the difference in quality appears almost accidental; some of the over or under-lying beds often present a strong contrast in the quality of the stone. In other places there is a gradation in character from the adjoining ordinary limestone to the fine marble. In the impure limestone formation of the calp series, beds of black

demand which exists in the neighbourhood for the common rock, either for masonry or burning into lime. In some localities the limestone rock itself more than repays the cost of removing it, and in those localities where this formation prevails, these considerations and the quality of the marble beds determine the economy of raising it.

A YORKSHIRE ELIZABETHAN HOUSE.

THE DESIGN ATTRIBUTED TO INIGO JONES.

AT Bridlington, Yorkshire, last week, Mr. W. H. St. John Hope ciceroned the members of the Royal Archæological Institute to what now remains of the once famous Monastery. The Western Entrance of the Priory Church—considered to be one of the best specimens of the Architecture of the time of Henry VIII.—the decorated windows, with tracery consisting of combinations of trefoils and quarterfoils, the North Porch, rich in the variety and beauty of its mouldings, and the clustered Pillars were each in turn examined. The members then proceeded to Burton Agnes Church, subsequently, by the courtesy of Sir Henry Boynton, inspecting the Hall, which is the finest specimen of Elizabethan Architecture extant in Yorkshire. Mr. J. Bilson acted as chief interpreter, and gave as much of the history of the two structures, as well as of the former Lords of the

the design of the house, and Murray made the precise statement that it was added to and somewhat altered by him in 1628. He had been unable to find any authority for this idea, which was certainly not confirmed by the building itself. The first alteration appeared to have been the insertion of the sash windows in the principal front and the alteration of some of the gable windows, which they might safely attribute to Sir Griffith Boynton, who improved his seat at Burton Agnes at the end of the seventeenth or the commencement of the eighteenth century. Internally the Hall has been considerably altered, but it contains two fine features in it chimney-piece and screen. The great chimney-piece contains representations of the five senses, and above a large relief of the wise and foolish virgins. It bears the arms of Sir Thomas Boynton of Barmston (1544-1582), and of his wife, Frances Frobisher, a cousin of the celebrated navigator, and his fourth wife, Alice, daughter of Nicholas Tempest, of Helmesden in the bishopric. The chimney-piece must

tion, but that left room for a good deal of misconception. There was a certain amount of what might be called civil life—towns enjoying what he might call the Roman municipal constitution, though few in number. Yorkshire was one of the poorer counties in the matter of Roman remains, for where they existed they were almost entirely military. York seemed rather to contradict what he had been saying, as that was a town which possessed a full municipal constitution. With the exception of London and Colchester, they found more relics collected in the Museum at York illustrative of Roman life, and the furniture of that life, than were to be found in any five or six other places. With the exception of York and Aldborough, there were very few remains of Roman villas in the country; but the way one had to regard these towns was not as definite parts of Roman civilisation, but merely as towns in which the elements of civil life blended with the military. In other places in the country they found traces of military forts arranged along the roads. In nearly all cases

ST. MARY'S CHURCH, STRETTON, NEAR BURTON-ON-TRENT: SOMERS CLARKE & MICHELETHWAITE, ARCHITECTS.

Manor, as he was able to do in the time at his disposal. Burton Agnes Church, dedicated to St. Martin, was, Mr. Bilson explained, one of the Churches in the patronage of the Abbey of St. Mary, York. Traces remain of what he called the first Church, the aisleless Norman Nave, which no doubt had an aisleless Chancel, with square East End, belonging to the Early Twelfth Century. Norman masonry remains at all four angles of the Nave. Under the South Aisle of the roof are a few old Norman corbels. In the Churches of the Wolds this type of the Church with aisleless Nave and Chancel, apparently all Early Twelfth Century, were very common, but the Chancel was to all appearance completely rebuilt at the restoration effected by Bishop Wilberforce in 1840. Great interest was shown in the Chapel in the North Aisle containing the Tomb of Sir Roger de Somerville, the founder of the Church, and first owner of Burton Agnes. In front of the Hall, Mr. Bilson pointed to certain figures in the stone-work indicating that it was erected in 1601. Many of the guide-books, he observed, credited Inigo Jones with

therefore have been removed from Barmston where the Boyntons had a large house, only a fragment of which now remains. The Architecture of the earlier English Renaissance has, said Mr. Bilson, received far too little attention from archæologists. Yorkshire, it was true, was not rich in houses of this period.

"ROMAN YORKSHIRE"

Was the subject of a more or less impromptu address by Mr. F. Haverfield, at the evening meeting of the Historical Section of the members, held in the Royal Hotel, Scarborough. South Yorkshire, he observed, seemed to have been, more or less, the boundary of one-half of the Roman province, and one was therefore justified in speaking of it as an actual division with some meaning in Roman times. There was definite evidence of a technical kind that York was occupied prior to 100 B.C. In the year 124 Hadrian had built his great wall from the Tyne to the Solway, and York had been included in the definite area of the Roman dominion. The occupation of Roman Britain was generally described as a military occupa-

these were occupied by garrisons, and were intended simply and solely for military duties. In the districts around these forts there was no doubt crime and disturbance. Near to Leeds some coin moulds were discovered which rather indicated that at some time or other the Britons were engaged in the recesses of the moors forging Roman coins. Detailing the way in which Roman Yorkshire passed into the English Yorkshire as we know it today, Mr. Haverfield pointed out that when the Romans left the island there remained a considerable number of the population who spoke the Roman language and bore Roman names. In Yorkshire, chiefly because of the hills, the Roman element seemed to have lasted longer than it did elsewhere. The small kingdom of Elmet, in the Leeds district, seemed to have maintained itself against the attacks of the Saxons right down to the year 625, and when it was conquered it was at a time when the ferocity of the Saxon conquest had somewhat abated. The conquest of Britain by the Saxons was, in fact, a much longer business than was generally supposed.

IN NORTH FRANCE.

LAON AND ITS CATHEDRAL.

THE Church stands in one of those pleasant bright little French towns of narrow streets and white houses, its west front towering above the cobble-paved place where the women huddle on market days in their blue gowns and white caps, their baskets, gorgeous with a wealth of fruit, resting on their knees. But, above the ordinary attractions of a Cathedral town, Laon has also the advantage of one of the finest situations in the North of France. Set upon a high hill rising like an island from the surrounding plain, with a picturesque circlet of walls and ramparts and avenues, it has throughout its history, from the time of the Romans to that of the Franco-Prussian War, been a fortress of great importance and has faced innumerable sieges. In spite, however, of its beauty and interest, few of the thousand Englishmen who hurry past it on their race to or from the South stop to pay the town a visit. If you are awake so early, look out as the train pants along the grassy way from Rheims

trying to force his elbow through the bars. Then with little warning appears one of the finest groups in the town. A great broad flight of steps, flanked at their summit by two massive gate piers, leads up to the Cathedral. Children are playing at hide and seek in and out of the walls, and old women resting against the gate piers after climbing the steps. The sentries are on duty and the masons working at the restoration of the Church, and the background to it all is the Northern Transept, with its severe triple Portal and great rose above, while the group is completed by the Chancel of the Church, and the steep gables and round Towers of the old Bishop's Palace. This latter has gone through many vicissitudes since the commune murdered its bishop, and burnt the Cathedral in the early years of the twelfth century. The present building is one of the most beautiful remnants of the domestic work of the thirteenth century left in France, and its double Chapel dates back to the twelfth century. But now these are disused and serve chiefly as a Museum, and the great Hall has been divided

white road that winds up into the town from the plain below and disappears through the quaint Porte d'Ardon, a venerable thirteenth century Gateway, with its round *tourelles* at the angles of a steep tiled roof.

The Church of St. Martin is well worth a visit (it is older than the Cathedrals), and the Hotel Dieu, and even the great Barracks at the western end of the town, and another old Gate with a Leaning Tower close beside it, to say nothing of the views and walks beyond. But you have no time for these, so, after entering through the Porte des Chenizelles, turn to the right and tread the thronged narrow streets until you stand before the West Front of the Cathedral, now a Cathedral no longer. The first thing that strikes one on entering the Church is its generally English characteristics. In height it compares rather with Salisbury than with Amiens. It has a square east end and beautiful lancet windows, filled with richly coloured glass, with their rose above. Not that this was the original termination of the Choir. It was circular and much shorter. The Transepts remind one of England, with their bold pro-

ST. MARY'S CHURCH, STRETTON, NEAR BURTON-ON-TRENT: PLAN BY MESSRS. SOMERS CLARKE & MICHLETHWAITE.

and you will see rising abruptly before you the rock of Laon shimmering in the fresh pearly light of morning. Its outline is clothed in trees, its top crowned by white walls, and then, reaching high into the sky, soar four Towers such as may be seen nowhere else in France or, for that matter, in Europe, that slowly change places and group themselves in half a dozen ways as the train passes on and finally pulls up in the Station at the foot of the hill. Then get out, for at any rate you can comfortably have three hours there and meet the afternoon train for Calais at Amiens. Better spend much more time, but even if this is all that can be spared, don't drive up. Walk, for you can take an occasional rest as you pass through the vineyards and gardens that clothe the hill, to glance back over the great plain that stretches far and away in one waving sea of cornland. Above frown the old ramparts, and behind them rise rows of white houses, some still retaining their mediaeval gables and niches and round *tourelles*, others of Renaissance or later date, with here and there the shaft of a dejected Gothic window peeping out, like a prisoner

into the civil and criminal Courts, for since the days of the Revolution the Bishop has gone and the lawyers have taken his place. Admire the steps and the great Transept and the Palace, and still keep on underneath the frowning fortifications, in the shade of the trees that climb down the hill to the peaceful little village of Vaux, which lies below. And just above the red-roofed village turn and look back at the Cathedral, framed in a setting of green acacias. You are almost due east, and though the more imaginative finish of Amiens or Chartres or Rouen, with octagonal clerestory and interlacing of buttress and pinnacle above the crown of Chapels, is missing, yet there is a simplicity and strength about its square east end (almost unique in France) that forms an appropriately solid base for the hardy Towers that soar from behind it. It is a delightful walk round the shady glaciis in the early morning, before the sun beats down too hotly. And, if you do not wish to enter the town too soon, still follow the walls and on along the alleys, where, with bands and illuminations, the fetes of the town are kept, until they lead into the

jection, and the piers of the Nave are of a form quite unusual in France. But for all its English appearance inside, the exterior is essentially French, and so is the detail of the interior—French of the very best type, of the early years of the thirteenth century. So are the Cloisters, quaint and beautiful in design and arrangement; so is the Baptistry Chapel, in itself quite unique; and so are all the Chapels of the Nave. But all round the Church in front of the Chapels are Renaissance Screens, a tribute to the taste of the sixteenth century, wonderful in their variety and design, but terribly out of place in the greater work around them.

A CEREMONY of considerable historical interest has been performed at Northbourne, near Dover, by the Bishop of Dover, in the dedication of a Lichgate in connection with the Parish Church. The special interest attaching to the Lichgate is that it is erected at a spot known as St. Augustine's Walk, where St. Augustine settled after landing at Ebbsfleet, near Ramsgate.

THE ART OF ILLUSTRATING IN BLACK AND WHITE.

MR. JOSEPH PENNELL has launched another of his slashing letters against the ineptitude of Art criticism, and the "Yellow Book" has found him a valiant defender. A London Contemporary glories in the fact that this much-discussed quarterly has laid aside the follies of its misguided youth, so far as illustration goes, and that its "Art is up to a fair standard." I am sorry, says Mr. Pennell, that you prefer the platitudes of the imitator, the *affiches* of the advertiser, even though, of course, with all people of any Artistic intelligence, you fail to understand why Mr. George Moore or Mr. John Lane should court the presence of the amateur baronet. Unaccountably, somehow, the really good work that is in the "Yellow Book" you do not refer to at all. But this want of reference to work which is good seems to be inevitable, and I may be quite wrong in even thinking that anything in this number is worth looking at. I cannot help wondering how, had some of us been working twenty-five or thirty years ago, we would have received the illustrations contributed to what really stood for the "Yellow Books" of that day. We know perfectly well what Mr. Ruskin thought of them. We have his opinion, written down in letters—luckily they are not as durable as brass—of Charles Keene and Fred Walker. As to the other illustrations of that time, I am not sure that he ever even looked at their work. And we know, too, how thoroughly artistic judgment all over the World has reversed his opinions. But it is seldom that the opportunity has been afforded to compare a critic's estimate of work done thirty years ago with the work itself. And in this case it never will be afforded again.

At the Fine Art Society's, 148, New Bond Street, there have been hung a series of drawings and a number of water-colours by Arthur Boyd Houghton, J. W. North, G. J. Pinwell, and Fred Walker among others. These drawings in black and white were, in almost every case, made to illustrate the gift-books of the season, gift-books which followed the annuals and preceded the Christmas Number books which are all of them, with one exception, dead and forgotten; and even that exception can be bought for much less than its original price, if you can find it—Miss Jean Ingelow's "Poems." The other books in which most of the illustrations in question appeared, were "Wayside Posies"—note the name—edited by Mr. Robert Buchanan in 1867, and I think "The North Coast," by the same editor, 1868, and Novello's "National Nursery Rhymes," 1870. Despite Sir Walter Besant, people cared more about books in those days than they do now, and they were willing to pay more for them too. They treasured them up, and one can get these illustrated books at present only with very great difficulty. But it is most astonishing to find suddenly in an Exhibition the original drawings with which they were decorated. I say astonishing, because most Artists and Art lovers thought that these drawings were all made upon the wood block by the Artist and cut to pieces by the engraver. This was the method usually followed until well on into the seventies. But now it seems that they were preserved, I suppose, by photographing on to the wood block. A definite statement as to how and why they were thus preserved would be most interesting and valuable, and I trust that the Messrs. Dalziel, the engravers, will give it in your columns.

Still, the drawings are here, having been sent on, a number of them, from Birmingham, where they were shown by the Royal Society of Artists, and a very interesting catalogue of them is published. The man whom we now know was the greatest of that group, if we except Frederick Sandys, Ford Madox Brown, Millais and Rossetti, who came before him, was Arthur Boyd Houghton, and, though he was one of the most prolific of the group, I do not know of half a dozen of his original drawings in existence. Here there are, I believe, but three: a finished design for the Nursery Rhymes, "Tom, Tom, the Piper's Son," which contains all the imagination which the same Artist expressed in his "Arabian Nights" or "Don Quixote," all the sense of composition, of arrangement, of power, which was so

evident in his "Graphic America," all the technical accomplishment which you find in his "Home Thoughts" and "Home Scenes"; and if the beauty of some of the designs in that book are not so evident in this drawing, the same beauty is to be found in an exquisite pencil study which is here by him. His knowledge of the real life around him, too, is shown in a charming little street scene; and for the first time in years, and for the last time, I believe, outside the Print Rooms of the great Museums, one has the opportunity of studying his master's work. Fred Walker is represented in black and white by but a single sketch, I think, rather in the style of Sir John Gilbert. So also is J. Mahoney, who produced not only the earliest, but the finest set of Alpine drawings that have ever been done, to illustrate Mr. Whympers' "Scrambles amongst the Alps." But the marvels of the Collection are in the almost complete set of drawings by J. W. North and G. J. Pinwell. The latter, possibly, is the better represented man. Nearly the greater part of his work for Miss Ingelow's "Poems" is upon the walls. It is a pity though that the drawings for the "High Tide" are not here. But one can easily be content with the "Winstanley" designs. From the "Wayside Posies" we have the amazing study of reflections in "Shadow and Substance," the "Swallows," the "Journey's End," "Norland's Farm," "Doctor Tom," and "The Sailor's Love." One cannot praise these drawings too much, or too strongly advise the younger illustrators to hunt up the books in which they appeared. But excellent in a certain way, and for their time, as were the engravings made from them, they give no idea whatever of the exquisite originals, which, as I have said, may now be seen for the last time before they disappear into the portfolios of collectors. Here is the work of the men who gave the *Graphic* at its start its World-wide pre-eminence, which gave the *Cornhill*, *Once a Week*, and *Good Words* an artistic standing which no English illustrated journal has ever approached since. Here are unique examples of a British Art, every one of which should be upon the walls of the National Gallery. Certainly, during the last five or six years no such show has been held in London, and no such opportunity has been offered to artists and collectors. But illustration has not yet, like cycling, become the fashion. When the dealers have got rid of Bartolozzi's prints they may turn their attention—I hope it will be some years yet—to original Art in black and white. The work of this group of men was thoroughly and distinctly healthy, accomplished, distinguished, and English.

THE Leeds School Board has decided, subject to the approval of the Education Department, to purchase a plot of land owned by Messrs. Walmsley, containing about 7,000 square yards, and having a frontage to Norwood Grove and two intended new streets, as the site for the proposed School in the Brudenell Road district, the price provisionally agreed upon being 13s. per yard.

THE spacious open-air Bath which the Liverpool Corporation has provided in Burlington Street, has been formally opened. Situated in one of the poorest and most densely-populated parts of the city, this Bath, which will be free, should prove nothing short of a blessing to the poor urchins who positively swarm in the purlieus of Vauxhall Road and neighbourhood. The Bath holds 85,000 gallons of water, and varies in depth from 2 ft. 6 in. to 3 ft. 8 in.

AFTER all, the gold-finding experiments in Sutherlandshire are likely to turn out better than has been anticipated during the past few weeks. Within the last week the number of miners on the ground has increased, and some of them are said to be doing fairly well, which, under the severe restrictions imposed by the County Council, is as well as could be expected. The experiment has just over another month to run.

ARRANGEMENTS are being set on foot for an immediate extension of the railway from Mafeking to Buluwayo. The estimated cost is one and a half millions sterling.

THE Subscribers to the Frank Holl Memorial have been notified that it has now been placed in St. Paul's Cathedral.

THE ARRANGEMENTS OF SHRINES.

THE Shrine of Edward the Confessor, which still remains in Westminster Abbey, will serve to illustrate the arrangement of Becket's Shrine, and probably those of the other principal saints. It stands, like Becket's, in a Chapel, and separated from the Choir and High Altar by a Reredos, but yet not a detached building as the Lady Chapels so often were. Architecturally speaking, the Chapels of Edward and Becket are within the Choir at its east end; the pavement in both cases is raised above the level of the Choir, and each Shrine is a parallelogram on the plan, and stands east and west. The Altar is at its west end, and in contact with it, so that the Saint is placed behind the Altar, *retro altare*; and, reciprocally, the Altar is at "the head of the saint," since the head of a corpse was always laid to the west. These phases had been noted by the monkish chroniclers; for example, in the Saxon Cathedral the matutinal Altar was placed at the head of Dunstan, and Anslem, Odo, Wilfrid, and others were deposited behind Altars. On the other hand, in Chantry Chapels the tomb of the uncanonised founder is commonly at the west of the Altar, so that the priest stands at the foot of the tomb. The description of the Shrine of St. Cuthbert at Durham will also serve to illustrate the two already mentioned. This, too, was placed behind the great Reredos of the High Altar upon a raised platform enclosed, and forming what was called a "Feretory" or Chapel for the reception of feretrum. This platform may still be seen extending partly into the great Eastern Transept or "Nine Altars" as it is called. In the midst of it "his sacred Shrine was exalted with most curious workmanship of fine and costly marble, all lined and gilt with gold, having four seats or places convenient underneath the Shrine for the pilgrims or lame men setting on their knees to lean and rest on, in the time of their devout offerings and fervent prayers to God, and holy St. Cuthbert, for his miraculous relief and succour." (Under the Shrine of Edward the Confessor, there are arches, three on each side, which probably served for a similar purpose). "At the west end of the Shrine of St. Cuthbert was a little Altar adjoined to it, for mass to be said only on the great and holy feast of St. Cuthbert's Day in Lent . . . and at this feast, and certain other festival days, in time of divine service, they were accustomed to draw up the cover of St. Cuthbert's Shrine, being of wainscot . . . and a strong rope was fastened thereto, and did run up and down in a pulley under the Vault for the drawing up of the cover; fine sounding silver bells were fastened to the said rope, which at the drawing up of the cover made such a goodly sound that it stirred all the people's hearts within the Church." This cover was painted and varnished within and without, and within the Feretory, on both north and south sides, there were ambries of fine wainscot for relics.

THE Conseil D'Administration de la Dette Publique Ottomane has placed a large order with the N. A. P. Window Co., for fitting the whole of their new block of offices, which are being erected at Constantinople, with its patent Window Sashes. We believe this is the first time sliding sashes have been introduced into Turkey, casements having been hitherto invariably used.

THE paper cables used in insulating electric wires in Chicago are made by wrapping strips of manilla paper around the wire and coating it with resin and resin oil. When sheathed in lead pipe these cables are said to be highly satisfactory.

THE Municipality of Geneva now claims that it has the largest Fountain in the World. This Fountain has been erected at the port's entrance of that city. It is no less than 300 feet in height, and may be seen from a great distance, detaching itself like a great white sail flapping through the effect of the wind.

THE Persian Government has requested the Russian Government to send Engineers to make preliminary surveys for a Railway to connect Teheran and Tabriz with the Trans-Caucasian system.

THE WEAKNESS OF NORMAN TOWERS.

DAINGEROUS CONDITION OF SHOREHAM'S FAMOUS CHURCH.

SHOREHAM Church, a Church which has been described as having no equal for size, dignity and grandeur, between Winchelsea and Chichester, is threatened with disaster. We refer, of course, to the Parish Church at New Shoreham. In consequence of certain internal dilapidations, the Rev. Charles M. A. Tower, after consultation decided to obtain the best advice possible as to the condition of the Tower. Mr. B. Ingelow, of Messrs. Slater, Carpenter & Ingelow, Architects, inspected the Tower towards the end of last month and again on a later occasion with Mr. Thompson, the eminent builder, who is at present engaged at Peterborough Cathedral. Sir Arthur Blomfield was also asked to pay Shoreham a visit and inspect the Tower. The condition of the Tower is so serious, we append Sir Arthur's report together with Mr. Thompson's letter:—

"I found the whole of the north-east angle containing the turret stair," writes Sir Arthur, "in a most dilapidated and unsatisfactory condition, caused by long-continued neglect in dealing effectually with palpable indications of weakness and crushing which must first have begun to show themselves at a very early date in the history of the building. Most of the cracks and fractures (which are both frequent and serious) appear to be of long standing, and the progress of the mischief has, no doubt, until lately been as slow as it has been sure. But in cases like this a period must sooner or later arrive when inaction is no longer possible without imminent risk to the building. I have no hesitation in saying decidedly that such a point has been reached in New Shoreham Church. The sixth respond of the arch between the North Transept and the north Choir Aisle is in a distinctly dangerous condition, and no time should be lost in making it temporarily secure with strong centreing, shores and strutting carefully arranged so as to permit a thorough examination with a view to dealing with this angle as may be found necessary to make it permanently safe. This, I anticipate, can only be effected by rebuilding in a sound and substantial manner. When this has been carried out the Tower will probably be much safer than it has been for many years past; but the progress of dilapidation already far advanced will still be going on in the upper part, and neither this corner nor the Tower generally can be considered at all in a sound state before the work of substantial repair is carried up the staircase and through the whole of the interior of the upper stages of the fabric. Until this is done the bells cannot be rung with safety; at present they are not in a fit state to be rung under any circumstances. If the weak angle and walls generally are carefully and skilfully treated, not only may the bells be put in order and rung, but I think it will be found that the present unsightly brick cemented buttress may be removed. In conclusion, pray allow me to express my strong opinion as to the very great importance of entrusting the difficult and delicate operation of examining, and if necessary rebuilding the failing angle to a builder well accustomed to work of this kind, and who may be trusted to deal with Mediaeval Architecture in a properly conservative spirit."

"In accordance with your request, I have carefully examined the Tower of Shoreham Church," says Mr. Thompson. "There are many indications of weakness and great pressure, and also that an active movement is going on injurious to the stability of the Tower, but the more serious of which are to be traced in the north-east angle of the Tower, and in the walls above the Bell Chamber. The most serious mischief is, however, from the crushing movement in the weaker angle—the north-east—in which the stone steps leading from the ground floor to the floor of the Bell Chamber are built, and here the mischief is great, and is extending downwards to the responsible pier, &c., or the eastern face of the north-east angle, and which I consider to be in a dangerous condition. The Tower seems at an early date, from some cause—probably insufficient foundation (although this can only be ascertained by examination)—to have gone over a little to the

east, and, more recently, to have pressed heavily upon the north-east angle, accelerating the mischief above mentioned. It is quite evident that some immediate measures must be taken to prevent more serious and irreparable damage to the beautiful and interesting work of the Church. The first and essentially necessary course is to carefully strut and shore with timber, and put strong centreings to the arches of the Tower and the openings immediately in connection with the same, which will enable examination of the foundations to be made, &c., and give time to determine the amount of repairs of the works most needful."

We are glad to note that prompt steps are being taken in the matter. At a meeting held on Thursday last, the Rev. Charles Tower announced that arrangements had been made to enable the work to be taken in hand at once. Many people were not fully alive to the danger of these old Norman Towers. The building of the Normans was not to be compared with that of the Romans. The building of the Normans consisted of a very fair facing, but there was a very weak filling up in the centre of the thick walls. The Bishop of Chichester, who approved warmly of the plan, had sent him a list of Towers that had fallen—Towers, which five minutes before they fell, looked, he had no doubt, as strong, firm, and solid as theirs. The Towers mentioned were at Winchester, Gloucester, Worcester, Evesham, Dunstable, Lincoln, Ely, Norwich, Selby, Hereford, and Chichester. That showed them that they could not ignore the opinion of those eminent Architects who had warned them that something must be done to render their own Tower more secure.

EARLY "SCOTTISH MANNER" IN CHURCH BUILDING.

WHEN Bede describes the building of the Cathedral of Lindisfarne by St. Finan, in the year 652, he tells us that "it was constructed not of stone, but of oaken planks, thatched with reeds, after the Scottish manner." This "mos Scotorum" was carried by their missionaries even beyond the Alps; and in his wooden Oratory at Bobbio, among the wild hills near the source of the Trebbia, St. Columbanus, early in the seventh century, reproduced in Classic Italy the rude type of Irish Banchor and Scottish Iona. St. Bernard relates that so late as the twelfth century St. Malachy built a wooden Shrine in Ulster, "opus Scoticum, pulchrum satis;" and that when afterwards he began to raise a stone edifice, such as he had seen abroad, the Irish exclaimed against it as a piece of Norman extravagance—a vain and useless innovation. The Monastery which St. Columba founded in Iona in the middle of the sixth century, is called by an old writer "gloriosum canobium." That it was so, in one sense, no person will question who traces on the map how large was the region of England which its Scottish missionaries and their Saxon disciples built up in the Christian faith. But its glory was not material. The only passage in Cumin or Adamnan from which we can infer anything as to the buildings on "that illustrious island which was once the luminary of the Caledonian regions," speaks of the apostle of the Scots as sending forth his monks to gather "bundles of twigs to build their hospice." The mainland abode of St. Waloe, a bishop of the same age, is described in the Breviary as a mere wattle-hut—"pauperulam casam calamis viminibusque contextam." The greater dignity of the Churches seems to have been in their construction, not of basket work, but of squared timber; they were log houses, not wigwams. Thus, in accordance with what Bede writes of Lindisfarne, the Breviary relates that the Church of St. Maolrubha, at Urquhart, on the western bank of Loch Ness, was built of "hewn oak;" and of the same fashion doubtless was the more famous Church which he founded at Applecross, in the western wilds of Ross, in the year 673, and which a century later gave an abbot to the great house of Banchor. Built, as the primitive Churches were, of such perishable materials, it is not to be wondered at that so many "venerable seats of ancient sanctity" in Scotland should now offer little to the eye of the pilgrim.

SAWDUST.

THE 40-inch lens for the great Yerkes telescope has been tested by Alvan Clark, the American maker, on the star Arcturus, the planet Saturn, and some double stars, and found satisfactory. Mr. Clark is also constructing a binocular telescope like a huge opera glass for Mr. Edgecombe, of Newington, Connecticut, U.S. The twin telescopes are 6½ inches in aperture, and lie side by side.

SOME weeks ago the Buxton Council asked the Duke of Devonshire for a piece of land suitable for a recreation ground, and his Grace, through Mr. F. Drewry, his agent, has intimated his willingness to give six acres, situate off London Road. The site is central, and its value can scarcely be estimated.

A NEW Maritime Canal, only 600 feet long, but 400 feet wide, and 14 feet deep, connects Great Salt Pond on Block Island—that is to say, one of the finest land-locked Harbours on the Atlantic coast of America—with the ocean. These great and important works come so fast upon us that we scarcely heed them. Yet did not our grandfathers and great grandfathers accomplish things quite as big relatively? There are seven miles of tunnelled galleries hewn in the rock of Gibraltar.

THE excavations at Pimsgad, the Algerian Pompeii, have been resumed under the direction of Mr. Albert Ballu, Architect to the Historic Monuments Commission.

A DISPENSARY and Medical Officer's Residence are to be erected at Coolgreany, County Wexford.

A NEW National School is to be built at Cornanool, within two miles of Castlebar.

A "BALLASTIC" Plate for a man-o'-war's turret has been despatched from Bethlehem, Pennsylvania, to Russia, where it will be tested by the Russian Government, with a view to a contract being concluded for a supply of a quantity of ship's armour.

ARAB papers announce that at the little town of Urfah, north of Aleppo, the ruins of an old Temple have been discovered, of which it is believed that it existed in the time of the Chaldeans. Urfah, which the Romans called Castellum Ur, is the "Ur of the Chaldees" of the Bible, the birthplace of Abraham, and a house, declared to be that of the patriarch, is still shewn there. If the ruins of this Temple are really Chaldean, they may possibly lead to important discoveries.

VISITORS to the British Museum will be pleased to note the great improvements which have been made in the Mummy Room by the erection of three Skylights in place of the old side windows, which, at their best, only threw the light on to the cases nearest the windows. These Skylights are very large, and show up the smallest objects in the room, which may have hitherto remained unnoticed.

THE Sanitary Institute, which had so successful a congress last year at Liverpool, will not hold any congress this year. The Institute has been devoting itself to practical work during the winter, and we scarcely think it is in a position to devote its energies to another congress for the present. The Institute, however, is doing most useful work.

THE Dublin Corporation has decided to appoint a fully qualified Assistant in the City Architect's Office, such appointment to be an annual one.

THE Duke of Cambridge will lay the Foundation Stone of the new Secondary School and Technical Institute at Richmond to-morrow.

THE Loughborough Board of Guardians purposes carrying out alterations at the Workhouse at a cost of £738.

THE Earl of Crawford has presented a small Collection of Antiquities to the British Museum, consisting of a series of objects of hematite found in Egypt. Among these may be noticed a few very fine Babylonian cylinders and Egyptian scarabs. All these objects are on exhibition in the third Egyptian Room.

AN Hungarian Architect and Antiquarian, M. Adrian Diaconu, claims to have found in the ruins of the ancient Roman camp of Bersovia, at Bogsan, near Temesvar, unmistakable evidence that the Romans, and, in particular, the officers of the Fourth Legion (Flavia Felix), understood, as early as the second century, the Art of Printing, and made use of movable types while encamped at Bersovia.

Professional Items.

ABERDARE.—The tender of Mr. R. C. Brebner, of Edinburgh, at £20,737, for the new Waterworks, has been recommended for acceptance by the Waterworks Committee of the Aberdare District Council.

ALDEBURGH.—A proposal is before the Council for the erection of an iron Bridge for vehicular traffic over Thorpe Haven. The cost is estimated at £500.

BOURNEMOUTH.—Plans prepared by the Borough Surveyor, Mr. F. W. Lacey, have been adopted by the Bournemouth Town Council, for a Fire Brigade Station at the East Yard, and Mr. Lacey is also to prepare plans for the Chapels and other buildings at the Cemetery. For the latter work the Surveyor will be paid an honorarium of 120 guineas, out of which he is to pay for any outside assistance required in the preparation of the designs.

BRIGHTON.—The Town Council invites tenders for the erection of a Residence for the Superintendent of the Public Abattoir, and also for the extension of the Colonnade and Terrace, Madeira Road. Tenders should be sent to the Town Clerk by Friday, July 26th.

CAMBORNE.—On Wednesday the foundation stone of the New National Schools was laid. The Architect for the new building is Mr. Sampson Hill, of Redruth, and the contractors are Messrs. Moyle and Michell. It is hoped that the new Schools will be completed on or before Whitsuntide next year.

CHICHESTER.—The tender of Mr. C. Hooker, of £855, has been recommended for acceptance by the Finance Committee of the City Council for the building of the Manager's House and two cottages at the Outfall Works. The Local Government Board has sanctioned the borrowing of £7,000 for works of sewage and sewage disposal.

COMPTON GIFFORD.—The laying of the memorial stone of the Tower of Emmanuel Church, Compton Gifford on Thursday last, marked the commencement of the completion of the edifice. The present contract for the Tower only represents about £3,500, whilst the proposed Spire will cost another £1,600. Mr. Bone is the Architect, and Mr. Jonathan Marshall, builder.

COVENTRY.—The new engines, boiler, buildings, &c., for the Kenilworth Water Company, are now completed, and are capable of supplying 100,000 gallons of water per day. The whole of the work has been carried out by Diggins and Strong, Coventry, from plans by E. J. Purnell, jun., Coventry.

DUMFRIES.—At a meeting of Dumfries School Board, on Tuesday last, it was resolved to proceed with the erection of the new Academy, according to the plans prepared by Mr. F. Carruthers. The following estimates were accepted:—Mason—Messrs. Houston and Robson, Dumfries, £6,226 5s. 8d.; Joiner—Mr. McLauchlan, Dumfries, £3,165 7s. 7d.; Plasterer—£651 3s. 8d.; Slater—Mr. Milligan Annan, £246 7s. 8d.; Plumber—Messrs. Drummond, Dumfries, £686 19s. 10½d.; Painter, Mr. Haining, Dumfries, £416 14s. 10d.; Tile—Messrs. Keand and Wardrop, Glasgow, £335 12s. 6d. The cost will be about £13,575.

GILFACH-GOCH.—A new Hotel was started at Gilfach-goch last week. It is to be built with local stone, with Ruabon brick and Bath stone dressings. Messrs. Griffiths & Jones, Pontypridd and Tonypany, are the Architects, and Mr. Elias Thomas, Tonyrefail, and the Llantrissant Steam Joinery Company are the Contractors.

GLASGOW.—The time for lodging tenders for the mason, brick, iron, carpenter, joiner, glazier, slater, plumber, plaster, and iron work required in the completion of the Art Galleries being erected in Kelvingrove Park by the Association, for the Promotion of Art and Music in Glasgow expired on Thursday last. The tenders were

received by Mr. Allen F. Baird, the hon. secretary of the Association, and the Building Committee will meet in the course of a few days to consider the various offers.

ILFRACOMBE.—Plans for ten Villas on the Chambercombe Park Estate, Ilfracombe, have been prepared by Mr. H. W. Weir, Architect, of Ilfracombe, for Mr. H. Braund. So great is the demand for houses on this Estate that, in many cases, the agreement for tenancy is signed before the foundations are in, the houses being taken from the plans.

ILFRACOMBE.—The alterations and general restoration of Christ Church, Ilfracombe, is just completed. The Church, which is Romanesque in design, has had a new timber ceiling, windows, fresh seating, &c. The whole of the restoration has been carried out according to plans and specification, and under the superintendence of Mr. H. W. Weir, Architect, Ilfracombe.

KINGSBURY.—The Kingsbury School Board proposes to build a new Main School and one extra Class Room at Hurley (this being one of the three Schools under its control). The old building has been condemned by Her Majesty's inspectors. Messrs. T. W. F. Newton and Cheater, of Birmingham and Tamworth, have already made plans which have been approved by the Board and also by the Education Department, and tenders were to be in by the 19th. The style is a free rendering of the Georgian period, with red brick stone dressings, and red tiles, and the new accommodation will provide for about 200 children, exclusive of a present Class Room, which will still be used, with accommodation for 75 infants. The Clerk to the Board is Mr. H. S. Martin.

LANCHESTER.—The Guardians, at their fortnightly meeting on Thursday, decided to build a new Infirmary at a cost of £5,000, and to borrow the money required for a period of 25 years.

LISCARD.—A new Church is being erected on the site of the original iron building in Martin's Lane, Liscard, and known as Christ Church. The building, when completed, will cost about £3,000. The new Church will accommodate 500 persons, the contractors for the works being Messrs. W. H. Bleakley and Co., Birkenhead; while Mr. T. Barry, of Liverpool, is the Architect.

LIVERPOOL.—From the designs of the water Engineer, new buildings have been erected by Mr. E. Gabbutt, Contractor, Liverpool, to be used as Corporation Workshops. They are bounded on the south-west by Pall Mall, on the north by Leeds Street, and on the north-east by Highfield Street, and have a frontage to Pall Mall of about 100 yards. Generally the buildings are of grey and red pressed bricks with terra cotta dressings. The principal entrance, which faces the Lancashire and Yorkshire Railway Line, is under a bold stone Archway, and protected by ornamental iron gates, surmounted with a liver. The two-storied block to the north of the Entrance Gate includes the Storekeeper's Rooms, where are kept all the miscellaneous stores and articles required in a large system of waterworks. At the side of the archway near to the Entrance Gate, there is a Watchman and Timekeeper's Room, and adjoining this are the Meter Office and Superintendent's Office. On the upper floor there is also provided a Standard Sample Room. To the left of the depot for stores, and with a separate entrance are the Stables, Coach-house and Harness-room, and above these a Residence for an assistant storekeeper. To the right of the main entrance is the office for testing water fittings. The principal room is 57ft. long and 37ft. wide, and has a separate entrance from Pall Mall. At the rear of the block facing Pall Mall, the Workshops are situated. These consist of a Mechanic and Fitters' Shop 6ft. by 33ft., Machine Shop 45ft. by 33ft., a Smithy, and a Shop for testing water meters, also a Joiner and Pattern-maker's Shop. The Workshops and Offices are heated by a hot water system erected by Messrs. Killick & Cochran, Liverpool.

LONDON.—On Tuesday afternoon Princess Louise performed the ceremony of laying the Foundation Stone of a new Technical Institute in Lancaster Road, North Kensington. The new building will adjoin the Free Library of the parish, and the site alone has cost £2,526. Towards the sum required for the building and furniture the Campden Trustees have given £5,000. When the Institute is completed, classes in wood work, wood carving, drawing, &c., which at present meet at different places in the district, will find a home in the Institute. The drawings show a handsome building of red brick with stone dressings. There will be two floors, the lower one for boys and the upper for girls. The building is being erected by Messrs. Holloway from plans drawn by Mr. Roland Plumble, F.R.I.B.A.

LINCOLN.—The new Font lately presented to St. Nicholas Church, Lincoln, has been designed by Mr. Loftus Brock, and is in the thirteenth century style, with octagonal bowl, which is richly carved, and supported by four Doric marble columns. The carving has been executed by Messrs. M. Tuttell & Son, Sculptors, Lincoln.

MILLBROOK.—For the new Board Schools in course of erection, at a cost of £10,000, Mr. A. F. Gutteridge, of Southampton, is the Architect, Mr. A. F. Cawte, of the same town, the Contractor, and the fittings are being supplied by Messrs. Illingworth, Ingham and Co.

NEWLYN.—Mr. Gregory Jones's Fresco over the Chancel Arch of the "Church of the Painters" at Newlyn, has been so generally approved that he has been commissioned by the Rev. R. Peel Yates to decorate the walls of the Church in a similar manner. His success is the more creditable as it might well be imagined that the criticism of an Artistic Colony would be more than usually exacting.

NEWMILUS.—Mr. Wm. Morton, of Birmingham, is about to erect a Hall in memory of his brother, and plans for same are in course of preparation by Mr. Arthur Harrison, of Colmore Row, Birmingham. The Hall will be erected at Newmilus.

NOTTINGHAM.—To-day the foundation stone of the new permanent Church of St. Catherine, Nottingham, is to be laid by the Duke of Newcastle, the Lord Bishop of Derby having consented to conduct the service. The new Church is being built to the plans of Mr. R. Clarke, Architect, of Nottingham, and will be a handsome edifice of Bulwell stone, in the Early Decorated style.

PADDINGTON.—The Church of All Saints, Norfolk Square, Paddington, which was burnt down in June of last year, has been rebuilt from designs by Mr. Ralph Nevill, of Chancery Lane, and will be consecrated by the Bishop of London on All Saints' Day.

PENZANCE.—A new Organ has recently been erected in Sennen Church, Penzance. The Organ is a two-manual one, built by Messrs. Gray & Davison, London; and rebuilt and enlarged by Messrs. Pearse & Co., London.

PENZANCE.—For the new Sea Wall on the Western Promenade, the tender of Mr. Arthur Carkeek, Redruth, was accepted by the Town Council at a meeting held on the 15th inst., at the sum of £9,866. The Surveyor's estimate was £10,830, including costs of the enquiry and railings. The following tenders were sent in:—John Shaddock, Plymouth, £13,500; Shillabeer, Plymouth, £10,200; Messrs. J. C. & T. A. Lang, Liskeard, £10,600; W. H. Stevens, Penzance, £11,075. A Clerk of the Works is to be advertised for.

RHONDDA VALLEY.—A new Unitarian Chapel has been commenced at Clydach Vale, Rhondda Valley. It is to be faced with local stone, with Cattybrook red brick dressings. The plans were prepared by Messrs. Griffiths & Jones, Architects, of Pontypridd and Tonypany, and the work is being carried out under their superintendence.

ROTHERHAM.—The religious denomination known as "Spiritualists" has opened a place of worship at Parkgate. The "Temple," as it is called, is situate in Ashwood Road, and its seating accommodation is for 250 persons. The total cost is put down at £500.

ROTHESAY.—At a meeting of the Bute County Council, Mr. William Dunlop Brown, Glasgow, was appointed Sanitary Inspector for the County, and District Sanitary Inspector for Bute and Cumbrae.

SALISBURY.—The reported unsafety of Salisbury Cathedral Spire has caused widespread consternation among Antiquarians, Architects, and Churchmen. Sir Arthur Blomfield was immediately taken into council, and, after a careful examination, reported to the Dean and Chapter that, though no immediate danger was to be apprehended, serious mischief had occurred and must be remedied without delay. His report will be published, and no time is to be lost in appealing for funds to obviate all possibility of a catastrophe.

SHEFFIELD.—The Sheffield School of Art has again been awarded a gold medal, also a silver medal and six bronze medals, in the National Competition. The gold medal is taken by J. R. Duffield, for historic studies in Design on articles in the precious metals. The silver medal is gained by Percy John Roberts, for Modelled Design as applied to the baser metals.

SWANSEA.—A Hall, to seat about 500 persons, and extensive Club premises are being erected at Curnburla, Swansea, in connection with the Friendly Societies of the district, the Architects being Messrs. Wilson & Moxham, of Swansea.

TIVERTON.—The Joint Isolation Hospital Committee of the Tiverton Town Council and the Rural District Council have adopted a scheme formulated by Mr. J. Siddalls, C.E., Borough Surveyor, and have selected a site about three acres in extent, two miles from the town, upon which boring operations have just been carried out under the direction of the Architect, for the purpose of ascertaining the presence of water on the site. The bore has been sunk by Messrs. Shepherd & Sons, of Exeter, to a depth of 150 ft. and a depth of 50 ft. of water has been found. Continuous pumping for 48 hours for the purpose of testing the capacity of the borehole has been carried on, without lowering the water-level. The scheme is now to be pushed forward at once.

WARWICK.—The Local Government Board has given its consent to the raising of a loan of £1,556, for the cost of works at the Police Courts and Barracks at Aston; and has also consented to the raising of a loan of £1,336 for the erection of a new Police Station at Erdington.

WHITBY.—On Wednesday last was consecrated the new Church of St. Mary, at Goathland, near Whitby. The Church has been built in place of the old one, which had become dilapidated and too small for the requirements of the district. The new Church is a handsome structure, and is built in the Late Decorative style, treated in a simple and broad manner. The total cost is about £2,000.

WOKING.—Messrs. Taylor, Sons & Santo Crimp, of Westminster, have been commissioned by the Woking Urban District Council to design a scheme which is to include the drainage of all except the most rural parts of the district.

The South Hetton Coal Company, Limited, has through its agent, Mr. W. O. Wood, expressed their intention of erecting a new Miners' Institute at South Hetton, in place of the present inconvenient room used for the purpose, and which has long been too small for the largely increased requirements. The offer of the new building, which is to cost over £1,000, was accompanied by one condition: that the miners should provide the necessary money to furnish the interior.

OUR BOOKSHELF.

"The Reliquary and Illustrated Archæologist." A Quarterly Review.

Messrs. Bemrose and Sons, of 23, Old Bailey, send us the July issue of this Review, published at half-a-crown. The work is extremely well printed, and we appreciate good printing, for it is one of the finest of the mechanical Arts. The number, which is the third published—the two previous issues we should much like to possess—deals with the Roman Thermæ of Fiesole, of which discovery very little information, up to the present, has been published. It appears that the first fragments came to view in a field beyond the Theatre, where, in 1892, some workmen were repairing the Etruscan wall, which had given way. They found two ancient brick furnaces, with some bits of Roman stone wall, and some interesting fragments, such as a base of white marble, trapezoidal in form, on which were the remains of a statue of Hercules. The feet were intact, the lion and cub lay in fragments near it. There was also found a very large sheet of lead, weighing 560 kilos (about 1,236 lbs. avoirdupois) with a pipe in it, evidently part of the lining of a large cistern. Near this was a metal bucket with two movable handles, and the earth was full of fragments of all kinds of antique marbles. Several excellent photographs of the remains illustrate Mr. Leader Scott's article.

"The Anatomy of Pattern." By Lewis F. Day. (London: Batsford, 94, High Holborn.)

This is the fourth edition of a very excellent text-book, and Mr. Day strikes the correct note when he assumes no particular knowledge on the part of the student, but only that he is a student, who wants to know something, and that what he wants to know is "what I would have liked someone to tell me when I was a beginner." There is an enormous amount of information on the technicalities of Design in the book, and after a very careful study of it, it seems remarkably easy to produce something startlingly beautiful. But Mr. Day does not tell us everything—the facility of producing well balanced design, appropriateness of pattern—although upon this head he devotes a whole chapter—and many other virtues of good work which are something more than mere trickery of the pencil. These things are actually inexplicable, and it is well that they should be, or the World would be flooded more than it already is, by design of a very low quality. Some of the "patterns" shown in this work, are designs of the very highest merit, and it has often passed our understanding why Mr. Day allows so much of his charming work to be produced in colours which, to our mind, are fearful to look upon. "The Anatomy of Pattern" is the perfection of a text book. It is concisely, distinctly, and definitely written; and although it has no appearance of being a pretentious work, its 55 pages are full of sterling information which no real student should fail to possess.

"Year Book of the Scientific and Learned Societies of Great Britain and Ireland." Twelfth Annual Issue. (London: Charles Griffin & Company, Exeter Street, Strand.)

The work is a mass of information relating to all the Societies engaged in fourteen departments of Research, with the lists of the papers read during the past year, and the names of their Authors. It is one of the most useful of the Year Books published.

"Bungalows and Country Residences." A Series of Designs and Examples of Recently Executed Works. By R. A. Briggs, Architect. (London: B. T. Batsford, 94, High Holborn, W.C.)

The third edition of a collection of views and plans of Country Houses, designed by Mr. R. A. Briggs, with a description of the plates and an estimated cost of each design. Mr. Briggs eschews style and all attempt at individualism. He does not fetter his work with any limitable intentions, and so he gives us a conglomeration of designs which, taken singly, are in many instances striking, and in some instances really good, as for instance, the Bungalow design shewn in plate XI., which is, distinctly simple. Mr.

Briggs' executed work is far above much that is shewn in this collection of sketches. Mr. Briggs, in his preface, thanks his friends and clients who contributed to the success of his previous editions—"a success which is rarely reached in the publication of Architectural works." We will but hope that if another edition of this "Architectural Work" be ever called for, its Author will allow us to compile it, under the guarantee to produce illustrations of his own executed work far in advance of much that appears in the present book.

SOCIETY MEETINGS.

Northern Architectural Association.—The annual excursion took place on Saturday. Members assembled at the Central Station, Newcastle, and travelled to Chollerford, where the new buildings at Chesters, carried out for Mr. Clayton, were visited. The remains of the Roman Station of Cilurnam in the Park, at Chesters, were inspected, and explained by Mr. Robert Blair.

Sheffield Society of Architects and Surveyors.—In presenting the eighth annual report the Council congratulates the members on the satisfactory condition of the Society. Financially, a considerable portion of the subscriptions which were in arrear at the commencement of the year has been collected, and the balance in hand very materially improved; and numerically there has been an accession of members and an increased attendance. At the request of the last annual meeting, the careful consideration of the Council has been given to the question of renting a room for the Society's operations, but the subject was postponed on the report of the treasurer, that he had closely looked into the accounts and found that the margin between the income and the expenditure was not sufficient to warrant the undertaking. As the prizes presented by the Society are usually in books, it was thought advisable to have an inscription plate for the books, and the Treasurer, Mr. F. Fowler, F.S.I., offered a prize of a guinea for the best design, and Mr. R. W. Fowler, F.S.I., offered a second prize of half-a-guinea. Several designs were submitted, and the first and second prizes were awarded by the Council respectively to Mr. F. Wilson (student) and Mr. L. D. Hemsol, (student); the former design is now being engraved. The lecture list for next winter is in a promising state, Dr. H. C. Sorby, F.R.S., Mr. Paul Waterhouse, M.A., F.R.I.B.A., Mr. Hugh Stannus, F.R.I.B.A., Mr. Percy Fitzgerald, M.A., F.S.A., and Mr. T. Winder, Assoc.M.Inst.C.E., are expected to render useful service; and the Sketching Classes and a Surveying Class for the summer, and the History Class and the Class of Design for the winter, will make up an acceptable programme for the year.

Royal Archæological Institute of Great Britain and Ireland.—The annual meetings of the Royal Archæological Institute of Great Britain and Ireland were held at Scarborough last week under the presidency of Viscount Dillon. The Archbishop of York read a paper dealing with "The Advantages Accruing from a Study of the Science," and St. Mary's Parish Church (confirmed to the Cistercians in the year 1238) and the Castle (1236—Norman keep and later works) was inspected, amongst other places of interest.

At a recent meeting the Crediton Rural District Council accepted the tender of Mr. W. Berry, for repairing Diddy Mill Bridge at £33. Several places were reported as unsanitary at Bow, and notices were ordered to be issued. The Surveyor reported the footpaths at Sandford to be in a bad state, and inquiries are to be made as to who is liable for their repair. Several Bridges reported by the Surveyor as being considerably washed were ordered to be repaired.

The result of the appeal that has been made to the City companies, and the merchants and bankers of the City to combine in subscribing towards the purchase of the celebrated Holbein picture, at Barbers' Hall, has proved very disappointing. Less than £1,000 has been subscribed, which is a ridiculous sum, seeing that £15,000 is asked for.

The Builders' Journal COMPETITIONS.

No. 5.—A Cottage Hospital.

Designs are required for a Cottage Hospital on a Corner Site in a County Town. Provision must be made for twelve beds (six women and six men), with Matron's and Superintendent's Apartments, Convalescent Room, and all necessary domestic and sanitary accommodation. A sum of three thousand pounds may be expended on the building and terrace. Designs to reach the Editor not later than Monday, August 26th, 1895.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Publishing.

The terms for free post Subscription to any part of the United Kingdom are SIX SHILLINGS AND SIXPENCE per annum by half-yearly or annual prepayments.

Advertising.

SITUATIONS WANTED, SITUATIONS VACANT, PARTNERSHIPS, APPRENTICESHIPS.

Per line, Sixpence. Minimum charge, Eightpence. Three Insertions for the price of Two.

Prepayment in the above Advertisements is absolutely necessary.

Page or Paragraph Announcements, Trade Advertisements.

Prices on application.

Small Advertisements for current week's issue are received up to first post Monday morning inclusive.

Editorial and Publishing Offices:

Talbot House, Arundel Street,
Strand, W.C.

THE American excavations in Crete have been so far crowned with success. They have led to the discovery of a large Byzantine Church, the stones of which have been taken from much older buildings, some of them bearing Archaic inscriptions. Amongst them is the text of a treaty between the towns of Gortyna and Rhizema. There is also an agreement in Archaic dialect relating to the building of houses and the planting of trees, and a decree relative to the importation of bronze coins into Gortyna. There is also a rich find of inscriptions of later times, Macedonian and Roman.

"DOLCOATH," one of the greatest tin mines in the World, is about to change ownership. Until recently, it was worked on the "costbook" method, but is now to become a limited company. It has, in times of high price, been known to pay over one hundred per cent. in a year; and it is one of the oldest of the existing mines in Cornwall.

COUNCILLOR E. PARKES, M.P., will lay the Foundation Stone of the new Meat Market and Slaughterhouses, in Bradford Street, Birmingham, tomorrow.

SAWDUST.

THE premises of the General Electric Company, Limited, in Chapel Street, Salford, have been completely destroyed by fire. The damage is estimated at about £30,000.

THE fine Observatory at Montrouge, Paris, is to be pulled down and a similar building reconstructed outside the fortifications at Meudon, the large space of ground occupied by the existing building being wanted for the prolongation of the Boulevard St. Michel.

THE Foundation Stone of the new Free and Parochial Schools attached to the Parish of St. John-at-Hackney, which were founded in 1714, and which, owing to the demands of the Education Department, it has recently been found necessary to extend, at an estimated cost of £7,700, was laid by Princess Henry of Battenberg on Tuesday last.

AN effort is being made to reinstate the famous Church Bells of Ashbourne to their former high condition. It was with respect to Ashbourne Church that Tom Moore's well-known poem, "Those Evening Bells," was written. A sum of about £400 will be required.

THE picturesque island of Eigg, Inverness-shire, at one time the property of Professor Norman Macpherson, has been purchased by Lieutenant A. Robertson-Stark.

DURING a severe storm which passed over Sandusky, Ohio, the other day, a number of very large trees were blown over, among them one that has quite a history. It was a sycamore, and regarded, not only as one of the largest this side of the Mississippi river, but it is noted for the reason that the Indians hollowed it out, and constructed inside an apartment large enough for two dozen people.

THE Haslingden Town Council has adopted plans and estimates for a new Fire Station, to cost £1,700.

THE rebuilding of Mar Lodge will cost the Duke of Fife a considerable sum over and above the insurance money he has received. The old house was not fully insured, the policy on the building being, we understand, for £12,000 only. The new Mar Lodge will be an important structure of brick and stone. The plans have already been drawn out and approved, and building operations will begin at once. It is possible that the Queen may lay the Foundation Stone during her autumn residence in the Highlands. She has had a hand in completing the design, and it was at her suggestion that a fresh site has been chosen. The old home commanded a fine view, but the outlook from the new one will be superior.

IT is proposed by the Methodist Free Churches to build and endow a College. Mr. Alderman Duckworth, of Rochdale, reported at the Assembly on Wednesday that he hoped by next Assembly to complete his scheme for raising the £20,000 necessary for this purpose. He has promises of £15,000, and £5,000 in cash.

ON Tuesday afternoon a deputation from the Douglas School Board waited upon the Isle of Man Board of Education, and obtained the Board's sanction for the purchase of a site in North Douglas, at a cost of £2,000, for the purpose of erecting a new Board School for the accommodation of about 1,000 children.

AN electric Fire-alarm now being introduced in Switzerland acts automatically through the expansion of a metallic rod under heat. This makes an electric connection, and it is said that the alarm is so sensitive that it is put in operation by holding a lighted match near it.

A MONUMENT is to be erected to the memory of the late Professor Von Helmholtz. In order to effect this object, an international and representative Committee of 180 well-known Scientists has just been formed. The Emperor of Germany has promised 10,000 marks and a free site for the purpose.

THE Corporation of Norwich purposes spending about £200,000 on a system for preventing the pollution of the River Yare by the sewage of Norwich.

THE Yorkshire Union of Artists has opened its eighth annual Exhibition of Pictures in the West Cliff Saloon, Whitby, this being the second year in succession in which the Society has held its Exhibition there. The number of works exhibited is larger than usual, there being fifty more than last year, while it is conceded that the quality of the work is above the average.

Trade and Commerce.

The Joiners' Strike at Rotherham.—

The strike of joiners and carpenters in the Rotherham district has been settled, and work has been resumed after a ten weeks' stoppage. The men asked for the adoption of new working rules and for an advance of wages. For some time after the cessation of employment masters and men held aloof, and there seemed to be little disposition to discuss the questions at issue. An amicable understanding with regard to the rules, &c., has been arrived at, but no advance is made in the wages.

The Liberator Building Society.—

THE WEST WORTHING ESTATE.—Mr. Douglas Young, auctioneer, of London, conducted a sale by auction on Thursday last in a marquee on the estate, when almost the whole of the lots submitted, comprising 100 freehold plots of land, 6 houses, 2 shops, and the West Worthing Club house, were sold, the total of the sale amounting to £16,600. A special fast train from London conveyed a large party of buyers to Worthing. The luncheon was presided over by Mr. Alderman Piper, of Worthing, who made a most encouraging statement as to the active measures taken by the Worthing Corporation in the matter of drainage and water supply to render the town one of the healthiest in England. That this fact was realised by the company present soon showed itself by the spirited bidding for the various lots submitted. Although the reserves were considerably exceeded, the buyers appeared well satisfied with their purchases, and in many cases good bargains were obtained. The remaining portion of the estate, which will be sold in the course of next month, consists of freehold villa plots fronting the Grand Avenue, a thoroughfare 80 feet wide, extending from the station to the sea.

VICKERS' Ink.—This ink is delightfully fluid and fluent; it is a pleasure to use it. Mr. George Vickers (of Angel Court, 172, Strand), sent us a sample on a day when the editorial pen nibs had their digestion disordered, they refused to assimilate ordinary food. The effect of a change of diet was simply marvellous, new ideas graciously came to hand and set themselves down without hesitation. We shall, therefore, continue to use this ink for obvious reasons.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

ABERGAVENNY.—For the erection of drill-hall, Abergavenny, for H and I companies 4th Battalion S. Wales Borderers. Mr. E. A. Johnson, architect, Abergavenny. Quantities by architect:—

Thomas, J. G., Abergavenny*	£1,200	0	0
* Accepted conditionally.			

ABERGAVENNY.—Accepted for the erection of a pair of semi-detached villa residences, Abergavenny, for Mr. G. W. Shackleton. Mr. E. A. Johnson, architect:—

Henry Smith, Wclverley, Kidderminster	£1,180	0	0
---------------------------------------	--------	---	---

AYLESBURY.—For additions to Baptist Chapel, Walton-street. Mr. F. Taylor, architect, Aylesbury:—

Sherwin, W. H.	£1,170	0	0
Gibson, G. H.	1,090	0	0
Grimsdale, H. T.	1,035	0	0
Slasey, W. H.	945	0	0
Wallis and Sons, Chesham (accepted)	827	0	0

BRANKSOME (DORSET).—For making up roads, &c., Princess-road and Eagle-road, for the Urban District Council. Mr. S. J. Newman, Surveyor, Council Offices, Branksome:—

The Admiralty Offices.

IN the initial issue of THE BUILDERS' JOURNAL, a couple of geometrical drawings were given of the new Admiralty Offices in St. James's Park. At that time the buildings were far from complete, and no judgment whatever could be formed as to how the drawings were working out in execution. A morning contemporary, noted for its utter ignorance on Art matters—particularly Architectural—notifies the completion of the block, and believes "it will probably be very generally allowed that externally it is, upon the whole, a very satisfactory addition to the official edifices of London, while, as regards the interior, it is in all the requirements of lightness, healthiness, comfort, and real utility, superior to anything yet erected in London." About its lightness, healthiness, comfort, and real utility, we shall be able to speak when we have an opportunity to survey its internal arrangements, but of its external appearance it may be said at once that a more trite and commonplace design has never been made for a great national building for many years. How far this has been influenced by officialdom and financial meanness we do not know; but we do know that if this is the kind of Architecture that the Capital of England indulges in for its great public works, it is time some really competent authority should be placed at the head of the department of State that controls such things. It is totally insufficient that buildings of this nature should be "admirably adapted to their purpose," as the *Daily News* puts it. Public buildings of a great country have a higher motive than a mere adaptability to the duties of a handful of the community. They should teach a lesson even to the poorest-minded creatures walking in their shadows; a lesson in ambition, a lesson in nobleness, a lesson in respect. Public buildings are milestones

in the history of a country. They should be the finest of their kind, the best that money can procure, the living Art of the moment. They should not become the catspaw of a democratic Chancellor of the Exchequer, who finds in a nice plain building, "admirably adapted to its purpose," an easy way through the polling booths at the next General Election. We have in the Capital of this great Empire many extraordinary public buildings, a conglomerous mass of everything that Architecture is not. Shining out from that mass is Barry's wonderful Palace of Westminster, England's noblest work for centuries, and Norman Shaw's new Scotland Yard, a building yet to be under-

Should Westminster Abbey be added to?

THE attitude of the new Government with regard to the Westminster Improvement and the vexed question of adding to the Abbey is likely, we hear, to be in great measure the attitude of its predecessor. For this little bit of continuity of policy we are honestly thankful. Government policy in Architecture has always been fearfully and wonderfully made, but by-and-bye an orator may be born who will rouse the country to enthusiasm in the Art of Building by means of a "purely Constructive Policy," to adopt one of the catch phrases of both parties. For the present we are quite sure that

orator remains to be born. However, we understand upon authority that the change of Government will make little or no difference to the policy of the Office of Works, in regard, especially, to the recommendations of the Royal Commission on Westminster Abbey. Mr. Akers Douglas, the new First Commissioner, is at one with his predecessor, Mr. Herbert Gladstone, as to the advisability of taking the vote of the Commons before deciding upon the best site for the proposed Monumental Chapel. Therefore the offer

HOUSE AT OXTED: THE ENTRANCE FRONT: R. A. BRIGGS, ARCHITECT.

stood. If with these we include Street's masterpiece in the Strand, forgetting its west elevation, and the great want of cohesion in the whole design, only remembering its beautiful Great Hall and the fine detail of the whole work, we have actually nothing left but Architecture at its lowest, and the lowest of the lot is either Sir Gilbert Scott's monstrosity on one side of the Horse Guards' Parade, or Messrs. Leeming & Leeming's Admiralty Offices on the other. Which is actually the worst, we have no inclination to discover. "Real utility" upon "the whole" are so eminently the mere jingle of phrases that one wonders how a daily contemporary can print such stuff as criticism.

of £38,000, for the erection of this building which was made by Mr. Yates Thompson, still awaits acceptance or refusal. The old controversy as to whether a private donor should be allowed to immortalise himself at the expense, so to speak, of the venerable Abbey, will face the new Commons, together with the alternative sites upon which the Royal Commission split. The late First Commissioner completed the negotiations for acquiring the houses in Old Palace Yard, the removal of which was unanimously recommended on the ground that they not only conceal to a great extent the Architecture of Henry the Seventh's Chapel and the ancient Chapter House, but are also a constant

source of danger to the Abbey by fire. The vote in the Civil Service Estimates, in which provision is made for the purchase money and costs, was passed before the dissolution, so that there is nothing to hinder the authorities from beginning the work of demolition whenever they feel disposed. Mr. Herbert Gladstone's idea was to postpone operations until the autumn and winter months, when men engaged in the Building Trades are most in need of employment, and we understand that Mr. Akers-Douglas concurs in the suggestion. With regard to Mr. Yates Thompson's offer, the gift was conditional upon the adoption of the Old Palace Yard site. We think the late Government acted wisely in deferring a decision. One half of the Royal Commission were in favour of the Old Palace Yard site, but the other half—including Mr. Plunket (the First Commissioner of Works in the last Conservative Administration), Mr. Alfred Waterhouse and the late Mr. L. J. Jennings—preferred what is known as the Refectory site. In face of so marked a divergence of opinion, it would have been presumptuous of Mr. Shaw-Lefevre, who was First Commissioner when Mr. Thompson's letter was written, to assume the responsibility of determining the question. This view of the matter was the more convincing seeing that Mr. Shaw-Lefevre was himself strongly wedded to Mr. Pearson's scheme of utilising the area about to be cleared in Palace Yard. One of the arguments adduced in favour of Mr. Pearson's proposal was that the Side Aisles and Chapel, which would be the lowest part of the new building, would not come within 50 feet of the corner of the existing houses. Mr. Plunket and the other advocates of the Refectory site contend, however, that the erection of any structure calculated to conceal the Architecture of Henry VII.'s Chapel and the ancient Chapter House is objectionable. We are not quite reconciled to the idea of adding to the Abbey at all. It seems to us a dangerous thing, granting what skill and discretion you please, to tamper with either the symmetry or the sanctity of Westminster Abbey, and it is a moot point whether the proposed Chapel will not do both. However, no doubt the Commons will "thresh out" the question in their way. Only, as a matter of detail, the average member really knows little about Architecture, and cares less. A committee of experts had much better endeavour to agree.

A "CONDEMNED AREA" IN SHEFFIELD.

Two years ago the City Council took in hand the improvement scheme for dealing with the insanitary area in the Crofts. Most of the property has now been acquired, and the practical carrying out of the scheme, which involves the demolition of a large number of houses occupied by the working classes, cannot be much longer delayed. The difficult question arises, how best to deal with the displaced population. Various suggestions have been made, one being that the Corporation should build workmen's houses, and let them at rents which might possibly not bring in income sufficient to pay the interest on the outlay. A member of the Town Trust is anxious that the Trust should take over the whole or a part of the condemned area, level the houses thereon, and build new ones; or if the Council preferred to carry out the scheme, that a purchase should be made after the area had been cleared. The matter has not been fully discussed by the Trustees, but in view of the limited funds at their disposal it is hardly likely that a scheme of such proportions and involving such large financial responsibility would be undertaken by them. It is interesting to mention that at the June meeting of the City Council in 1893 a resolution was carried on the motion of Mr. Stuart Uttley, seconded by Mr. Llewellyn, instructing the Health Committee "that in any scheme which they may make for the improvement of any unhealthy area or

areas they shall appropriate a certain part of it as a site for the erection of dwellings for the working classes." It would, therefore, seem as if the Council had already committed itself to the policy of erecting working-class dwellings.

CARLYLE'S HOUSE AT CHELSEA.

INTERESTING RELICS AND MEMORIALS.

THOMAS CARLYLE'S dwelling house at Chelsea, which was opened to the general public on Friday, is a well-built specimen of late 17th century Architecture, three storeys high. The gathering at the private view was modest, and it will not be until the actual centenary of Carlyle's birth (December 4th) that any representative celebration will be attempted. The Committee have succeeded in gathering together a very fair collection of personal relics, which, so far as possible, have been placed in the positions they occupied when Carlyle died. At present the rooms increase in interest, the higher one gets up. On the ground floor are two small rooms containing an old bookcase, black with age, and two tables and chairs, but nothing otherwise notable. The Drawing Room on the first floor contains similar furniture, plain almost to severity. Over the mantelpiece is a picture of he rugged old man on horseback, and on another wall there is a coloured sketch representing him in the evening of life, not long before he died. Another large, black bookcase covers one side of the room, and this is filled with well-thumbed, tattered volumes in German and English, ancient copies of Shakspeare, faded and yellow, and several homely volumes of Bohn occupying conspicuous places. But this room has another interest. Within it took place those brilliant gatherings of English men of letters which, for a whole generation, made the modest life abode of Thomas Carlyle the most famous and memorable in the land. Dickens was here, and Browning, and Forster, and Tennyson, and Leigh Hunt, the foppish French Count d'Orsay, swift-witted Douglas Jerrold, Laman Blanchard, Edward Irving the preacher, and the famous painters Maclise and Stanfield. Leading directly from this room is Mrs. Carlyle's Bedchamber and Dressing Room, one of the walls being adorned with a portrait of her face, with its sweet expression and sad, regretful eyes. On the second floor is Carlyle's Bedroom and the "spare" room where Ralph Waldo Emerson slept during that memorable visit of his. Carlyle's bed was an old-fashioned four-poster, and here again the accompanying furniture is of almost Spartan plainness. His hip-bath stands in a sort of dressing-closet, and on the table is his old silk hat, venerable and battered and strange of shape. Carlyle had a leonine head, and this hat of his would slip over the entire face of most men. Carlyle occupied the Bedchamber from 1834, for 47 continuous years. The third and last storey is the most interesting in the house. Carlyle added this room in 1853 at a cost of £200, and made it, as he fervently hoped, proof against sound. "Frederick the Great" was written here. The walls are still covered with prints and portraits of that monarch, faded brownish maps, and a notable portrait group of the most famous German philosophers. A black hair-seated arm-chair is near the fireplace. On the completion of "Frederick" Mr. Carlyle gave up this room, as the noises from the street below penetrated as clearly here as anywhere else. In the winter of 1880 he vacated his old Bedroom also, and in 1881 lived mainly downstairs in the Drawing Room, there to die on February 5th of that year.

The report of the Committee which was formed to make the purchase of the dwelling shews that £2,033 has been collected to date, but of this there has been an expenditure for freehold and repairs of £1,844, leaving a balance of £189. There is, however, a further estimated liability of £245 outstanding, and no maintenance fund has been provided as yet.

At a meeting of the Glasgow Corporation last week it was decided that the price of gas be reduced 2d. per 1,000 cubic feet, being from 2s. 6d. to 2s. 4d., the latter being the lowest rate at which the illuminant has ever been supplied to Glasgow.

AN OLD GLASGOW ARCHITECT ON SOME OLDER ONES.

By THOMAS GILDARD,

HONORARY MEMBER OF THE GLASGOW ARCHITECTURAL ASSOCIATION.

II.

HUTCHESON'S Hospital School has, like the Union Bank, been so altered and added to that there is little of Mr. Hamilton's building to be seen. Originally, although not without some play of composition, it was comparatively plain, the Trustees being either unable or unwilling to expend much money, or thinking that plainness in even such an important School was enough for its situation.

A considerable time intervened between the building of the Wings of the Normal Seminary and the building of the centre part, with its square-columned Porch and Clock Turret. The Turret is well outlined, but I do not think that the connection of the later with the earlier work is, in some particulars, well managed—some of the leading features of the original not being carried along, whereby the composition is less integral than it might have been. I have little doubt that the cause of the Seminary not being erected all at once was the want of money, for Mr. Stow, the enlightened and zealous promoter, did not enjoy much public recognition of his doing the State some service. I have seen, as if Mr. Stow was the subject of Goldsmith's lines—

"Even children followed with endearing wile,
And pluck'd his gown to share the good man's smile."

It is not creditable to Glasgow that there is no public memorial of a man who was such an advanced pioneer in the reform of education.

St. Paul's Church in John Street is comparatively small, but perhaps few buildings by Hamilton are more characteristic of his manner.

A good example of Hamilton as a Tenement Architect is the Cleland Testimonial at the corner of Cathcart and Buchanan Streets.

Mr. Hamilton was essentially a Roman Architect, and such buildings as the Royal Exchange and Hamilton Palace place him in that style in the very foremost rank among modern Architects. They are of the best type of Roman—simple yet dignified in conception, powerful yet subservient in detail, and not overburdened or distracted by pompous and assertive ornament.

In Mr. Hamilton's time the Gothic revival had made little progress, and as his principal achievements had been in other styles, it is possible that he had little sympathy with it. Saint John's Church, off Gallowgate, is an example of his work in Gothic. Its detail is certainly not the most exemplary, but viewing it as Sir Walter Scott advised Melrose to be viewed, it is seen to be a composition of great dignity of proportion. Pictorially it is one of the grandest features in the civic scenery of the East End, and seen from the Fir Park, it is an impressive object in even the general picture of Glasgow.

Mr. Hamilton was more successful in the Jacobean style. Dunlop House, finished shortly before I began my apprenticeship, is in that style, and was one of his favourite mansions. An addition to an old house is what was originally intended, Sir John Dunlop having some sentimental regard for what had been the ancestral home, but the addition's claims and charms advanced with steps, perhaps slow, but sure, and at last took possession of the old home with the exception of one solitary chamber.

In the Houses of Parliament competition Mr. Hamilton was awarded the third premium. The style which he adopted was the Elizabethan or Jacobean.

In the Donaldson's Hospital competition Mr. Hamilton was one of three Architects selected, the others being Gillespie-Grahame and Playfair.

Mr. Playfair's design was chosen, and Mr. Hamilton's, I understand, received an honorarium of £300. Mr. Hamilton's elevation was Ionic, the arrangement of parts being somewhat similar to that of the principal façade of Hamilton Palace.

A somewhat exhaustive list of Mr. Hamilton's works will be found under the article "David Hamilton" in the "Architectural Publication Society's Dictionary."

The office hours were from nine till seven, the hour between four and five being the in-

terval for dinner. On Saturday the office closed at four. There was no gas in the office, and in the winter evenings we wrought by candle-light.

Two assistants of long before my time were James Gibson and John Thomson. The Hamilton family always spoke of James Gibson with affection for his kindly disposition, and with praise of his abilities. He died shortly after having begun business. John Thomson became Architect of the Tennant Town Residence in West George Street (in which is shown much of the manner of his matter), and of Elmbank Crescent, a range of buildings possessing many excellences well worthy of careful study.

The Hamiltons' method of get-up or finish of drawings was somewhat different from that presently in practice. Both father and son were exceptional colourists, as also had been an older son, William (who had been dead many years before the time I am speaking of). Hence, as much as from it being the custom of the period, all sketch elevations were highly coloured in India-ink, sepia, or in a brilliant style after the manner of the famous architectural painter, Roberts. The drawings were not merely washed over, but all the shadows were carefully projected. The effects were produced by repeated coats of transparent colour; even the plans and sections of "working-drawings" always received two coats. I remember there was over the mantelpiece an elaborate perspective, by William Hamilton, of an Italian court or quadrangle, in which the shadows were almost absolutely black, nevertheless, they were so transparent that the most delicate mouldings and ornaments beneath them were as visible, clear, and distinct as when the drawing-in pen had newly left them. The colouring of James Hamilton—who possessed remarkable abilities as an Architect and draughtsman, as well as colourist—was less laboured, more sketchy, than that of his father and older brother, and often showed much depth and brilliance. The writing on the sketches and working drawings was invariably in a peculiar small back slope, and done with a

sions, &c., and many of them of great beauty, by a misunderstanding, fell into the hands of an Architect of no great professional repute, and and now some years dead, and he ignominiously consigned them to an underground cellar, where they remained literally to rot.

The late John Mossman's father made a bust of David Hamilton; another, by Patric Park, is in the Corporation Galleries, alongside that of Glasgow's other great Architect, Alexander Thomson; and his portrait was painted by Saxon and Macnee. In the dining room there

was a fine portrait of the Duke of Hamilton who built the Palace, testifying to friendship no less than to professional association; and, I believe, that Mr. Hamilton was also familiarly known to the Earl of Eglinton. This grand old Architect knew how to deport himself in the society of dukes and earls.

A contemporary of Mr. Hamilton was Peter Nicholson, who is better known to us as the author of such standard books as "Treatise on Perspective and Isometrical Drawing," "The Architectural Dictionary," and "The Carpenter's Guide," than as a practising Architect. For Glasgow he designed Carlton Place, and in this, to transpire the line of the poet, we find his work inspired by what his precepts taught. I know one of the houses, that of Mr. Robb, banker. Its plan is unique, and the Dining Room and Library are remarkably fine rooms, the

Church, the Lunatic Asylum in Parliamentary Road (now offices of the City Parochial Board), and the late Hunterian Museum. The Jail was one of the earliest endeavours in this country to apply Greek Architecture to our commonplace circumstances, and although, of necessity, it has windows, they in nowise detract from the broad and severe treatment, proper alike to the style and to the purpose of the building. The Doric portico, with its deep recess, is not only of great dignity in itself, but is in aptest harmony with the general composition. Unfortunately, by repeated alterations on the street level, the building is now sunk from its original platform. I have heard it said that Stark would have liked the composition to have been a superstructure upon a low stylobate. The Steeple of St. George's Church, may, in beautiful and picturesque outline and fine play of light and shade, perhaps vie with even the best of Wren's. And yet there have been attempts, again and again, on one pretext or another, to have this beautiful Steeple and the Church removed, one being that they stood in the way of the public convenience, and another—adding insult to injury—that the valuable site might be occupied by a building for business. The traffic is not yet so great as to require

their removal, and the greater the traffic becomes, they will be of the greater advantage—it being diverted, that going west taking the one side and that east the other. There was a proposal at one time to convert the Church into Municipal Buildings. Mr. Low made a design in which he took down the Church, but retained the Steeple, piercing it on four sides, and utilising it as an alcove for a public statue or a fountain, or as a refuge from a shower, or a waiting-place. The Lunatic Asylum was at the time of its erection considered one of the best planned in Europe. For external effect, its plan is exceedingly happy, an octagon, with wings branching from four of its faces, and this octagon resolving itself into a circle crowned by an oviform Dome of great beauty of outline—the arrangement of octagon and wings affording opportunity for grand massive effects

THE FARM BUILDINGS, BICKLEY HALL: ERNEST NEWTON, ARCHITECT.

crowpen, not the steel imitation, but cut from the quill of the wing of the veritable *cornix*. Full-size detail drawings were always inked in and coloured.

It might be expected that David Hamilton left many interesting drawings, but a very large number, chiefly details, were burned when it was found that there was no room for them in the office, and a less honourable fate befel others that had been kept carefully in portfolios. These portfolios, containing drawings of the Great Queen Street Theatre, the Royal Exchange, Hamilton Palace, Churches, Man-

former decorated by sculptured panels on the walls. It is claimed for Nicholson "that he was the first who discovered that Greek mouldings were the section of a cone, and he defied any person to prove that he ever derived any information from foreign works."

Another contemporary of David Hamilton, was William Stark, of whom Sir Walter Scott said that "more genius died than is left behind among the collected universality of Scottish Architects." He has given to Glasgow four public buildings, of varied character, and all of the highest excellence—the Jail, St. George's

of light and shade. I can scarcely believe that the finial on the Dome was the work of Stark. It is both bad and out of place. Of course, the exigencies of the different purpose have necessitated great alterations on Stark's original design, and I hesitate to say whether they have all been made with judgment.

(To be continued.)

At Daniel Stewart's College, Ravelston, Edinburgh, a new Gymnasium and Recreation Hall was formally opened last week, at a cost of some £1,800.

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,
July 30th, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

It was rumoured a little while ago that the old Rolis Chapel, in Chancery Lane, was to be transformed into a Museum, and thus made the connecting link in the chain of buildings forming the old and new Record Offices. The necessary authority for stopping the services and generally preparing the way for the alteration had been granted, but even now the services are being continued, though the new Record Office, which faces Chancery Lane, is almost completed, and quite hides the ancient Chapel from public view. We hear, however, the services will be stopped next month, and that the Chapel will then be placed in the hands of the builders, who, while they have to retain as far as possible the historic portions of the building, have several alterations to make in order that the structure shall become perfectly proof against fire, for its walls will contain some of the most valuable documents that the nation possesses, including autograph letters of our leading statesmen, papal bulls of great antiquity, and, above all, Doomsday Book. The Chapel will be so enclosed by the outer walls of the new Record Office that it will be necessary to provide a top light, and this will necessitate several extensive alterations, while the Rolls House, formerly the residence of the Master of the Rolls, is to be swept away, in order to make room for the Wing of the new building.

THE Dean of Guild Court, Edinburgh, has just passed plans for altering one of the few remaining ancient buildings of the High Street. The tenement adjoins the Assembly Hall, and was purchased last year for the Church of Scotland. It is situated in a court known as Boswell's Court, so called from one Dr. Boswell who lived there about 1760. The house, however, is very much older than that, and even without any record of its history, it must have been in existence at least 100 years before. The front, to Castle Hill, is in polished ashlar, with numerous lofty and narrow windows, and still retains some fragments of the moulded string-courses and a goodly row of dormer gables, with finials of varied designs, now much weather-worn. The original doorway, which is also the door to an old-fashioned turret stair, remains with its mouldings fairly entire. Over it is the lintel, with a panel and inscription, which speaks plainly as to its age, "O Lord in the is mi traist," and some initials. The plans, now passed, will complete the improvement scheme of the Assembly Hall, originated and carried through so far successfully by the efforts of the Rev. Dr. Mair, of Earlston. In these alterations the Architects, Messrs. Hardy & Wight, have provided on the two lower floors ample accommodation much needed by the Assembly. The external aspect of the old building will be carefully preserved in all characteristic features, and the rough walls rough-casted and repaired.

WHATEVER happens to the County Council's Water Bills in the new Parliament one thing is certain: provision must be made for the future needs of Londoners. The Council is the only

authority which can introduce a new water supply, and the Water Committee has boldly let its designs be known. Like Liverpool and Birmingham it is proposed that London should go to Wales. The Council's engineer has fixed on the Wye district, and here magnificent watersheds have been surveyed, 312,400 acres in extent, capable of yielding a daily supply to London of 415,000,000 gallons, after allowing for compensation water. This water is more than the whole average flow of the Thames in summer. Considering the greatness of London and its magnificent possibilities, this scheme is relatively no larger than the new supplies of Manchester, Liverpool or Birmingham. The total cost is estimated at £38,800,000, but it would only be necessary to carry out part of the scheme at first—introducing an extra supply of 200,000,000 gallons daily.

At the National School of Fine Arts, Paris, the ten selected works for the Prix de Rome have been on view. This prize, which enables the holder to travel for three years, with all his expenses paid, is the most coveted distinction annually offered to the pupils. The competitors are winnowed out of a great many more, and it is considered a great honour in itself to be included in the ten. Extraordinary precautions are taken to secure the originality of the works submitted to the judgment of the Academicians. A student who has won the right to a *loge*, as each small studio in the fine building on the Quai Malaquais is called, has to prepare and submit a sketch in forty-eight hours, during which period he sleeps, eats, and works in solitary confinement, leading a hermit life in his cell. The drawing which he supplies to the examiners contains the merest suggestion of the elements of the future work, but it is sufficient to prove the identity of the crude conception with that of the finished painting, which has to be executed in seventy-two days. For better or worse the pupil once pledged to a particular form of treatment may not alter it, and to indicate that he has not done so the small rough pencil sketch is appended to the frame of the large canvas. This year the subject given to the competitors was "Christ at the Foot of the Cross, Mourned by the Marys." The ten paintings are typical of the several Schools of Art which are now being taught in this city, one or two being fantastic in the extreme; but according to the opinions expressed, the Grand Prize is destined to fall to Laurens, the son of Jean Paul Laurens, a well-known Artist, and a member of the adjudicating body. Laurens the younger is the only competitor who has portrayed Mary Magdalene as a woman still in the possession of physical beauty.

RESIDENTS in the Metropolis will find an article about themselves in the current number of the "Quarterly Review," which cannot be called complimentary in any sense. It is entitled "Londoners at Home," and its burden is that, as the Cockney seldom owns his house, he is in a bad condition, and "London, its gifts considered, is the least efficient and least influential aggregate of people on the globe." In matters of taste the working classes are, it seems, demoralised, and, what is still worse, the ethics of the trading classes appear to be no better, for it is stated seriously that "the aborigines of North Siberia are possibly superior to Londoners in that first element of commerce, common honesty." Perhaps the writer's climax is found in the assertion that "Londoners habitually live as leasehold tenants, or as lodgers only, not in territorial dignity as freeholders of their own homes. Not true to themselves, but eager for the property of others, people so submissive and demoralised could hardly be entrusted with the honour of their country or with its defence in case of war." Anything less like the London of to-day, the healthiest and largest city in the World, the most peaceful, one of the best-ordered, and pre-eminently the most public-spirited and Imperial-minded, we have never seen, and it is a surprise to find it, of all places in the World, in the "Quarterly."

It would almost seem that a panic had set in with regard to the condition of our English Cathedrals. It is now Salisbury's turn. Mr. E. H. Hulse, as member for Salisbury for

the past nine years, writes: "I am anxious to draw your attention to an appeal which is being made by the Dean and Chapter of Salisbury for the necessary funds to prevent the decay, and consequent destruction, of the most graceful of all our Cathedral Spires in England, and, perhaps, in Europe. It appears from the subjoined report of Sir Arthur Blomfield that a great deal of the external stonework is split, and it is imperatively necessary to render the angle turrets immediately secure. No mere repairs would suffice, but the work of restoration must be carried out to ensure the safety of this Architectural gem, which the Old World and the New World alike admire. The sum of £5,000 is required for the immediate preservation of the Tower, and already operations are in process around the north-west turret."

Here is Sir Arthur Blomfield's report:—"During the progress of certain minor repairs in the Central Tower it became evident that something was seriously amiss with the upper part of the two western stair turrets which required investigation. A scaffold was accordingly erected round the north-west turret, from which a close and careful examination has been made, with the result that its state proves to be even worse than was feared. A good deal of the external stonework is split and fractured, and is in so loose and unsafe a condition that no assurance can be given of security from some serious disaster which might at any time occur. Certain cracks which are observable internally, especially one in the base of the Spire at this angle, though they are certainly not altogether new, show indications of a slight recent movement which would inevitably become dangerously aggravated by any considerable fall of portions of the external stonework. It is difficult to determine with certainty the precise cause of the present state of things in these turrets, but various adverse agencies have no doubt been gradually at work for many years past. Of these the principal are, first the numerous iron bands, rods and ties which have been introduced from time to time, many of them in the most injudicious manner. An attempt has been made to protect some of them with lead from wet and consequent corrosion, but this has in many places altogether failed, and made matters worse rather than better. The next agents are wet and frost, which have gradually done much damage; and the third is to be found in the great thrust of the Spire, which is continually active. Nothing can be done to lessen or modify this element of danger, but it is imperative to render the angle turrets, which receive so much of it, as sound and strong as they can be made. For this purpose any attempt at small repairs or patching would not only be useless, but positively dangerous. The work that is called for by the necessities of the case is emphatically not one of restoration, but of repair, which is absolutely essential for safety, and which to be effectual must be complete and thorough. The greatest care, caution and skill will be necessary in dealing with the damaged portions of both these turrets. I should recommend the completion of the north-west turret first, to be followed immediately by the repair of the corresponding one on the south side."

THE new Church of St. James, at Handsworth, has now been completed and the consecration ceremony took place on Tuesday last. Mr. J. A. Chatwin, Architect, was asked to submit designs for a large extension of the existing edifice, or for a new Church in which the old Sanctuary was to be utilised. The original structure was an unattractive building with a huge Gallery, very deficient in ventilation, and generally condemned as being Ecclesiastically and Architecturally bad. Mr. Chatwin's proposal was to remove the old Gallery and add a new Nave, Chancel, South Aisle, Baptistery and Organ Chamber, at a cost of about £7,000, and, his designs being approved, the work was commenced about twelve months ago. The result is that a well-proportioned, commodious Church has taken the place of the unsightly and inconvenient building which had outlasted its generation. The old Church now forms the North Aisle, and the Chancel becomes a Morning Chapel. The contract was given to Messrs. Thomas Barnsley and Son.

THE maintenance and repair of the Houses of Parliament, internally and externally, present figures sufficiently startling at first glance. Building operations cost every year £13,765, the renewal of furniture £3,520, and the warming, ventilating, and lighting of the buildings £16,590. The system of warming and ventilating the Houses of Parliament is most elaborate. The air is pumped in from the River Thames, and sent through pipes packed with cotton wool to cleanse it; it then passes through heating chambers in winter, and through cooling chambers in summer, before it is distributed by fans through the building; £2,200 worth of coal is consumed every year in working the machinery of this system of ventilation. There is a resident engineer with a salary of £400, and a further sum of £5,000 is paid in wages in this department. The coals supplied to the apartments of the Lords cost £500, and to the Commons £1,200. The annual gas bill of both Houses is £3,000; the bill for electric lights £1,800, and, curious to relate, in addition to the gas and electricity, the use of oil lamps costs £1,250.

IN an interesting preface to Messrs. Osgood's new edition of "A Pair of Blue Eyes," Mr. Hardy, the novelist, who was an Architect by profession, says the novel was written at a time when the craze for indiscriminate Church restoration had just reached the remotest nooks of Western England, where the wild and tragic features of the coast had long combined imperfect harmony with the crude Gothic Art of the ecclesiastical buildings scattered along it, throwing into extraordinary discord all Architectural attempts at newness there. To restore the grey carcases of a mediævalism whose spirit had fled seemed a not less incongruous act than, to set about renovating the adjoining crags themselves.

ON the site of the old House of Detention now stands one of the most recent and finest buildings erected by the London School Board—the Hugh Myddleton Schools. These buildings are being utilised for exhibition purposes in order to show what is being done under the London School Board in connection with manual training, Art studies, and hand-and-eye training. The recent demand for attention to what is now termed "suitable occupations" in all Schools gives to this Exhibition a special interest to all engaged in the management of Elementary Schools, as well as to teachers under the Education Department. In fact, the advance made by the London School Board in work of this kind is so great, that representatives from countries from which the ideas connected with hand-and-eye training were originally borrowed are now attending in London to learn the art of going forward. To

teachers seeking information concerning "suitable occupations" for lower standards, it may be intimated that paper work in the form of making simple designs in coloured paper seems by far the most general means of meeting this portion of the Code requirements. Colouring in crayon is much less frequently shown, while water-colour work for young scholars has but two exponents, one School tinting outlines; while a rival method, called brush work, has been adopted in the other department. Of course, exceptionally advanced work in water-

being established by a cable 200 feet in length. Since the organ is not visible from the Church below, and is separated from the organist by the full length of the building, the effect when the music breaks forth is very striking.

IN the course of a lecture on Light Railways and Cable Ways, given at the weekly meeting of the Balloon Society, Mr. W. J. Brewer, after referring to the importance to Commerce of cheap and easy transit, and to the Conference which had been invited by the late Government on the subject of Light Railways, went on to describe the suspended cable way system which he had invented, and which had been successfully at work at the Dyke, Brighton. The cost for a light railway of this kind would be about £250 per mile, exclusive of cars and engines. The advantages were, first, as to cost, which, taking weight for weight, would be vastly cheaper than a surface line of the ordinary type. It would not interfere with the land, and he believed it especially met the difficulty of transport now felt in many manufacturing districts, for by its goods could be conveyed speedily and at a cheap rate from the manufacturer to the railways. Then it did not require locomotives nor level crossings, nor did it in any way interfere with the ordinary traffic on roads. The system, he said, was capable of enormous development. There was no reason why whole trains of railway carriages, and waggons should not be taken across rivers by this means, and he also proposed to ascend mountains by zig-zag lines. As to motive power, the system was equally open to gas or electricity. Mr. Brewer added that he had perfected a cable system for surface lines where the overhead track was not considered advisable.

SIR STUART KNILL, who, with the Governor of the Bank and Sir Joseph Dimsdale, is heading a movement to secure from the Barber-Surgeons' Company the famous historical Painting by Holbein for the Guildhall Art Gallery, has received a letter from Sir Francis Cook, of St. Paul's Churchyard, stating that he was very much interested in this fine historical picture, and he understood from Mr. Temple, the director of the Art Gallery, that the

suggestion to purchase it had not as yet made much progress. He felt very strongly that the picture never ought to leave the City, and he sincerely hoped that City men and the Companies would not allow that most interesting relic of the past to go elsewhere. He thought the picture ought to find a resting place at the Guildhall, and with that view he would be happy to contribute £500 towards its purchase, if during the next six months such a sum as the Barber-Surgeons' Company might consider sufficient could be raised.

THE WEST DOOR OF LLANDAFF CATHEDRAL: MEASURED AND DRAWN BY WILLIAM EATON, A.R.I.B.A.

colour drawing is to be seen from a special few elder scholars, but this type of work is expected from but few Schools.

THE celestial organ presented to Westminster Abbey by Mr. A. D. Clarke is now set up in the triforium of the South Transept. Though in all respects a separate organ, complete in itself, it forms part of the grand instrument in the Choir. It is controlled from the same console, and may be used in conjunction with the great organ. The action is electric, connection

A PAPER by Mr. H. Rye, on "The Building Stones and Canals of Rievaulx Abbey" greatly interested the members of the Archaeological Institute in their session at Scarborough. A tradition, observed the writer, lingered around the glorious ruin of Rievaulx Abbey to the effect that stones and other building materials had been brought to the site in boats, but nobody, so far as he knew, had attempted to show how and by what means. There were two distinct kinds of stone in the early work, and in the later work a third stone was used. This last was the easiest to trace and was found first. The earliest took a little more finding, and the second was the hardest of all to locate. The earliest stone was a dark brown sandstone, and came from a quarry about a quarter of a mile from the Abbey, in the direction of Bilsdale, close to the river bank. The quarry was called "Penny Piece." Of this stone the whole of the Norman work was built. Having found the quarry, he looked round to see how the stone could be got to the Abbey by boat. He discovered the traces of the banks of a canal running down to Rievaulx Mill. To get the water into this canal a dam would be required, and the ruin of a big stone dam was plainly to be seen. But the bank or Byland side of the River Rye was low, and an earthwork had to be thrown up, and here it was that their documentary evidence began. Finding that the building stone could be got down to the river, that the dam could be thrown across and so bring the water to the site, also that they could work their Mill and keep the drain clean, the monks went to Roger, the Abbot of Byland, and obtained a charter which enabled them to commence operations. The dam on the Byland side could be plainly seen about fifty yards long. The work went on and was finished in the reign of the great St. Ælred. The Norman period was given as 1066 to 1154, and was followed by the Transitional. St. Ælred's reign would extend 13 years into that period; and they knew from his writings that the Abbey prospered, for he said he governed 300 monks, also that "they drank nothing but water, ate little, laboured hard, slept little and on hard boards, never spoke except to their superiors on necessary occasions, and loved prayer." No doubt the fame of St. Ælred drew many to Rievaulx, and the buildings were not large enough. Gifts came in, and an enlargement of the buildings was made. In the Chapter House and Cloisters they found Transitional work, and that a new stone was in use. This new stone came from a place in Bilsdale, where there had been vast quarrying operations, not only for building stone but also for iron stone; and as oak grew wild in Bilsdale, it was probably used for roofing the new Cloister.

MR. J. WILLIS CLARK gave a Paper before the Architectural Section on "Libraries," illustrated by about 70 lantern slides. He began with the Libraries of the Ancient World, where the books were kept in presses (*armaria*), and then passed to the different Monastic Orders. He showed by quotations from the Rule of St. Benedict and the Orders which succeeded, that reading was one of the duties of all monks, and that a Library was formed in every Monastery. At first the books were kept in a press (*armarium*) in the Cloister, which was the centre of the monastic life, where the reading went on at stated times. Afterwards, when books had become too numerous for the Cloister-presses, a separate room was built to contain them, general during the thirteenth century. Mr. Clark then showed that the Cathedrals of the old formation, and the Colleges of Oxford and Cambridge, were building and fitting up Libraries at the same period. He next alluded to the furniture. The earliest bookcase was probably a sort of elongated lectern, of which an example still survives at Zutphen, in Holland, in the Library attached the Church of St. Wallburg, and in the old Library of Lincoln Minster. These desks would contain but few books, so gradually a system which wasted space less was adopted, with two shelves on each side, and a desk in front. The books in these early cases were all fastened by chains, and so a reader's seat, or a desk, was a necessary part of them. After the invention of Printing, chaining was gradually given up, and then bookcases with more shelves in them, but

still placed at right angles to the walls, were adopted. The first Library fitted with shelves against the walls was that of the Escorial (1584), and the first in England that built by Wren at Lincoln for Dean Honywood (1675). Finally, Mr. Clark gave a short sketch of private Libraries during the Middle Ages, illustrated by pictures taken from illuminated manuscripts in the British Museum and elsewhere.

THE Burns Monument at Ayr, unveiled in 1891, will be completed by a bronze panel representing "The Parting of Burns and Highland Mary," the sculptor being Mr. George E. Bissell, Poughkeepsie, New York. Three sides of the Monument have already been filled. The fourth panel, fronting the west, which was left for friends in the United States to complete, will therefore soon be placed. The subscriptions of 25 dols. each have been secured by the Hon. Wallace Bruce, of Brooklyn, New York, ex-United States Consul at Edinburgh. Twenty-three subscribers represent eleven States of the Union.

FOUNDED in Greville Street, Covent Garden, in 1829, the Royal Free Hospital soon outgrew the building in which the institution had its inception. In 1842, extensive premises in the Gray's Inn Road, formerly used as the Barracks of the Light Horse Volunteers, became vacant, and, being well adapted for the purposes of the charity, were purchased, and the Hospital was removed to its present site. Since then a Wing has been added, out of funds provided by the Freemasons of England, the freehold has been purchased, and in 1876 another building, containing 500 additional beds and a large out-patient department, was completed and opened, being named the "Victoria" Wing in honour of the Queen, the patron of the Hospital. Other enlargements followed, and in 1892 a fund was initiated at a Mansion House meeting to complete the reconstruction of the Hospital by rebuilding the Front, which was the only remaining portion of the old Barracks. The urgent necessity for better accommodation impelled the Committee to commence this work at once, and its completion now places the Governors in possession of a Hospital containing 160 beds, replete with every convenience for the treatment of the sick poor. The cost of the new buildings, which relieves about 2,000 in-patients, 20,000 out-patients, and were opened by the Prince of Wales, has been £30,000. Mr. William Harvey is the Architect.

MEMBERS of the Liverpool Engineering Society recently paid a visit to the Lytham Sewerage Works, at the invitation of Dr. L. Fisher, J.P., Chairman of the Urban District Council. Mr. Paterson, of the Hermite Company, explained that the system experimentally adopted at Lytham is that known as the "Hermite" process, which briefly consists of electrolyzing sea water, in order to produce chlorine, and then passing this antiseptic through the sewers, which has the effect of completely sterilising the sewage and of preventing the evolution of sewer gases.

THE whole of the new portion of the Midland Conservative Club, Birmingham, which has just been added to the old building in Waterloo Street, is carried on brick piers and iron girders. Messrs. Essex, Nicol & Goodman, the Architects, had some difficulty in planning the new buildings so as not to offend the owners of the adjoining property by interfering with their rights as to the light, but they have admirably succeeded to a large extent by constructing the upper part with Mansard roofs. The interior of the Club has been re-modelled by the omission of the Lavatories on the first floor and the enlargement of the Card Room. The stone steps of the Staircase, which were much worn, have been levelled by means of Granolithic concrete, and, together with the Hall, the Staircase has been decorated in light colours, while the walls of the various rooms have been covered with papers of artistic designs. The special feature of the Smoke Room is the provision of a green paper of a conventional foliated pattern, the design of Burne Jones. The Lounge is divided from the Hall by an Oak Screen, lighted by side windows and a lantern, and decorated with handsome Japanese paper, relieved with golden-coloured

mouldings. The ceiling of the Reading Room is finished in anaglypta, which is picked out in colours, and the Billiard Room is papered in light colours and varnished, the ceiling looking very pretty in its brilliant colouring. The Dining Room is resplendent with colour. The walls are covered with a paper of a unique and artistic design by Beresford Pite. This shows a background in two shades of red with a bold yellow lily, which has the effect of being in relief. The ceiling coves and cornices are decorated in distemper, in light harmonious colours relieved with a considerable amount of gilding; and the apartment is lighted by four massive electroliers, each carrying eight lamps. The Club is now lighted by electricity, and the Kitchens in the basement are ventilated by means of fans driven by electric motors. The structural alterations have been carried out under the direction of the Architects by Messrs. Surman and Sons; Mr. W. H. Coulton has decorated the buildings; Messrs. Verity have supplied the electric-lighting fittings; and Messrs. Pickup and Co. have completed the ventilation.

GRACE DARLING'S Monument is in a lamentable condition. It was blown down during the gale of November last, and has never been touched since. The memorial figure had a stone canopy over it, supported by stone columns. The whole of the columns and canopy are now down, while portions of the iron railings and also some part of the figure have been smashed. Grace Darling is represented with hands crossed and an oar by her side, within sight of the islands rendered famous by her deed. In a cottage facing the Church the heroine was born and reared.

MR. HOGARTH, who has been excavating the Temple of Hatasu at Der el Bahri, recently delivered a highly interesting lecture to members of the Royal Society. Mr. Hogarth said that a great deal of light had been thrown on a very obscure period of Egyptian history by the discoveries made during the excavations. Early in 1887 Mons. Mariette began operations at Der el Bahri, but beyond clearing away some of the rubbish from one of the chambers very little results were obtained. The work, however, was taken up by Mons. Naville in 1893, and now we had before us one of the finest Temples ever discovered in the Nile Valley. On the west wall were sculptures showing the arrival of Queen Hatasu's fleet in the land of Punt. This fleet had been sent out by order of the Queen to obtain frankincense and other aromatics, and also to bring back certain trees for the purpose of replanting in the gardens attached to the Temple of the god Amen. Mr. Hogarth pointed out that the Egyptian Artist never could succeed in freeing himself from conventionalities, but in the case of this Sculptured Chamber there had at least been an attempt to alter the usual stiff style of Egyptian Art. A large quantity of potsherds or ostraka, as they are technically called, were discovered on the site. These, however, only date from Coptic times, there having been an early Christian Convent on the mound in about the fourth century. During the process of excavation a very remarkable discovery of foundation deposits were unearthed, consisting of hoes, adzes, and small objects the use of which had not yet been explained. The columns which supported the Temple were of the order known as "Doric," but the Lecturer did not seem to believe in the popular idea that they were ever copied by the Greeks in their Art.

THERE is a story going the rounds about two very distinguished archaeologists—Sir William Wilde and Dr. Donovan. It seems that they made an excursion to the Isles of Arran, where interesting remains of archaeological nature have been found. They came across a little rough stone building, and both entered into a fierce argument as to the exact century of its erection. Finally each claimed a date, one giving it the sixth century and the other a later one. A native, who had listened with gaping mouth and ears to the lengthy and learned terms used by the disputants, broke into the conversation with the remark: "Faix, you're both wrong so far as that little buildin' is concerned; it was built just two years ago by Tim Doolan for his jackass."

ON Wednesday the Foundation Stone of the New Meat Market and Slaughter Houses which are being erected in Bradford Street, Birmingham, was laid by Councillor Parkes, M.P. The work is the largest of its kind which has been undertaken in Birmingham by the Corporation, and when it is completed the city will be in the possession of a Market which will favourably compare with that of any other town in the country. The designs selected were those prepared by Messrs. Essex, Nicol & Goodman, Newhall Street, who adopted all the latest improvements to be found in the English and German systems. The building is being erected by Mr. John Bowen, at an estimated cost of £50,000. This is for the building alone, and does not cover the cost of the site, nor the provision of cold stores in the basement under the Meat Market, machinery for pumping water, refrigerating plant, electric-light installation, &c. When everything is taken into consideration, the total cost of the whole scheme may be put down at about £90,000. The Market has a frontage to Bradford Street of about 300 feet, and it extends to Cheapside, where the frontage is of a similar length, the depth between the two thoroughfares being about 320 feet. It is deemed of the highest importance that, in the erection of a number of Slaughter Houses, the departments should all be on one level, and on the level of the Meat Market the Architects have arranged for three retail Slaughter Houses and wholesale Slaughter Houses, Pig Lairs, Triperies or Offal Houses, cattle and sheep yards, and gangways, and ample room has been left between the various departments, so as to admit of plenty of ventilation. The Cold Storage and Freezing Chambers are placed underneath the Market Hall, the approach to them being either from the subway which communicates from the wholesale to the retail sides, or by the lifts by which carcasses can be readily dropped and run along the corridors on the travelling gear. The Engine and Machinery Department adjoins the refrigerating plant, and the apparatus for destroying condemned meat is placed on the retail side. At the Bradford Street end a small portion of the ground floor area will be occupied by the inspectors and collectors, and staircases will give access to the Superintendent's Office and the official rooms.

THE most novel engineering scheme in the construction of a foundation is the one recently used in New York—to freeze a bed of quicksand which impeded the work. A row of four-inch pipes was sunk to a depth of forty feet. These pipes were capped at the bottom, and contained inside similar pipes open at the bottom. From a large condenser cold air was forced through these smaller pipes into the larger, from which it returned to the condenser. The air was cooled to a temperature of about 45 deg., thus freezing the surrounding mud and wet sand, and checking their flow into the excavations.

MR. W. B. RICHMOND, A.R.A., and Mr. E. Onslow Ford, A.R.A., were on Friday night elected Royal Academicians. Mr. Onslow Ford's work as a sculptor has lain chiefly in the direction of portraiture. In 1883, he completed statues of Mr. Henry Irving as Hamlet, and of Mr. Gladstone. His statuette "Folly" was purchased under the terms of the Chantry Bequest. He was born in London in 1852, and became an Associate of the Academy in 1888. Mr. William Blake Richmond, whose fine cartoons were recently described in THE BUILDERS' JOURNAL, is the son of the late Mr. George Richmond, A.R.A., and was born in 1843. He was a student at the Royal Academy, and exhibited so early as 1860. For some years afterwards he worked in Italy, and his career as an English painter practically

dates from his return to this country in 1870. He was Slade Professor at Oxford from 1878 to 1883, and was elected Associate of the Academy in the same year as Mr. Ford.

THOSE who fancy that the painter's skill comes to him by nature, and that hard work has little to do with it, will receive small encouragement from Mr. Alma Tadema, who, in presenting the prizes to the Students of the National Art Training School, emphasised the need for persevering labour, declaring that Art was not so much the outcome of the individual brain as of continuity of experiences which, concentrated in one specially gifted mind. He insisted also on the importance of the minor Arts, because of the influence exerted upon the community by the nature of their surroundings. When he found that the black Pompeian decorations of his early Antwerp Studio made him paint too heavily, he had his Working Room coloured red. Then his pictures got too hot. Upon arriving in Berlin he painted his Studio light green.

A DINING ROOM FIRE-PLACE, BY R. A. BRIGGS.

DR. LEGGE, the bishop of the diocese, reopened the Lady Chapel at Lichfield Cathedral on Wednesday last, and dedicated numerous gifts and offerings for its use and adornment. The gifts include an Altar-piece, two large windows of ancient glass, ten alabaster statues of virgin saints, alabaster Altar rails, the great South Transept window, four other windows in the Choir Aisles and the Chapter House. The latest additions, which are entirely for the enrichment of the building, have been made at an outlay of £4,000, no part of which has been taken from the fund raised for the repair of the fabric.

THE recent visit of the Lord Mayor of London to Bexhill, in the Diocese of Chichester, led to a curious discovery. It having been decided to present an address of welcome, the organisers of the affair, somewhat naturally, expressed a wish to have the Arms of the See emblazoned on the document. Application was accordingly made to Dr. Durnford for a die wherewith to carry the idea into execution, and in searching for this among the Cathedral

archives the venerable prelate brought to light a block which had lain aside for over a hundred years, and which differed in a material respect from that which has recently done duty. Burke and other authorities on Heraldry give the arms of the Bishop of Chichester as containing a central figure of Prester John sitting on a tombstone with a mitre on his head and a sword in his mouth, and it is this emblem which appears upon the modern edition of the Episcopal Seal. It would appear, however, that the figure formerly depicted was that of *Salvator Mundi*, with the customary insignia. Dr. Durnford, who is in his 93rd year, declares that he is too old to undertake the task of probing the matter to the bottom, but the doubt which has arisen might furnish an absorbing topic of discussion amongst archaeologists.

A MONUMENT which is to be erected to Alfred de Musset on the Place de St. Augustin, Paris, will be taken in hand immediately by the sculptors Mercié and Falguière. Eighteen years ago a committee was formed with the object of erecting a statue to Musset. Some of its members have passed away, and have their monuments already. The one they met to erect exists still only on paper. Balzac has been waiting about three years for the statue promised by the committee, but the delay of the Musset statue has been six times as long. Meanwhile bronze and marble effigies, bearing obscure names, abound.

THE National Competition of Art at South Kensington shows better results this year than on previous occasions. There are so few Gold Medallists that they can well be mentioned in detail. Miss Winifred Smith, of Birmingham, is first on the list with her designs for book illustrations, she having also won the Princess of Wales' scholarship of £11. The other Gold Medallists for the year are Mr. C. A. Sheehan, of Bristol, for a model design for a Panel; Mr. A. H. Hodge, of Glasgow, for a design for an Art Gallery; Mr. Charles Quennell, of Lambeth, for the same; Mr. H. H. Woolidge, of New Cross, for a model of a figure from the antique; Miss Laura Johnson, of Nottingham, for a monochrome painting of figure from the antique; Mr. Ernestine Willoughby, of Plymouth, for a modelled design for wall decoration; and Mr. J. R. Duffield, of Sheffield, for studies of historic styles of ornament. No fewer than eight Silver Medals have fallen to the lot of Birmingham competitors, these being Miss Mary J. Newell, Miss Agnes Manby, Miss Martha A. Onions, Mr. Ormond E. Gollins, Mr. William Hayes, Mr. H. A. Payne, Mr. Edwin F. Reynolds, and Mr. Alfred Watson. Twenty-two Bronze Medals go to Birmingham, and two to Wolverhampton, while Birmingham competitors have gained forty-five book prizes.

THE proposed extension of the Liverpool Museum in order to provide increased accommodation for the valuable Natural History Collections contained therein, and especially for their better scientific arrangement, has attracted a good deal of attention in scientific circles. Indeed, not only in London, but also in the United States, in quarters interested in such matters, nothing but approval has been expressed in regard to the plan which it has been resolved to adopt of arranging the collections so as to present to the visitor the lowest forms of life in the animal and vegetable kingdoms on his entrance, gradually introducing him from room to room to those of nearest affinity in ascending order till the highest are reached. It is recognised that when this is accomplished, the Liverpool Museum will be the first, certainly in Europe, and probably in the World.

A SHORT time ago there was unearthed at Linlithgow, in connection with the restoration of the Parish Church, an interesting tombstone, which is supposed to have marked the burial place of two of the earliest Provosts of the Royal Burgh. This relic has now, at the instigation of the Town Council, been erected in the wall of the Church adjoining St. Catherine's Aisle, celebrated as the spot where the apparition appeared to King James IV. on the eve of the battle of Flodden.

It was resolved some time ago that a permanent Memorial should be established at East Brent, Somerset, to commemorate the jubilee of Archdeacon Denison's appointment as vicar of the parish. It has now been agreed that this Memorial shall take the form of the restoration of the Cross in the Churchyard, the base of which has been standing for about five centuries, and the Bishop of the diocese has signified his warm approval of the scheme, together with his intention of visiting East Brent on August 4th, when the jubilee festivities will take place, and of officiating at the dedication of the Cross when finished.

THE acquisition by the British Museum of the celebrated Cabinet of Drawings and Sketches by Old Masters, and of Engravings of the Early German and Italian Schools, formed by the late Mr. John Malcolm of Poltalloch, gives additional interest to the exhibition of a selection of the choicest examples from the collection which has been arranged in the Public Gallery of the Department of Prints and Drawings at the Museum. A glance at these is sufficient to convince the connoisseur that the authorities are to be congratulated on their action in securing for the nation such beautiful treasures of Art. Perhaps the gem of the collection is the fine penwork on pink prepared paper of a study for a figure of Abundance, with attendant children, by Sandro Botticelli. Of Leonardo Da Vinci, there is a magnificent drawing of a profile study of the head of a warrior in fantastic armour—a work which Professor Colvin considers shows the energy and subtlety of the great master's hand perhaps better than any other example of his early Florentine time. Raphael is represented by several charming drawings of studies of male and female heads, and by a most beautiful study in pen and bistre for a group of the holy women and apostles weeping over the body of Christ. Examples of drawings by Michael Angelo, Correggio, Titian, and the other old masters of the Italian School, and a selection of a series of about two hundred drawings and sketches by the most famous masters of the French, German, Flemish, and Dutch Schools, and of about the same number of rare early engravings of the German and Italian Schools, illustrate the extent by which the national collection has been enriched.

THE purchase by the Liverpool Corporation of the undertaking of the Liverpool Electric Supply Company has been effected so quietly that neither the public nor the City Council knows anything about the terms, except the broad fact that the sum to be paid amounts to something like £400,000. The success of the purchase transaction depends upon the passage through Parliament of the Boundaries Extension Bill, and nothing definite is yet known as to what will be the fate of that measure this year.

MEN WHO BUILD.

No. 23.

MR. R. A. BRIGGS.

OFFICE it that what we mean by a Bungalow is an artistic little dwelling, cheaply but soundly built, with a proper regard to sanitation, and popped down in some pretty little spot, with just sufficient accommodation for our own particular needs. Moreover, it is not necessary that an English Bungalow, like its Eastern original, should be a one-storied building. A Cottage is a little house in the country, but a Bungalow is a little country house, a homely, cosy little place, with verandahs, balconies, oriels and bay windows, while the plan is arranged to ensure complete comfort, with a feeling of rusticity and ease; a place where Herrick might have sang:—

Here, here I live with what my board
Can, with the smallest cost, afford;
Here we rejoice because no rent
We pay for our poor tenement
Wherein we rest, and never fear
The landlord or the usurer.

These sentiments are those of Mr. R. A. Briggs, who has more than once written on "Bungalows." By virtue of a long study of the delightful little buildings, a vast number of which he has erected in all parts of the country, he has been recognised as an authority upon a modest phase of Architecture which interests but casually the ordinary practitioner. In England it would be unsuitable to build Bungalows like those that are met with in India—low, squat, rambling houses, with latticed windows and flat roofs, and every conceivable device for keeping out the scorching rays of the sun; nor can we have Colonial Bungalows—mere huts, built of logs, with rough shingle roofs, and no glazing to the window-sashes. Land and bricks, and timber, and comfortable commodities must

be paid for in this delightful land, where, in spite of Herrick, there are landlords and taxing usurers in whatever corner of the shires one elects to hide one's self. To you, the Bungalow is a much neglected thing. Mr. Briggs has discovered, as hundreds of others must have discovered, any number of peaceful nooks where the jerry builder is not attracted, and where the price of land and the demands of the rate collector are no bar to the complete enjoyment of inexpensive living. If the pleasant soldier Architect had done nothing more than to

enhance the popularity of his little dreams of brick and wood, he would have done a deal more than many of his more ambitious contemporaries.

Robert Alexander Briggs served his articles with one Gilbert Redgrave, a good man and true, eclipsed, however, Architecturally, by his pupil. You can hardly carry in your memory the actual dates of your contemporary's movements, and so the date of the pupilage is lost. But in 1883 you find Robert Briggs walking off with the Soane Medallion, by the aid of a drawing which proudly hangs over the mantelpiece of his own room in Devonshire Square, surrounded

by specimens of almost all the recognised Architectural draughtsmen in England. His fifty pounds took him to Belgium, North Germany, and through to Italy, where he did much study and sketching, spent a deal more money than was actually necessary, and lingered round Pompeii until his friends began to wonder what had become of the Soane Medallist. In the House of the Wounded Adonis he found colour and he remained to copy it. The Mosaic work in the Museum at Naples lured him on with paint brush and pencil. In St. Martin's at Ypres he stayed to draw

House at Northwood.

R. A. BRIGGS, ARCHITECT.

most of the horrible grotesques in which the place abounds. At Mayence, the Reredos in the Side Chapel captivated his sketch book, and at Nuremberg, on his way home, he perforce must pay a return visit to complete some unfinished work from St. Lawrence. He did not neglect France, as one may assume from the numerous drawings and articles of Furniture which have appeared from time to time in *Furniture and Decoration*. In fact, it may be said that among the best things Robert Briggs has yet done is his Series of Furniture Designs which happily have never trespassed upon the Gothic Cult. He seems to have taken the best French work, cut away from it much of the effeminate feeling which does not find very much favour in English eyes, and given us bolder, stronger and better work, harmonising with the teachings of our own convictions.

In his actual Bungalow work, Mr. Briggs has been extremely happy, not quite so

and dead, show their own strong individuality on everything they do or did.

In this one point Mr. Briggs has failed, not that the failure shews weakness of purpose or of study, but merely that steadfastness of faith which makes strong men stronger, and a reputation that transcends over the waves of fashion and opinion.

At the moment Mr. Briggs is engaged on some fine additions at Battenhall Mount, for Mr. Percy Allsopp, for whom he is erecting a Private Chapel, in which the studies of those old Soane Medallion days are likely to have full play.

FOR the disturbance of his residence by the entry into London of the Manchester, Sheffield and Lincolnshire Railway Company, who proposed to buy up the house for the purposes of their new Station at St. John's Wood, Jerome K. Jerome, the well-known author, was on Thursday, in the Middlesex Under-Sheriff's Court, awarded £500 compensation. The

THE BUILDERS' JOURNAL COMPETITIONS No. 4.—A Village Church.

The drawings submitted in the Village Church Competition have been handed over to Mr. Arthur C. Blomfield, M.A., who has kindly consented to adjudicate upon them. His report and the result of the Competition will be published in our next issue.

THE WEST OF ENGLAND EYE INFIRMARY COMPETITION.

THE Competition for the West of England Eye Infirmary has been decided, and the names of the authors of the selected designs announced. Thirty sketch designs were sent in for the preliminary competition, and out of these Mr. Charles Barry, who acted as assessor, selected five to be worked out in the final. Ultimately he considered "Exe" to be the best. The Committee have unanimously confirmed Mr. Barry's choice. We append the names of the authors of the selected designs in the following order of merit, also confirmed by the Committee: "Exe,"

A BUNGALOW DESIGN BY MR. R. A. BRIGGS.

happy perhaps as he might have been had he been a little more conservative in his designs. For instance, the design which appears on the present page is extremely good. The "massing" of the little house is perfectly done; the large room is a feature practically unknown in any other domestic building of its size, and there is a pretension about the whole thing which is delightfully in opposition to the country house of Commerce. Yet this is the only design we have seen from Mr. Briggs' pencil which shows the absolute freedom of his own individual work. In many of his other published works, the wishes of the clients are easily detected. A good Architect is the man who, knowing what is good, has the facility for forcing his knowledge over the wishes of the man who builds, and that is why such domestic men as Norman Shaw, Ernest George, David Brandon, E. J. May, E. W. Godwin, Butterfield, and others, living

plaintiff's case was that his house, which he rented at £90 a year, with the option of purchase, was very secluded, enabling him to carry out his literary work with absolute privacy.

THE largest Graving Dock in the World, just constructed by the London and South Western Railway, as part of its scheme of Dock extension at the port of Southampton, will be opened on Saturday by the Prince of Wales.

THE so-called "Limmer Bridge" in Hanover, which crosses the Leine near Schwanenburg, has fallen at last. The bridge was very old, and was allowed to remain undisturbed for the sake of picturesque antiquity. A lad of ten happened unfortunately to be on the bridge, and was killed by the stonework falling upon him.

THE new High Pavement Higher Grade Board School at Stanley Road, Nottingham, was opened recently by the Mayor. The cost of the building, which is the most completely equipped for educational purposes of all the Board Schools in the country, was £10,528 os. 6d. exclusive of fittings. It will accommodate 588 scholars.

Messrs. Edward Thomas & Sons, of 7, Queen Anne's Gate, Westminster; "Health," Mr. Ernest Herbert, of 32, Bedford Row, London; "Aloa," Messrs. Shoebridge & Lewis, of 103, Strand, London; "Outpatient," Mr. W. F. Edwards, of 184, Lazell Street, Birmingham; "In Oculis," Mr. H. F. Talbot, of 7, Cherry Street, Birmingham.

THE COVENTRY COMPETITION.

WITH regard to the competition for the Coventry Municipal Buildings, respecting which we gave a detailed criticism in a recent issue, together with sketches of the first premiated designs by "Leofric, the Saxon," we are now in a position to state the names of the authors of the designs, which were by Mr. Harry Quick, of Coventry, Messrs. Brewill & Baily, Nottingham, and Mr. C. E. Mallows, Bedford.

It has been decided by St. Martin's Vestry to carry out improvements in St. Martin's-place and Charing-cross-road, at an estimated cost of £1850

ROMAN WALLS IN ENGLAND AND GERMANY.

THE N. A. A. VISIT CILURNUM AT CHESTERS, NORTHUMBERLAND.

[FROM CORRESPONDENTS.]

MR. N. G. CLAYTON, of Chesters, has upon his estates the remains of the Roman Wall, which together with its Mile Castles and Stations, can still be clearly traced stretching across the country from the Tyne (on the east) to the Solway (on the west). Members of the Northern Architectural Association, including Mr. F. W. Rich (vice-president), Messrs. J. H. Morton, J. T. Cackett, A. B. Plummer, E. Shewbrooks, W. Glover, F. Caws, H. Grieves, H. C. Charlewood, C. T. Brown, W. Hope, H. Gibson, C. S. Errington, H. Cayley, H. Oswald, R. Morton, E. J. Watson, M. Martinson, R. Sisson and R. Rich, visited Chesters on the 20th inst. for the purpose of inspecting the Station. Mr. Robert Blair, conducted the party. In front of Mr. Clayton's residence at Chesters, and between it and the North Tyne River, are situated the remains of Cilurnum. They cover an area of rather more than five acres, only exceeded in size by Amboglanna at Birdoswald, in Cumberland.

Cilurnum (as inscriptions have proved) was garrisoned by a people from Asturia in Spain. Cilurnum is of the usual oblong, right-angled, parallelogramatic form, with rounded corners, and is, in this respect, like the important station of Borcovicus, at Housesteads, about eight miles west of Chesters.

The ramparts at Cilurnum are, like the East Wall at Borcovicus, five feet thick, and the fosse can still in places be distinguished. There are two gateways in both the East and West Walls, and one in the North and in the South. The gates here, as at Borcovicus and elsewhere, have consisted of two portals, and each portal has been spanned by an arch or vault. The gates closing the portals have been two-leaved, and have moved upon pivots. One of the iron pivot sockets is still *in situ* at Cilurnum. At Borcovicus the stop stones for the gates and the pivot holes and the ruts in the threshold stones caused by the chariot wheels, may be clearly noticed. Similar ruts, &c., exist at the east entrance to Cilurnum, &c. On each side of the gateways at Cilurnum, and at Borcovicus, is a Guard Chamber. Cilurnum is situated across the line of the Great Roman Wall.

Most of the streets in the Camp have been passages, barely three feet wide. There have been, however, two main streets, about eighteen feet wide, crossing at right angles, and running from east to west and north to south. Near the centre of the Camp, and on the south side of the main street, running from east to west, the ruins of the Market Place or Forum may be noticed, together with its public buildings.

After passing up the steps to the north gate of the Forum, the main street led to the north gate of the Camp. There were also gates on the east and west sides of the Market Place. The Central Square (or as it were Cloister Garth) of the Market Place, into which goods were probably brought, was surrounded by a covered way or colonnade, and the gutter-stones to receive the drip from the roof are still in position. On the south side of the Market Place are the remains of the three Halls, each having a wide portal. The Central Chamber is believed to have been the aerarium of the Station, the place where the treasure chest of the regiment was kept, and where all pecuniary business connected with it was transacted. The chambers on each side of it are believed to be the curiæ, in which court martials were held and the justice of the district dispensed. At a later date a Vault was constructed for the better preservation of the treasure chest, and this Vault was entered from the original aerarium. The construction of the roof of the Vault is peculiar, being formed of arches or ribs, all flush on the under-side.

The General's Quarters or Prætorium are believed to have been the buildings situate between the Market Place and the east rampart. The whole of the remains of Roman work in the North of England are believed by the writer to indicate a military occupation of the district rather than that of a domesticated character; for example, nothing of the nature

of tessellated pavement or residential villas seem to have existed as is the case further south. The remains of concrete floors are still extant. At Cilurnum, however, the flooring of the rooms in the General's Quarters rests upon sleepers of brick and stone, and heated air was conveyed under the floors from a furnace situate at the south-east corner of these buildings. Flue tiles in the walls about the remains make it clear that the warm air was also conveyed up the walls of the rooms in order to heat them. The eastern entrance to the camp at Cilurnum was approached from the east side of the North Tyne by means of a Bridge; two of the piers upon which the wooden Bridge rested may be seen when the river is low. The third pier or abutment (on the east and opposite side of the river to the camp) is situate in a plantation some distance from the river's present edge, owing to the stream having, in the course of centuries, changed its position to the westwards. This abutment was discovered 35 years ago. It is a solid mass of large ashlar masonry, well planned, and measures about 22 ft. on the side fronting the river. The facing stones have been bound together with rods of iron run with lead. A large monolithic pillar and other remains here are believed, by Mr. Holmes, of Newcastle, to have formed part of an arrangement for lifting, out of its position, a portion of the wooden platform, or Drawbridge, crossing the, now fordable, river. Mr. Holmes' views and information as to the Bridge may be fully considered from Volume 16 of the "Archæologia Æliana" (the publication of the Newcastle Society of Antiquaries). The piers and abutments contain within them the piers of a prior Bridge. There are also the remains of a Castellum at the end of the Roman Wall where it terminates near the eastern abutment of the Bridge. The lewis holes in the stones of the latter Bridge are in a good state of preservation. The stones in both Bridges have been fastened together with iron cramps, and in the earlier Bridge the stone joints are crossed by cramps neatly let into the stones.

It is believed by the authorities that in these Bridge piers we have the remains of the work of Hadrian's time. Between the River and the Camp of Cilurnum are the remains of a range of buildings, consisting of the space or courtyard paved with rough flags and having a wall on its west side with seven recessed arches or niches facing the courtyard. The object of these niches has never (to the writer's mind) been satisfactorily explained. Near to are chambers with hypocausts and with concrete floors, one having a splayed opening or window, beneath which Dr. Bruce found some fragments of Roman glass. The Camp was entered from the Bridge by the east gateway. The Guard Chambers here are exceptionally well preserved, the masonry at one point being 12 courses high. The burial ground was to the south of the Station, near where the river turns to the east. Excavations are still being made; all removed earth is carefully examined and sifted, and every object of interest is collected for preservation in the Museum at Chesters.

After the Roman Station had been examined, Mr. Rich conducted the party over the house buildings, and explained that Chesters has been in possession of the Clayton family for about 90 years. It was originally built by the Erringtons. Some additions were made to it, chiefly in a Portico on the north side in Mr. Dobson's time. The present owner, Mr. N. G. Clayton, has had extensive alterations made. The old Mansion House has been really gutted and nearly rebuilt, and forms a very small portion of the Mansion of to-day. It is built of stone throughout from the neighbouring quarries, is lighted by electric light, generated by Mr. Clayton's own installation, and is supplied with water from a never failing spring about three miles away. Mr. Clayton has built a Museum near the Entrance Lodge, in which to store all the objects of antiquity. New stables have been built a short distance from the house with all the modern improvements. A new carriage drive is also being made, with Entrance Lodge and gates. The contractors for the work have been Mr. Walter Scott, of Newcastle; Messrs. Middlemiss Bros., for builders and joiners' work; Mr. Civil, of Hexham, for part joiners' work; Messrs. Watson and Sons,

Newcastle, for plumbers' work and heating; Mr. Smith, of Hexham, for part plumbers' work; Mr. Baty, of North Tyne and Mr. Charlton, of Stamfordham, for tiling and slating; Messrs. Wilkinson and Co., for plasterers' work; Mr. Ellis, of Hexham, for painting and glazing; and Messrs. Musgrave and Co., for stable fittings.

The Mansion has been carried out from the designs of Mr. Norman Shaw, and the rest of the works in Museum, Entrance Lodge, Gates, Stables, &c., from designs by Mr. Frank W. Rich, of Newcastle-on-Tyne.

THE TEUFELSMAUER INFERIOR TO HADRIAN'S WALL.

THE Teufelsmauer, a wall 120 miles long, which crosses Württemberg and Bavaria, is a part of the great frontier work which formed the *limes* of the Roman Empire between the lower Rhine near Bonn and the Danube near Regensburg. Two-thirds of this great work consists of an earthen rampart and a ditch, called Pfahlgraben, which forms the frontier of the province of Germania Superior; the rest is a stone wall without a ditch, behind which lay Raetia and the upper waters of the Danube, and this is the Teufelsmauer. For the last three years a Commission, established and endowed by the German Government, has been busy examining the 360 miles of this long boundary, and the seventy or eighty Castles which compelled the barbarian to respect it. An able soldier and a well-known archæologist are "directors" of the undertaking, while the excavations are personally supervised by volunteers who, however, are not mere amateurs. The actual course of operations may be best illustrated by an instance. Mr. William Kohl, of Weissenburg, in Bavaria, has under his care the examination of the Teufelsmauer for some 50 kilometres—about 30 miles—and has also helped to dig out two Roman Forts. The Forts are at Weissenburg itself and at Dambach. The latter lies close to the Teufelsmauer; the former resembles most of the Forts on the Retian frontier in being several kilometres to the south of it. Any visitor to Weissenburg may see it; it stands close to the Railway Station and the *praetorium* or headquarters, and three of its gates have been left uncovered for future students to admire. It is of the usual shape, rectangular with rounded corners and corner turrets, measuring about 570 ft. by 530 ft. The interior has not been fully excavated; but it appears, like most of the *limes* Forts, to have contained fewer stone buildings than the Forts on our English Wall of Hadrian. It resembles rather such a Fort as Hardknott, recently excavated by the Cumberland Antiquarian Society, and it is perhaps more than a coincidence that the scanty evidence surviving seems to ascribe both the Raetic *limes* and Hardknott to the middle of the second century of our era—that is, to the reigns of Pius or Marcus Aurelius. The Fort at Weissenburg can hardly, if this be so, have been occupied more than a hundred years, for the coins found in it end with the middle of the third century. Despite this, the smaller objects discovered in the excavations, and now preserved in the local Museum, are by no means contemptible. They would make a good show in any but three or four towns in England, and emphasise to the English visitor the weakness of our Romano-British civilisation. The Teufelsmauer itself lies three or four miles to the north of Weissenburg, sometimes moderately preserved, sometimes traceable only by hedges or field boundaries, and not seldom wholly destroyed. There is, however, a long stretch in the immediate neighbourhood of Weissenburg which is interesting enough. The Wall runs fairly straight across the country, keeping, as a rule, to the high ground, but declining no steep ascent or descent, and occasionally taking a course which is commanded from the outside; it was plainly a frontier barrier, but not a military defence. Where unexcavated it is a mere mound of stones lying idly one on the other, but the spade has revealed something different inside. We have, that is, a solid and tolerably well constructed wall, four feet thick, built with mortar and with stones in somewhat irregular courses, and buttressed at intervals of ten to fifteen yards. The Teufelsmauer is far inferior to Hadrian's Wall as a piece of building, but it is none the less a real wall. At suitable spots

Towers are built into it, measuring usually about twelve by fourteen feet inside, and presenting the curious feature that they are hardly ever bonded into its masonry. Clearly they were built before the Wall, but it would be rash to say how much earlier. Perhaps those who erected the Wall found it convenient to put up these Towers first, like the Bridges on a railway, and then join them by the Wall. Perhaps the Towers belong to an earlier date, when Forts and Towers existed alone, as they seem to have done in the Odenwald during one period of Roman rule in Germany. Altogether there is much to see on the *limes*. Mr. Kohl's section is but one of several, and an archaeological tourist might profitably and pleasantly visit a dozen other districts. The *limes*, too, is singularly accessible, and its neighbourhood is often attractive for wholly un-Roman reasons. The splendid stretch of earthwork on the Taunus Hills, with the excellently preserved Forts at the Saalburg and Feldberg, is in the midst of forests and yet close to Wiesbaden, Homburg, and Naheim. There is a good piece further north, near Ems, and the archaeologist may be also an *habitué* of watering-places. In Würtemberg and Bavaria you wander through quaint old-fashioned towns with picturesque walls and stately Towers.

THE engineers of the Snowdon Railway have decided to construct it on lines similar to the latest Swiss Mountain Railways. The gauge will be 2 ft. 7½ in., and the sharpest curves will have a radius of four chains. The length of the line will be 4½ miles, and Terminal Stations will be erected at Llanberis and the summit. The locomotives are being manufactured in Winterthur, Switzerland.

ON Saturday week the Foundation Stone of the Church enlargement in connection with Holy Trinity Church, Shoreditch, was laid by Lady Howard de Walden. The Church, which was built in 1887, was some little time ago found to be too small, and a piece of ground adjacent was purchased, and an extension made to the western end at a cost of £1,000.

It is to be regretted that the movement to acquire the Riverbank Estate at Putney for the purposes of a Public Recreation Ground is not progressing as it ought, and unless some decided local feeling is evinced sufficiently strong to induce the local authority to contribute towards the comparatively small sum required, it will fall through.

A NEW Wesleyan Reform Union Chapel has been opened at Mexborough, having been erected at a cost of £2,200.

THE WALL DECORATION OF MEDIAEVAL CHURCHES.

NO one supposes that all the mediæval Churches were decorated in gold and colours, like the Sainte Chapelle of Paris or St. Stephen's at Westminster. Yet they were painted, and in this manner:—The rubble of the walls was dubbed out to a plain surface; the angle jambs of windows and doors were made of stone, because that was the best and most durable material for the purpose. The whole of the walls were then covered with a coating of gesso (whiting and size) one-eighth of an inch thick, which was gradually thinned off as it approached the stone jambs, which were covered with only a thin coating of it, so that it did not show as stone. Upon this gesso the artist painted his subjects with a red outline, and shaded them up with black and red and yellow, using white for the high lights. It should be remembered that these colours were not used pure except in little bits, but were broken up with white and with one another. The seas of diaper we see in modern Churches were unknown to the old artist, who when he did employ diaper did so only as a background or to fill up a space unoccupied with anything more important. Nearly every Church in the thirteenth century was decorated in this manner; they were whitewashed in the reigns of Edward VI. and Elizabeth, and have, in the vast majority of instances, only been brought to light to ensure their more speedy destruction from the church restorer. The interior of a modern Church, on the contrary, is neatly plastered with plaster, one inch or three-quarters of an inch thick, which stops flush with the stone quoins, which are left uncovered because the Architect has been brought up to consider stone as a beautiful material for its own sake; in fact, just the same as an Italian would regard marble. The consequence is that we see every piece of stone a distinct colour from the plaster, and all the lines of the Architecture become jagged and uneven.

THE Right Hon. A. Akers-Douglas, First Commissioner of Works, has, during the past few days, been on an official visit to Edinburgh. Accompanied by Mr. W. W. Robertson, Surveyor of Works, he inspected the following buildings in charge of his Department: Holyrood Palace, the Royal Observatory, the General Post Office, the Museum of Science and Art, the Royal Botanic Garden, &c.

A HOUSE IN QUEEN'S GATE : R. A. BRIGGS, ARCHITECT.

HOW ANCIENT JERUSALEM WAS DISCOVERED.

BENEATH FEET OF MODERN RUBBISH.

THE fact that modern Jerusalem stands on many feet of rubbish was demonstrated by Captain Wilson—now Major-General Sir Charles W. Wilson; and the work of exploration was commenced in 1868 by Major-General Sir Charles Warren—then holding the rank of lieutenant—and an efficient staff of non-commissioned officers of the Royal Engineers. In November of that year, a shaft was sunk near the south-east angle of the Temple area, and tunnels driven in the direction of the wall. Great personal danger was incurred, for the loose shingle ran like water when disturbed, and stout wooden frames had to be provided to line the shafts and tunnels. Characters in red paint were found on the lower stones of the wall—some of which were of immense size—and these marks were shown to have been made by the Phœnician masons employed by Solomon, before the stones were set in their places, probably as they were finished at the quarry. The solid rock was struck at the depth of no less than 79 feet 3 inches below the present surface level, and the great corner foundation stone, 3 feet 8 inches high and 14 feet long, was seen and examined; while in a recess cut in the rock was found a small jar or vase, probably used for holding the oil employed in the ceremony of laying the stone, for we know that the Jews bestowed great care on the corner-stones of their buildings, and the dedication of Solomon's Temple was celebrated by a festival of especial grandeur. There can be little doubt that the Temple, like the Tabernacle and all its furniture, would be consecrated by being anointed with the holy oil. The immense artificial platform on which Solomon's Temple and its successors were built is an irregular oblong, about 1,600 feet long, and 1,000 feet wide, with an area of thirty-five acres. Its western wall in ancient times abutted on the slope of the Tyropœan valley separating the two hills. On the other side of the valley rose the slope of Zion, surmounted by the Palaces of the Kings of Judah, and in later times by the Palace of Herod; and the hills were connected by Bridges, one being known as the Zion Bridge, forming a communication between the Temple precincts and the Palace Hill. Many years before any excavations were made, Dr. Robinson, the eminent American traveller, had noticed, near the south-west angle of the Temple platform, certain projecting stones in the wall, which had unmistakably the appearance of the spring of an arch. It was reserved for Sir Charles Warren, not only to prove the truth of this surmise, but to discover the original level of the valley spanned by the Bridge. The Royal Engineers, under Warren's direction, made a careful survey of the projecting blocks, which extend along the wall for 50 feet, and the span of the arch having been calculated from the curve of the stones, a shaft was sunk about 40 feet from the wall. After digging to a considerable depth they came upon the remains of the actual pier which supported the arch, 12 feet thick and 50 feet long. On a level with the base of the pier was the stone pavement of the ancient street leading along the Tyropœan valley, and lying on this pavement, between the pier and the wall, were the fallen stones or voussoirs of the arch. However, the explorers did not stop here. They broke through this pavement, and digging still deeper a canal or aqueduct was found, together with arch stones belonging to an arch older than the first. Several lamps, weights, and jars were also brought to light, and this at a depth of 45 feet below the present surface. To quote the words of Sir Walter Besant, "It was Warren who restored the ancient City to the World; he it was who stripped the rubbish from the rocks, and showed the glorious Temple standing within its walls, 1,000 feet long and 200 feet high, of mighty masonry; he it was who laid open the valleys, now covered up and hidden; he who opened the secret passages, the ancient aqueducts, the Bridge connecting Temple and town. Whatever else may be done in the future, his name will always be associated with the Holy City which he first discovered." The future has passed into the present. What has been done at Jerusalem since Warren's time?

Practically nothing, if we except such limited work as could be carried on within English territory, as, for example, the tracing of the rock-scarp of Zion in the property of the English School and Cemetery by Mr. Maudslay; or the interesting items of news furnished from time to time by Herr Schick, the Jerusalem Architect.

Early in this year letters were received both from Dr. Bliss and Herr von Schick, reporting the discovery of a Latin inscription at the Cœnaculum, near the Zion Gate. The stone inscribed is built into the wall, and is a votive tablet to Jupiter on behalf of the welfare and greatness of the Emperor Trajan and the Roman people, erected by the Third Legion, which takes us back to the interval between the destruction by Titus and the founding of Cœlia Capitolina.

A DAY IN A CISTERCIAN ABBEY.

MR. MICKLETHWAITE'S ATTEMPT TO PORTRAY THE MONASTIC ROUND.

"A CISTERCIAN Day," in which an attempt was made to picture the ordinary life in a Cistercian Abbey, was the title of a Paper read by Mr. J. T. Micklethwaite, before members of the Royal Archaeological Institute at Scarborough. The great body of the monks, he said, were laymen in the modern sense of the word—that was to say, they were not in Holy Orders. They had priests amongst them to minister to them in spiritual things, just as the secular clergy did to men living in the World, but it was characteristic of the specially monastic services that they might go on without even the presence of ordained clergy. The abbot and a small number of officers under him managed the common property and ruled the house, and where the family consisted, as it often did, of some hundreds of persons, the burden could not have been a light one. Any monk was bound to undertake an office if the abbot imposed it on him. The office of cook was the only one which was laid equally on all in turn. The day and the night were each divided into twelve hours, but they were not of constant length, such as we, whose time is regulated by mechanical clocks, are accustomed to understand by the word. The first duty of the monks was to keep up the regular daily round of services, the *opus Dei*, as they called it, and nothing was allowed to stand in the way of it. At harvest tide, when all joined in the in-gathering of the crops, and at other times when monks were at work so far from the Church as to make the journeys to and fro inconvenient, they might say the offices in the field where they were. The office of the night was that now known as matins; but the Cistercians, using in this, as they did in other matters, the language of St. Benedict, called it vigils. In the winter half of the year, which was reckoned to be from the 1st of November till Easter Day, they rose for vigils at the eighth hour of the night, that was about two o'clock a.m., except on feasts of twelve lessons and a few other days. The office for the dead followed, and after that vigils as the case might be. Such time as remained before dawn was filled up with meditation or reading, lights being placed in the Cloister by the bookcase, and in the Chapter-House, for the convenience of readers. At dawn, on the sign being given by the abbot, the sacrist rang the bell for the return to the Church, and the short office now called lauds, and by the monks matins, was sung. In the other half of the year the hour of rising was so arranged that there should always be a short interval between vigils and matins, which were to be said at daybreak. The service of vigils was somewhat shortened in summer, and the office for the dead was said after evensong, but even then the time of rest was so reduced that to make it up a mid-day sleep or *meridien* was allowed. The reader and those who had served at table dined after the others, but to all those who, by reason of their serving, had to dine thus late, an extra allowance was given on all days except the week days in Lent—and certain other days. In summer, to make up for their want of sleep in the short nights, the monks slept for an hour after dinner. After nones, if there was no supper, they went into the grates, where those

who would might drink. After supper, on supper days, or after evensong at other times, all the monks assembled together in the Cloister, and one of them read aloud either from the Bible or from some other book thought to be edifying. This reading was called collation, a word which had in recent times come to be used as a newspaper term for a cold lunch. After collation all the monks went together to the Church and sang compline, which was the last service of the day, and then went to bed. Such was the ordinary life of the monks, varied only by the season of the year and the alternation of feast and work day. When, from old age or infirmity, the monk could no longer take his part with his brethren, he withdrew from the Cloister to the Infirmary, though still keeping, or being expected to keep, the rule in the spirit. The soul of the dying monk was sped on its way with much solemnity. When the last moment came the dying man was laid upon the floor, where ashes had been strewn in the form of a cross. This was a practice not peculiar to Cistercians or even monks. The abbot himself administered the last sacraments, and the monk died with his brethren praying round him. After mass the body was buried, and for 30 days a special memory of the deceased was kept in Church and in Chapter. His name was entered in the book and read out in Chapter year by year, and at every meal a share of the food was set apart and given to the poor, whose prayers were expected in return. The life of the lay brethren whilst in the abbey was not very different from that of the monks, except that their want of letters made it impossible for them to take their part in the services. The lay brothers worked for the benefit and profit of their house in all sorts of useful crafts, but such as ministered to luxury was forbidden. They were to observe silence generally, smiths only being allowed to speak in their workshops. Other trades had "parlours" outside their shops where necessary talking might be done.

THE Foundation Stone of a new Infant School in connection with St. Mary's Church, Ulverston, has been laid by the Duchess of Devonshire. The School, which will cost £1,800, most of which was raised from the proceeds of a bazaar held in Jubilee year, is built on the site of the old playground, in order to afford additional accommodation required by the regulations of the Department.

SOME interesting pieces of porcelain, collected from various private sources, have been sold at Christie's. The following prices were realised:—A pair of vases, with pierced necks, each painted with birds, 80 guineas; a square-shaped Limoges enamel plaque, with the History of Troya, 85 guineas; an oblong plaque of Limoges enamel, with the Espousal of the Virgin Mary, 90 guineas; a pair of Louis XVI. mottled marble vases, with handles and feet of chased ormolu, 91 guineas; a silver-gilt ewer, the handle formed as a terminal female figure, 72 guineas; a life-size bust of a saint, silver parcel-gilt, 191 guineas.

BALCOMBE is having its share in improvements. The Railway Station has been largely improved, and a Passenger Bridge across the line provided. The Parish Council appears to be anxious to provide a Village Reading Room, and this seems a possible institution in the near future, although a suggested expenditure of £800 on what would be practically a Public Hall, was not at all warmly received at the recent Parish Meeting. Public Halls are certainly not yet wanted in Balcombe, but a comfortable Reading Room and Recreation Room would no doubt be much appreciated.

THE Margate Town Council, at a special meeting held on Tuesday last, decided to offer £2,500 to Messrs. Lewis for a slip of land 100 feet deep, forming part of their Cliftonville estate, so as to widen the popular promenade to the east of the town, leading from the Fort to Hodge's Flagstaff. The question has provoked considerable interest for several months.

It has been estimated that the cost of a Pullman carriage is from £2,000 to £3,500; of an ordinary first-class carriage, £550 to £700; second, £450 to £600; third, £350 to £450; of a coal waggon carrying eight tons, £60 to £70; a waggon carrying ten tons, £70 to £90.

THE CHAPEL OF A MILANESE BASILICA.

INTERESTING MODEL IN EDINBURGH MUSEUM.

THE Chapel of St. Peter Martyr, contained in the Church of St. Eustorgio, Milan, discovered twenty years ago, is now a thing of interest to Architects and decorators. Its exhumation is so recent an event that it is still almost unknown. Until a year or two ago no writers on Painting or Architecture had described it, and it is figured in none of the text books. It is, therefore, fortunate that the model of the Chapel, which has now been placed in the Edinburgh Museum of Science and Art, is on a scale admitting of an exact reproduction of all its details of moulding and ornament and sculpture. This work, which has been executed by Signor Adolfo Consolani, could scarcely have been better done, and the frescoes with their figure subjects have been so skilfully copied by Signor Catani, of Sienna, that the spectator easily forgets that the whole thing is only one-tenth of the size of the original. The Church of Sant Eustorgio, to which the St. Peter Martyr Chapel appertains, is one of the oldest and most renowned of the Milanese basilicas. Founded as early as the fourth century, it had become famous in the eleventh century as the repository of the relics of the Magi, said to have been brought from the distant east by the Empress Helena. Its fame, however, suffered a temporary eclipse when Frederic Barbarossa, after plundering Milan, carried off these much envied relics to Cologne, leaving behind only the sarcophagus in which they had been preserved. But the Church began to gain reputation anew when in 1227 it came into the hands of the Dominicans; and the violent death of one of their number, Friar Peter of Verona, and his burial within its walls, restored to it even more than its former greatness. Milanese nobles and their families, and wealthy worshippers, built those Chapels which now so picturesquely break the line of its southern wall. Of these Chapels that of St. Peter Martyr is at once the largest and the most interesting.

The gift of Pigello Portinari, a Florentine noble and agent of Cosimo de Medici at Milan, this beautiful little Chapel was erected in 1462 by Michelozzo Michelozzi, an Architect of Florence. The building is rectangular, and nearly square in plan. The Chapel proper, which measures little more than 40 ft. each way, may be likened in its general form to that of a cube drawn in at the top corners by a circular band or wall, and surmounted by a cupola. Opening from it is another, but much smaller cubical-shaped chamber, also with a domed roof. This forms an inner Chapel, in which the Altar is placed. The four walls of the principal part are finished by a frieze of cherubs, and are surmounted by arches which span the whole breadth of the wall. Under one of these arches the visitor enters from Sant Eustorgio, and passes beneath another to reach the inner Chapel. The spans on each side are pierced by Gothic windows, the remaining spaces being filled with frescoes illustrating incidents in the life of St. Peter Martyr. The Fathers of the Church are painted within medallions on the pendentives which spring from the corners of the building to support the "drum," on which a beautiful frieze, in high relief, representing a dance of angels, has been sculptured by Michelozzo. From the drum rises the cupola, ribbed in radiating sections, and painted in tones which graduate from red, through amber yellows, to the blue of the upper vault. At the base of the cupola are sixteen lunettes, eight of which are opened by circular windows, others being filled by medallions with painted heads of apostles. Over all is an elegant open-columned lantern with a small surmounting cupola; and four rectangular Towers, rising from the outside corners of the building, complete the construction. Every part of the interior is treated with colour, but some uncertainty still surrounds the identity of the artists. That Vincenzo Civerchio and Vincenzo Foppa both had a share in the work seems certain. They were the leading frescoists of the day, and it is probable that the whole of the painted decoration is from their hands. Facing the entrance over the opening to the smaller Chapel is the large picture of the

Annunciation, treated after the conventional fashion, and with elaborate Architectural background; and on the sidewalls are depicted incidents in the life of the Saint. The tone of the whole colouring of the Chapel is pleasant and harmonious. The dainty treatment of the moving drapery in the Dance of Angels is as happy in its colour as in its form, and the frescoes, apart from their more important interests, afford excellent studies of fifteenth century costume. The seventeenth century brought only misfortune to the Chapel. The taste of the day was no longer that of the "golden 1500." The decorations were too simple, the pictures too tame. They were no longer pleasing to the crowds of fashionable visitors who found comfort within its walls. And so Padre Cuccino "restored and embellished" the Chapel. The frescoes were covered with whitewash, and other scenes were painted in their place; the ornamental carvings were hidden beneath more florid forms in plaster; additions were made to the Altar; and the worthy Father, lest his good deed should be forgotten, had it recorded on the walls, and presented to the Chapel two candlesticks, on which he had inscribed his name, office and date. Thus a highly interesting example of fifteenth century Art was hidden from the World till twenty years ago, when, fortunately, all Padre Cuccino's "restorations" were removed, and no trace left of him except the record of his misapplied zeal, and the two candlesticks, which remain to show his name and date.

ROMAN CARPENTRY.

THE arch not only superseded the use of long tone beams, but it was constantly used in places where indeed joists of wood would have been much more convenient, giving support to the opinion that even the Romans were not skilled in the application of timber to their edifices, though, on the contrary, it is difficult to understand how Rome could become subject to such dreadful conflagrations as that which occurred in the reign of Nero if timber had not been employed in the ordinary houses of the city to a much greater extent than would appear from existing remains. The domestic structures of Herculaneum and Pompeii were evidently never very susceptible of fire from the small quantity of timber required in their construction; and discoveries which are made from time to time of portions of the ordinary houses of ancient Rome under the pavements of the modern city evince that they were very similar to them in almost every particular. The infrequency of stairs, and the meanness of those which exist leading to upper apartments in the houses of those cities, leads to the belief that the Romans seldom built above the ground story, and that their skill in carpentry was not very great, otherwise they would more frequently have had recourse to so easy and convenient a mode of extending room as upper stories offer. There are, however, other things which tend to prove that carpentry was well understood by the Romans, and the most remarkable is the Bridge that Trajan built over the Danube, the piers of which are said by Dion Cassius to have been 150 feet high and 170 feet apart. Now, whether the Bridge itself consisted of a wooden platform, as there is much reason to believe, or was of stone arches, as the historian intimates, the skill which constructed centreing for the latter, or laid the platform from pier to pier in the former case, of that immense extent, was amazing. Nevertheless such skill in carpentry is not evinced by the remains of the civic and domestic structures of the Romans, in which arching in all its variety was used where carpentry would have been better. Of their joinery we know nothing, but it does not appear to have been much practised by them, mosaic pavements supplying the place of flooring, and stucco that of wainscoting; the luxury of windows being unknown, their fittings were not required, and doors, it would appear, were uncommon, except externally, the internal doorways being probably covered with something equivalent to the quilted leather mats suspended from the lintel, which are used instead of swinging doors at the entrance of the Churches in Italy at the present time.

DOMESTIC ARCHITECTURE IN THE MIDLANDS.

AN INSTRUCTIVE ARCHÆOLOGICAL EXCURSION.

MEMBERS of the Birmingham and Midland Institute, Archæological Section, visited Bolsover and Barlborough on Wednesday. A drive of seven miles through a hilly country, dotted over with collieries and election posters, brought the party up a very steep hill to Bolsover, where the party had the permission of Mr. Turner to inspect the Castle. The ancient Norman Castle, at that time in ruins, was granted (temp. Elizabeth) to the Earl of Shrewsbury, husband of Bess of Hardwicke. This lady got it settled on her second son, Sir Charles Cavendish, and built a new house on the foundations of the Norman Keep. The Architect, Robert Smithson, part Architect of Woollaton, seems to have been dominated by the Castle idea, and the house lacks the freedom of design and comfort of many houses of the period. It is now unfurnished, and its most noticeable features are an unusual number of stone and marble chimney-pieces, all projecting like muffles. Several rooms are vaulted like cloisters, and there are in a room, called the Star Chamber, oil paintings of the twelve Cæsars, said to be copies of those in the Star Chamber at Westminster (temp. Charles I.) In the front court are two very elegant iron lamp-brackets, noteworthy as examples of Jacobean ironwork. The house is approached by a handsome flight of steps, and there are terra cotta figures of Hercules and Atlas over the two doorways. Adjoining are the roofless and ivied ruins of a noble building in the style of Inigo Jones, built by a succeeding Cavendish, Duke of Newcastle, for the entertainment of company, and here Charles I. was received by him, and a masque by Ben Jonson performed. Near this is the picturesque Riding School, renowned in the annals of horsemanship. For three generations the estate passed through heiresses, at length resting with the Bentincks (Cavendish Bentincks), and the roofs were dismantled to enrich Welbeck. After a visit to the Church, containing a rare stone carving of the Nativity (15th Century) and two magnificent Cavendish monuments, in an absurdly small Chapel, a pleasant drive past fields of strawberries and of raspberries on the hill top brought the party to Barlborough Park with its old trees and famous avenue. By the permission of Miss De Rodes and by the kindness of Mr. J. Dolling Bolton, the fine Elizabethan house was opened for inspection. This is a house of moderate size, built around a small well or courtyard. The original entrance, facing the avenue, was up an impressive flight of steps to the Dining Hall, but a more convenient entrance has been made at the side through a pretty Conservatory, and the well, covered by a sky-light, gives room for a convenient staircase. Here were seen carved and marqueterie furniture, tapestries, family pictures, fine mantelpieces and fine iron gates.

OVER 70 years ago Joseph Dudley, of Waterford, Maine, conceived the idea of putting a large clock outside his house over the entrance to the place. For that length of time the clock has been running regularly with the original works in it. Neither the rain nor the snow has ever stopped it.

MR. R. H. AMPHLETT, one of the justices at County Petty Sessions, recently called the attention of the chairman (Sir H. F. Vernon) and the clerk to the lack of accommodation at the Droitwich Court, which he characterised as the worst in the country. The magistrates had no retiring room, except through the courtesy of the Borough Treasurer; there was no accommodation for witnesses, the police, members of the Bar, &c. The cells were more like coalholes, and not suitable for the present age. Sir Henry Vernon remarked that at the present time the Standing Joint Committee were trying to keep the rates down, and if new buildings were erected the expenditure would increase. He thought the cells were suitable, and would bear favourable comparison. The Clerk said that as Mayor he would bring the matter before the Town Council.

Professional Items.

BIRMINGHAM.—Plans are being prepared by Messrs. Crouch & Butler, Architects, Waterloo Street, for a large block of buildings in Corporation Street, to be erected for the purpose of a furniture manufactory. The cost of the buildings will be about £10,000.

BLACKPOOL.—The Corporation has accepted the tender of Mr. Robert Finnigan, of Northampton, for £64,870, for the construction of Sea Defence Works at the North Shore, for the Corporation. The plans are by J. Wolstenholme, Borough Engineer.

BLACKPOOL.—Mr. Walton held an inquiry on Tuesday into the application of the Corporation to borrow £33,769 for Public Street Improvements and Sewerage Works, £12,750 for Police Station, £12,000 for Municipal Buildings, £4,989 for Private Street Improvements—a total of £63,508.

BRISTOL.—The Town Council is still considering the desirability of building new Markets. Plans have been prepared showing the properties that must be acquired and the streets which would have to be made around the Markets, if they were built on the Queen Street (Castle Street) site. The Markets would be in two blocks—one in Queen Street and the other facing the National Schools in Marybush Lane.

BURNLEY.—The new Workhouse Hospitals, which are being erected from the designs and under the superintendence of Mr. G. Keighley, Architect, of Burnley, are nearing completion. They are being warmed and ventilated throughout by means of Shorland's double fronted patent Manchester stoves.

CHORLEY-CUM-HARDY.—The Corner Stone of the new South Transept of St. Clement's Church, was laid recently with Masonic rites. The Church itself, which replaced a very ancient structure, was built some thirty-five years ago. A North Transept was afterwards added, and the addition is a replica of it. It will provide accommodation for something over one hundred worshippers, and will cost to complete about £1,500. Of that amount £1,000 has been subscribed. The Architects are Messrs. W. and G. Higginbottom, St. Ann's Street, Manchester.

CRANBROOK.—For the construction of new Waterworks to supply the districts of Cranbrook, Hawkhurst and Goudhurst, tenders will shortly be invited. The works will comprise an Artesian Well, Pumping Station, Reservoir, and Distributing Pipes. The Pumping Station is to be on the high ground near Cranbrook Union, about 2½ miles from the well. The designs are being prepared by Mr. E. P. Seaton, of Prince's Street, Westminster.

DERBY.—Colonel Walter M. Ducat, R.E., held an enquiry at the Guildhall, Derby, on Wednesday, in respect to certain loans applied for by the Corporation of Derby under the Public Health and Electric Lighting Acts. They included the borrowing of £13,000 for Electric Lighting purposes, £8,595 for providing a Recreation Ground, £1,095 for the purchase of property for Street Improvement, and £943 for Sewerage Work and other purposes.

EDINBURGH.—Mr. Hill, Engineer of the Manchester Waterworks, has been appointed to advise as to the construction of the embankment and works for the new Reservoir on the Talla, in order to secure that it shall be sufficiently strong for the public safety.

GOLCAR, YORKS.—At the monthly meeting of the Golcar School Board held recently, it was decided to build new Schools in Royd Street, to accommodate 400 children. Mr. J. Berry, 9, Queen Street, Huddersfield, was appointed Architect.

GRINDELWALD.—The new Anglican Church here was opened on Thursday. The present building has been erected on the site of the first Church (destroyed by the great fire of 1892), which was built by the late Canon Butler. His

friends have presented the new Church with a Pulpit and Reredos in his memory. The cost of the rest of the fabric has been defrayed by the Colonial and Continental Church Society.

HORSFORTH.—The Foundation Stone of a new Vestry for the New Connexion Chapel in Bachelor Lane, was laid on Saturday by Mr. R. Cockroft, of Bradford. In addition to this new Vestry there are to be several structural alterations in other parts of the Chapel, plans for which have been drawn by Mr. W. Walter, and the estimated cost of the whole is about £300.

ILFORD.—Messrs. Christy, Cropper, and Wollard have been asked to prepare designs for an Infectious Diseases Hospital, which is to be erected by the Urban District Council.

KIRKCALDY.—From plans by Messrs. Dunn and Findlay, of George Street, Edinburgh, new Halls, &c., to be called the Beveridge Hall and Library, and Adam Smith Hall, are to be built at Kirkcaldy, N.B.

LIVERPOOL.—At the Consistory Court, held on Tuesday, permission was granted to build a Tower in the South Transept of St. Paul's, Widnes, up to the level of the Church roof, and to construct an Organ Chamber, with Organ, in the Tower. The cost of the projected work is £1,700, for which £1,300 is already subscribed. The cost of completing the Tower will be £1,000 additional.

LIVERPOOL.—An enquiry is to be held at the Municipal Offices with regard to the application of the City Council for sanction to borrow £35,000 for the erection of a new Central Fire Station and Police Buildings. It is also proposed to erect new Church Schools at Halebank at a cost of £2,500.

MACCLESFIELD.—A new Wesleyan Chapel is being erected at Kerridge, at a cost of £1,123, by Mr. J. Clayton, builder of Macclesfield, from plans by Mr. E. Jones, Architect, of Hanley.

MERTHYR TYDFIL.—Mr. P. R. A. Willoughby, Engineer and Surveyor, has been selected from 83 applicants for the post of Assistant Surveyor to the Merthyr Tydfil District Council.

OBAN.—Operations in connection with the proposed Tower on the hill above Battery Terrace have already begun. The building, which is to cost about £6,000, is to be handed over by Mr. J. Stuart-M'Craig, banker in Oban, as a gift to the town. The design is also to include space for a Museum, but it is considered by many that the placing of such a desirable institution as this latter on the top of a high hill would be somewhat of a mistake.

PENRITH.—At a meeting of the Penrith Rural District Council, held on Tuesday last, Mr. Jackson's tender was accepted for the Ousby Waterworks, which have been designed by Mr. E. A. Sandford Fawcett, of 1, Victoria Street, Westminster. It was also decided to apply to the Local Government Board for a loan to carry out the Melinerby Waterworks, for which Mr. Fawcett is also the engineer.

RICHMOND, SURREY.—On Wednesday afternoon the Foundation Stone of the Technical Institute and Secondary School now being built in Selwyn Avenue, Richmond, was laid by the Duke of Cambridge. The premises will cost, when completed, £6,467. The portion now being erected will cost £4,626, towards which the Richmond Town Council contributes £1,250, and the Department of Science and Art £650, leaving the balance to be obtained from the County Council and subscriptions. Chemical and Physical Laboratories, a School of Art, Class Rooms for Carpentry, Carving and Plumbing are all included in the portion now to be erected. This will be one of a series of new technical buildings erected or being erected by the County Council in the seven principal towns of the county, at a cost of over £20,000, supplemented by votes of nearly £6,000 from local rates or subscriptions. Messrs. Fryer & Barr, of Queen Anne's Mansions, Westminster, were the Architects.

SKIPTON.—The Water Street Wesleyan Chapel has just undergone considerable improvements in the erection of a fine Organ by Messrs. Harrison and Harrison, of Durham, the enlargement of the Choir Gallery, the introduction of a Rostrum, and the thorough renovation of the entire building. The cost has been about £700.

TORQUAY.—The Promenade Pier was formally opened on Tuesday by the Mayor. It is constructed partly upon the inner arm of a concrete groyne and partly upon timber piles screwed into the sea bed. The total length is 930 feet. The width of the first 750 feet is 30 feet, but it then widens out to 60 feet. The decking, which is of close-jointed pitch-pine, rests upon cross and longitudinal latticed iron girders. Ornamental seating runs the whole length of the structure on both sides, and the Pier is lighted with 56 gas lamps. At the outer extremity are three landing stages for steamers—one each for high, medium, and low tides. A broad flight of steps leads from the Pier on to the outer arm of the groyne, which is available to promenaders. The Pier is approached from the Princess Gardens by means of a curved inclined deck. The contract (£9,971) has been carried out by Mr. Alfred Thorne, of London. The Pier was designed by Mr. H. A. Garrett, borough surveyor.

TRENT.—For a considerable period there had been a general outcry with regard to the insufficient accommodation at the old and time-worn structure on the Trent side, and eventually the members of the Public Baths Committee of the Corporation succeeded in inducing the Town Council to sanction the expenditure of about £1,000 on the rebuilding of the Baths. The work has been excellently carried out by the contractors, Messrs. W. H. Raynor & Sons, who have been engaged since February last in the task. The new structure, which was formally opened on Thursday, has a framing of wrought iron and a roof of corrugated iron. There are two concrete platforms, one a little higher than the other. On the whole, the improvement upon the old building is distinguishable in many respects. Mr. A. Brown, borough engineer, is responsible for the carrying out of the work.

WAKEFIELD.—On Wednesday was dedicated a new Vestry and Chapel, which have been erected in connection with Sandal Parish Church, near Wakefield. The new structure, which is substantial and commodious, has been built by Messrs. Denholme and Co., contractors, Wakefield.

WATFORD, HERTS.—At a meeting of the Watford School Board, held on the 22nd inst., designs in competition for the new Fearnley Street Schools were fully examined, when that submitted by Mr. C. P. Ayres, Architect, of Watford, was selected. The new School will accommodate 1,020 children, and will be erected on a site at the top of Fearnley Street, recently purchased from the Earl of Essex, and containing one acre. The approximate cost is £10,200.

WHITLEY.—The Foundation Stone of the Hall and Sunday Schools in connection with the proposed new Presbyterian Church, at Whitley, is to be laid by Sir George B. Bruce, tomorrow. The cost of the whole site, together with the contemplated buildings, will be upwards of £2,000.

YSTALYFERA.—New Schools have recently been completed, and form in themselves what might be called a "Model School." The accommodation is for 80 Boys and 40 Girls. The Schools have been arranged so as to afford every convenience coupled with economy. For the boys, Chemical Laboratories, &c., are provided; and for the girls, Cooking Class Room, Music Rooms, &c., besides the usual Class Rooms, and a large Assembly Room. The plans were prepared by Messrs. Wilson & Moxham, Architects, Swansea, and were approved by the Glamorganshire County Council and the Charity Commissioners.

SOCIETY MEETINGS.

South Staffordshire and East Worcestershire Institute of Mining Engineers.—About twenty of the members of the South Staffordshire and East Worcestershire Institute of Mining Engineers recently paid a visit to the James Bridge Steelworks of Messrs. F. H. Lloyd & Co., and the Generating Station of the South Staffordshire Tramway Company. The party was personally conducted over the works of the first-named company by Mr. J. W. Hall and Mr. J. Heming, two of the directors, who, in the fullest manner, explained all the processes, and submitted special test pieces and records. Several large orders in course of execution were seen, and much surprise was expressed to find that cast steel could be applied to so many uses, as well as gratification that a South Staffordshire firm had brought the system of casting in steel to such a pitch of efficiency. Afterwards the party inspected the Generating Station, under the guidance of Mr. A. Dickinson, engineer and manager, who stated that his overhead electric traction system extended for eight miles, and he explained the arrangements which had been made to overcome objections and difficulties.

Somerset Archæological Society.—The forty-seventh annual meeting of this Society was held at Bath last week, and extended over three days. The proceedings opened on Tuesday, when Mr. H. D. Skrine, this year's president, took the chair at the annual meeting at the Royal Literary and Scientific Institution, which has been chosen as the head quarters of the Association during the meeting. Mr. F. T. Elworthy read the report of the Council, which stated that the Society numbered 569 members, though the balance in hand had been reduced to 17s. 2d., against £49 4s. 2d. the previous year. Nineteen new members were elected, and Mr. E. B. C. Trevellan (retiring president) and the Bishop of Bath and Wells were added to the list of vice-presidents. The President's address, which was of considerable Archæological interest, dealt with the occupation of Hampton and Claverton Downs just outside Bath by the Belgic conquerors of the South of England. In the evening a meeting was held at the Literary Institution for papers and discussion. The Dean of Wells (Dr. Jex Blake) presided. Rev. Canon Church read some interesting notes which he had made on the cartulary of the Priory of SS. Peter and Paul, Bath. Rev. T. S. Holmes gave a paper written by Bishop Hobhouse on a map of the Forest of Mendip. An excursion was made on Wednesday to Great Chalfield Church and Manor House, Bradford-on-Avon parish Church, and the Saxon Church at Bradford; the Bridge Chapel, Kingston House, and the fourteenth-century barn having been viewed, Westwood Church and manor house, Hinton Abbey, Charterhouse Hinton, were also seen. On Thursday the first place visited was Chapel Farm, Lansdown, viewing the site of the battle of Lansdown, the camps, and the monument of Sir Bevil Grenville, thence to Cold Ashton Church and Manor House, and on to Marshfield Church. The party then proceeded by Bannerdown and Batheastoo, to Claverton Manor, and the camps in the neighbourhood.

Sheffield Junior Engineering Society.—A meeting was held on Friday night in the Engineering Lecture Room at the Central Science School, when a paper was given by Mr. H. J. Kuypers on propeller bosses, Mr. Eclair Heath, Whit.Sc., in the chair. The Lecturer gave a very interesting account of the manufacture of bosses, and showed by means of slides how accurate work could be turned out of shops with apparatus designed for the purpose of boring, turning, facing, scraping, &c. He also emphasised the necessity of careful work required when fitting on to the shafts of steamers. In the discussion that followed, Mr. Eclair Heath gave some useful information in reference to keying on of propellers and propeller work generally.

The Birmingham Association of Mechanical Engineers.—A party of members of the above Association recently paid a visit of inspection to the Saltley Gasworks. They were received by Mr. H. Hack (chief engineer), Mr. Morrison and Mr. Giles, the

latter of whom is a member of the Association. The party took a great interest in the novel mechanical arrangements which have been introduced into the works.

The Birmingham Architectural Association.—The second annual sketching excursion of this Association is to be held at Ludlow and the neighbourhood on the 3rd, 4th, 5th, and 6th of next month. The number is to be limited to twenty, and photographers are requested to bring their cameras. Messrs. Charles E. Bateman and Herbert T. Buckland are the hon. secretaries.

SAWDUST.

THE death is announced of Professor Charles Cardale Babington, M.A., F.R.S. He was born at Ludlow in 1808 and educated at St. John's College, Cambridge. As an antiquary he is known by his "History of the Chapel of St. John's College, Cambridge," by his "Ancient Cambridgeshire," and by various contributions to "Antiquarian Transactions."

THE east-end exterior of St. Nicholas new Church, Shaldon, has been considerably improved by the erection of a wrought-iron foliated Cross, about six feet high.

IN Greene County, Tennessee, is a very beautiful Cave. The entrance is in the side of a ridge, about midway between the summit and the base, and merely a hole about five feet square. From the entrance is a long, narrow slope, leading into a subterranean chamber, with groined roof and well-turned arches, and numbers of stalactites and stalagmites. Narrow passageways connect this chamber with a number of others, in one of which is "Pompey's Pillar," a column about 20 feet high and two feet in diameter, which glitters like a cluster of gems in the torchlight.

A NEW Fire Station is to be built at Islington, on a site of which 42, 43, 44, and 45, Florence Street, Islington, form part.

THE new Horfield Baptist School-Chapel, Bristol, was opened on Thursday. The site for the new Chapel and School was secured through the Bristol Baptist Union, and the Committee thereupon entered upon the present large and comprehensive scheme, the total cost of which is estimated at about £6,000. A start has been made by building Schools and Vestries, involving an outlay of about £2,000, and in due course, the remainder of the scheme will be proceeded with. The School building will seat 500, and is provided with a Baptistry, being intended to serve the double purpose of Chapel and School until the Chapel is erected.

THE Bellahouston Trustees have offered to give to the City of Glasgow the Bellahouston Estate at what is, in the circumstances, the nominal sum of £50,000. The conditions attached to the offer are that the Estate, which extends to about 180 acres, should be converted into a public park for the use of the citizens, and that the park should be named the Bellahouston Park.

THE alterations at the Loughborough Workhouse are to be carried out by the Board of Guardians at a cost of £738.

FOR the erection of a new Workhouse, Doncaster, the Local Government Board has sanctioned the borrowing by the Board of Guardians of £6,350.

THE Rawtenstall Town Council proposes to spend the sum of £4,000 for a new Fire-engine Station, Stables and Fire-engine.

DIBDIN'S House at Hanger Hill, near Ealing, has been put up for sale and withdrawn. There was no offer that came near the reserve price. At another time such a chance would be most eagerly embraced, but a good many desirable properties are still on hand in the inability to find customers for them.

THE Department of Science and Art has received information through the Foreign Office that an Industrial Exhibition is to be held next year at Berlin.

It has been decided by the Darlington Board of Guardians to ascertain the cost of building new offices with a Board Room attached, allowance being made for what the present offices of the Board would realise.

SIX Memorial Stones have just been laid of an enlargement of the Antley Wesleyan Chapel and School premises, Accrington, which is to cost about £3,000.

A RISING young Architect—Mr. Bell, of John Street, Bedford Row, formerly with the late John D. Sedding and T. G. Jackson, A.R.A.—made a successful ascent of the snowy summits of the Well and Wetterhorn on the 10th, and beyond a slight mishap on the Rosenlani Glacier—which might have been more serious, and only ended in losing a few sketches down a crevice—Mr. Bell is none the worse for the adventure. The Wetterhorn was first ascended by the late Professor Tyndall and later on by Edward Whymper, and is considered a difficult climb.

THE Felixstowe and Walton District Council proposes to make application to the Local Government Board for sanction to borrow £1,700 for the purchase of land and cliffs for laying out and improving the land, and for the provision of Lavatories, Shelters and Cloak Rooms.

THE Duke of Newcastle on Tuesday laid the Foundation Stone of St. Catherine's Church, St. Anne's Well Road, Nottingham, which is being built at a cost of £6,000 to replace a temporary iron structure.

THE Earl of Dunmore has just purchased for £35,000 a farm near Johannesburg. He is so impressed with the general prospects of the country that he purposes building a large house on the farm and taking his family out from Scotland to reside there.

A NOVEL sort of window-glass has been invented. Persons on the inside of the house can see through it, but it is opaque to those on the outside.

THE Church at Easington, County Durham, which has been closed for nearly twelve months for the carrying out of improvements, was re-opened on Wednesday by the Bishop of Durham. The total cost of the improvements is over £3,000.

THE Queen has just received a quaint and original birthday gift from India. It is the life of her Majesty written in Hindustani. The biography is produced on a huge scroll, and the curious feature of the work is its design. At first sight it resembles a fanciful pen and ink sketch of a majestic tree, but on a closer examination the student of Hindustani may read the biography of the Queen up the trunk and along the branches. The penmanship is remarkably fine, and is said to have been the result of more than a year's labour.

THE formal opening of the new access from Bell Place, Glenogle Road, to Inverleith Park, Edinburgh, took place last week. At an expenditure of something like £600, the Corporation has constructed a rustic Footbridge of a substantial character over the water of Leith, and laid out a path along the north bank of the stream, which, on crossing the main thoroughfare, takes the passenger into Inverleith Park. This should be a great boon to the residents in the locality.

AFTER ten years' work in temporary buildings, the authorities of the Cambridge Training College for Women Teachers have been able to erect large and handsome College buildings by means of a grant from the Pfoiffer bequest and voluntary subscriptions. The new buildings will be formally opened on October 19th.

It has now been practically settled that the chief sensation of the Paris Exhibition of 1900 will consist of a new Bridge over the Seine 100 metres broad, and with Houses, Theatres and Monuments on either side of it, like the Pont Neuf in olden days, not to mention old London Bridge. It will span the Seine from the Champs Elysées to the Invalides.

It is not often that the foundation stone of a public building is "laid" twice. Such was the case on the occasion of Princess Beatrice's visit to Hackney. So anxious were the masons of the Free and Parochial Schools to see the work completed, they had actually lowered the stone into position before the Princess had performed the necessary offices prior to declaring it to be "well and truly laid." There was, therefore, nothing to be done but to raise the stone again.

At the Old Town Hall, Morley, on Thursday last, Colonel John Ord Hasted, R.E., representing the Local Government Board, held an inquiry into an application by the Morley Town Council to borrow the sum of £42,000 for purposes of water supply.

The Builders' Journal COMPETITIONS.

No. 5.—A Cottage Hospital.

Designs are required for a Cottage Hospital on a Corner Site in a County Town. Provision must be made for twelve beds (six women and six men), with Matron's and Superintendent's Apartments, Convalescent Room, and all necessary domestic and sanitary accommodation. A sum of three thousand pounds may be expended on the building and terrace. Designs to reach the Editor not later than Monday, August 26th, 1895.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Publishing.

The terms for free post Subscription to any part of the United Kingdom are SIX SHILLINGS AND SIXPENCE per annum by half-yearly or annual prepayments.

Advertising.

SITUATIONS WANTED, SITUATIONS VACANT, PARTNERSHIPS, APPRENTICESHIPS.
Per line, Sixpence. Minimum charge, Eighteenpence.
Three Insertions for the price of Two.
Prepayment in the above Advertisements is absolutely necessary.

Page or Paragraph Announcements, Trade Advertisements.

Prices on application.

Small Advertisements for current week's issue are received up to first post Monday morning inclusive.

Editorial and Publishing Offices:

Talbot House, Arundel Street,
Strand, W.C.

MAJOR RUCK, R.E., and Dr. Tyndall, from Netley Hospital, recently visited Ipswich for the purpose of officially inspecting the Hermite Electrical Installation now used in the treatment of the Ipswich sewage. The visitors, under the guidance of Mr. A. E. Cooper (of the firm of Pattison & Cooper, the engineers) thoroughly entered into the details of the process, and took practical observations upon the results of the treatment, expressing their high appreciation of the system of dealing with sewage.

For the building of the Jungfrau Railway 9,000,000 francs will be required. Plans for the first section of the railway are finished, and it is supposed that next month the laying of that portion of the line from Scheidegg to Eigergletscher will be begun, and in three months be nearly completed. In view of the undertaking of the building of the Jungfrau Railway, artists in all branches of Art are busy with views of the neighbourhood of the Jungfrau group of mountains for the Geneva National Exhibition.

Trade and Commerce.

The National Opalite Glazed Brick and Tile Syndicate, Ltd.—We are asked to state that this firm has removed from 142, Charing Cross Road, to Ethelburga House, 70-71, Bishopsgate Street Within, E.C.

Messrs. Colls & Sons.—A fire of an alarming character broke out at a quarter to three o'clock on Friday morning, at 5, Coleman Street, upon the premises of Messrs. Colls & Sons, Builders. The earliest arrivals at the scene found that the entire upper portion of the premises was blazing fiercely, while the mischief was spreading to a second building of three floors, 90 feet long and 30 feet wide, which was used as Showrooms, Offices and Workshops. At three o'clock the fire was at its height, and was illuminating half London. The entire workshops of four floors were blazing from top to bottom with tremendous fury, and the fire seemed likely to be of a most lasting and troublesome description. Six steamers and several of the powerful City hydrants were brought into use, and the firemen worked very arduously to prevent a serious extension of the mischief. One of the buildings most seriously threatened was an unoccupied structure in Basinghall Avenue, owned by the Draper's Company; but this the firemen succeeded in saving. Messrs. Colls' Workshops were eventually gutted, and considerable damage was caused to the second structure. The office portion of Messrs. Colls' building was saved, and work will be promptly carried on in adjoining premises.

W. & T. Avery, Limited.—The first meeting of the shareholders in the new Company, Messrs. W. & T. Avery, Limited, carrying on the well-known scale and weighing machine manufactories at Birmingham, Glasgow, London, &c., has just been held in Birmingham, Mr. W. B. Avery presiding. The directors' report, which was approved, showed a net profit on the nine months, since the new Company took over the business, of £7,369 and recommended payment of dividends of five per cent. on the preference and ordinary shares. These will absorb £2,125. The preliminary expenses, £1,041, were ordered to be written off, £1,500 to be placed to a debenture redemption fund, and £2,702 to be carried forward. It was stated that the Company had acquired the once famous Soho Works from the Trustees of James Watt & Co., and intended to concentrate there the whole of their business, and that the expense of this removal had influenced the directors in not recommending a higher dividend than five per cent.

A Trade Union Dispute.—In the Queen's Bench Division, on Thursday, Baron Pollock and a special jury had before them the case of Wright & Co. v. Hennessey. This was an action brought by Samuel Wright & Co., fibrous plaster manufacturers, carrying on business at Hackney, to recover damages from the defendant, Samuel Hennessey, organising secretary of the National Association of Operative Plasterers, for alleged libel and maliciously inducing and endeavouring to induce persons to break their contracts with the plaintiffs and for an injunction restraining the defendant, his servants and agents, from inducing or endeavouring to induce Messrs. Colls & Sons to break a contract made with the plaintiffs in respect of work for and at the Pavilion Theatre, Whitechapel, from inducing Messrs. Colls' men to go on strike, and from inducing any persons from employing or making contracts with the plaintiffs. The defendant generally denied the plaintiffs' allegations, and pleaded privilege. The plaintiffs' case was that they manufactured fibrous plaster at their works and then employed labourers to fix the moulds, &c., on the buildings, this being work on which, they contended, it was not necessary to employ plasterers. The defendant's Union, however, maintained that members of the Union should be employed to do the work.

London County Council v. J. Sanders.

—At the Marylebone Police Court John Sanders, a builder, of 49, Lisburne Road, Hampstead, was summoned by William Smallpeice, District Surveyor for East Hampstead, for using mortar the ingredients of which did not conform to the requirements of the by-laws of the London

County Council. The evidence was that the defendant was the builder of a house known as 5, Constantine Road, Hampstead, in the erection of which he had used mortar which was deficient in lime to the extent of fifteen degrees. Mr. Nimmo, for the defence, admitted that his client had committed a technical breach of the by-law, but contended that similar mortar had been commonly used in the Metropolis for years past. He added that if the prescribed amount of lime was used the mortar would set too quickly. A specialist called for the defence stated that the mortar used was good enough for "speculative building," but it was not "high class." The magistrate, having remarked upon the absence of any professional gentleman to conduct the case for the London County Council, observed that the defendant's own witness had damned the case by his faint praise of the article used. It was clear that it was not up to the standard which the public had a right to expect. The public were absolutely at the mercy of the builders, and if they used inferior mortar it was nothing less than a fraud upon the persons who took the house. He imposed a fine of 40s. and 23s. costs.

The Building Trade.—The London Building Trades' Federation recently celebrated the third anniversary of its formation in Hyde Park. Immediately after the signing of the agreement with the master builders in 1892, which until last month governed the conditions of work in the building trade within a twelve-mile radius of Charing Cross, steps were taken to bring about a federation of all the trade unions in the building trade. So far, the attempt has been very successful, and the twenty-four unions now belonging to it have some 38,000 members in the London area. The general uneasiness which has characterised the building trades since the 1892 agreement was abrogated, gave additional interest to yesterday's proceedings, which were, however, spoiled by the wet. Still, there was a brave show of banners on the Embankment when at three o'clock the procession marched off to the Park. Most of the unions federated were represented by their bands and banners, including the gasworkers, the navvies, and the other unions of bricklayers' labourers, the four unions of carpenters and joiners, the two unions of operative plasterers, the operative bricklayers, and the plumbers. There were two platforms in the park, at one of which Mr. Joseph Verdon, the secretary of the London Building Trades' Federation, presided, and Mr. Stevenson, the secretary of the United Builders' Labourers Union, at the other. The following were the two resolutions which were put and carried from each of the platforms:—(1) That this meeting of building trades workers considers that the action of the Central Association of Master Builders in terminating the agreement entered into in 1892 is both unnecessary and uncalled for, and if persisted in can have but one effect, and that the total disruption and dislocation of the building industry; and this meeting pledges itself to resist to the utmost any violation of the said agreement. (2) That this mass meeting of the workers employed in the building trades considers that the time has arrived when active steps should be taken to secure the direct representation of the building trades upon all local and municipal bodies, and pledges itself to use all legitimate means at its disposal to carry the same into effect; and it further resolves not to support any candidate for such bodies, who is not pledged to vote that trade union rates of wages and conditions of work shall be observed on all contracts."

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

BOURNEMOUTH.—For the making-up of Firs-terrace and other paths with as-halte and tar paving, for the Corporation. Mr. F. W. Lacey, Borough Surveyor, Bournemouth:—

Asphaltic Limestone Concrete Co., Ltd., Queen Victoria-street, E.C.4.	£171 18 0
The Mendip Granite and Asphalt Co. (for part of work only)	82 16 4

* Accepted.

Courtney and Fairband	900 6 0
Leney, Henry, Penge (accepted)	899 0 0

LONGRIDGE (LANCS.).—Accepted for the construction of 2,500 yards earthenware pipe sewers, for the District Council. Mr. Theo. S. McCullam, C.E., 4, Chapel Walks, Manchester :—

MORPETH.—Accepted for the erection of a villa-residence at Morpeth, for Mr. John Paton. Mr. Geo. Reavell, junr., architect, Alnwick :—

	For House.	For Boundary Wall.
R. Carse and Son, Amble	£1209 10	£109
MOTtingham (KENT).—For building five houses at Mottingham, near Eltham, Kent. Messrs. Logsdail and Beale, architects and surveyors, New Eltham, S.E. :—		
Toms	£3,275 0 0	
Larke and Sons	2,870 0 0	
Jerrard and Son	2,700 0 0	
Rider and Son	2,465 0 0	
Webber, A. A.	2,300 0 0	

NANTYLO (MON.).—For additions to school buildings, Garnvach, for the Aberystroth School Board. Mr. Geo. Rosser, architect, Victoria-buildings. Quantities by Mr. R. L. Roberts, Newbridge, Abercarn, Mon. :—

Richards, A.	£1,285 0 0
Wilkins, G. H.	1,178 0 0
Newby, E. C.	1,149 0 0
Hatherley and Carr	1,095 0 0
Davies Bros.	1,000 0 0
Morgan, J. T.	950 0 0
Jenkins, Jno., Brynmawr (accepted)	862 15 0

NOTTINGHAM.—For the construction of a new road at Bulwell, for the Corporation. Mr. Arthur Brown, C.E., Borough Engineer, Guildhall, Nottingham :—

Vickers, J. H.	£9,200 0 0
Baker and Sons	8,955 17 5
Hawley, J., and Son	8,171 11 5
Tomlinson, J.	7,950 0 0
Smart, Thos.	7,825 0 0
Logan and Hemingway, Mansfield-road, Nottingham (accepted)	7,769 4 0
Hodson and Sons (withdrawn)	6,900 0 0

OSWESTRY.—For the erection of four houses, Ferraers-road, for Mr. Tom Leake. Mr. F. H. Shayler, architect, 33, Willow-street, Oswestry :—

Howells	£1,846 6 0
Davies, E.	1,759 0 0
Southern, W. W.	1,500 0 0
Thomas, W. H.	1,393 10 6
Evans and Felton, Oswestry (accepted)	1,389 10 0

PENZANCE.—For the construction of a sea-wall at the western promenade, for the Corporation. Mr. George H. Small, Borough Surveyor, Public Buildings, Penzance :—

Shaddock, J.	£13,500 0 0
Stephens, W. H.	11,075 0 0
Lang, J. C. and T. A.	10,600 0 0
Shellabear, George	10,200 0 0
Carkeek, A., Redruth (accepted)	9,866 0 0

PENZANCE.—For additions to Wesleyan school, Mr. J. W. Trounson, Architect, 27, Clarence-street, Penzance :—

Burnet and Trounson	£674 17 6
Burnet and Son	648 10 0
Walters, Rd.	654 12 6
Ford and Son	612 14 0
Trounson and Trythais, Belgravia-street, Penzance (accepted)	634 0 0

SPALDING (Lincs.).—For the erection of offices and shops in the Sheep Market, for Mr. Banks. Mr. William Jephson, Architect, 11, St. Thomas's-road, Spalding :—

Levesley, William	£865 10 0
Perkins, J. W.	557 10 0
Watson, C. A. (accepted)	490 0 0

[All of Spalding.]

STEVENAGE.—For the erection of new farm buildings at Stevenage, Herts. J. Randall Vining, architect and surveyor, 89, Chancery-lane, W.C. :—

Lawrence, W., and Son, Datchworth	
Stevenage	£1,707 3 6
Black, A., and Son, Forest-hill, London	1,610 0 0
Miskin, C. St. Albans, Herts	1,595 0 0

Professional Jealousy.

It wants someone versed deeper than we pretend to be in the extraordinary animosity shown by one section of the public Press to the conductors of another section, to discover the reason that no mention is ever made of the generosity of Mr. Passmore Edwards. As no competition exists between newspaper proprietors in the personal advance of charitable objects in which they themselves are the prime financial movers, the universal neglect to give a little passing credit to a creditable individual, is more strongly marked than it otherwise would be. Perhaps conscience makes cowards of them; perhaps their own hearts strike them dumb; perhaps there are reasons too deep for our penetration; but be these things as they may, here is one of their number daily spending large sums upon Free Libraries, Cottage Hospitals, and kindred institutions, and not a single "chirp" comes from his fellows in approbation of his splendid work. There is something radically wrong in the state of Denmark, for Mr. Passmore Edwards is distinctly a man worthy of better treatment. The income derived from his three principal publications, the *Echo*, the *Building News*, and the *English Mechanic*, must be very large, and we contend it to be a noble thing to devote the greatest portion of that income towards the establishment of institutions which shower lasting blessings upon one's fellow men. The Caxton Convalescent Home at Limpsfield, but recently completed, and not yet publicly open, is an instance of his generosity. For years the Committee of the Caxton Convalescent Home made repeated applications to printers and newspaper proprietors for subscriptions to build a Home for the particular benefit of the printing and allied trades. As many of these proprietors have made enormous fortunes out of printing and newspapers, it might have been expected that they would have

cheerfully responded to the appeal. They did not. But Mr. Edwards did; he, furthermore, undertook, solely at his own cost, to build the Home, although he declined the honour of laying the Foundation Stone for fear of "chilling the zeal of some newspaper proprietors and Press writers." The building being complete, the donor last week was requested to "open" it, and in again declining any function but that of having dipped his hand deep into his own pockets to provide the entire costs of the contracts, Mr. Edwards deemed it in the

there are thousands of disinterested individuals who will remember his noble generosity and keep that remembrance green

Art in the Service of Religion.

"We had left behind us the unhappy days when men were content to dwell in Palaces and worship God in Barns," said the Archbishop of York at Lichfield last week. There had been a dedicatory service in the Cathedral, and Dr. Maclagan was back in his old diocese. Yes, we have certainly left behind us the days when men, speaking generically, ever dwelt "in Palaces," if, indeed, *men* ever dwelt therein, which we question. Ten minutes by rail in and out of any one city will convince you, if you need convincing, that men are now content with rectangles and a plain roof. Round the heart of each city a great layer of soulless block-building lies, choking and throttling the light of day and all human aspiration, until the suburban villa breaks in, with its all too trim strippy garden growing ten feet high Sunflowers, or ten pennyworth of Stocks. In leaving our "palaces"—we should like to ask the Archbishop what epoch in the country's history he has studied?—we have certainly tumbled into the jail of the jerry builder; these weary, close-fisted buildings, all red and hot to the eye, and signifying nothing save pounds, shillings and pence. We worship in fine and lordly fabrics, as is right and reverential, but why—*why*, we repeat, do we bestow all our Art upon the ecclesiastic side of Religion; throwing up a tower here or a transept there, in the puerile belief that by this means you exalt and purify the slum? Church after Church seems to us (and we are all too familiar with the congestion of the large towns in England and abroad) but as the wreck, the hull, of a once proud vessel, battling against wind and weather, time and tide. The cohorts of the common-place are around, and a beautiful

WROUGHT IRON GRILLE: DESIGNED BY ROMAINE-WALKER AND TANNER.

interests of the Institute that someone else should perform the ceremony. "The 'policy of silence' shown towards me by the London Press," he writes, "when I take a prominent part in commencing or opening institutions I may have provided for human benefit, might, if I complied with your request to open our Caxton House, militate against its prosperity. When it is opened for the special benefit of London printers, it is hoped that London newspapers will give it becoming publicity. Whether they do or not, Mr. Passmore Edwards may rest assured

Church but emphasises, like a bas-relief, the vulgar, the sordid, the surrounding mean. There is—we are prepared to argue it against prelates—a *Domestic* side to Religion; it has its analogy in Domestic Architecture; roughly speaking, it is Home. We want the Home extolling from our pulpits; the ceaseless cry for the Beatitudes should begin there. The tendency is all too strong towards demarking more and more the spiritual from the temporal, and the Archbishop of York would have done well to tell his hearers that you can worship in a building wherein you *happen also to dwell*. In the fierce days of Christianity, God was worshipped "in barns"—the religion of Christ began beside the manger—and worshipped there with a strength and a sublimity that is lacking in these days. One great and mighty fane—splendid as it is, a heritage as it is in our belief—is not leaven enough for the lump of a large and squalid city. We want Religion and Art to ally themselves in the common ground of daily life, a rough meeting place, a battle ground, certainly; but no fight could be finer than these on the one hand and the depressing Utilitarianism and dangerous Unidealism of the Hour upon the other. A little Domestic Art—and Architecture; yea, even Religion. A Cathedral makes a fine watch-tower, but you must have also the battlements and the fortresses of your City. If Religion would be a real power it must buttress and fortify itself in the homes, not in the Minsters, of the land.

New York "licks" Civilisation! Recently the Legislature of the New York State appointed a Committee to inquire into the condition of the tenement houses. It included many public men of the highest repute, among them Mr. Richard Watson Gilder, the editor of the "Century" magazine. The Committee drew up a number of recommendations which subsequently became laws. Small parks and public playgrounds were established on the overcrowded east side of the City. The number of sanitary inspectors was increased, and a sanitary police specially organised. Light and air were let into the stifling basements. Due safeguards against fire were provided in existing tenements. Owners of insanitary property were rendered personally responsible for its condition. Regulations were made for the improved construction of future dwellings, and, in short, the whole subject was dealt with on the principles of humanity and of common sense. The Committee found a fearful state of things when they began their inquiry. New York beats creation in density of population, in the whole area below the Harlem. The rate is, or was, 143 persons to the acre. In parts, of course, matters were ever so much worse. The Eleventh Ward measures 32 acres; and on every acre there were, in June last, 986 souls. Bombay has but 759 to the acre in its most forlorn slum. The Josefstadt of Prague, which is about our highest possible in Europe has but 485 to the acre. The tenement houses burn like paper when they catch fire. They often catch fire, and their miserable inhabitants are roasted wholesale. Many of these people are foreigners; no other city in the World has so large a foreign population. Nearly half the number of New Yorkers, at the time of the census of 1890, were foreign born. That America "licks creation" is a time-worn boast; we would suggest that "Civilisation" be nearer the mark.

It is telegraphed from Cape Town that Parliament has passed the Bill for the construction of a railway to connect the southern and western parts of the Colony with the eastern frontier.

ENGLISH & FRENCH CATHEDRALS.

A CONTRAST.

ENGLISH Gothic Architecture as shown at its finest in our Cathedrals, was treated somewhat cavalierly some years ago by Professor Moore, of Harvard, who thinks that we never caught the full meaning of Gothic Art. An article in the *Atlantic Monthly* for August, in which an American Architect contrasts the Cathedrals of England and France, shows that all Professor Moore's professional colleagues do not share his indifference to Gothic outside France, where "alone do we find the whole structure of a Cathedral and fully organised and visible framework which the wealth of applied ornament only serves to emphasise." Mr. Peabody, the writer, of course notices that the apsidal east end of a Cathedral is almost unknown here save at Westminster Abbey, though Norwich, Peterborough, Lichfield, and Canterbury have circular ends, while, on the other hand, the square east end, almost universal in England, is found abroad only at Laon, of which we recently gave a description, and a few lesser places. Then, again, the English Cathedral is low and long rather than narrow and lofty in its proportions. The splendid Western Front at Wells is 31 ft. wider than that of Amiens, yet it is only half as high; and "the Nave at Wells is but twice as high as it is wide, while that of Amiens is three times its own width." Yet, "by a strange contradiction," Mr. Peabody is ready to admit, "there is nothing about these English Churches carried to a greater degree of perfection or which brings them greater glory than their "clustered Towers and their groups of heaven-sent Spires." The English Architect clung firmly to the belief that a Central Spire, combined with the Western Towers, would produce a more pleasing effect than those Towers alone, as the French designer thought. The result is that "no French Church possesses a single Central Spire to compare with that of Salisbury or of Norwich," though "the Western Towers of the great French Cathedrals, taken by themselves, are more grand and stately structures than similar features in England." The rich mouldings and clustered piers of early English Gothic contrasts with the plain capitals and simple shafts of the same age in France. English Sculpture was developed more regularly, and from the first, in all but the figure, could bear comparison with the best French work. Taking up one point after the other in this way, Mr. Peabody makes it clear that the difference between the Cathedral builders of mediæval England and France was principally a matter of temperament. The French Architect always kept in view the great principle of Gothic Art, which, in Freeman's words was "an upward tendency of the whole building and of its minutest details." He delighted to exhibit his constructive skill in lofty Naves and Arches, in "a brilliantly conceived framework of pier and vault, of buttress and pinnacle." On the other hand, "the Frenchman," writes Mr. Peabody, "never formed such harmonious features of Church and scenery as one sees at Salisbury and Lincoln—never massed Spires in such gracious composition as we find at Lichfield and Lincoln." English Gothic in fine has its own place, though not perhaps the first place, in the master Art.

THE Blackburn Free Library has been reopened, after undergoing considerable alteration.

AN enlargement is about to be made to the Wesleyan Chapel erected at Lindley, Huddersfield, in 1867, of which the estimated cost is £1,500.

We regret to record the death of Mr. George Knowles, F.R.I.B.A., formerly in practice at Bradford as an Architect and land agent, which took place on July 26th at Moorhead House, Shipley, Yorks, in his eighty-first year. He was for many years the head of the firm of Messrs. Knowles & Wilcock, in Leeds Road, Bradford, his works including the Town Hall at Guisely, the Institution for the Blind at Bradford, Westgate Ragged Schools, and Manningham National Schools. He had been a member of the Royal Institute of British Architects since 1862.

AN OLD GLASGOW ARCHITECT ON SOME OLDER ONES.

BY THOMAS GILDARD,

HONORARY MEMBER OF THE GLASGOW ARCHITECTURAL ASSOCIATION.

III.

THE Hunterian Museum was a perfect model in Roman Architecture, and, severely purged of its vulgarities, was an exquisite study of all the best qualities of the style. The portico was Doric, and the general building, square in plan, was crowned by a Dome of comparatively flat outline. But modern utility respects not beauty. *Utile et dulce* are divorced, and the Hunterian Museum, under the shadow of the University, had to yield to the stronger and more respected force of a Railway Station. And it seems within the fitness of things that the Juggernaut wheels of the steam-engine should have crushed out of existence one of the chief ornaments of that University which to the illustrious Watt had given encouragement and protection. I heard the late Mr. Mossman make a suggestion that the Museum might be rebuilt as a Shelter-House in the South-side Park, but whether or not this suggestion was put before the Parks Committee I know not. Stark was likewise Architect of the Gallery Front and the canopied Pulpit that, until lately, were in Glasgow Hie Kirk. One of Stark's pupils was Playfair, of Edinburgh. Stark, it may be said, was not a Glasgow Architect, but his grand contributions to our city are for this brief notice, I think, a sufficient apology.

John Herbertson had in early life been in the office of David Hamilton. While in business on his own account he was for many years Architect to the Prison Board of Lanarkshire. In St. Columba Church, Hope Street, he introduced somewhat of a novelty—the elevation of the part of the area beneath the Gallery two or three feet above the general floor level, access being had from a plat on the stair to Gallery. The effect is good, and those farthest from the Pulpit benefit by the eye-line given by the greater elevation. John Carrick, John Baird and Alexander Munro were successively assistants in Mr. Herbertson's office, and James R. Napier, son of the eminent engineer and shipbuilder, and who became a Fellow of the Royal Society, learned in it Architectural drawing.

My predecessor as an apprentice was Charles Wilson, but a few years elapsed between his giving up his drawing-board and my taking possession of it. He was a favourite pupil, and was in the office while Mr. Hamilton was engaged in much of his best work, he remaining some years beyond the expiry of his apprenticeship, yet, when in business for himself, he was no follower of his master. If a chief element in Hamilton's genius was masculine vigour, Wilson's was characterised by feminine elegance. We have examples of this in such buildings as the Hall of the Faculty of Procurators, the High School and the Free Church College, with its Church. In all these there is great refinement and delicacy and much charm of composition. I know few things more satisfactory in the way of an Architectural prospect than the Faculty Hall as it may be seen from the south-west shortly before sunset. The building is certainly not without defects, such as coupled columns—a corruption which even the great name of Wren fails to honour,—and these columns engaged with the walls; but its general proportion, its harmony of parts, and its quiet easy elegance of manner, compensate in a great measure for violations that are perhaps only known to, and seen by, the old-fashioned critic. In the Gallery of College Free Church there is an out-of-the-common arrangement. The Gallery staircase does not lead, as is usual, to the level of the backmost seat, necessitating from this a descent to the level of the lowermost, but stops short at the level of the second lowermost, introducing to a passage which feeds the two lower seats, and whence arise steps to the higher. To this arrangement there is one objection. It defines a social distinction, and of this we have enough otherwise in Churches professing the worship of the one Father. In one of Mr. Wilson's works he showed the influence of his master, the Gateway to the

Southern Cemetery. The detail is almost exactly the same as that of Lennox Castle. He had not the training of a Gothic office, nevertheless he used Gothic with appreciative skill in several of the Disruption Churches.

An early work was one of considerable importance, Gartnavel Asylum. In this he showed not only common sense but common honesty in not wasting money on useless details, useless as "a joy for ever" to the unfortunate inmates, and useless to a building that by the general public could be seen only from a distance. After maturing the plan, he gave his chief attention to the composition, the grouping, the massing, the sky-line, and the light-and-shade resulting from the alternation of projection and recession. The elegant range of residences which the West End Park bears as a coronet, and the great granite staircase leading to it, are evidences of the delicate yet healthy spirit which in Wilson's work is a principal characteristic. Mr. Wilson was an Architect whose works can always be looked on with pleasure by the ordinary beholder, and with profit by the intelligent student. For some time he had as partner his brother John,

vigorous, as in the United Presbyterian Church at the corner of John and Cochrane Streets. Its stylobate story is rich and massive and the contour of its mouldings, as of those of the whole structure, show the firm and easy pencil of a master. The Ionic Colonnade which it carries, is, however, not so satisfactory. The intercolumniation is filled in with glass, and it was possibly expected that by this, as it is transparent, the columns would have been emphasised with a certain resemblance of relief. We can easily imagine what would have been the effect of somewhat of a recess welcoming the deep soft shadows of the summer setting sun. A similar boldness of conception and vigour of execution characterise, with "jutting, frieze, and coigne of vantage," the magnificent building at the corner of Nelson Street and Trongate. It is the same with the Wallace Monument and many of his Mansions. Were we to judge by only the Unitarian Chapel, we would say that the Greek Graces seemed to keep themselves aloof, but for a Picture Gallery and a School of Art in Greek Doric which he designed for George Square, they happily waited upon him in

"Dictionary of the Architectural Publication Society." Our recent president, Mr. Douglas, was one of his pupils.

The Architect, in some respect, of perhaps next importance to Mr. Hamilton was Mr. Baird—there were two Architects in Glasgow of the name of John Baird, their periods of practice over-lapping—the before-mentioned and he who was assistant with Mr. Hamilton—a gentleman who enjoyed a large practice, and a very large measure of the esteem of his fellow-citizens. Although his practice was extensive, somehow he has left to us few important public buildings. One of his best was one of his earliest, the Wellington Street United Presbyterian Church. This building is a square box, with a Portico at one end of it, a form of Church with which, in our own day, we are not wholly unfamiliar, a simple enough composition, yet how rarely successful. In this Church are to be seen several of the best qualities of Architecture—proportion of harmony, a sense of breadth and repose in the general effect, and a sympathetic feeling with this in all the details. The Portico is part of the structure, is not stuck on, and has little

THE STAIRCASE, GOSFORD HOUSE : WILLIAM YOUNG, ARCHITECT.

but John's must have been "a back seat" in the business. Charles's name appears twice in the "Architectural Publication Society's Dictionary"—in its own place, and in the article "David Hamilton."

As I have said, Mr. Rothead had been about six months in Mr. Hamilton's office when I entered it, leaving it immediately after having taken the first (a fifty pound) premium in a competition for a Church in Ireland. He was an Edinburgh man, a pupil of David Bryce, and was intimately acquainted with all the detail of George Heriot's Hospital. He was eminently a picturesque Architect, although Queen Margaret College and Buckingham Terrace attest his mastery of the best phase of Italian. His Saint John's Free Church, was an early experiment in Gothic, and enjoyed much popular admiration, but in those days of the Gothic revival we were thankful for small things. His Park Church, however, shows him in that style in the fulness of his power; while in the Later Italian, as chastened as was latterly his apprentice-master, he was in that variety of the style more directly descended from the Roman, exceedingly bold and

all their native purity and dignity. These buildings, with an open Colonnade abutting upon the Scott Monument, and rising no higher than its Pedestal, would have been a great ornament to the Square, and would have in nowise interfered with the thoroughfares designed by Mr. Carrick. In the dual competition for the India Office and the War Office, he occupied the same position as did Sir George Gilbert Scott—he gaining the third premium for the one and Sir George for the other. He was a man of indomitable energy; in the more picturesque styles he had a most fertile fancy, and, if not much of a colourist, was a splendid draughtsman; in ornament, bold, vigorous, and sweeping. Conscious of power, which he could readily wield by his facile draughtsmanship, his high ambition would have undertaken such works as Westminster Palace, the London Law Courts—even Saint Paul's Cathedral. It might almost be said of him, as Dr. Johnson said of Milton, "his was a genius that could cut a Colossus from a rock, but could not carve beads out of cherry-stones." His name has secured a place in Irving's "Dictionary of Eminent Scots," and in the

stuck up to it. The Church has, within the past few years, been metamorphosed by Mr. Burnet into a Music Hall, and whatever he may have done with the interior he has with the exterior had the good sense to let well alone. One of Mr. Baird's latest works was that extensive range, the Macdonald Warehouses, with elevations towards South Hanover and Ingram Streets and George Square. These elevations are treated with, for Mr. Baird, singular freedom, a freedom, however, to which there is no sacrifice of law or dignity. One of Mr. Baird's chief employers was Sir James Campbell, and for him he designed the stately range of buildings in Buchanan Street, immediately north of the Arcade. Sir James employed him also on his firm's Warehouse in Ingram Street, but, when he wished the style to be old Scottish, Mr. Baird recommended that the elevations should be by Mr. Billings.

(To be Continued.)

A New Home for Waifs and Strays is about to be erected at Cullercoats, near Newcastle-on-Tyne, for which Mr. W. Lister Newcombe, of Newcastle, is the Architect.

Bricks and Mortar.

TALBOT HOUSE, ARUNDEL STREET,
August 6th, 1895.

"I know what it is to live in a cottage with a deal floor and roof, and a hearth of mica slate; and I know it to be in many respects healthier and happier than living between a Turkey carpet and a gilded ceiling, beside a steel grate and a polished fender. I do not say that such things have not their place and propriety; but I say this, emphatically, that the tenth part of the expense which is sacrificed in domestic vanities, if not absolutely and meaninglessly lost in domestic discomforts and incumbrances, would, if collectively offered and wisely employed, build a marble church for every town in England; such a church as it should be a joy and a blessing ever to pass near in our daily ways and walks, and as it would bring the light into the eyes to see from afar, lifting its fair height above the purple crowd of humble roofs."

—JOHN RUSKIN.

THE season of the Royal Academy closed last week. It has been an average season from the point of view of the flow of shillings, but it must be called disappointing from that of the artists, many of whose works remain unsold. Prices, regulated by an instinct in advance, ruled low as well, though, of course, the biggest painters claimed and got their own. What, however, pays the Royal Academician best is the work which he executes, like portraits, on commission, and every Academician now goes in for portraits.

MORE than once during the last months of the late Parliament murmurs were raised in the House of Commons at the way in which the site of Her Majesty's Theatre, in the Haymarket, was allowed to remain. Various plans for filling the huge gap have been considered, among them being the erection of a vast Hotel, "upon American lines"; but it may be well to recall a practical suggestion, made some time since by Dr. Sclater, the Secretary of the Zoological Society of London. In his idea, the site could best be devoted to housing the Royal Academy of Arts, the space thus set free in Burlington House being given up to Science. How far the Academicians would like such a change is not open to much doubt; but it is to be remembered that at this moment there are at Burlington House, in addition to the Academy, the Royal Society, the Society of Antiquaries, the Royal Astronomical, Chemical, Linnæan and Geological Societies, and the British Association. The last named has not for any great length of time had permission to occupy the apartments over the gateway, and the whole building is now in use. Most of the newer scientific bodies are merely offshoots of the parent societies, and it might appear undesirable from several points of view to establish them in the privileges of older foundations. Among them, perhaps, the only one having any distinct claim to benefit by such a displacement of the Academy as is suggested is the Royal Geographical Society; but, if the Haymarket site could be devoted to some such purpose as is suggested, it would be a distinct public gain.

PROFESSOR HERKOMER, at the National Eisteddfod of Wales, simply "slaughtered" the Art Section, upon delivering the adjudication. He said that the Arts Section showed a very bad face. It was next to disaster. He was telling them the plain truth in simple English. Now this Art Section was a matter which they must really consider very seriously by next time. The Eisteddfod was a gigantic machinery for encouraging intellectual effort, and he wanted to see the talent brought out not only in Art but also in the minor and applied Arts, but they had shown nothing in Art. How was that? Was it because they had no talent? No, he could not believe that. They had only to encourage it. He had awarded first prize to "Hand and Heart," and the second prize to a man whose name was Haggerty. In the "Animal Painting" only a donkey's head had been sent in, and that was not a good one.

With regard to the water colours, the first prize was awarded to "St. Cuthbert," the second to "Ccherzando." In the Pencil and Crayon Section he awarded the first prize to "B. W.," but he could not award a second prize. The painting upon porcelain was a most feeble thing. The Sculpture was the most deplorable of all. He gave the prize to a chimney-sweep. At least, it was a head that looked as if it had been up the chimney. There was no prize in the Modelling in Clay, but he had raised the prize in Wood Carving to £6. The Art Modelling was disgraceful.

THE students of the Glasgow School of Art have again been very successful in the National Competition at South Kensington, 43 awards having been obtained, as against 35 last year. They comprise 1 gold medal, 4 silver medals, 10 bronze medals, 19 national books, and 9 prizes for sets of works. The gold medal is gained for Architectural design; the silver medals for modelling design, modelling antique, Architectural design, and life studies; and the bronze medals and national book prizes are for ornamental design, modelling, Architecture, and painting. The awards for Architecture are the highest for the Kingdom. The following are the prize-takers:—Gold medal—Albert H. Hodge; silver medals—Andrew Allan, John Moffat, George A. Paterson, George Smith; bronze medals—James B. Fulton, John G. Gillespie (2), Albert H. Hodge, John P. Main, Charles J. Menart, Bessie M'Elwee, Annie L. M'Geehan, George A. Paterson, Harry P. Sharpe; national books—Lizzie Bell, Emmet Brady, John Brown, Florence Faill, Helen J. Findlay, James B. Fulton, Andrew Law, Wm. Lucas, John Moffat, George Munro, Henry M'Affee, Lizzie G. Naismith, George A. Paterson (2), Donald M'K. Stoddart (2), George E. Walker, Robert Whyte, Marion H. Wilson; prizes for sets of works—Margaret P. Cameron, Alex. M. Gardner, Alex. Jamieson, David G. Miller, Peter S. M'Lauchlan, Norman A. M'Lean, David N. Rollo, Andrew Rollo, Wm. Smith.

ONE of the most interesting so-called haunted houses in England is Ewanrigg Hall, near Maryport, in Cumberland. It belongs to the Christian family known to fame in connexion with the mutineers of the *Bounty*. But its chief attraction to the visitor lies in the fact that it is the original of Limmeridge House, introduced by Wilkie Collins into his masterpiece, "The Woman in White." Collins and Dickens knew this neighbourhood well. Ewanrigg Hall, with its estate of over 600 acres, has just been offered for sale by auction by order of the Court of Chancery, but no purchaser was forthcoming.

SMALL in itself, but of great importance and value was the Geographical Exhibition temporarily arranged for the members of the Geographical Congress by the authorities of the British Museum, who are prohibited by law from allowing any part of the national collections to leave the precincts of the Museum. The privilege of seeing these treasures was highly appreciated by the specialists in historical geography and the history of discovery. The Exhibition, divided into two sections, consisted of early manuscript maps, Portolani, engraved maps and atlases, arranged in the Department of MSS.; while the second section was brought together by Sir Wollaston Franks, in his Department of Mediæval Antiquities, and comprised astrolabes, many of them possessing great historical interest as being connected with celebrated personages, quadrants, sun dials, &c. That the astrolabes made in the East as early as the Eleventh and Twelfth and Thirteenth centuries are remarkable for their workmanship and accuracy there is plenty of evidence to show. Take, for instance, the Saracenic Planispheric Astrolabe, made at Cairo in A.H. 638 (= A.D. 1240) inlaid with silver and copper. When one remembers the imperfection of the tools with which an astrolabist of that period must have worked it is a matter for wonder to notice the multitude of exact lines produced and the accuracy of the result achieved. Several of the quadrants exhibited were designed for English sovereigns, notably those of Richard II. and Edward VI.

THE Duke of Westminster, as President of the National Trust for Places of Historic

Interest or Natural Beauty, addresses a letter to us in which he makes an appeal to all visitors to Scotland who may take a trip to Loch Ness, and who care for the beauties of the Highlands, to join in a protest against the desecration of the well-known Falls of Foyers. The Duke observes: "Workmen are at present employed at Foyers in making a Tunnel from a point above the upper fall to a point below the lower fall. Through this Tunnel the whole of the waters of the Foyers river will be conducted, for the purpose of manufacturing aluminium by means of electricity, so that, as the agent of the Aluminium Company humorously states, 'The Falls will not be injured, only there will be no water in them.'" It is sincerely to be hoped that by October, when the final decision is to be taken, such an overwhelming public opinion will have been brought to bear in favour of preserving the finest waterfall in the United Kingdom that even the Inverness-shire County Council will begin to value its magnificent cataract.

WRITING with reference to Sir Arthur Blomfield's report on the danger to the Spire of Salisbury Cathedral, "The Salisbury Journal" says:—As originally reared, the Cathedral of New Sarum was destitute of this crowning grace. Added by a bold after-thought on the part of some great Architect of the fourteenth century, whose name is lost, Salisbury Spire has now continued to lift itself for half a thousand years. But Salisbury Spire, though one of the most graceful fabrics that the hand of man ever wrought, is also one of the most daring. The sub-structure on which the Spire and the upper part of the Tower rest was not intended by the original builders to bear such a burden—gigantic as glorious. We need hardly remind our readers that the Early English Cathedral Church of which Bishop Richard Poore laid the foundations in 1220 included only the lower part of the Central Tower, originally constructed as a lantern. A hundred years later—in the reign of Edward III., and while Wyvil was Bishop of Salisbury, it was the good fortune of the Cathedral to be crowned with its noble Spire by some unknown Architect. With the insight of true genius, he grasped the opportunity transmitted to him by his thirteenth century predecessors, and carrying the Tower to a greater height, ventured to place on it a lofty Spire.

BUT, like some other men of genius, in taking advantage of the means afforded him for a display of his powers, he tried those means to the utmost. While he bequeathed the Spire of Salisbury to succeeding ages as an object of wonder, he also made it a treasure which was only to be preserved by the exertion of vigilance. That vigilance has, on the whole, been displayed; but as Sir Arthur Blomfield's report shows, it has not always been well directed. The numerous iron bands, rods and ties which have been introduced from time to time, with the object of strengthening the fabric, have often done more harm than good; the destructive agencies of wet and frost have been at work from year to year and from century to century; and the tremendous thrust of the Spire has never ceased its pressure, which is both downward and outward. This last element of danger cannot be removed or even lessened; but hitherto it has been encountered by a resistance that was strong enough to prevent a catastrophe. No doubt the genius who reared the Spire to its splendid height counted on that resistance being watchfully maintained; but the alarming discovery has now been made of a decay—apparently unsuspected till very recently—which has already become so threatening that, unless the damaged portions of the fabric are promptly and effectually repaired, the day may not be far distant when the beautiful Spire of our Cathedral will share the fate of other lofty Spires and Towers that have been laid in ruins. Here is a great work for Englishmen to do.

IN Frankfort-on-the-Main, where Goethe was born, and where the Goethe House is held in as great a reverence as at Weimar, there is to be an Exhibition of relics connected with the great poet. It is said that a large number of objects will be on view, hitherto wholly unknown to the public. Amongst them will be some of the numerous pictures—painted by himself—which

Goethe was in the habit of presenting to his friends. The greatest have their weakness; and it was Goethe's foible to fancy that he could paint. He was, in point of fact, one of the vilest daubers that ever spoilt a canvas with colours; but his pictures, if worthless in Art, are naturally interesting. We wonder, by the way, how much a picture traced authentically to Goethe's brush would fetch at a sale by auction in this country?

At a meeting of the holders of Founders' Stock in the Channel Bridge and Railway Company, the Hon Philip Stanhope, M.P., the chairman of the directors, read the report, which was in French, and stated that the studies which had been made from the plans of the Bridge, had undergone serious modifications in the last few months, under the direction of Messrs. Schneider & Co., of the Creusot Works, and M. Hersent, and these modifications had been submitted to the consideration of Sir Benjamin Baker, by whom they had been approved. It had been thought desirable to form a group of eminent contractors of public works in England analogous to that formed by Messrs. Schneider and Hersent in France, and negotiations were accordingly entered into in the course of the present spring with Sir John Jackson, who completed the Manchester Ship Canal and constructed the Tower Bridge, and who was probably the most efficient contractor of sea works now in England. Sir John Jackson, in a meeting with Messrs. Schneider and Hersent, in Paris, adhered completely to the plans proposed, and he had afterwards been in negotiation with one of the largest iron manufacturers in Great Britain, and had assured himself of their readiness to take part in the proposed undertaking. A demand for the concession was now before the Department of Public Works in France, by whose authority a commission had been appointed to examine the specifications. The adoption of the report was carried.

THE American girl artists, who throng the Art Schools of the Latin quarter, have now a delightful domicile in that historic neighbourhood. In the Rue Chevreuse, just a stone's throw from the well-known Art Schools of Colarossi and Delecluse, a charming old house with a garden, court, and balconies, with rooms overlooking the gardens, has been arranged as a Students' Hotel or Home. There are cosy, tastefully-furnished Drawing Rooms, a big Reading Room, well equipped with American newspapers and magazines, and Dining Rooms where meals are served at moderate prices at small tables. The larger Dining Room is charmingly decorated with a frieze. Each resident—and naturally the house is always filled to overflowing—has a tiny room of her own, for which she pays a sum ranging from about 10s. a month. A similar Hotel is greatly needed for the English and Scotch girls who form so large a majority in the Art Schools of the Latin quarter. Some two years ago a club for English girl artists was started in the Rue Notre Dame des Champs, but has ceased to exist.

BRISTOL will soon have an opportunity of witnessing the running of electric cars from the city to St. George and Kingswood. Up to about two or three months ago the Tramways Company had intended adapting the old line between West Street and the St. George's present terminus, but this would have had the disadvantage of incurring risks in connection with the old form of construction of T rails and chairs, which might not have been found sufficiently heavy to wear well under the strain of the electrical cars. Seeing, too, that the line would have to be pulled about considerably for the purpose of accurate gauging and making the electrical connections, the Directors, some two months ago, determined to lay down a new line, so as to give the girder rail a heavier form

of construction throughout from Old Market to Kingswood. In order to accelerate the construction the company called in the assistance of Mr. J. Clifton Robinson, C.E., upon whose report it had already acted in connection with the electrical scheme. Mr. Robinson at once advised that the Company should do the work itself, and held that it could be finished well before the Kingswood extension and the piece of line in Old Market Street, which had been contracted for in November. The organisation of the labour gangs was capitally arranged. Hundreds of men were taken on. The old line was removed and a new line, with additional doubling and complicated curves into the dépôt, all completed in six weeks from the date of breaking ground.

ALL the principal collectors of pictures have been again returned to Parliament. Amongst these we may mention Mr. John Aird, Sir John Pender, Sir Frederick Mappin, and Mr. Cuthbert Quilter. Amateurs and collectors in a smaller way are to be found in Sir Richard Webster, Mr. Joseph Chamberlain, Sir Charles Dilke, Mr. Hosier, Dr. Farquharson, and Sir

injured by the competition of Smyrna. What could once be sold (on the spot) for £31 a ton is now sold for £2 12s.; in London the price is £4. Yet the Turkish product is inferior in quality to that of Naxos, only the methods used with the latter are defective. Formerly the Greek Government prohibited the export of any emery which was not up to a certain standard of purity and fineness. When the last concession to the lessors ran out five years ago, quantities of inferior mineral were sent into the market and injured the sale of the Naxian product. But apart from this, the working of the deposits is still of the most primitive kind, and now that underground work must be resorted to, better skill and appliances are needed for success and for the safety of the workmen. The latter, however, are jealous of any interference with what has become an hereditary industry. They still build fires round the blocks of stone in which the emery is embedded as the best means of breaking them up. It is by the way a curious regulation imposed by the Government that the quarrymen must all be married. When Greece gets development in other things besides politics more will be made of the emery and the marble of Naxos; of the former there is estimated to be some 20 million tons in reserve.

A GREAT Exhibition, entitled the Millenium, is to be held at Budapest next year to commemorate the foundation of the Hungarian kingdom under Arpád 1,000 years ago. The Exhibition, which will be on a scale of great magnificence, is being organised under the auspices of the Emperor Francis Joseph, who, together with the Sultan of Turkey, and many other royalties, will be amongst the exhibitors. In connection with the celebration, the new House of Parliament, now being constructed at a cost of 16,000,000 florins, will be inaugurated, as well as numerous monuments and public buildings.

SHEFFIELD'S new Town Hall is proceeding apace, and the outward appearance of the structure will soon be a decided ornament in the neighbourhood of Fargate. A considerable amount of the internal structural work has been completed, and but for delay in selecting and putting in the furnishing and fittings some of the rooms would be occupied very shortly. This applies to those portions of the building intended for the use of the Town Clerk and his staff, the City Surveyor and his staff, including the Department for the Inspector of Weights and Measures, and the rooms for the Medical Officer of Health. Entrance to the City Surveyor's Department will be from Surrey Street, and the rooms will extend round the corner into Norfolk Street. Provision has been made for the City Surveyor and his clerical staff, the buildings inspectors, draughtsmen, and foremen, and there will also be a Waiting Room for the public. The Town Clerk's Department consists of rooms for himself and the Deputy Town Clerk and the members of the staff. The rooms for the Water Department and the City Accountant are not yet finished.

THE Column of July, in the middle of the Place de la Bastille, Paris, is frequently confounded with the grim old Fortress which was razed to the ground by the mob during the First Revolution, July 14th, 1789. Of that historic pile there, however, remains no memorial except the line of white tones on the west side of the open space, which trace its perimeter, and the mural inscription which is to be read on the wall of No. 3. It may be of interest to recall that the Pont de la Concorde was actually completed with the blocks of masonry removed from the site of the Bastille. The bronze Column of July is a monument which was erected nearly half a century after the Bastille was taken and destroyed.

SKETCHED: BY F. T. W. GOLDSMITH.

S. Montagu. Amongst the new members, the best known dilettante is the Hon. Massey-Mainwaring; but Mr. Horniman has collected at his suburban residence a so-called museum of curiosities.

THE Front of Lord Rosebery's house in Berkeley Square is now completed, and it forms a handsome addition to the Domestic Architecture of London. It is curious that the scaffolding, which has been up almost throughout the term of his premiership, should be demolished contemporaneously with his downfall from power. An augury might be used either way.

OF those familiar with emery as a polishing material, whether in the form of emery-paper or in the more solid form of grinding wheels, &c., probably few people could say offhand from what quarters the supply of it comes. Though known to the Greeks (who called it *Smyris*), its common use may be said to be quite a modern thing. For many a year the principal supply came from Naxos, the largest of the Ægean Islands, midway between Greece and Asia Minor. But the island of Ariadne and Dionysus has allowed its trade to be

AUTHORITIES differ as to the exact date when the great wall of China was built, but the consensus of opinion appears to be that it was begun at least in the reign of the Emperor Che-Hwang-Te, the founder of the Tsin dynasty, who ascended the throne in 231 B.C., and died 210 B.C. There does not seem to be any reason for doubting its actual existence. It is true that the late Carter Harrison, of Chicago, when visiting China in 1886, wrote home that he was inclined to look upon it as a myth. Subsequently a paragraph went the round of the papers, copied from the *Times* of August 5th, 1887, which attempted to show on the authority of Abbe Larrien that the great wall "does not and never did exist," that there are, indeed, "square towers of earth faced with brick, at considerable distances from each other, but these were never joined together by any wall as originally intended." This paragraph called out a lively controversy, which was settled in favour of the wall. Among others, H. S. Ashbee wrote to *Notes and Queries* insisting that he himself had seen the great wall, that he had climbed upon it, and, though he had never measured it nor travelled along it for any great length, he could bear ocular evidence that it extended from the point where he stood upon it in a straight line, unbroken save in places where it had been allowed to fall into decay, as far as the eye could reach in either direction. "While crossing the Gulf of Liao-Tong I plainly saw, from the deck of the steamer, where the great wall started from the sea. Further, in the same part of China, but unconnected with the great wall, I observed the square towers in question."

THE Monument erected in York Minster to the memory of the late Archbishop Thomson, will be unveiled next Friday. The ceremony of unveiling will be performed by the Earl of Crewe, after a service in the Choir of the Minster. The Monument consists of an exceedingly beautiful recessed Altar Tomb, designed by Mr. Rodley, with a life-size recumbent effigy by Mr. Thorneycroft. The site of the Monument is in the South Transept, just outside the entrance to the South Choir Aisle.

WHEN collectors of every class roam on the look out for neglected treasures, we may not hear of as many wonderful "finds" as those recorded in earlier times, but occasionally well-instructed experts are fortunate even now. Genuine Aldines are sometimes picked up in old book shops, manuscripts of historic value are now and then discovered among documents rejected as worthless, and ancient coins are of course frequently found. Quite recently M. Duez, the French painter, who is well known also as a collector with great judgment, was fortunate in meeting with an exceptionally interesting picture in a very unpromising quarter. In the neighbourhood of Honfleur, in Normandy, he recently saw a picture in very bad condition, but the experienced eye of the artist detected in it either the handiwork of a well-known master or of a very successful copyist. To the owner the picture was not more valuable than the frame, and M. Duez had no difficulty in getting it for 60 francs. It turned out to be, as the new owner had hoped, a veritable Murillo, and M. Duez has already been offered 17,000 francs for his lucky purchase.

CHARLES DICKENS' desk has been given by Mr. Bancroft to the South Kensington Museum, where it has been appropriately placed in the Forster Library. It bears the following inscription:—"This desk belonged for many years to Charles Dickens, and was last used by him a few hours before he died, on June 9th, 1870. His executrix afterwards gave it to Edmund Yates, at whose death it was sold by public auction on January 21st, 1895, and bought by S. B. Bancroft, who presented it to the South Kensington Museum."

AN interesting range of buildings is being demolished at Lindfield, near Brighton. The Schools and buildings established there by the Quaker philanthropist, William Allen, will soon be removed from the ken of the parishioners. This celebrity lived nearly a century too soon. It is on record that as early as 1823 he was

considering the best method of making an inroad upon the then demoralising system of paying agricultural labourers out of the poor rate, and he tried building Cottages for them and giving them some land. In 1824, while lodging in Brighton, he "went over to Lindfield to procure ground for the establishment of a School of Industry." In 1825 he erected commodious School Rooms for boys, girls, and infants, with Workshops adjoining. These are the buildings now being pulled down. To these Schools, lending libraries were attached. Some of the elder boys were engaged during a portion of the day on the School Farm, some in a printing office, and others in different kinds of manual labour. The girls were taught needlework and knitting, and the infants learned to make patchwork and to plait straw.

In Egyptian and also in ancient Mexican Sculpture, such attitudes of repose as squatting, kneeling, or sitting cross-legged, are frequently seen, but in Greek statuary very seldom. The Greek artists represent their figures resting on chairs or couches in the European fashion. In the crouching Venus, as Dr. Regnault and M. Lajard have recently pointed out, we have an attitude of action, not rest, as may be seen by comparing it with the Venus of Tanagra, a terra cotta figurine. The "Shell Venus" is the only Greek figure they have found on its knees, and they regard it as an archaic work.

A MEMORIAL to the late Randolph Caldecott, by Mr. Alfred Gilbert, R.A., has been placed in the Crypt of St. Paul's Cathedral, by the permission of the Dean. It is in proximity to the memorial to Mr. Frank Holl, R.A., another of Mr. Gilbert's works. Mr. Caldecott was born in 1846, and died February, 1886. He came into notice as an artist (1875) by his illustrations to Washington Irving's "Old Christmas." This, succeeded by "Bracebridge Hall," and the first of a series of coloured picture books made him more widely known. Amongst many works illustrated by him may be noticed "John Gilpin," "The House that Jack Built," "The Mad Dog," "The Great Panjandrum," with sketches of scenes in America, which he was preparing at the time of his death. The following is the inscription on his monument: "An artist whose sweet and dainty grace has not been in his kind surpassed; whose humour was as quaint as it was inexhaustible."

THE big Tunnel on the new Sheffield Extension line to London is near Rugby, and corresponds in some sort to the celebrated Kileby Tunnel on the London and North-Western Railway. Half-a-dozen shafts are sunk already, and six more are in progress. The material is good for working, and almost free from water. Stone is very sparingly used in the construction, Staffordshire blue bricks being found better. The new line will be remarkable for the rapidity with which it has been built, although its structure will be of great durability. In the matter of economy, both in first cost and in working, it will leave all other lines far behind.

SOME interesting reports from the British representatives abroad on the subject of light railways have just been issued. Their publication has been delayed owing to the despatches having been placed, in manuscript, at the disposal of the Committee of the Conference convened by the Board of Trade to consider the question of light railways and tramways. In Belgium there are seventy-five such lines extending over 836 miles. Of these, six belong to private companies and the remainder to the National Society of Local Railways. Dividends have been steadily increasing. In Prussia the light railways, or "Kleinbahnen," number thirty-seven, with a total mileage of about 480 miles. Of these the German Government says: "In general the light railway appears to be well adapted to the development and improvement of agriculture and forestry and their accessories, particularly to opening up new markets and facilitating the carriage to and fro of manure and raw produce over a considerable area of country."

MR. ROBERT CASSON, of Wallsend, has now in his possession 18 coins, recently found whilst

excavating the foundation of his new house, situated within the boundary of the ancient Roman Camp, Segedunum. The coins, which are supposed to be Roman, lay in a cluster, suggesting the idea that they had once formed the contents of a purse or bag. A copious spring of water has also been discovered in the foundation of the same house, an incessant stream of very cold water bubbling to the surface. On the workmen thrusting their bared arms down the cavity, pieces of ancient pottery have been found, which has given currency to the opinion that the water is rising from a Roman well. The members of the Newcastle Society of Antiquaries have been communicated with in reference to the discoveries.

ACCORDING to present plans, which are, of course, only speculative, the Canal which has been talked about between the Baltic and the Black Sea, will proceed from Riga and make use of the Rivers Düna, Beresina and Dnieper, ending at Cherson on the Black Sea. It is, properly speaking, only the connexion between the Düna and the Beresina which is to be a Canal. The whole length of this contemplated waterway is about 1,000 miles, the breadth at the top at the narrowest places about 220 ft., and at the bottom about 120 ft., depth everywhere 29 ft. The lowlying Pripjat bogs makes it possible to do away with locks, with exceptions of a lock at each terminus. The land through which the Canal will have to pass has at the top a thin layer of sand and black earth, and under this stiff clay, which is not only favourable for working, but lends itself admirably to the burning of the requisite bricks. There are projected harbours at a number of places. As it is proposed to start the work simultaneously at many different places, the time required for the completion of the Canal is only put at five years. The total expenditure, including the purchase of the requisite land, is calculated at £20,000,000.

THE new lava stream on Vesuvius has a frontage of more than 300 ft. and a height varying from 14 to 20 ft. or more. At one part the lava has piled itself up to a frightful height on the edge of a ravine, and the fear is lest it should give way and fall. The director of the Observatory caused a sort of dam to be built of scoriae, in the hope to turn the lava should it advance upon the building. Near the new crater, two little extra cones formed, from one of which is heard a constant whistle, like that of a locomotive. This is quite a new and curious phenomenon.

RAPID progress is being made with the Theatre that the Directors are building in the grounds of the India Exhibition. When completed it will be, it is stated, the biggest thing of its kind in the World. The span of the roof is 217 feet, St. Pancras Station being the only building in London that exceeds this span. As the cantilever system is employed, there is not a pillar in the vast auditorium to obstruct the view. Several novelties have been introduced to fit the Theatre for the special kind of performances that will be given. It has an Upper Stage 315 feet long and 100 feet deep working on trolleys, and a Lower Stage which will work over a broad stretch of water, thus permitting a water scene to be produced at short notice. There is seating accommodation for 5,000 people, in tiers raised proportionately above each other. The orchestra will be suspended from the roof. On a stage of these dimensions anything short of a grand spectacle would be useless.

AN interesting experiment has been inaugurated by the Technical Education Board of the County Council. The premises in Bolt Court, Fleet Street, formerly used by the Stationers' Company as a School, have undergone a thorough repair, and have been fitted up as a School of Photography. For the last two months evening Art Classes have been conducted under the control of the National Society of Lithographic Artists, and arrangements have now been made to commence a School of Photogravure and Half-tone Etching. These Classes will commence in September or October next, under the management of a Committee consisting of six nominees of the Lithographic Artists' Society and six nominees of the Board.

WHEN gas was first introduced it was thought marvellous that a flame could be kept alight without a wick, but the latest invention in gas-burners quite eclipses this, as it not only burns the gas, but actually makes the gas light itself. This invention, patented by Mr. J. F. Duke, and sold by the Duke Patents Company, 20, High Holborn, is pronounced to be one of the most marvellous subjugations of Science to domestic economy. It consists of just an ordinary gas burner with a small tube at the side. This burner is simply screwed into the bracket or other fitting, the gas turned on, and lo! in from six to ten seconds (for the air in the pipe to pass out), the gas lights itself. The action of the burner is simple:—The gas on issuing from the burner passes over a small knob of porous material impregnated with a rare and indestructible metal, which as soon as the gas passes over it becomes red hot; this red heat is communicated to a small piece of platinum wire which immediately becomes incandescent and lights the gas. This little black knob is practically indestructible, as is also the platinum wire. Therefore, as long as the burner exists, the gas on being turned on will light itself.

MANY of us visiting Brighton will miss the quaint front of the "Old Ship," believed to be the oldest Inn in Brighton, which has just been removed. One of the earliest allusions to the house is in the Court Rolls of Bright-helmstone Manor, which record an admission, on August 23rd, 1670, "to one Cottage or Inn, known as the 'Old Shipp,' situate in the Hemphshires of Bright-helmstone . . . in the tenure of George Hackett."

A QUESTION of great importance to those who contract with urban authorities has been decided by a Divisional Court in the case *The British Insulated Wire Company v. The Prescott Urban Council*. The contract was made originally between the Company and the Local Board, which, under the Act of last year, the Council had superseded. The plaintiffs carried out their contract and were partially paid. The action was brought to recover the balance due for the supply of electric light and for the price of some extras. It was contended by the Council that the contract was invalid as it did not comply with the requirements of section 174 (2) of the Public Health Act, 1875, which provides that every contract with an urban authority "shall specify some pecuniary penalty to be paid in case the terms of the contract are not duly performed." In the present contract there was no such provision, but merely a clause referring all disputes to arbitration. The Court decided against the plaintiffs. The omission of the penalty was fatal, and the agreement was not binding.

It appears from a report just issued that the Liverpool Corporation has acquired, subject to the approval of Parliament and the next meeting of the Council, for £400,000 the undertaking of the Liverpool Electric Supply Company. The Corporation will also pay any sum which the Company has expended on capital account for the benefit of the concern over and above its share capital. The report states, *inter alia*, that St. George's Hall, the Town Hall,

and other municipal buildings, which cost between £3,000 and £4,000 a year to be lighted with gas, will be supplied with electricity.

THE purification of the Clyde, in its present state the most formidable nuisance in Great Britain, is at length in a fair way to be undertaken by the Glasgow Corporation. The news is difficult to believe, for the Corporation has been considering schemes with that object since 1853. But one gathers that public feeling on the matter is now "ripe." This ripeness is coincident with a saving in tramway fares said to be equal, since the purchase of the Tramway Company's undertaking, to a rate of 7d. in the £, and with a reduction of 2d. per 1,000 feet in the price of gas. Moreover, a small experiment in defecation at Dalmarnock has yielded excellent results. The Corporation

support, all fear of the stone falling has been removed. Fortunately the lord of the manor and the owner of the land (Sir Edmund Antrobus) is an antiquarian of no mean repute. He has given years of close study to elucidating the mystery which surrounds the origin of Stonehenge, and has done everything he can to promote the purpose of the antiquarian authorities; and, as a result, the stones are for the moment safe, and in no danger of falling. The antiquarian authorities, however, are keeping, in conjunction with Sir Edmund Antrobus, a close observation upon them, and there is now a properly-appointed attendant.

It is stated that the Duc d'Aumale is about to purchase the Château d'Amboise from his nephew, the Duc d'Orléans. It is the oldest of all the national castles, and is rich in historical reminiscence. Charles VIII. was born and died there. It was the scene of the butchery which followed the celebrated conspiracy of Amboise. From 1848 to 1852, it served as the prison of Abdel-Kader. Confiscated by the State after the fall of Louis Philippe, it was restored to the Comte de Paris by the National Assembly. Since then it has never been inhabited. It is in a dilapidated condition, and sorely needs restoration.

THE completion of the restoration of the beautiful Early English Doorway, leading to the Bristol Cathedral School, undertaken at the expense of past and present pupils of the establishment as a mark of esteem to the headmaster (Rev. H. W. Pate), was celebrated last week. The matter was mooted last October, and subsequently it was decided to proceed with the project. The Archway has been carefully restored under the superintendence of Mr. Pearson. Precentor Mann gave a few particulars of the Architectural features of the Doorway. The Doorway was Early English, or, if he might use what might seem to be a contradictory term, was late Early English. Critics pronounced it to be a very beautiful specimen of the period, with its graceful, slender shafts, surmounted by foliated capitals at the spring of the Arch, its deeply cut mouldings, and its remarkable cusplings. Originally the Doorway led down to the Refectory, which stood on the site of the School, before the then monastic establishment was turned into a

Cathedral. He was glad that such a fine specimen of Early English Architecture had been preserved as a lasting memorial of regard for their headmaster.

THE British Museum Report contains an interesting reference to a recent acquisition in the Department of Antiquities. This is a marble sepulchral stele of Athenian work of about 400 B.C., showing in relief a seated figure of a woman holding a casket, while before her stands a maid with an infant in swaddling clothes. The latter was found, of all places, in the cellar of a house in Jersey. This graceful work, as Professor Jebb lately pointed out, had had strange wanderings. Originally brought from Athens to Jersey, probably as part of a ship's ballast, it was taken to Inverness, and thence found its way to Bloomsbury, to join, we may add, two other Attic Stelæ.

NEW SHOREHAM CHURCH, ARCH AND PIER, NORTH SIDE OF NAVE.

seems thereupon to have received in a business-like spirit a memorandum of the City Engineer, showing how an extension of the same principle to the whole north side of the City, with a sewage farm of 237 acres at Dalmuir, might be accomplished at a cost of £600,000, which would involve a threepenny rate for thirty years. The only division of opinion was as to whether the south side should be dealt with simultaneously, or at least provided for at one and the same borrowing. This, however, has led to a short postponement of the matter, and may be a cause of further and longer delays.

We are glad to learn that the efforts of the members of the British Archæological and Antiquarian Associations to prevent the decaying process at Stonehenge have been successful. One of the outer stones has fallen out of position, but, thanks to a wisely-placed

AN ANNOUNCEMENT.

OUR NEXT ISSUE

Of August 13th will mark the beginning of our Second Volume, and will contain the first

DOUBLE INSET LITHO ILLUSTRATION.

The PRICE will NOT BE RAISED.

This number will also contain the first attempt to formulate the whole of the

CONTRACTS OPEN.

which we intend to make an ordinary weekly feature. This number will therefore be posted to every reputable Builder and Contractor in the four Kingdoms, and will, together with our large ordinary edition, possess a first Edition of

25,000 Copies.

"A WONDERFUL PERFORMANCE."

"'The Builders' Journal' is remarkable even in these days of cheap journalism. Issued at a penny, it nevertheless has all the appearance of a sixpenny illustrated journal. On its professional merits we are not competent to pass an opinion, but as a specimen of journalism we must say that it is a wonderful performance."—*The Literary World*, June 28th, 1895.

THE GLASGOW EMPIRE PALACE.

THE Glasgow Dean of Guild Court on Thursday approved of Mr. Frank Matcham's plans for the reconstruction of the Gaiety Theatre, which is to be converted into the Empire Palace. Operations will be begun in October.

SALISBURY CATHEDRAL.

AS a result of his appeal for funds to repair the Spire of Salisbury Cathedral, Mr. Hulse, M.P., has received the following letter:—"Foreign Office, Aug. 1. Dear Mr. Hulse,—Lord Salisbury desires me to say that he will be very glad to contribute the sum of £100 towards the restoration of the Spire of Salisbury Cathedral.—I am, yours very truly, (Signed) Schomberg K. M'Donnell."

THE ENLARGEMENT OF UPTON ASYLUM.

ON Friday, at Chester Castle, a Committee meeting of Visitors of the Upton Asylum was held, when the chief business for transaction was the consideration of the tenders received for the enlargement of the Asylum. The County Council on Thursday, at its quarterly meeting, decided to accept the loan of £80,000 by Parr's Banking Company and Alliance Bank, Limited, for the purpose of carrying out the work.

THE CHESTER BATHS COMPETITION.

ON Thursday afternoon, at a meeting of the Chester Baths and Boating Committee, the decision of Mr. Baggallay, Architect, of Conduit Street, London, acting as adjudicator on behalf of the Corporation, was made known respecting the plans for the extensive Baths for the city. There were twenty-nine competitive plans submitted, and out of seven set apart for final selection he gave his award in favour of Mr. Burgess, Architect, 33, Palliser Road, West Kensington, London. The Committee accepted the plans for the scheme, and the Council is authorised to expend a sum of about £8,000. The premium of £50 for successful plans was awarded to Mr. Burgess.

It is announced that Professor Judd, C.B., has been appointed Dean of the Royal College of Science, in the room of the late Professor Huxley.

RECENTLY was laid the Foundation Stone of a new Girls' School which is being built by the Managers of the Pontefract National Schools. The building will cost nearly £1,000, and will replace the inadequate premises at present in use.

MEN WHO BUILD.

No. 24.

MR. EDWARD ONSLOW FORD, R.A.

THE Academy has done well. It has taken unto its inner self the one remaining Sculptor, who will assuredly leave his mark upon the Art history of his age as deep and as lasting as English Art can tell of. Onslow Ford was not in your mind when a month or two back you wrote of the kindredship of the three

of Andrea Verrochio, Leonardo da Vinci, Raphael, and Angelo himself, all the Arts were in harmony and invariably combined in the same man. How, since then, Architecture came to slip away from the combination, to recede slyly, as it were, from the affections of her sisters, and to place her charms at the mercy of many heartless wooers, who have debased her and humbled her to the dust, is no matter here; we long for her retribution, and that it will come in the fulness of time we have no fear. But Onslow Ford has got near the Old-World accomplishment. He started life as a Painter, and his earliest memories lurk somewhere round Blackheath, where he gave up Greek and Latin for a surreptitious escapade with his pencil. Going with his mother to Dunkirk when he was only seventeen, an old Frenchman gave him his first lesson, and afterwards he passed eighteen months in a Flemish studio at Antwerp. From Antwerp he drifted to Munich, where he finally flung away the brush in favour of the chisel, and devoted

MR. EDWARD ONSLOW FORD, R.A., IN HIS STUDIO.

constructive Arts, and showed—poorly perhaps—in dealing with the work of W. B. Richmond, who, curiously enough, steps up into the ranks of the noble forty side by side with Mr. Ford, how much Architecture depended upon the painter and the sculptor for her own perfection, and how, in the tints

himself for a considerable period entirely to modelling.

Returning to his native shores with a wife and a strong determination to work for all he was worth at his second love, young Ford pitched his tents on the breezy stretches of Blackheath, where occasional murmur of a

commission reached him when he least expected it. At last—or many will think at first—came his chance, the Rowland Hill bust for the Guildhall, and as he happened to be "at home" when the fickle dame came tapping at his door, he invited her to enter, and from that hour the Canaan of an artist's ambition has beckoned him along the widening path of success. The Rowland Hill bust lacks the grace of his later work. The art of taking pains does not always make good Art, and perhaps least of all does it go to make good Sculpture. But if Onslow Ford laboured over his Rowland Hill work no whit more than he laboured over his magnificent Orchardson bust in the present Academy, you hold it truth that the advancement is the advancement of artistic genius, and in no way the outcome of mere toil. Toil destroys more artistic sentiment than it ever creates. It has its virtues. It contrives, undoubtedly, to make bad work good work, but, inversely, does it make good work poor work; destroying the dash, the piquancy, and the brilliancy of genius, just as a studied sentence destroys the effervescent charm of brilliant impromptu. Toil, therefore, outside the toil of study, has not aided Onslow Ford in the production of his finest work, and those who remember his "Folly" of 1886, or even his Irving as Hamlet in 1883, need not to have waited for his Shelley Memorial or his superb Gordon Statue at Chatham to have proclaimed him a Sculptor of the very highest class. Poor Shelley, lying on the sea-shore near St. Arengo, just as they found him on that ill-fated July day now nearly three-quarters of a century ago. The design is magnificent. The body stretched upon a slab, as if just cast up by the waves. One arm lies loosely across the breast, and the head hangs slightly backwards. Never has bronze been cast to such a poem; and the monument marks the spot where the poet sleeps—in Keats's tomb.

Perhaps the finest statue Onslow Ford has yet completed is Lord Strathnairn's, recently erected at the top of Sloane Street, one of the most unsuitable positions in London. The commission came from the City, as many of Mr. Ford's best commissions do, for the veteran Field-Marshal was always a prime favourite with the City magnates, and it was in the Egyptian Hall of the Mansion House that the necessity of duly honouring the hero's memory was first discussed. Over this work Mr. Ford fought a desperate fight. He strongly advocated the uniform of a Colonel of the "Blues," instead of the very inartistic garb of a Field-Marshal. But the military forces were too strong for him, otherwise his original study for the work bade fair to develop possibly into the finest modern equestrian statue in this country. But beyond mere portraiture which at one time it was feared Onslow Ford would prize most, there have been, during the past six or seven years, some fine things creeping out of the studio in Acacia Road, things which if they have not all the subtlety of Mr. Thornycroft's works are free from the impurity of Boehm and men of the semi-heroic School. The foreign influence is not sufficiently apparent to add a zest to his conceptions, and as he is yet well on the fair side of fifty Onslow Ford has a mighty career in front of him if he will forget the laurels already on his brow.

THE death is announced from Newport, Rhode Island, of Mr. Richard Morris Hunt, the well-known Architect. He was 66 years of age.

LARGE Ironworks and Engineering Shops are being established by an Anglo-Russian Company in the Caucasus. The Company will employ 3,000 workpeople in the manufacture of railway carriages and locomotives.

IN NELSON'S COUNTRY.

A MEMORIAL RESTORATION TO THE HERO OF TRAFALGAR.

HOW few are acquainted with the village in which England's naval hero, Nelson, was born. Burnham Thorpe, the little sequestered Norfolk hamlet, far up in the north of the county, is too far out of the beaten track to tempt the tourist. The village life goes on as in the days of Nelson, and but for its association with the name of the great Admiral, the obscurity of the past would be continued to the future. To those who have visited Burnham, astonishment has always found expression from the fact that not a stone or a monument stood in his birthplace to perpetuate the memory of one of the most favourite of British heroes, and whose connection with the village was of the most intimate kind. Nelson's father, the Rev. Edmund Nelson, M.A., was rector of the parish (A.D. 1755 to 1802). Horatio, his fourth son, was born at the Rectory on Michaelmas Day, 1758. His childhood was passed in Burnham Thorpe. The parish register contains the boy's signature more than once as a witness at marriages in 1769, when he was about 11 years of age. His father and mother sleep in the Chancel of the parish Church. The old Rectory occupied by Nelson's father has long disappeared, a more modern structure having been erected in another part of the grounds; but the old pump, which served the household of the Nelsons, still remains. The rippling wayside stream in which the future Admiral ducked the country boy, and was in turn ducked, still runs as merrily as ever, and the room in the Lord Nelson Inn, where Nelson supped for the last time with his fellow villagers prior to his departure to meet England's foes, is still the same. In 1770 Horatio Nelson went to sea, and it is striking to note with what constant affection he always speaks of his Norfolk home. When afloat he sent gifts for the relief of its distress, when ashore he first hastened to Burnham Thorpe. Here he spent the five years (November 1787—January 1793) during which he was unemployed. In 1798, when raised to the Peerage, he was created Baron Nelson of the Nile and of Burnham Thorpe, and in 1801, Viscount Nelson of the Nile and of Burnham Thorpe. On May 11th, 1804, he writes touchingly: "Most probably I shall never see dear, dear Burnham again, but I have satisfaction in thinking that my bones will probably be laid with my father's in the village which gave me birth. The thought of former days brings all my mother into my heart, which shows itself in my eyes." His affection for his native village was never stronger than when Nelson was nearing the close of his glorious career. At Trafalgar, when the *Victory* was going into action, Lord Nelson said: "This is the happiest day of my life, and it is the happiest day, too, for Burnham Thorpe, for it is the day of their fair." Burnham Thorpe was the revered spot which rose up before his fading memory. When Nelson was dying in the cockpit of his flagship the *Victory*, he said to Captain Hardy, "Don't throw me overboard, I wish to be buried by the side of my father and mother at Burnham Thorpe, unless it please the King to order otherwise." These words show how his love to the village and to his father's Church lasted to the very end. It did please the King to "order otherwise," and our hero lies in St. Paul's Cathedral.

In the village, therefore, so closely allied with Nelson's heart, it was only meet that some memorial should be raised to ever perpetuate his name. An influential Committee was therefore formed for the purpose, and at the first meeting held at Marlborough House in June 1890, the Prince of Wales presiding, it was resolved that the memorial should take the form of restoring the Parish Church, which was at that time described as being in a deplorable state. The most expensive section of the work has been finished. The South Aisle and Tower have been rebuilt, the Arch at the west end, which was formerly blocked up and an unsightly Gallery, has been opened. The outlay represents £4,000. Another £2,000 is required to complete the work. Most appropriately, the date chosen for the re-opening of the sacred building was Thursday, August 1st, the date of Nelson's victory.

THE VERDIN TECHNICAL SCHOOLS AND GYMNASIUM.

OPENING NEXT THURSDAY.

THE Verdin Technical Schools and Gymnasium, which will be opened at Winsford by the Duke and Duchess of Westminster next Thursday, are the gift of Mr. Joseph Verdin, whose brother, Mr. W. H. Verdin, laid the foundation stone exactly a year ago. The Schools comprise Class and Preparation Rooms, a Chemical Laboratory, an Art Store Room, Plumbing Room, Cookery Room, Laundry, Drying, and Ironing Rooms, and Committee and Cloak Rooms. The lighting and ventilation as well as the heating of the building are devised on the most recent principles. Messrs. Woodhouse and Willoughby, of Manchester, the Architects, have produced a building which, though on a much larger scale than its neighbours, is in keeping with the character and Architectural traditions of the locality. In the centre of the block is the Main Entrance, surmounted by a large Flemish scroll gable, and flanked on either side by subordinate gables, each with a bold chimney-stack springing from the apex, and connected by the ridge of the roofing with the main gable. Two subordinate doorways, similar in character and treatment to the principal entrance, provide direct communication—one with the Boys' Section of the Schools and the other with the Girls' Department—while the Front Entrance leads directly through an ante-room to the Gymnasium. Mullioned and transomed windows light the three principal elevations. The front of the building and part of the sides are faced with Ruabon red stock bricks, and all the dressings are in red terra-cotta. The joiner's work is generally of St. John's pine, stained a walnut shade and twice varnished. The Gymnasium measures 49 ft. 6 in. by 37 ft. 6 in., and is 30 ft. high from floor to ceiling. The cost of the building, including the furnishing, amounts to about £8,000.

THE LARGEST GRAVING DOCK IN THE WORLD.

THE magnificent Graving Dock which the London and South-Western Railway Company has just completed as an essential part of their improved Dock and Harbour Estate at Southampton, was opened on Saturday by the Prince of Wales. Up to the present time the ship-repairing requirements of Southampton have been met by a series of four graving docks, varying in length from 250 feet to 450 feet, and in width from 51 feet to 80 feet, with a depth of water over the blocks ranging from 15 feet to 25 feet. The great increase witnessed in the dimensions of passenger and trading steamships within the last quarter of a century has necessitated a corresponding expansion of the facilities provided at the principal ports for dry docking, and in this movement the London and South-Western Railway Company, as the owners of the extensive range of docks at Southampton, have far out-distanced all their competitors. They have, indeed, constructed the largest single graving dock in the World, its actual dimensions being—length, 750 feet; width at sill level 87½ ft.; and at the quay level, 112 ft. 6 in. The water capacity is 73,000 tons, and the maximum depth 35 ft., so that in every detail the dock is fitted to receive much larger vessels than any which even modern trade has demanded. Built due north and south on reclaimed land lying between the rivers Itchen and Test, the dock opens direct into the Empress Dock, the large deep-water area opened by the Queen in July, 1890, and the situation chosen will enable the largest American, Cape, or other vessels using Southampton, to be docked without the slightest interruption of the growing volume of trade centred in the port. It is claimed that the engines employed to empty the dock are probably the most powerful ever introduced. The plant, which has been erected by Messrs. John and Henry Gwynne, of Cannon Street and Hammersmith, consists of a pair of Invincible centrifugal pumps, each driven direct by a pair of vertical high-pressure steam engines. A third Invincible centrifugal pumping engine of smaller dimensions, also driven direct by a high-pressure engine, is supplied to deal with the leakage, and to drain the culverts.

VILLAGE CHURCH COMPETITION

THE ASSESSOR'S AWARD.

THIRTY-FOUR sets of drawings were submitted in this competition, from which we selected seven, which were sent to Mr. Arthur C. Blomfield, M.A., whose report is appended, the names of the authors of the premiated designs being as follows:—

- 1.—"Æsthos," CHAS. H. HOLDEN,
156, Bradford Street, Bolton.
- 2.—"La Signora dalle Camelie,"
HERBERT F. J. COOPER,
63, Vassall Road, North Brixton, S.W.
- 3.—"Couvre-feu," FRANK WHALLEY,
36, Sella Street, Chester.

6, Montague Place,
Montague Square, W.

DEAR SIR,—After a careful examination of the seven sets of drawings selected from the thirty-four sent in, I have had to set aside two bearing the titles "Jack" and "Ave Maria," partly on account of non-compliance with the rules laid down for the competition, and partly for obvious defects either in plan or general arrangement.

Having carefully compared the remaining five, I have selected that sent in under the title of "Æsthos" as complying most nearly with the requirements of a small Church for a village community.

The order of merit runs thus:—(1) "Æsthos," (2) "La Signora dalle Camelie," (3) "Couvre-feu," (4) "Euric," (5) "A Sketch of a Mouse," (6) "Ave Maria," (7) "Jack."

I must add that not one of those designs could be carried out for the specified sum, though, perhaps, that which I have placed first comes nearer the mark than the others.

I do not propose to make any report on the last two in the list for the reasons given above.

"Mouse."—The design bearing the sketch of a mouse is an admirably drawn and carefully finished set of drawings, and if intended for a small School or College Chapel would have many points to recommend it, but for a Village Church it is quite unsuitable, both in plan and general character of design; nor could it possibly be built for anything like the stipulated amount. The arrangement of the Chancel, which is uncomfortably narrow, and disproportionately long, is bad—no room being left for communicants—nor is there any Altar-rail. There is no indication of how the Choir, which in a Village Church is almost invariably composed of men and boys, is to be divided, and a considerable amount of valuable space is wasted in other ways, and the Pulpit and Clergy Seat are obstructive. The stairs to the West Gallery are much too narrow; the Font is boxed in so as to be almost useless, and a Ladies' Lavatory is unnecessary and wasteful.

"Euric."—The design marked "Euric" is capitally drawn and carefully worked up, and would have been placed much higher but for one radical defect, which mars the whole design—viz., an almost total absence of light. The side windows are mere lancets and the West Window is so overshadowed by the external arch, 9 ft. beyond, as to be of very little use. The East Window affords little, if any help to the Nave. The design is, however, a clever one, and, apart from the fact that a great deal of space is wasted and a large quantity of material extravagantly used to produce the rather Swiss effect of the Bell Tower and its abutments, the effect would be in execution, no doubt, pleasing and picturesque.

"Couvre-feu."—The set of drawings bearing these words, while displaying no great originality of conception, fulfils fairly well, in its simplicity of style and general arrangement, the requirements of an inexpensive Village Church. The Font is in an impossible position, however, and the space between the Choir Seats is too narrow. The Turret stairs to Belfry cut too much into the Tower Pier, and advantage has not been taken of the slope of the ground for the Heating Chamber. The necessity of the buttress under the West Window is not apparent.

"La Signora dalle Camelie."—This drawing is perhaps the most striking and original of all, and possesses great merits in many ways. The external appearance, however, is not that of a Church, but rather that of a picturesque farm building, the only indication of its purpose

being a crucified figure of Our Lord high up on the North Gable. The design is undoubtedly clever and original, but its failure to suggest the purpose or object of the building considerably discounts the merits of the plan and general arrangement, which are, in their way,

any special originality of style, is characterised by a due sense of proportion, honesty of purpose, and in point of general arrangement and simplicity of plan is the best of the seven designs I have examined, and the appearance both externally and internally would be such

WEST ELEVATION

SOUTH ELEVATION

Scale. 0 10 20 30 40 50 feet

DESIGN FOR A VILLAGE
CHURCH BY "ÆSTHOS"

very good. The arrangement of chairs, there being only an entrance on one side of the Church and a small door at the West end, is inconvenient. The way up for communicants is narrow, even though there is a return passage; and the Font is not well placed—a view of the Sanctuary should be obtainable from it during the Baptismal Service. The cost would far exceed the limit imposed.

"Æsthos."—This design is, in my opinion, the best. It more nearly complies with the requirements of the competition, being essentially a Church in appearance and plan for a small village community, and being able to be built for something like the sum named, or at any rate something nearer than the other designs.

There are one or two criticisms, however, which may fairly be passed.

The Roof construction is not good, but could easily be amended.

The abutment to the west of the North and South Tower arches should be increased.

The Font would be better under the West Window.

The whole design, while not conspicuous for

as to impart to the building a quiet and dignified character.—I am, dear Sir, faithfully yours,

ARTHUR C. BLOMFIELD.

Of the drawings we did not deem it necessary to submit to the Assessor:

"Trafalgar" sends a design, simple in plan, as a Village Church should be, and detailed very neatly. A little more dignity in the elevations would have prompted "Trafalgar's" work being submitted to Mr. Blomfield.

"Carlos" shews the elements of design in his set, but his section is quite illogical in construction.

"Anglo Saxon" is likely to become a good draughtsman, and a little more careful study will produce better work.

"X.P.'s" drawings have some merit in them.

"Classic" sends a set of plans, the Tower of which is distinctly good, but totally out of character in a Village Church of 200 seating capacity.

"Scotia" sends an ambitious design labelled Greek Architecture, but which has much Asiatic feeling about it. Anything more incongruous than a Greek Temple on the hillside of an

English Village we cannot conceive; but the details prompt us to advise "Scotia" to persevere in the style he has chosen, and if, in after years, he is able to purify much of the style that passes as modern Grecian he will not have done badly.

"Oak Shingle," who has elaborately mounted his two sheets of drawing on boards a quarter of an inch in thickness, has the pen of a ready draughtsman, the section of the Church Spire being executed with perfect accuracy of detail, but his elevations and sections show a woeful disregard of the mere rudimentary rules of Design. "Oak Shingle" should at once take rod and tape and do nothing but measure up old work and transfer his measurements to paper, for twelve months, and then "enquire again."

The designs submitted by "Mars," "Dickey Sam," "Faith," "Endeavourer," "Alpha," "Horseforde," "Lux," "Sambo," "Victor," "An Attempt," "Westward Ho," "Go Bang," "Deo Dante Dedi," "Mayor" (who is evidently playing off some practical joke upon us), "Novice," "Caibre Cincait," "Quill," "Hil-yard," "Apis," "Ted," and "X.P." call for no special mention. Some possess the germ of Architectural thought, but several of them are calculated to break the heart of their authors, pastors, and masters, who have permitted them to enter the ranks of Architectural practice, with the prospect of ever making bread and cheese. Perseverance, however, is the watchword every student should figure on his drawing board, and perseverance let it be.

THE stonework of the Great Hall at Hampton Court, which had become somewhat dilapidated in parts, is being repaired.

THE South London Fine Art Gallery was re-opened on Sunday, and will be open every day (except Saturday) till next June. The hours are three to five, and seven to half-past nine. The Gallery is meant especially for the poor and for children, and to enable them to use the pictures and books with profit, special arrangements are made for the young people.

Two new playgrounds for Londoners were opened to the public last week by the County Council. Spa Green, in Rosebery Avenue, and Island Gardens, in the Isle of Dogs. No district in London was more in need of a recreation ground than the dismal region of the Isle of Dogs. A house which the Council acquired along with the gardens is to be utilised as a Free Library.

THE Secretary of State for Foreign Affairs has received a copy of a notice issued by the Bulgarian Ministry for Public Works inviting tenders for the construction of the Roman-Pleven-Choumen Railway. The tenders must be sent in before November 1st next. The notice and the conditions of tender can be seen at the Commercial Department of the Foreign Office, S.W., between 11 and 6.

WITH reference to the revised scheme for the construction of a Bridge across the English Channel, in which Sir John Jackson, the deep sea works contractor, is now interesting himself, we learn that as a part of the preliminary work it is proposed to erect two experimental piers (such as the Bridge would be carried upon) a mile or two from the shore, opposite the South Foreland, from which point the shortest route could be obtained across the Channel.

A NEW *Creche* for the poorer (Blowick) end of All Saints' parish, Southport, was opened recently. The building is of two storeys, and has cost about £1,100, which has been most generously provided by Mrs. Blanchard, leaving the furnishing and the erection of boundary walls to be met by local subscriptions. This *Creche* displaces the old building close by, which has been in regular use since August, 1882, and is the first in the diocese to be designed and erected specially for such a purpose.

At a recent meeting of the Wimbledon Urban District Council it was decided to discontinue the existing system of street illumination by means of petroleum, and to illuminate the whole town by electricity. The initial outlay for installation is estimated at £31,000, and the yearly cost of maintenance at £3,750. The scheme provides for the erection of arc lights in the main thoroughfares, and 1,000 incandescent lamps of thirty-two candle-power each in the remaining streets.

THE HEAVIEST CROWN IN EUROPE.

MANY have seen the Queen's Crown in the Tower, but few know how it is made and how many jewels it contains. It is constructed of jewels taken from old Crowns, and other stones provided by Her Majesty. It consists of emeralds, rubies, sapphires, pearls and diamonds. The stones, which are set in gold and silver, incase a crimson velvet cap with a border of ermine, the whole of the interior being lined with the finest white silk. Above the crimson border on the lower edge of the band is a row of 129 pearls. Round the upper part of the band is a border of 112 pearls. In the front, stationed between the two borders of pearls, is a huge sapphire, purchased by George IV., set in the centre of valuable pearls. At the back, in the same position, is another but smaller sapphire. The sides are adorned with three sapphires, and between these are eight emeralds. Above and below the sapphires, extending all round the crown are, placed at intervals, fourteen large diamonds, the eight emeralds being encircled by clusters of diamonds, 128 in number. Between the emeralds and sapphires are sixteen ornaments, each consisting of eight diamonds. Above a circular bend are eight sapphires, set separately, encircled by eight

which adorned the helmet of Henry V. at the battle of Agincourt. The centre of the ruby is hollowed out, and the space filled, in accordance with the Eastern custom, with a smaller ruby. The Maltese cross is formed of seventy-five splendid diamonds. At each of the sides and at the back is a Maltese cross with emerald centres, containing respectively 132, 124, and 130 sparkling diamonds. Level with the four Maltese Crosses, and stationed between them are four ornaments shaped like the fleur-de-lis, with four rubies in the centre, and surrounded by diamonds, containing eighty-five eighty-six, and eighty-seven diamonds. From the Maltese crosses spring four imperial arches, composed of oak leaves and diamonds. The leaves are formed of 728 diamonds; thirty-two pearls represent the acorns and fifty-four diamonds the cups. From the upper part of the imperial arches hang suspended four large pendant-shaped pearls set in diamond cups, each cup being formed of twelve diamonds, the stems from each of the four hanging pearls being incrustated with twenty-four diamonds. Above the arch is the mount, which is made of 438 diamonds. The zone and arc are represented by thirty-three diamonds. On the summit of the throne is a cross, which has for its centre a rose-cut sapphire set in the centre

DESIGN FOR A VILLAGE CHURCH BY "ÆTHOS"

diamonds. Between each of these eight sapphires are eight festoons of eighteen diamonds each. In front of the crown is a diamond Maltese cross, in the centre of which glitters the famous ruby given to Edward I. by Don Pedro the Cruel. This is the stone of fourteen large diamonds. Altogether the crown comprises one large ruby, one large sapphire, twenty-six smaller sapphires, eleven emeralds, four rubies, 1,363 brilliants, 1,273 rose diamonds, four pendant-shaped pearls, and 273 smaller pearls.

THE "WREN" OF ANCIENT EGYPT.

SENMUT, THE ARCHITECT, AND HIS QUEEN.

RIGHT opposite to the stupendous ruins of the Temple of Amon, at Karnak, with the River Nile between them, stands, most curiously situated, the recently-discovered Temple of Dér-el-Bahri. At this point the great gaunt limestone cliffs of the old river bank fold back into the Western Desert, and form an almost right-angled crease. At the base of the scar, and dove-tailed into a corner of the rock, the Architect has planted the Temple. At the upper or Sanctuary end, and along the right side, the protecting cliff rises sheer from the platform and embraces the walls of the building; and also, be it said, has proved a source of enormous trouble to the explorers from the deposit which the weathering of centuries has rolled down from its sides upon the Temple platform.

Now, if we imagine that the platforms and the buildings which the explorers have exposed form the Temple proper, we shall be quite in error, and herein lies the feature which stamps this building as unique amongst the sacred edifices of the land. The Temples of Egypt were either great independent erections, standing freely upon the plains, or gigantic caverns hewn into the cliff side. The Temple of Dér-el-Bahri is a combination of both. The great platforms, no less than three in number, rising like three gigantic steps one higher than the other, are merely the approach to the Temple. The holy of holies, the sanctuary of Amon, to which great God of Thebes the building is dedicated, lies in the cliff side, and for no less than 60 feet the visitor penetrates the solid rock to examine its features. And besides this Temple there are many minor rock-hewn Halls and Shrines, to which he will find entrance from the platforms. The building is, in truth, a Transition one. The Architect has taken his idea of the sanctuary from the tombs in the hill side, especially those at Beni-Hassan, and suggestions for the platforms from the Temples of his predecessors, combining them with consummate skill and taste. It forms, in style and in time, a link between the pile at Karnak and the gigantic rock-cut Temple of Aboe-Simbel, which Rameses II., 200 years later, carried for 300 feet into the cliff side.

High up in the face of the precipice the Architect of Dér-el-Bahri has hewn his Temple and Shrines, and the height at which he has placed them has suggested to him the conception of bringing the worshipper up from the level of the plain beneath by a succession of platforms, the first two of which are some 250 feet long and 300 feet wide. The "step" from platform to platform was too lofty to scale directly, and so the approach of the worshipper was facilitated by sloping ways, springing from the centre of each platform to the level of the one above it. The faces of these steps have been utilised for inscriptions and historic pictures, and, as we shall presently see, one of their surfaces records, with full illustrations, an incident of the time which has for us just now some points of special interest.

To whom do we owe this lovely Temple? Who was its Architect? When was it built? The excavations of the last three winters have given complete and satisfactory answers to the questions. Its erection was due to the munificence of Queen Hatasu, or, as she is otherwise called, Queen Ramaka, wife to Thothmes II., and aunt to Thothmes III., one of whose obelisks is a familiar object on the Thames Embankment. We are all now familiar with the idiosyncrasy of this great Queen. The pictures in her Temple invariably represent her dressed as a man, while the inscriptions speak loud in praise of her as a woman. After all, she did no worse than Joan of Arc, and thus anticipated by some 3,500 years the aspirations of the rational dressers and lady bicyclists of our own day.

And the Architect? Who was this Ecclesiastical Artist—this Wren of ancient Egypt? We now know much about him. A statue of him is in Berlin, and his name was Senmut. Thus he speaks of himself in the inscription on the statue in words which curiously illustrate the trouble taken by the officials to combine the actual and assumed sex of their kingly queen:—"I was a great man who loved his

lord, and I gained the favour of my queen. He exalted me before the face of the land to the rank of overseer of his house and purveyor of the land. I was chief over the chiefs, head of the Architects, I executed his orders in the land. I lived under the lady of the land, Queen Ramaka, living eternally." And thus some 1,500 years before Christ, and 200 years before the Hebrews fled from the land, Queen Hatasu and her Architect, Senmut, planned and built this lovely Temple. One word about the famous Sculptures on the face of the step to the upper platform. A considerable portion of this wall surface of almost 300 feet is occupied with pictorial representations of a commercial expedition despatched by the Queen to a land spoken of as Punt. Five ships comprised the expedition, and they returned laden with products, such as gold, ivory, and incense; with animals, such as leopards, panthers, dogs, monkeys, and giraffes; and with aromatic trees, which we see at first in flower pots, and, after their transplanting, flourishing in the soil of Egypt—commodities which point undoubtedly to an African locality; and, indeed, there is excellent ground for supposing that Punt was no other than the coast of Africa, at the lower end of the Red Sea, and now known as the Somali country. It is more than imagination that would see in that extraordinary Somali encampment now in the grounds of the Crystal Palace the direct descendants of those men of Punt, with whom the sailors of Queen Hatasu traded 3,500 years ago? It is an idea worth considering as we run down to the Palace after a visit to the Dér-el-Bahri relics at Burlington House.

ABOUT two miles from Ecclefechan, in Dumfriesshire, is the Roman Fort of Birrens, known to the Romans as Blatum Bulgium. It has long been known as the probable site of a Roman Fort; now its examination by spade and pick has been undertaken by the Society of Antiquaries of Scotland, and in particular by Dr. James Macdonald and Dr. Christison, two well-known Scotch antiquaries. The excavations are still incomplete; but the results hitherto attained are said to be most promising, including the foundations of some well-built edifices, potteries, and a few coins.

ARRANGEMENTS are now nearly completed for the carrying out of the new building scheme which the Committee of the Newcastle Y.M.C.A. has had under consideration for some time. Active operations will be commenced shortly, probably early in the autumn. The new building will cover the whole of the ground occupied by the present premises of the Association, and extend right back to the Auction Rooms of Messrs. Davison and Son. About £10,000 will have to be raised to enable the Committee to carry out the scheme.

THE Pendlebury Institute Company, Limited, has agreed to sell the whole of its property to the Swinton and Pendlebury Urban District Council, to be used as a Town Hall and Offices. Owing to the vastly increased facilities for entertainments and the near access to Manchester, the original purposes of the Institute no longer exist. School attendance Offices and Overseers' Offices have already been opened at the Institute, but it is not proposed to remove the District Council Offices there at present.

THE Secretary of State for Foreign Affairs has received a copy and translation of a notice issued by the Municipality of Vienna, calling for tenders for plans, construction, and working of a network of electric railways in and round that city. The tenders must be sent in before the 14th of November next. The notice may be seen at the Commercial Department of the Foreign Office, S.W., between the hours of 11 and 6.

RECENTLY a treble bell, the small bell of a future peal when the Tower is built of St. John Baptist, Felixstowe, was temporarily hung at the west end of the Church, and was rung for the first time. The bell, which weighs over four cwt., was cast by Messrs. John Taylor and Co., of Loughborough, and is of fine tone.

A RAFT containing over 7,000,000 feet of lumber, mostly white pine, is on its way down the Mississippi to St. Louis. It is believed to be the biggest raft ever floated down the river. Carried by rail the lumber would make four and a half miles of car loads.

MASTER BUILDERS MEET AT LEEDS.

THE NEW FORM OF CONTRACT AND THE R.I.B.A.

THE National Association of Master Builders of Great Britain held its half-yearly meeting in the Arbitration Room, Royal Exchange, Leeds, on July 23rd, when representatives were present from London, Liverpool, Manchester, Birmingham, Bradford, Huddersfield, Bolton, Derby, Preston, Leicester, Walsall, Hanley, Newcastle-on-Tyne, Bristol, Hull, Leeds, Southport, Nottingham and Blackburn. The report for the past half-year was approved and adopted, and ordered to be printed, and circulated amongst the members. Mr. C. W. Green, Liverpool, the honorary treasurer, submitted his audited accounts for the past half-year, showing the Association to be in a very satisfactory financial position. The President, Ald. J. Bowen, J.P., of Birmingham, explained to the meeting the course which had been adopted in reference to the Plumbers' Registration Bill, introduced into Parliament last session, and impressed upon the members the desirability of strongly opposing the Bill should it be again introduced. A letter was read from Mr. Stanley G. Bird, London, giving an account of the result of negotiations, which had extended over a long period, with the Royal Institute of British Architects, with reference to the proposed new form of contract, and expressed much regret that, owing to the course adopted by the Royal Institute of British Architects in refusing to sanction the introduction of an arbitration clause in the form of contract, the whole matter had practically fallen through. Mr. John Dawson, of Huddersfield, in expressing his view as regards the Employers' Liability Bill, strongly urged the members to insure themselves against the risk of accidents to their workmen. Mr. T. F. Rider, London, gave a short account of the cause of the action which had been instituted by the Master Plasterers' Association of London against the National Association of Operative Plasterers, which had, for some considerable time past, systematically persecuted and endeavoured to get boycotted certain master plasterers in London with whom they may have had some slight grievance. Mr. Rider explained that this case was one in which master builders generally were concerned, and they should make a point of giving all the support they could in order to strengthen the action taken by the above body. It was decided that the Association should render all the support it could, both financially and otherwise, to the Master Plasterers' Association of London. Various other matters interesting to the building trade were discussed, amongst which reference was made to the apprentices' indenture form, some being drawn up in such a manner as to render the employer liable to maintain the apprentices when unable to work through illness. Mr. W. Irwin, of Leeds, was unanimously elected a member of the Council to fill the vacancy occasioned by the resignation of Mr. Banks Mawson. It was resolved to hold the next half-yearly meeting in London. In the evening the members were entertained by the Leeds Master Builders Association at dinner in the Queen's Hotel, when Mr. W. Irwin, the vice-president of that Association, expressed the pleasure it afforded the Leeds Master Builders to have the opportunity of receiving the representatives of such an important industry, and commented upon various matters relating to the building trade. Alderman John Bowen, in thanking the Leeds Master Builders for the reception accorded to the National Association, commented generally upon the objects for which the Association was formed, and called the attention of the members to the fact that defence and not aggression was one of the principal objects in view, and strongly urged all master builders to stand shoulder to shoulder, and be united in action, as it is only by this means the combinations of the operatives can be easily and effectually dealt with.

An interesting archaeological discovery was recently made in Jamaica of a cave containing twenty-four skeletons of the aboriginal Arawaks, a shattered canoe of cedar wood, an arborvitæ mortar, and two curious earthenware vessels.

MAKING ELECTRICITY.

NIAGARA, UNLIMITED, 450,000 HORSE-POWER.

THE utilization of Niagara on the American side is effected, as on the Canadian, by turbine wheels. About a mile and a half above the American Fall a broad and deep Canal has been cut to carry the rushing water from the rapids to a series of wheel-pits, down which the water drops into the turbines. Subterranean Tunnels carry off the water when it escapes from the revolving turbines, and ultimately it is discharged into the river again through holes in the face of the cliff that one may see from the new Suspension Bridge. This scheme is to supply 100,000 horse-power of motive force; and it is so far in operation that two or three days ago a current of 4,000 horse-power was "laid on" to an aluminium factory a mile away. A second group of works, to supply another 100,000 horse-power, on the same plan, is to be constructed when the first group is completed. Meanwhile the Canadians are not idle. Their scheme is to have a huge Subterranean Chamber beneath the bed of the river in rear of the Horseshoe Fall, or rather of the end of it, near which stood in former times a great rock. In this Chamber the turbines and dynamos will be placed, all out of sight, and certainly out of hearing. This great plant will be drawing from the waters of Niagara 250,000 horse-power of motive force without the spectator before the curtain being any the wiser. Thus between them the Canadian and United States turbines will generate electric energy equal to 450,000 horse-power, to be transmitted by wires to the many cities around them, to a distance perhaps of over a hundred miles. In Canada, which possesses the finest, the largest and the most famous of the Falls, and which was the first to turn the water-power into electricity, this kind of motive force will some day be the dominant factor. Mighty rivers and lakes are the grand characteristic of Canada; great waterfalls are as common there as hills in England. In some places, as at Ottawa, the power dormant in these Falls has been turned to account, but the quantity of power allowed to run untapped is so vast that what is used is nothing in comparison. The English public has no conception of what can be done with the turbine nowadays. The way we use what little water-power we do use is by the overshot or undershot-wheel, made familiar to us by artists' sketches of places now out of the way and in ruins. Of such, in a more businesslike style, is the large wheel at Laxey, in the Isle of Man. But when you have a mass of water, even with a small fall—6 ft. or 8 ft.—the Canadian form of turbine seems to work wonders. The water is conducted into a channel, gathering force as it slides; and apparently by sheer weight in the Turbine Chamber it sets in motion mighty wheels that by the act of revolving produce the potent current of electricity—a current which at Ottawa (although produced from a very small portion of the Falls of the Ottawa River) suffices to run all the tramcars for many miles around and through the city, to light the streets and the buildings, to work the "elevators," and to supply the motor power of various factories. When we reflect upon the quantity of water annually poured over England by our too-liberal clouds and the quantity that meanders its way to the sea in so many directions, it would certainly seem well worth while that those bodies charged with educating our young engineers should institute travelling scholarships, and send some of them off to study the applications of water and electric power in Canada and the United States. It is an astounding thing that, when hundreds of cities, and even mere villages, in North America have their cheap, convenient, swift, and universally patronised electric trams, we in England should be only just thinking about them.

MR. CHARLES HOPKINSON, the head of the Bee Hive Engineering Works, Retford, died suddenly last Sunday week. As a practical milling engineer he was known all over the United Kingdom and also on the continent, and he was the owner of many patent rights, and had taken several gold and other medals at the Royal Shows and Milling Exhibitions all over the country.

A BIG WORK AT NEWCASTLE.

EXTENDING THE ASYLUM.

THE extension of the Newcastle City Lunatic Asylum at Gosforth, the foundation stone of which was laid by the Mayor (Ald. W. H. Stephenson), on Wednesday last, will involve an expenditure of £100,000. The City Lunatic Asylum at Coxlodge is about thirty years old, and has cost something like £96,000. A site was chosen at Coxlodge, consisting of 52½ acres, for which the price paid was £10,000. The Visiting Committee appointed as its Architect Mr. Moffat, of Edinburgh. Further extension becoming necessary, and having been agreed upon, the Council invited Architects to send in plans in competition. No fewer than twenty-two Architects competed, and the judging of the plans resulted as follows:—First, Mr. J. W. Dyson, Grainger Street, Newcastle; second, Messrs. Montgomery and Carr, Newcastle; third, Mr. W. L. Newcombe, Newcastle; fourth, Messrs. Freeman and Robbins, Newcastle. Mr. Dyson was appointed Architect for the buildings, and premiums were awarded to the remaining three Architects. The contract was given to Mr. Walter Scott, Newcastle.

The new Asylum is being erected for male patients, and will accommodate 361, and when completed the whole of the present Asylum will be adapted for women patients, the total accommodation being then about 800. The new buildings are arranged in two-storeyed blocks, the various floors forming wards for the different classes of patients. The walls externally will be of stone, and the roofs covered with best Bangor slates. The patients' blocks will have the floor between ground and first floor of Mark Fawcett and Co.'s system of fireproof flooring, and the ceiling to the upper floors will be formed of concrete. The floors and woodwork generally will be pitch pine. The Lavatories, Bathrooms, &c., will be lined with glazed bricks. All the Staircases will be of Yorkshire stone. The heating and ventilation will be the system known as the "plenum" system, and all apparatus is to be in the subways below the buildings, so that no part can be interfered with by patients. There will be fire main services both inside and outside the buildings. In addition to the patients' blocks there is a complete Administrative Department, comprising Committee Rooms, Offices, Kitchens, Stores, Dining Hall, Workshops, Bakery, Visitors' Room, Club Rooms for attendants, and apartments for the medical and other officers. There is also a new Laundry, Isolation Hospital, Recreation Hall, Chapel, Superintendent's Residence, Head Attendant's House, ten Cottages for attendants, and Entrance Lodge. The buildings will be lighted by electric light, and the motive power required for driving machinery, ventilating fans, &c., will be electric. A complete electric plant is to be provided. The foundations, and the erection of the main buildings to the ground floor line have been carried out by Mr. John Ferguson, of Newcastle, and the contract for the superstructure and auxiliary buildings has been let to Mr. Walter Scott, of Newcastle, who is now proceeding with the work. The heating and ventilation will be carried out by Messrs. Ashwell and Nesbit, of Newcastle and London; the electric light fittings, wires, and cables by the Corlett Electrical Engineering Co.; and the sanitary fittings throughout are to be of Doulton's manufacture. The whole of the proposed works have been designed by Mr. John W. Dyson, Architect, of Newcastle. To give an idea of the magnitude of the buildings, it may be stated that they will cover five acres of ground, and there will be over 3½ million cubic feet of actual buildings.

THE Duchesse d'Uzès' Statue of Joan of Arc has been unveiled at Pont-à-Mousson. It was refused admission at the last Paris Salon—according to some, because it was not believed to be really her own work, and, according to others, because the professionals were jealous of an amateur.

A FRENCH engineer has conceived the interesting idea of reproducing the house in which Napoleon lived at St. Helena, as an attraction during the Exhibition of 1900. The house will be an exact copy of the original, surrounded by panoramic canvases representing the natural environs.

A FIRE RESISTING TREE.

AN interesting account of a fire-resisting tree is given by Mr. Robert Thomson in a Consular report on Colombia. He writes: "The thousands of square miles of natural pasturage on the plains and lower hills of Tolima assume during the rainy season the most beautiful verdure. But in the alternate season of drought the general aspect is that of a desert. These lands were originally acquired at a nominal cost. No conservation of the natural fertility of the land has ever been taken into consideration. On the contrary, the natural grasses, intermixed with scrub or brushwood, have been systematically burned from year to year, and the burnings effected during the most scorching period of drought. The principal object attained by this process of despoliation is the reproduction of new and tender herbage or pasturage, which, with the advent of the rainy season, forthwith covers the parched surface. Vast pastoral regions—scores of thousands of square miles—in tropical America are thus maintained. Half a century, or it may be a century, of this treatment suffices to extinguish almost every trace of fertility in the soil. In Tolima alone hardly less than 2,000 square miles of savannahs and hills, ascending to some 3,000 feet, have in this way been transformed into comparatively barren wastes. And in other parts of the Republic many thousands of square miles have similarly lapsed by this devastating process. This persistent burning of the savannahs and hills for crops of renewed pasturage plays desperate havoc with all other vegetation, trees and brushwood. Isolated palm trees, with their intensely hard trunks and endogenous structure, together with groups of brushwood in sheltered or humid spots, sometimes withstand the fury of the flames. There is, however, one phenomenal exception to this subversive power of the fires. A humble tree with contorted and rugged trunks and branches and scabrous leaves, a tree presenting the most subdued and weird aspect conceivable; this pigmy tree not only resists the fury of the flames, but fire is actually congenial and subservient to its existence, for the tree, instigated by the conflagrations, forms itself into great plantations. The name of this tree is chaparro (*Rhopala obovata*), indigenous to Colombia and other South American countries. It attains a height of 15 to 20 feet, and its distorted trunks measure from nine to 12 inches in diameter. It is widely distributed in Colombia, for I have found it at the Sierra Nevada of Santa Marta, and dispersed inland 1,000 miles from the sea. In contact with great forest fires it maintains a precarious existence. But, as already explained, it usurps dominion in places where no other tree can grow. In Tolima it abounds on the slopes and ridges of the hills at elevations from 1,000 to 3,500 feet. In this department alone hundreds of square miles of the lower hills, which have been reduced to sterility by incessant burnings, are occupied by this diminutive tree, and it assumes the aspect of vast systematically formed and well-kept plantations. This is more than a triumph of the "survival of the fittest."

By the will of Mr. George Woofenden, of Kenwood Bank, Sheffield, £120,000 is to be devoted to the erection and endowment of Convalescent Homes and Almshouses in Sheffield.

THE Parish of St. Luke, Chadderton, Oldham, is to be provided with a Vicarage. The estimated cost is £1,500. It is hoped shortly to proceed with the work of erection of the structure.

THE extension of the British Museum is likely, it seems, to be presently undertaken. The annual report of the Trustees announces that the purchase of 5½ acres of adjoining ground for this purpose is on the point of being completed.

THE Church at Easington, County Durham, which has been closed for nearly twelve months for the carrying out of improvements, was reopened recently by the Bishop of Durham. The total cost of the improvements is over £3,000.

POROUS glass is a late novelty in the Paris market. The holes are so small that neither dust nor draught follows its use, and yet the ventilation is said to be excellent.

Professional Items.

BALCOMBE.—Mr. G. Richards Julian, the Architect appointed by the Council, is preparing plans for the proposed Workmen's Reading Room. The building is to consist of three rooms that can be opened together for entertainments, and caretaker's Cottage at side.

BATTERSEA (S.W.).—Next the Town Hall, a large Mansion has been secured by Mr. Sprague, the Architect, and Mr. Macham, of Sunderland, and on the site is to be erected a Theatre and Opera House.

BERKHAMSTED.—An event of signal importance in the history of Berkhamsted School was celebrated when the new Chapel was dedicated by the Bishop of Colchester. The Chapel is Late Perpendicular in style, from the designs of Mr. Charles H. Rew, Architect, of Berkhamsted, and the east end is unique among English Churches, being built after the style of the Church of Santa Maria dei Maracoli at Venice.

BETHESDA (WALES).—New Schools are about to be built at Bethesda, Wales, from designs by Messrs. Willink and Thickeness, Architects, of Castle Street, Liverpool.

BOOTLE.—A start has been made with the new Presbyterian Church of England at Bootle. The Church is designed to accommodate 600 persons on the Ground Floor, having no Galleries, and will be built of grey and red brick. It has a large single roof span, divided into bays, with hollow Transepts. There are also Vestries and Rooms for Sunday School purposes. An Organ Gallery is provided at one end of the West Transept. The present Church is to be used as a Schoolroom, with covered connection with the new Church. The Church is expected to be completed in twelve months. Messrs. Raffles and Campbell are the contractors, and Messrs. Woolfall and Eccles, of Castle Street, Liverpool, are the Architects.

BILLINGBOROUGH.—A handsome stained glass window has just been placed in the east end of the Parish Church at Billingborough, Lincolnshire. It is intended to serve as a memorial to the Duke of Clarence and Avondale.

BRIGHTON.—The Brighton Borough Engineer and Surveyor has been instructed to provide an electric passenger lift for the Town Hall at an estimated cost of £538. He states in his report that there are 2,000 such lifts worked by electricity in operation in various parts of the country.

BROADSTAIRS.—The Yarrow Home, Broadstairs, for convalescent children, was opened on Wednesday last. Messrs. Davis and Emanuel were the Architects, and Messrs. Colls, the builders. It contains accommodation for fifty boys and fifty girls in separate Wings, and a special feature of the building is the verandahs facing due south.

BURBAGE.—The new Public Hall at Burbage, near Buxton, has been opened by Lady Goring. The Foundation Stone was laid last autumn. The building is in the open space dividing the new and old Macclesfield Roads, the main front facing the former. The style is Late Gothic. The Hall is 56 ft. by 30 ft., with Entrance, Ticket Office, and Cloak Rooms, and Platform, 30 ft. by 13 ft. The seating capacity of the Hall is 350. At the east end are four shops. The building has been erected by a limited liability company, and the total cost is between £2,000 and £3,000. The Architects were Messrs. Garlick and Flint, Terrace Road, Buxton, and the builder Mr. J. Gladwin.

BURTON-ON-TRENT.—The Board of Guardians has under consideration a report by Mr. Stevenson, Architect, on proposed alterations to the House, including separate Wards, accommodation for nurses, Children's Wards at the Hospital, and enlargement of the Laundry and Wash-house. The estimated outlay is put down at £4,820.

DUBLIN.—On Sunday, the new Organ, which is the memorial gift of the Catholic officers and men of the Royal Irish Constabulary to the Church of the Holy Family, Aughrim Street, was opened. The Organ, which has been built by Messrs. Telford & Telford, is throughout of Irish manufacture, and has been pronounced by competent critics to be a most perfect instrument.

DUMFRIES.—Tenders to the amount of £11,728 11s. 9d. have been accepted for new Academy Buildings for the Dumfries Burgh School Board. The contractors are—for masonry, Messrs. Houston & Robinson; joinery, S. McLachlan; plastering, R. Moffat; plumbing, P. Drummond & Son; painting, H. Haining, all of Dumfries; and R. Mulligan, slater, of Annan; Kean & Wardrop, tile layers, Glasgow.

DURHAM.—For the new County Council buildings, the design marked by the motto of "Demos" has been adopted for execution at a cost not exceeding £22,000, the Architects being Messrs. Harry Barnes and Fredk. E. Coates, A.A.R.I.B.A., of Sunderland. These gentlemen were awarded the second premium by the referee, Mr. MacVicar Anderson, and the first premium was voted to the plan inscribed "Onward" by Messrs. Cooksey & Cox, of the Adelphi, W.C.; but the conditions of the competition required tenders within the amount stipulated, to be submitted for approval before the Council would confirm the adjudicator's recommendation. The tender for building this design by Messrs. Barnes & Coates was stated to be £18,051, which was accepted, leaving a margin, as above stated, of £4,000 for contingencies. The tender for Messrs. Cooksey & Cox's plan amounted to £21,977, with only £23 for contingencies. It was stated that the site in Old Elvet cost £6,000, and that the fittings and furnishings would bring the total cost up to £40,000.

FARSLEY.—At its last meeting the Calverly and Farsley School Board decided to invite five Architects to send in sketch plans for a new School, consisting of Central Hall and five Class Rooms, capable of accommodating 360 scholars.

GATESHEAD-ON-TYNE.—Designs were recently invited from five Architects practising in Newcastle for the new permanent Church of St. George, in the parish of Christchurch. Mr. J. W. Walton-Wilson, F.R.I.B.A., of Shotley Hall, the assessor, selected that submitted by Mr. Stephen Piper, of County Chambers, Westgate Road, Newcastle, and he has since been appointed Architect. The whole scheme is to be carried out at once, inclusive of Tower. The design is Early English in style, consisting of Nave and Aisles lighted by triplet lancets, no clerestories being introduced; shallow Transepts, each having double gabled fronts and Chancel; Tower with belfry and saddleback roof, on south side of West Front, at angle of two thoroughfares. Accommodation will be provided for 630 persons. The contract has been let to Mr. Alexander Pringle, of Gateshead, at £5,900.

GLASGOW.—The Stained Glass Window presented to Greenhead Parish Church, Glasgow, by the Messrs. Tullis, of Bridgeton, has just been completed by Mr. Stephen Adam, St. Vincent Street, Glasgow. The lower portion of the Window—which is a three-light one—represents the Adoration and the gifts of the Kings, and the lower part represents Christ in Glory surrounded by worshipping figures. The Window is a beautiful piece of mosaic glass work, richly coloured, and treated in a fine artistic spirit.

GREAT SAUGHALL.—The Foundation Stone was laid last week of a new Church at Great Saughall, near Hawarden. It is being built from the designs of Mr. Medland Taylor, of Manchester, and will be mainly of brick, with tiled roof.

HACKNEY.—In emulation of their neighbour Shoreditch, the Hackney Vestry has decided to introduce electric light in conjunction with a dust destructor. The scheme has been

entrusted for its elaboration to Mr. Francis Hastings Medhurst, their consulting electrical engineer, who holds similar appointments for Bedford and several other corporations.

HUDDERSFIELD.—The Wesleyans of Lindley, Huddersfield, are commemorating the opening of their first Chapel 100 years ago—a building now used as a Sunday School—by adding a new Chancel to the handsome Gothic Chapel erected in 1867. The Chancel is being built from designs and plans by Mr. Edgar Wood, Architect, of Manchester. The cost will be about £1,500, towards which £1,100 has been subscribed or promised. The scheme includes the provision of Minister's and Choir Vestries and Organ Chamber. The principal feature of the Chancel will be a five light flowing tracery window, which will be filled with stained glass, the gift of Mr. J. W. Sykes, J.P., Lindley. The interior of the Chapel will be finished of polished stone and oak panelling, and will be fitted with oak Choir Stalls and Communion Table, specially designed by the Architect and presented by Mrs. W. A. Whitehead, of Baildon, Bradford and Miss Sykes, of Lindley, "in memory of their sister." Messrs. Bottomley & Sons, of Lindley, are the contractors for masonry, and Messrs. Crowther & Wilkins, of Marsh, are the joiners.

IPSWICH.—In the competition for the Ipswich Workhouse six designs were remitted to the Assessor, Mr. Charles Barry, who has awarded the first premium to Messrs. Stephen Salter, Lister Newcombe, and H. Percy Adams, of 28, Woburn Place, Russell Square, London, and the second to Messrs. Philip Tree and Ivor Price, of 70, Warwick Road, Earl's Court, London. The other Architects who competed were:—Messrs. H. S. Legg and Son, London; Messrs. W. H. Seth-Smith and A. R. G. Fenning, London; Mr. G. W. Leighton, Ipswich; and Messrs. C. Q. Ellison and Son, Liverpool.

At a cost of about £1,200, new School buildings, adjacent to Crown Street Congregational Church, are being erected under the supervision of Mr. Frank Brown, Architect. The Foundation Stone was laid on Tuesday last.

LANCASTER.—St. Luke's Church, Skerton, Lancaster, is proposed to be furnished with a new Chancel, in order to make room near the centre of the Church for the organ, which is attacked by dry rot. The design has been prepared by Messrs. Austin & Paley, Architects, and the estimated cost is about £600.

LEAMINGTON.—The new loop-line which the London and North Western Railway Company has constructed between Daventry and Marton, near Leamington, was recently opened for passenger traffic. The line has been constructed by Messrs. Walter Scott & Co., of Newcastle, at a cost of over £250,000, and is nearly fourteen miles long.

LEDBURY.—Extensive alterations and improvements have been made to the parish Church. The cost of the restoration has been nearly £5,000. Mr. J. L. Pearson, R.A., was the Architect, and Messrs. Bunning, Camberwell, London, were the contractors.

LIVERPOOL.—At the Local Government Board inquiry at the Municipal Offices into the application by the Liverpool Corporation for power to borrow £35,000 for the erection of a new Central Fire Station and District Police Offices, and the extension of the present Police Offices on the site of the present buildings. The Town Clerk stated that the City Surveyor had gone carefully into the question, and estimated £20,000 as a fair proportion for police purposes, and £15,000 for the fire department. The present accommodation for both sections was very inadequate, and the present scheme was the most economical that could be devised to meet the requirements of the city. It did not involve the purchase of any new land, as the present site would be used, and the money required was simply for the erection of new buildings. The present buildings were erected thirty-seven years ago when the population was under 435,000, and the police force numbered less than 1,000. At present the population was

518,000 and the police force 1,600. The lowest tender for the buildings was £33,594, but it was thought there should be a margin for contingencies, and the sum of £35,000 was proposed.

LLANELLY.—The Llanelly Harbour Commissioners have decided to have a new Dock and bucket dredger, at a cost of £100,000. The site of the new Dock is favourably situated, and is a freehold of the Commissioners. It is to the north of the present Carmarthenshire Dock, and is at present a reservoir used for scouring purposes. Its position is a most suitable one, ample room being offered for siding accommodation, and it is noteworthy that it adjoins the Mynydd Mawr line, which connects the great anthracite coalfield with the seaboard. The Dock gates will be 50 ft. wide.

LONDON.—The London County Council has accepted the tender of Messrs. L. Faulkner and Sons, at £111 2s. 10d., for repairs to and painting of the Myatt's Fields boundary wall. The tender of Messrs. McVey for the supply of fencing for Hilly Fields, at £927 19s. 9d., was also accepted. The tender of Mr. S. Kavanagh, at £8,399 17s. 9d., was accepted for rebuilding Lea Bridge.

LYDEARD.—Dr. Kennion, Bishop of Bath and Wells, recently dedicated an Organ just erected by Messrs. Brindley and Foster, of Sheffield, at a cost of £567.

LYNN.—Additions are being made to the Town Hall by Messrs. Young and Co., of Norwich, from plans prepared by Messrs. Tree and Price, of London and St. Leonard's.

MERTHYR TYDVIL.—In this parish, on the 29th July, Mrs. Frederick Harris laid the Foundation Stone of a new place of worship, which is dedicated to St. Matthias. The Architect is Mr. J. L. Pearson, R.A., and the new edifice will cost about £3,000 and seat 350 people. The site was given by Colonel Lockwood.

NEWCASTLE-ON-TYNE.—For strengthening the Lantern Tower of the Cathedral, Mr. Leeson, the Architect, states that the work could be well and substantially done for £1,515, exclusive of Architect's commission and the clerk of work's salary, for which, and for unforeseen circumstances, a further sum of £250 should be added.

On Thursday will be unveiled an alabaster Tablet, with black marble inscription panel, erected in Felling Church, to the memory of the late William Watson Pattinson, J.P., of Felling House. The design is by Messrs. Hicks and Charlewood, Architects, Newcastle. Mr. Beall is the Sculptor.

NOTTINGHAM.—With reference to the site of the proposed new Workhouse, the Local Government Board has, upon the advice of its Architect, Mr. Gordon Smith, requested the Board of Guardians to select a more eligible one. Mr. Gordon Smith, in his report, says:—"The fact of the site having a private road across it is a most serious drawback, and its irregular surface and steep gradient will greatly increase the difficulty of arranging a Workhouse on the site, and will certainly very largely increase the cost of erection. Doubtless these two conditions are capable of being overcome—a tunnel or tunnels may be formed under the road so as to connect one side with the other, and by means of stairs, inclines, and arranging the storeys of the buildings at varying levels, all these difficulties may be either entirely overcome or greatly mitigated. At the same time it has to be remembered that these conditions will very materially add to the cost of the building by reason of the tunnelling, the digging, excavating, levelling, and carting, and the unusual depth of foundations that will be necessary in almost every block of building that may be erected, in order to arrive at the proper levels, and when built, the arrangements will be such as will involve great difficulty and cost in permanent administration and supervision if efficiency is to be maintained."

PICKERING.—A new Roman Catholic Church was consecrated at Pickering, on Tuesday last.

The building was formerly a Salvation Army Barracks. A beautiful Reredos, having tabernacle and canopy of Caen stone, with columns of rough royal marble, has been inserted. It is in the Corinthian style, with rich mouldings and panelled and carved dome, surmounted by a cross, the carvings of dome and capitals and cross being richly gilded. A handsome stained glass East Window, by Mr. Redmond of Whitby, has been inserted, the centre light representing "The Descent from the Cross." The whole of the woodwork is stained and varnished. The work of interior decoration has been ably carried out by Mr. G. M. Robson, of Norton, the woodwork being executed by Mr. J. White, of Whitby, and the plumbing and glazing work by Mr. Remmer, of Pickering.

POCKLINGTON.—The Guardians of Pocklington Union (Yorks) have resolved to enlarge the Workhouse, and plans for the new erection have, therefore, been prepared by Mr. H. L. Tacon, Architect, of Rotherham.

RAINHAM (KENT).—The Architect estimates that the cost of site and buildings for the proposed Cemetery would be £2,365, and he recommends a loan of £3,000; these figures include cost of site, £800; building a Chapel, £900; and a Lodge, £400.

RETFOED.—After a careful examination of the West Retford Bridge, over the River Idle, the Surveyer to the Town Council finds that the bolts which fastened the iron plates to the girders have all been worn away, and will require immediate attention. This accounts for the settlement of the road in places on the Bridge.

RIPON.—From plans and specifications prepared by Mr. Preston, the Local Government Board has decided to borrow £1,100 for the purpose of Highway repairs and a scheme of Water Supply.

STANDON.—The additions to St. Edmund's Roman Catholic College, near Standon, will, when complete, include an Exhibition Hall, which will be used as a study place, ten Class Rooms, Lavatories, Swimming Bath, covered Playground, two Dormitories, a Library for the boys, and a Billiard Room for the Professors. The Architect is Mr. A. E. Purdie. The estimated cost of the undertaking is £4,500.

STRENSALL (NEAR YORK).—A Wesleyan Chapel is being erected, to replace the structure burnt down some months ago. The plans are by Mr. Edward Taylor, Architect, York. The contractors are Mr. H. Creaser, of Strensall, and Mr. G. Mansfield, York.

SWANSEA.—It is proposed to pull down Swansea Parish Church and erect a larger one in its place. The accommodation of the present Church is inadequate, and it is intended to erect, from the designs of Sir Arthur Blomfield, a Church with 1,200 sittings, at a cost of £20,000, of which £15,000 is subscribed.

THORNIEBANK.—The Public Library, which is being built at Thorniebank, N.B., to commemorate the late Mr. Alexander Crum, of Thorniebank, is in the Classic style of Architecture characteristic to Scottish buildings in the 17th century, and the Architect is Dr. Rowand Anderson, Edinburgh. The cost will be about £2,000.

TOTTERDOWN.—New School Rooms are being erected in connection with the Totterdown Free Methodist Church at a cost of £2,500. The Façade is in hammer-dressed blue pennant stone, with dressings of Monk's Park freestone. The work is being carried out from the designs and under the supervision of Mr. William Paul, Architect and Surveyor, of Wells Road, Bristol.

TOXTETH PARK.—Built on the grounds of Richmond Lodge, near Sefton Park Railway Station, by the Urban District Council of Toxteth Park, the new Refuse Destructor and Depot have been opened. The plans were prepared by Mr. John Price, engineer to the District Council. The refuse is tipped inside the Destructor building directly into movable trucks, then directly into the furnaces, through

openings in the top of the cells. The trucks and feeding openings are constructed in accordance with the patents of Messrs. Boulnois and Brodie, and with all the latest improvements. There are six cells or furnaces, erected back to back, with a main flue to carry off the gases placed between, on what is known as the "Fryer" principle as improved by the manufacturers, Messrs. Manlove and Co. The cells are fitted throughout with mechanically self-clinking fire bars, the patent of Mr. Thomas Henderson, of Trueman Street, Liverpool. The total expenditure has been £7,888 8s. 5d. Mr. Price also prepared the plans for the Town depot, consisting of Manager's House, Weigh-house, Stabling for ten horses, cart sheds, yard, with apartments for a horsekeeper and fireman. The cost of the depot was:—Buildings (Mr. T. Spencer, Aintree), covered vans, horses and harness, &c., £3,035.

WEDNESBURY.—The Corner Stone of a Girls' Department in connection with the Parish Church Schools, Church Hill, has been laid by the Mayor. The new building is to stand on land adjacent to the old Schools, and with certain alterations of the existing buildings will afford additional accommodation for 300 children, whilst improved outbuildings will be provided. The work is being carried out by Messrs. Morriss and Atkinson, Lansdown Street, Birmingham, from designs by Mr. J. H. Gibbings, City Road, Birmingham.

WESTON-SUPER-MARE.—New Schools are to be erected for the School Board, at Weston-super-Mare. They are designed to accommodate 999 children, and will be built from plans by Messrs. Price & Wooler, Architects, of Weston-super-Mare.

WORTLEY.—From the designs of Messrs. Kay & Twist, Architects, of Park Row, Leeds, a new Church is shortly to be built at Wortley, Leeds.

YEADON.—New Conservative Club and Premises are about to be erected from plans by Mr. Harold Chippindale, Architect, of Guiseley.

YORK.—On Friday the Monument erected in York Minster to the memory of the late Archbishop Thomson will be unveiled. The Monument consists of a recessed Altar Tomb, designed by Mr. G. F. Bodley, A.R.A., with a life-sized recumbent effigy by Mr. Hamo Thornycroft, R.A. The site of the Monument is in the South Transept, just outside the entrance to the South Choir Aisle.

M. HENRI BLONDEL, 71 years of age, the most enterprising builder in Paris, who erected the Continental Hotel, the Labour Exchange, and 172 Dwelling Houses, has been fined 3,000fr. for "simple"—that is to say, non-fraudulent—bankruptcy. His liabilities are said to exceed £1,000,000.

A SCHEME is on foot to erect a Drinking Fountain at Cockermouth, to commemorate the fact that William Wordsworth was born in that town on April 7th, 1770. Such a memorial would be a suitable adjunct to the new park which Mrs. Harris has given to the town, and which will be formally opened next week.

AN old landmark in the city of Wakefield is to be restored in the re-construction of the Tower of St. John's Church, which was removed at the end of 1884 on account of its unsafe and dangerous condition. The cost of the work is estimated at from £2,500 to £3,000.

THE Over Wyresdale Township having agreed to erect and maintain a Bridge over the Wyre at Abbeystead, subject to the Lancaster Corporation keeping the bed of the river in repair, the Corporation has assented to the proposal.

THE Local Government Board has authorised the purchase of the Tooting College Estate by the Wandsworth and Clapham Board of Guardians for the sum of £40,000 as a Home for the aged and infirm poor.

THE Accrington and Church Outfall Sewerage Board was fined £280 at the Blackburn County Court recently for disobeying an order to carry out a sewerage scheme within eighteen months. The fine was at the rate of £10 for each day of default.

The Builders' Journal COMPETITIONS.

No. 5.—A Cottage Hospital.

Designs are required for a Cottage Hospital on a Corner Site in a County Town. Provision must be made for twelve beds (six women and six men), with Matron's and Superintendent's Apartments, Convalescent Room, and all necessary domestic and sanitary accommodation. A sum of three thousand pounds may be expended on the building and terrace. Designs to reach the Editor not later than Monday, August 26th, 1895.

RULES.

- 1.—There must not be more than three separate sheets of drawings submitted by any competitor in any single competition.
- 2.—The scale must be a uniform one of 8 feet to the inch for plans, elevations, and sections. Detail drawings must be to half-inch scale, and a perspective in ink may be included.
- 3.—All drawings must be inked in, and be without colour or wash.
- 4.—Drawings in each competition must be sent in on the date specified, and must be submitted under a motto, accompanied by the name and address of each competitor in a sealed envelope.
- 5.—All competitors must be under the age of twenty-six.
- 6.—A public exhibition of the premiated designs will be held. The result of each monthly award will be announced in our columns and the assessors' reports will be published in full. The Drawings will remain the property of their authors, but we shall reserve the right to reproduce any we think fit.

THE AWARDS.

- 1.—A Gold Medal and a Cheque for £10 10s., to the competitor who submits the best half-dozen sets of drawings during the session of twelve months.
- 2.—A Silver Medal and a Cheque for £3 3s., to the competitor who submits the best single set of drawings during the session.
- 3.—Certificates signed by the Assessor and countersigned by THE BUILDERS' JOURNAL, will be awarded to the authors of the premiated designs in each competition, who will each receive a cheque for half-a-guinea for out of pocket expenses.
- 4.—At the end of the session the whole of the premiated designs will be submitted to a committee composed of the monthly assessors, and the Gold and Silver Medals and cheques will be awarded by them.

Editorial.

THE EDITOR will be glad to read any suitable matter submitted to him, and will return all MSS. when stamps are sent to pay postage.

All matter must reach the Editor by the first post on Saturday morning to ensure its treatment in the current issue.

Publishing.

The terms for free post Subscription to any part of the United Kingdom are SIX SHILLINGS AND SIXPENCE per annum by half-yearly or annual prepayments.

Advertising.

SITUATIONS WANTED, SITUATIONS VACANT, PARTNERSHIPS, APPRENTICESHIPS.

Per line, Sixpence. Minimum charge, Eighteenpence. Three Insertions for the price of Two.

Prepayment in the above Advertisements is absolutely necessary.

Prices on application.

Small Advertisements for current week's issue are received up to first post Monday morning inclusive.

Editorial and Publishing Offices:

Talbot House, Arundel Street,
Strand, W.C.

THE new Free Library, at West Hartlepool, will be opened by Mr. W. C. Ward-Jackson, in October.

A BRASS Tablet to the late Bishop Sillitoe, first Bishop of New Westminster, has been placed in the Cathedral, New Westminster. The memorial is in the form of a shield, bearing a suitable inscription.

THE new buildings of the Cambridge Training College for Women Teachers, which were erected by means of the Pfeiffer Bequest, have just been completed. They will be formally opened on October 19th.

THE Leigh and Atherton Joint Sewerage Board proposes borrowing £45,000 for the purposes of sewerage and sewage disposal.

A MASSIVE granite Monument was unveiled on Sunday morning in Uxbridge Cemetery, to the memory of the Chartist poet, John Bedford Leno, who is there buried.

THE Doncaster Rural District Council proposes to borrow £7,500 for the purpose of providing sewage and sewage disposal works for Bolton-on-Dearne and Goldthorpe.

SOCIETY MEETINGS.

Essex Archaeological Society.—On Thursday the Essex Archaeological Society visited Saffron Walden for the purpose of its annual meeting. A large number of members, with Mr. Beaumont, proceeded to Audley End Mansion, which was thrown open by the Right Hon. Lord Braybrooke. Having journeyed to Saffron Walden, the Church was visited, where the Rev. W. E. Layton read a paper. After this the party visited the Museum, when papers were read by Mr. G. Maynard, the curator, describing the rise and progress of the Museum from its formation in 1832 to its present time. Mr. Maynard afterwards read a short paper on the early history of the Castle ruins.

Builders' Benevolent Institution.—This Charity held its forty-eighth annual meeting on Thursday, July 25th, at the offices, 35, Southampton Row, Bloomsbury. Mr. Basil P. Ellis (the President) occupied the chair, supported by Messrs. George Plucknett, J.P. (Hon. Treasurer), Thomas Stirling, W. Scrivener, E. M. W. Goslett, and other friends of the Institution. The Secretary (Major Bruton) read the annual report, which stated that the Institution continues to carry into effect its purposes as usual, the only drawback being the need of increased income to provide for all the necessitous applicants who seek the benefits of the Charity. This is especially to be regretted, because some are very aged before making their wants known. The Committee's efforts have been much hampered by the diminution of subscriptions, consequent upon the death of many regular subscribers, and this makes it an earnest and urgent matter to endeavour to obtain new subscribers and donors, in order to maintain the Institution. This state of affairs cannot be too widely known to the patrons. A movement has been set on foot for the Secretary to call and solicit subscriptions or donations from all members of the building and allied trades within the metropolitan district, which it is hoped will be attended with good practical results. At the present time there are forty-six pensioners on the funds, while others are waiting for election until the income is sufficient. Four female pensioners have died within the past year; one man and one woman have been elected. The Committee strongly expresses its gratitude to the President, Mr. Basil P. Ellis, for the lively interest he takes in the transactions of the Institution, and for his determination to get very liberal contributions to the Charity. It also offers its thanks to the stewards of the annual dinner, and to the Honorary Auditors for their services. The Committee has further the pleasure to announce that Mr. John Mowlem Burt, J.P., D.L., has accepted the Presidency for the ensuing year, and will preside at the annual dinner on November 7th next, in the Hall of the Worshipful Company of Carpenters, London Wall. On the motion of Mr. Thomas Stirling, seconded by Mr. Goslett, the report and balance-sheet were unanimously adopted. Mr. Plucknett proposed a cordial vote of thanks to the outgoing President for his exertions in aid of the Institution during the past twelve months. Mr. Stirling seconded the motion, which was carried by acclamation. The President returned thanks, and said that he was pleased he had been able to do something for the charity. The success which had already attended the movement for increasing the number of subscribers was largely due to Major Bruton, who had been most assiduous in calling upon those who were likely to help. Votes of thanks were also passed to the Vice-Presidents and Trustees, to the Hon. Treasurer (Mr. Plucknett), who was re-elected, and to the Hon. Auditors. The retiring members of Committee were also reappointed, with the addition of Mr. Ellis. On the motion of the President, Mr. John Mowlem Burt, J.P., D.L., was elected President for the ensuing year.

A MOTION has been laid on the table of the Paris Municipal Council to erect on one of the public squares of the capital a Statue of Sir Isaac Newton. It is most likely that the motion will be carried without opposition, and that a Monument will be erected to the discoverer of the laws of gravitation near the Monument to the author of "Hamlet."

Trade and Commerce.

Edison and Swan United Electric Light Company.—In moving the adoption of the report to 30th June last, at the annual meeting of this Company held at Cannon Street Hotel last week, Mr. J. S. Forbes said they had been subjected to severe competition since their patents expired last year. The profit, however, for the year had amounted to £25,876, and after payment of interest on debenture stock there was £21,376 left. An interim dividend at the rate of 5 per cent. had been paid for the first six months of the year, and a similar one was now recommended, carrying forward £3,702. More business, had been done but the amount of profit accrued was smaller in consequence of reduced prices. The Earl of Lichfield seconded the adoption of the report, which was carried.

TENDERS.

Information from accredited sources should be sent to "The Editor." No results of tenders can be accepted unless they contain the name of the Architect or Surveyor for the work.

BARNSELY.—Accepted for the erection of five houses, &c., Old Mill-lane, for Mr. William Foulstone. Messrs. Senior and Clegg, architects, 15, Regent-street, Barnsley. Quantities by architects:—

Taylor, E. R., Barnsley, masonry ...	£860	0	0
Duncan and Jones, Ardsley, near Barnsley, joinery ...	310	0	0
Ashworth, H., Barnsley, plumbing ...	43	0	0
Marshall, T., Barnsley, plastering ...	81	0	0
Fleming, M., Barnsley, slating ...	64	0	0
Beaumont Bros., Barnsley, painting...	17	17	0

BARNSELY.—For the erection of three houses, &c., Fitzwilliam-street, Hoyland-common, for Mr. Jackson. Mr. W. J. Sykes, architect, Hoyland, near Barnsley:—

Hogue, M. A., Hoyland-common, near Barnsley ...	£547	10	0
---	------	----	---

* For the whole of the works.

BRENTFORD.—For the erection of Public Baths, Cliden-road, for the District Council:—

Godson and Sons ...	£6,077	0	0
Higgs ...	6,075	0	0
Hansen ...	5,651	0	0
Hughes, R. N. ...	5,437	0	0
Ford and Sons ...	5,346	0	0
Bloomer, John ...	4,999	0	0
Ball, John ...	4,904	2	4
Barnes, James, Brentford ...	4,850	0	0

* Accepted.

BRISTOL.—For the execution of street works under the Private Street Works Act, 1892, for the St. George Urban District Council. Mr. T. L. Lewis, surveyor, Parochial Offices, St. George, near Bristol.

Thomas and Webb ...	£3,102	0	0
Martin, Frederick ...	128	0	0

* For Gratitude-road, Co-operation-road, St. Mark's-grove, Graham-road, Calybrook-street, Victoria-road, Heber-street, Bellevue-road, Brighton Park, Hanover-street, Nicholas-road, Beaconsfield-road, Salisbury-street.

† Victoria Park. Two mile hill.

BRISTOL.—For the excavation and construction of lake, &c., St. George, for the Urban District Council. Mr. T. L. Lewis, engineer and surveyor, Parochial Offices, St. George, Bristol. Quantities by the engineer:—

Stone, J. E. ...	£4,222	19	10
Williams, John ...	2,466	13	2
Wilkins, G. H. ...	2,369	1	4
Lloyd and Powell ...	2,211	9	11
Thomas and Webb ...	1,739	15	5
Jones, George ...	1,732	6	7
Martin, Fredk., St. George ...	1,450	9	6

[Engineer's estimate, £2,061.]

* Accepted.

BUSHEY (HERTS).—For new photo-etching works, for Messrs. André and Sleight, Limited. Messrs. J. E. K. and J. P. Cutts, architects, 34, Maiden-lane, Covent Garden:—

Miskin, C. ...	£4,488	0	0
Judge, W. ...	4,280	0	0
Darvill, J. ...	4,123	0	0
Turner, T., Ltd. ...	4,061	0	0
Brightman, C. ...	3,795	0	0
Clifford and Gough ...	3,765	0	0

CARDIFF.—For the erection of fireproof warehouses, Tunnel-court, for Mr. J. J. Lewis. Mr. David C. Salmond, C.E., architect, 7, Windsor-place, Cardiff. Quantities by architect:—

Waterman, T. R. ...	£3,313	5	2
Cox, R., and Bardo ...	3,197	0	0
Shepton, S., and Son ...	3,160	0	0
Keene and Wells ...	3,158	0	0
Davies, D. J. ...	3,100	0	0
Allan, James ...	3,100	0	0
Davies, David ...	3,080	0	0
Gibson, Henry ...	3,000	0	0
Venning, J. H. ...	2,968	5	1
Scott and Williams ...	2,940	18	8
Gibson, John ...	2,916	0	0
Evans, E. R., and Bros. ...	2,895	8	0
Turner, E., and Sons ...	2,888	0	0

[All of Cardiff.]

COLCHESTER.—For building Catholic Schools in Priory-street. Mr. W. Scargill, architect:—

Diss, Alfred (accepted conditionally) ...	£1,300	0	0
---	--------	---	---

Boundary wall to above.

Wiles (accepted conditionally) ...	44	0	0
------------------------------------	----	---	---

BURTON-ON-TRENT.—For the erection of a sixty-quarter malting in Wood-street, for Messrs. R. Peach and Co. Mr. R. Stevenson, architect, Imperial chambers, Burton-on-Trent. Quantities by the architect:—

	Wood and Concrete Floors.	Iron and Concrete Floors.
Chamberlain Bros	£5,428 0 0	£5,349 0 0
Kennard, Geo.	5,338 0 0	5,449 0 0
Hunter, J. and J.	5,300 0 0	5,365 0 0
Walker and Slater,		
Derby	5,250 0 0	5,325 0 0
Hodges, Geo.	5,228 0 0	5,284 0 0
Kershaw, R.	5,200 0 0	5,335 0 0
Stevenson, W. A.	5,198 0 0	5,260 0 0
Lowe, T. and Sons	5,170 0 0	5,240 0 0
Edwards, Henry	5,106 10 0	5,249 0 0

[Rest of Burton-on-Trent].

* Accepted.

CRICKHOWELL (WALES).—For the erection of a villa-residence, near Llangatock Wharf, for Mr. Wm. Thomas and Mr. John Richards. Mr. John Vaughan Richards, architect, Llangatock, Crickhowell. Quantities by architect:—

Jones, T. and Sons	£486 10 0
Morgan, Thomas	470 0 0
Griffiths, George, Crickhowell	378 10 0

* Accepted.

DARLINGTON.—Accepted for additions to the Training College, for the Committee of the Training College. Mr. J. P. Pritchett, architect, 24, High-row, Darlington. Quantities by the architect:—

Slougill, H., Darlington, brick, stone, and plaster work	£620 3 7
Atkinson, J., and Son, West Hartlepool, slating	75 15 0
Renshaw, J., Darlington, carpentry and joinery	305 0 0
Lishman, T., Darlington, plumbing and glazing	105 0 0
Metcalfe, T., Darlington, painting	17 10 0
School Furnishing Co., Darlington, science fittings	128 15 0

DUNDEE.—Accepted for additions to the Royal Asylum Mr. T. S. Robertson, architect, St. Andrew's-buildings, Seagate, Dundee:—

Bruce, John, Lochee, masonry.
Morrison, John, Lochee, joinery.
Brown, David, Dundee, plumbing.
Buttar, Andrew, Dundee, slating.
Labrine, James, Dundee, plastering.
Lindsay and Scott, Dundee, glazing.
Nicoll, G. H., and Co., Dundee, tile laying.
Beath and Keay, Dundee, steel beams.
Total, £3,600.

GLOUCESTER.—For the erection of a sanitary depot, &c., Seymour-road, for the Corporation. Mr. R. Read, C.E., City Surveyor, Guildhall, Gloucester. Quantities by Mr. F. E. Godwin, Heathville-road, Gloucester:—

Forse, H. A.	£6,335 0 0
Wilkins, G. H., and Co.	6,300 0 0
King, Alfred, and Sons	6,298 0 0
